The overriding problem of Canadian trade and payments in the postwar years had been how to make the traditional surplus with Europe convertible to meet the payments deficit with the U.S. Payment of U.S. dollars by the Economic Cooperation administration for goods shipped to Europe under the European Recovery program eased the strain, but the vulnerability of Canada's position was clearly shown in the spring of 1949, when a cessation of these offshore purchases produced a crisis in Canadian trade. Between the end of March and the end of June the Canadian reserves of gold and U.S. dollars fell from U.S. $1,076,000,000 to $977,000,000.

Latin America.—Although monetary conditions were rather more stable in most Latin American countries than in the previous year, a considerable degree of inflationary pressure still persisted. Gold and foreign exchange holdings remained fairly steady for the area as a whole, and, unlike most other parts of the world, there were fewer exchange rate adjustments than in 1948. In fact, the improvement in terms of trade brought about by the European devaluations, supplemented by the steep rise in coffee prices toward the end of the year, strengthened the technical positions of most currencies of Central and northern South America. Whereas some of the latter countries, however, increased their holdings of gold and foreign exchange, the monetary reserves of others declined or were maintained at about

Foreign Exchange Rates

Note: Includes only currencies regularly quoted in New York during 1949. Averages of certified noon buying rates for cable transfers in cents per unit of foreign currency, corrected to two decimal places. The rates listed are mostly official rates; in many cases they were managed and supported by strict systems of exchange control. Therefore they did not always reflect the true exchange rates; neither were these properly reflected in the black-market rates.

The following members of the International Monetary Fund had not announced the initial par value of their currencies: Austria, China, Finland, Greece, Italy, Poland, Thailand, and Uruguay. Since January 26, 1948, no agreed par value existed for the French franc.

the same level only with the aid of various import and exchange controls, of which multiple exchange rate systems were the most striking type. Only Cuba, the Dominican Republic, El Salvador, Guatemala, Haiti, Mexico and Panamá operated without exchange controls.

Mexico, after maintaining the rate at between 6.85 and 6.95 pesos per U.S. dollar from Sept. 1948 through Jan. 1949, allowed it to depreciate gradually in free market operations to around 8.22, and on June 17 a new par value of 8.65 pesos per U.S. dollar was announced with the approval of the International Monetary fund.

Following the devaluation of sterling, four countries made important rate changes. Effective Oct. 3 Argentina readjusted her multiple rate structure. The preferential selling rate of 3.73 pesos per U.S. dollar, used for essential imports, was retained, but an additional preferential rate of 5.37 was introduced. The basic selling rate, applicable to imports of semiessentials, was devalued from 4.23 to 6.09, and the free selling rate, for authorized nontrade remittances, from 4.81 to 9.00 pesos to the dollar. Similarly the basic buying rate of 3.35, applicable to important exports, was retained, while new preferential buying rates for nonregular exports of 4.83 and 5.73 pesos to the dollar replaced the old preferential rate of 3.98, and a new special buying rate of 7.20 for exports of certain industrial goods replaced the old rate of 5. It was also planned to re-establish an auction selling rate for imports of luxury goods. Apart from the new free rate which represented a depreciation of 47% against the dollar, the effect of these changes was in general to devalue the peso by 30.5% against the dollar and, with some significant exceptions, to maintain the old sterling-peso relationship. The spread between the highest and lowest rates was therefore increased.

In Ecuador a decree issued on Dec. 31 provided for a depreciation of the export rate from 13.13 to 15 sucres to the dollar and for a reclassification of the imports to which the selling rates for essential, semiessential and luxury goods were to be applied.

In Paraguay new rates established in November effected a substantial devaluation of the guaraní against the dollar for most transactions and a considerable simplification of the rate structure. The old official rate of 3.12 guaranies per U.S. dollar was retained for essential imports and three new import and export rates set up, ranging from 4.92 to 8.05 guaranies to the dollar. Previously there had been about 40 effective export rates and a smaller number of import rates. The 4.92 export rate covering 90% of exports represented a devaluation against the dollar of 25–38% depending on the pre-existing rate.

On Nov. 14 Peru announced a new exchange rate system involving the temporary abandonment of the old parity, the adoption of a fluctuating rate and a simplification of the rate structure. Under the new system all trade transactions were to be conducted at the free certificate rate (which had stood at 16.18 soles per U.S. dollar on Nov. 5), and a free rate without certificates was applicable to nontrade transactions. All exporters received certificates for the full value of their products whereas previously this had been true only of exporters of mining products and exporters to the sterling area. Certificates were sold to importers who must obtain them to the full amount of exchange they required. The system prevailing before Nov. 14 had resulted in certificate dollar-sterling cross rates as low as $3.03 in April, but after the devaluation of sterling this disparity practically disappeared.

On Oct. 6 Uruguay introduced a new series of rates. The new system retained the old basic buying and selling rates of 1.52 and 1.90 pesos per dollar respectively, the former applicable to wool, wheat, meat and linseed, the latter to general imports amounting to about 75% of the total. Two new buying rates of 1.78 and 2.35 pesos were established for other exports and an additional selling rate of 2.45 for luxury imports. Nontrade transactions continued to be conducted at the free rate, which was subject to stabilization by the central bank. The new system reduced the number of rates in effect but increased the spread between the lowest and highest. Maximum devaluation against the dollar was about 28%.

The Sterling Area.—The exchange control system instituted at the outbreak of World War II and placed on a more permanent basis in the United Kingdom by the Exchange Control act of 1947 was maintained practically unchanged throughout the year. Furthermore, no country entered or left the sterling area in 1949.

In the latter half of 1948, the dollar deficit of the sterling area had been more than covered by ECA assistance, and the central reserves of gold and dollars increased from $1,733,000,000 at the end of Sept. 1948 to $1,874,000,000 at the end of March 1949. Nevertheless, the international economic position of the United Kingdom remained extremely vulnerable. The large prewar net income from investments abroad had not been restored, and government expenditure overseas was still a heavy burden. Various other factors also contributed. The price of gold, an important dollar earner of the overseas sterling area, had remained unchanged in the face of a rise of about 100% in the prices of exports from the dollar area. Furthermore, apart from the South African gold loan of £80,000,000 to the United Kingdom in 1948, which was repaid in sterling in 1949, the gold production of the overseas sterling countries and the proceeds of their exports to the dollar area did not, as in prewar years, yield a net surplus with which the United Kingdom could cover its deficit with the western hemisphere. Instead, these countries, taken as a group, were now net claimants on the central hard currency reserves rather than net dollar earners, and the United Kingdom surplus with them was made up largely of unrequited exports financed by releases from accumulated sterling balances and other capital transfers. In the first nine months of the year sterling releases totalled the equivalent of $830,000,000 and were equal to one-seventh of all United Kingdom exports.

In the second quarter of 1949, while imports of sterling area countries from the dollar area increased, their exports to that area fell both in price and in volume, and the drain on the central reserves reappeared. The position of sterling was further weakened by the spread of cheap sterling transactions in which the pound was traded at rates below $3. In the first half of 1949 the total gold and dollar deficit of the sterling area amounted to $963,000,000, of which $617,000,000 was on the United Kingdom account and $173,000,000 on the account of the rest of the sterling area. The remaining $173,000,000, representing payments in gold and dollars to countries outside the dollar area, notably Belgium, Switzerland, Western Germany and Iran, could not be allocated between the United Kingdom and the other sterling area countries. Since ECA aid ($669,000,000), drawings by the United Kingdom on the Canadian credit ($56,000,000) and by India on the International Monetary fund ($31,700,000) were insufficient to cover the deficit, the central reserve declined by $206,000,000.

A conference of British Commonwealth of Nations finance ministers on the subject of the dollar drain was held in July, and it was agreed that the necessary steps should be taken to cut imports from the dollar area by 25%. Further measures to alleviate the position of sterling, notably by increased U.S. and Canadian purchases from the British Commonwealth of strategic materials such as tin and rubber, and by the broader use of ECA funds for purchases in Canada, were announced after the U.S.-Canadian-British talks held in Washington, D.C., at the beginning of September. The growing opinion that devaluation was imminent, however, led importers in the dollar area both to delay payments and withhold new orders for sterling area products. Finally, with the reserves dropping below $1,400,000,000, he exchange rate of the pound was reduced by 30.52% from $4.03 to $2.80 on Sept. 18. The new rate was effective in all he British dependent overseas territories except British Honduras. Similar readjustments were made, either simultaneously or in the following days, in the exchange rates of all the other currencies of the sterling area with the exception of Pakistan, which, thanks largely to its exports of jute, maintained a comparatively strong position vis-à-vis the dollar area. On Dec. 31 a new par value of four British Honduras dollars to one British pound was announced with the approval of the International Monetary fund and the previous relationship between the two currencies restored.

Prior to devaluation sterling had been quoted in various financial centres at free rates equivalent to substantially less than $3. The disparity disappeared with devaluation, but by the end of the year free sterling was again being quoted at discounts exceeding 10%.

Continental Europe.—The dollar shortage persisted in most European countries except Switzerland, which continued without foreign exchange control. Not all countries were affected equally. Thanks to ECA aid and receipts of gold and convertible exchange from countries outside North America, Belgium and Italy, for example, were able to add to their gold and foreign exchange holdings. There was a striking improvement in the monetary position of France, and a reappearance of substantial exports from Western Germany.

Within Europe the unbalanced position of some countries continued to cause difficulties which were, however, mitigated by the European payments scheme organized in 1948 within the framework of the European Recovery program. In Sept. 1949 the scheme was renewed with some modifications, but it soon appeared likely that the distribution of drawing rights established would have to be revised, since the varying degrees of devaluation appeared likely to reduce the imbalance in trade among the ERP countries and change the net creditor and debtor positions of different countries.

A significant step towards the removal of exchange restrictions was taken in mid-November, when the Belgian franc was made freely convertible into Swiss francs and U.S. dollars. Discussions also took place concerning the easing of transfer restrictions among various groups of countries, notably France, Italy and the Benelux countries, but by the end of the year little had been achieved save some reductions of import quotas.

Western and Northern Europe.—Alone among western European currencies the Swiss franc was not devalued. With gold and dollar assets exceeding $2,000,000,000 at the end of August and increasing to such an extent that the monetary authorities had refused to convert dollar assets and adopted a gold sterilization policy to control the inflationary effect of an inflow of foreign exchange, there was no need to change the official parity. However, shortly after sterling devaluation the central bank decided to buy all dollars at the official rate, and the finance dollar market, in which the dollar had been quoted at a discount of about 8%, disappeared.

Denmark, Finland, Norway and Sweden followed sterling and devalued their currencies by 30.5%. Finland was in a somewhat special position. Faced with high domestic costs and declining export prices for pulp and other wood products, its principal exports, it had previously devalued its currency by 15% on July 5. Thus in the latter half of the year the markka lost 41% of its dollar exchange value, falling from 136 to 231 to the dollar.

The Netherlands also reduced the par value of its currency by a similar ratio, 30.2%, to 3.80 guilders per U.S. dollar. In an effort to stimulate exports to the western hemisphere the Netherlands allowed Dutch exporters to retain 10% of their dollar earnings. The Belgian franc, on the other hand, which had been in a relatively strong technical position since World War II, mainly as a result of Belgium-Luxembourg's continuing favourable balance of payments position with other European countries, was devalued by only 12.3%.

Preliminary estimates of the French balance of payments during the first half of 1949 placed the deficit of the French union with the rest of the world at an annual rate of roughly $900,000,000, compared with about $1,700,000,000 in 1948. The deficit with the dollar area was probably at an annual rate of about $800,000,000 compared with over $1,000,000,000 in the previous year. Internally, prices were stable or declining until August. The growing strength of the franc reflected this improvement in the internal and external financial position of the country. By April the black market dollar rate had dropped from above 500 at the beginning of the year to about 350. The revision of the exchange rate system of Oct. 1948 was maintained, with minor modifications, through Sept. 19, 1949. On the basis of this system noncommercial transactions in U.S. dollars, Swiss francs, Portuguese escudos, and, from June 10, Belgian francs, were carried out at the free market exchange rate (which moved slowly upward from 314.80 fr. to the dollar in January to 330.60 in September), while commercial transactions in these currencies and all transactions in other currencies took place at the average of the free market and the official rate (214.71 fr. to the dollar).

Following the devaluation of sterling the franc was devalued on Sept. 20, and the exchange rate system unified. This adjustment came at a particularly inopportune moment since prices had begun to rise again in August as a result mainly of the summer drought, and concurrently union demands for wages grew. From Sept. 20 all transactions were conducted at the equivalent of the free market rate for the dollar, which was initially at 350, but thereafter appreciated slightly. Thus for noncommercial transactions in hard currencies the franc depreciated by only 5.7% in terms of the dollar, while for all other transactions it depreciated by 22.3% in terms of the dollar and appreciated by 11.9% in terms of sterling. The free market rate continued to be controlled by the French monetary authorities, who could influence the demand for hard currencies by regulating the volume of import permits issued, or could themselves intervene in the market.

Within the franc area there continued to be different rates, in colonial French Africa (C.F.A.), where one franc C.F.A. was equal to two metropolitan francs, and in the French territories in the Pacific (C.F.P.) where one franc C.F.P. was equal to 5.5 metropolitan francs.

The currencies of both occupied countries, Austria and Western Germany, were reduced by a smaller percentage than sterling. On Sept. 19 the deutschemark was devalued by 20.6% from 3.33 to 4.2 per U.S. dollar. Although the official rate of 10 Austrian schillings to the dollar had been in effect since the end of the war, most commercial transactions with Austria had been carried out at premium rates, the premiums varying widely according to the commodities and currencies involved. Effective Nov. 22 the official rate was reduced to 14.40 schillings per U.S. dollar and the system considerably simplified. All export transactions were to be conducted at an effective export rate of 21.36 schillings to the dollar (applicable to luxury imports and noncommercial transactions), and the effective export rate (applicable to all other imports).

Southern Europe.—In Italy the system of exchange rates introduced in 1947 and modified on Nov. 26, 1948 to peg sterling quotations to the dollar at the cross rate of $4.03 per pound sterling continued in effect until the devaluation of sterling. Thereafter the procedure by which exporters sold half their foreign exchange proceeds at the official rate and half at the free rate while importers carried out all transactions at the free rate was continued. The official rate was now determined daily, however, by the average of the closing free market quotation in Rome and Milan rather than monthly by the average free rate in these markets for the previous month. Thus a wide differential between the official and free rates was hardly possible any more. The lira was then allowed to depreciate from 575 to about 628 to the dollar in the free market—which the monetary authorities controlled in much the same way as in France. Thus the lira depreciated by about 8% in relation to the dollar and appreciated by about 32% in relation to sterling.

For more than a year internal monetary stability had been maintained in Italy, and a rapid expansion of exports had been achieved. This, together with ECA-paid shipments coming in at an annual rate of over $300,000,000 and substantial incomes from tourism, resulted in Italy's becoming, like Belgium, a creditor in its relations with most European countries and even substantially increasing its reserves of gold and dollars.

The Italian currency adjustment brought some new problems. For example, whereas Italy had accumulated large amounts of sterling since the agreement of Nov. 26, 1948, after the devaluation of sterling Italian exports of fruits and vegetables to the United Kingdom were reported to have slumped badly.

In Greece the official rate for the drachma of 5,020 to the dollar and the certificate system of exchange rates under which exporters sold foreign exchange certificates to importers in the open market remained in effect. Before the devaluation of the pound sterling, exchange certificates were quoted at a level which gave an effective sterling-dollar cross rate of about $3.20 or 79% of the official parity. Effective Sept. 22, however, the Bank of Greece announced new certificate rates (which could be controlled through the issuance of permits for the purchase of foreign exchange) giving effective exchange rates of 15,000 drachmas to the dollar and 42,000 to the pound. This change represented a depreciation of 23.8% with respect to sterling and of 33.3% with respect to the dollar and eliminated the disparity in the dollar-sterling cross rate.

On Sept. 22 Portugal devalued the escudo by 13.1% with respect to the dollar so that its currency appreciated by 25% with respect to sterling. The major reason for this step probably lay in its balance of payments position vis-à-vis the sterling and dollar areas.

After the devaluation of sterling Spain retained its basic buying and selling rates of 10.95 and 11.22 pesetas to the dollar respectively but altered its various special import rates by 30.5% and its special export rates by amounts varying from 7 to 42%. The spread between the basic rate still used for certain imports deemed essential and the highest special rate thus widened substantially.

Eastern Europe.—The exchange rates of Albania, Bulgaria, Czechoslovakia, Hungary, Poland, Rumania and Yugoslavia, like that of the U.S.S.R., remained unchanged throughout the year. On May 24 the existing exchange rate of 50 Yugoslav dinars per U.S. dollars was approved by the International Monetary fund. These countries continued to conduct practically all their foreign trade through state-owned agencies whose operations were determined by the needs of their domestic economic plans rather than by considerations of profitability in terms of domestic currencies. Thus their exchange rates had little influence on either the volume or direction of their foreign trade.

Middle East.—There was little change in exchange control regulations in the middle east in 1949. Besides Iraq—which remained within the sterling area—two former members of that group, Egypt and Israel, followed the British example and devalued their currencies by 30.5%. In both cases the prime motivation for the action lay in the importance of sterling in their foreign exchange assets and in their dependence on the sterling area as a market for their exports. As regards Israel the devaluation hardly affected imports and financial transactions with hard currency countries since these had been conducted at buying and selling rates of U.S. $3.015 and U.S. $2.986 per Israeli pound ever since the new state had been established. The other middle eastern countries, Iran, Lebanon, Syria and Turkey, did not change the par values of their currencies despite the close relations (especially of Iran and Turkey) with sterling and the orientation of much of their trade to countries which did devalue.

Iran made some changes in its certificate exchange rate system. From Jan. 16, 1949, three rates were in use. The official rate, 32.50 rials to the U.S. dollar, was applicable to government requirements, imports of sugar and, from Feb. 13, to nontrade receipts. The Anglo-Iranian Oil company purchased rials for local expenditure at the buying rate of 32 per U.S. dollar. The official plus certificate rate, which declined from 53.88 rials to the dollar in January to 46.19 in October, was used for all other imports except machinery and essential consumers' goods. In addition to rials at the official rate, certificates were issued to exporters and could be sold in the free market to importers or others authorized to buy foreign exchange. After the devaluation of sterling, the certificate rate for the pound dropped to around 112 rials to the pound, giving a dollar-sterling cross rate of U.S. $2.44.

Syria and Lebanon, with identical monetary units and a common bank of issue, also maintained the existing official par values of their currencies. To encourage exports a regulation was issued, effective Sept. 26, restricting the use of the official rate to 10% of the proceeds of nontrade transactions.

China.—In May the exchange clearance certificate system was abolished and an exchange deposit certificate system introduced, under which deposit certificates were issued, amounting to 80% of the foreign exchange deposited with the central bank or appointed banks. These certificates, which also served as import licences, were sold in the open market to those desiring exchange. In a further effort to halt the runaway inflation a new currency unit, the silver yuan, was established. Its exchange value was set at 1.55 to the dollar but was subsequently reduced to 1.45. However, the rapidly deteriorating political and military situation rendered all attempts at monetary and financial stabilization futile.

Thailand.—In September a new official rate of 12.5 baht to the dollar and 35 to the pound was established, representing a depreciation of 20.6% against the dollar and an appreciation of 14% in relation to sterling. Exporters of rice, rubber and tin were required to sell varying portions of their exchange proceeds at the official rate and were allowed to dispose of the remainder in the free market.

As regards imports the official rate was applicable almost exclusively to fuel oil. Other payments were made through the free market at 21–22 baht to the dollar. Before the devaluation of the pound free market sterling was quoted at 62 to 66 baht, giving a dollar-sterling cross rate of $2.81 to $3.06. Thereafter, however, the disparity narrowed, the free rate dropping to [illegible] baht, giving a cross rate of $2.64.

Philippines.—The import restrictions imposed toward the end of 1948 did not have the desired effect, and despite U.S. aid estimated at about $200,000,000 excluding U.S. army and navy expenditures, foreign exchange reserves declined from $400,000 oo at the end of 1948 to $279,000,000 at the end of Sept. 949. To halt the drain more drastic import controls were inroduced at the end of November, and effective Dec. 9 a licence rom the central bank was required for all transactions in gold nd foreign exchange.

Japan.—On April 25 an official exchange rate of 360 yen per .S. dollar was established for all foreign exchange transactions ermitted. For important export products such as textiles, this ad the effect of devaluing the yen. (*See* also European Reovery Program; Gold; International Trade; Tariffs.)

xploration and Discovery.

During the year 1949 a considerable number of xploration expeditions were in the field. Although the chief bjects of these expeditions were not geographical exploration, n the sense in which such exploration was carried out a century efore, nevertheless the main motives were scientific and the xpeditions did in fact often add to geographical knowledge. he principal geographical features of the earth's crust are by ow fairly well understood, and only occasionally does an xpedition seek to answer a primarily geographical question as, or example, the expedition which sought to establish whether lexander I Land was or was not an island. However, an normous amount of data is required from remote regions, and ost expeditions had representatives of one or more sciences to tudy particular problems.

The scientific data obtained by expeditions such as these genrally are not available in detail until published in the scientific iterature, often a year or two after the expedition has returned. t is therefore in general possible in this summary only to cite he fields investigated during 1949 and not the detailed results. urther, there were various other expeditions in addition to hose cited, about which either less information was available r only one or two scientific objectives were included among onscientific activities, and which have therefore been omitted rom this summary.

In the polar regions, comparatively little activity was maniest in connection with the north pole. Routine flights for the urpose of gathering meteorological information were conducted orthward from Alaskan air bases, and it was assumed that imilar flights were conducted from bases in Siberia, although o exact information on these flights was available. On the ther hand, in the region of the south pole, considerable activity as in progress. Late in the year, a large Norwegian-British-wedish antarctic expedition started for the antarctic continent. he expedition had with it meteorologists, glaciologists, geoloists and biologists. It proposed to undertake exploration of ueen Maud Land.

In Alaska, Bradford Washburn, director of the Boston Mueum of Science, tested the possibility of supplying an expedition to Mt. McKinley by air, including the use of helicopters. his mountain, the highest on the North American continent 20,300 ft.), had been climbed and studied on previous expeditions. Assisted by the U.S. army and air force and by the ffice of naval research, Washburn showed that it was feasible o land helicopters on the sides of the mountain, and to provision and supply an expedition by supplies dropped from the air.

S. Dillon Ripley, 2nd, of the Peabody museum of Yale uniersity conducted an expedition to Nepal. Very few foreigners ad ever been allowed to enter this country. Ripley obtained ome important new ornithological data, and also succeeded in hotographing the Himalaya from a new angle.

Hassoldt Davis and his wife conducted an expedition into the Tumuc-Humac mountains in the southern part of French Guiana. These mountains lie along the border between French Guiana and Brazil, and had never been more than superficially explored. The expedition was sponsored by the United Nations Educational, Scientific and Cultural organization at the invitation of the French government, and brought back unique photographs of tribal customs in the interior.

ELEPHANT carrying a party of explorers into valley fastnesses of the Himalayan kingdom of Nepal, formerly inaccessible to western scientists. The 1948–49 expedition was sponsored jointly by the National Geographic society, Yale university and the Smithsonian institution

Sponsored by the Brazilian government, the Roncador-Xingu expedition continued its work in the interior of Brazil. The expedition was stimulated by Minister of the Interior João Alberto Lins de Barros, and by Frederico Hoepken, and the advance party was led by Orlando Villas Boas. This party did some exploratory work on the Manitsauá-miçu river. They surveyed the regions of the Peixoto do Azevedo, Cristalino, São Benedito and Cururú-açu rivers. They located places where air fields could be built. The main purpose of this expedition was to do the pioneer work in the deep interior necessary to open up this region to air routes and to the advance of civilization. A large operation, it had been in the field for several years, planned to continue for several more years, and had many branches under the leadership of various competent and vigorous scientists.

Sponsored by the American Geographical society, Maynard Miller explored the Patagonian ice fields to study the rate of recession or advance of glaciers.

Matthew W. Stirling led a National Geographic Society-Smithsonian expedition into the interior of Panamá to study the customs of the Indian tribes in the interior.

In Venezuela, William H. Phelps, Jr., accompanied by C. B. Hitchcock, acting director of the American Geographical society, ascended the summit of the hitherto unclimbed Mt. Parú, starting from San Fernando de Atabapo on the Orinoco, and intensively explored the mountain and its environs. The mountain is one of the type characteristic of that region, with a flat top and steep sides. The expedition did considerable mapping, and had ornithology as one of its objectives. The problem of bird distribution was studied, since these isolated mountains have flora and fauna differing from those to be found in the parts of the main chain of the Andes at the corresponding altitudes. The expedition also located and described more than 80 new plants and botanical specimens.

Prince Peter of Greece and Denmark started on an expedition to the Pamirs and Outer Mongolia to study tribal customs in that region. By Dec. 1949 his expedition was in the field and no word on its achievements had yet been received.

The American Museum of Natural History expedition to Afghanistan, led by Walter A. Fairservis, Louis Dupree and Henry W. Hart, located the ruins of Peshawarun. This ancient city, dating from the time of Alexander the Great, had eluded discovery for many years. At one time more than 100,000 people lived there. It was on an old trade route between India and the Tatar empire in central Asia. The site is located in southwestern Afghanistan. It appeared probable that it was abandoned because the Helmand river shifted its course and left the city without water.

The Swiss Himalayan expedition made renewed efforts to scale previously unclimbed mountains in India.

In a sphere called a "benthoscope," Otis Barton descended to a depth of about 4,500 ft. below the surface of the ocean off southern California and obtained new data on icthyology and other phases of marine life. In the other direction, exploration of the upper atmosphere progressed, with a continuation of the rocket-flight series at White Sands, N.M., initiated several years before. Several of the captured German-type V-2 rockets had ascended more than 100 mi., the record ascent still being that of Dec. 17, 1946, which reached 114 mi. A smaller rocket ejected from the nose of the large one reached an altitude of about 150 mi. These rockets carried meteorological instruments as well as cameras, ozone meters, sunshine recorders, solar spectrographs and cosmic-ray equipment. In addition, the rockets usually were equipped not only for telemetering performance data but for measurement of any variables which were adaptable to transmission by short-wave radio. Much new information about the pressure, temperature and composition of the upper atmosphere as well as cosmic radiation, solar ultra-violet and amounts of ionization had been obtained, and it was found that this region was much warmer than had been previously believed. Balloon flights using instrument-carrying (unmanned) balloons were extensively used in many parts of the world. Quite a number of these attained altitudes of more than 100,000 ft.

The Blue Dolphin expedition of the Arctic Institute of North America in co-operation with the Smithsonian institution, the office of naval research, the Woods Hole Oceanographic institute and the Canadian geographical bureau, took the schooner "Blue Dolphin," fitted with recording fathometer, bathythermograph, hydrographic winches and other equipment, for a study of hydrography, oceanography and biology through the Strait of Belle Isle and the coastal water of Labrador.

A French expedition under the leadership of Paul-Émile Victor was at the close of the year occupying the station at Eismitte, in the centre of the Greenland ice cap, observing meteorology and atmospheric electricity. The expedition had studied glaciology especially in the ablation zone. It was expected that eight men under the leadership of Robert Guillard would stay over the winter of 1949–50 and that Victor would return to Paris to organize the antarctic branch of the Expéditions Polaires Françaises.

The New Zealand-American Fjordland expedition sponsored by the New Zealand government, the American members of which were O. J. Murie and J. K. Howard of Boston, Mass., conducted explorations and mapping and studied the ecology, flora and fauna in the fjords of the southwestern corner of the South Island of New Zealand, especially in Caswell sound an the region between the sound and Lake Te Anau.

The U.S. navy medical expedition to Africa went from Cairo Egypt, to the Cape of Good Hope to study tropical diseases The expedition went up the Nile, through the Anglo-Egyptia Sudan, to Nairobi, Kenya. Thence a part of it went east t Mombasa, Kenya, and Madagascar, another part west to th Congo; upon returning to Nairobi the expedition continue south through Tanganyika to Capetown, Union of South Africa The chief medical officer was Comm. Julius M. Amberson. Th expedition obtained extensive new data on the incidence an prevention of diseases in that area. Export-Import Bank of Washington.

Created i 1934, the ban was made a permanent independent agency of the U.S. government by the Export-Import Bank Act of 1945, approved Jul 31, 1945.

Its purpose is not only to facilitate the financing of U.S exports, but to assist in the financing of development project in foreign countries which will increase their productive capacity step up their exports, thereby improving their foreign-exchang situation and making them better suppliers of those material and goods needed for import into the U.S. Its financing is generally limited to the dollar cost of U.S. materials, equipmen and services required for development projects in foreign countries.

The bank is empowered to lend to U.S. exporters and importers and to private entities in other countries as well as to foreig governments. It finances specific export and import transaction on application of U.S. exporters and importers where the natur of the risk involved is such that private credit cannot be obtained and when, in the opinion of its board of directors, ther exists reasonable assurance of repayment. It also arranges, i favour of foreign purchasers, credits which are available o equal terms to all qualified U.S. exporters for financing the sal of U.S. export staples such as raw cotton.

The total amount of loans authorized by the bank from th time of its establishment in 1934 approximated $4,513,000,00 at the end of 1949. Disbursements during 1949 were approximately $185,000,000, and repayments during 1949 were approximately $144,000,000. Outstanding loans of the bank totalle $2,179,585,273.52 at the end of 1949.

Eye, Diseases of.

Sulfonamides continued to be employe in the treatment of local and systemi eye infections with few serious side reactions. That the use o sulfonamides could produce changes in the eye had been demonstrated by the production of slight cloudiness of the aqueo humour and transient myopia. Objective stigmatoscopy showe that in many cases refractive changes toward myopia occurre axially. Since the myopia must depend on a change in the len it seemed probable—as in diabetic changes of refraction—tha this is localized in the nucleus of the lens. The actual pathogenetic mechanism, however, remained obscure; probably th change is in some way allergic.

The increase in the number of diabetics continued, and the umber with diabetic retinopathy further increased in comparion with the greater number of diabetics. The increase in proiferative retinopathy was particularly pronounced. One-third of he patients with diabetic retinopathy had normal blood pressure that is, less than 130 mm. of mercury systolic). These were ound among the younger patients. More than one-fourth of he patients with retinopathy were affected by this before five ears had elapsed from the time when the diabetes started. Patients less than 50 years of age when their retinopathy was liagnosed had been affected with diabetes only for a short time; hey seemed to be particularly susceptible to retinopathy. The proliferative retinopathy takes longer to develop than the comnon retinopathy, probably because some pass through a nonproliferative preliminary state. Possible reasons for the increasng frequency of diabetic retinopathy are insufficient insulin reatment and the introduction in the 1930s of the free diet.

By the use of a new staining technique (fuchsin-sulphite regent of Fuelgen) which had become available for the visualizaion of the blood vessel walls in preparations of the whole unectioned retina, it was possible to see and determine the nature f small haemorrhagic spots in the retina seen particularly in liabetes by use of the ophthalmoscope. Flat preparations of the etina in cases of diabetic retinitis showed great numbers of apillary aneurysms. The aneurysms always have both an aferent and an efferent connection and are therefore true aneuysmal dilatations, not endothelialized petechiae which would be onnected to the vascular tree by a single channel. In some apillaries tiny knuckles can be seen in the walls, possibly repesenting the first stage of aneurysm formations. The aneurysms re most frequent in the central retinal region but occasionally an be found quite far out in the periphery. Similar capillary neurysms occasionally are seen in cases of retinal disease in ondiabetics, but they are quite rare. By the technique applied, ny cellular component that contains carbohydrate is stained ed. By this preparation the internal limiting membrane stains rilliantly, showing that this structure is a definite entity and ot a condensation of the vitreous surface, as had been supposed y some authors.

The use of tracer elements in the treatment of diseases of the ye had been proposed since the discovery by the use of radioutographs that the concentration of these elements can be estinated. A series of radioautographs were made in connection vith a comprehensive study of the exchange of phosphate beween the blood and the eye. Radioactive phosphorus (P^{32}) was njected intraperitoneally into guinea pigs. The animals were illed after an experimental period of one to one and one-half ours, whereafter the eyes were frozen and sectioned. The secions were placed in contact with photographic film which was larkened by the radioactive material. The pictures obtained in his manner gave a direct indication of the newly introduced hosphate in the eye at the moment of death.

Granulomatous diseases of the eye, such as brucellosis, syphiis and tuberculosis were treated with doses of manganese, coper, cobalt, zinc, magnesium and iodine with encouraging results.

yskens, Gaston

(1905–), Belgian prime minister, was born at Lierre, Belg., on April 1. fter qualifying in political and social science at the University f Louvain, Belg., and Columbia university, New York city, he vas appointed in 1931 professor of economics and public inance at the former. He entered politics as a Christian Socialist and on April 2, 1939, was elected a member of the chamber of representatives; after the liberation he was re-elected on Feb. 17, 1946, and on June 26, 1949, his name was included in the Christian Social party list. He was appointed minister of finance in the first Achille van Acker cabinet (Feb. 1945), and in the two successive Paul-Henri Spaak cabinets (March 1947–Nov. 1948 and Nov. 1948–Aug. 9, 1949). On Aug. 10, 1949, he formed a coalition government of nine members of the Christian Social party and eight Liberals (*see* BELGIUM).

Fads of 1949.

The outstanding fad of 1949 was the South American card game known as canasta. The New York Regency club, which was credited with having skyrocketed the game into popularity, reported that people who start playing the game in the afternoon never stop for dinner. Canasta may be described as a combination of rummy and bridge which can be played two- or three-handed but is essentially a four-handed partnership game.

During the year there was also the craze for get-rich-quick Pyramid clubs which had ephemeral popularity.

In fashions, the "new look" in women's dress underwent some modification. Skirts were shorter; the fullness, which was a characteristic of the previous year, was gathered toward the side or back in a harem drape, and the emphasis above the waist was on an extreme *décolletage,* which demanded the employment of boned brassières. This trend toward nakedness was also seen in the Bikini or French Riviera type bathing suit.

Fads in hair-do's showed a sudden and complete emphasis on short cuts. Not since the time of Irene Castle's innovation ("castle clip") had there been such a vogue for short, straight hair. Teen-agers affected rolled-up dungarees and flat, ballet-type slippers. Paired-off adolescents matched sweaters the way another generation swapped rings. Mothers and toddling daughters (mirroring the covers of popular women's magazines) showed matching playsuits and afternoon dresses. Except for a gay note in ties and sports jackets, men's fashions remained, as usual, conservative.

Television made a great impact on the popularity of children's toys. Miniature sets ranked high in the Christmas sales, as did marionettes, puppets and cowboy suits—all a reflection of the most popular TV shows.

The cowboy and Indians revival among children was perhaps the outstanding children's fad of the year. This could be attributed to the TV revival of the "Hopalong Cassidy" sequences and its adaptation of "The Lone Ranger."

Other toys which were sold out included costumes of all sorts, plastic erector sets, Toni permanent wave dolls and Schmoos. The latter was a well-publicized replica of a comic strip character.

In popular music "bop" continued to surge in faddish popularity. Described in *Downbeat* magazine by Charlie Parker as "It's trying to play clean and looking for the pretty notes" it found more favour than ever with small band jazz enthusiasts. Its distinctive feature is a strong feeling for the off-beat. Tin Pan Alley tunes of the year included: "Mule Train," "Ghost Riders in the Sky" and musical hits such as "Some Enchanted Evening" from *South Pacific.*

In literature it is interesting to notice that on the best seller lists once again spiritual themes found their way to the top. Cookbooks and picture books were also popular especially as Christmas gifts, and children's books once again were often half toy.

In food, fads were limited. Caesar salad was in vogue through the summer and fall, and slot-machine hot dogs still prevailed

PYRAMID CLUB "TAKING," at the height of the fad in 1949. A variation of the 1935 chain-letter fad, pyramid clubs held out the promise of get-rich-quick results on an original investment of one dollar

in the larger cities.

As usual the teen-agers were responsible for innovations in speech. "How ——————— can you get?" the blank denoting space for such words as "smart," "stupid," "low," "corny" or "frantic," was the catch phrase of 1949, and "wizard" was the adjective that took the 1948 place of "terrific." (M. F. K.)

Falk Foundation, The Maurice and Laura: *see* Societies and Associations.

Falkland Islands.

A British colony consisting of two main islands and about 200 smaller islands in the South Atlantic. Area: 4,618 sq.mi.; pop. (1948 est.): 2,000. Governor: Sir Miles Clifford.

History.—A new constitution, granted at the end of 1948, came into force on Jan. 1, 1949. It provided for a legislative council consisting of the governor as president (with a casting vote only), three ex officio, three official and six unofficial members, two of which were nominated and four elected. The council held its inaugural meeting on March 4. The Colonial Development corporation announced that under its auspices a sealing venture had been launched. The Falkland Islands Dependencies survey ship, "John Biscoe," returned to Britain on July 14 after a successful voyage, marred only by the inability to relieve the post at Marguerite bay; it again sailed for the antarctic on Oct. 11 and reached Deception Island on Dec. 2. (*See* also Antarctica; Exploration and Discovery.) (Jo. A. Hn.)

Finance and Trade.—The currency is the pound sterling. Estimated revenue, 1949: colony £127,555, dependencies £114,330; expenditure: colony £151,698, dependencies £103,567. Imports (1948): colony £293,212, dependencies £2,043,335; exports: colony £321,384, dependencies £3,900,203.

Far Eastern Commission: *see* Japan; Reparations.

Farm Co-operatives: *see* Farm Credit Administration.

Farm Credit Administration.

The institutions and associations operating under the supervision of the Farm Credit administration in the United States and Puerto Rico continued to meet the sound credit needs of farmers and farmers' co-operatives in the year ended Dec. 31, 1949. The number of farmer borrowers increased over the previous year; the amount of money (capital stock owned) invested by farmers and farmers' co-operatives in their co-operative credit system was $11,729,113 more than at the end of 1948; and earned net worth increased substantially in the year.

The co-operative Farm Credit system operates through 12 district offices and through local co-operative credit associations. Farmers obtain credit to finance farm production (operating credit) from local production credit associations, and long-term farm mortgage credit through local national farm loan associations. Each farmer-borrower owns stock in his association equal to 5% of his loan. Farmers' business co-operatives deal directly with the bank for co-operatives of the district in which the co-operative is located or, in the case of a co-operative of large regional scope, with the Central Bank for Cooperatives. Each borrowing co-operative owns stock in the bank for co-operatives from which a loan is obtained.

Loans made to farmers and farmers' co-operatives by all institutions and associations of the Farm Credit administration in the year totalled $1,531,000,000, compared with $1,583,000,000 for the previous year. Credit needs of farmers reached a high level in the year, accelerated by farm commodity prices declining about 22% in the past two years while costs of farm production went down only 4%.

The 12 Federal land banks in 1949 closed 39,522 farm mortgage loans for $182,357,486 in the United States and Puerto Rico. At the end of the year they had outstanding 305,545 loans for $899,475,022. Funds used in making loans are obtained by the sale of consolidated farm loan bonds to investors. These bonds are not guaranteed by the United States government. Loans were made through national farm loan associations in the United States and direct by the Federal Land Bank of Baltimore in Puerto Rico. However, a change in the law in the year allowed farmers in Puerto Rico to form national farm loan associations. Also, the maximum size of loan was raised to $100,000.

The 503 production credit associations made 287,443 loans for $955,930,424 in the year, an increase of 3.4% over the previous year. The PCA's in the year increased their membership to 454,774, compared with 434,676 at the end of 1948.

Farmers' co-operatives—marketing, purchasing and business service associations—obtained $382,617,211 in operating capital, facility and commodity loans from the 13 banks for co-operatives in 1949, compared with $494,678,097 the previous year. The downward trend of farm commodity prices was reflected in the operations of farmers' marketing and purchasing co-operatives when they, like other handlers of agricultural products and supplies, were compelled to absorb some inventory and operating losses, and for the first time in many years found it necessary to adjust operations to buyers' market conditions.

The 12 federal intermediate credit banks, the principal sources of loan funds of the production credit associations and of part of the loan funds of the banks for co-operatives, as well as of certain types of privately financed credit institutions, made loans and discounts in the year totalling $1,589,000,000, compared with $1,546,000,000 in 1948. These funds were obtained principally through the sale of consolidated debentures to investors. These debentures are not guaranteed by the United States government.

Capital stock owned by farmers and farmers' co-operatives in Farm Credit institutions and associations went from $126,555,404 on Dec. 31, 1948, to $138,284,517 on Dec. 31, 1949, an increase of 9.3%. Capital stock of the 12 federal land banks totalled $57,885,528 on Dec. 31, 1949, compared with $55,917,766 the year previous, all of which was owned by farmer-borrowers either direct or through their national farm loan associations. Members of production credit associations owned $64,867,489 in capital stock of their associations, compared with $56,842,038 on Dec. 31, 1948. Government capital in the associations declined from $29,073,600 to $22,296,100 in the year. At the end of the year 116 associations were operating without government capital, compared with 52 on Dec. 31, 1948. Farmers' co-operatives increased their capital in the 13 banks for co-operatives from $13,795,600 on Dec. 31, 1948, to $15,531,500 on Dec. 31, 1949.

During the year, the Regional Agricultural Credit corporation of Washington, D.C., operating under the Farm Credit administration, was dissolved, and all functions relating to the corporation were transferred to the secretary of agriculture.

(I. W. D.)

Farm Debt: *see* AGRICULTURE.

Farmers Home Administration.

Expansion of services to farmers to include loans for farm houses and buildings was the major development of the Farmers Home administration in 1949. In the Housing act of 1949, approved July 15, the congress authorized this agency of the United States department of agriculture to make farm housing loans, at 4% interest, for periods up to 33 yr., to farm owners who need safe, sanitary homes and farm buildings but do not have resources to provide them and are not able to obtain necessary credit from other sources on reasonable terms. Small loans and grants for minor repairs to protect families' health and safety and loans for land enlargement and development also were authorized in special instances. Preference was given to war veterans and families of deceased servicemen.

Appropriations of $27,000,000 for farm housing loans and grants were approved Oct. 14 for the fiscal year ending June 30, 1950. The first loan was closed Nov. 17 in public ceremonies in Scottsboro, Ala., to enable a young farmer to build a modern six-room home on his 80-ac. farm. The house which had stood on the land for many years was far beyond repair and was torn down. Similar ceremonies were held during the remainder of the year to mark the closing of the first loans in various states.

Applications for other types of Farmers Home administration credit increased, particularly from veterans; there were about 20,000, or 32%, more applications filed by returned servicemen in the first ten months of 1949 than in the corresponding period of 1948.

Funds were available for approximately the same number of loans as in 1948, but the proportion of veterans' loans increased considerably. Through October, 108,489 operating loans and 1,417 direct farm-ownership loans were made, and 770 farmers and 21 farmers' associations in the 17 western states received credit for water facilities. About 45% of the $78,255,176 advanced in operating credit and 90% of the $11,772,958 loaned for farm purchase, enlargement and development went to veterans.

The mortgage insurance program, started late in 1947 to supplement the direct farm ownership loans, expanded rapidly. Banks, trust companies, insurance companies and private individuals advanced $9,438,085 in 1,339 farm real estate loans during the first ten months of 1949, and the Farmers Home administration guaranteed the repayments.

About 2,400 special loans to aid farmers who suffered losses from blizzards, floods, droughts or other production disasters were made in areas designated by the secretary of agriculture.

Farouk I

(1920–), king of Egypt, was born in Cairo on Feb. 11, the only son and eldest child of King Fuad I, and the great-great-grandson of Mohammed Ali, founder of the dynasty. In 1935, as Prince Said, he was sent to England to complete his studies. Upon his father's death on April 28, 1936, he returned to Egypt, where a regency council acted for him until July 29, 1937, when he was invested as king.

During the year 1949 rivalry of the palace and the Wafd party, led by Nahas Pasha, continued. On April 21, King Farouk received Husni ez-Zaim, the dictator of Syria. On Oct. 6 he solemnly exhorted the country to ensure the preservation and success of the coalition; but it was not long before party polemics destroyed the coalition cabinet (*see* EGYPT). Addressing the Arab league council on Oct. 30, he pointed out that there was still an empty seat at its table—that of Palestine. On Nov. 19, in connection with the celebrations of the centenary of the death of Mohammed Ali, the army presented to King Farouk a field marshal's baton.

Fashion and Dress.

With the 1949 spring openings it became evident that the silhouette was about to take a new and surprising turn toward the straight line reminiscent of the 1920s. The first indication was the shorter, tighter day-skirt, 14 in. above the floor and going up. The second manifestation was the appearance of a day-length evening dress, which, as the year went on, evolved into that most characteristic fashion of the 1920s—the chemise dress, straight as a string, beaded, embroidered or fringed, and either strapless or with narrow shoulder straps. There was much else on which to base the reminiscent trend: oval necklines, helmet hats, tight little *tailleurs,* crepe de Chine shirtwaist dresses, loosely fastened belts, dangle earrings, long ropes of pearls, paste hair-ornaments and tiaras for evening, and boyish windswept coiffures that strongly recalled the flapper era.

Since it was likely that the majority of women would hesitate over an immediate and complete acceptance of this revolutionary change in fashion, designers introduced many devices for making the transition easier. In Paris, for instance, the tight skirts in the spring collections were embellished with "flying panels," lengths of matching or contrasting fabric floating from the beltline to give a softer, less rigid silhouette. In the fall these were crisscrossed like shears and called "scissors panels." Other devices for softening the new straight lines were hip bows, flaring panniers, fans of pleats in back or front or at one side, tunic effects and bloused backs. The overblouse, in fact, became one of the year's biggest fashions and was seen everywhere over straight skirts and even over shorts on the beach. These overblouses were either long and fitted below the belt, or waist-length and tied with a drawstring or elastic-banded. Another important 1949 fashion point was the dropped shoulderline, which tended to shift emphasis to sleeves. Dropped shoulders and voluminous sleeves appeared on many suits, dresses and coats.

In 1949 style came to depend as much on fabric as on cut. For daytime, flat fabrics disappeared almost entirely. The most popular coatings were dobby woollens, thick fleeces, chinchilla cloth and tweeds. The devaluation of the British pound made excellent English tweeds available even in the less expensive brackets. Ottomans (ribbed silks and wools) were extremely popular. Piqué had its biggest summer, with damask-printed cottons, ribbed organdies and Swiss muslins also in abundance. For resort wear, rough, coarse linens were the fashion, particularly in black.

The use of nylon increased tremendously. Nylon underwear was in demand everywhere, and by midyear, there was a flood of dress fabrics that looked like crepe, seersucker, moire and worsted, all made of nylon yarn, all washable and quick-drying with no ironing necessary. The U.S. nylon bathing suit, usually strapless to allow an even suntan, was seen on all the fashionable beaches of the world. For evening wear, although velvet made a strong comeback and there was more chiffon than there had been in years, the textured fabric began to make itself felt in little ways. One of the most-talked-about dresses in the winter collections was a short, sleeveless dinner dress of a new, primitive, porous wool, rough as a shepherd's cloak. And, day and night, there was great emphasis on texture in accessories, with pigskin, fur, *glacé* kid, alligator and pin seal much used for bags, belts, shoes and gloves.

The short-hair fashion, which had been on the upgrade since the end of World War II, was completely accepted in 1949, and the hats of the year, therefore, were small and caplike; they included berets, pillboxes, bicornes and toques, with some models, such as close-fitting helmets and turbans, borrowed from the 1920s. One of the most popular hats of the year was the jockey cap, seen in all fabrics from felt to velvet, and worn jauntily to one side, with the brim over the ear. Dinner caps appeared at all the smart restaurants and clubs—little cups and eggshells of satin and velvet, often ornamented with jewelled dangles or feather upshoots.

Finally, an extremely significant change had taken place in the distribution of fashion. Paris designers, notably Dior, Fath and Schiaparelli, began to commute between New York and Paris. In Paris their collections were strictly made-to-order and extravagantly high-priced. In New York they designed for mass production at prices that made their models available to large numbers of American women. It looked, at year's end, as if a new and much more democratic era was dawning in the world of fashion and dress. (*See* also FURS.) (C. SN.)

FBI: *see* FEDERAL BUREAU OF INVESTIGATION.

Federal Bureau of Investigation.

Established in 1908 by Attorney General Charles J. Bonaparte, the FBI is the investigative arm of the United States department of justice. The jurisdiction of the Federal Bureau of Investigation extends generally to all federal crimes not specifically assigned to another agency of the federal government. Specifically, it is charged with the duty of investigating violations of the laws of the United States, collecting evidence in cases in which the United States is or may be a party in interest, and performing other duties imposed upon it by law. It is also a service agency aiding law enforcement in identification, technical, training and record matters.

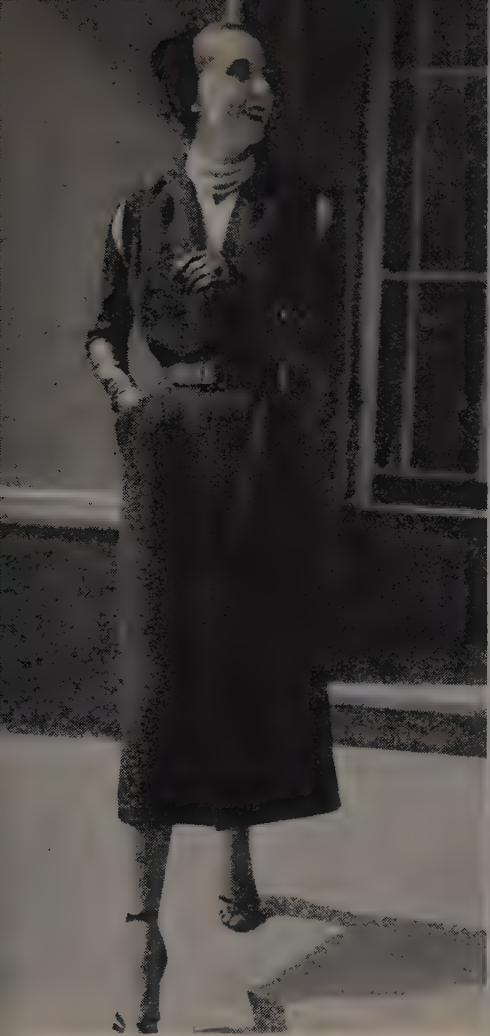
Originally, FBI jurisdiction covered about 20 or 30 federal statutes. Changing conditions necessitated more federal laws to control various forms of illicit interstate traffic and other varieties of large-scale criminal activity, and FBI jurisdiction expanded until in 1949 it embraced approximately 120 major federal laws.

As a result of the FBI's general investigative activity during the 1949 fiscal year, returns to the taxpayers totalling $100,477,335 were effected—in fines, savings, recoveries and Renegotiation act claims adjusted in favour of the government. This figure exceeded by more than $51,000,000 the entire cost of all FBI operations during the year.

During the 1949 fiscal year there were 8,415 convictions in cases investigated by the FBI with sentences totalling 20,077 years, 10 months and 13 days. In addition, there were two death and eight life sentences. There were 5,812 fugitives located and 10,005 automobiles recovered in all cases investigated. Of all persons brought to court in FBI cases, 97.2% were convicted, 93.9% of the convictions being on pleas of guilty.

Since the outbreak of World War II in 1939, the FBI has had the primary responsibility for collecting information relating to the general security of the nation. During the 1949 fiscal year the FBI handled a large volume of work in collecting and disseminating to other government agencies security information of official interest to them.

During the 1949 fiscal year in connection with the federal employees loyalty program, a total of 550,087 loyalty forms of incumbents, appointees and applicants were processed. Since the inception of the loyalty program on Aug. 1, 1947, a total of



bove: DAY-LENGTH DINNER DRESS of rough, heavy lack wool, reflecting emphasis on textured fabrics

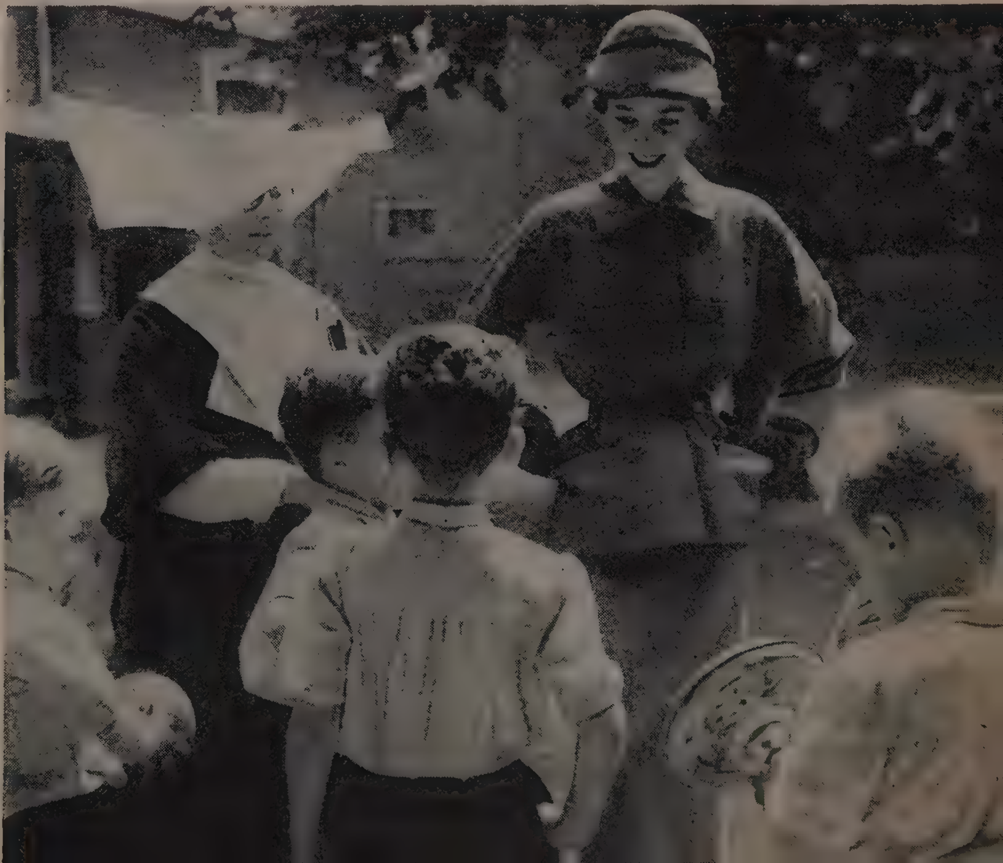
Below: THE FASHIONABLE 1949 SUIT, with overblouse, dropped shoulders and important sleeves



2,571,062 loyalty forms had been processed, 9,728 full field investigations had been initiated, and 9,104 of these investigations had been closed. As of June 30, 1949, there were 624 full field investigations pending and the FBI had returned to the U.S. civil service commission 2,561,046 applicant, incumbent and appointee forms marked "No Disloyal Data." This represented 99.6% of the total forms processed by the FBI. In this program, as in all its other investigations, the FBI was strictly a fact-finding organization. The facts collected were reported without bias, conclusions or recommendations. It was the responsibility of the employing agencies and the loyalty hearing boards to weigh the facts and to take or decline administrative action.

The identification division of the FBI received 3,508,480 fingerprint cards during the 1949 fiscal year, bringing the total number on file to 112,024,618. More than 73% of all arrest fingerprint cards received were identified, and 12,780 fugitives from justice were identified by fingerprint searches. There were 12,138 agencies contributing to this national repository of fingerprint records in 1949, and 79 foreign countries and territories were co-operating with the FBI in the international exchange of fingerprints.

The FBI laboratory received 88,435 specimens of evidence for examination, 70,503 of them in connection with FBI work, 2,241 of them from other federal agencies and 15,691 from non-federal agencies. These specimens required 102,327 scientific examinations of various types, the submission of written reports, testimony in 217 cases and depositions in lieu of testimony in 1 case.

Three sessions of the FBI National academy for local law-enforcement officers were completed during the 1949 fiscal year, bringing the number of graduates from this academy to 2,024, representing departments in every state in the union, all territorial possessions and many foreign countries.

Police training of the type offered in the National academy was made available to an estimated 75,500 officers attending 1,510 local police training schools in which the FBI participated during the year. (*See* also CRIME; JUVENILE DELINQUENCY; POLICE; SECRET SERVICE, U.S.) (J. E. H.)

Federal Communications Commission.

Technical improvements and policy decisions accomplished marked advances both domestically and internationally in practically all forms of electrical communication during 1949.

Standard broadcast stations mounted from 2,127 to 2,234 on the air or under construction, with 352 applications pending. Frequency modulation stations in operation increased from 700 to 740 with 48 applications pending. One hundred and eighty-eight FM construction permits and five FM licences were surrendered.

Issuance of new television construction permits remained suspended throughout the year pending a comprehensive study by the commission. Construction previously authorized went forward, however, and at the end of the year the number of stations on the air had advanced from 51 to 98, with 10 under construction. There were 350 applications pending.

In September the commission began a hearing on the possibilities of improving the existing very high frequency television system, of allocating additional channels in the ultra high frequency band and of authorizing colour. Colour systems were demonstrated by the Columbia Broadcasting system and the Radio Corporation of America. Color Television, Inc., was scheduled to give a demonstration in 1950.

The commission rescinded its ban against editorializing by broadcast licencees with the proviso that their stations continue to give a reasonably balanced presentation of all responsible viewpoints on particular issues.

Many of the numerous radio giveaway programs would be outlawed under an interpretation by the commission of a section of the criminal code on lotteries. The commission listed several types of programs which it considered violations of the statute and announced that it would not grant licences to applicants who broadcasted or proposed to broadcast such material. Enforcement of these new rules was being delayed pending the outcome of several suits seeking to enjoin the commission.

A series of decisions in the court of appeals for the District of Columbia circuit upheld the authority of the commission to review program plans and past performance in determining if an applicant had served the public interest.

A conference of the North American Regional Broadcasting Agreement signatories, which convened in Montreal, Que., in September to discuss a new agreement, recessed until the spring of 1950 without reaching an agreement. Vital problems of sharing frequencies were thus unsolved as the year ended, with grave danger of serious interference to radio service in all the countries if early agreement was not reached.

The use of radio on land mobile vehicles of various types was greatly expanded by the promulgation of new rules. While the demand for frequencies far exceeded the supply, it was nevertheless possible to provide for a number of new uses of radio, as well as expansion of existing services. This was made possible through further advances in equipment design and through the utilization of frequencies in the higher portion of the radio spectrum.

The new rules made specific provision for the licensing, on a regular basis, of such groups as the land transportation, petroleum, power, logging and construction industries, as well as of a number of others. In addition to providing facilities for these privately operated radio systems, frequencies were also allocated for use by communications common carriers serving the general public.

Western Union proposed to congress that it serve as the nation's single system of domestic and international record communications by acquiring the telegraph business of telephone companies and the international telegraph facilities of U.S. carriers and by establishing a domestic communications system for governmental use, both civilian and defense.

A marked improvement in global communications was anticipated as the result of the International Telegraph and Telephone conference at Paris. The resulting agreement reflected a high degree of success in modernizing rules governing operating practices and in revising the rate structure. About 70 nations participated. (*See* also RADIO; TELEVISION.) (W. CY.)

Federal Deposit Insurance Corporation.

The calendar year 1949 was the fifth consecutive year in which no depositor in an insured bank in the United States experienced a loss as a result of banking difficulties. During the year four banks with total deposits of nearly $6,000,000 received advances from the Federal Deposit Insurance corporation which facilitated the merger of each bank with a solvent insured bank. Depositors in these banks were fully protected against loss.

At the close of 1949 the surplus of the Federal Deposit Insurance corporation amounted to about $1,200,000,000, which had been accumulated from assessments paid by insured banks and from the return on the investments of the corporation. All the original capital stock had been repaid prior to 1949.

The contingent liabilities of the corporation as an insurer of bank deposits increased slightly during the year 1949 with the increase of total deposits in the 13,600 insured banks. An inrease during the last half of the year more than compensated or a decline of $5,000,000,000 during the first half.

The board of directors of the Federal Deposit Insurance corporation was composed of Maple T. Harl, chairman, Preston Delano, comptroller of the currency, and H. E. Cook. (*See* also BANKING.) (M. T. H.)

Federal Mediation and Conciliation Service.

The Federal Mediation and Conciliation service was created as n independent agency by the Labor Management Relations act f 1947. The function of the service is to prevent or minimize abour disputes which affect the free flow of commerce by assisting the parties to settle their disputes through conciliation and nediation. As a service to both labour and management, lists f arbitrators are provided from among whom one may be elected by the parties to render a final and binding decision in abour disputes.

During 1949 the service was called upon to assist in the settlement of several major labour disputes, including those affecting he coal, steel and aluminum industries. One of the most significant developments in the steel dispute was the appointment by the president of a steel fact-finding board with the power to ecommend to the parties a basis upon which the dispute might e settled. The board's major recommendation was that the teel companies place into effect a noncontributory pension und. It also recommended that no wage increase take place. While the unions were willing to accept the board's recommendations, the employers were not, and despite the efforts of he service to prevent a work stoppage from taking place a trike of 500,000 steelworkers did occur.

During 1949 the service employed approximately 200 commissioners. In the 12 months preceding June 30, 1949, the service eceived 20,841 dispute notices concerning disputes over contract negotiations involving 82,162 establishments. In addition, ,937 direct requests from either one or both parties were eceived inviting intercession of the service. The service accepted jurisdiction in 15,047 disputes and actively participated n the settlement of 7,046. In the remaining 8,001 disputes the ervice stood by ready to intercede, but the disputes were settled by the parties themselves without active participation of he service.

A preventive activities program was also being carried on by he service, the purpose of which was to improve the normal elations between the parties during the life of a contract so hat issues arising after contract expiration might be treated as nutual problems rather than as issues in dispute. It was the aim f the service to establish peaceful negotiation of contracts hrough effective collective bargaining by the parties themselves. (C. S. C.)

Federal Power Commission.

Power production in the United States reached an ll-time high in 1949. Electric utilities in the 12 months ended Nov. 30, 1949, produced for public use 290,427,498,000 kw.hr. f electric energy, the Federal Power commission reported, indicating a production of more than 291,000,000,000 kw.hr. in he calendar year. Industrial output was about 53,000,000,000 w.hr.; so that the total produced by utility and industrial lants was estimated at 344,000,000,000 kw.hr. Installed generating capacity of public utilities at the end of November was 1,575,110 kw., and capacity of industrial plants, including railroads and railways, was 13,418,242 kw. Adding the 485,000 kw. additions expected in December, the year's total increase in generating capacity was estimated at 5,500,000 kw. Five million farms had been electrified, statisticians reported, and the utilities added 2,000,000 customers to their lines, making a total of nearly 43,000,000. Applications for preliminary permits, licences and amendments filed with the commission in the fiscal year involved, after deducting for conflicting applications, ultimate installations of nearly 2,850,000 h.p., more than double the 1,300,000 h.p. total of the previous year. The 178 applications pending involved ultimate new installation of 5,200,000 h.p., approximately 87% of the 5,922,000 h.p. installed capacity of the hydroelectric projects which were already under licence.

Determination of the actual original cost of electric utilities, a task upon which the commission had been engaged for almost a decade, was nearing completion. To June 30, 1949, dispositions of excess over original cost aggregating $1,448,899,283.74, by 251 public utility companies had been authorized, and attention was being concentrated on investigations of the plant accounts of natural gas companies under the commission's jurisdiction.

River-basin studies in co-operation with the army corps of engineers and the bureau of reclamation involving the feasibility of hydroelectric installations resulted in specific reports on projects having a potential capacity of about 4,800,000 k.w. capable of generating annually about 29,000,000,000 kw.hr. Three Missouri river basin power-market surveys were published; a five-state New England survey was completed; a state survey of Nevada was made, as well as a report on power markets and developments in the Pacific northwest; and ten other surveys were in progress.

Natural gas became one of the nation's fastest growing industries, work being rushed on new pipe lines to almost all parts of the country. Transcontinental Gas laid 600 mi. of its 1,180-mi. pipe line to supply the New York city-New Jersey area. Tennessee Gas Transmission was extending its system to Buffalo, N.Y., increasing capacity to 1,000,000,000 cu.ft. per day. Texas Eastern, owner of the "Big Inch" lines, projected new lines that would raise its capacity to more than 1,000,000,000 cu.ft. All three systems were planning extensions to serve New England cities. The gas supply of Detroit, Mich., was substantially increased and service extended to Milwaukee, Wis.; Minneapolis and St. Paul, Minn., were supplied by new lines from the Hugoton field. St. Louis was enabled to change to natural gas, and a new line was completed to Kansas City, Mo. Baltimore, Md., received natural gas and Washington, D.C., supply was increased by lines from West Virginia. Southern California received vast quantities of Texas and New Mexico gas, and new lines by El Paso Natural Gas Co. and Pacific Gas and Electric were under construction to supply the San Francisco bay area. Construction was proceeding on lines to serve Nashville, Chattanooga, Knoxville and other Tennessee points. Two companies were competing to supply Virginia cities, one proposing also to serve North and South Carolina. Southern companies proposed large extensions in Mississippi, Alabama, Georgia and Florida. A new Texas-Illinois pipe line was projected to increase Chicago's gas supply. Construction of the new Trunkline Gas Supply line would largely increase Panhandle Eastern Pipe Line Co.'s capacity. Texas Gas Transmission had almost completed its line from Carthage, Tex., to Middletown, O. Cities Service, Colorado Interstate, Columbia, Consolidated and other systems built new lines. United Gas Pipe Line Co., operating in Texas, Louisiana and Mississippi, was reported as having a capacity of 2,000,000,000 cu.ft. per day. Since 1942 the Federal Power commission had issued 446 certificates of public convenience and necessity authorizing the construction of 27,500 mi. of pipe lines and 1,603,000 compressor horsepower with an estimated cost of $1,628,500,000. Applications for certificates pending on June 30, 1949, involved proposed additional expenditures of $922,807,000.

After serving ten years, a large part of the time as chairman, Leland Olds of New York retired from the commission, the senate having refused to confirm his nomination for a third five-year term. He was succeeded by Mon C. Wallgren. Nelson Lee Smith of New Hampshire continued as chairman, and the other members of the commission were Claude L. Draper of Wyoming, who had served since the commission was reorganized in 1930, Harrington Wimberly of Oklahoma and Thomas C. Buchanan of Pennsylvania. (J. W. Je.)

Federal Reserve System.

In view of the changing credit situation and the downward readjustment in business, the federal reserve system took steps during 1949 to relax measures of monetary and credit restraint adopted earlier to combat inflation.

During the year, federal reserve holdings of government securities declined $4,400,000,000, of which $3,800,000,000 took the form of a reduction in holdings of marketable bonds. The federal reserve banks sold long-term restricted issues to savings banks and private pension and trust funds. The liquidity position of commercial banks was increased through their acquisition of substantial amounts of short-term government securities with funds released by reductions in reserve requirements.

On June 28, the federal open market committee, after consultation with the treasury, announced that "it will be the policy of the Committee to direct purchases, sales, and exchanges of Government securities by the Federal Reserve banks with primary regard to the general business and credit situation." While it was stated that "the policy of maintaining orderly conditions in the Government security market, and the confidence of investors in Government bonds will be continued," it was noted that "under present conditions the maintenance of a relatively fixed pattern of rates has the undesirable effect of absorbing reserves from the market at a time when the availability of credit should be increased." Later, on Dec. 3, in testimony before the Douglas subcommittee of the joint congressional committee on the economic report, the chairman of the board of governors of the federal reserve system stated that he regarded the announcement "as a significant milestone because it reflected the joint judgment of the Treasury and of the Federal Open Market Committee that the postwar economic and financial situation had evolved to a point where open-market operations could safely be permitted to play a more orthodox role in our policies," and noted his regard for "June 28, 1949, as a most important date" because "it signified removal of the strait-jacket in which monetary policy had been operating for nearly a decade; that is, since the beginning of the war."

Reserve requirements for member banks were reduced substantially during 1949. At the beginning of the year, reserve requirements against net demand deposits were 26% for central reserve city member banks, 22% for reserve city member banks and 16% for country member banks, while reserve requirements against time deposits at all member banks were 7½%. At the end of the year, reserve requirements in effect were 22% against net demand deposits for central reserve city member banks, 18% for reserve city member banks and 12% for country member banks, with a reserve requirement of 5% against time deposits at all member banks.

These reductions were brought about in three steps. On April 28, the board of governors lowered reserve requirements effective early in May; on June 30, the temporary authority granted by congress for increased reserve requirements expired, and reserve requirements were further reduced; and again, on Aug. 5, the board of governors announced another reduction in reserve requirements effective in steps during August and early September. The reductions in reserve requirements during the year caused required reserves of all member banks in Jan. 1950 to be $4,000,000,000 less than what they would have been on the basis of requirements in effect in Jan. 1949.

Regulation W, relating to consumer instalment credit, was twice eased by the board of governors in the first part of 1949. Effective March 7, the standard maximum maturity on all extensions of consumer instalment credit was made uniformly 21 months instead of 15–18 months, and minimum down payments on furniture, appliances, etc., were reduced from 20% to 15%. Effective April 27, the maximum maturity on consumer instalment credit was further increased to 24 months, and the minimum down-payment requirement on furniture, appliances, etc., was further reduced to 10%. In both revisions the 33⅓% minimum down payment on automobiles was retained. On June 30, the temporary authority granted by congress, under which the board of governors issued Regulation W, expired, and the regulation was not continued after that date.

Effective March 30, the board of governors amended the supplements to Regulations T and U so as to reduce the margin requirements for purchasing registered securities from 75% to 50%. These requirements were applicable both to purchases of securities and to short sales. Other amendments to Regulations T and U, effective May 16 and July 20, increased the loan value for securities acquired through the exercise of subscription rights and removed margin requirements applicable to credit for financing the functions of specialists on the New York Stock exchange. (*See* also BANKING; CONSUMER CREDIT.) (J. K. L.)

Federal Security Agency.

June 30, 1949, marked the completion of the first ten years of the Federal Security agency's operation. Though most of its constituent units were older than the agency, their activities had in general their greatest expansion and development in this period. The major constituents include the office of education, public health service, Social Security administration, office of vocational rehabilitation (q.v.) and Food and Drug administration. Integration of agency operations at the regional level is achieved through ten Federal Security regional offices.

On Aug. 20, 1949, the bureau of employment security, part of the Social Security administration, was transferred to the department of labour by the President's Reorganization plan no. 2 of 1949.

As in the past few years, one of the major concerns of the office of education during the year was the teacher shortage, still critical for elementary schools, and the serious shortage of adequate school buildings to house a record-breaking school population.

Federal grants to states for general public health work, tuberculosis, venereal diseases, cancer and mental health are administered by the public health service. These grants, totalling $36,400,000 in the fiscal year, were the largest in history, as were the amounts appropriated by states and localities for these purposes. In the hospital construction program, all states and territories had completed their surveys and plans by the end of the fiscal year, and almost 800 projects had been approved for grants. Grants actually made totalled $10,800,000. In July 1949 the Hospital Survey and Construction act was amended to increase to $150,000,000 the annual federal amount authorized (through June 1955) to assist states and communities in construction of hospitals and health centres. The amendments also established in the public health service a program of research and demonstrations on hospital administration.

In addition to long-term research projects carried on by the ational Institutes of Health, approximately $2,000,000 in rants and contract authorizations was allocated to seven in- itutions for the construction of additional research facilities cancer and in cardiovascular, mental and nervous diseases. he service's research fellowship program also made advanced esearch training available to 430 scientists.

The social security programs for which the Social Security dministration has federal responsibility continued to afford rotection to insured wage earners and their families against e risks of income loss through old age, involuntary unemploy- ent or death of the family earner. At the end of the fiscal year 949, monthly benefits totalling $51,500,000 were being paid nder the old-age and survivors insurance program to more than ,500,000 persons—retired workers and their wives and de- endent survivors of deceased insured workers. During the fiscal ear the state-federal unemployment insurance system paid out 1,193,000,000 to about 5,600,000 unemployed workers who ualified on the basis of their previous employment and for hom suitable jobs could not be found. For certain needy groups f the population, also, the special state-federal public assistance rograms helped maintain family income. In June 1949, pay- ents were made to about 2,600,000 recipients of old-age as- istance, 71,200 recipients of aid to the blind and nearly 1,370,- 00 children in 540,000 families receiving aid to dependent chil- ren. In the maternal and child-health and child-welfare pro- rams, federal grants totalling $22,000,000 were made to states o assist them and local communities to extend and strengthen heir health and welfare services for mothers and children.

The state-federal programs of vocational rehabilitation for ivilians, for which the office of vocational rehabilitation admin- sters federal grants and provides technical assistance to the tates, served a record number of disabled persons. During the scal year 1949, 58,000 were rehabilitated into self-sustaining mployment. Another 11,250 were awaiting only a final decision hat they and their employers were mutually satisfied. A third roup of 11,000 were prepared to enter gainful employment.

The Food and Drug administration examined about 70,000 samples of foods, drugs and cosmetics in the fiscal year to check observance of the federal statute by the more than 77,000 firms doing interstate business in these commodities. Nearly 2,200 seizure, criminal and injunction actions were instituted in the federal courts for violation of domestic shipments, and about 6,400 imported products that failed to meet U.S. standards were detained at ports of entry. (*See* also DRUG ADMINISTRATION, U.S.; PUBLIC HEALTH SERVICES; SOCIAL SECURITY; VOCATIONAL REHABILITATION, OFFICE OF.) (O. R. E.)

Federal Trade Commission. The Federal Trade commission administers a group of laws designed to foster the successful operation of the economic system of free competitive enterprise in the United States. Some are designed to prevent buyers from receiving false or misleading information; others are designed to keep channels of trade open and ensure the widest possible choice for buyers and sellers, at prices arrived at freely and offered without illegal discrimination. All are grounded on the economic principle that the well-being of the country and of its individual citizens depends upon free and fair competition in an open market.

Under the Federal Trade Commission act, the commission takes steps to prevent use of deceptive and unfair methods of competition. Under the Clayton act, it takes action to prevent substantial lessening of competition through unlawful price or related discrimination, exclusive dealing contracts, acquisition of corporate stocks, or interlocking directorates. Under the Webb-Pomerene Export Trade act, it supervises the registration and operation of associations of U.S. exporters. Under the Wool Products Labeling act, it takes steps to protect producers, manufacturers, distributors and consumers from the unrevealed presence of substitutes and mixtures in manufactured wool products. Under the Lanham Trade-Mark act, it has power to apply for cancellation of registered trade-marks which are deceptive, immoral or scandalous, or have been obtained by fraud or are contrary to other provisions of the act.

In administering these laws, the commission carries on its

EMONSTRATION UNIT of the U.S. public health service at work in 1949, howing elementary school pupils of Hartsville, S.C., how to use sodium fluoride their daily dental care activities through formal complaint and trial methods and through voluntary co-operative procedures, including individual stipulation agreements, industry-wide trade practice conferences and other types of co-operation with businessmen to inform and guide them concerning the scope and meaning of the laws. It also carries on general investigations of economic conditions.

During the year ending June 30, 1949, the commission issued 96 formal complaints and 47 orders to cease and desist from unlawful practices. It accepted 139 voluntary stipulations to discontinue unlawful practices and promulgated trade practice rules for the following industries: handkerchief; yeast; oil heating (New England); trade pamphlet binding (New York); and rayon, nylon and silk-converting. Existing rules for the cotton-converting industry and the baby-chick industry were revised and extended. Conferences concerning proposed rules were held for 14 other industries. The commission also completed an investigation and made recommendations for the future conduct of the business of the Pipe-Fittings & Valve Export association in accordance with the Webb-Pomerene Export Trade act. It also carried on investigations of Carbon Black Export, Inc., and Pacific Forest Industries under the same act. Forty-five export associations were registered with the commission on June 30, 1949. The commission carried on compliance work, under the Wool Products Labeling act, with thousands of manufacturers, distributors and dealers and made field inspections in 39 states. It also used its powers under the Lanham Trade-Mark act, which became effective July 5, 1947, to file two petitions for the cancellation of trade-marks with the commissioner of patents. The Federal Trade Commission act and the Clayton act became applicable to the interstate insurance business on July 1, 1948, insofar as the business is not regulated by state law. The commission, therefore, continued to study state insurance legislation, held trade practice conferences in the mail order insurance field and carried on other investigations of insurance matters.

During the year ending June 30, 1949, the commission completed a report on "The Concentration of Productive Facilities" and on "The Fertilizer Industry." It issued quarterly financial reports based on the operating statements of about 8,500 manufacturing corporations, presented data on concentration in manufacturing industries before the subcommittee of the house judiciary committee and made exploratory economic investigations as a basis for developing a program for antimonopoly cases.

In recent years, the commission has placed increased emphasis on industry-wide elimination of unlawful trade practices. It has, therefore, expanded the voluntary and co-operative phases of its work to expedite widespread understanding and observance of the law. Under its trade practice conference procedures, for example, it is possible to work toward voluntary elimination of unlawful trade practices on an industry rather than an individual company basis. Such a program permits the commission to use its powers under the laws it administers most effectively to prevent practices leading toward monopoly and to promote practices resulting in fair competition. (L. B. Mn.)

Fencing. The number of entries in the 1949 national championships was the largest in the history of fencing in the United States. A new system of deciding the individual championships was tried. This consisted of fencing the usual pool system until there were eight survivors. The eight survivors were then matched in ten touch bouts for men and eight touch bouts for women, with a winning margin of two touches required in direct elimination. This was a slight modification of the new system tried out in the international championships held in 1949 in Cairo, Egypt.

In the team events, the Fencers club of New York won the foil team championship for the first time since 1936 with the Salle Santelli of New York second and the New York Athletic club third. The Salle Santelli retained its three team titles, sabre, épée and three-weapon. In the sabre the Washington, D.C., Fencers club was second with Salle Montague of New York third. In the épée team event Salle Montague was second and the University of Chicago third. In the three-weapon team the New York Athletic club was second and the Fencers club of New York third. The Faulkner School of Fencing of Los Angeles, Calif., successfully defended its women's team titles.

The women's individual championship was won by Miss Polly Craus of the Faulkner School of Fencing who defeated Mrs. Maxine Mitchell of the Cavaliers of Pasadena, Calif., in an overtime bout 9-7. Mrs. Dolly Funke of the Fencers club defeated Miss Grace Acel of the Salle Santelli 9-5 for third place.

In the épée individual, defending champion Norman Lewis of the Salle Santelli defeated John Donaldson, U.S. army, 10-3 for the title. F. R. Weber, U.S. army, defeated George B. Calkins of the Philadelphia, Pa., division 10-7 for third place.

The men's foil individual went to Daniel Bukantz of the Fencers club who defeated his clubmate Charles Steinhardt 10-8. Silvio Giolito of the New York Athletic club defeated the defending champion Nathaniel Lubell of the Fencers club 11-9 for third.

For the first time in history a foreign visitor to the U.S. won the national fencing championship when Umberto Martino, Italian military attaché to the embassy in Washington, defeated George Worth of the Salle Santelli 10-8 for the sabre championship.

In the Pacific coast championships, Alfred Snyder of the Olympic club of San Francisco, Calif., won the men's foil. Gary Martin of the Aldo Nadi studio of Los Angeles was second and Salvatore Giambra of the Olympic club was third. Bruce McBirney of the Faulkner School of Fencing won the épée with Pierre Paret of the Halberstadt School of Fencing of San Francisco second and Del Reynolds of the Los Angeles Athletic club third. The sabre was won by Salvatore Giambra of the Olympic club.

The women's championship went to Miss Polly Craus of the Faulkner School of Fencing with Mrs. Maxine Mitchell and Miss Camille Bayer, both of the Cavaliers, second and third respectively. The Olympic club took the foil and sabre team titles and the Faulkner School of Fencing won the épée and women's team events.

In the midwest championships, all of the 1948 winners repeated. Byron Krieger of the Salle de Tuscan of Detroit, Mich., in foil and sabre, Miss Paula Sweeney of the same club in the women's foil and Albert Wolfe of Kentucky in the épée. Arthur Cohen of the Illinois division was second in foil with Edgar Micllef of Michigan third. Scott Breckinridge of Kentucky was second in épée and Lional Bernstein of Illinois was third in both épée and sabre. John Westley of Illinois was second in sabre. Mrs. June Krieger, wife of the foil and sabre champion, was runner-up in the women's event and Miss Carol Christensen of Michigan third. (W. A. Dw.)

Fertilizers. Nitrogen, phosphoric acid (P_2O_5) and potash (K_2O) are the three primary plant nutrients and they usually constitute the statistical factors used to record commercial fertilizer data. In the year ended June 30, 1949 world consumption of commercial fertilizers and fertilizer ma erials (exclusive of U.S.S.R.) included 3,292,000 tons of nitro-en, 4,966,000 tons of phosphoric acid and 3,220,000 tons of otash, increases respectively of 44%, 42% and 37% above e prewar average. During that year Europe continued as a et exporter continent to the extent of 166,000 tons of the ombined nutrients; South America remained a net exporter of 05,000 tons, while North America changed to a net exporter f 279,000 tons. Africa was a net importer of 165,000 tons, sia of 445,000 tons and Oceania of 11,000 tons. The change f North America from an importing to an exporting continent as caused by the shipment of large quantities of fertilizer rom Canada and the United States to occupied areas in Ger-any, Japan and Korea. Large shipments of fertilizers were lso made to China.

In 1948 there was estimated to be a world shortage of 1,000,-00 tons of nitrogen for agricultural purposes. It was estimated, owever, that world nitrogen production in the year 1949–50 ould amount to 3,864,000 tons against programmed con-umption of 4,119,000 tons, which would reduce the shortage or that year to 255,000 tons. Continued rehabilitation of war-orn plants in Europe and Japan, and construction of new xation facilities in various countries were expected to balance itrogen demand and supply by about 1951.

Total world production (including U.S.S.R.) of phosphate ock in 1948–49 reached 18,082,000 metric tons of material veraging about 32% P_2O_5; about one-half came from the Jnited States, one-third from North Africa, one-eighth from J.S.S.R. and one-twentieth from the Pacific islands. Known vorld reserves of commercial grades of phosphate rock were stimated at more than 26,000,000,000 tons with the principal leposits lying in the United States, North Africa, U.S.S.R. and ertain islands in the South Pacific.

The use of radioactive isotopes of plant nutrients as research ools to determine when and how plants utilize their sources of lant foods continued during 1949. These studies afforded nuch information as to the proper time for fertilizers to be pplied to each individual crop, the best location and method or the placement of fertilizers to each crop, and the degrees o which crops utilize plant nutrients added in the form of ertilizers and those already in the soil.

The fertilizer industry continued its chemical and mechanical esearch to discover new and better methods of production of utrients available to plants and to improve existing methods. ustained increases in production of atmospheric nitrogen far bove designed capacities were achieved in many plants. Grow-ng concern over the dwindling reserves of sulphur for the pro-luction of sulphuric acid, a necessary ingredient in the pro-luction of superphosphate, stimulated research into other meth-ds of making the phosphoric acid of phosphate rock available o plants as food. Electric furnace volatilization and recovery, nd direct heat and fusion processes were being successfully perated technically though the economies of such processes pparently did not permit competitive commercial operation. *See* also AGRICULTURE; TENNESSEE VALLEY AUTHORITY.)

Finland. An independent republic of northern Europe, Finland has an area of 130,159 sq.mi., including the Åland Islands. Pop. (census 1940) 3,887,217; (by tax list, Jan. 1, 1947) 3,849,097; (mid-1948 est.) 3,958,000. Capital: Helsinki (pop. Jan. 1, 1947, tax list figures) 358,195. Other principal cities: Turku (Åbo) 93,735; Tampere 93,665. Language and nationality: 90% Finnish, about 10% Swedish. Religion: Lutheran Christian. President 1949: Juho K. Paasikivi; prime minister: Karl August Fagerholm.

The Åland Islands, a Swedish-populated archipelago belonging to Finland, lie to the southwest at the mouth of the Gulf of Bothnia. Area: 581 sq.mi. Pop. (tax list, Jan. 1, 1947) 22,787. Chief town: Mariehamn, pop. 3,239.

History.—Finland in 1949 still lay between the forepaws of the Russian bear, still looked out to the west. When Sweden had to decide whether to join the North Atlantic Treaty (*q.v.*) or to stand aloof, it was with one eye on Finland that it decided to remain neutral. Sweden wanted to take no overt step which might antagonize the Soviet Union or excuse any further penetration of Finland—for that would bring the U.S.S.R. to Sweden's own doorstep. Finnish officials expressed satisfaction with the Swedish attitude.

The Russians complained bitterly about the western-mindedness of the Finns, and in press and radio lashed out at Premier Fagerholm. In February it looked as if the combination of outside pressure plus the pincers attack of both right and left at home might force the Social Democrats out of office. But after various reballotings the government squeezed by with a vote of confidence, 97 to 95.

The most dramatic test of government strength came in August when the Communists built up a strike of lumber workers into an all-out campaign against public order and the administration. Troops were quickly sent to the centre of trouble at Kemi, and the government wavered neither in firmness nor self-restraint. Communist leaders then ordered strikes in other industries—transport, food, building and the metal trades. The whole Communist issue was out in the open in Finland; when the purpose of the Communist trade union leaders became clear many non-Communist members simply would not follow their orders. The executive committee of the Federation of Trade Unions voted 8 to 6 to expel the striking Communist-led unions. Two strikers at Kemi were killed in a clash with police, and the Communists called for a general strike on the day of their funeral, Sept. 1. That same day the parliament calmly opened its autumn session; there were demonstrations but no incidents. A delegates' meeting of the trade union federation met a few days later and confirmed the action of its executive committee. There might be two sets of unions, one Communist and one non-Communist (perhaps as many as 130,000 of the 300,000 federation members were Communist), but there would be no united labour front against the government.

By Sept. 6 the strike wave was an admitted failure. The Agrarians still opposed the agricultural price policy, and workers still suffered hardship because of the currency devaluation and other pressures on the national economy. By December unemployment was rising seriously. The situation was so critical that it was suggested that the presidential election set for January be called off. Paasikivi agreed to continue, if re-elected, and in him most of the parties had faith.

Plans for the nationalization of key industries, drawn up by a nationalization committee appointed by the former coalition government, were in December shelved. The existing government was itself Social Democratic, but was dependent for parliamentary support on the bourgeois parties, not on the "folk-democrats" which had once formed part of the coalition. Actually the government moved slightly in the direction of more free enterprise: in July it abandoned the subsidy of grain and doubled the price of grain (to 20 markkaa per kilo for wheat and rye). For the producer this meant a net increase of 20%; for the consumer a doubled price for breadstuffs was partially offset by reduction of the general turnover tax from 10% to 5%.

Prices had (in July) declined about 6% since the peak of 1948, and wages had declined by 5% through automatic adjustment. The cost of living index nevertheless stood at 814 in July (with 1938–39 as 100). The government felt it necessary to devalue the markka by 17.7% (July 5) in relation to foreign currencies. In September, when Britain devalued the pound, Finland accepted another reduction of 30.5%, because of the vital importance of the British market for Finnish pulp.

Despite its economic and financial difficulties Finland continued to enjoy good credit abroad. In August the International Bank for Reconstruction and Development (World bank) granted a loan of $12,500,000. The government of Finland guaranteed the loan, to be repaid by 1964; the Bank of Finland was to relend the money for modernization in the woodworking industries, and small amounts for cement and electric power development. Finland also made arrangements to repay its debts of about $120,000,000 to Sweden; the Swedish government credits of $91,000,000 were consolidated as of Dec. 31, 1949, into one loan to be repaid at 3% by the year 1983.

In August the U.S. congress agreed to set aside all further payments of the World War I debt of Finland to the U.S. totalling about $8,000,000, for cultural interchange between the U.S. and Finland, including equipment for Finnish colleges, education of Finns travelling to the United States and academic enterprises of U.S. citizens in Finland.

Education.—(1947) Schools: elementary 6,036, pupils 463,400; secondary 299, pupils 81,160; training colleges 8, students 1,341; high schools for adults 71, pupils 4,400; technical schools 444, pupils 35,480. Universities (1948) 3, and institutions of higher education (1948) 4, students 13,500, professors and lecturers 936. Illiteracy (1930) 0.9%.

Finance and Banking.—Budget: (1948) revenue 72,494,000,000 markkaa, expenditure 72,445,000,000 markkaa; (1949 est.) revenue 98,531,000,000 markkaa, expenditure 98,506,000,000 markkaa. National debt (Dec. 1948): 121,617,000,000 markkaa. Currency circulation (July 1949): 28,252,000,000 markkaa. Gold reserve (Aug. 1949): U.S. $6,000,000. Bank deposits (Sept. 1949): 23,100,000,000 markkaa. Monetary unit: markka with an exchange rate of 231 markkaa to the U.S. dollar (Dec. 15, 1949).

Foreign Trade. Imports: (1948) 66,440,000,000 markkaa; exports: (1948) 68,050,000,000 markkaa (excluding 11,550,000,000 markkaa reparations to the U.S.S.R.).

Transport and Communications.—Roads (1946) 37,242 mi. Licensed motor vehicles (June 1949): cars 19,900; commercial vehicles 33,237. Railways (1948): 3,084 mi.; passenger-journeys 44,000,000; freight traffic 15,000,000 tons. Shipping (July 1948): merchant vessels 297, total tonnage 457,437. Wireless licences (1948): 680,000. Telephones (1947): 264,231.

Agriculture.—Main crops (metric tons, 1948): wheat 265,000; barley 214,000; oats 640,000; rye 199,000; potatoes 1,950,000; root vegetables 837,000; cultivated hay 2,425,000; hemp and flax (1946) 2,700. Livestock (March 1948): cattle 1,452,000; sheep 999,000; pigs 304,000; horses (March 1949) 395,000; chickens 1,918,000. Production (metric tons, 1948): milk 1,750,000; butter 30,000; cheese 7,000; meat (including offal) 110,000. Fisheries: total catch (1947) 46,000 metric tons.

Industry.—(1946) Industrial concerns 5,691; persons employed 236,723. Fuel and power: electricity (1948): 2,780,000,000 kw.hr. Raw materials (in metric tons, 1947): pig iron 70,182; ferroalloys 455; steel ingots 71,459; steel castings 5,216; copper (mine production, 1948) 23,322; cobalt 50; nickel 82; selenium 617; gold (fine troy ounces) 10,642; silver (fine troy ounces) 188,821. Forest products (1948): sawn goods 815,000 standards; cellulose 1,080,000 metric tons; mechanical pulp 138,000 metric tons; newsprint 328,000 metric tons; other paper 233,000 metric tons; board and cardboards 139,000 metric tons; plywood 210,000 cu.m.

Fire Insurance: *see* INSURANCE.

Fires and Fire Losses.

In 1949 the value of property destroyed in the United States by fire, including lightning, declined to $667,536,000 from an all-time maximum of $711,114,000 in 1948, a reduction of 6.1%. These figures covered incurred losses reported to the National Board of Fire Underwriters by member companies and included an allowance for unreported and uninsured losses.

The largest amounts of loss by months, in 1947, 1948 and 1949, occurred in March 1947 and 1948 and in December 1949. The smallest amounts occurred in September 1947, August 1948 and Oct. 1949. There was no major conflagration in the United States in 1949, but there were five fires causing losses of about $1,000,000 each and six others where the losses ran between $500,000 and $1,000,000.

The total fire waste for the ten-year period ending with 1949 was 42% more than in the preceding ten years. From 1940, when the loss by fire was $306,469,000, to the peak year of 1949, the total increased every year, except for a $7,000,000 decline in 1943. (*See* also DISASTERS; FORESTS).

Fish and Wildlife Service: *see* FISHERIES; WILDLIFE CONSERVATION.

Fisheries.

The world catch of fish during 1949 was estimated as about 39,000,000,000 lb. Production by European nations was above the prewar figure, and large increases occurred in South Africa as latent or previously undiscovered fishery resources were developed. For North America as a whole, the catch exceeded the prewar level; production in Latin America and parts of Asia showed an upward trend.

Expansion of fleets and exploration of new grounds characterized the fisheries of many nations during the year. Angola began investigation of accessible tuna resources with a view of developing a canning industry, and Norway, which during 1949 undertook tuna fishing on a small scale, considered expansion of the industry and for the first time offered frozen tuna in United States markets. New sardine canning plants were established in South Africa. Iceland arranged for the construction of 10 new fishing trawlers in Great Britain, and the United States army bought 12 New England trawlers and sent them to Germany as an aid to food production in that country. The fishing industry of Mexico bought a number of Gulf and Pacific coast boats from the United States.

The United States was represented by participating delegates or observers at an unusual number of international meetings and conferences which had as their subject the conservation of fisheries, the pooling of scientific information regarding fishery resources and the co-ordination of effort leading to the better development and utilization of these resources.

The Indo-Pacific Fisheries council met at Singapore in March to discuss problems relating to the scientific investigation and development of the fisheries of that area. This was the first of a series of regional councils proposed by the Food and Agriculture organization of the United Nations for the development of the fisheries of the world. At a special meeting called by F.A.O. in Rome in September, the establishment of a second council, this time for the Mediterranean, was discussed.

A special committee of the International Council for the Exploration of the Sea met in Malaga, Spain, in May to consider the tuna fisheries of the Atlantic and Mediterranean waters and to provide means of exchanging scientific information and co-ordinating research on tunas, one of the most important groups in the fisheries of the world.

The United Nations Scientific Conference on the Conservation and Utilization of Resources, which met at Lake Success, N.Y., in August, gave prominence to discussions of the conservation of marine and fresh-water fisheries. Opportunities for developing the fisheries of the Gulf of Mexico and the Caribbean sea were discussed at a meeting of the Gulf and Caribbean Fisheries institute at Miami Beach, Fla., in November.

The first meeting of the International Whaling commission as held in London, England, in May to adopt bylaws, select ermanent headquarters, appoint a permanent secretariat and iscuss changes in current international whaling regulations. he commission was appointed under an International Whaling greement to co-ordinate scientific research on whales and regute whaling activities throughout the world. Norway, Great ritain, Japan and the Soviet Union remained the world's foreost whaling nations in 1949. The United States operated only ne shore station, at Eureka, Calif. No United States factory ips had worked in the Antarctic since 1940.

Three new international conventions affecting fishery matters ere approved by the United States senate during the year: 1) the International Convention for the Northwest Atlantic isheries; (2) the Convention between the United States and Iexico for the Establishment of an International Commission or the Scientific Investigation of Tuna; and (3) the Convenon between the United States and Costa Rica for the Establshment of an Inter-American Tropical Tuna Commission.

The United States fleet, through reduced building of new raft, was somewhat smaller than in 1948. One thousand new shing boats were documented in 1949, 184 less than the numer documented the previous year. Sales of vessels to other ountries further reduced the size of the domestic fleet.

The total catch by United States fishermen showed little hange as compared with recent years and was expected to total bout 4,500,000,000 lb. However, the trend toward lower prices oted during the concluding months of 1948 continued, with the esult that the total value of the catch to fishermen was less han $300,000,000, its lowest value since 1946. Even canned sh brought less than in 1948, although the pack was larger, eaching 800,000,000 lb. Fish oils, vitamin oils and fish meals hared in the price decline. Imports of fishery products coninued to increase, exceeding exports.

The United States government vigorously pursued its proram of research and exploration in waters of the United tates and its possessions. Three vessels were scheduled for use n fishery research and exploration by the Pacific Oceanic Fishry Investigations unit of the fish and wildlife service based at Ionolulu, Hawaii. The vessels "Henry O'Malley" and "Hugh I. Smith" began explorations for tuna in the tropical and subropical seas between Hawaii and the Palaus during the concluding months of the year, and the purse seiner "John R. Manning" as under construction for use in the central Pacific area beinning in 1950. This program was authorized by the 80th conress in recognition of the growing world importance of the tuna sheries and other oceanic resources of the region.

The fish and wildlife service chartered the trawler "Deep Sea" or a survey of the fishery resources of Bering sea. The survey, n its early stages, indicated certain areas where fishing would e unprofitable because of the set of cold currents from the iberia coast or the presence of rough bottom. In other areas, owever, catches of flounders, capelin and cod of excellent maret size indicated the value of determining as definitely as possile the abundance of these fishes and their capacity to support ermanent fisheries.

The 100-ft. troller "Oregon" was used by the fish and wildlife ervice in an exploratory tuna fishing operation off Oregon, Vashington and southeastern Alaska to determine the areas here oceanic conditions were suitable for albacore. The landig of albacore in Alaska ports in 1948 for the first time sugested that these valuable tunas might occur in commercial bundance farther north than had usually been supposed.

NEWFOUNDLAND COD FISHERMEN at Harbour Grace in 1949, with a catch for eventual sale to Mediterranean countries, the West Indies and South America. But with 13 quick-freezing plants in Newfoundland, more and more frozen cod fillets were being marketed in the U.S. where they fetched higher prices

Other vessels were engaged in studying oceanic conditions ffecting the sardine fisheries off California and Oregon, in takig a census of the fish populations of Georges Bank off the coast of New England and in studying oceanographic conditions in the Gulf of Mexico in relation to the sporadic occurrence of the disastrous "red tides." Another vessel was sent to the Gulf late in the year to undertake fishery research in connection with the newly established Gulf States Marine Fisheries commission, for which the fish and wildlife service had been designated the principal research agency.

Important technological developments of the year were the use of nylon nets of extreme efficiency, the development of gear for trawling in deeper water and tests of the midwater trawl first used in Denmark. United States fishermen also became interested in a new German electrical fishing device. Several New England ports made increased use of once discarded species for the manufacture of meal and oil, and the formerly wasted "stickwater" from fish meal and oil plants was diverted to an increasing extent to the production of condensed fish solubles.

Aside from minor fluctuations, there were few important changes in the landings of the principal species comprising the United States catch. Menhaden landings continued to dominate the field in terms of tonnage, with the 1949 catch amounting to approximately 1,000,000,000 lb. While slightly less than the quantity caught in 1948, this catch was one of the largest in the history of the fishery. The California pilchard fishery continued its slow recovery. A sudden scarcity of pilchards which set in about 1945 occasioned a series of extremely small catches in a fishery that formerly averaged about 1,000,000,000 lb. annually: 530,995,000 lb. in 1946, 272,236,000 lb. in 1947, 361,907,000 lb. in 1948 and an estimated 600,000,000 lb. in 1949. The pack of canned pilchards was expected to reach 3,900,000 cases for the year, as compared with 2,654,149 cases in 1948.

Tuna fishing of Central America slackened considerably during the early months of summer and later in the year as the price of canned tuna declined and canners were unable to guarantee fishermen the desired prices. However, the pack for the year was expected to reach 7,000,000 cases, approaching the record 1948 season.

Except for heavy runs of pink salmon in Southeastern Alaska and the Puget sound district of Washington, salmon continued to be scarce, and the pack for the year totalled about 5,400,000 cases. The previous year's pack was 4,824,966 cases. The Maine sardine industry had a poor early season, but heavy runs of fish late in the year raised the pack to about 300,000,000 cases, showing little change from the record pack of the previous year.

Rosefish led all other Atlantic food fish with a production of about 238,000,000 lb. The Atlantic mackerel fishery, traditionally subject to extreme fluctuations, had one of its poorest seasons in years. Early fall catches of shrimp on the Gulf coast indicated a good season. The trawl fisheries of Washington and Oregon were less active than formerly.

The market for fish meal and oil had begun to decline in 1948 after the war years of brisk demand; the downward trend was accelerated in 1949. Prices for oil showed a drastic decline, and with increasing imports and heavier production in the California pilchard fishery, prices for meal were also affected. Total production of meal was estimated as somewhat more than 200,000 tons; of fish oil, 15,500,000 gal. Increasing imports, synthetic products and depleted fisheries hampered the production of natural vitamin oils.

Freezings of fishery products were slightly under the preceding year—290,000,000 lb., as compared with 295,000,000 lb.—but monthly holdings of frozen fish reached an all-time high record on Dec. 1, when 159,000,000 lb. were in storage.

San Pedro, Calif., remained the leading fishing port in the United States in terms of the tonnage of fish received. This is the chief port for the tuna, mackerel and pilchard fisheries of California. It handled about 540,000,000 lb. of fish in 1949. On the Atlantic coast, Gloucester, Mass., remained the leading port for fresh fish, with landings of about 233,000,000 lb., mostly rosefish. Lewes, Del., the principal menhaden port, received about 156,000,000 lb.

Sealing operations on the Pribilof Islands, carried on under the supervision of the United States government, resulted in a take of 70,891 fur-seal skins, as compared with 70,142 in 1948. The fur-seal herd consisted of approximately 4,000,000 animals, having increased from a low point of 132,000 seals in 1910 under a program of conservation. Average prices for seal skins at the fall auction in St. Louis were $55.93 each, with 25,394 skins sold. At the spring auction, 27,862 skins were sold for an average price of $59.55.

An interesting research development of the year was the conclusion of an agreement between the Atomic Energy commission and the fish and wildlife service to conduct co-operative research on shellfish and other marine organisms by the use of radioactive tracer methods. The research project, at the Beaufort, N.C., laboratory of the service, had several objectives: (1) to learn more about the accumulation in marine life of radioactive material and its possible effects on shellfish; and (2) to determine what natural foods are required by oysters for growth and fattening, as an aid to conditioning oysters for market. (R. L. Cn.)

Canada.—Intense federal government activity through the department of fisheries highlighted the industry during 1949. A government statement of policy on May 5 was developed into a national program to stabilize Canadian fisheries through a better understanding of the problems peculiar to each region. Major projects under direction of the Fisheries Research board of Canada included: testing of goldeye resources of Lake Claire, Alta., to assure a seasonal catch of 250,000 lb. (the total Canadian goldeye catch in 1947 fell to 82,000 lb.); predictions of size and time and place of Pacific coast salmon and herring runs to guide the industry; invention of a new railway refrigeration car to permit 208-hr. transportation of fish in prime condition in 90° F. weather; improved cooling and packaging of fish for successful air freight carriage; establishment of cold-storage warehouses in major cities; government help in improving retail distribution, with special emphasis on quick-frozen packaged products; discovery of a new scallop bed off Prince Edward Island; and establishment of a government kitchen to make fish a more popular food. Parliament improved the Fish Inspection act to provide better government control of fish shipping, storing and retailing. The annual per capita consumption passed the 12.2 lb. mark, but still fell far short of Europe's average of 45 lb.

During the 1948–49 fiscal year the Fisheries Prices board spent $1,250,000 of federal funds to support the industry. Exports fell off to $41,800,000 (excluding Newfoundland) for the first seven months of 1949, compared with $51,600,000 for the same 1948 period, and federal authorities therefore welcomed lower tariffs through the Annecy agreements. These took effect Jan. 1, 1950, and resulted in lower barriers for Canadian herring, salmon, cod, lobster and mackerel in dried, smoked and canned forms in Italy, Greece, Denmark, Sweden, Dominican Republic, Haiti, Liberia, Czechoslovakia and the United Kingdom.

The main provincial developments included: British Columbia's new tuna industry landed 2,200,000 lb., compared with 2,174,000 lb. in 1948, and the province's game fish experts reported that by feeding fresh-water shrimps to Kamloops trout their size could be increased from a normal 1½ lb. to 3½ lb.; Saskatchewan fisheries branch found that bluegills, large-mouthed bass and black crappie could be successfully reared in some water conservation reservoirs; Ontario released about 575,000,000 fry and fingerlings of eight kinds of game fish and three kinds of commercial fish.

Internationally, Canada agreed to an International Commission for the Northwest Atlantic Fisheries, warned U.S. fishermen that the three-mile limit would be strictly enforced and announced that harbour seals were proved hosts of worms that attack commercial cod fish.

Floods and Flood Control.

The U.S. flood control act approved Oct. 13, 1949 provided $437,430,400 for flood control work during the fiscal year ending June 30, 1950. The funds were classified as follows: general flood control, $366,330,400; emergency fund, $2,000,000; lower Mississippi river, $67,000,000; Sacramento river, $3,600,000; Mississippi river emergency fund, $500,000. Of the flood control general fund, $518,581,090 was specified for new construction; $3,210,000 for advance planning; and $5,000,000 for preliminary examinations, surveys and contingencies. Exclusive of the lower Mississippi river and the Sacramento River flood control construction was continued or begun on 165 projects in 37 states and Alaska. The $67,000,000 allotted the lower Mississippi river project was designated for work in seven states: Kentucky, Illinois, Tennessee, Louisiana, Missouri, Arkansas and Mississippi.

At the end of June 1949, a total of 256 flood control projects vere in operation; 30 were new. Construction was continued n 98 projects, of which 43 were reservoirs and 55 were of a ocal character, such as levees, flood walls, channel improvenents, etc. Construction was begun on 34 new projects, 9 of vhich were dams and reservoirs.

Reservoirs placed in operation during the fiscal year included he Union Village reservoir, Vt.; the Tully reservoir, Mass.; he Addicks reservoir, Tex.; the Hords Creek reservoir, Tex.; nd the Wister reservoir in Okla. Local protection projects laced in operation included projects at Nashua, N.H.; Holoke, Mass.; Springdale, Mass.; the Conway county levee disricts no. 1, 2 and 8, Ark.; the McLean Bottom levee district o. 3, Ark.; the Henderson county drainage district no. 3, Ill.; rojects at Tucker lake, Ark.; Cincinnati, O.; Aten, Neb.; Hot prings, S.D.; the project at the mouth of the Sangamon river, ll.; projects for the Owasco inlet and outlet, N.Y.; Lancaster, .Y.; Pajaro river, Calif.; the Mill Four drainage district, Ore.; nd projects at Indianola, Neb.; Elkins, W.Va.; Tacoma, Wash.; nd Taylorsville, Ky.

Congress in the first deficiency appropriation act of 1949, nacted May 24, provided funds of $14,000,000 for general lood control projects. In the second deficiency appropriation ct of 1949, approved June 23, 1949, $500,000 was made availble for prosecution of the work on the Fort Worth floodway n the Trinity river in Texas. On Oct. 10, 1949, the president igned another appropriation, which provided, among other hings, $76,000 for the modification of the project at Mandan, .D.

In the first deficiency appropriation act, congress also made vailable $10,000,000 for the repair and restoration of levees nd other flood control works threatened or destroyed by floods.

Channel improvement of the Mississippi river proper was ontinued during 1949 at a number of places below Cairo, Ill. Completed levee construction totalled approximately 1,500 mi. f main stem levees, extending from near Head of Passes, La., o Rock Island, Ill. Co-ordinated with the main stem levees vere 1,000 mi. of tributary levees, practically completed in 949. Below Cairo, work continued on river bank protection. Revetment in place totalled more than 100 mi. of river bank; n addition, many miles of permeable dikes were in place for ank stabilization and channel regulation. The substantially ompleted 2,500-mi. levee system now contained more than ,200,000,000 cu.yd. of earth; it was called the largest earthnoving project in history.

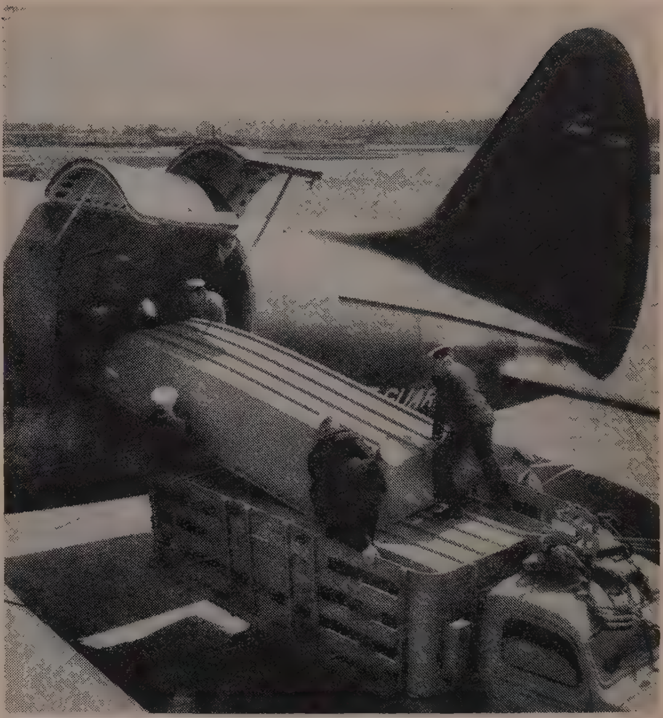
Damaging floods occurred in New England in the Connecticut iver valley during the closing days of Dec. 1948, causing damges running as high as $7,000,000 and claiming the lives of ve persons. Disastrous as the flood was, however, the flood ontrol works that had been completed and were in operation revented damages estimated at $11,000,000.

Damaging floods also occurred along the Potomac river in Virginia and West Virginia during June 1949. Rain fell with uch intensity that communications were disrupted before varnings could be sent. Eleven lives were lost and the total lamage in Virginia was estimated at more than $3,000,000 and n West Virginia at $6,000,000.

In Jan. 1949, minor flooding occurred on the Grand (Neosho) iver from Oswego, Kan., to Pensacola reservoir and on the Verdigris river from Inola, Okla., to the mouth. Major flooding ccurred on the Poteau river from Cauthron, Ark., to Wister eservoir, with minor flooding from Poteau, Okla., to the mouth. Major flooding occurred on the Kiamichi river and on the ittle river and its tributaries, while moderate floods were exerienced on the Red river at Fulton, Ark.

During the early months of 1949, a great amount of snow overed the Missouri river basin, causing some flooding of major streams and their tributaries. However, if the plains states had experienced flood-producing weather in the spring, record flooding might easily have occurred. Fortunately, this did not become a reality.

(G. Hb.)



EMERGENCY FLOOD BOATS being loaded aboard a U.S. coast guard C-46 Commando plane at St. Louis, Mo., in a 1949 test demonstration. In less than two hours, the plane then flew to Louisville, Ky., and unloaded men, boats and radio contact equipment into the Ohio river, ready for service

Great Britain.—The summer of 1949 and the previous winter were both dry seasons, and serious and prolonged floods were few; but local authorities and catchment boards carried out flood control work planned as a result of the serious floods of 1947 and 1948. Many railway bridges in Scotland and northern England damaged in Aug. 1948 were repaired and lines fully reopened to traffic. The River Trent Catchment board considered a scheme, estimated to cost £2,323,700, for major protection works in the Trent valley, which included the widening of certain river stretches and the construction of river barriers at Gainsborough, Lincs. The River Wye Catchment board approved proposals for the second stage of the Monmouth flood relief scheme, and flood relief sewers were constructed in Hampstead, London, and in Salford, Lancs.

In October the first instalment, costing about £750,000, of the Rimrose brook main drainage scheme was put into operation. Its object was to provide drainage facilities for undeveloped lands in the catchment area, where considerable housing development was proposed by the Bootle corporation and the Litherland urban district council, and also to prevent serious flooding which had taken place periodically in Bootle, Litherland and Seaforth, Lancs.

Coast Erosion and Protection.—The Coast Protection act received the royal assent in 1949 and provided for the establishment of both national and local responsibility for coast protection in Great Britain by setting up local coast authorities of two different types to deal with the problems of their areas. It gave wider powers to county district councils or borough councils on the coast, enabling them to carry out works to protect their lands and coastlines. Under these, the minister of health (for areas in England and Wales) or the secretary of state for Scotland could, where many interests were involved, set up coast protection boards, ensuring that the danger of lack of co-ordination evident in the past would be overcome. The bill also provided for financial assistance to the authorities concerned.

Many authorities carried out work in repairing and extending sea defense works. At Seaford, Sus., the strengthening of the sea wall was continued and new groynes were built. The construction of a sea defense wall at Rhyl, Flintshire, began in November, with the object of checking a flood high-water mark which had advanced more than 1,500 ft. between 1871 and 1949. Prestatyn, adjacent to Rhyl, approved a scheme costing £235,000. At Lowestoft, Suff., work on sea defense estimated to cost £130,000 in the next five years was approved. The Essex Rivers Catchment board proceeded with plans to improve existing sea walls at an estimated cost of over £500,000, including work to be undertaken in consequence of abnormal tides during March.

Australia.—The bill authorizing the Snowy river scheme consisting of a vast hydroelectric and irrigation project, including measures for retaining the flood waters for irrigation purposes and estimated to cost £200,000,000, passed all stages in the house of representatives in June. The work was officially begun on Oct. 17 by the first blasting at one of the dam sites. In June, following heavy rain, the Hunter river burst its banks and caused an area of 200 sq.mi. around Maitland and Kempsey, N.S.W., to be submerged. Some streets in Sydney were also flooded to depths of 5 ft. In order to minimize the dangers of floods in the future the New South Wales government adopted a flood control for the Hunter valley to cost over £10,000,000. The scheme comprised the construction of three reservoirs to be operated solely for flood control, while five other reservoirs were to be primarily used for irrigation.

Austria.—A week of continuous rain in August caused the biggest summer floods for several years in many alpine rivers. The Danube rose 18 ft. in 36 hr. near Vienna.

India.—Among the irrigation and flood control projects under construction was Bhavani dam in Madras consisting of an earth structure below the junction of the Moyar and Bhavani rivers, where much excavation was done during World War II.

Italy.—Floods occurred in the provinces of Benevento, Avellino and Salerno at the beginning of October as a result of torrential storms. An area of 1,000 sq.mi. was devastated and more than 30 people lost their lives. In November the river Reno broke its banks and flooded more than 30,000 ac. of farmland near Bologna.

Pakistan.—The Lloyd barrage on the river Indus, part of the world's greatest irrigation scheme, was the subject of grave concern when investigation showed serious cracks in the ashlar masonry of the piers, and remedial work was undertaken.

Uganda.—Construction of the Owen Falls dam on the River Nile was commenced in the autumn of 1949. The scheme was for hydroelectricity in addition to irrigation and flood control and would enable abnormally high flood waters to be conserved as "century storage" or continuous storage over several years in conjunction with existing dams on the lower course of the river, where water is stored during floods, to be used during the same year. (*See* also DAMS; DISASTERS; IRRIGATION; METEOROLOGY; SOIL EROSION AND SOIL CONSERVATION; TENNESSEE VALLEY AUTHORITY.) (J. KD.)

Florida.

The extreme southeastern state of the United States, Florida is called the "Peninsula state" because of its peculiar outline. Its coast line, not taking into account the numerous bays and indentations, is greater than that of any other state, extending 472 mi. along the Atlantic and 674 mi. along the Gulf of Mexico. Area: 58,560 sq.mi., of which 4,298 sq.mi. are water surface; population (1940): 1,897,414, of which 1,045,791 were urban and 851,623 were rural; 1,381,986 white, 514,198 Negro and 1,230 of other coloured races. Only about 60,000 were foreign-born. Capital: Tallahassee (16,240 in 1940). The larger cities are Jacksonville (173,065), Miami (172,172) and Tampa (108,391). Population figures for Tallahassee and the three largest cities, Jacksonville, Miami and Tampa, by the state census of 1945 were 18,105; 206,442; 192,122; and 124,476, respectively. The estimated population of Florida, July 1, 1949, according to the U.S. census bureau, was 2,494,000.

History.—The state elective administrative officers in 1949, whose terms expire in Jan. 1953, were Fuller Warren, governor; R. A. Gray, secretary of state; Richard W. Ervin, attorney general; C. M. Gay, comptroller; J. Edwin Larson, state treasurer; Thomas D. Baily, superintendent of public instruction; and Nathan Mayo, commissioner of agriculture.

In Jan. 1949 a new administration in the state government was inaugurated. The legislature met in April. A fencing bill was passed to keep cattle off the highways and a citrus marketing bill was enacted setting up certain standards for shipping citrus fruit to keep immature fruit from being put on the market. A legislative reference bureau was created. An important movement of the year was the establishment of a citizens constitutional committee for the revision of the state constitution. In a special session of the legislature in September, a limited sales tax was passed.

Education.—Enrolment in the public schools for 1948–49 through grades 1–12 was as follows: white 352,023; Negro 114,935; total 466,958. There were 1,502 elementary and 763 secondary public schools in the state with instructional staffs (not including 182 supervisors) totalling 16,232 and 733 principals, of whom 12,286 teachers and 605 principals taught in the schools for whites and 3,946 teachers and 128 principals in the schools for Negroes.

Social Insurance and Assistance, Public Welfare and Related Programs.—Florida disbursed for state welfare through the state welfare board $42,661,410.04 in 1948–49. From grants by the federal government, the state received in 1948–49 for old-age assistance $17,862,069.25; for dependent children $6,394,063.50; and for aid to the blind $891,714.25; total $25,147,847. Disbursements for old age assistance were $29,243,352; for dependent children $9,745,032; and for the blind $1,471,645; total $40,460,029. Administration and other welfare services $2,201,380.54. The unemployment benefit receipts were $9,660,916.22 with net benefit payments of $8,154,968.10.

The appropriations for various prisons and other institutions for 1949–50 were: the prison at Raiford $1,077,450 with $23,260 contingent fund; the prison farm at Belle Glade $247,000; the industrial school for boys at Marianna $403,228; the industrial school for girls at Ocala $120,000, with $600 contingent fund; the correctional institution for boys at Apalachee $181,960, with $8,000 contingent fund. The state also supports a state hospital for the insane at Chattahoochee and a second hospital at Arcadia, the Florida Farm Colony for the feeble-minded at Gainesville and the Florida School for the Deaf and Blind at St. Augustine. The appropriations for these institutions for 1949–50 carried the sums of $4,990,450, with $125,000 contingent fund, including the hospital at Arcadia; $473,840; and $590,910, respectively.

Communications.—The total highway mileage in the state in 1949, exclusive of roads built for military purposes, was 51,518 mi., of which approximately 24,642 mi. were paved or hard-surfaced. Disbursements for the year ending Dec. 30, 1949, for maintenance and construction, amounted to $32,024,284.45. The state road department's tentative budget for 1950 for construction was $59,283,852.00 plus $8,491,145.09 for maintenance and other departmental costs. Florida in 1948, the latest report available, had approximately 5,000 mi. of railroads, exclusive of yard tracks.

Banking and Finance.—On June 30, 1949, there was a total balance in the state treasury of $42,718,775.13 with outstanding warrants and adjustments of $17,318,172.59. The state is constitutionally forbidden to incur a debt by borrowing except to put down insurrection and repel invasion. The constitution also prohibits the legislature from levying an income tax, forbids any state ad valorem tax on real estate and exempts homesteads from taxation by local taxing units up to the value of $5,000.

On June 30, 1949, there were within the state 61 national banks with deposits amounting to $1,165,425,000 and 125 state banks and trust companies with deposits of $517,775,968.72 representing total deposits of $1,683,200,968.72, a gain in deposits of $21,311,246.11 in the fiscal year.

Agriculture.—The citrus production for the season 1948–49 and the estimates for 1949–50, respectively, were as follows: oranges (including tangerines) 62,700,000 and 65,400,000 boxes; grapefruit 30,200,000 and 25,000,000 boxes; limes 200,000 and 250,000 boxes.

The sale of truck crops including strawberries for the year 1948 was estimated at $90,892,000.

On Jan. 1, 1949, the livestock resources of the state were as follows: 1,007,000 beef cattle and calves; 148,000 milk cows; 666,000 swine; 14,000 sheep; 25,000 horses; and 29,000 mules.

Manufacturing.—In 1947, according to the census of manufacturers, there were 2.807 manufacturing establishments in Florida. There were 701 food products plants employing 19,565 persons and having a total

Principal Agricultural Products of Florida

Crop	1949	1948	Average, 1938-47
orn, bu.	8,983,000	6,910,000	7,612,000
bacco, lb.	25,061,000	20,846,000	19,045,000
tatoes, bu.	5,428,000	3,745,000	4,240,000
gar cane, short tons.	1,091,000	1,056,000	889,000

nnual pay roll of $42,976,000. Lumber, rough and dressed, millwork, urniture and fixtures, wooden boxes, pulp, paper and gum and wood aval stores employed approximately 25,000 persons in 656 plants with pay roll of nearly $50,000,000. Wood pulp and paper manufactured Florida in 1948 were valued at approximately $103,000,000. The 8 ills in Florida manufacturing pulp, paper and paperboard employed bout 6,000 persons in 1948, had a pay roll of approximately $25,000,000 nd used about 1,600,000 cords of wood, about half coming from Florida orests. Florida wood-pulp production for 1948 was 1,221,200 standard ords. The total estimated value of wood products for Florida for 1949 as about $155,000,000.

In 1947 there were 74 plants manufacturing cigars in Florida with roducts shipped valued at $45,901,000. These plants employed 8,613 ersons and had an annual pay roll of $13,085,000.

Mineral Production.—Florida has only limited resources in minerals, but as large and rich deposits of phosphates, lime and limestone and less-xtensive though highly valuable deposits of kaolin and fuller's earth. he value of the state's mineral production in 1949 was estimated at ore than $55,000,000. (A. N. P.)

lour.

For the first eight months of 1949, wheat flour production in the United States amounted to 155,500,000 wt., compared with 185,300,000 cwt. for the corresponding eriod of 1948. The sharp downward production trend thus ontinued from 1948, when the annual total dropped to 279,-00,000 cwt. for the calendar year, from the 1947 all-time high f 305,500,000 cwt., a 9% decrease. The peak production onth for the first eight months of 1949 was January, with 2,380,000 cwt., compared with 24,400,000 and 28,190,000 cwt., espectively, for the corresponding months of 1948 and 1947.

The monthly average flour extraction rate gradually dropped rom a high of 72.8% for Jan. 1949 to a low of 71.4% for ugust. This compared with annual averages of 72.8% and 2.6% for 1948 and 1947, respectively.

Milling production data, as reported in 1949 by the U.S. epartment of commerce, bureau of the census foods section, ere based on information furnished by flour mills representing bout 96% of the total U.S. production.

Gross Distribution of U.S. Flour Production.—Net exports f wheat flour for 1948 amounted to 55,300,000 cwt., a de-rease of 29,740,000 cwt. or 35.0% from 1947, when the net eached an all-time high of slightly more than 85,000,000 cwt. lour procured for military usage (total for all armed services) as 22,100,000 cwt. for 1948, only 600,000 below the five-year verage, 1944–48. The flour remaining available for domestic onsumption during 1948 was 201,700,000 cwt., an increase of nly 4,000,000 over 1947. This increase was a consequence of harply reduced exports rather than a result of flour production. *See* WHEAT.)

Bleaching and Maturing Agents.—The report of E. Mel-anby concerning the toxic effects of nitrogen trichloride-treated our on dogs had led to an intensive re-evaluation of the bio-ogical effects of the available flour bleaching and maturing gents. The status of this investigation in 1949 was summarized y Aaron Arnold, whose tabulations describe the biological ffects of the principal flour bleaching and maturing agents on ogs, rats, rabbits, monkeys and humans. No effect, toxic or therwise, was obtained by the use of the oxidizing agents, leaches and related materials which were commonly used to nprove the baking properties of flour.

Flour and Cereal Enrichment.—Progress in cereal enrich-ent, principally flour, was described by Robert R. Williams, hairman of the Committee on Cereals, Food and Nutrition oard of the National Research council. The importance of our enrichment to human nutrition generally is based on the act that 72% of the total food calories consumed by the orld population are composed of cereals: wheat, rice, corn and other grains. Since milling into flour is virtually necessary to the preservation of grains under existing modes of food distribution and since modern milling methods involve large losses of vitamins and minerals, flour enrichment as a part of the milling process is logical and commercially feasible. Basic improvement of all white cereals, milled or otherwise, is considered to be an inevitable world-wide measure in the interests of improved human nutrition.

In addition to wide acceptance of the flour and cereal enrichment program in Great Britain and continental U.S., the program was introduced in the Philippines, Cuba and Puerto Rico. In the latter country the enrichment of all white flour was made a legal requirement.

Flour Handling.—Certain legal restrictions on the re-use of flour sacks gave impetus in many states to the semibulk handling of flour, also known as the "tote-Bin system." The handling of 3,000 to 3,500 lb. of flour in one metal bin presented substantial advantages with respect to sanitation, rapidity of handling, elimination of handling losses and economy of storage space. Contamination as a result of foreign odours, dust, dampness, rodents and insect infestation was eliminated by the use of properly designed metal bins. A general discussion of the system was given by Thomas R. Freer and D. M. Binger.

Northwestern Flour Characteristics, 1949 Crop.—Technical information gathered from many milling and baking laboratories during the first half of the crop season was summarized by Charles A. Glabau. A majority of the baking technologists reported good to excellent colour characteristics, fermentation tolerance and gas retention. Other important quality characteristics, including ash and protein content, absorbtion and response to mixing showed the usual quality variations without significant trends from previous average values.

Laboratory investigations of new crop characteristics of cracker and cookie flours were surveyed over a period of years by W. H. Hanson. The effects of the ageing of wheat upon flour quality were studied for the purpose of determining which laboratory tests were most useful in the evaluation of new crop flours. Viscosity measurements of the flour by the MacMichael method showed a tendency toward higher values during ageing of the wheat, although the general conclusion was that neither this test nor any other revealed consistently significant quality differences. The usual chemical methods were supplemented by cookie baking tests, "pup" loaf baking tests and mixograms. Mixogram data indicated that dough elasticity and mixing tolerance increased slightly with ageing of the flours. (*See* also BREAD AND BAKERY PRODUCTS.)

Food and Drug Administration: *see* DRUG ADMINISTRATION, U.S.

Food Supply of the World.

The world food situation became increasingly easier during 1949 and in a few sectors burdensome surpluses were emerging. In great contrast with the uneasy, if not actually dangerous, food situation of the world in the early part of 1948, the wide-spread favourable harvests of that year were followed by increased food supplies in 1949 in all major regions except the United States and Canada. Prospects for meeting the effec-

CHAKRAVARTI RAJAGOPALACHARI, governor general of the Dominion of India, plowing land on the Government House estate for the cultivation of food. Urging all India to raise as much food as possible, the governor general hoped to set an example by beginning with uncultivated Government House land

tive demand for food in the 1949–50 consumption year were brighter than in any of the preceding postwar years, although a large proportion of the world's population nevertheless would not be and had not been adequately nourished by some standards. Food rationing and other restrictions were widely relaxed or abandoned. The improved situation was not so much the result of extremely large crops in one or two areas (as had previously been true as regards the U.S.) nor enormous outturn of one major crop, but rather a general improvement in many categories, but particularly bread grains, feed grains, fats and oils and fruit and vegetables. Carryover grain stocks in the four principal exporting countries on July 1, 1949, were 72,800,000 tons, about 68% larger than the small stocks of the previous year. Livestock in Europe might be mentioned as one item showing much improvement following the large crops of 1948 and the increased abundance of coarse grains for import.

Essentially 1949 was a year without famine; crops were not very poor in any large area; malnutrition was endemic but not epidemic. The western part of the Mediterranean area, particularly parts of Spain and Portugal, continued excessively dry with resulting damage. The drought over some other parts of western Europe, especially France, relaxed before great damage was done. Bad drought was reported from South Africa. Both drought and flood accompanied by great damage were rumored from north China. Some damage was reported from the western prairie provinces of Canada where subsoil moisture continued low.

Table I.—*World Food Production by Commodities and by Areas Compared with Prewar*

(Per cent of prewar)

Food commodity	1946–47	1947–48	1948–49	1949–1950*
Bread grains	94	96	102	101
Rice	92	93	97	99
Coarse grains	104	97	110	104
Fats and oils	85	88	94	100
Sugar	90	92	108	106
Meat	94	93	94	97
Dairy products	88	87	90	95
Potatoes	84	83	105	96
Area				
Far east	90	92	95	96
Europe (excluding the U.S.S.R.)	76	79	89	93
U.S. and Canada	135	128	138	135
Latin America	114	114	118	120
Australia and New Zealand	96	109	106	107
Africa and near east	—	101	116	118
World average (excluding the U.S.S.R.)	95	97	104	105

*Preliminary estimate.

In some exporting countries, particularly the U.S., there began to be no little concern about the possibility of agricultural surpluses. Substantial reduction in planted acreage of wheat and corn crops to be harvested in 1950 in the U.S. were ordered. Government storage programs were expanded and exports subsidized. (*See* AGRICULTURE.)

The world food supply situation by commodities and areas is summarized in Table I.

Bread Grains, Wheat and Rye.—World bread grain production estimates for 1949 were revised downward somewhat during the year as additional information became available and near the year end were estimated at 233,000,000 short tons, slightly smaller than the 238,000,000 tons of 1948 but a bit above the average 229,000,000 tons of 1935–39. The world wheat crop was finally placed at 6,185,000,000 bu., a figure somewhat below the 6,385,000,000 bu. of 1948 and moderately in excess of the 6,010,000,000 bu. average for 1935–39. The decrease was primarily the result of decline in North American production, the U.S. producing 1,146,463,000 bu. in 1949, compared with 1,313,534,000 bu. in 1948. The Canadian crop was about 25,000,000 bu. smaller than the 1948 harvest but approximately 50,000,000 bu. in excess of the prewar average. The U.S. crop was the sixth consecutive crop of more than 1,000,000,000 bu. but almost 250,000,000 bu. below the record, although about 400,000,000 bu. more than the prewar average.

The world rye crop of 1949 totalled 1,655,000,000 bu., as against 1,665,000,000 bu. in 1948 and 1,730,000,000 bu. prewar average (1935–39). The increase was largely in Europe, that continent in 1949 producing 705,000,000 bu., compared with 660,000,000 bu. in 1948, but 765,000,000 bu. average prewar. North America produced only about half as much as in 1948.

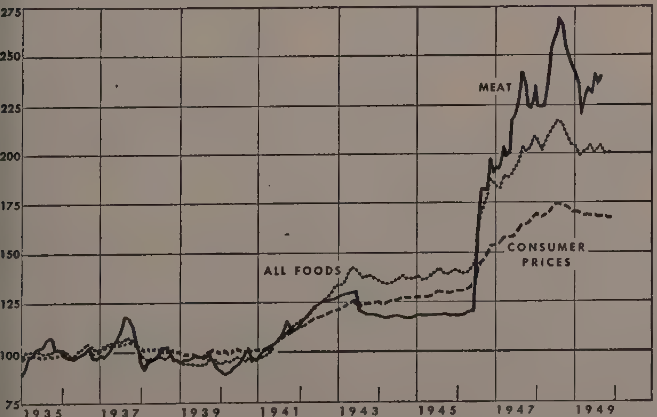
The abundant bread grain crops of 1949 were particularly important in assuring the continuation if not improvement of the diets of western Europe, in providing continuing stocks for export from the chief exporting countries to the densely populated deficit areas of Europe and Asia. But as year end carryover stocks became more abundant, fears of unmanageable surlus began to mount in exporting countries. The favourable tuation as regards bread grains gave preliminary promise at ie end of 1949 of continuing. Although winter wheat seedings ı the U.S. were, by official order, only 85% of the record creage seeded in the autumn of 1948, condition of the new rop was excellent and initial indications were that the prospecve harvest might be nearly as large as in 1949. Rye acreage as expanded 12% and the condition was excellent. Reports on ie new crop in Europe were favourable.

Feed Grains.—A major difference in regard to the world ood supply in 1949, contrasting with the immediate postwar ears, was the relative abundance of the feed grains, a situation ccounted for primarily by the record corn (maize) crop of the .S. in 1948, from which there was a record carryover followed y a large crop in 1949. The 1949 crop of 3,377,790,000 bu. plus carryover of 815,376,000 bu. gave a new record total supply. 'he corn (maize) crop for the world amounted to about 5,680,00,000 bu., second only to the record crop of 5,990,000,000 bu. ı 1948–49 and much in excess of the prewar average of 4,750,00,000 bu.

Other feed grains, oats, barley and grain sorghums, yielded bundantly in 1949, although not up to the 1948 level. The orld oat crop was estimated at 3,980,000,000 bu., as compared ith 4,200,000,000 bu. in 1948. Europe's 1,375,000,000 bu. was ightly more than in 1948, but nearly one-fifth less than the rewar average. The world barley crop was estimated at 2,250,00,000 bu., compared with 2,380,000,000 bu. in 1948 and about 00,000,000 bu. less than the prewar average.

The significance of these cereals not widely used for bread es partly in their service as buffer stocks against human staration but more especially in their indirect use as concentrated vestock feeds supporting the continuing expansion in meat and vestock production. Whereas in 1947–48 imports of feed rains into western Europe were very modest because of short upplies in exporting countries, exports from the U.S., mostly ɔ western Europe, during 1948–49 of feed grains were large nd were expected to be still larger in 1949–50. These exports ould be based primarily on the record corn supply.

Rice.—The world's greatest food crop for direct human conumption, in terms of the number of people preferring that taple, is rice. In terms of total world production, it had not et regained prewar levels; the estimated crop was 144,200,000 netric tons (paddy) in 1948–49, compared with 142,500,000 ons in the previous year and approximately 147,400,000 tons in he prewar period. Nearly 95% of production was in Asia. The J.S. crop of 89,141,000 bu. was a record one and acreage was o be reduced in 1950. The distribution of production of rice in elation to consumption was very different from the prewar period, and world trade in rice was only about 40% as large as in the prewar period. In particular, the major exporting areas of southeast Asia, because of somewhat smaller production but primarily because of political disturbances, transportation difficulties and increased consumption by the producers, did not provide the usual export quantities for the densely populated deficit rice-consuming areas of the far east. To some extent this gap was filled by wheat and other grains from Australia and the Americas; the U.S. exported 64,200,000 bu. of wheat to Japan and Korea in 1948–49. Rice under International Emergency Food council suggested allocation of 1949 amounted to only 3,813,000 metric tons. Nevertheless, the situation was somewhat more favourable: Japan harvested an estimated 599,105,000 bu. crop, compared with 586,004,000 bu. in 1948; production and export from the surplus areas of southeast Asia seemed to be on the upgrade and prices appeared to have stabilized.



ONSUMER PRICES and retail prices of meat and of all foods in the U.S., 935–49 (1935–39=100), based on bureau of labour statistics data for modrate-income families in 56 large cities (Source: Bureau of Agricultural conomics)

Potatoes.—The 1949–50 crop was about 8,000,000,000 bu., compared with 8,764,000,000 bu. in 1948–49 and 8,300,000,000 bu. average in the prewar years 1935–39. The European crop (excluding the U.S.S.R.), in particular, declined sharply to 4,414,363,000 bu., compared with 5,054,390,000 bu. in 1948, and was about 10% below prewar. The U.S.S.R. crop was indicated at 2,800,000,000 bu., a little below 1948 but slightly above prewar. The Canadian crop, as well as that of the U.S., was smaller, although still abundant in relation to demand. Acreage was increased in Europe, but yields per acre declined to 180 bu., compared with 210 bu. in 1948 and 200 bu. prewar. In spite of lower acreage and yields in the U.S., the 1949 crop nevertheless was excessive and the government support program involved $50,000,000 to $60,000,000. Although this was much reduced from the 1948 crop, official goals for the 1950 crop were set much lower at 335,000,000 bu.

Sugar.—World production of beet- and cane-sugar for the 1949–50 season was indicated at 36,646,000 short tons, raw value, 2% less than the record large crop of 1948–49 of 37,249,000 tons, but about 6% more than the prewar (1935–39) average of 34,718,000 short tons. World beet-sugar production, largely in Europe, increased to 11,362,000 tons, compared with 11,071,000 tons in 1948, but continued below the 12,025,000 tons of prewar. Meanwhile, world cane-sugar production of 25,284,000 short tons was about 900,000 tons less than the record large crop of the previous year. Increases in the Philippines, the U.S.S.R., the U.S., Argentina and several European countries failed to offset the decreases of Cuba and some other areas; Cuba declined to 5,300,000 tons from a record 6,675,000 tons in 1947. Per capita consumption continued highly divergent among the various countries, ranging from 93.3 lb. per capita in the U.S. in 1949 to only a very few pounds per person for more than one-half the world's population.

Meat.—The meat supply situation was generally easier in 1949. Pork, poultry and fish were in more abundant supply and prices were lower, whereas high quality beef and lamb were relatively scarce and prices continued high. Total meat consumption per person in the U.S. was expected to approximate 150 lb., compared with 147 lb. in 1948, a record 155 lb. in 1947 and a prewar average of 126 lb. Lamb consumption, however, was only 90% of 1948, whereas chickens and turkeys were consumed at an increased rate, 10% above 1948. Numbers of livestock in the U.S., excepting perhaps sheep, had completed the declining phase of their cycle and were expanding in 1949.

Due to improved feed conditions in 1948 and continuing favourable production in 1949, output of meat increased in 1949 in all major producing areas, although in Europe it was only about 75% of prewar; in spite of large increases in some areas, the world total was still below prewar. Milk cows, however, were given special consideration and world cattle numbers, for beef as well as milk, were placed at a record 761,000,000 head at the beginning of 1949. Hogs, which in Europe are fed largely on potatoes and barley, along with poultry offered the major opportunities for near-future expansion. Meat exports from Argentina, Canada, Australia and New Zealand continued in fair volume to western Europe, particularly to the United Kingdom.

Fats and Oils.—Expansion in the production of most kinds of fats and oils continued in 1949 with consequent easing of the supply situation and the price level. Although significant differences existed among areas and types, the over-all supply approximated the prewar level. On a per capita basis the supply continued below prewar, Germany and Japan being especially low at a consumption level about half that of prewar. Production of fats and oils in the U.S. was at a new record of about 12,010,000,000 lb. as a result of the large near record 1949 crops of soybeans and cotton as well as a large hog crop. Palm oil and coconut oil also became available in larger amounts from tropical areas. The olive oil crop of the Mediterranean basin was abundant. As a result, world exports of this composite food item were expected to be as much as 10% larger than in 1948. Exports from the U.S. were especially large, reaching a record 2,100,000,000 lb. in 1948–49.

Food Prices and Trade.—The decline in food prices continued in 1949. Food prices, particularly those of food raw materials such as grains and fats and oils, which reached their postwar peaks in the free markets of the world early in 1948, subsequently declined sharply but irregularly. Prices of meat and livestock products were relatively resistant to the decline. The over-all decline amounted to 10% to 20% with a few items showing extreme declines to one-third to one-half their former peak levels. As a result, although declines on the retail level were much less abrupt and smaller, black markets in food practically disappeared, rationing and other restrictions were removed in most countries and a buyer's market began to appear.

Because of cheapness, storability, availability and widespread acceptability, the bulk of food moving in world trade continued to be grains. In 1948–49, world exports of grain and grain products reached 36,200,000 metric tons, compared with 35,600,000 tons in 1947–48, and the largest since 1931–32, but still less than the record 40,600,000 tons moved in 1928–29. Of the 1948–49 total, 26,600,000 tons were bread grains, and 9,600,000 tons were feed grains. In 1948–49 (mostly from 1948 crops), grain supplies carried over at year end in the four principal exporting countries increased 68% as compared with 1947–48. For the first year since before World War II, exportable supplies were in surplus compared with provisional import programs. In fact, there were signs of trouble ahead in the efforts of most countries to restore or exceed prewar production and to reduce imports, particularly from hard currency areas. The widespread devaluation appeared at the end of 1949 not to have affected agricultural prices or trade very substantially.

Estimated exports in 1949 included sugar to about 10,000,000 short tons, of which more than 80% came from the western hemisphere, compared with less than 50% before the war. World supply and demand continued in full balance. Prices were rather sluggish and slightly down compared with 1947, Cuban raws falling at times slightly below four cents per pound.

Table II.—*Supplies of Major Foodstuffs Entering World Trade*

(In millions of metric tons)

Commodity	Prewar	1946–47	1947–48	1948–49	1949–50*
Cereals (excluding rice)	29.4	28.7	35.0	36.2	35.0
Rice (milled)	7.8	2.7	3.8	4.3	4.5
Fats and oilseeds (fat content)	5.9	3.2	4.0	4.8	5.2
Sugar (raw basis)	11.5	8.0	9.0	10.7	10.0
Meat	1.9	1.9	2.0	1.9	2.0

*Preliminary estimate.

Food Situation by Areas.—European food production in 1949 was not quite so large as in 1948. In Europe the 1949 cereal harvests averaged some 5% below the previous year, the western and southern portions in particular dropping below the previous year. Potatoes were lower, but sugar increased, as did fats and oils and livestock and dairy products. Nevertheless, the domestic food supply of Europe in 1949 was still somewhat less than prewar levels, and population had increased. The major food item, bread grains, was about 92% of the prewar average. Domestic supplies of meat, dairy products and poultry were still low compared with prewar. Nevertheless, the situation had relaxed sufficiently to lead to derationing of bread, lowering of the flour extraction rate and reduction or discontinuing of the mixing of coarse grains in bread flour. Stockpiles of grains were increased. A disturbing feature was the extent to which the world import requirements of food, particularly into Europe, had come to depend so overwhelmingly on the vast but unstable production of North America. The occupied area of western Germany was reported to have a volume of food production in 1949 some 29% larger than in 1948.

The food situation in the U.S.S.R. appeared to be more favourable than at any time since World War II, whether judged by exports, observers' reports or the situation as to rationing, but there were reports of delay in harvesting, because of excess rains, and delay in compulsory deliveries.

The 1949 grain crops of India and Japan were slightly better than in 1948. The situation in China was less clear because of domestic warfare. Natural conditions for the rice crop, the major cereal item of the diet, were at least as favourable as in 1948. Civil disturbances in Burma continued to restrict the movement of the 1948 rice crop and the production of the 1949 crop. Supplies available for export from French Indo-China continued to be small, although some increase occurred in the Siamese crop. Japan made further progress in agricultural rehabilitation and in the rice collections.

Food crops in the southern hemisphere harvested during 1948–49 were more than average, particularly in Australia and Argentina; reports of serious drought in South Africa indicated probable less favourable results there. Exportable supplies of dairy products had increased somewhat in Australia and New Zealand, and there were also moderate increases in meat supplies from some southern hemisphere countries. Inadequate incentives, in terms of prices paid, apparently continued to be a drag on production in some areas, especially in Argentina, and late in 1949 the government announced somewhat higher prices for grains.

The food situation, both as to production and consumption, was excellent in North America in 1949, partly because of near record crop production but also because of an upturn in livestock and its products. Crops in the U.S. yielded 148% of prewar (as compared with 154% in 1948), and even livestock production was 133% of prewar. Canadian crops also were less than in 1948; that country began to search for wider markets for its exportable foods, even in the U.S., in the face of a cutback in contracts with the United Kingdom.

World Food Organization.—The United Nations Food and Agriculture organization (F.A.O.) continued to occupy the centre of the international agricultural stage during 1949. Its fifth annual conference of the 62 member countries was held in Washington, D.C., during Nov. and Dec. 1949. During the year, Norris E. Dodd of the U.S. continued as director general. Lord Boyd-Orr (*q.v.*), the former director general, was the 1949 recipient of the Nobel prize for peace. A decision was taken to move the permanent headquarters to Rome, Italy. Two other major matters were considered. As regards technica assistance on agricultural matters to those nations requesting uch help, the importance of providing technical advisors and xtension services were emphasized, with order of priority on roposed projects to give preference to measures likely to secure n early increase in production of food and other requirements f local populations. The other matter was the consideration of he report on world commodity problems, proposing an interational commodity clearing house, which would purchase surlus supplies of food in exporting countries and dispose of them mong under-supplied countries having inconvertible currency lifficulties. Instead, a Committee on Commodity Problems was rdered with recommendations looking toward an approach nvolving an individual commodity basis.

Other international food activities during 1949 were the ratiication of the International Wheat agreement which, it was hought, might be the forerunner of other commodity agreenents. However, at the year end it appeared that performance nder the agreement was hardly up to schedule.

ootball. Notre Dame, Oklahoma, California and Army were ranked as the four top college football teams of the Jnited States in 1949. They were the only ones playing a major chedule that finished with perfect records for the season.

Notre Dame completed its fourth consecutive schedule without a defeat. Since Frank Leahy resumed his post as head oach in 1946 after serving in the navy, it had won 36 games nd been tied twice, and for the third time in the four years he Fighting Irish were ranked as the No. 1 team of the nation.

Army, under Earl Blaik, enjoyed its fifth season without a oss in six years. It extended its undefeated sequence to 20 ames by defeating Navy 38–0 before Pres. Harry S. Truman nd a gathering of 102,000 in Philadelphia's Municipal stadium.

Oklahoma, which lost its opening game in 1948 and then won all the others, maintained its invincibility through ten more games in 1949. Its coach, Charles (Bud) Wilkinson, was voted the outstanding mentor of the season. California completed its second regular season in succession without a setback and its coach, Lynn Waldorf, placed second in the balloting for the outstanding coach of the year, as he did the year before.

Behind these four teams in the nation-wide poll of the Associated Press were ranked Rice, Ohio State, Michigan (the 1948 leader, whose 25-game winning streak was ended by Army), Minnesota, Louisiana State and the College of the Pacific. Kentucky, Cornell, Villanova, Maryland, Santa Clara, North Carolina, Tennessee, Princeton, Michigan State, Missouri and Baylor followed next in order.

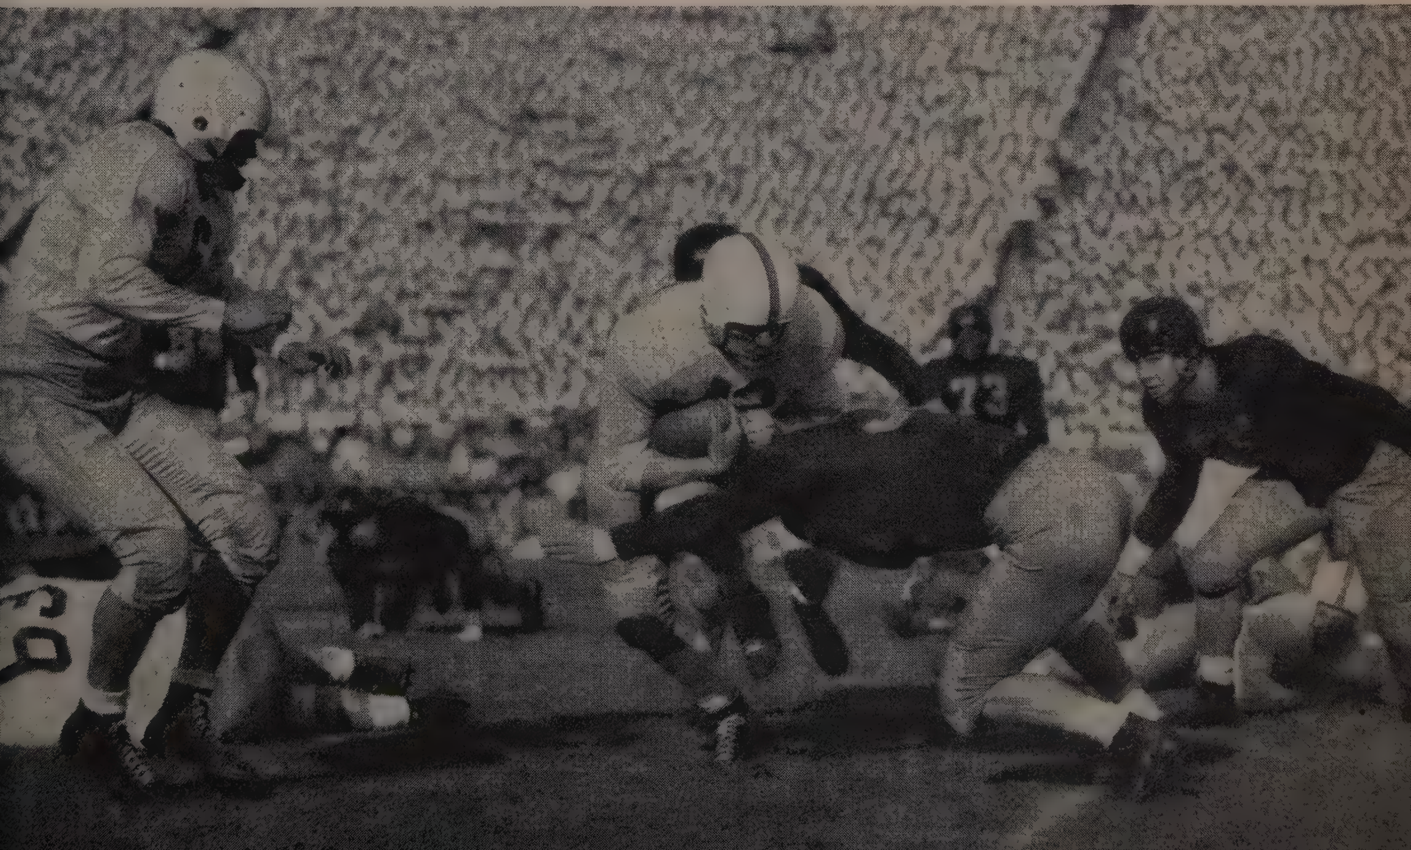
Michigan, Western conference champion in 1948 and 1947, shared the title with Ohio State. Oklahoma repeated as winner of the Big Seven crown. California, cochampion with Oregon in 1948, finished on top in the Pacific Coast conference. Rice was champion of the Southwestern conference, Tulane of the Southeastern and North Carolina of the Southern. Army was ranked as the No. 1 team of the east and was awarded the Lambert trophy while Cornell, beaten only by Dartmouth, retained the Ivy league title by defeating Pennsylvania. Princeton won the Big Three honours for the third successive year, the first time this had ever been accomplished.

California and Ohio State were named to play in the Rose Bowl at Pasadena, Calif., as the top teams in their conferences. Michigan was barred from consideration by the agreement that limits a Western conference team to playing once in three years in the postseason game. California and Ohio State, coached by Wesley Fesler, met in the Rose Bowl, Jan. 2, 1950, and Ohio State won by the score of 17–14.

In the Sugar Bowl at New Orleans, La., the contestants were Oklahoma and Louisiana State, which was defeated twice during the season but gained victories over three conference champions —Rice, North Carolina and Tulane. The Sugar Bowl game was won by Oklahoma, 35–0.

Rice played North Carolina in the Cotton Bowl at Dallas,

HUGH McELHENNY, University of Washington fullback, being downed by Paul Baldwin, halfback for the University of California, after a two-yard gain in the second quarter of the game played at Berkeley, Calif., Oct. 22, 1949



Tex., and the verdict went to Rice, 27–13. In the Orange Bowl at Miami, Fla., Kentucky and Santa Clara were the opponents and the latter won, 21–13.

Leon Hart, 255-lb. Notre Dame end, was voted the Heisman Memorial trophy as the outstanding player of the year, the second lineman in the 15-yr. history of the award to be honoured. He was chosen by a big margin over Charles Justice of North Carolina, Doak Walker of Southern Methodist (the 1948 winner), Arnold Galiffa of Army, Robert Williams of Notre Dame, Eddie Lebaron of College of the Pacific, Clayton Tonnemaker of Minnesota and Emil Sitko of Notre Dame. All of these were backs except Tonnemaker, a centre.

Hart, Tonnemaker, Galiffa and Sitko were unanimous choices on all of the widely recognized All-America teams. So also was Rod Franz, California guard, while Jim Williams, Rice end, Doak Walker and Wade Walker, Oklahoma tackle, were named on most of them.

Doak Walker and Justice, two of the greatest backs of 1948, were handicapped by injuries in 1949. Walker was unable to play in the final game against Notre Dame. In his absence, Kyle Rote turned in a remarkable performance, scoring three touchdowns and eclipsing all others on the field as Southern Methodist gave Notre Dame its only real scare of the year.

Playing before 75,000 in the Cotton Bowl stadium at Dallas, the Mustangs battled the 28-point favourite Fighting Irish tooth and nail from the start to finish. Trailing by 7–20, they threw the crowd into an uproar as they scored two touchdowns in rapid succession and tied the score. To win the game, Notre Dame had to march 57 yds. in the final quarter and then stop a 67-yd. advance by S.M.U. to the 4-yd. mark.

College football enjoyed its customary high favour while professional football was suffering a marked drop in attendance. Although there was a slight drop in the east and on the Pacific coast, attributed to the televising of games, the college figures for the country as a whole were even higher than in 1948. Michigan drew the almost incredible total of 563,500 spectators for six games in its enlarged stadium and 772,482 for nine games at home and away. Notre Dame continued to play to sellout crowds in almost every game. Pennsylvania, Army, Navy, Ohio State, Southern Methodist, Stanford and Tulane were other leaders in attendance.

A great deal of controversy was occasioned during the season over the use of the platoon system, which many of the leading teams used. The employment of separate offensive and defensive units was decried by some of the coaches and there was considerable criticism of it in the press. It was argued that teams with large squads had an unfair advantage in the ability to make wholesale substitutions against opponents who lacked the manpower to do so. It was ruining the game and was confusing to the spectators, opponents of the system argued. The majority of the coaches, however, appeared to be against any change in the rules that would restrict substitutions and to side with Earl Blaik of Army in his contention that the alternate use of offensive and defensive teams of rested players made for a safer, faster and finer game of football and permitted more men to participate.

There was no marked change in the pattern of the game, either offensively or defensively. The T formation continued to enjoy a big vogue but the single wing was still going strong and some of the most successful teams employed it. The forward pass was used extensively, but not nearly as much as in professional football, in which the running attack was secondary to the pass with most teams.

Professional Football.—The four-year war between the National league and the All-America conference came to a sudden end shortly before the Philadelphia Eagles and the Cleveland Browns were again established as the champions of the two circuits. Since the conference started operations in 1946, to challenge the older organization for the public's support, the two leagues had gone their separate ways, refusing to get together on schedules and a common draft. As a consequence of their staging rival attractions in New York and Chicago and their attempts to outbid each other for the services of college stars at ruinous figures, professional football became more and more a losing proposition for all but a few clubs. It was obvious that an agreement would have to be reached soon or it would be the end of both leagues.

The agreement was reached so secretly that the public was taken by surprise. It was effected at a series of conferences in Philadelphia, Pa., between Bert Bell, commissioner of the National Football league, and J. Arthur Friedlund, representing the conference.

The settlement called for the formation of a new 13-club league, to be known as the National-American Football league. All of the ten clubs operating in the National league were to be included and three from the conference—the Cleveland Browns, the San Francisco Forty-Niners and the Baltimore Colts.

The New York Yankees were purchased by Ted Collins, owner of the New York Bulldogs of the National league. The Buffalo Bills, the Los Angeles Dons and the Chicago Hornets, the other teams in the conference, were to go out of business. The new league was to be divided into divisions, National and American, and the winners in each were to meet in a play-off for the world championship, comparable to the world series in baseball.

The fact that attendance fell off so much in 1949 at the professional games was probably one reason why the agreement was reached. Most of the clubs saw their patronage decline sharply. Partly because of bad weather, slim crowds saw the play-offs for the championships in the two leagues. The Philadelphia Eagles defeated the Los Angeles Rams in rain and mud before 22,245 fans in Los Angeles, Calif., 14–0. At Cleveland, O., 22,550 persons saw the Browns win from the San Francisco Forty-Niners in the mud by 21–7.

The Browns closed down their operations in the All-America conference with a remarkable record. They had won the championship all four years, the only professional team in organized football to carry off four consecutive titles, and they had won 52 games (including four championship play-offs), lost four and been tied three times.

Canada.—The Grey cup, emblematic of the dominion football championship, returned to Montreal for the first time in 18 yr. as the Alouettes of that city defeated the Calgary Stampeders, 28–15 on a snow-patched field before a capacity crowd of 20,100 at Varsity stadium in Toronto.

The Alouettes, organized in 1945 to represent the city of Montreal in the Big Four Football union, defeated the Ottawa Rough Riders for the Big Four title. They then crushed the Hamilton Tigers, winners in the Ontario Football union, 40–0 in the All-Eastern final to qualify for the East-West play-off. The Calgary Stampeders had earned the right to represent the west by defeating the Regina Rough Riders.

The University of Western Ontario defeated McGill university, 12–9, to win the championship of the Intercollegiate Rugby Football union. McGill was the surprise team among the colleges, which are not permitted to compete for the Grey cup.

The season witnessed a healthy growth in interest in Canadian football and the increasing influence of American football on the dominion game, as reflected in the wide adoption of the T formation and the number of players from across the border who excelled in the big contests. The fear was expressed in ome official circles that this influence was becoming too owerful.

The Big Four raised the number of United States players ermitted each member team from five to seven, and of the 13 layers selected by writers and coaches on the Big Four all-star eam no less than 10 were from the United States. However, he Jeff Russell Memorial trophy, awarded annually to the layer who best combines sportsmanship with effective play, ent to Canadian-born Royal Copeland, halfback on the oronto Argos.

Resulting in part from the introduction of football clinics in he off season and the improvement in coaching methods, the andard of play in junior and high school ranks was higher hroughout the dominion. (A. DA.)

Great Britain.—*Rugby Union.*—For the second year in sucession Ireland in 1949 carried off the international honours. ext in the championship table came England, France and Scotnd, with two wins out of four games, and Wales figured at he bottom.

Lancashire won the county championship for the third time unning, Gloucestershire once again being runner-up. The Oxford . Cambridge match in Dec. 1949 was won by Oxford, 3–0.

Rugby League.—In international Rugby league football, a oung Australian side visited the United Kingdom in 1948 for he first half of the season, the last test being played in Jan. 949. The visitors lost all three matches, and except in the rst match, which they lost by 21 points to 23 at Leeds, they ere outplayed as well. The home international championship played between England, Wales and France, each country laying the other two home and away. For 1948–49 France eaded the list, losing only to England at Bordeaux.

At Wembley, the challenge cup finalists were Bradford Northrn and Halifax, and the former won by 3 goals and 2 tries to il. Warrington, the leaders of the league table, were expected o win the league club championship. But they lost to Huddersield 12 points to 13.

Association.—In the game between England and Scotland at Vembley, Scotland won by 3–1. Scotland were undisputed hampions, for they won all three matches, beating Wales at ardiff 3–1 and Ireland at Glasgow 3–2.

The Football association cup final at Wembley was played etween Wolverhampton Wanderers and Leicester City, the ormer winning 3–1. The Scottish cup was won by Glasgow angers who beat Clyde 4–1. The English league championship as won by Portsmouth. The Scottish league championship was on by Glasgow Rangers with Dundee as runners-up.

The university match was one of the best ever played between xford and Cambridge. In the end Oxford won by five goals to our. In the Football association amateur cup final, played at Vembley for the first time, Bromley beat Romford 1–0.

oreign Investments.

United States Investments Abroad.—The flow of United tates capital to foreign countries that was resumed at the end f World War II continued in diminished volume during 1949, nd contributed to raise the value of United States investments foreign countries (and international organizations) to aproximately $31,700,000,000 on Sept. 30, 1949—an increase of out $200,000,000 over Dec. 31, 1948. Unlike previous years, hen loans by the United States government dominated, the bulk of new foreign investments accounting for this increase was made by the private section of the economy whose investments, including the reinvested earnings of subsidiaries in foreign countries, accounted for about $650,000,000 of the $1,200,000,000 of government and private capital investments abroad during this period. However, the effect of new investments on the total value of United States investments abroad was offset by the devaluation of leading foreign currencies during Sept. 1949 which may have had the effect of reducing the value of United States investments abroad by roughly $750,000,000 to $1,000,000,000.

Estimates of the balance of international payments of the United States prepared by the United States department of commerce indicated that direct investments were the major vehicle for private capital exports to other countries during 1949 while the United States remained dormant as a capital market for portfolio loans to foreigners. Direct investments accounted for $370,000,000 of estimated private capital outflows during the first nine months of 1949 together with an additional $370,000,000 of reinvested earnings, while the only foreign borrowing in the United States of any consequence involved a $100,000,000 government of Canada bond issue.

From the published data it appeared that the outflow of United States direct investment capital in 1949 would fall below the record of almost $800,000,000 set during 1948.

Although the volume of United States direct investment capital exports was large during 1949 and earlier postwar years, it played a relatively small part in assisting foreigners to pay for their over-all purchases from the United States or to develop their own productive facilities.

Early in 1949 interest in United States private foreign investments was stimulated by the fourth point of the inaugural address of the president of the United States, Harry S. Truman, who called for increased U.S. technical assistance and productive investments in underdeveloped areas. The primary purpose of this program was to help the people of economically underdeveloped areas, who comprise a large part of the world's population, in their efforts to develop their human and natural resources, to increase their productive capacities and to raise their standards of living. During 1949, and earlier, the progress of these countries was hindered by deficiencies in technical skills and in capital for essential productive investments. It was held that United States assistance in meeting these deficiencies would have both direct and indirect benefits not only for the people of the underdeveloped nations but for the United States as well.

The per capita consumption of products from the United States by underdeveloped countries was low not because of a lack of desire of United States products or because of availability of local substitutes, but because these countries lacked the capacity to produce commodities for export. This seriously limited their ability to import the products of other countries.

Statistically, the need for capital over the next four years by the world as a whole—excluding the United States and Canada, was placed at $43,000,000,000 a year, according to a report on international investment and financing facilities by the Food and Agriculture Organization of the United Nations (F.A.O.).

This figure was based on data taken from national development plans, aspirations expressed by various governments and estimates for a number of countries prepared by the F.A.O., and included $5,000,000,000 for agriculture. About $8,500,000,000 would have to be obtained from foreign sources. For non-European countries the figures would be about $7,200,000,000 for total capital needs, including $1,400,000,000 for agriculture and $3,000,000,000 from foreign sources on the average during each of the next four years.

The report also indicated that while aid from foreign sources

Note: No allowance has been made for the value of private direct investments abroad damaged during the war, written off or expropriated without compensation. Holdings of portfolio securities of former enemy countries, or countries where no realistic valuation is obtainable, have been excluded. Government long-term investments exclude loans to foreigners by commercial banks at the risk of the Export-Import bank. These have been classified as private capital in this table, which includes only the outstanding amount of such loans rather than authorized amounts. Government expenditures on productive agricultural facilities are classified as government investments in this table.

*Includes investments in the International Monetary fund and the International Bank for Reconstruction and Development amounting to $3,386,000,000. Although the entire United States investment in international institutions, including the subscription of $687, 500,000 in gold to the International Monetary fund, is included in United States investments abroad, the gold held by international institutions or others in the United States is not included as a foreign investment in the United States.

†Less than $500,000.

Source: Data prepared by the U.S. Departments of Commerce and Treasury and individuals.

since the war, both expended and committed, had exceeded the $8,500,000,000 per annum deemed necessary for the future, public funds had constituted over 90% of total international investments, but apparently were beginning to decline. In the same period, savings in underdeveloped countries were estimated at less than half the rate necessary to raise the desired domestic capital and service on the foreign debt.

While there was general agreement on the desirability of private capital investments, many U.S. business organizations were opposed to the portion of the Point 4 program that proposed United States government guarantees of new private investments abroad as a means of stimulating investments.

The volume of capital outflows outside the petroleum industry was not impressive during most of 1949 and in previous postwar years. In the early postwar years, general shortages of goods in the United States probably hindered the export of capital. However, other factors probably exerted an even greater restraining influence on capital outflows. Political and economic factors in large areas of the world were not favourable to the making of new investments. In Europe and in most of Asia political conditions were unstable and in most of the world balance-of-payments difficulties increased the problem of dollar-exchange availability. Investors feared that severe exchange restrictions on the transfer of earnings and capital would generally be imposed in the future, although for the most part there was sufficient dollar-exchange available after the war to accommodate the transfer of income to the United States. Various restrictions imposed by foreign governments also had a bearing on decisions regarding new foreign investments, and for public utilities there was also the fear of expropriation.

During 1949 the president requested congress to authorize an experimental program for the guaranty of newly invested private capital in undeveloped countries. The capital would have to contribute to the economic development of such areas and would be guaranteed against risks related to foreign investments, other than ordinary business risks. Outstanding among such risks proposed for a program of government guarantees were those of nonconvertibility of returns derived from the investment, including capital, and loss through seizure, confiscation or expropriation, without prompt, adequate and effective compensation. Ordinary business risks, such as those encountered by a business operating in the United States were not included in the proposed program.

Treaties of friendship, commerce and navigation between the United States and a large number of other countries were under negotiation during 1949. These related to more comprehensive provisions for the protection of investments than did earlier treaties. The treaties were to be of a long-term nature and the United States proposed that they provide the basic legal climate in which citizens and enterprises of one country may do business in the other.

The proposed treaty commitments sought to secure the following for United States investors: (1) Fair treatment no less favourable than accorded to nationals of the foreign country or of a third country; (2) reasonable freedom to operate, control and manage enterprises; (3) the right to withdraw earnings and reasonable amounts of principal of the investment; (4) conditions under which exchange restrictions might be imposed, and protection of the interests of the investor with regard to such restrictions; (5) assurances regarding tax discrimination against foreign investors; and (6) commitment of effective compensation in the event of expropriation of an investor's property.

Foreign Investments in the United States.—The value of foreign investments in the United States was practically unchanged during the first nine months of 1949 and stood at approximately $17,000,000,000 at the end of September. The general ability of citizens of other countries to retain U.S. assets in the face of continuing balance-of-payments deficits with the United States was an evidence of the success of the European Recovery program (ERP) in rendering aid to foreign countries. The effectiveness of this aid had been apparent in an increase in foreign short-term balances in the United States during the last half of 1948 and the first quarter of 1949, following the serious decline that began with the termination of lend-lease aid in 1945. However, banking and other short-term claims of ERP countries on the United States again declined in the second quarter of 1949 as a financial crisis developed in the United Kingdom. Following the devaluation of the pound sterling and the currencies of other leading countries in mid-September there was some evidence of a recovery in short-term claims on the United States.

For countries with relatively low reserves, losses of gold and foreign exchange might have serious consequences, although it should be noted that such losses are not causal but are the consequence of imbalance in the exchange of goods, services and aid with other countries. According to preliminary figures of the U.S. department of commerce, the devaluation of the British pound in Sept. 1949 was preceded by losses of short-term banking claims on the United States and sales of gold to that country of about $29,000,000 in the first quarter and $269,000,000 in the second quarter of the year. During the third quarter, the loss amounted to $237,000,000. At the close of September, British short-term banking claims on the United States were about $439,000,000 as compared with $546,000,000 nine months earlier.

The decline in total foreign short-term banking claims on the United States in this period aggregated $165,000,000. Aside from the United Kingdom, the declines were largest for China ($92,000,000), the Republic of the Philippines ($140,000,000) and Italy ($48,000,000). However, the Italian loss of about $100,000,000 in the third quarter of the year merely reflected the shift of that sum to gold, purchased from the U.S. treasury.

Increases were largest for the following countries: Canada ($52,000,000), Japan ($80,000,000) and the Netherlands ($43,000,000). The Canadian acquisition of United States funds reflected the flotation of $100,000,000 of Dominion of Canada bonds in the United States during the third quarter of the year.

Gold and dollar reserves of Great Britain had increased by about £20,000,000 sterling in the last 12 days of September according to the chancellor of the exchequer. Later in 1949 the chancellor stated that United Kingdom reserves had continued to move upward since the devaluation of sterling. In some financial quarters it was also apparently expected that on the basis of the reduced British dollar import program and of Economic Cooperation administration (ECA) aid as then approved by the United States congress there was no reason to expect, in the period up to June 1950, that British reserves would fall below their end of Sept. 1949 position.

Foreign countries and international organizations made net purchases of approximately $86,000,000 of the long-term securities of United States corporations and bonds of the United States government during the first nine months of 1949. Such acquisitions were in contrast to the general experience of earlier years when countries in Europe and Asia sold substantial holdings of United States stocks and bonds largely as a means of meeting their balance-of-payments deficits on current account.

If changes in the holdings of U.S. securities by the International Bank for Reconstruction and Development were excluded from foreign acquisitions during the first three quarters of 1949 it appeared that over-all purchases and sales by foreign countries of U.S. securities were in approximate balance, although the experience varied from country to country. Net purchases by the International bank in this period were securities issued by the United States government.

Countries participating in the European Recovery program purchased about $35,000,000 of stocks and bonds according to data published by the U.S. treasury department, although if trading for Swiss account was eliminated, transactions for other ERP countries were about in balance during the first nine months of 1949. Since it was known that several ERP countries were in great need of dollars during this period, particularly in the second and third quarters, the absence of large liquidations of United States securities suggested that certain countries probably had about exhausted their holdings of readily marketable securities. This may have been the case for France and the Netherlands. These two countries, as well as others, had been aided earlier by the U.S. treasury in identifying the United States assets of their nationals which had not been reported to them, and had presumably liquidated such security holdings that had been revealed by the treasury. Nationals of the United Kingdom had sizable holdings of securities, although the choice of these were still pledged with the Reconstruction Finance corporation as collateral for a loan granted to England in 1941 and were therefore not available for sale.

Of the countries cooperating in the European Recovery program, Switzerland engaged in the largest volume of transactions of United States stocks and bonds during the first nine months of 1949 and on balance purchased about $36,000,000. The acquisition reflected the relatively sound economic position of that country strengthened by its wartime neutrality, although a portion of Swiss security purchases presumably were for residents of other countries for whom Switzerland acts as a banking centre.

United Kingdom purchases in this period of $12,000,000 of securities were probably for the account of non-Britishers since the exchange control system of that country would presumably not have permitted the use of scarce dollars for portfolio investments. The Netherlands sold about $15,000,000 of United States stocks and bonds, continuing the program begun in 1948 of liquidating its nationals' dollar holdings. In that year $78,000,000 of Netherlands assets were sold. France had followed a similar program during 1948, liquidating about $72,000,000 of U.S. securities, although in 1949 changes in French holdings of United States securities were negligible through September and appeared to consist of switching from holdings of shares to investments in bonds. Italy and Belgium made small security purchases in the latter period.

As a result of transactions and small rises in the quoted prices of stocks and bonds, the value of foreign-held United States portfolio securities increased by about $192,000,000 during the first three quarters of 1949. About $106,000,000 of the rise reflected security price increases and the balance, the previously mentioned combined net purchases of foreign countries and international organizations.

Direct-investment enterprises (United States branches of foreign companies, and United States-incorporated companies, 25% or more of whose voting shares were held abroad) apparently continued to retain a large portion of their United States earnings for expansion and other purposes in the United States, thus adding to the value of foreign investments in such companies. In 1948 the foreign equity in the earnings of United States-incorporated subsidiaries was approximately $150,000,000. About $57,000,000 of this income was paid out as dividends to foreigners.

Among the uses announced in 1949 for the reinvested funds of direct-investment enterprises were the following plans of a leading detergent-, soap- and shortening-producing company whose control was in British hands. The company and its affiliates proposed to spend $65,000,000–$70,000,000 for plant expansion, including new products, additional research facilities and a 20-story office building to centralize and house its administrative functions.

The latest report available during 1949 on the activities of the Office of Alien Property of the United States related to the fiscal year ended June 30, 1948. On the latter date, the office held title to former enemy property in the United States with a value of $340,000,000 and held another $3,000,000 of assets in safekeeping or under supervision. In addition, the annual report of the organization stated that about $61,000,000 of vestible property had not been vested (seized) as of June 30, 1948.

From its inception in March 1942 to that date, the office and its predecessor organization had received about $125,000,000 from the sale and liquidation of business and personal property it had taken from enemy aliens.

During this period the property of nationals of Germany, Japan, Italy, Hungary, Rumania, Bulgaria and of enemy-occupied countries had been vested. During 1948 the Office of Alien Property considered that its primary responsibility was the elimination of German and Japanese interests in property in the United States, since treaties of peace with Italy, Hungary, Rumania and Bulgaria in the year before had provided for the return of assets seized in the United States after the satisfaction of certain claims. An agreement was reached in that year with Italy for the return of vested property, involving a certification procedure for Italian claims to such assets. In addition, former Italian ships were returned to the Italian government and replacements made for Italian ships seized by the United States government and thereafter lost while being employed in the war effort. No agreements were concluded between the United States and Bulgaria, Hungary or Rumania with respect to the disposition of property taken from nationals of those countries. In addition to property vested by the Office of Alien Property, there were certain assets such as bank deposits belonging to the governments and nationals of those countries which remained blocked. Forests.

The U.S. forest service in 1949 issued an over-all summary and analysis of its postwar reappraisal of the forest situation in the United States. Highlights of its report were:

The potential productivity of the nation's forest land is enough eventually to fill domestic needs generously, provide for national emergencies and help in some measure toward meeting the needs of a world undersupplied with timber. Approximately one-third the total land area is forest land. About 461,000,000 ac. are suitable and available for growing merchantable timber.

The supply of saw timber is steadily shrinking. More timber is cut or destroyed each year than is replaced by growth. Timber quality is deteriorating; much of the annual drain is in the better saw timber, particularly softwoods, whereas much of the growth is in small, low-grade trees and inferior hardwoods.

The nation must depend mainly on private forest lands for its timber supplies. Three-fourths of the commercial forest land is privately owned, including generally the best growing sites and most accessible locations. But 64% of all cutting on private lands was in 1949 still poor or destructive, and only 8% was up to really good forestry standards.

To meet the nation's prospective future needs would require increasing the annual growth of all timber by one-half and doubling the existing saw timber growth rate. The forest service recommended: (1) a system of public regulation of cutting that would stop forest destruction and keep forest lands reasonably productive; (2) expansion and intensified management of public forests; (3) increased public aids and services to private owners, including intensified protection against fires and destructive insects and diseases, increased aid in reforestation, a federally sponsored credit system to provide long-term loans suited to the needs of private forest operators, a federally sponsored insurance system to reduce the risks inherent in forestry enterprises, increased technical advice and assistance for small forest owners and expanded research in forestry and wood utilization.

A 1,250,000-ac. forest in the state of Washington was dedicated as a living memorial to Gifford Pinchot, pioneer American conservationist and first chief of the U.S. forest service. Formerly known as the Columbia National forest, it was renamed Gifford Pinchot National forest by proclamation of Pres. Harry S. Truman, June 15, 1949. Managed for sustained yield, its timber growth was estimated to be sufficient for an annual yield of 200,000,000 bd.ft. in perpetuity.

Fires burned thousands of acres of forest and watershed lands in the western states during the late summer months of 1949. The forest service reported a total of 7,657 fires in western national forests during the first nine months of the year, compared with 4,031 in the same period of 1948.

The Anderson-Mansfield act, passed by the U.S. congress in 1949, authorized an accelerated program of reforestation and revegetation of forest and range lands in the national forests. The act provided for a 15-year program, with appropriations for reforestation authorized in progressively increasing amounts, from $3,000,000 for fiscal year 1951 to $10,000,000 for 1955 and a like amount each year thereafter through 1965. For range revegetation, appropriations were authorized beginning with $1,500,000 for 1951 and increasing to $3,000,000 for 1955 through 1965.

International Conferences.—A large group of American foresters attended the Third World Forestry congress in Helsinki, Finland, during July 1949. In March an International Forestry and Timber Utilization conference of countries in Asia and the far east was held at Mysore, India. The United Nations Scientific Conference on the Conservation and Utilization of Resources, held at Lake Success, N.Y., Aug. 17 to Sept. 6, was one of the largest international meetings of natural resource technicians ever held. The technicians exchanged information at section meetings on forests, water, minerals, fuel and energy, land, wildlife and fish. Concurrently, a meeting of the International Union for the Protection of Nature was held at Lake Success. Resolutions adopted included recommendations for improved educational programs in conservation and for better protection of species threatened with extermination.

(C. E. R.)

Canada.—Although natural resources come under provincial jurisdiction, the federal government passed the Canada Forestry act on Nov. 30, 1949. The new law provided for establishment of forest experimental areas and laboratories, gave the federal government power to support any province or forest owner in protecting and developing forest resources and enabled the government to assist industries with economic studies on forest resources. Federal authorities were active in other forestry research: by girdling pulpwood size trees in the spring and filling the ring with an arsenic mixture, scientists proved that bark peeling is easy during flyless September, and that the wood is lighter and can be shipped more cheaply; the Sault Ste. Marie forest-insect laboratory stepped up its insect-killing activity under the leadership of Gernor Bergold, world authority on viruses; a new category of civil servants, known as "insect rangers," was organized as a further means of controlling forest pests.

There was much provincial forest activity during the year

Assisted by a $120,000 grant from the British Columbia Loggers' association, the west coast provincial university turned a 9,600-ac. wooded wilderness near Haney into a forestry college; British Columbia's 1949 tree planting included 10,000,000 fir and cedar saplings in coastal areas; Ontario set 18%–25% forest cover in southern agricultural areas as its reforestation target, continued its world-wide search for a strain of white pine resistant to blister rust and planned rigid timber-management in the 170,000-sq.mi. block where forest stocktaking was nearly completed; New Brunswick began a complete forest survey to put all timber operations under sustained-yield management after the pattern worked out by British Columbia.

According to the annual Canadian Forestry association survey, 6,390 fires during 1949 destroyed 1,500,000 ac. of forest with a potential wood and labour loss of $50,000,000. The 1949 losses created a ten-year average annual loss of about 2,000,000 ac. To help forest industries carry some of this loss, the first Limitholders Mutual Insurance company was established to provide mutual insurance on standing timber in New Brunswick, Quebec and Ontario.

BIBLIOGRAPHY.—Department of Mines and Resources, *Forest Conservation* (1949); Dominion Forest Service, *Native Trees of Canada*, new ed. (1949). (C. Cy.)

Great Britain.—A national census of the forests and woodlands of Great Britain was completed during 1949. Information which then became available showed the small area existing of productive woodlands in Great Britain compared with other European countries and also the great devastation caused by wartime fellings. Only 5% of the land surface of Great Britain was classified as forest land, and this consisted of nearly 3,000,000 ac. of privately owned woodlands and 500,000 ac. of state forests. More than one-third of this total woodland and forest area was unproductive, having been clear-felled during the two world war periods and not yet replanted.

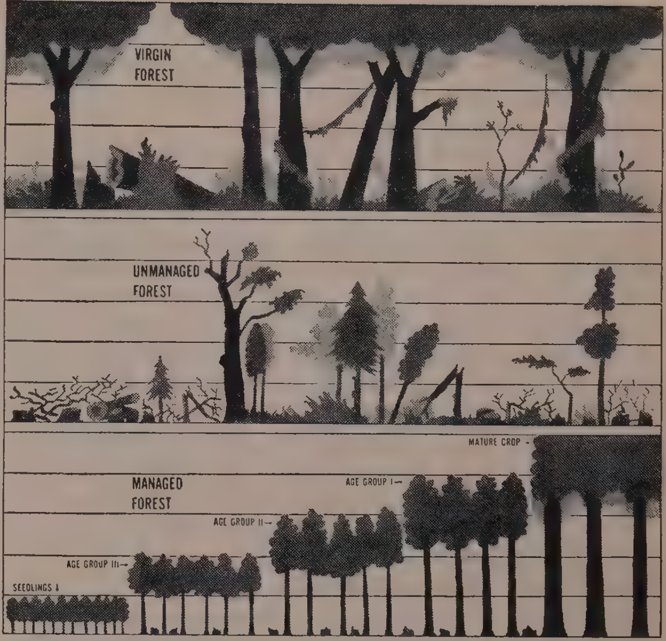
The various legislative enactments made to remedy this deplorable state of British forestry did not yet show much effect. The ambitious program of state afforestation, to bring the total area of forests up to 5,000,000 ac. at the end of 50 yr., had begun to give important results, and the annual target figures were almost reached again in 1949, but in the great effort to get large areas planted it was considered by some forestry experts that insufficient attention had been paid to the best ecological relation between the species of trees planted and the appropriate sites. The grant of financial assistance to private owners, under certain conditions, known as the "dedication" scheme, made little progress, and a small increase in the planting grant per acre and new supplementary grants for the thinning of plantations were made during the year to stimulate dedication and to encourage private forestry.

Because of the shortage of imported timber, excessive fellings in home woodlands continued after World War II, and the existing controls had to be tightened by a considerable reduction on the amounts of timber licensed.

The chief subjects of forestry research were the afforestation of peat and heath moorlands, the maintenance of fertility in nurseries and the study of the numerous varieties and races of poplars.

British Commonwealth of Nations.—In the commonwealth the heavy postwar demand for timber intensified the search for new sources of commercially useful timber; and formerly inaccessible areas were opened by modern mechanical methods of logging and the construction of extraction roads.

In British Guiana and in west Africa important projects were made for more extensive use of the forests, and new sawmills and plywood factories were placed under construction. In east Africa some of the plantations formed before World War II began to yield their first crops of sawn timber. The construction of a pulp mill was put into effect in Basutoland, and a wattle bark factory in Tanganyika.



CHARTS from Egon Glesinger's *Coming Age of Wood*, published in 1949. It was Glesinger's thesis that by treating the forest as a "mine" instead of a "crop," man has been overly wasteful of one of his basic raw materials

In Malaya the unsettled state of the country hindered forestry progress, but an important development was the compilation by the forest department of new timber grading rules. These rules, based on the ultimate commercial uses of the various grades of timber, created much discussion among foresters, timber importers and sawmillers, as the principles involved might be of great assistance in the grading and marketing of the lesser known species of tropical hardwoods not only in Malaya but in other parts of the commonwealth.

One of the chief developments in the fields of forest utilization during the year was in the uses of wood waste products, from both sawmills and paper mills and also from forest waste in the form of treetops, branch-wood and bark. In Canada and in Scandinavia new fibreboard plants were constructed where sawmill waste was treated chemically and mechanically, the finished product being obtained by pressure at a very high temperature.

In Australia there was a great increase in the use of eucalypt hardwoods for paper manufacture, and the year 1949 saw the establishment of new pulp mills and a steady increase in the Australian output of high quality paper of all grades.

Europe.—In European countries the disastrous fire in the pine forests of the Landes in southwest France was one of the most important events of the year. More than 360,000 ac. of valuable forests were destroyed. The pine forests of the Landes are the greatest source of resin and turpentine in Europe, and the economic loss to France of such a large part of the forests was all the more serious because of the great fires in the same area in 1944 and 1945.

In Germany and in Austria much progress was made in the regeneration of the forests overfelled during World War II and the postwar years, both by methods of natural regeneration and by the establishment of large nurseries for forest seedlings and transplants.

In Belgium the afforestation of the Campines and other areas of poor soils continued, and a new research station was opened for the cultivation and study of hybrids of poplars.

A parasitic disease known as the Chestnut blight (*Endothia* *parasitica*) caused considerable damage and economic loss in Italy, and to a less extent in Portugal and parts of Spain. Direct measures to cure or prevent the disease were not effective, and research was continued to find varieties of chestnut species resistant to the parasite.

Formosa

(TAIWAN or T'AI-WAN). Formosa is a large island in the western Pacific, separated from China to the west by the Straits of Formosa and from the Philippines to the south by the Bashi and Balingtang channels. Area: 14,589 sq.mi., including Pescadores and neighbouring islands. Pop. (1949 est.): 7,000,000, including Chinese Nationalist troops and refugees from the mainland.

The capital is Taipei (formerly Taihoku) (326,407 in 1940); other large cities include Kao-hsiung (formerly Takao) (152,265), Tainan (142,133) and Chi-lung (formerly Keelung or Kiirun) (100,511). Principal religions are Buddhism, Confucianism and Taoism.

History.—As a result of the successful advances of Chinese Communist forces on the mainland, during 1949 Formosa was converted into a Chinese Nationalist military stronghold. Wei Tao-ming was replaced as governor in Dec. 1948 by General Chen Cheng, former chief of staff of Nationalist forces in Manchuria. On Dec. 8, 1949, the capital of the Nationalist government was moved to Taipei, Formosa's capital. General Chen was removed as governor on Dec. 15, 1949, and appointed military commander of Formosa. K. C. Wu, former mayor of Shanghai, was appointed governor. At the end of 1949, Formosa was one of the two territories remaining in the control of the Nationalist government, the other being Hainan Island.

Education.—In 1941 there were 1,000 primary schools with 12,076 teachers and 740,693 students; 6 normal schools with 225 teachers and 2,507 students; 4 colleges with 236 teachers and 1,385 students; and 1 university with 345 students.

Finance.—Upon taking over the administration of the island, the Chinese issued a special currency for Formosa, the Taiwan dollar, based on the former Japanese yen notes. In 1949 a new currency, the new Taiwan yuan, was issued and the Taiwan dollar was eliminated. In Nov. 1949 the total note issue was 144,000,000 new Taiwan yuan. It was reported that the gold and silver of the Nationalist government's treasury was sent to Formosa during 1949.

Transportation and Communications.—In 1946 there were 981 mi. of government railroads, more than 1,500 mi. of private railroads and 500 mi. of tramways; there were 10,000 mi. of roads of all types, of which 2,200 mi. were main highways. In 1939 there were 220 telegraph offices, 195 post offices and 123 telephone exchanges.

Agriculture.—The gradual rehabilitation of agriculture since the close of World War II resulted in large increases in agricultural production in 1948–49 although output was still generally below prewar levels. The estimated 1948–49 agricultural production in short tons amounted to: rice, 1,320,000; sugar, 550,000; tea, 10,560; pineapples, 17,600; bananas, 85,800; oranges, 32,450; tobacco, 3,700; jute, 14,850; sisal, 2,200. The cultivated area in 1949 was estimated at 2,055,000 ac. or 23% of the total land area.

Industry.—In 1949 the firm hydroelectric capacity amounted to 130,000 kw. Industrial production in 1948 in short tons (unless otherwise stated) amounted to: coal, 1,815,000; salt, 396,000; copper, 990; aluminum, 2,750; cement, 258,900; refined sugar, 295,000; chemical fertilizers, 42,100; paper, 7,150; caustic soda, 5,280; hydrochloric acid, 3,410; bleaching powder, 3,080; cotton yarn, 884; cotton cloth, 4,480,000 yd.; gold, 12,200 troy oz.; crude petroleum, 36,000 bbl.; refined petroleum, 700,000 bbl.; electric power, 832,000,000 kw.hr.

Trade.—Formosa's chief exports in 1948 were rice, sugar, coal, salt, cement, tea and fruits. Chief imports were raw cotton, machinery and crude petroleum. Exports during 1948 amounted to the equivalent of U.S. $17,228,000, while imports totalled $4,786,000. (S. NR.)

Four-H Clubs.

Membership in the 4-H clubs of the United States reached its highest point during 1949 with a total of 1,850,000 rural boys and girls. The number enrolled for the first time was estimated to be about 700,000. Of the total enrolment, about 320,000 were Negro boys and girls.

Percentage of completion of all 4-H projects undertaken also increased slightly to a record of 76.81 for the membership in all states, Alaska, Hawaii and Puerto Rico. Completion of a project consists in the performance of some farming or homemaking activity according to latest scientific methods, in making reports to the club at regular monthly meetings on the methods being used and the progress noted, exhibiting the finished product at a local or county fair and submitting a written report on the project to the leader of the club at the end of the club year.

Paralleling roughly the increase in enrolment, the number of volunteer local leaders of 4-H clubs showed a similar increase. During 1939–49, the number of older youth serving as local leaders of 4-H clubs had grown from 43,258 to 53,820, and the number of adult leaders from 104,092 to 168,999.

The club members' selections of 4-H projects were studied during 1949 in a review of major extension activities. Projects in which at least 5% of all 4-H club members had enrolled fell into 14 main headings: clothing activities, such as making or remodelling garments; food selection and preparation; home gardening; food preservation; home health; swine; poultry; home furnishings and room improvement; corn; dairy cattle; beautification of home grounds; beef cattle; home industries; and home management. The project with the highest percentage enrolled was that of clothing, in which 32% were engaged; second was food selection and preparation, with 24% enrolled; and home gardening ranked third with 19%.

The international aspects of 4-H club work continued to be spread by visits of 4-H leaders on request of other countries as advisers on youth organization, and by visits of leaders of other countries to the United States. From 1944 through 1949, the extension service had aided in this program; trainees from 63 countries had participated, with most of the trainees spending some time in studying the techniques and aims of the 4-H movement. A number of countries throughout the world now had farm youth organizations with some similarity to the 4-H club work of the United States. (M. L. W.)

France.

A republic of western Europe, France is bounded on the north by the English channel, on the east by Belgium, Luxembourg, Germany, Switzerland and Italy, on the south by the Mediterranean sea, on the southwest by Spain and on the west by the Atlantic ocean. Area: 212,737 sq.mi., including the Mediterranean island of Corsica (3,367 sq.mi.). Pop. (1948 est.) 41,500,000. Language: French is almost universally spoken but there are also other regional languages or dialects: German, Breton, Flemish, Provençal, Catalan, Basque, and Italian. Religion: mainly Roman Catholic with *c.* 1,000,000 Protestants and more than 225,000 Jews. Chief towns (pop., 1946 census): Paris (cap., 2,725,374); Marseilles (636,264); Lyons (460,748); Toulouse (264,411); Bordeaux (253,751); Nice (211,165); Nantes (200,265). President of the republic: Vincent Auriol (*q.v.*); prime ministers in 1949, Henri Queuille and (from Oct. 28) Georges Bidault (*q.v.*).

History.—The year 1949 passed with much greater tranquillity than the preceding one. There was no repetition in 1949 of the big strikes of 1948, and there was also a much greater stability of price level. Interest in politics and in trade unionism declined. Communist propaganda was increasingly concerned with "peace," by which was meant opposition to the European Recovery program and the North Atlantic treaty. By December the only rationed commodity was coffee; in the course of the year milk had once more become legally available to adults in towns. Many price controls however remained in force. In spite of them the tendency of the cost of living in the second half of the year was to rise. As compared with incomes, prices—though relatively stable—were high throughout the year. The fight to secure a balanced budget was not yet satisfactorily won, partly because of heavy expenditures in Indo-China and partly because so many of the biggest nationalized undertakings continued to have deficits. The more tranquil course of political life led to a weakening of the double pressure on the Fourth Republic from the Communists on the one hand and the Gaullists, demanding a strengthened executive, on the other. But the working of the republic's machinery had not noticeably improved. The long premiership (by French standards) of Henri Queuille was in part achieved by an attitude that his critics described as "immobilism" and on his resignation there were two false starts and an interregnum of more than three weeks before his government could be replaced.

The Double Pressure Recedes.—The prestige built up by the Queuille government during the Nov. 1948 strikes was reinforced by its two big parliamentary successes in December. The first was a vote of confidence by 377 to 181 in recognition of the government's vigorous protest against the Anglo-American agreement on the Ruhr. This protest was the prelude to three-power negotiations which resulted in the creation of the Ruhr authority and a military security board. On Dec. 29 the French government congratulated Robert Schuman (*q.v.*), minister of foreign affairs, on the results achieved. The government's second success consisted in inducing the national assembly to approve by 341 to 231 an accelerated procedure for voting the budget, by which in the first instance only maximum figures of expenditure for the different ministries should be voted while the credits were to be examined in detail later. In this form the budget was finally voted on the night of Dec. 31, providing for ordinary expenditure of 1,250,000,000,000 fr. and extraordinary (reconstruction and re-equipment) of 615,000,000,000 fr.

On Jan. 12 the government in fulfilment of its promises to stabilize, and indeed reduce, prices issued a series of decrees and administrative instructions aimed at diminishing profit margins in industry and in the distributing trades—especially those of the middlemen dealing in farm produce, of which the prices to the producer were falling without proportionate advantage to the consumer. As on some previous occasions there was more talk of price reduction than was warranted by a situation in which price stabilization alone was a great deal to achieve. This naturally led later to some disappointment; but in spite of the scepticism of the general public the government achieved an interruption of inflationary tendencies. On Jan. 21 the government announced the issue of a loan at 5%. Since purchasers of scrip for 100,000 fr. were able to exchange for new scrip an equal amount of older loans issued at lower rates of interest, the interest of the new loan was really between 6%–7%. At the beginning of March, Maurice Petsche, the minister of finance, announced that the loan had brought in 108,000,000,000 fr. and that in consequence it would be unnecessary to impose any additional taxes in the current year.

The result of the loan was the more satisfactory in that both Communist and Gaullist propaganda against the government were of a character to discourage subscription. The government had had other difficulties. The minister of justice, André Marie, resigned on Feb. 13 when his health (undermined in a concentration camp during the war) collapsed after a running fight with Communists and Gaullists who alleged that a decision had been improperly taken not to prosecute a big building firm which had carried out important military contracts for the Germans during the occupation. Simultaneously the government was under constant pressure to prosecute Communist leaders for propaganda which by alleging that France was becoming the tool of U.S. aggressive intentions against the U.S.S.R., the true friend of the French people, was quite clearly intended to sabotage the integration of France into any western defense system. The government in fact only prosecuted some minor figures, being well aware that the speeches of leading Communists were much too cleverly worded to be actionable and that their words would have most effect if spoken from the dock. The Communists meanwhile had over-reached themselves by provoking Victor Kravchenko to a libel suit. The three-month trial ended on April 4 in a verdict not altogether flattering though in principle almost entirely favourable to Kravchenko; great damage was done to the reputation of the Soviet Union in France by the evidence given about conditions there (which the judge declared mainly irrelevant to the issue).

The Queuille government's prestige reached its height at the county council (*conseils généraux*) elections on March 20–27. These affected half the seats in every county council except that of the Seine (Greater Paris). According to the statistics of the ministry of the interior the Communists won 23.54% of the votes, compared with 26.9% in the same areas in Nov. 1946, and the Gaullists, who had not existed as a party in Nov. 1946, won 25.34%. A generous computation could therefore attribute to the coalition parties 51.12% of the votes. Since the Seine department, where there had been no voting, was one of the areas where both Gaullists and Communists were strongest, since further it was possible to disapprove of the government without supporting either of these parties, the claim of an absolute majority was somewhat specious; but the elections did clearly show that there were at least nearly twice as many people supporting or prepared to tolerate the existing regime than there were in either organized bloc of opponents. It was no longer possible for either Gaullists or Communists to claim convincingly that parliamentary republicanism was the weakest political cause in France.

The Coalition Weakens.—It might be that this success contributed to weaken the cohesion of the coalition when the national assembly met after the Easter vacation. The government had the bad news for it that the budget was not as watertight as had been thought, and that the deficits of the nationalized undertakings were increasing. The government hoped to meet the gap of 83,000,000,000 fr. by economies, including cutting down the investment program and increasing the price of gasoline. Queuille however could only induce the cabinet to agree on the proposals to be laid before the national assembly after that body had been sitting a week. The government had finally to abandon its own gasoline proposals and accept those of the assembly, which proved in practice to be based on erroneous suppositions.

Meanwhile the rivalries between trade union federations were shaking the coalition. When the Socialist trade unionists left the C.G.T. (*Confédération Générale du Travail*) in Dec. 1947 and formed the *Force Ouvrière* trade union confederation they had declared their aim was to improve the purchasing power, not merely the nominal wage of the worker. They had concentrated their attention therefore on bringing prices down. The stabilization of prices was not sufficient satisfaction for their troops. The F.O. trade unions were strongest among minor officials and "white-collar" workers, and largely unsuccessful in competing with the Communist organizations in the mines, heavy industry and the building trade. In the summer they felt it urgent to show that they were prepared to lead strikes, though they rejected all collaboration with the Communist-led C.G.T. The Christian trade union federation (C.F.T.C., or *Confédération Française des Travailleurs Chrétiens*) was no less anxious than the Socialists to show that they were not the tools of capitalism. Possibly because they felt more sure of their troops they declared themselves ready on occasion to co-operate with Communist trade unions. Both of these trade union federations began exerting pressure on their political friends in the coalition

—Socialists in the one case, M.R.P. (*Mouvement Républicain Populaire*) in the other—to resist the tendencies of the increasingly dominant Conservatives. The F.O. civil servants' union called on June 15 a 24-hr. strike of government employees in support of a demand for regrading (that is, in fact, salary increases) which brought work in a number of public offices to a standstill, though it did not affect the police. There were divergencies within the cabinet as to the attitude to strikes in the higher administrative levels; the Socialists had their way and there were no serious sanctions.

The government recovered prestige when Jules Moch, the Socialist minister of the interior, showed himself able to permit without disorder both a Gaullist and a Communist demonstration in close proximity on June 18. A very powerful police force was placed between them but on both sides there was an evident lack of desire for trouble. The Socialist party congress on July 18 approved of the maintenance of the coalition. Almost at once, however, divergent tendencies became apparent again when it was discovered that Daniel Mayer, the Socialist minister of labour, had granted holiday bonuses to the workers of the social insurance system, thereby setting a precedent for yielding to a demand which was being pressed in most branches of industry. The Conservative wing of the coalition protested that this was the thin end of the wedge of wage increases which would destroy the whole policy of stabilization.

The debate on the North Atlantic treaty (ratified on July 27 by 395 votes to 189) proved convenient cover for negotiations to hold the coalition together at least until the beginning of the summer recess. It was only by a majority of 289 to 230 that this was achieved before the national assembly dispersed on July 31. It was hoped that, with parliament absent, the government would hold together. By the end of September there were increasing rumblings of wage claims and Daniel Mayer was advocating the payment of a bonus to the worst paid categories of workers. It was the backwash of British devaluation that finally made agreement within the Queuille government impossible. The unexpectedly low dollar-sterling rate which the British government chose forced the French government to decide on a further devaluation of the franc which all plans had been made to avoid. The fear that this would mean a rapid increase in prices both stiffened the demand for a wage increase and the resistance to it of those who feared inflation. Queuille resigned on Oct. 5. The national assembly was hurriedly summoned.

The Two Weeks' Crisis.—On Oct. 8 President Auriol invited Jules Moch, the Socialist minister of the interior, to form a government. Moch, who was more respected than popular with those who appreciated his services to his country, was particularly hated by both Gaullists and Communists. After a violent all night debate he was invested as prime minister on Oct. 14 by 311 votes, that is, by one more than the constitutional minimum. On the night of Oct. 17 he informed President Auriol that he could not secure the necessary agreement between the parties to form a cabinet. On Oct. 18 President Auriol asked René Mayer, a Radical, to present himself before parliament but, though he secured investment by 341 votes in the national assembly, he also had to inform the president on Oct. 23 that he could not form a cabinet. This was due to his own party's objecting to Daniel Mayer's remaining as minister of labour and the Socialist party's refusal to co-operate on any other terms. Finally, on Oct. 23, the president asked Georges Bidault, the leader of the M.R.P. and former minister of foreign affairs, to form a cabinet. Although the country had remained astonish-

FRENCH FARMER inspecting a newly purchased tractor in 1949, as his family looked on. The tractor, paid for by dollars made available under the European Recovery program, would do the work of six horses

ngly calm, almost indifferent, through this long interregnum, nxiety was beginning to grow and helped Bidault to secure nvestment on Oct. 27, by 367 votes to 183, with 53 abstentions. Only the Communists, led by Jacques Duclos, voted against Bidault.

Bidault formed his government on Oct. 28; Queuille remained n it as minister without portfolio, while Schuman kept foreign ffairs, Moch the interior and Petsche the ministry of finance; Daniel Mayer declined office in order to facilitate the formation of the government and was succeeded by a fellow Socialist, Pierre Segelle; René Pleven, who had for long deplored the ierce opposition between the Gaullists and the parliamentary Republicans, became minister of national defense; René Mayer ccupied the ministry of justice.

Bidault, like his two unsuccessful predecessors, had committed himself both to a nonrecurring bonus for the lowest paid categories of workers and to the return of salaries from government control to collective bargaining. The first commitment was fulfilled but was at once denounced by the trade unions as otally insufficient. The Socialist-led F.O. trade unions called a 24-hr. general strike for Nov. 25 in support of a general wage ncrease and the Communist-led C.G.T. declared its approval. The strike was effective in all the trades dominated by Communist unions and much less so in those dominated by Socialists. The approval of the strike by the executive committee of the Socialist party after it had been declared harmful to the public nterest by the prime minister of a government which included Socialist ministers, was a reminder that the coalition remained badly flawed.

The government's bill for restoring collective bargaining immediately met with sharp criticism because it provided for compulsory arbitration.

The budget estimates for 1950 laid before the national assembly provided for ordinary expenditure of 1,535,000,000,000 fr. and an extraordinary one of 740,000,000,000 fr. The government was asking for 240,000,000,000 fr. of new taxes, but there was sharp resistance to this proposal.

Gen. Charles de Gaulle (*q.v.*) in his press conference of Nov. 14 seemed to show more inclination toward co-operation with other political groups in internal politics, but was if anything more critical than before of France's English-speaking allies. Criticism was widespread, not least in the national assembly, of Great Britain for that country's attitude toward the Council of Europe, which became a very important element in France's political hopes. There was also a good deal of anxiety about the alleged desire of important U.S. groups to arm Germany and Spain rather than France.

From April 20 to April 25 a World Congress of Partisans of Peace was held in Paris under Communist auspices. This brought into existence a permanent organization under cover of which a good deal of Communist activity took place. (*See* also French Union.) (D. R. Gi.)

Education.—(1947–48): Total infant schools 3,648, pupils 387,920; otal elementary schools 84,665, pupils 5,257,244; total secondary schools 947, pupils 427,008; state universities 17, students 129,025.

Finance.—Budget: (1948 actual) revenue 1,021,000,000,000 fr., expenditure 1,596,000,000,000 fr.; (1949 est.) revenue 1,250,400,000,000 fr., expenditure 1,870,000,000,000 fr.; (1950 est.) revenue 2,218,000,000,000 fr., expenditure 2,217,500,000,000 fr. Public debt (June 30, 1948): internal 2,264,734,000,000 fr., external 696,217,000,000 fr. Currency circulation (Dec. 1949): 1,278,000,000,000 fr. Gold reserves (Dec. 1949) 62,000,000,000 fr. On Sept. 20, 1949, the franc was devalued, the exchange rate thereafter being 350 fr.=$1.00 U.S.

Foreign Trade.—The value of imports and exports in millions of francs, for late years, was as follows:

	1946	1947	1948*	1949*
nports	234,042	346,692	672,673	921,794
xports	101,406	213,420	434,047	782,022
Adverse balance	132,636	133,272	238,626	139,722

*Including the Saar, incorporated in the French customs territory as from April 1, 1948.

Transport and Communications.—Roads (1948) 631,000 km.; railways (1949) 25,271 mi.; passengers carried, monthly average (1948) 2,554,000,000 passenger-km.; freight carried, monthly average (1948) 3,457,000,000 ton-km.; navigable waterways (1947) 8,458 km. Shipping (Dec. 31, 1949): merchant vessels 657, gross tonnage 2,709,786. Telephones (1947) 2,108,000. Radio receiving set licences (1947) 5,728,000.

Agriculture.—Production for 1949 (metric tons): wheat 7,850,000; rye 616,000; barley 1,412,000; oats 3,126,000; potatoes (1948) 16,719,000. Wine production in 1949 was about 920,000,000 gal. Livestock (Oct. 1948): cattle 15,437,000; pigs 5,678,000; sheep 7,408,000; horses 2,418,000. Foodstuff production (1949): meat 2,200,000,000 metric tons; milk 2,750,000,000 gal.; fats 400,000 metric tons; sugar 900,000 metric tons. Food rationing in France ended in Dec. 1949.

Industry and Production.—Total for 1949: coal 53,032,000 metric tons; gas 2,400,000,000 cu.m.; electricity 29,700,000,000 kw.hr.; liquid fuel 11,400,000 metric tons; steel 9,124,000 metric tons; cement 6,400,000 metric tons; nitrogen fertilizer 213,000 metric tons; motor vehicles: cars 100,000, tractors 17,100; woven cotton fabrics 150,000 metric tons; wool yarn 130,000 metric tons. (All the above exclusive of the Saar.) The index of employment in manufacturing in 1949 stood at 113 (1937=100); the index of industrial production in 1949 was 112 (1937=100).

Films of 1949.—*Life on a French Farm* (Coronet Instructional Films); *Journey to Provence; Pilgrimage to Brittany* (Simmel-Meservey). (K. Sm.)

Franco, Francisco

(1892–), Spanish army officer and statesman, was born at El Ferrol, Galicia, on Dec. 4. He graduated from the military academy of Toledo in 1910. (For his early career, see *Encyclopædia Britannica.*) On the outbreak of civil war in Spain in July 1936, General Franco became leader of the rebels. After a bitter three-year struggle, he emerged as the *caudillo y generalísimo* of Spain. During World War II, although his sympathies were pro-German and antisoviet, he remained neutral. On June 7, 1947, the *cortes* passed unanimously the Succession act making Spain a nominal kingdom, confirming Franco in office as head of the state for life, according him the right to nominate his successor and stipulating that the candidate for the Spanish crown must be at least 30 yr. old.

In a speech before the *cortes,* on May 18, 1949, Franco accused Great Britain of failure to keep promises made to Spain during the war, quoting Winston Churchill as having said in 1941 to the duke of Alba, then Spanish ambassador in London, that if England won the war it would help Spain to become a strong power in the Mediterranean and support Spain's territorial aspirations in North Africa. (Ernest Bevin declared in the house of commons on June 22 that there was no record in the foreign office archives justifying such a claim, and Anthony Eden said that no such commitment was ever made.) On Oct. 22 Franco arrived aboard the cruiser "Miguel de Cervantes" at Lisbon, Portugal, for a state visit. The visit reciprocated Pres. A. O. de Fragoso Carmona's visit to Spain in 1929 and was Franco's first trip abroad since 1941.

French Literature.

As the curtain fell on the half century, for many French writers whose participation in postwar public affairs had constituted a logical prolongation of their wartime activities, a curtain fell as well on certain of their illusions concerning the writer's commitment. The non-Communist leftist political party founded in 1948 by Jean-Paul Sartre and David Rousset disbanded as a result of internal disputes; it was rumoured that André Malraux was considering abandoning his position as chief of information for Gen. Charles de Gaulle; even certain Communists and their sympathizers—Edith Thomas, Jean Cassou, Jean Bruller (Vercors), Pierre Emmanuel—announced publicly their break with the ethics of the party. Regimentation, organization even, of the critical, realistic and frequently exasperated French intellect seemed more difficult of accomplishment than at any time since before 1940.

It was inevitable, however, that the long, often tragic confrontation with the many-faceted problem of the individual in the group, involving as it had, the re-examination of philosophical, sociological, political, even metaphysical concepts, should have left a profound mark on contemporary writing, a fact that led one critic to speculate as to whether literature was not on the road to becoming a branch of sociology, or else a laboratory in which philosophical hypotheses were being applied to the description of facts. Commenting on the Balzac centenary celebrations, another, older critic expressed the hope that after rereading *La Comédie humaine,* French novelists would return to observation of their time rather than continue "to wrack their brains over insoluble metaphysical problems." Both critics were possibly unaware that certain writers had already exchanged these problems for those closer to their own métier.

For whatever may have been the nature of their extraliterary preoccupations—whether sociological, philosophical, political or all three—it was evident in 1949, despite the apparent welter and confusion of the French literary scene, that only those who, in addition to having participated in these probings, were also aware of the expanding frontiers of consciousness and of the resultant need for new language techniques and a new optic, had succeeded in emerging above the rising tide of merely competent writing—memoirs, *reportages,* fictionized current events, etc.—that flooded the bookshops as a result of the introduction of high-powered merchandising methods into the French publishing world where, until recently, the goal was prestige rather than large profits. It is, in fact, probably no exaggeration to say that, because of the latter factor in particular, much of the most original writing of the year remained almost clandestine in its *rayonnement.* In any case, the multiplication of commercially inspired literary awards (more than 100 were distributed) brought out no important new talents and only served to weaken the significance of the awards that existed. This situation was particularly evident in the case of the novel which, more than any other literary form, offers perhaps the greatest possibilities of extensive circulation.

Here such classically written works as Jean-Paul Sartre's *La Mort dans l'ame* (third and most interesting volume of *Les Chemins de la liberté*), or Louis Aragon's social novel, *Les Communistes,* received wide notice, as did the two prize-winning novels: Robert Merle's *Week-end à Zuydercoote* (Prix Goncourt), a Hemingway-like story set against the background of the battle of Dunkerque, and Louis Guilloux's 800-page chronicle of life in a small Breton town, *Jeu de patience* (Prix Théophraste Renaudot). It was, nevertheless, in the more experimental works of such less-advertised writers as Marcel Bisiaux (*Les Pas contés*), Noël Devaulx (*Compère vous mentez*), André Dhôtel (*David*), Pierre Gascar (*Les Meubles*), Nathalie Sarraute (*Portrait d'un inconnu*), C. A. Cingria (*Bois sec, bois vert*), that the gradual evolution of the French novel away from the event and commitment toward a new reality that was neither surrealist nor existentialist, could be noticed.

This tendency toward a new reality, a new sort of concretization, was also to be seen among the poets, whose work was more concerned with things than with abstract ideas or with the different *mystiques* that had haunted the immediate postwar years. The appearance of *Main d'oeuvre,* by Pierre Reverdy, served to recall his pioneer role in this direction, the aim of which had been to poetize the concrete, rather than to isolate poetry and things in different spheres. *Proème,* by Francis Ponge, *Fête des arbres et du chasseur,* by René Char, *La Vie dans les plis,* by Henri Michaux, were, each in its way, representative of this tendency. *Contre-terre,* by a younger poet, René de Solier, also revealed this direction. The extraordinary popularity of another concretist, Jacques Prévert, whose satirical, tender, easily accessible poems were being quoted like song hits by an entire generation of young people, was confirmed by the enthusiastic reception of new popular editions of his *Paroles* and *Histoires,* first published in 1946, the former having already sold more than 60,000 copies. Critics noted that this was the first time since Victor Hugo that a poet could be said to have penetrated to this extent, and by word of mouth, into the extraliterary world.

It should be added, however, that the cinema, for which Prévert had written frequently, had done much to make this popularity possible.

Other events in the year's poetic activities were the publication of two volumes by Paul Eluard, *Corps mémorable* and *Une Leçon de morale,* as also of a collection of Philippe Soupault's later poems under the title *Chansons,* and a volume of the collected poems of André Breton. Here it should be recalled that when the critics, Pascal Pia, Maurice Saillet and Maurice Nadeau presented as a supposedly authentic, unpublished poem by Arthur Rimbaud, a pastiche entitled *La Chasse spirituelle* (an affair that caused no little stir in Paris literary circles), it was Breton who immediately launched one of his most penetrating defenses of the true poet in a little volume of accusation entitled *Flagrant délit.*

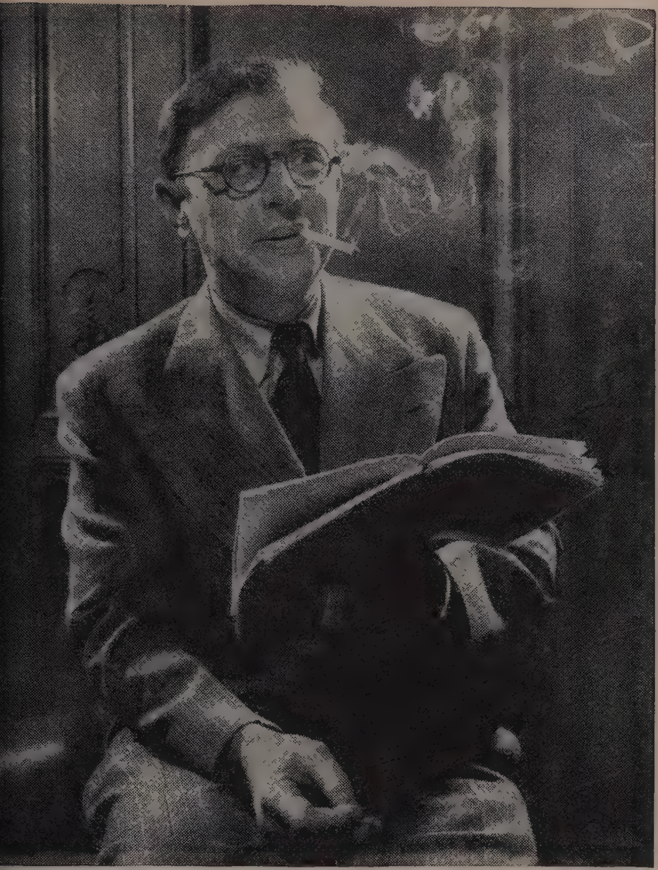
Several excellent poetry anthologies, one chosen by André Gide, were brought out.

During the early theatrical season, a number of established playwrights remained silent, or, as in the case of Henri de Montherlant's *Demain il fera jour,* Jean Anouilh's cynical comedy, *Ardèle ou la Marguerite,* not forgetting Henri Bernstein's lustful *La Soif,* presented plays that added little to their reputation. Two plays of value that marked the first months were that of the Catholic existentialist, Gabriel Marcel, *Un homme de dieu,* a probing analysis of religious motives, and Jean Genêt's desolate if brilliantly written play of crime and punishment, *Haute surveillance. Le Roi pécheur,* a modern poetic version of the Grail legend, by a newcomer to the dramatic field, Julien Gracq, obtained a critical *succès d'estime,* as did the poet Georges Audiberti's *La Fête noire,* for its lyrical satire and verbal richness. A film, *Rendez-vous de Juillet,* based on a scenario by Raymond Queneau, received a Cannes festival award.

The sensations of the fall season were Roger Vailland's *Abélard and Héloise,* and Michel Ghelderode's *Fastes d'enfer,* the former aggressively, intellectually anticlerical, and the latter blasphemous and obscene in the manner of this hitherto neglected Belgian dramatist's Flemish ancestors, Jerom Bosch or Pieter Bruegel. There was a cry of scandal, but both playwrights held the boards for several months. A French adaptation by Jean Cocteau of Tennessee Williams' *A Streetcar Named Desire* aroused considerable interest, as did an excellent performance of Strindberg's *Spook Sonata.*

As usual in France, there appeared a large number of excellent critical essays that varied in subject from the sexual emancipation of women (*Le Deuxième sexe,* by Simone de Beauvoir), or a plan for social, spiritual and political reorganization of France (*L'Enracinement,* by Simone Weil)—both of which were widely discussed—to the more intellectualized esthetic and philosophical considerations of literature and art by Maurice Blanchot (*La Part du feu* and *Lautréamont et Sade*), Maurice Merleau-Ponty (*Sens et non-sens*) or Francis Ponge (*Essais critiques*).

Jean Paulhan's resuscitation of the penetrating critical works of Félix Fénéon was an event of interest, as was the original analysis of Debussy (*Debussy et le mystère*) by the philosopher, Vladimir Jankélévitch.



ÉAN-PAUL SARTRE, French philosopher identified with existentialism; three his books were published in English in 1949; namely, *What is Literature?* essays), *Three Plays* and *Nausea,* his first novel

In the domain of pure philosophy, the year saw the publica- ion of two volumes of lectures delivered before Jean Wahl's *ollège Philosophique* (founded in 1946), as well as an impor- ant book by Gaston Bachelard, *Le Rationalisme appliqué,* hich completed the already vast work of this original thinker. ontinued interest in the philosophy of existence was evidenced y such titles as *De l'essence de la vérité,* a translation from e German of Martin Heidegger; *Le Vrai visage de Kierke- aard,* by Pierre Mesnard; *Gabriel Marcel et Karl Jaspers,* by aul Ricoeur. Sociology, science and political economy were epresented by the important volume, *La Structure elémentaire la parenté,* by the ethnologist, Claude Lévy-Strauss; *Le ythe de l'eternel retour,* by Mircea Eliade; *Loki,* by Georges umézil; *La Part maudite,* by the curiously universal Georges ataille; *La Science et l'espérance,* posthumous notes of Jean errin, awarded the 1926 Nobel prize in Physics, and *Principes fédéralisme,* by Robert Aron.

Among the 20 or so literary reviews, *Cahiers du sud, Esprit, aru, La Table Ronde, 84, L'Age Nouveau, Mercure de France, es Cahiers de la Pléiade, Psyché, Présence Africaine, Contre- oints* and *Dieu Vivant* may be said to have been the most epresentative.

A new review, *Empédocle,* made its appearance during 1949, d the disappearance of Georges Bataille's excellent *Critique* as generally deplored.

Four weekly newspapers: *Les Lettres Françaises, Les Nou- elles Littéraires, Le Figaro Littéraire, La Gazette des lettres* and e daily, *Combat,* supplied well-informed news and criticism literary activities.

rench Overseas Territories: *see* FRENCH UNION.
rench Pacific Islands: *see* FRENCH UNION.

French Union. With the establishment, by the constitution of 1946, of the French union, in which are comprised both the mother country and the former empire, the old colonial terminology was abolished and for the colonies were substituted four categories of overseas regions. The older, completely assimilated colonies claimed recognition as French *départements* administered as in the mother country; the others became overseas territories (*territoires d'outre-mer*) which henceforward would elect representatives to parliament and would have their own local assemblies possessed of wide powers; the trust territories, to be known in future as associated territories, were similar in structure to the overseas territories and had the same electoral privileges; lastly, there were the former protectorates, now styled associated states, which could belong to the union only by an act of voluntary accession.

Two of the three central instruments of government already in operation were: (1) the presidency of the French union, exercised, after the passing of the constitution, by the president of the republic ex officio; and (2) the assembly of the French union, of which 75 members represented metropolitan France (50 chosen by the national assembly and 25 by the council of the republic) and 75 members were elected by the assemblies of the overseas countries, which had been sitting in a consultative capacity since Dec. 1947. By an act of April 24, 1949, was instituted the high council of the French union, the function of which was to help the government with the general administration of the union and act in an advisory capacity. It included a delegation from the French government consisting of the chief ministers and representatives of the associated states, under the chairmanship of the president of the union. Its inception was not unattended by difficulty because of uncertainty as to the scope of its powers and to the abstention of Morocco and Tunisia, whose rulers had protested against a statement by the minister of overseas France in which he had included these countries in the French union; by the end of the year, therefore, the high council had still not been summoned.

French Union

Country and area, sq.mi. (approx.)	Population* (000's omitted)	Capital, status, governors, rulers, etc.
AFRICA		
Algeria, 851,298	8,676	Algiers, group of three *départements, Governor general:* Marcel Edmond Naegelen.

*1948 estimates if not otherwise stated.
†1946 census.
‡1943 estimates.

Total area of the overseas territories of the French union: approximately 4,575,767 sq.mi. Total pop. (1948 est.): 75,837,000. Certain essential information on the component parts of the French union is given in the table.

Algeria.—The cantonal elections held on March 20–27, 1949, confirmed the landslide to the right in the first electoral college (Europeans and *évolués* or developed Moslems) and the success of the "independent" supporters of the government in the second college (Moslems only). Four seats were lost by the Communists and six out of eight by the U.D.M.A. (Union Démocratique du Manifeste Algérien), which, led by Ferhat Abbas, stood for a republic of Algeria. The Nationalist M.T.L.D. (Mouvement pour le Triomphe des Libertés Démocratiques, led by Messali Haj), which attributed its defeat to administrative pressure, expressed itself with accumulated violence in the press and at public meetings. On the whole, however, conditions were quiet. In accordance with its constitution the Algerian assembly elected as its president a Moslem, Salah Abdelkader, who proclaimed his unfailing affection for France. A resolution of the assembly establishing a system of social security for the nonagricultural workers was put into force by a decree of June 10. The three Algerian *départements* were included in the Franco-Italian customs union under the treaty signed in Paris on March 26.

Population.—(Oct. 31, 1948 est.): Europeans 960,000 (11.2% of the total). Chief towns: Algiers (cap., 315,210); Oran (256,661); Constantine (118,774).

Finance.—Budget: (1948 est.) revenue 32,086,600,000 fr., expenditure 32,039,600,000 fr.; (1949 est.) revenue 52,546,000,000 fr., expenditure 52,524,000,000 fr. Monetary unit: Algerian franc=metropolitan franc. Exchange rate (from Sept. 20, 1949): 1 fr.=0.28 U.S. cents.

Foreign Trade.—(1948) Imports 91,400,400,000 fr.; exports 75,350,500,000 fr.

Transport and Communications.—Railways (1947): 4,338 km. Metalled roads (1947); northern Algeria 52,519 km., southern Algeria 282 km.; nonmetalled roads 15,046, tracks 20,575 km. Motor vehicles licensed (Jan. 1948): cars 26,165, coaches 1,003, taxis 1,387, trucks 19,895. Telephone subscribers (March 1949) 56,000. Ships entered (1948): 6,286; cargo unloaded (metric tons) 3,037,600; loaded 5,385,600.

Agriculture.—Main crops (1948, metric tons): wheat 906,980; barley 742,270; oats 117,227; potatoes 164,090; tobacco 21,068; dried figs 38,667, dates 11,516; citrus fruits 131,081; wine (hl.) 12,653,290. Livestock (mid-1948): cattle 968,628; sheep 3,105,121; goats 2,240,277; pigs 142,018: horses 204,790; asses 282,299; mules 229,374; camels 251,979.

Mineral Production.—(1948, metric tons) Phosphate rock 670,000; coal 225,800; iron ore 1,871,500; zinc ore 13,771.

Morocco.—The administrative system introduced by Gen. Alphonse Juin, unfavourable to the Nationalist Istiqlal (Independence) party, led by Si Allal el-Fassi and Ahmed Balafredi, appealed to the French settlers in Morocco who reaffirmed their confidence in him for ensuring the stability of prices and internal peace. On the other hand, the opposition of Sultan Sidi Mohammed ben Youssef seemed unremitting. In reply to a communiqué from the resident general on May 31, declaring that the treaty of Fez of March 30, 1912, was the only instrument regulating relations between the French and the Moroccans, he caused a statement to be issued through the intermediary of the council of vizirs to the effect that "Morocco did not cease to enjoy a position and a sovereignty defined by international treaties."

At the end of December a serious conflict between the resident genera and the sultan was made public. Mohammed ben Youssef was opposed to the organization of trade unions in Morocco if the rights of Morocca workers, including especially the right of election to executive bodies, were limited.

In an agreement signed on Dec. 30 the United States accepted for an indefinite period the prohibition of free imports into the protectorate, which had been imposed by France on Dec. 31, 1948. By admitting certain exceptions to the regulation the agreement gave practical satisfaction to the U.S. without diminishing France's self-respect. The Istiqlal party protested against the fact that Morocco did not take part in the negotiations and demanded that the country should be free to regulate its foreign trade.

Population.—(Jan. 1, 1949, est.): French 287,000 (3.5% of the total) Jews 200,000; foreigners 63,000. Chief towns (pop., March 1947) Rabat (cap., 161,416); Casablanca (551,322); Marrakesh (238,237) Fez (200,946); Meknès (159,811).

Finance.—Budget (1949 est.): balanced at 25,574,000,000 fr. Mone tary unit: Moroccan franc=metropolitan franc.

Foreign Trade.—(1948) Imports 74,865,000,000 fr.; exports 37,188, 000,000 fr.

Transport and Communications.—Roads (1948): 9,181 km.; track 32,000 km. Motor vehicles licensed (Dec. 1948): cars 24,470; com mercial vehicles 19,956. Telephone subscribers (May 1949): 29,500 Ships entered (1948): 5,358.

Agriculture.—Main crops (1948, metric tons): wheat 680,000; barle 1,431,000; oats 46,400; maize 445,900; sorghum 37,300; linseed 32,000 wine (hl.) 364,000. Livestock (1948): cattle 1,449,000; sheep 8,474, 000; goats 6,009,000; pigs 97,000; horses 155,000; asses 555,000 mules 141,000; camels 165,000.

Mineral Production.—(1948, metric tons) Phosphate rock 3,149,000 anthracite 290,200; iron ore 301,300; manganese 195,400; lead 39,200 petroleum 12,900.

Industry.—(1948) Main products: cement 262,200 metric tons; rug 71,400 sq.m.; tinned sardines 950,000 boxes.

Tunisia.—By the death on Sept. 1, 1948, at Pau, Fr., of former Be Sidi Mohammed al-Moncef, deported by the French in 1943 but regarde by the Tunisians as their legitimate ruler, public opinion was rallied t the reigning bey, Mohammed el-Amin, and one of the most acute cause of Franco-Tunisian disagreement was removed. But the Nationalist oppo sition was reinforced on Sept. 8 by the return from Cairo, Egy., Habib Bourguiba, chairman of the Tunisian Destour (Constitutional party to whom the bey accorded a cordial welcome. However, no seriou unrest occurred.

Population.—(1946 census) French 143,977 (4.5% of the total) foreigners (mainly Italians) 95,572; Jews 71,543. Chief towns: Tun (cap., 364,593); Sfax (54,637); Bizerte (39,327); Sousse (36,566).

Finance.—Budget: (1948 est.) balanced at 12,174,000,000 fr.; (194 est.) balanced at 16,343,000,000 fr. Monetary unit: Tunisian franc= metropolitan franc.

Foreign Trade.—(1948) Imports 33,826,000,000 fr.; exports 12,675 000,000 fr.

Transport and Communications.—Roads (Jan. 1949): 8,704 k Railways: 2,174 km. Motor vehicles licensed (March 31, 1949): ca 11,062; commercial 6,465. Telephone subscribers 22,352. Ships entere in Tunisian ports (1948): 2,028; cargo unloaded (metric tons) 1,028,00 loaded 3,115,000.

Agriculture.—Main crops (1948, metric tons): wheat 252,400; barl 100,000; olive oil 26,000; dates 46,000; citrus fruits 21,300; wine (hl 726,000. Livestock (1948): cattle 341,000; sheep 1,588,000; goa 1,083,000; pigs 42,000; horses 72,000; asses 109,000; mules 47,000 camels 177,000.

Mineral Production.—(1948, metric tons) Phosphate rock 1,864,000 iron ore 696,000; lignite 71,000; lead ore 21,600.

French West Africa.—Paul Béchard, the high commissioner of the repu lic for West Africa, was entrusted on Jan. 5, 1949, with putting in operation the military defense of West Africa, Togoland, Cameroun a Equatorial Africa. The natives' Nationalist party, the R.D.A. (Rasse blement Démocratique Africain), offshoot of the Communist party, co tinued its agitation, but its influence was clearly declining, to the adva tage of the local parties, even on the Ivory Coast, where it had mo solidly established itself.

Population.—(1948 est.) Europeans 54,560 (0.34% of the total Chief towns: Dakar (185,000); Saint-Louis (62,900); Bamako (6 100); Abidjan (56,000); Conakry (38,000); Porto Novo (31,000

Finance.—Budget: (1948 est.) balanced at 13,347,000,000 fr. C. A. Monetary unit: franc C. F. A. (Colonies Françaises d'Afrique)= metropolitan fr.

Foreign Trade.—(1948) Imports 19,841,000,000 fr. C. F. A.; expo 18,471,000,000 fr. C. F. A.

Transport and Communications.—(1948) Roads: 75,800 km. Railway 3,726 km. Motor vehicles licensed: cars 3,504; commercial 9,981. Te phone subscribers: 5,665. Ships entered: 2,789; cargo unloaded (met tons) 1,470,000, loaded 1,184,000.

Agriculture.—Main crops (1948, metric tons): peanuts 600,000; c ton 4,500; palm kernels 63,093; palm oil 35,688; bananas (expo 48,356. Livestock (1948): cattle 6,060,000; sheep and goats 18,016,4 horses 186,450; asses 561,700; camels 284,000.

Mineral Production.—(1948) Gold 659.9 kg.; diamonds 77,970 cara ilmenite 3,690 metric tons; zircons 191 metric tons.

Togoland.—According to the Dec. 31, 1948 estimates there were this trust territory 841 Europeans. Capital: Lomé (pop., 30,063).

Finance.—Budget (1949 est.) balanced at 591,350,000 fr. C. F. Monetary unit: franc C. F. A.

Foreign Trade.—(1948) Imports 824,200,000 fr. C. F. A.; expo 1,168,400,000 fr. C. F. A.

Transport and Communications.—(1948) Roads: 3,275 km. Railwa

.9 km. Ships entered at Lomé: 158; cargo unloaded (metric tons) .,346; loaded 39,314.

Agriculture.—Main crops (1948, metric tons): tapioca (export) 12,-9; palm kernels 7,677; palm oil 1,098; cotton 5,707; copra 2,093; anuts 2,560; cocoa (export) 2,955; coffee 1,712. Livestock (1948): ttle 83,712; sheep 259,938; goats 191,448; pigs 169,539; horses 867; asses 2,941.

Cameroun.—According to the Jan. 1, 1949 estimates, there were in is trust territory 6,513 Europeans. Capital: Yaoundé (pop., 1946 est., ,000).

Finance.—Budget (1949 est.) balanced at 2,452,300,000 fr. C. F. A. onetary unit: franc C. F. A.

Foreign Trade.—(1948) Imports 4,888,000,000 fr. C. F. A.; exports 285,000,000 fr. C. F. A.

Transport and Communications.—(1948) Roads: 10,606 km. Railays: 505 km. Telephone subscribers: 480. Ships entered at Duala: 385; rgo unloaded (metric tons) 186,300; loaded 163,300.

Agriculture.—Main crops (1948, metric tons): millet 368,000; manioc 7,000; maize 72,395; bananas 302,558; cocoa 43,000; coffee 5,700; lm kernels 32,000; palm oil 35,000; tobacco 270.

Mineral Production.—(1948) Titanium ore (95% content of TiO_2) 6 metric tons; tin 145 metric tons; gold 333 kg.

French Equatorial Africa.—According to the Jan. 1, 1948, estimates ere were only 13,320 Europeans, including 9,900 French, in all four rritories of French Equatorial Africa. Chief towns: Brazzaville (cap., p., July 1949 est., 83,579, including 4,353 Europeans); Bangui (41,-4); Fort Lamy (18,276); Libreville (12,600).

Finance.—Budget (1949 est.) balanced at 2,688,500,000 fr. C. F. A. onetary unit: franc C. F. A.

Foreign Trade.—(1948) Imports 6,010,000,000 fr. C. F. A.; exports 177,000,000 fr. C. F. A.

Transport and Communications.—(1948) Roads: 22,170 km. Railays: 512 km. Motor vehicles licensed: cars 640, commercial 2,600. elephone subscribers: 950. Cargo unloaded mainly at Pointe Noire and ibreville (metric tons): 236,700, loaded 314,800.

Agriculture.—Main crops (1948, metric tons, export only): cotton ,276; palm kernels 7,563; palm oil 2,389; coffee 2,415; cocoa 2,041; bber 325; mahogany 34,360; okoumé (light mahogany) 172,632.

Mineral Production.—(1948) Gold 1,982 kg.; diamonds 118,000 rats; lead ore 5,006 metric tons.

French Somaliland.—From Jan. 1 the status of Somaliland was raised that of a free territory. A new currency, the Jibuti franc, freely nvertible into U.S. dollars, was instituted on March 20. The 1946 nstitution, which in practice reserved the right to vote to the *évolués*, d the effect of giving a majority to the inhabitants of mixed origin, the detriment of native Danakils and Issa Somalis. The consequence as an outbreak of disturbances which found expression in riots and olence: 38 people were killed and 154 wounded at Jibuti on Aug. 29.

Population.—(1948 est.) Europeans 2,500, including 1,750 French. apital: Jibuti (pop., 22,000).

Finance.—Budget (1949 est.) balanced at 403,274,000 fr. C. F. A. onetary unit: Jibuti franc with exchange rate: U.S. \$1=214.39 buti fr.

Foreign Trade.—(1948) Imports 1,777,400,000 fr. C. F. A.; exports 018,200,000 fr. C. F. A.

Transport and Communications.—(1948) Roads: 25 km. Railway: km. Motor vehicles licensed: cars 169, commercial 210. Telephone bscribers: 296. Ships entered at Jibuti: 1,357; cargo unloaded (metric ns) 240,775, loaded 166,557. The volume of traffic is explained by e fact that Jibuti was the main port serving Ethiopia.

Madagascar.—The supreme court of appeal in Paris on July 7 rejected e petition submitted on the ground of irregularities by the eight prisners convicted on Oct. 4, 1948, by the court at Antananarivo, but the esident of the republic immediately commuted the death sentences to portation for life. The reprieved Malagasy leaders of the armed revolt March 1947 were transferred to the Comoro Islands pending their moval to Belle Isle off the south coast of Brittany, which had been dered by the government on Aug. 2 but which so far had not been fected. From efforts made to secure a revision of the case it became ore and more clear that the accused had not had the benefit of their nstitutional rights. After an inquiry by a commission sent by the sembly of the French union the latter on June 10 requested the govnment to take steps to remedy the situation.

Population.—(1947 est.) Europeans 60,498, including 40,887 French. hief towns: Antananarivo or Tananarive (cap., pop., 165,477, including ,402 French and 2,780 foreigners); Tamatave (29,776); Majunga 6,271); Diego-Suarez (21,677).

Finance.—Budget (1949 est.) balanced at 2,646,147,000 fr. C. F. A. onetary unit: franc. C. F. A.

Foreign Trade.—(1948) Imports 8,941,900,000 fr. C. F. A.; exports 121,500,000 fr. C. F. A.

Transport and Communications.—(1948) Roads: 26,618 km. Railays: 859 km. Motor vehicles licensed: cars 6,087; commercial 3,990. elephone subscribers: 4,616. Cargo unloaded (metric tons) 439,800; aded 244,900.

Agriculture.—Main crops (1948, metric tons): rice 744,323; manioc 7,462; sweet potatoes and taros 201,602; potatoes 90,035; maize ,483; sugar cane 293,400; coffee 23,898; vanilla 461.

Mineral Production.—(1948, metric tons) Graphite 14,228; corundum 330; mica 507; kaolin 40.6. Precious stones (kg.): garnets 133,004; eryls 9,082; agates and chalcedonies 4,030.

Réunion.—In 1946 only 2.67% of the total population (that is, 6,698) ere described as of French origin, although 97% were French. Chief wns (pop. 1946 census): Saint-Denis (cap., 36,096); Saint-Louis (23,-6); Saint-Paul (25,959); Saint-Pierre (22,379).

Finance.—Budget (1948 est.) balanced at 266,558,696 fr. C. F. A. onetary unit: franc C. F. A.

Foreign Trade.—(1948) Imports 2,873,500,000 fr. C. F. A.; exports 2,248,400,000 fr. C. F. A.

Transport and Communications.—(1948) Roads: 790 km. Railways: 126 km. Motor vehicles licensed: cars 2,519, commercial 1,090. Telephone subscribers: 1,950. Cargo unloaded (metric tons) 129,696, loaded 98,631.

Agriculture.—Main products (1948): sugar 67,664 metric tons (1949 est., 110,000 metric tons); rum 86,730 hl.; vanilla 53 metric tons.

Saint-Pierre and Miquelon.—Each of the two islands is a *commune*. Capital: Saint-Pierre (pop., 1946 census, 3,636).

Finance.—Budget (1949 est.) balanced at Fr. C. F. A. 174,800,000. Monetary unit: C. F. A. franc.

Foreign Trade.—(1948, Fr. C. F. A. million) Imports 226.4; exports 246.5. Main exports: salt and fresh cod, seal skins and silver fox skins. Ships entered: 556; cargo unloaded (metric tons) 32,700; loaded 5,060.

French Guiana.—Capital: Cayenne (pop., 1948 est., 10,961).

Finance.—Budget (1946) balanced at 101,700,000 fr. Monetary unit: metropolitan franc.

Foreign Trade.—(1948) Imports 878,000,000 fr., exports 154,000,000 fr. Main exports: gold 330 kg.; balata gum 884 metric tons; tulipwood 9,700 kg. Cargo unloaded (metric tons) 15,000; loaded 3,000.

Guadeloupe.—Chief towns (pop., 1946 census): Basse-Terre (cap., 10,086); Pointe-à-Pitre (41,323).

Finance.—Budget (1947) balanced at 1,049,300,000 fr. Monetary unit: metropolitan franc.

Foreign Trade.—(1948) Imports 5,415,000,000 fr.; exports 3,835,000,000 fr. Chief exports: rum (1947 production: 127,399 hl.), sugar (1947 production: 35,132 metric tons), bananas (1946 production: 48,000 metric tons) and coffee (1946 production: 400 metric tons).

Martinique.—Chief towns (pop., 1946 census): Fort-de-France (66,006); Lamentin (15,114); Sainte-Marie (13,276).

Finance.—Budget (1949 est.) balanced at 988,325,000 fr. Monetary unit: metropolitan franc.

Foreign Trade.—(1948) Imports 6,406,300,000 fr.; exports 4,692,600,000 fr. Chief exports: rum (1948 production: 194,026 hl.) and sugar (1948 production: 33,701 metric tons).

French India.—In the referendum held at Bengali-speaking Chandernagore on June 19, 7,473 votes were cast for incorporation in the Dominion of India and 114 against. Special provisions completely separated the city from other French settlements during the negotiations for its transfer. To comply with the expressed desire of the Tamil-speaking southern settlements (Pondicherry, Yanaon, Karikal and Mahé) for an autonomous system within the framework of the French union, the French council of ministers on Sept. 28 passed a scheme of federation for the four free cities. The referendum to determine the choice between France and India which was to have been held on Dec. 11 was postponed. A rigorous blockade imposed by the Indian government on the expiration of the Franco-Indian customs convention on April 1 affected particularly Pondicherry and Karikal. The transformation of the two cities into free ports greatly increased their traffic in 1949.

Population.—Of the four settlements the largest was that of Pondicherry; the population of the towns was estimated in 1948 as follows: Pondicherry (22,572); Karikal (70,541); Yanaon (5,853); Mahé (18,283).

Finance.—Budget (1949 est.) balanced at Rs. 7,673,120. Monetary unit: rupee. Exchange rate (from Sept. 19, 1949): R. 1=73.50 fr.=21 cents U.S.

Foreign Trade—(1948) Imports 3,214 metric tons valued at 147,000,000 fr.; exports 1,594 metric tons valued at 633,900,000 fr.

Indo-China.—With its political division into three associated states, Viêt-Nam, Cambodia and Laos, forming part of the French union, the name French Indo-China became of only historic significance.

On March 8 the difficult negotiations between the French government and the former emperor Bao Dai culminated in an agreement which guaranteed, within the framework of the French union, the independence of Viêt-Nam comprising the three Annamese speaking *Ky: Tongking*, or *Bac-Ky* (country of the north); *Annam*, or *Trung-Ky* (country of the middle); and *Cochin-China*, or *Nam-Ky* (country of the south). Diplomatic representatives in Viêt-Nam were to be accredited jointly to the president of the French union and the head of Viêt-Nam; the latter was to have independent representation only in China, in Thailand and at the Vatican, their letters of credence being signed by the president of the French union and initialled by the ruler of Viêt-Nam; the Viêt-Namese army would have French instructors; military and economic guarantees in favour of France were also stipulated in the agreement. Viêt-Nam would have 19 representatives in the assembly of the French union.

By the promise of unity to Viêt-Nam, Cochin-China was induced to exchange its status of overseas territory for that of a province of Viêt-Nam, this being decided on April 23, by 55 votes to 6, with 2 abstentions, by a territorial assembly elected for the purpose on April 10. Ratifying this decision on June 3 by 367 votes to 221, the national assembly thus brought to an end the colonial status of Cochin-China which dated back to 1862.

Bao Dai, having proclaimed himself emperor and assuming the title of prime minister, on June 30 formed the first Viêt-Namese government, with Gen. Nguyen Van Xuan, president of the provisional central government of Viêt-Nam since May 1948, as deputy prime minister, minister of the interior and minister of war. By the end of the year the French parliament had not yet ratified the agreement of March 8 which had come into force on June 14 by an exchange of letters between Bao Dai and Léon Pignon, high commissioner of the republic. At a ceremony in Saigon on Dec. 30 the administrative and political powers were formally transferred to the Viêt-Namese government.

The return of the former emperor of Annam did not to any extent rally the non-Communist nationalists or even the Catholics. The economy of the country showed an increasing decline and in spite of successes in the French offensive which won from the Communist-controlled Viêt-

Minh the Catholic province of Phat Diem, to the southwest of Hanoi, Ho Chi Minh continued to control the mountainous region stretching from the Sino-Tongkinese frontier to the frontiers of Cochin-China and Cambodia. Guerrilla fighting kept things everywhere in a state of insecurity. The approach of the Chinese Communist armies strengthened the spirit of resistance of Viêt-Minh and threatened to create a new danger.

In Cambodia the fall of the Penn Nouth government on Jan. 21, following a financial scandal, brought about a crisis which was ended on Feb. 1 by the appointment to the premiership of Yem Sambaur, leader of the Democratic party which had provoked the emergency. The seriousness of the internal situation, because of the successes of the rebel Issaras, supported by Viêt-Minh, and of the progress of the opposition which was taking the risk of compromising the Franco-Cambodian agreement, led King Norodom Sihanouk to dissolve the national assembly on Sept. 18 and to postpone *sine die* the elections which according to the constitution were to have been held within two months. The king proceeded to Paris on Oct. 6 for the purpose of signing the treaty with France, but since the ministerial crisis persisted he was obliged to return on Oct. 26. The treaty was eventually signed by the prime minister, Sisovath Moniret, on Nov. 8. Cambodia sent five representatives to the assembly of the French union.

Because of a budgetary dispute between the government and the assembly, the prime minister of Laos, Souvannarath, resigned on Jan. 2 and was replaced on Jan. 10 by Prince Boun Oum, leading personality of southern Laos. By a treaty signed in Paris on July 19 by Pres. Vincent Auriol and King Sisavang Vong, Laos was recognized as an independent associated state. This agreement led on Oct. 24 to the voluntary dissolution of the "free government of Laos," known as the Lao Issara government, headed by Phya Khammas at Bangkok. Laos sent three representatives to the assembly of the French union.

Population.—(1946 est.) Europeans 26,000, including 23,000 French and *assimilés*. Chief towns (pop., 1949 est.): Saigon with the seaport of Cholon (256,000); Hanoi (160,000 including 6,000 French and 7,000 Chinese); Haiphong (92,000 including 5,000 French and 30,000 Chinese); Pnom-Penh (128,950).

Finance.—Budget (1949 est.) balanced at 1,426,600,000 piastres. Monetary unit: piastre=17 fr.

Foreign Trade.—(1948) Imports 40,087,700,000 fr.; exports 19,918,000,000 fr.

Transport and Communications.—(1948) Roads: 20,370 km. Railways: 3,245 km. Motor ,vehicles licensed: cars 15,500, commercial 7,500. Telephone subscribers: 5,400.

Agriculture.—Main products (1948, metric tons): rice 4,210,000; sugar 15,785; rubber 43,901.

Industry.—Main products (1948, metric tons): coal 338,950; cement 180,500.

New Caledonia.—The population of Nouméa, the captial, was estimated in 1946 at 10,466. There were 18,700 Europeans in the island.

Finance.—Budget (1949 est.) balanced at 274,500,000 fr. C. F. P. Monetary unit: franc C. F. P. (Colonies Françaises du Pacifique)=5.50 metropolitan fr.

Foreign Trade.—(1948) Imports 554,000,000 fr. C. F. P.; exports 328,000,000 fr. C. F. P. Main exports (metric tons): nickel ore 96,415; nickel (mattes) 6,300; chrome 75,021; gypsum 779; copra 1,569; coffee 920; hides 285.

French Pacific Islands.—This overseas territory comprises eight archipelagos, the most important being the Society Islands, including Tahiti (area: 600 sq.mi.; pop., 1946 est., 24,820), with the town of Papeete (pop., 12,428).

Finance.—Budget (1948 est.) balanced at 164,700,000 fr. C. F. P. Monetary unit: franc C. F. P.

Foreign Trade.—(1948) Imports 381,400,000 fr. C. F. P.; exports 405,500,000 fr. C. F. P. Main exports (metric tons): phosphate rock 187,000; copra 18,439; vanilla 154.

Friends, Religious Society of.

Statistics compiled by the Friends World Committee for Consultation indicated that there were more than 176,000 persons in 1949 who bore the name of Friends (Quakers). They composed 53 Yearly Meetings and annual conference groups in almost every quarter of the world: the largest number (119,000) were in North America; there were 24,000 in the British Isles, 26,000 in Africa (chiefly in Kenya and Madagascar), 5,000 in Central America, 1,000 in Australia and New Zealand, 900 on the European continent and 400 in Asia. All Friends share a belief in the inward divine Light "which lighteth every man that cometh into the world."

STORY HOUR for youngsters aged three to five, at the Quaker centre in Ludwigshafen, Ger., where a kindergarten was operated by an American Friend Service committee team in 1949

From the religious concerns of Friends sprang programs o service and education which were world-wide in scope. Th major channels of service were provided, as in previous years by the Friends Service council operating from London and th American Friends Service committee with headquarters in Philadelphia, Pa., and regional offices in 13 American cities. Continuing their work of relief and rehabilitation in countries stil suffering from World War II and its aftermath, English Friend also carried on a ministry of reconciliation through Quake centres in Shanghai, Delhi, Calcutta, Geneva, Paris, Amsterdam Berlin and other cities. The major foreign-service effort of th American Friends Service committee was a large-scale relie program among Arab refugees in the Gaza area of Palestine where in conjunction with United Nations Relief for Palestin Refugees, some 40 Quaker workers distributed food and clothin and provided shelter and medical services for more than 200,00 refugees. The American section of the committee entered a ne field by launching a large-scale project of slum clearance an self-help housing in Philadelphia. Institutes of international relations and volunteer work camps were conducted under the committee's auspices in many American communities, and international service seminars in the U.S., Europe and Japan brough together students of many nationalities for intensive study c international problems.

The continuance of the "cold war" prompted the America Friends Service committee to set up a working party to stud relations between the U.S. and Russia in the hope of findi areas in which tensions could be relaxed and constructive ste taken toward peace. In July the working party released a stat ment later printed in revised form under the title *The Unite States and the Soviet Union: Some Quaker Proposals for Peac* The group concluded, after several months of study and di cussion, that Russian communism and western democratic ca italism are both likely to persist and that peaceful co-existen rather than victory by one side should be the aim of gover mental policy. The report pointed out that current tensio

t crops during a cold wave in Jan. 1949. An unprecedented frost brought
vy damage to citrus crops throughout southern California

lect each side's fear of attack by the other but warned that creased armaments would not deliver the world from these rs. Three specific proposals for action were made: the reening of east-west trade; the creation of a neutralized and ified Germany; and the strengthening of the United Nations an agency for settling disputes, for reducing armaments (inding atomic weapons) and for fostering an atmosphere in ich a more effective instrument of world government could be ated.

Although draft calls for military service were suspended, 40 ung Friends were arrested for refusal to register under the lective Service Act of 1948; most of these men were senced to prison. These young Friends, like those who registered conscientious objectors, maintained the historic testimony of Society of Friends against war and preparation for war. All se outward manifestations of religious concern sprang out of onflowing spiritual life of the society which arose, as during ee centuries past, in hundreds of local meetings for worship. ee also CHURCH MEMBERSHIP.)

uit. Though adequate comprehensive statistics were not available, the world fruit crop of 1949 was indicated an abundant one, exceeding that of 1948. The processing of ricots, peaches, pears and prunes was larger, suggesting a nerally favourable outturn. World apple production was estited at 503,800,000 bu., 18% larger than the 427,300,000 bu. of 1948. European production was 12% larger than in 1948, but still 7% below the prewar average. World pear production was indicated at 150,900,000 bu., 30% more than 1948 and 14% higher than prewar.

The U.S. fruit crop in 1949 was about a third larger than in the prewar years 1935–39 and perhaps 10% larger than in 1948. Only pears and sweet cherries, however, made new record high harvests. The apple crop was about 50% larger than the small 1948 one.

Prices for most fruits in 1949 were sharply lower to the producers, and millions of bushels of some kinds, such as apples and pears, were not marketed because harvesting costs appeared likely to exceed the returns. Government support programs were available for some types in the form of purchases for the school lunch program and for export.

Apples.—The U.S. 1949 apple crop totalling 133,181,000 bu. was the largest since 1939, about 150% as much as the small 1948 crop (88,407,000 bu.) and a fifth above average. The crop of the central states was double that of 1948 and about 150% of average. Of 11 leading varieties, accounting for three-fourths of the 1949 crop, all showed increases compared with 1948. Delicious (27,800,000 bu. in 1949, against 18,000,000 bu. in 1948)

Table I.—*U.S. Commercial Apple Production by Leading States*

(In thousands of bushels)

was the leading variety; McIntosh, second; and Winesap, third.

The average price to producers for the crop was estimated at $1.45 per bushel, a sharp decline compared with $2.23 per bushel for the 1948 crop. It was estimated that 10,500,000 bu. were not harvested because of low prices. World production was estimated at 503,800,000 bu., 18% more than in 1948, but only 1% more than the prewar average.

Apricots.—The 1949 crop in the commercial producing states, California, Washington and Utah, was 200,300 tons, compared with 246,600 tons in 1948, and 12% less than average for the decade. The crop of the major producer, California, was 25% less than in 1948, and that of Washington, 42% more than in 1948. Quality was good and the price slightly higher than in 1948. The world crop was larger than in 1948.

Avocados.—The U.S. production in 1949 was estimated at 17,300 tons, slightly more than in 1948, but somewhat smaller than average. Production in the leading state, California, declined, whereas that in Florida increased about 25%.

Bananas.—The U.S. supply, all imported, amounted to about 20 lb. per capita in 1949, approximately the same as in 1948.

Cherries.—The 1949 U.S. commercial cherry crop was large—243,730 tons, compared with 214,380 tons in 1948 and an average of 172,223 tons. Sour cherries, commercially produced mostly in Michigan, New York and Wisconsin, were a crop of 112,030 tons, against 134,760 tons in 1948. The sweet cherry crop, mostly produced in Washington, Oregon and California, was a record large one of 131,700 tons, two-thirds more than in 1948 and 50% above average.

Cranberries.—The U.S. 1949 crop was 856,800 bbl., significantly smaller than the record high one of 922,500 bbl. in 1948, but 29% more than average. Massachusetts produced 530,000 bbl., 62% of the total crop. The Wisconsin crop was a large one of 210,000 bbl., almost twice the average for the previous decade.

Dates.—The California date crop of 1949 was estimated at 12,800 tons, compared with 16,240 tons in 1948 and only 8,352 tons for the 1938–47 average. Prices were slightly lower than in 1948.

Figs.—The 1949 fig crop of California and Texas was even smaller than in 1948. California produced 28,400 tons of dried figs in 1949 (30,300 tons in 1948) and 7,000 tons not dried, against an average for 1938–47 of 33,030 and 16,130 tons. Texas figs for preserving were estimated at 660 tons in 1949, compared with 1,007 tons average for the decade.

Grapefruit.—The 1949–50 U.S. grapefruit crop was indicated as a small one of 36,350,000 boxes, compared with 45,520,000 boxes in 1948–49, and an average of 50,528,000 boxes for the previous decade. The average price per box to producers was estimated at $1.64, compared with 80 cents in 1948.

Grapes.—The 1949 grape crop of 2,701,500 tons was slightly less than average and considerably below the 3,044,400 tons of 1948, but approximated the prewar production. The California crop, 2,526,000 tons of the total, was far below the 2,857,000 tons of 1948, but about average. More raisins were produced than in 1948, possibly because of the government support program.

Table II.—*U.S. Orange Production by States*

(In thousands of boxes*)

State	1949	1948	Average 1938-47
California			
Navels and miscellaneous	14,900	11,910	19,068

*Boxes hold 77 lb. in California and Arizona; 90 lb. in other states.

Lemons.—The indicated 1949–50 average California lemon crop of 12,000,000 boxes (9,930,000 boxes in 1948–49) appeared to be selling at about $2.80 per box, compared with $4.18 in the previous year.

Limes.—The 1949–50 Florida crop of 250,000 boxes was large compared with 200,000 boxes in 1948 and 158,000 boxes, average for 1938–47.

Olives.—California in 1949 produced 39,000 tons, compared with 58,000 tons in 1948 and 46,600 tons, average 1938–47.

Oranges.—The indicated U.S. crop for 1949–50 was 105,600,000 boxes, compared with 99,620,000 boxes in 1948 and 93,593,000 boxes, average 1938–47. Prices, estimated at $1.56 per box for the crop, were lower than the $1.70 of 1948.

Tangerines.—The 1949 Florida crop was estimated at 4,400,000 boxes, the same as 1948.

Peaches.—The U.S. 1949 peach crop was estimated at 74,780,000 bu., considerably larger than the 65,352,000 bu. of 1948 and the 68,947,000 bu. average of the previous decade. The crop was short in the early southeastern states, but the California clingstone crop for canning was a record one, 37% above average. The estimated average price to producers of $1.53 per bushel was below the $2.05 per bushel for the 1948 crop.

Table III.—*U.S. Peach Production by Leading States*

(In thousands of bushels)

State	1949	1948	Average 1938–47	State	1949	1948	Averag 1938–4
California	34,461	30,127	28,273	Colorado	2,109	1,922	1,86
Michigan	3,900	3,250	3,444	Georgia	2,040	2,812	5,35
Washington	2,772	2,210	2,244	Virginia	1,953	1,209	1,49
S. Car.	2,490	3,160	3,671	N. Jersey	1,948	1,175	1,38
Penn.	2,451	2,182	1,920	N. Car.	1,428	1,646	2,22
Arkansas	2,412	2,482	2,188	New York	1,428	1,114	1,34
Texas	2,400	1,140	1,728	Ohio	1,194	780	84
Illinois	2,307	1,428	1,524				

Plums and Prunes.—The 1949 plum crop in California, estimated at 90,000 tons, was one-third above 1948. Commercial dried prune production of 175,100 tons was 1% below 1948 and 13% below average. Prunes marketed fresh were 6% to 7% above 1948, and above average. The states of Oregon, Washington and Idaho canned 29,800 tons, about average, but twice the tonnage canned in 1948.

Pears.—The 1949 pear crop of the U.S. was a record high one of 36,627,000 bu., about 40% more than in 1948 and 20% above average. The Pacific coast states produced 22,450,000 bu. of Bartletts, 50% more than in 1948. Part of the crop was no marketed because of low prices.

Table IV.—*U.S. Pear Production by Leading States*

(In thousands of bushels)

State	1949	1948	Average 1938–47	State	1949	1948	Averag 1938–
California				Michigan	1,200	300	85
Bartlett	14,335	9,418	10,059	New York	1,195	384	94
Other	1,958	1,250	1,471	Texas	484	236	39
Washington				Illinois	410	330	38
Bartlett	5,325	3,780	5,327	Penn.	385	255	37
Other	1,975	1,775	1,900	Ohio	272	178	32
Oregon				Oklahoma	229	142	1
Bartlett	2,790	1,861	1,843	Colorado	204	155	18
Other	3,360	2,964	2,688				

Pineapples.—Florida pineapple production in 1949 was 5,00 boxes, compared with 4,600 boxes in 1948 and an average o 9,900 boxes (1938–47). A large part of U.S. consumption was imported, mostly from the Hawaiian Islands.

Strawberries.—The 1949 strawberry crop was 8,866,00 crates, smaller than the 10,224,000 crates of 1948 or the ten year average (1938–47) of 9,138,000 crates. Acreage was larger but yield and value were about 20% less than the previous year (*See* also HORTICULTURE.) (J. K. R.)

urniture Industry. At the close of 1949 the 4,000 furniture factories in the United States aking wooden household furniture showed a 15% drop in lume compared with 1948 output, but the total value of their oduction, $1,175,000,000, was the second highest in the entire story of the furniture industry, and was surpassed only by e $1,335,000,000 volume reported by the U.S. census bureau r 1948.

At retail, the 1949 output of furniture sold for approximately ,500,000,000.

During 1949 wholesale furniture prices were reduced 4%, e first reduction in eight years. The index figure on furniture ices at the factories was 112.06 in 1946, 142.5 in 1948 and 8.4 in 1949. In 1939 the index figure was 81.1.

The first half of 1949 was difficult for the furniture industry ecause most furniture and department stores were heavily ocked and bought sparingly until August, when they had duced their inventories to normal. The early fall brought a sh of customers that caught many stores short-stocked and ctories were running to capacity during the fall and early inter to fill their requirements. Backlogs, which were down % from the March 1948 figure, rose rapidly and in December ere down only 18% for the comparable month. Shipments in arch were off 21% but in December were only 8% lower an the previous December and only 15% lower for the entire ar.

The approximately 123,000 employees of the 4,000 plants presented a 6% drop in employment for the year and pay lls were 10% lower. Average wages for the industry remained $1.21 per hour, but shorter hours were worked during the st half of the year. The total number of employees of the rniture industry as a whole was 178,560 in 1949, with 39,000 these employed by 1,391 upholstering plants and 16,000 by etal furniture factories.

In 1949 modern furniture again outsold traditional. As in 48, French provincial was the "high style" leader for the ar with 18th-century English designs and Chinese adaptations pidly returning to favour. Mahogany continued the most popar wood, with walnut, maple, oak and cherry rating in the der named.

Dual-purpose furniture and new types, especially for telesion viewers, proved popular at the furniture markets in Grand apids, Mich., Chicago, New York city, High Point, N.C., mestown, N.Y., San Francisco and Los Angeles, Calif., during 49. Tables with swivel tops, upholstered chairs on swivel ses, "Mr. and Mrs." dressers, oversized cocktail tables, long venports and other "king-sized" items were considered smart both manufacturers and the public.

Elimination of credit controls on all household goods during e year brought a rash of competition based on "no money wn" that sold approximately 1,500,000 television receivers, ,000,000 pieces of furniture and several million rugs before e year's end.

Furniture manufacturers showed a net profit of 6% after ending 43.1 cents of every sales dollar for materials; 18.3 nts for labour; 15.8 cents for overhead; 8 cents for selling; cents for administration; and 3.9 cents for income taxes. his was almost the same breakdown as in 1948.

The most interesting development during the year was the vasion of the United States furniture market by England, veden, Norway, the Philippines, Belgium, Italy, Switzerland d Scotland. Canada and Mexico remained the only foreign rniture customers of U.S. furniture factories, and furniture ports were far greater than exports. No Japanese furniture as imported, but much Chinese cane furniture was sold in the S. during the year. France and Germany, once big exporters of furniture, were having difficulty supplying their own markets because of material shortages. (*See* also INTERIOR DECORATION.)

(J. A. G.)

Furs. The year 1949 was one of the worst that the U.S. fur industry had experienced for many years. Reduced consumer demand brought about drastic deflation in prices. The supply of mink was abundant and prices were low. This fur declined in value during the first half of the year but recovered fully in the last quarter. Mink garments at prices 30% to 40% below those of 1948 created a new group of customers. Wild and ranch mink coats, capes, jackets, stoles, etc., sold well. New ranch mink coats sold at retail in New York from $1,500 up.

Persian lamb, beaver and Russian squirrel were popular. Other furs were neglected; the long-haired furs were unwanted. Insolvencies during the year numbered about 150, with liabilities placed at more than $6,000,000.

Government revenue from the fur tax declined steadily. The total amount collected during the first ten months of 1949 was approximately $38,000,000, or $12,000,000 less than for the corresponding period in 1948. All efforts to have the tax removed failed. Congress was sympathetic but indicated a new tax would have to be found to replace the fur tax.

Promotion of fur lined cloth coats, tax free, reduced sales of fur coats. Tax free fur coats were denied further immunity from tax, and merchants were given until March 1950 to dispose of such merchandise.

All the fur exporting countries of the world shipped fur skins to the United States during 1949, especially the U.S.S.R. American furs sold steadily early in the year in many European countries, but quantities were limited because of dollar shortage. In the fall when sterling and other currencies were devalued, American fur shipments to most countries slumped.

The London market transacted an improved volume of business with other countries, but government restrictions hampered home consumption. English fur merchants and processors benefited by improvement in the fur business in Italy, France, Belgium, the Netherlands and the Scandinavian countries. Business in western Germany improved as additional supplies of fur skins became available. The German fur industry was centred in Frankfurt and Bonn. Switzerland imported furs steadily from the United States. Furs from Japan, Korea, India, Pakistan and various countries in Africa reached New York in limited quantities. Chinese Communists took over the fur business in China, and shipments reached the U.S. through Tientsin, Shanghai and Hong Kong.

The fur of greatest importance during the year was Persian lamb, of which about 6,000,000 skins were sold at auction. Prices declined between 30% and 40% during 1949. The supply came in about equal amounts from Afghanistan, the U.S.S.R. and South-West Africa. Persian lambskins were sold at public auction for the first time in Windhoek, South-West Africa, in September.

Estimates put ranch mink skin production in the United States and Canada at less than the 2,000,000 1948 total. An increase in European production of ranch mink was anticipated. Many mink farmers pelted out because of low prices.

Furs dyed fancy colours were introduced. Midnight blue on Persian lamb, broadtail, kid and squirrel was well received. The industry hoped colours would stimulate business. Other colours introduced were cardinal red, emerald green, caramel and navy blue.

New styles were well received and favoured various collars, moderate sleeves and restrained back fullness. Popular lengths were 26 to 40 in. Few coats exceeded 47 in. Little furs remained in favour.

THREE-QUARTER LENGTH COAT of Silverblu mutation mink, a fur introduced by the Mutation Mink Breeders association in 1949

Raw fur imports for the first ten months of 1949 were valued at approximately $91,000,000, compared with approximately $137,000,000 for the corresponding period in 1948. Exports of fur skins for the first eight months of 1949 totalled approximately $26,000,000, compared with approximately $19,000,000 in 1948.

Gas, Natural.

World production figures for natural gas were not available. The United States had the largest reported output, and the combined outputs of all the other countries totalled only one-fifth that of the United States. The following table shows outputs during recent years in those countries for which data were available, in thousands of millions of cubic feet:

	1946	1947	1948	First half, 1949
Venezuela	331.4	402.6	466.2	238.0
Canada	47.9	52.7	59.0	33.0
Mexico	27.1	35.3	37.6	19.3?
Poland	5.3	5.2	6.0?	3.3?
France	3.9	5.2	6.1	3.7
Hungary	3.2	3.6	3.1?	?
Italy	2.2	3.3	4.2	3.2
China	2.2	1.9	1.5	?

United States.—The salient data on the production and consumption of natural gas in the United States are shown in the following table, as reported by the U.S. bureau of mines.

More than half of the natural gas consumption is distributed by the public utility companies, their combined sales having amounted to 2,515,000,000,000 cu.ft. in 1947, 2,728,000,000,000 in 1948 and 2,143,000,000,000 in the first three quarters of 1949.

Gasperi, Alcide de

(1881–), Italian prime ministe was born on April 3 at Pieve Tesin Trentino, then in Austria-Hungary. After studying at the Un versity of Vienna, he became editor of *Il Nuovo Trentino* an later was elected to the Austrian parliament as an Italian mino ity representative. After the union of his native province wit Italy, he was elected deputy to the Italian parliament in 192 He opposed Mussolini's dictatorship and in 1926 was sentence to four years' imprisonment for anti-fascist activities. Durin World War II De Gasperi took part in the resistance movemen in Rome and on June 9, 1944, joined the first Ivanoe Bonom cabinet as minister without portfolio. Minister of foreign affai of the second Bonomi (Dec. 10, 1944) and Ferruccio Par (June 19, 1945) cabinets, he was elected leader of the reco structed Christian Democratic party (*Democrazia Cristiana* and on Dec. 9, 1945, became prime minister.

On Feb. 11, 1949, the 20th anniversary of the signing of th Lateran treaty between Italy and the papacy, he made his fir official call on Pope Pius XII. On March 11 he informed th chamber of deputies that the cabinet was unanimous that Ita should join the North Atlantic treaty. On April 17, in a pre interview, he announced the government's plan for land refor He visited Trieste (*q.v.*) on June 10 and pledged the Itali government to continue to work for the return of the territo to Italy.

(*See* also Italy.)

Gas Turbines: *see* Jet Propulsion.

Gaulle, Charles de

(1890–), French army officer a politician, was born Nov. 22 in Lil France. He was graduated from Saint-Cyr military college 1913. He was captured by the Germans at Verdun in Mar 1916. In 1932 he was appointed secretary-general of the Sup rior Council of National Defense, and in 1934 he published *Ve l'armée de métier*, in which, condemning the doctrine of defen behind a fortified line, he advocated the creation of a mech nized and armoured army for a war of movement. In May 19 he commanded the 4th armoured division which fought the G mans successfully at Laon and Abbeville. On June 6 he was a pointed undersecretary of state for national defense in t Reynaud government. To protest against the opening of t armistice negotiations with Germany by the Pétain governme De Gaulle went to London where, on June 18, he launched Fighting France movement. On Sept. 10, 1944, he was back Paris as head of the French provisional government and co mander in chief of the French forces. On Nov. 13, 1945, t first constituent assembly unanimously elected him head of t new government, but on Jan. 20, 1946, he resigned, finding hi elf unable to preside over a coalition government with comunist participation. On April 14, 1947, he announced that he ould head the R.P.F. (*Rassemblement du Peuple Français*), a ew party which gained nearly 40% of the entire vote in the ct. 1947 municipal elections.

During 1948 and 1949 he continued to direct the R.P.F. In aris, on March 29, 1949, De Gaulle said that there was not "third force," but only Communists and non-Communists. At ersailles, on Oct. 2, he asked for new elections and expressed is confidence that there was a majority in France for a regime orthy of that country. At a press conference held in Paris on ov. 14, De Gaulle sounded a new note when he declared that e unity of Europe should have been built around a directly egotiated Franco-German settlement, based on their community f cultural and economic interests. (*See* also FRANCE.)

iem Stones. Since the beginning of World War II there had been little information available on gem tones other than the diamond (*q.v.*). Rubies and sapphires are ound in Ceylon and Siam, sapphires in Queensland, Austr., meralds in Colombia, South Africa and India. Lesser gems nclude opals from New South Wales and South Australia, and ircons from Indo-China. Brazil and Madagascar both produce variety of lesser gems.

Imports of gem stones into the United States were as follows:

	1947		1948	
	Carats	Value	Carats	Value
ough diamonds	996,514	$42,589,592	912,762	$44,460,365
ut diamonds	347,810	53,471,539	389,314	56,244,934
ough emeralds	7,385	258,062	4,937	28,054
ut emeralds	2,286	75,420	11,213	286,565
earls, natural		366,624		772,763
earls, cultured		737,753		748,302
arcasites		308,724		235,058
ther varieties				
Rough		298,393		258,553
Cut		3,664,048		3,160,778
Imitation		8,605,874		9,794,908
Total		$110,376,029		$115,990,280

Imports of gem stones expanded enormously in recent years, s indicated by the following totals of value covering the decade 939–48:

939	$40,488,136	1944	$ 77,529,806
940	37,769,135	1945	114,435,231
941	33,777,215	1946	189,017,646
942	28,520,070	1947	110,076,029
943	72,109,788	1948	115,990,280

While the United States has no output of precious stones, here is a fairly extensive production of a wide variety of semirecious and ornamental stones, of which agate, jade and turuoise are the most important. (*See* also MINERALOGY.)

(G. A. Ro.)

ieneral Services Administration. The General Services administraion was created by the Federal Property and Administrative ervices Act of 1949 to fill a need for an efficient, businesslike ystem of property management.

Its establishment followed recommendations of Pres. Harry . Truman to the congress in March 1948 and later by the ommission on Organization of the Executive Branch of the overnment.

It was the intent of congress in setting up the General Servces administration to provide for the government an economic nd efficient system for procurement and supply of personal roperty and nonpersonal services; widest possible utilization f available property; prompt disposal of surplus property; and dequate records management.

To achieve this end, the personnel and functions of various overnment agencies engaged in these fields were transferred to the General Services administration. They were: the Federal Works agency, including the Public Buildings administration and the bureau of community facilities; the bureau of federal supply and the office of contract settlement, from the treasury department; the national archives establishment; and the War Assets administration. Jess Larson was named by President Truman as the first General Services administrator.

Thus were consolidated under one arm of the federal government procurement and supply, building construction and management, records management and certain public works functions.

Maximum use and minimum purchases of federal property and nonpersonal services in the field of supply were major goals of the General Services administration. These were to be accomplished by establishing uniform policies and methods for procurement, utilization and related activities.

Centralized purchasing, where it was more advantageous to the government, was to be maintained. Procedures were to be geared to prevent losses to the government through competition of executive agencies for the same articles in the same market, unnecessary buying, lack of quantity purchases and the purchasing of articles by one agency when they were carried as excess by another.

Inventory levels of property held by the various executive agencies were to be watched carefully by the General Services administration to insure maximum utilization. Excess property from an agency that no longer needed it would be transferred to one that did need it. Property which became surplus to the needs of the entire government would be promptly and advantageously disposed of.

General Services was authorized to design and construct any type of federal building, either by direct appropriation or by reimbursement from appropriations made to other agencies. Also, it was to operate, maintain and protect buildings under its jurisdiction throughout the United States, and assign or regulate assignment of office space; lease space for government use in Washington, D.C., and throughout the entire country; and acquire sites for federal buildings to be constructed under its jurisdiction.

Advance planning for nonfederal public works was another responsibility of General Services. The administrator was authorized to make advances of federal funds to encourage states, their agencies and political subdivisions to complete the plan preparation of specific public works and to take other steps necessary to enable them to undertake construction.

General Services also was to maintain in recoverable operation, or in standby status, a reserve of industrial plants, equipment and machine tools, designated by the secretary of defense, to form a nucleus of productive capacity to meet immediate military needs in event of or in anticipation of a national emergency.

Transfer of suitable war surplus structures and facilities to educational institutions was made a duty of General Services, as well as making available to state and local governments surplus property for disaster relief.

Preservation and administration of the permanently valuable records of the federal government, through the national archives establishment, became another major task of General Services.

The *Federal Register*, which publishes official rules and regulations, and the Franklin D. Roosevelt library at Hyde Park, N.Y., were also placed under the jurisdiction of General Services.

The War Assets administration, charged with the disposal of billions of dollars of surplus left over from World War II, was transferred to General Services for the express purpose of liquidation. Of the $27,100,000,000 of war surplus property declared to War Assets or its predecessor agencies, $25,600,000,000 had been disposed of by Oct. 1, 1949. (J. Lar.)

Genetics.

J. V. Neel demonstrated that sickle-cell anaemia was conditioned by a recessive gene; heterozygotes or carriers were shown to have some sickle-shaped cells in their blood. Carriers could thus be detected by a simple blood test. L. Pauling and collaborators showed that the haemoglobin of blood in sickle-cell anaemia was different from normal haemoglobin. In the heterozygotes they found both types of haemoglobin present in the ratio of 40% sickle-cell anaemia haemoglobin to 60% normal haemoglobin. Louis Diamond and co-workers found that 27 of 147 infants suffering from erythroblastosis foetalis, who had received transfusions of Rh-negative blood from male donors, had died while not 1 of the 42 receiving blood from female donors had died. The cause for this difference was not determined.

Micro-organisms.—There were rapid and spectacular advances in this field during 1949. A. D. Hershey and Raquel Rotman inoculated cultures of the bacterium *Escherichia coli* with two different mutant strains of bacteriophage. By suitable dilution they were able to introduce single bacteria into small culture tubes. After the bacteria had burst, the contents of each culture tube was plated separately and the released bacteriophage particles allowed to form colonies on the agar plates. It was found that the released phage particles were of four types, the two original mutant strains, a type which contained both mutants and one which contained neither. By studying different pairs of mutants in this way they were able to show that some of the mutants behaved as though linked in a genetic system comparable with the chromosomes of higher organisms, while others assorted freely; that is, they showed no linkage. This important work demonstrated that even bacterial viruses, the bacteriophages, contained a complex hereditary mechanism. S. E. Luria and R. Dulbecco found that after bacteriophages had been subjected to ultra-violet light many of the single particles could not grow and cause the bursting of a bacterium. However, when a bacterium was infected by two such inactivated particles, it was destroyed by growth of the phage particles. They concluded that each inactivated particle contained a different lethal mutation, and that genetic recombination resulted in lethal-free particles, which then multiplied within the bacterium and caused it to burst.

Drosophila.—M. M. Green and K. C. Green showed that there were three closely linked loci in the X-chromosome of *Drosophila melanogaster,* which on mutation produced lozenge-shaped eyes. Any two of these mutant genes, if each was carried in a separate X-chromosome, would produce the lozenge character. However, if two such mutant genes were carried in the same chromosome, normal eyes were produced. This work demonstrated that the position of the gene as well as its nature determines its action. C. L. Ward showed that in several *Drosophila* species there were strains which differed from other strains in the same species in the number and shape of their chromosomes. He concluded that fusions had occurred between certain chromosomes to form one V-shaped chromosome from two rods. Wilson Stone showed that hybrids of two *Drosophila* subspecies, which were heterozygous for such chromosome fusions, were not less fertile than individuals homozygous for such fusions.

Induced Mutations and Mutation Rates.—L. J. Stadler found dominant modifiers in corn, some of which increased the natural mutation rate while others decreased the rate for seed-colour mutation at the locus studied. C. Auerbach found that formaldehyde increased the mutation rate in *Drosophila* when it was added to the larval food but not when applied in other ways. W. K. Baker demonstrated that flies X-rayed in an atmosphere of nitrogen gave fewer mutations than when X-rayed in air or oxygen. Barbara Hayden and Luther Smith found that X-raying barley seeds in a vacuum gave fewer chromosome aberrations than X-raying in air. G. Kolmark and M. Westergaard induced reverse mutations in the mould Neurospora by the use of nitrogen mustard in low concentrations.

Geography.

In 1949 the death of Mark Jefferson, Bailey Willis, Wallace Atwood, W. E. Ekblaw and O. E. Baker, and the retirement from professional positions of other leaders, almost marked the passing of the first considerable generation of American geographers. These pioneers in geographic work and teaching received all, or most, of their scientific training in allied fields such as geology, economics and history, and their individual approaches to geography commonly reflected this background. The younger generation which was taking over the reins had been trained largely in the field of geography.

The 16th congress of the International Geographical union met in Lisbon April 8 to 15. The many sections (I, Cartography; II, Physical Geography; III, Biogeography; IV, Human and Economic Geography; V, Geography of Colonization; VI, Historical Geography and the History of Geography; and VII, Methodology, Teaching and Bibliography) reflected the diverse fields represented. The topics of greatest interest were suggested by the new commissions appointed:

(1) The 1:1,000,000 world map as a basis for geographical distributions; (2) Medical geography; (3) World land use; (4) Regional planning; (5) Soil erosion; (6) Periglacial morphology. For more detailed reports on this congress, the first such congress in 11 yr., see the *Geographical Journal,* CXIV, pp. 76–82, and the *Geographical Review,* XXXIX, 482–87. The next congress was to be held in the United States in 1952. Professor George B. Cressey of Syracuse university was elected president of the union.

The commission on geography of the Pan-American Institute of Geography and History met in Rio de Janeiro Sept. 12 to 24. The meetings were largely exploratory. The 66 adopted proposals outlined many times more work than could be accomplished by the relatively few western hemisphere geographers. It was noted that in several Latin American republics no geographers were active in research and geographic work was almost restricted to elementary instruction. The U.S. delegation proposed a land classification and use survey of the hemisphere based on a map scale of 1:1,000,000. Such a survey would provide basic data for evaluating the need for conservation of natural resources. The world-wide interest in this topic was indicated in "Renewable Resources: A World Dilemma" (*Geographical Review,* XXXIX, 86–98) in which the numerous recent publications on conservation were reviewed.

The work of the Food and Agriculture organization of the U.N. had been of great value in assembling up-to-date data in economic geography. A logical next development was the calling of a conference to promote higher standards of living by mobilizing world-wide science. More than 600 scientists from 50 nations attended the U.N. Scientific Conference on the Conservation and Utilization of Resources at Lake Success, N.Y. Aug. 17 to Sept. 6. The many papers described local progress in resource utilization and conservation, for example: "Recent Experience in Lift Utilization and Drainage in Egypt" and "The Practical Basis of the Norwegian Forest Policy." Little was done in the field of broad world policy, partly because of lack of uthority and partly because so little accurate data was available on world-wide resources. This need for fundamental facts had been stressed at every geographic conference in recent years, and was stated concisely in a call for "A World Inventory" by S. Van Valkenburg at the Lisbon congress (see *Economic Geography*, XXV, 237–39).

The new program of research in medical geography of the American Geographical society was outlined in the *Geographical Review*, XL, 9–41, in an article which surveyed the entire field of medical geography. The society began field work on a comprehensive study of glaciers and ice fields throughout the Americas. These and other programs were initiated before the retirement of Director John K. Wright, who was to be succeeded by George H. T. Kimble of McGill university. The editor of the *Geographical Review*, Gladys M. Wrigley, also retired but would continue to advise the new editor, Mrs. Wilma B. Fairchild.

Accurate maps and other data had been scarce on the physical and economic geography of countries within the "iron curtain." In contrast to authorities on other areas, specialists on soviet geography had had little or no travel experience and no opportunity for unhampered field work within the soviet-controlled areas. For these reasons, the U.S. edition of Balzak, Vasyutin and Feigin, *Economic Geography of the U.S.S.R.* (edited by Chauncy D. Harris) was a valuable contribution although its data was no more detailed than in most regional textbooks.

Both geographers and historians had given increasing attention to the relations between their fields. During the year 1949 a third edition of W. G. East, *A Historical Geography of Europe,* appeared. Two scholarly works by classicists, M. Cary, *The Geographic Background of Greek and Roman History,* and J. Oliver Thomson, *History of Ancient Geography,* showed noteworthy geographic insight. Geographic texts and articles showed an increasing awareness of the historic roots of modern cultural landscapes and most current studies in human geography contained some historical background.

While many larger studies were in progress and many geographic texts and standard works were being revised, the bulk of current research was being presented in scientific journals, both in the field of geography and allied fields. The scope of this work could be best grasped by consulting the annual volumes of the *Bibliographie Geographique* and the monthly *Current Geographical Publications* (compiled by the American Geographical society). (*See* also CARTOGRAPHY; EXPLORATION AND DISCOVERY; NATIONAL GEOGRAPHIC SOCIETY; SOCIETIES AND ASSOCIATIONS.) (O. P. S.)

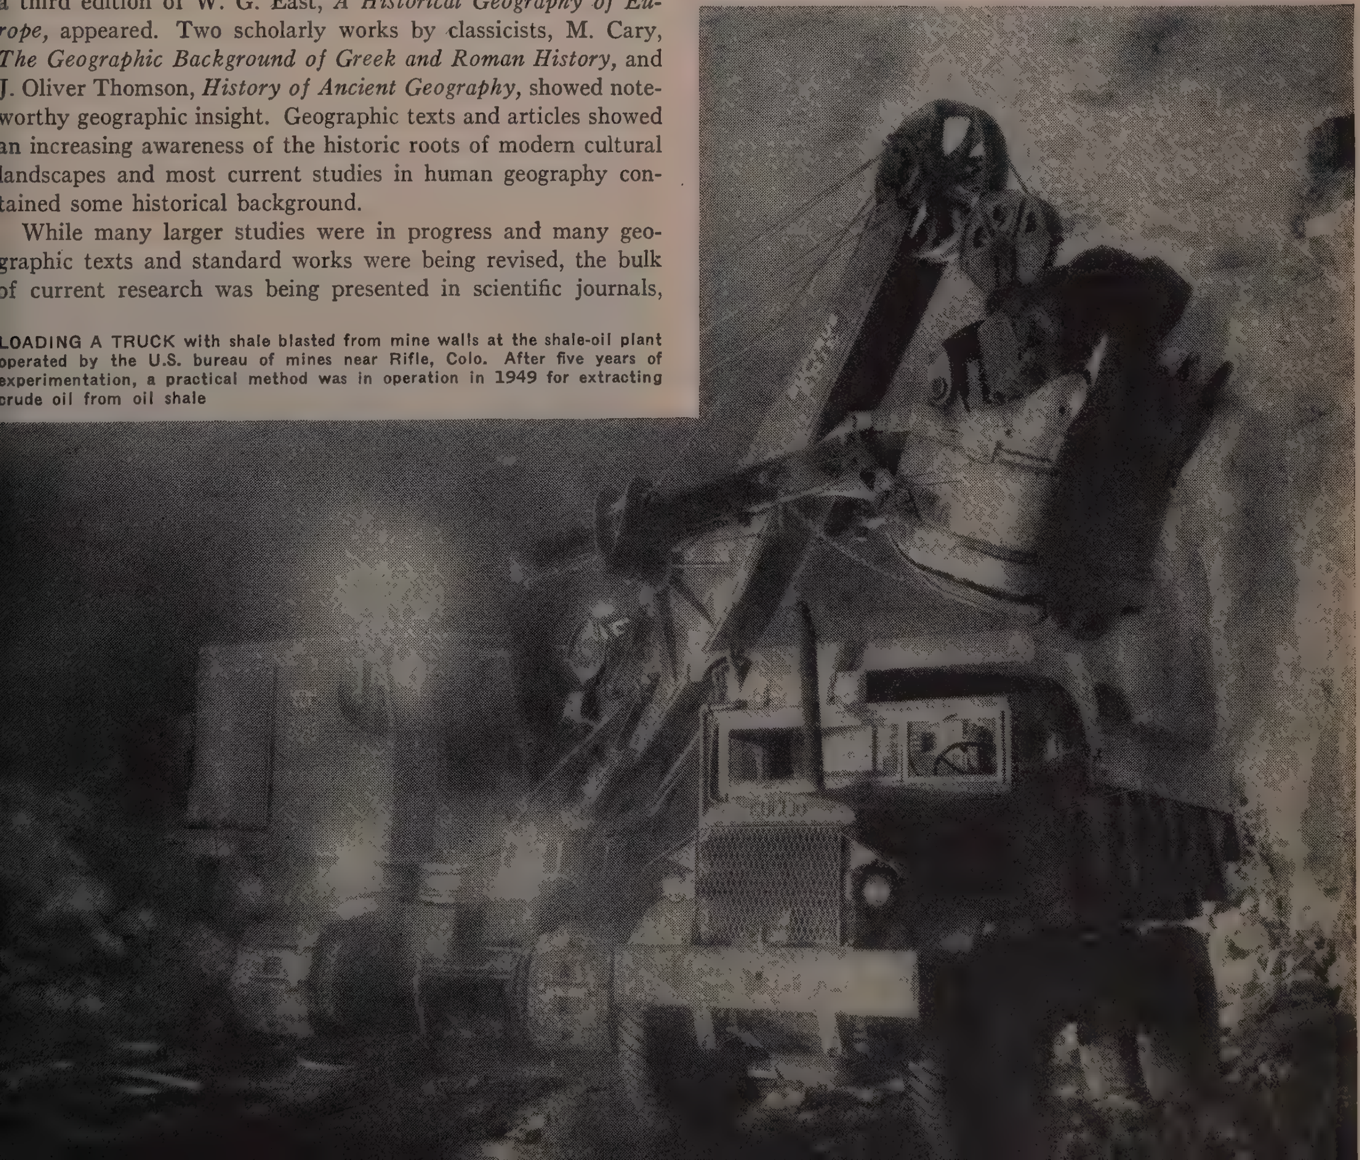
Geology.

Geomorphology.—New editions of two well-known textbooks on geomorphology came from the press in 1949—one by P. G. Worcester, an American, and the other by C. A. Cotton of New Zealand.

Interest in the relatively new science of permafrost and related phenomena was enhanced by a valuable symposium in the March issue of the *Journal of Geology* to which Kirk Bryan, Leland Horberg, H. T. U. Smith and others contributed.

General Geology.—Revisions of *Introduction to Physical Geology* by W. J. Miller and *Geology: Principles and Processes* by W. H. Emmons and others became available. Important new books included *Introduction to College Geology* by Chauncey D. Holmes of the U.S., and *Geology, An Introduction to Earth-History* by H. H. Read of England.

Historical Geology.—Two outstanding textbooks appeared—*Introduction to Historical Geology* by R. C. Moore, and *Historical Geology* by C. O. Dunbar, a successor volume to the *Textbook of Historical Geology* by Charles Schuchert and Carl Owen Dunbar. In Germany, Roland Brinkmann's revision of Emanuel



LOADING A TRUCK with shale blasted from mine walls at the shale-oil plant operated by the U.S. bureau of mines near Rifle, Colo. After five years of experimentation, a practical method was in operation in 1949 for extracting crude oil from oil shale

Kayser's *Abriss der Geologie,* Part 2 of *Historische Geologie,* was issued.

A. J. Eardley's paper on "Paleotectonic and Paleogeologic Maps of Central and Western North America," published in the May issue of the *Bulletin* of the American Association of Petroleum Geologists, set new standards for workers in this phase of geology.

The Committee on Interrelations of Pleistocene Research, R. F. Flint, chairman, of the Division of Geology and Geography of the National Research council, issued a symposium of 12 papers in the September *Bulletin* of the Geological Society of America.

Stratigraphy.—Realization of the importance of facies changes in both pure and applied geology resulted in the publication of a symposium on the subject as memoir 39 of the Geological Society of America, based on a conference under the chairmanship of C. R. Longwell.

"Sedimentary Facies in Gulf Coast" was the subject of a far-reaching paper by S. W. Lowman in the Dec. 1949 issue of the *Bulletin* of the American Association of Petroleum Geologists.

Structural Geology.—In his presidential address before the Geological Society of America, published in the April *Bulletin,* James Gilluly decried the widely accepted concept of the periodicity of mountain-building movements.

A new and considerably improved edition of C. M. Nevin's *Principles of Structural Geology* was welcomed by workers in this field.

Petrology and Petrography.—Further consideration of the problem of granitization dominated the field of igneous petrology. The November issue of the *American Journal of Science* carried a review of the problem by R. A. Daly.

The results of studies of "Internal Structure of Granitic Pegmatites" by E. N. Cameron and others appeared as monograph 2, *Economic Geology.* Crystallization of a magma from the walls inward was considered to be the cause of zoning in these rocks. *Sedimentary Rocks,* by F. J. Pettijohn, represented an outstanding addition to the literature on geology.

Continued interest in research on clays was indicated by several articles. In the January issue of *American Journal of Science,* C. M. Gilbert and F. J. Turner advocated universal stage techniques for the study of sedimentary rocks.

In a brief article in *Science* for Feb. 18, W. H. Newhouse and others set forth a hypothesis for structural (planar) control of migrating chemical elements in metamorphic processes.

Applied Geology.—Two main trends continued to dominate the study of metallic ore deposits: structural control and wall rock alteration. The former had received attention in the excellent *Structural Geology of Canadian Ore Deposits* (1948) by a number of authors, and the latter was the subject for a symposium at the 75th anniversary celebration of the Colorado School of Mines, Golden, Colo. "Rock Alteration as a Guide to Ore—East Tintic District, Utah," by T. S. Lovering and others, published as monograph 1, *Economic Geology,* represented a landmark in this rapidly developing phase of mining geology.

The relation of the mineral content of plants to that of the underlying soils, a comparatively new technique in prospecting, was further considered by H. V. Warren and R. E. Delavault in the March issue of the *Bulletin* of the Geological Society of America.

As an aid to prospectors for radioactive ores, numerous handbooks were published by governmental agencies. *Prospecting for Uranium* (U.S. Atomic Energy commission) and *Prospector's Guide for Uranium and Thorium Minerals in Canada* (bureau of mines, Canada) were examples.

The second edition of *Géologie des Gîtes Minéraux* by E. Raguin seemed valuable for a general study of mineral deposits. *Examination and Valuation of Mineral Property,* third edition by R. D. Parks, also merited the attention of mining engineers and geologists.

A revival of interest in research on the geology of coal was evidenced by several excellent papers by G. H. Cady and others in *Economic Geology* and by a coal research symposium at the meeting of the Geological society of America in El Paso, Tex

Among petroleum geologists the interest in reef limestones as reservoirs for oil and gas increased rapidly as a result of discoveries and extensions of such types of pools in Alberta, Canada, and in the Permian basin of west Texas.

Three new text and reference books in the field of petroleum geology appeared: *Subsurface Geologic Methods,* a voluminous symposium by 42 contributors compiled and edited by L. W LeRoy and H. M. Crain, and published as a quarterly by the Colorado School of Mines; *Principles of Petroleum Geology* by C. G. Lalicker; and *Oil Fields in North America* by W. A. Ver Wiebe. The last was an expansion of the author's *Oil Fields in the United States,* published in 1930. (*See* also MINERALOGY PALAEONTOLOGY; SEISMOLOGY.)

FILMS OF 1949.—*Carlsbad Caverns, N.M.* (National Park Films). (B. H. P.; F. M. V. T.)

George VI (1895–), king of Great Britain, Ireland and the British dominions, was born at York cottage Sandringham, on Dec. 14; for his biography see *Encyclopædia Britannica.*

During 1948 plans were announced for a royal tour of Australia and New Zealand in 1949 by the king, the queen and Princess Margaret; but on Nov. 23, 1948, it was announced that the king was suffering from obstruction to the circulation of the right leg and that on medical advice he was postponing the visit

On March 12, 1949, an operation of lumbar sympathectomy was performed in Buckingham palace by J. Learmonth (who was later invested a knight commander of the Royal Victorian order). The king made good progress and at the beginning o

KING GEORGE VI reviewing troops of the Welsh Guards at Buckingham palace in his first uniformed appearance after a leg operation earlier in 1949 pril went to Royal lodge, Windsor. He returned to London entertain the commonwealth ministers on April 21 and on ay 3 entertained the European foreign ministers who were in ondon for discussions on the constitution of the Council of urope. On July 14 he received the commonwealth finance min- ters who were meeting in London. On June 9 he attended the ooping of the colour parade on the occasion of the official lebration of his birthday, and later in the same month he ficially inaugurated "Colonial Month" at a ceremony at hurch house, London. On Aug. 3 he received the chiefs of staff the United States, Denmark, Norway and Great Britain. On ug. 5 he left London for Balmoral castle for his annual sum- er holiday and was sufficiently recovered from his illness to ke part in many grouse shooting excursions. He received King bdullah of the Hashemite Kingdom of Jordan (*q.v.*) at Bal- oral on Aug. 27; and on Sept. 15 held a privy council at which easures connected with the devaluation of the pound on Sept. 3 were approved. He laid a wreath at the Cenotaph on Re- embrance day, Nov. 6, and on Christmas day broadcast to the eoples of the commonwealth and empire.

eorgia. Georgia, the fourth state to enter the union, ratified the constitution on Jan. 2, 1788. It is located in e south Atlantic region, has an area of 58,876 sq.mi. and is opularly called the "empire state of the south." On July 1, 949, its population, excluding armed forces overseas, was esti- ated at 3,196,000, an increase of approximately 2.3% over the 940 census of 3,123,723 (34.4% urban, 65.6% rural; 64.9% ative white, 34.7% Negro and 0.4% foreign-born). Leading ties and their populations in 1940 were: Atlanta, the capital, 02,288; Savannah, 95,996; Augusta, 65,919; Macon, 57,865; olumbus, 53,280.

History.—In the early part of 1949 the most important po- tical events centred around the regular session of the general ssembly, which convened on Jan. 10 and was adjourned on eb. 19. Several important measures were enacted during the ession: (1) A voters' registration act, requiring all voters to egister regardless of whether they had previously registered, as passed; registrants who could not read and write a given ction of the United States constitution had to answer 10 out f 30 questions on the government of Georgia and of the nited States; (2) the secret Australian ballot, which in the ast had been in effect in less than half of Georgia's counties, as extended to all primaries and elections throughout the ate; (3) the merit system was made applicable to employees several additional departments of state government; (4) all ate employees were required to take an oath disavowing com- unism and swearing to uphold the constitutions of the United tates and of Georgia; (5) persons applying for marriage cences were required to present a doctor's certificate showing eedom from syphilis in a communicable stage; (6) the Mini- um Foundation Program of Education was enacted.

The objectives of the Minimum Foundation program were: increase allotments to the university system, to create a chedule of minimum salaries for public schools and to provide creased funds for vocational education, pupil transportation, uilding needs and other services. However, the program was acted into law without an appropriation of funds sufficient to ut it into effect.

Governor Talmadge convened a special session of the general ssembly on July 18, and during a short session which ended n July 28, taxes on the incomes of corporations and the sale f cigarettes, gasoline, beer and wine were all increased to take are of an additional appropriation of $21,500,000 ($9,000,000 public schools; $1,000,000 to the university system; $5,- 00,000 to rural highway; and the rest to public health and welfare).

At the end of the year the principal state officials were: governor, Herman E. Talmadge; lieutenant governor, S. Marvin Griffin; chief justice of the supreme court, W. H. Duckworth; secretary of state, Ben W. Fortson, Jr.; treasurer, George B. Hamilton; attorney general, Eugene Cook; auditor, B. E. Thrasher, Jr.; comptroller general, Zach D. Cravey; commissioner of labour, Ben T. Huiet; commissioner of agriculture, Tom Linder; superintendent of schools, M. D. Collins; chancellor of the university system, Harmon W. Caldwell.

Education.—During the school year which ended June 30, 1949, there were in Georgia 3,538 elementary schools (1,179 for white children and 2,359 for Negroes) with an enrolment of 593,013 pupils (374,406 white children and 218,607 Negroes) and 16,270 teachers (10,580 white and 5,690 Negro). There were 1,368 high schools (738 for white children and 630 for Negroes) with an enrolment of 159,033 pupils (122,367 white children and 36,666 Negroes) and a teaching staff of 6,702 (5,241 white and 1,461 Negro). State expenditures for public education during the year amounted to $41,220,500.

In 1949 during the fall quarter, 26,588 students (including 2,072 Negro students in the three Negro colleges) were enrolled in the 18 divisions of the university system. The total operating budget of the system for the fiscal year was $17,120,218.

Social Insurance and Assistance, Public Welfare and Related Programs.—Public assistance payments during the fiscal year ending June 30, 1949, reached an all-time high of $27,212,894, an increase of 33.88% over the previous year. Old-age assistance amounted to $21,629,565; aid to the blind $703,993.50; aid to dependent children $4,879,335.50. On June 30, 1949, there were 126,647 persons receiving aid from one of these programs. (On July 1, 1948, there were 109,470 receiving such assistance.) In Nov. 1949 a total of 94,905 persons received old-age grants with an average allowance of $22.73; 2,575 blind persons received benefits averaging $26.70; and 31,875 dependent children received benefits averaging $16.79.

In Nov. 1949 there were approximately 13,500 beneficiaries for unemployment insurance under the Georgia program. The average payment per week of total unemployment was $14.82. Also in November, 1,100 veterans were drawing $20 per week of total unemployment under provisions of the G.I. Bill.

As of June 30, 1949, there were 6,306 prisoners in the various state and county institutions under the control of the state board of corrections. Budget allotments to this board for the fiscal year were $1,044,904.64.

Communications.—According to the state highway department, the road mileage in Georgia as of July 1, 1949, was as follows: total of state, county and city systems 94,801 mi.; state roads 14,876 (9,220 mi. paved and 5,656 mi. unpaved); county roads 76,315 (1,474 mi. paved and 74,841 unpaved); urban streets 3,610 mi. For the fiscal year ending June 30, 1949, total receipts of the highway department were $38,880,789.43 from the following sources: state treasury $27,482,524.12; federal government $9,714,989.56; miscellaneous $1,683,275.75.

On Dec. 30, 1948, there were 6,360 mi. of main-line railroad track in Georgia. In Oct. 1949 the Bell Telephone company reported 475,903 telephones in service in Georgia and, according to the Georgia Public Service commission, there were 46,644 telephones being serviced by other telephone companies in Georgia on Dec. 31, 1948.

Banking and Finance.—On Dec. 31, 1948, there were in Georgia 289 state banks with total assets of $758,158,788.23 and deposits of $693,913,608.41. On June 30, 1949, there were 51 national banks in Georgia with total assets of $941,872,000 and total deposits of $878,832,000.

There were 70 savings and loan, or building and loan, associations (56 federal and 14 state) operating in Georgia on Oct. 31, 1949. Total assets of these associations were $225,000,000 as compared with $160,000,000 on June 30, 1948.

For the fiscal year ending June 30, 1949, the total state receipts were $109,981,071.65, the largest of all time. Budget allotments for the fiscal year ending June 1949 were $108,360,424.33. The state treasury had a net surplus of $6,153,984.16 on June 30, 1949.

Agriculture.—In Dec. 1949 the United States department of agriculture estimated the value of field crops produced in Georgia during 1949 at $366,178,000, a decrease of 16% from 1948.

Manufacturing.—According to the *Census of Manufactures 1947*, the latest made by the bureau of the census, 249,926 persons were employed

Table I.—*Leading Agricultural Products of Georgia*

Crop	1949	1948	Average 1938–47
Cotton, bales	610,000	751,000	779,000
Cottonseed, tons	242,000	303,000	315,000
Corn, bu.	59,400,000	49,182,000	45,255,000
Peanuts, lb.	605,900,000	818,300,000	629,877,000
Tobacco, lb.	116,590,000	95,763,000	88,358,000
Potatoes (sweet), bu.	6,030,000	4,930,000	7,100,000
Hay, tons	698,000	805,000	736,000
Oats, bu.	14,775,000	13,728,000	13,097,000
Velvet beans, tons	221,000	227,000	424,000
Peaches, bu.	2,040,000	2,812,000	5,358,000
Wheat, bu.	2,280,000	2,984,000	2,293,000
Pecans, lb.	17,000,000	39,600,000	26,378,000
Sugarcane syrup, gal.	3,150,000	3,600,000	3,984,000
Potatoes, Irish, bu.	1,296,000	1,024,000	1,573,000
Lespedeza (seed), lb.	19,100,000	16,100,000	6,598,000
Cowpeas, bu.	420,000	478,000	758,000
Sorghum syrup, gal.	590,000	660,000	1,017,000

Table II.—*Major Industry Groups in Georgia: 1947*

Industry	Number of employees	Salaries and wages	Value added by manufacture
Textile	102,535	$205,061,000	$398,023,000
Food	26,774	53,676,000	133,448,000
Lumber (exclusive of furniture)	33,979	44,559,000	88,466,000
Apparel	25,009	40,477,000	76,084,000
Chemical	11,119	24,088,000	77,043,000
Paper	7,319	19,226,000	54,207,000

in Georgia's 4,754 manufacturing establishments. These persons received $484,246,000 in wages and salaries, and a total of $1,015,999,000 in value was added by manufacture. (In 1939 there were 3,055 establishments employing 176,965 persons, who received $142,021,000. Value added by manufacture was $280,032,000.)

Table III.—*Leading Mineral Products of Georgia*

Mineral	Quantity in 1948	Value in 1948	Value in 1947
Clay, raw, short tons	2,216,665	$15,472,110	$13,436,317
Stone, short tons	3,631,430	10,801,355	9,977,938
Clay, products, heavy		7,373,000	5,667,000
Iron ore, long tons	273,735	746,818	693,485
Sand and gravel, short tons	985,729	719,771	575,115
Barite, short tons	62,781	654,959	639,865
Talc, short tons	53,602	624,694	673,351

In Sept. 1949 an estimated 722,600 workers were engaged in non-agricultural employment in Georgia. This was 26,300 less than the total for Sept. 1948.

Minerals.—The mineral production of Georgia was valued at $42,662,000 in 1948 as compared with $37,037,000 in 1947. The value of the principal minerals produced, except cement and fuller's earth, is shown in Table III. (J. F. A.)

Georgia Warm Springs Foundation: *see* SOCIETIES AND ASSOCIATIONS.

German Literature.

The division of Germany into an eastern and a western realm of culture was necessarily reflected during 1949 in the contrast between a predominantly political emphasis behind the "iron curtain," where publishing centred on translation from the Russian and on interpretation of soviet scholarship, and a humanistic and religious resurgence in the west.

Among the wave of lyrical poetry characterizing the first post-nazi years, the verse of Friedrich Georg Jünger (*Poems*) was expected to prove of lasting value; Marie Luise Kaschnitz (*Poems, Dance of Death*) mastered congenially inherited forms in her lucid penetration of two decades of experiences; and Hans-Egon Holthusen's poetry (*Here in Our Time*) revealed an original lyrical mastery, while his essays demonstrated a critical mind of universal scope, implacable realism and differentiated metaphysical and ethical responsibility.

Ernst Jünger, the most powerful prose-writer of contemporary Germany, brought out his war diary (*Strahlungen* [*Radiant Forces*]) which, besides being brilliant literature, included historically significant aspects. His *Heliopolis*, the symbolical image of humaneness resisting the scientific organization of power, was a novel reflecting the immediate past by the fiction of a future potentially inherent in our contemporary civilization. Stefan Andres' story *We Are Utopia* was, with Wolfgang Hoffman-Zampis' *Erzählung* (*Tale*), the most impressive testimony of sensibility to the moral issue of human existence in our time. Andres' novel *The Beast from the Depth*, the first of a cycle to be called *The Flood*, was a literary interpretation of the demonic forces in recent history; the theme was deepened into the metaphysical problem of guilt and punishment by Werner Bergengruen's *Fire Signal*.

Like the narrative prose, the philosophic and historical literature was devoted to clarifying the basic issues of the crisis of the century. Among the numerous personal accounts of experiences during the nazi regime, Hans Speidel's *Invasion 1944* excelled through its classical style and transcended the military to reach the political and the moral issues. Viktor von Weizsäcker's retrospect (*Begegnungen und Entscheidungen*) showed the philosophizing psychiatrist facing the religious, sexual, social and political conflicts of our age with unfailing honesty and criticism, although not without a perspective which was beyond nihilism. To fathom the contemporary significance of the struggle between humanity and barbarism in the light of historical eschatology was the aim of Bernhard Guttmann's *The End of Time*. A similar intention was basic to Hans Sedlmayr's interpretation of 19th and 20th century art as a symbol of a "loss of center" (*Verlust der Mitte*) and Hans Freyer's *World History of Europe*, which viewed the present and future of the western world in the mirror of its past. Constructive possibilities of the existentialist approach to philosophic problems were illustrated by Bultmann's re-evaluation of original Christianity (*Das Urchristentum*), by Heidegger's collection of essays (*Holzwege*) and by Jaspers' *On the Origin and the End of History*. Wolfram von den Steinen's *The Age of Goethe* (Bern) was conceived with a view to the generally western significance of Goethe's epoch and its survival in the present world.

As a monthly of the best literary quality, *Merkur* (Stuttgart) was published by editors of competent humanistic standards; *Universitas* (Tübingen) had a wide scope of information on literature, art and scholarship; *Deutsche Beiträge* (Munich) revitalized a good pre-Nazi tradition of criticism, and *Die Sammlung* (Göttingen) continued the representation of German liberal thought on education, while at the same time taking stands on significant social, historical and literary events. An outstanding weekly newspaper, *Die Zeit* (Hamburg), gave an account of current literature and art; the weekly *Christ und Welt* (Stuttgart) represented the Protestant, and the monthly *Hochland* the liberal Catholic point of view, both with ingenuity and conviction.

The outstanding German writers of 1949 were most impressive by their seriousness in probing the bases of the experience of terror and war and in their search for the firm ground of civilized existence. (AR. B.)

Germany.

A country of central Europe, Germany is bounded on the north by the North sea, Denmark and the Baltic sea, on the east by Poland, on the south by Czechoslovakia, Austria and Switzerland, and on the west by France, Luxembourg, Belgium and the Netherlands. According to a declaration signed in Berlin on June 5, 1945, the country was under the supreme authority of the four Allied powers—the United States, Great Britain, the U.S.S.R. and France—and divided into the four following zones:

Zones	Area (in. sq. mi.)	Population (May 17,1939, census)	Population (Oct. 29, 1946 census)
British	37,723	19,785,500	22,344,900
United States	41,506	14,257,600	17,174,400
French	15,405	6,088,900	5,004,000
Soviet	41,623	15.157,100	17,332,900
Berlin	344	4,321,500	3,180,300
Total	137,335†	59,610,600	65,036,500

Source: *Statistical Bulletin of the Control Commission for Germany (British Element).*

*Excluding the Saar (area 734, sq.mi.; pop. 874,400).

†Including some small German frontier areas which, as agreed upon under the six-power agreement of March 26, 1949, were taken over by Belgium, Luxembourg, the Netherlands and the Saar respectively (total area, 52.1 sq.mi.; total pop., c. 13,500).

Before the *Anschluss* of Austria the area of Germany was 181,677 sq.mi. with a population (May 17, 1939 census) of 69,317,000. The British, soviet and U.S. zones contained larger populations than in 1939; by 1946 the zonal increases were: British zone 12.9%, soviet 14.4%, U.S. 20.5%. The additional inhabitants were mainly Germans evacuated or transferred from Poland and Czechoslovakia. Only in the French zone was the population less (3.5%) than in 1938. Chief cities (first figure 1939 census; second figure, 1946 census): Berlin (4,332,242; 3,180,383); Hamburg (1,711,877; 1,406,158); Munich (829,318; 738,018); Cologne (772,221; 489,812); Leipzig (707,365;

608,111); Essen (666,743; 520,592); Dresden (630,216; 463,032); Frankfurt-on-Main (553,464; 389,097); Duesseldorf (541,410; 421,506); Dortmund (542,261; 436,198); Hanover (470,950; 347,040). Language (1946 est.): German with small admixtures of Lusatian (260,000 in Kottbus-Bautzen area), Polish (150,000, mainly in Westphalia) and Danish (17,000). Religion (1938 est.): Protestant 62.7%; Roman Catholic 32.5%; Jewish 0.7%; others 4.1%.

During the year 1949 Germany was virtually partitioned into two states with a special provisional regime for Berlin (*q.v.*).

Western Germany.—Area, 94,634 sq.mi. Pop. (June 30, 1949, est.), 47,254,900 which indicated an increase of 2,731,600 after Oct. 29, 1946; during the first six months of 1949 alone the population of western Germany had increased by 407,000 including 105,000 returning prisoners of war and 162,000 refugees from the soviet zone. Capital: Bonn. President of the Federal Republic of Germany, Theodor Heuss (*q.v.*); federal chancellor, Konrad Adenauer (*q.v.*). Allied high commissioners: British, Gen. Sir Brian Robertson; French, André François-Poncet; U.S., John J. McCloy (*q.v.*).

Eastern Germany.—President of the German Democratic republic, Wilhelm Pieck (*q.v.*); prime minister, Otto Grotewohl (*q.v.*). Soviet Control commission: Gen. Vasili Ivanovitch Chuikov, chairman; Ivan Fedorovich Semichastnov, deputy chairman; Vladimir Semenovich Semenov, political adviser.

History.—The establishment of a west German federal republic and of an east German Democratic republic in 1949 marked the final stage of the partition of Germany. The three western Allies, despite many disagreements, maintained a common policy of progressively handing back to western Germany its sovereignty and of modifying and reducing the restrictions and limitations on its industry. The remaining restrictions were to be supervised by the Ruhr authority and the Military Security board.

The Ruhr statute which was published by the three western Allies in Dec. 1948 provided that a Ruhr authority was to allocate coal, coke and steel, prevent discriminatory trade practices and safeguard foreign interests in the Ruhr. It was to consist of 15 members (3 U.S., 3 British, 3 French, 3 German, and 1 from each of the Benelux countries). The German political leaders protested against the Ruhr statute on the grounds that it would be used to prejudice western Germany's competitive position and that such international control could only be justified if its authority were extended over the whole of western Europe's heavy industry. This latter contention later received support from the French Socialist party and from the U.S. high commissioner, John J. McCloy.

On Jan. 17 it was announced that the Allied Military Security board had been established, consisting of Major General James P. Hodges (U.S.), Major General V. J. Westropp (Great Britain), General Etienne Paskiewicz (France). Its sphere of responsibility was to be prevention of military organizations, of the manufacture or import of arms by western Germany and of war preparations through scientific research.

Major political and industrial concessions to western Germany which had been discussed in London during the first two months of the year became accomplished facts in April and May. On April 13 at Washington, it was announced that the three western ministers of foreign affairs had signed an agreement under which 159 industrial plants scheduled to be dismantled were to be struck off the dismantling list. The Washington agreement also permitted western Germans to construct any number of high-sea ships up to 7,200 tons and a speed of 1 knots. The following production quotas were authorized in the case of the industries forbidden under the Potsdam agreemen of 1945: ball-bearings 33,000,000 units a year; aluminum 85,000 tons a year; styrin 20,000 tons a year. All synthetic gasolin and synthetic rubber plants were to be dismantled with the exception of the Wesseling hydrogenation plant. Aircraft construction and the manufacture of raw magnesium and beryllium remained forbidden.

German Federal Republic.—On May 8 the Basic law or constitution for the west German Federal republic was agreed upo by the parliamentary council of 65 members which had bee elected by the state (*Land*) parliaments in Oct. 1948 and whic had been drafting and debating this constitutional documen for eight months at Bonn. There were 12 votes cast agains the Basic law—6 by the Bavarian Christian Social union an two each by the Centre party, the German party and the Communist party. The final adoption was preceded by two month of debate and negotiation between the leading west Germa political parties and the Allied authorities. In general the western Allies favoured in varying degrees a constitution whic would establish a highly decentralized federal state. The Christian Democratic union was also in favour of concentrating mor power in the hands of the individual states (*Lander*) than wa thought desirable by the Social Democratic party who anticipated that without a higher degree of centralism the socia reforms which they advocated could not be implemented. Th most contested field was finance. A deadlock between the view point of the western authorities and that of the Social Democratic leaders developed. On April 22 this was resolved by th Allied military governors' handing over to the parliamentar council a letter from the three western foreign ministers whic made the following concession in the direction of greater centralism: the federal government could claim, in addition revenue from customs, monopolies, consumers' taxes, turn-ov tax and property tax, part of the revenue from income tax an corporation tax; it was envisaged that this additional revenu would be used to subsidize education, health and welfare in th poorer states.

The Basic law, which finally emerged and was adopted, provided for a two-chamber system consisting of a federal di (*Bundestag*) to be directly elected every four years and federal council (*Bundesrat*) consisting of members of the individual state governments. The states were to have three to fi representatives in the federal council, according to their population, but each state delegation was to have only one vote. The principal powers of the federal council consisted of the right to demand that a joint commission of the federal diet and the federal council should debate any given law, and of the right of veto. The federal diet could, however, overrule the council's veto by an absolute majority. The federal president was to be elected by a federal assembly consisting of the federal diet and 400 delegates elected by the state diets (*Landtage*); he was to propose the federal chancellor who would then select his ministers. Implementation of the federal government's laws was to be in the hands of the states, except in the following fields: foreign affairs, federal finance administration, post, inland waterways and shipping, federal railways, frontier control and criminal police.

Most interesting of the clauses of the Bonn constitution were two aimed at eliminating weaknesses in the constitution of the Weimar republic of 1919–33 which had led to the destruction of democratic government. The first was article 21 which ruled that "parties which by their aims or the behaviour of their supporters are calculated to damage or destroy the fundamental free democratic order are unconstitutional." The other, article 67, to prevent party groupings in the legislature from following negative and irresponsible courses—laid down that the federal diet could only pass a vote of no-confidence in the chancellor if it chose a successor by means of a majority of its members and asked the president to dismiss the chancellor. According to the Basic law, Berlin was named as part of the west German Federal republic, but the three Allied military governors did not agree to the admission of the former capital in practice because of their desire not to embitter relations with the soviet union still further.

On Aug. 14 elections for the federal diet were held throughout the three western zones of Germany. Out of the 402 seats contested the C.D.U. (Christian Democratic union) allied with the Christian Social union won 139, the S.D.P. (Social Democratic party) 131, and the Free Democratic (Liberal) party 52 seats. Two extreme right-wing parties, the Bavarian party and the German party or D.P. (*Deutsche Partei*) won 17 seats each. Surprising was the securing of 12 seats by the extreme nationalist Alfred Loritz's W.A.V. (*Wirschaftliche Aufbau Vereinigung* or Economic Reconstruction union) and of 5 seats by the near-nazi German party of the Right (*Deutsche Rechtspartei*). The elections were fought with some bitterness, and the leading parties' chief bid for electoral support consisted in violent attacks on the occupying powers, particularly for their policy of dismantling.

On Sept. 12 Theodor Heuss was elected federal president and on Sept. 20 Konrad Adenauer, the leader of the Christian Democratic union, formed a coalition government based on the C.D.U., the F.D.P. and the D.P.

Noteworthy in Adenauer's first speech as federal chancellor was his declaration that western Germany would not accept the Oder-Neisse frontier, which marked the border of the eastern territories annexed by Poland and the U.S.S.R.

On the day following the formation of the west German government the western military governors made over to it extensive new powers. These were defined in an Occupation statute which placed all governmental authority in German hands, with the exception of the following reserved fields: disarmament and demilitarization; Ruhr control, reparations, decartellization, trade discrimination, and foreign interests in Germany; foreign policy, displaced persons and admission of refugees; the prestige and security of Allied occupation forces; the safeguarding of exchange rates; control of internal affairs to ensure that money and food should be used so as to minimize aid from abroad; custody of people arrested or sentenced by occupation courts.

The three occupation authorities retained the right to resume full powers if necessary for security, for the maintenance of democratic government or for fulfilling international obligations. They also retained a right to veto any law within 21 days of receiving it, but pledged themselves to exercise this right only in the case of a law conflicting with the Basic law, with the state constitutions, the Occupation laws, the Occupation statute or the basic aims of the occupation. Provision was made for a review of the Occupation statute within 18 months after coming into operation.

The three military governors were renamed high commissioners to function as a unity in an Allied High commission which would not deal with German authorities below the level of the federal or state governments, except in the field of the reserved subjects.

On Nov. 3 the federal diet decided upon Bonn as the federal capital, thus settling a controversy which had raged for many months on the relative merits of Frankfurt and Bonn.

Against this background of constructive political concessions western Germany still had to face in 1949 two punitive measures in exaction of reparations: the first was provisional frontier rectifications at Germany's expense, the second the continuance of dismantling of industrial plants. The provisional frontier rectifications carried through on April 23 for the benefit of the Netherlands, Belgium, Luxembourg and the Saar were very small. Only 52.1 sq.mi. and 13,500 German inhabitants were involved, but the west German political leaders and press attacked the unilateral rectifications bitterly as violations of the clause of the Atlantic charter in which the western Allies had foresworn territorial annexations. Karl Arnold, the prime minister of North Rhine-Westphalia, made the proposal that, in lieu of ceding territory, Germany should construct a road for Belgium and take part in the draining of the Zuider Zee. Following this initiative Belgium renounced the major part of its frontier claims.

West German resistance to industrial dismantling reached a climax in the summer when the synthetic gasoline plants in the Ruhr were dismantled. At Bergkamen and Ruhr Chemie, Oberhausen, Allied troops had to occupy the factories before dismantling could proceed, and six dismantling workers who had refused to dismantle at the Dortmunder Paraffinwerke were sentenced to two months' imprisonment, though subsequently released on good behaviour. Two workers of the same plant received prison sentences of five months, and three weeks for assaulting a dismantling contractor.

During the Washington talks in September between the three foreign ministers Ernest Bevin suggested that dismantling should be terminated by Nov. 1. On Oct. 8 the U.S. high commissioner in Germany, in a news agency interview, urged the ending of the "senseless dismantling." The French government was less willing to make further concessions to western Germany. (*See* also Reparations.)

German Democratic Republic.—In October an event occurred which made agreement upon further concessions by the western Allies to the west German republic politically urgent and therefore easier of achievement. A German Democratic republic was proclaimed in the soviet zone. Already on May 15 and 16 a people's congress (*Volkskongress*) had been elected in the soviet zone and the soviet sector of Berlin under a plebiscite arrangement, each voter having the chance to vote "yes" or "no" to a single zonal list of candidates, also to "the unity of Germany," the early conclusion of a peace treaty and the withdrawal of the occupation forces. It was announced that 95.2% of the voters had gone to the poll and that 66% of these had voted "yes" in this election in which there was much evidence of falsification and pressure. This people's congress elected a people's council (*Volksrat*) of 420 which was transformed on Oct. 7 into a provisional people's Chamber (*Volkskammer*) for the new republic. A chamber of the states (*Landerkammer*) was nominated three days later and on Oct. 11 the two chambers elected Wilhelm Pieck president of the Democratic republic. Otto Grotewohl of the S.E.D. (*Sozialistische Einheitspartei*) or Socialist Unity party formed a provisional government of seven S.E.D. ministers, three from the Liberal Democratic party, four from the Christian Democratic union, one from the National Democratic party and one from the Democratic Farmers' party and one of no party allegiance. The key ministries—interior, justice and one of deputy premiership—were in the hands of the S.E.D. (communist) ministers Karl Steinhoff, Max Fechner and Walter Ulbricht. At the same time General Chuikov announced that a soviet Control commission would replace the soviet Military administration whose administrative functions would be transferred to the German provisional government. On Oct. 16 Georgi Pushkin was appointed soviet ambassador to the new German Democratic republic and Rudolf Appelt was sent as German representative to Moscow.

On Aug. 20 Wilhelm Pieck had announced that the soviet zone government would claim to represent all Germany, and on Oct. 21 the western German chancellor answered by declaring: "Only the West German Federal Republic has the right to speak for the German people."

Other Events.—The façade of concessions by the Russians to the Germans in their zone of Germany undoubtedly spurred the western Allies to improve the status of the west German republic. At a conference of the three western foreign ministers in Paris (Nov. 9–11) agreement was reached on the basis of a number of offers to be made to the west German government in return for its co-operation in the Ruhr Control authority and with the Military Security board. On Nov. 22 a protocol was signed at the Petersberg hotel in Bonn by the three Allied high commissioners and the west German chancellor under which, in return for full German co-operation with the Ruhr authority and the Military Security board, dismantling was suspended of all except 11 plants, western Germany could build or acquire immediately six ocean-going ships above the limits laid down at Washington in April 1949, German consulates and trade missions were to be established abroad and Germany's participation in international organizations and in the Council of Europe was to be promoted. German participation in the International Patent office at The Hague had been sanctioned on Nov. 17 and west Germany's representative had taken his place in the Organization for European Economic Cooperation (*q.v.*) on Oct. 31.

International discussion as to whether Germany should be invited to join the new Council of Europe started in May 1949 when the statute of the Council of Europe was adopted and a clause was included providing for "associate membership," that is, membership of the consultative assembly only, in the case of countries such as western Germany which could not send a foreign minister to the Committee of Ministers.

At the first session of the Assembly of Europe in Strasbourg in August and September Winston Churchill energetically advocated west German membership but Robert Schuman, on behalf of France, laid down, as a pre-condition, that the Saar must also be admitted as a member. Churchill agreed that a Franco-German understanding on the Saar question was a prerequisite of Germany's admission. On Nov. 3 the west German chancellor stated in a newspaper interview that western Germany would not refuse to enter the Council of Europe if the Saar were admitted. In this he was at variance with the Social Democratic party, whose leader, Kurt Schumacher declared on Nov. 9 his opposition to the French proposal to admit the Saar. In November the committee of ministers meeting in Paris passed a resolution in favour of Germany's admission to the Council of Europe, and the way seemed open. (*See* also EUROPEAN UNION.)

Behind the east-west tug-of-war over western Germany and the mass of new constitutional documents and institutions which came into being in 1949, there loomed for the new federal government three gigantic social problems: housing, unemployment and refugees. There were 5,000,000 new dwellings required in western Germany and the federal government planned a program of 250,000 new dwellings for 1950; unemployment reached a figure of 1,332,000 including 438,000 refugees from eastern Europe or from the soviet zone; the total of refugees from the east in western Germany was about 8,000,000, and was increasing at the rate of 1,000 a day in the autumn of 1949. Most of the refugees were embittered, impoverished and politically irreconcilable to the loss of their homelands. Many thousands of them were housed in congested camps.

In the first ten months of the year about 240,000 German prisoners of war returned home from the Soviet Union. On Oct. 29 Wilhelm Pieck promised that the remainder would be repatriated by Jan. 1, 1950. About 600,000 German prisoners of war and civilian prisoners still remained in the U.S.S.R. in December. (*See* also COUNCIL OF FOREIGN MINISTERS; PRISONERS OF WAR; REFUGEES; WAR CRIMES.)

FILMS OF 1949.—*School in Cologne* (British Information Services).
(D. A. SN.)

Education.—British and U.S. zones (1947): elementary and secondary schools 27,077, teachers 115,658, pupils 6,896,861; French zone, including the Saar (1948): elementary and secondary schools 5,861, teachers 16,781, pupils 951,450. Universities, U.S., British, French zones (1948), 16, teaching staff 3,377, students 71,672. Universities, soviet zone (1948), 5, teaching staff 671, students 12,269.

Finance.—The first interim budget of western Germany covering Sept. 21, 1949–March 31, 1950, totalled about 1,534,000,000 DM. The estimated 1950–51 budget for the German Federal Republic was: revenue 8,000,000,000 DM., expenditure 10,100,000,000 DM., including 4,535,000,000 DM. for occupation costs. Note circulation, mid-Sept. 1949, 7,279,000,000 DM. The unofficial conversion factor fixed the deutschemark before Sept. 28, 1949, at 30 cents U.S., and after that date at 23.8 cents U.S. Note circulation in eastern Germany was estimated in Feb. 1949 at 4,112,000,000 OM. (ostmarks). The free, and unofficial, exchange rate in Sept. 1949 was 1 DM.=5.70 OM. Officially, no exchange rate was reached. In eastern Germany the 1950 budget estimates were as follows: revenue 17,630,000,000 DM., expenditure 17,526,000,000 DM.—an expansion of 10% in comparison with 1949.

Foreign Trade.—British and U.S. zones (1948): imports 3,164,000,000 DM., exports 1,817,000,000 DM.; (six months 1949): imports 3,051,000,000 DM., exports 1,756,000,000 DM. French zone (1948): imports 596,000,000 DM., exports 353,000,000 DM.

Agriculture.—Main crops, three western zones and Saar (1949): wheat 2,430,000 metric tons, rye 2,784,000 tons, barley 1,204,000 tons, oats 3,020,000 tons, potatoes 20,875,000 tons, sugar beets 4,035,000 tons. Soviet zone (1948): wheat 999,000 metric tons, rye 1,941,000 tons, barley 428,000 tons, oats 809,000 tons, potatoes 12,408,000 tons, sugar beets 4,583,000 tons. Livestock, western zones and Saar (Dec. 1948): cattle 10,320,000, pigs 5,616,000, sheep 2,362,000, horses 1,577,000, poultry 25,088,000. Soviet zone (Dec. 1948): cattle 3,202,000, pigs 2,100,000, sheep 780,000, horses 570,000.

Industry.—Western Germany, excluding the Saar (1949 est.): coal 103,000,000 metric tons; crude oil 760,000 tons; electricity 44,000,000,000 kw.hr.; gas 8,100,000,000 cu.m.; steel 9,000,000 tons; cement 8,500,000 tons; motor cars (passenger) 80,000, trucks 50,000; cotton yarn 230,000 tons; wool yarn 60,000 tons; synthetic fibres 110,000 tons. In Nov. 1949 the index of industrial production in western Germany was at 98% of the 1936 level. No precise statistical information was available for eastern Germany, but total production was estimated at about 55% to 60% of the 1936 level.
(K. SM.)

Giauque, William Francis (1895–), U.S. physical chemist and Nobel prize winner, was born in Niagara Falls, Ontario, Can., on May 12. He was graduated from and became an instructor in chemistry at the University of California, where he was made professor of chemistry in 1934. A specialist in low-temperature research, he shared the Pacific division prize of the American Association for the Advancement of Science (with H. L. Johnston in 1929) for the discovery of two isotopes of oxygen. In 1936 he received the Chandler medal from Columbia university and in

1937 the Elliott Cresson medal from the Franklin institute for the discovery of methods for producing temperatures near absolute zero. During World War II he was engaged in research work, much of it still unrevealed in 1949, for the U.S. government. He received the Nobel prize for chemistry in 1949 for studies of the magnetic and physical properties of substances under conditions approaching absolute zero.

G. I. Bill of Rights: *see* VETERANS' ADMINISTRATION (U.S.).

Gibraltar. A British fortress colony, Gibraltar is situated on a narrow peninsula covering the western outlet of the Mediterranean sea. Area: 2.12 sq.mi. Pop. (Dec. 31, 1948): 23,700. Governor: Lieut. Gen. Sir Kenneth Anderson.

History.—The United Kingdom government's decision not to create a legislative council, announced in July 1948, was rescinded; and the terms were published in Aug. 1949 of a new constitution providing for a legislative council consisting of the governor as president, three ex-officio, two nominated (of whom both may, and one must, be an official) and five elected members.

In the late summer strong protests were raised against an expenditure of £2,250,000 incurred on the erection of 472 flats under a housing scheme sponsored by the United Kingdom government and which, it was claimed, could have been built far more cheaply with local labour. Linked with these protests were others against an increase on the duty on coffee from Aug. 2 and against a proposed new trades tax due to operate from Jan. 1950.

A delegation from the chamber of commerce visited England to lay the local case before the secretary of state for the colonies.

It was decided to end the wartime evacuation scheme by the end of the year; evacuees from Gibraltar who were still in Britain could apply for repatriation at government expense up to that date.

Finance.—Currency: pound sterling, with United Kingdom coinage and local government notes. Budget (1948): revenue £681,580; expenditure £652,755. (JO. A. HN.)

Ginger: *see* SPICES.

Girl Scouts. Service and international friendship were keynotes in the work of the Girl Scouts of the U.S.A. during 1949.

More than 1,000,000 Girl Scouts between the ages of 7 and 17, in communities of all sizes throughout the United States, took part in a variety of projects carrying out the promise "to help other people at all times." Among the activities were: co-operation in local health and welfare drives; aid to the community chest and other voluntary agencies; and the performance of special duties in hospitals, child care centres, libraries and museums. Particular emphasis was placed on conservation of natural resources. Girl Scout troops worked closely with state or local forestry services and agricultural bureaus. Many of the summer camps owned by Girl Scout councils had been posted as wildlife sanctuaries.

From July 19 through Aug. 12, U.S. Girl Scouts were hostesses at a western hemisphere encampment in Manistee National forest near Muskegon, Mich. The 83 campers included Girl Scouts representing every region, territory and possession of the United States, as well as Girl Guides from Canada, Colombia, Curaçao, Ecuador, El Salvador, Guatemala, Haiti, Jamaica and Trinidad. Other international events of the summer in which U.S. Girl Scouts took part were: an encampment in Sweden; a conference in Switzerland; across-the-border camps which several Girl Scout troops from the northern states shared with Canadian Girl Guides; and a new foreign service experiment, which enabled 13 Senior Girl Scouts and assistant troop leaders to work as camp counsellors in France, Great Britain and the Netherlands.

The Girl Scouts held their 13th national convention in Milwaukee, Wis., Nov. 15–18. Approximately 5,000 adults were present. A new international service project, to be known as "Schoolmates Overseas," was announced for 1950. Every Girl Scout troop would be expected to make and fill at least one schoolbag for the children of other lands who needed pencils, paper and other supplies.

The semiannual registration count of June 30, 1949, showed a total membership of 1,436,529. This number included 446,163 Brownie Scouts, aged 7 through 9; 611,622 Intermediate Girl Scouts, aged 10 through 13; 54,348 Senior Girl Scouts, aged 14 through 17; 323,331 adult volunteers; and 1,065 local professional workers. Girl Scout national headquarters are at 155 E. 44th St., New York 17, N.Y. (C. M. R.)

Girl Guides.—New appointments during 1949 were headed by that of Princess Margaret as Sea Ranger commodore, thus extending her connection with the movement to which she had belonged since 1937. Lady Stratheden and Campbell was appointed chief commissioner, imperial headquarters, in place of Finola Lady Somers, and the Viscountess Colville of Culross succeeded Mrs. Stewart of Murdostoun as chief commissioner for Scotland.

Numbers showed an increase of 5,000 Brownies and Girl Guides; the total membership in Great Britain stood at 445,000, and the world total at 2,500,000. The Guide club, for adult members of the movement, was opened at 46 Belgrave square, London, and was honoured by a visit from Queen Elizabeth. For the first time all members of the movement were asked to contribute a penny a week to headquarters' funds in order that headquarters could give the maximum amount of help to its members.

British guides again travelled widely to camps and international conferences, and a party from Great Britain attended the Swedish national camp. Great Britain acted as hostess country to the conference for extension guiders (those working with handicapped children), which was attended by delegates from 16 countries. (B. PL.)

Glands: *see* ENDOCRINOLOGY.

Glass. The slight recession in manufacturing in the United States during the early months of 1949 caused a decline in the production of all kinds of glassware. Later in the year, however, demand increased. Flat glass, made in 34 establishments, was produced in large volume. The automobile industry required unprecedented amounts of plate glass for its approximately 6,000,000 new cars. The building industry was active, and production of window glass reached a high level.

The production of glass containers fell off 10% from the previous year, reaching a total of 90,000,000 gross. These were made in 87 factories, employing about 45,000 people and using 4,000,000 tons of raw materials. Pressed and blown glassware was made in 125 different establishments employing 40,000 persons. Tumblers made on automatic machines numbered 50,000,000 dozen. An equal number of pieces of table, kitchen and household glassware were produced. The total value of all glass products was somewhat less than in 1948, but it exceeded $600,000,000. To this figure should be added the value of products made from purchased glass, including such items as mirrors, cut glass and articles made from tubing, which reached a total value of $200,000,000.

Numerous patents were issued in this field. Improvements were made in methods of drawing sheet glass, of drawing tubing and in feeding gobs of glass to automatic machines. Ribbons of glass a few thousandths of an inch in thickness were successfully produced to serve as dielectric layers in small condensers. Glass tubes were made with diameters of less than 0.01 in.

Manufacture of television tubes for the first time passed the million mark. Formerly, these were all made from glass containing lead to provide adequate electrical resistance. New lead-free glasses were developed for this purpose, equally nonconducting. The United States, which had become completely self-sufficient in the field of optical glass, continued to produce it in adequate quantity and quality. The older names for the varieties of optical glass were virtually abandoned in favour of a numbering system. For example, a glass may be designated as 523:64, which refers to a glass having an index of refraction of 1.523 and a "nu" value or reciprocal of dispersive power of 64. (S. R. S.)

Gliding. Two Australian gliding records were established in 1949—a single-place distance record of 221 mi. by F. Hoinville on Jan. 11, and a two-place altitude record of 6,440 ft. by R. Roberts and E. Byrne on Feb. 26.

In the United States, J. Robinson set an international absolute altitude record by reaching 33,500 ft. in his glider "Zanonia" on Jan. 1. This altitude flight was the result of direct application of theoretical and practical knowledge of atmospheric waves.

The Soaring Society of America held its 16th national soaring contest at Elmira, N.Y., July 2–10. Twenty-six pilots flew under a completely new set of contest rules in which a set task such as goal, goal and return, straight line distance and speed was determined each day for all pilots by the contest board. A total of 5,381 mi. were flown; 19 flights ranged from 100 to 200 mi. and the longest flight was 205 mi. P. B. MacCready, Jr., flying the Orlik, earned the title of national soaring champion for the second consecutive time.

Another high performance sailplane became available to glider pilots during 1949 when the Civil Aeronautics administration approved the all-metal single-place Schweizer 1-23 for production.

On Feb. 4, 1949, the ministry of civil aviation in England issued new regulations affecting glider pilots. No licences would be required for noncommercial glider operations.

The Swedish national contest was held at Orebro, Swed., July 7–17. Eighteen pilots competed in the task flights set for each day, and a total of 8,848 mi. were flown. Thirty-four flights ranged from 100 to 200 mi. and four exceeded 200 mi. T. Lof, flying a Wiehe, was winner of the contest.

Three new French records were established. Mlle. M. Choisnet's duration flight on Nov. 17–19, 1948, of 35 hr. 3 min. was approved as official. E. Nessler soared 265 mi. with a passenger to establish a new French two-place record on July 25, 1949, and a new single-place goal-and-return French record was set by A. Lambert on the same day.

Several new sailplanes appeared on the continent during 1949. Two in France were produced by Castel Mauboussin—the C.M. 7, a tandem two-place sail-plane for all-round use, and the Jalon, a tandem two-place for research. In Hungary, the National Corporation for Sports Equipment, with E. Rubik in charge, produced Koma, a two-place training glider with folding wings.

In Canada T. R. Loudon of the University of Toronto, Ont., supervised the design and construction of an advanced single-place trainer, the Loudon.

Goitre: *see* Physiology.

Gold. So far as the long-run position of gold is concerned, the most important single development of 1949 was the wave of currency devaluations in September, which embraced the British pound sterling and the monetary units of 30 other nations. The primary purpose of this general readjustment was to establish more realistic relationships with the U.S. dollar, but an incidental result was to change greatly the price-cost situation in gold mining in the devaluing countries. Among them these areas account for roughly 80% of the world's gold production outside the Soviet Union. Devaluation had the effect of raising the price of the world's principal monetary metal by 10% in Canada; 14% in the Belgian Congo, and 44% in the Union of South Africa and other sterling countries.

Following a moderate expansion in each of the early postwar years, gold production showed an increase in 1949 of 1,000,000 fine oz. over 1948. Output for the principal producing countries (excluding the U.S.S.R.) totalled 23,800,000 oz. This was 2,600,000 higher than 1945, the postwar low, but fell 12,900,000 short of 1946, the year of record output.

With the widespread currency devaluations and the categorical declarations by the president of the United States and his secretary of the treasury that there would be no change in the official United States price of gold, hoarding of the metal in western Europe showed a declining tendency in 1949. As a result of these various developments, prices in the premium markets such as Alexandria, Egy., Bombay, Ind., Hong Kong, Paris, Fr., and Milan, It., subsided noticeably toward the end of the year. Another characteristic of the period was the trend toward removing restrictions in gold dealing in several areas. The most conspicuous case was Hong Kong, where the free market, abolished in April, was re-established three months later, in July, subject to certain requirements with respect to fineness.

So far as the distribution of the world's monetary reserves was concerned, the outstanding phenomenon of 1949 was a marked reduction in the flow of gold to the United States. The increase in U.S. stocks, through the end of November, was $227,000,000. This means that the United States absorbed approximately 27% of the new gold produced during the year.

Table I.—*Analysis of Changes in Gold Stock of United States*

(In millions of dollars)

Period	Gold stock at end of period	Increase in gold stock	Net gold import or export (—)	Ear-marked gold: decrease or increase (—)	Domestic gold production
1937	*12,760	1,502	1,585.5	—200.4	143.

*Includes gold in the Inactive Account amounting to $1,228,000,000 on Dec. 31, 1937.
†Includes transfer of $687,500,000 gold subscription to the International Monetary fun
‡Preliminary.
§Not yet available.
‖Gold held under earmark at the federal reserve banks for foreign account, includin international institutions, amounted to $4,213,900,000 on Nov. 30, 1949. Gold under ea mark is not included in the gold stock of the United States.
¶10-mo. total. ♀9-mo. total.

(outside Russia). But in 1948 the United States absorbed lmost twice the amount the world produced and in 1947 more han three times the total. Taking the 16 years from 1934 to 949, inclusive, United States monetary stocks increased by $17,800,000,000 while the world's output of new gold amounted o $15,300,000,000. Gold and dollar holdings of the United Kingdom fell by $527,000,000 between Dec. 31, 1948, and Sept. 18, 949, the date of devaluation, but by the end of the year had ecovered $359,000,000 of this loss.

(E. H. Co.)

World Production.—The Russian output of gold was not reported, but was variously estimated at 6,000,000 to 7,000,000 oz. in 1947, increasing from 3,000,000 to 4,000,000 oz. in 1944. While data are otherwise fairly complete, the lack of a definite igure for an output of this size makes the totals subject to a certain degree of uncertainty. The countries listed in the following table account for 70% to 80% of the total output.

United States.—The mine production of gold in the United States advanced from the postwar low of 954,572 oz. in 1945 to ,109,185 oz. in 1947. Production dropped back to 2,014,257 oz. n 1948, and still further to 1,603,881 oz. in the first ten months of 1949.

Canada.—The recovery of gold production in Canada from he postwar slump was not interrupted, as it had been in the United States. Output advanced from the low of 2,696,727 oz. n 1945 to 3,070,221 oz. in 1947, 3,525,221 oz. in 1948 and ,648,171 oz. in the first eight months of 1949.

South Africa.—After a decline of 6%, the premier gold output of the world recovered from 11,200,281 oz. in 1947 to 11,84,849 oz. in 1948 and 7,777,747 oz. in the first eight months of 1949. (*See* also EXCHANGE CONTROL AND EXCHANGE RATES; MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. Ro.)

Gold Coast: *see* BRITISH WEST AFRICA.

Golf. Sam Snead, Virginia-born professional who had been a headliner since he came to the big leagues in 1937 and 5-year-old Marlene Bauer, outstanding feminine prodigy of the airways, dominated the U.S. golf scene in 1949. Snead, unanimously adjudged one of the great natural swingers of all time, won the national Professional Golfers' association championship, he Western open and the Masters' invitation tournament. His only defection was in the United States Golf association open, where he made poor selection of a club at the rim of the 71st reen.

Miss Bauer easily won the girls' national and western junior ournaments, scored a number of major match victories over her elders, and reached the national women's semifinals in Philadelphia, where two stymies by Dot Kielty prevented her from eaching the title match.

Winners of the national open and women's titles, respectively, were Cary Middlecoff, a dentist from Memphis, Tenn., who had urned pro two years before after a promising amateur career nd Mrs. Dorothy Germain Porter, Philadelphia housewife and mother.

SAM SNEAD making an iron shot on the second hole of the national P.G.A. championship match in which he beat Johnny Palmer at Richmond, Va., May 31, 1949

The national amateur champion for 1949 was Charles Coe of Ardmore, Okla., who bore out earlier predictions about his prowess by decisively beating Rufus King of Texas in the final bout at Rochester, N.Y. Ken Townes of Los Angeles won the national public links crown, and Harvie Ward of Tarboro, N.C., took the national intercollegiate championship.

The United States scored two important international team victories. After being down in the foursomes of the Ryder cup play in Ganton, England, the Americans took six out of eight singles matches to retain by a 7 to 5 count the trophy they had held since 1935. The U.S. Walker cup team routed a visiting British squad at New York's Winged Foot club by 10 to 2, marking the 11th U.S. triumph in 12 meetings with the Britons.

The Western Golf association continued its Evans Caddie Scholars' foundation, a plan designed to give deserving caddies college educations. Fifty-eight boys who were beneficiaries of the foundation were attending 19 colleges and universities throughout the country during 1949. Bing Crosby, one of the directors of the W.G.A., was voted recipient of the W. D. Richardson trophy by members of the Golf Writers' Association of America for the year's outstanding contribution to golf.

The Women's Western Golf association also continued to be a prominent factor in United States golf. Louise Suggs won the W.W.G.A. open and Helen Sigel of Philadelphia became the first easterner to take the association's amateur title.

Outstanding absentee of the 1949 season, but very much in the minds of golf fans throughout the world, was Ben Hogan, the Texan who preceded Snead as Professional Golfer of the Year. Almost fatally injured in an automobile crash in February, Hogan came back to fulfil his role as nonplaying captain of the U.S. Ryder cup team on its tour of England.

The United States Golf association, governing body of the game in the United States, reported a net increase in club membership of 644, raising the association's total club roster to

1,395. A total of 5,511 entrants turned out for qualifying rounds and competition proper in the six events conducted by the U.S.G.A. The association also showed a profit for the first time in three years. (C. BT.)

Great Britain.—In 1949 the Walker and Ryder cup matches both proved disastrous for Great Britain—so much so, indeed, as to lead to discussion about whether it was worth while continuing them. Each had been won by the British in Great Britain, although not since World War II, but the form of 1949 led to the belief that the gap between the golfers of Great Britain and the United States was, if anything, widening.

England won the men's international series and also beat France.

The open championship was won at Sandwich by the South African, Bobby Locke—his first "open" success. He had first tied with Harry Bradshaw, of Ireland, at 283, equalling the record aggregate first set by Gene Sarazen on the adjacent links of Prince's in 1933. His play in the replay, which he won with 135 to 147, was the outstanding exhibition of 1949. It was held by some that Bradshaw lost the championship when his ball lodged in the broken half of a discarded beer bottle and he wasted a stroke in getting it out. Such a contingency was later provided for in the new rules passed at the business meeting of the Royal and Ancient in September, to take effect on Jan. 1, 1950. H. Bradshaw later won the Irish open, beating Locke in the process. The Irish open amateur title was won by W. O'Sullivan on his home course at the Killarney Golf and Fishing club.

The amateur championship, the decision to play which in the republic of Ireland gave rise to criticism, was won at Portmarnock by S. McCready, of Belfast, who entered from Sunningdale. He beat the holder, Frank Stranahan (U.S.), and in the final another past holder from the United States, Willie Turnesa. In the first round of the final McCready holed the course in 70 to be 4 up. One down with 4 to play he won the next three holes for the match.

Despite this the outstanding amateur golfer of the year was R. White, of Southport, who won the English championship (beating Charles Stowe in the final at Formby), the *Daily Telegraph* foursomes (in partnership with Reginald Horne at Moortown) and both his matches in the Walker cup. The Brabazon trophy at Stoneham was won by P. Hine, a 17-year-old boy, with 287.

The women's title went to Bunty Stephens at Harlech, where two of the strongest United States women players failed. She beat Mrs. V. Reddan, Ireland, in the final. Later Miss Stephens made unsuccessful bids for the United States amateur and open titles. Mrs. A. C. Critchley (Diana Fishwick) was lured from semiretirement to win the English women's title at Burnham and Berrow.

Among the professionals M. Faulkner won three tournaments, R. Burton two and T. Haliburton, S. King and F. Daly one each. D. Rees, after a dull period, won the match play championship by one hole after a thrilling final at Walton Heath with H. Cotton, who had in turn defeated two United States Ryder cup men, L. Mangrum and J. Palmer, on the same day. The outstanding professional was undoubtedly Charles Ward, who happened also to be the smallest. He won the Masters tournament and two others and for the second year running headed the averages, thus winning the Vardon Trophy.

González Videla, Gabriel

(1898–), president of Chile, was born on Nov. 23 at La Serena, Coquimbo. He studied law at Catholic university, Santiago, thought he was interested in politics and after receiving his degree in 1923 began the practice of law. In 1937 he helped to form the popular-front coalition that elected th liberal Pedro Aguirre Cerda to the presidency, and in 1939 Ganzález Videla was sent to France as ambassador. He returned to Chile in 1942. On Sept. 4, 1946, as Radical party candidate, backed by left-wing elements, he won the largest popular vote in the race for the presidency, though the congress had to confirm his election because he had not received a clear majority. He was inaugurated on Nov. 3, 1946.

Though initially supported by left-wing elements, his presidency was marked by a progressive withdrawal from these elements. In April 1948, his government charged that Communists had plotted to assassinate him and stage a revolt, and in June the Communist party was outlawed.

In the congressional elections of March 6, 1949, his supporters won two-thirds of the seats in the chamber of deputies and 2 seats in the senate.

Government Departments and Bureaus.

The following are the leading officers of the more important government departments and bureaus of the United States The date for the information is Dec. 31, 1949.

Department or Bureau	Name	Post
Department of State	*Acheson, Dean G.	Secretary
	Webb, James E.	Under-Sec'y
	Kennan, George F.	Counselor
	McFall, Jack K.	Asst. Sec'y
	Allen, George V.	Asst. Sec'y
	Thorp, Willard L.	Asst. Sec'y
	Hickerson, John D.	Asst. Sec'y
	McGhee, George C.	Asst. Sec'y
	Miller, Edward G., Jr.	Asst. Sec'y
	Perkins, George W.	Asst. Sec'y
	Butterworth, W. Walton	Asst. Sec'y
Department of the Treasury	*Snyder, John W.	Secretary
	Foley, Edward H., Jr.	Under-Sec'y
Office of the Comptroller of the Currency	Delano, Preston	Comptroller
Treasurer of the U.S.	*Clark, Mrs. Georgia Neese	Treasurer
Bureau of Customs	Dow, Frank	Commissioner
Bureau of Internal Revenue	Schoeneman, George J.	Commissioner
Bureau of Narcotics	Anslinger, Harry J.	Commissioner
Bureau of the Mint	Ross, Mrs. Nellie Tayloe	Director
U.S. Savings Bonds Division	Clark, Vernon L.	Nat'l Director
*U.S. Coast Guard	Farley, Joseph F., Adm.[1]	Commandant
Department of Defense	*Johnson, Louis A.	Sec'y of Defense
Joint Chiefs of Staff	*Bradley, Omar N., Gen.	Chairman

Great Britain.—His majesty's chief officers of state and the permanent officials of the more important of the government departments of Great Britain at the close of 1949 were these:

Ministry or Department	Name	Post
Admiralty, Board of	Hall, Viscount	First Lord
	Lang, Sir John G.	Permanent Secretary
Agriculture and Fisheries, Ministry of	Williams, Tom	Minister
	Vandepeer, Sir Donald	Permanent Secretary
Air Ministry	Henderson, Arthur	Secretary of State
	Barnes, Sir James H.	Perm'nt Under-Sec'y
*Bank of England	Cobbold, C. F.	Governor
	Nevill, W. H.	Secretary
Cabinet Office	Brook, Sir Norman	Perm'nt Sec'y and Sec'y of the Cabinet
Central Land Board and War Damage Commission	Phillips, Sir Thomas	Chairman
Civil Aviation, Ministry of	Pakenham, Lord	Minister
	Overton, Sir Arnold	Permanent Secretary
Civil Service Commission	Waterfield, Sir Percival	First Commissioner
Colonial Office	Jones, Arthur Creech	Secretary of State
	Lloyd, Sir Thomas	Perm'nt Under-Sec'y
	Calder, Sir John Alex. Downie, Harold	Crown Agents
Commonwealth Relations Office	Noel-Baker, Philip	Secretary of State
	Leisching, Sir Percivale	Perm'nt Under-Sec'y
Customs and Excise, Board of	Croft, Sir William	Chairman
Defence, Ministry of	Alexander, Albert V.	Minister
	Parker, Sir Harold	Permanent Secretary
Duchy of Lancaster, Office of the	Dalton, Hugh	Chancellor
Education, Ministry of	Tomlinson, George	Minister
	Maud, Sir John	Permanent Secretary
Food, Ministry of	Strachey, John	Minister
	Lee, F. G.	Permanent Secretary
Foreign Office	*Bevin, Ernest	Secretary of State
	Strang, Sir William	Perm'nt Under-Sec'y
Forestry Commission	Robinson, Lord	Chairman
Fuel and Power, Ministry of	Gaitskell, Hugh T. N.	Minister
	Fergusson, Sir Donald	Secretary
Health, Ministry of	Bevan, Aneurin	Minister
	Douglas, Sir William	Secretary
Health, Welsh Board of	Crawshay, G. C. H.	Chairman
Home Office	Ede, James Chuter	Secretary of State
	Newsam, Sir Frank	Perm'nt Under-Sec'y
Information, Central Office of	Fraser, Sir Robert	Director General
Inland Revenue, Board of	Bamford, Sir Eric	Chairman
Labour and National Service, Ministry of	Isaacs, George	Minister
	Ince, Sir Godfrey	Permanent Secretary
Law Officers' Department	Shawcross, Sir Hartley	Attorney-General
	Soskice, Sir Frank	Solicitor-General
Lord High Chancellor's Department	Jowitt, Viscount	Lord High Chancellor
	Napier, Sir Albert	Permanent Secretary
Lord Privy Seal	Addison, Viscount	
National Assistance Board	Buchanan, George	Chairman
	Fieldhouse, Sir Harold	Secretary
National Insurance, Ministry of	Griffiths, James	Minister
	Hancock, Sir Henry	Permanent Secretary
Paymaster-General	Macdonald of Gwaenysgor, Lord	
Pensions, Ministry of	Marquand, Hilary A.	Minister
	Wilson, Sir Arton	Permanent Secretary
*Post Office	Paling, Wilfred	Postmaster General
	Little, Rudolf Alexander	Director General
Privy Council Office	Morrison, Herbert	Lord President
	Leadbitter, Sir Eric C. E.	Clerk
Scientific and Industrial Research, Department of	Lockspeiser, Sir Ben	Secretary

Ministry or Department	Name	Post
Scottish Office	Woodburn, Arthur	Secretary of State
	Milne, Sir David	Perm'nt Under-Sec'y
Stationery Office	Welch, H. G. G.	Controller
Supply, Ministry of	Strauss, George Russell	Minister
	Rowlands, Sir Archibald	Permanent Secretary
Town and Country Planning, Ministry of	Silkin, Lewis	Minister
	Sheepshanks, Sir Thomas	Permanent Secretary
Trade, Board of	Wilson, James	President
	Woods, Sir John	Permanent Secretary
Transport, Ministry of	Barnes, Alfred	Minister
	Jenkins, Sir Gilmour	Permanent Secretary
Treasury	*Attlee, Clement	First Lord
	*Cripps, Sir Stafford	Chancellor of the Exchequer
	Bridges, Sir Edward	Permanent Secretary
War Works Commission	Phillips, Sir Thomas	Chairman

Gray, Gordon

(1909–), U.S. government official, was born on May 30 in Baltimore, Md., was graduated from the University of North Carolina, Chapel Hill, in 1930 and took his law degree in 1933 at Yale university. In 1937 he purchased the two newspapers being published in Winston-Salem, N.C., as well as the local radio station, and was a successful publisher for ten years. In 1938 he was elected to the North Carolina senate, from which he resigned in 1942 to enlist in the army. He was commissioned a lieutenant at the Infantry school, Fort Benning, Ga., served on the staff of Gen. Omar N. Bradley, and was demobilized with the rank of captain. In 1946 he was again elected to the North Carolina senate, serving until Sept. 23, 1947, when he was appointed assistant secretary of the army. He was chairman of an interservice committee that recommended that the national guard should be removed from control of the states and placed in the army reserve forces—a recommendation still pending in 1949. On the resignation of Secretary of the Army Kenneth C. Royall, April 21, 1949, Gray became acting secretary, and was named secretary of the army on June 7.

Great Books: *see* EDUCATION; LIBRARIES.

Great Britain & Northern Ireland, United Kingdom of.

An independent kingdom in northwestern Europe, the United Kingdom comprises the main island of Great Britain, with numerous smaller islands off the English and Scottish coasts, and the six northeastern counties of Ireland. It is a constitutional monarchy, with a king and parliament of two houses, the house of lords consisting of 3 peers of the blood royal, of 704 dukes, marquesses, earls and barons (Aug. 1949), 26 spiritual peers (2 archbishops and 24 bishops), 16 Scottish representative peers, a number of Irish representative peers (in 1949, 7; vacancies no longer filled) and a few life peers who have held high judicial office; and the house of commons, numbering 640 members, elected by universal suffrage. Areas and populations of the component parts of the United Kingdom were:

	Area (in sq.mi.)	Population (June 30, 1948, est.)
England, together with Channel Islands and the Isle of Man	50,623	43,676,000*
Wales, including Monmouthshire	8,012	
Scotland	29,794	5,172,000
Great Britain	88,429	48,848,000
Northern Ireland	5,238	1,365,000
United Kingdom	93,667	50,213,000

*Wales: pop. (1948 est.) 2,523,000.

Cap.: London (*q.v.*) (pop., est. June 30, 1948): city and metropolitan police districts 8,367,000; city and metropolitan boroughs only 3,402,400. Chief towns (est. June 30, 1948, if no otherwise stated): Glasgow (est. Dec. 31, 1947) 1,106,000 Birmingham 1,099,850; Liverpool 767,990; Manchester 697,540 Sheffield 512,110; Leeds 497,340; Edinburgh (est. Dec. 31 1947) 487,300; Belfast (Jan. 1, 1939) 443,500; Bristol 435,510 Nottingham 297,310; Hull 294,070; Newcastle-on-Tyne 292,890 Leicester 280,550. Language: English is almost universall spoken, but in Wales (according to the 1931 census) 3% of th population spoke Welsh only and 31% spoke both languages; i Scotland 0.15% spoke Gaelic only and 2.7% spoke both languages; in the Isle of Man 528 spoke English and Manx. Religions: Church of England (nominal membership 15,000,000 effective 5,500,000); Roman Catholic Church (England, Wales Scotland and Northern Ireland, *c.* 3,500,000); Presbyteria established church in Scotland (1,600,000 in 1949); Church i Wales (est. 250,000); Methodists (1,500,000 in 1949); Jews (400,000). King: George VI (*q.v.*); prime minister and firs lord of the treasury: Clement R. Attlee (*q.v.*).

History.—To the great majority of the people of Grea Britain, 1949 presented a picture of calm. The number o people at work was extremely high; unemployment was so lo as to blunt the desire to look for new jobs. It was only towar the end of the year that signs of unemployment appeared in th shipbuilding and repairing trades. The hours of work done pe person per week differed hardly at all from the average in 1938 and with a huge labour force this made the output very high There were a number of strikes, but the total number of day lost in consequence was small; and the causes which set off th strikes lay in overeasy circumstances rather than in the presence of manifest wrongs to be righted. This applied, for example, to the so-called lodging turn strikes which occurre among a few railwaymen in June because footplate crews refused to spend the night away from their homes. More seriou were the dock strikes which ran along the coast from Liverpoo to London and lasted intermittently from April until July. Th go-slow movement at Smithfield was caused by the porter desire to prove that what seemed to be the modest amount o work they did in a week was in fact a full week's work. (*Se* also STRIKES.)

Some of these movements—particularly that among th dockers—were fomented by Communists. But their success wa too slight to trouble the generally tranquil picture of the country as a whole. There had been warnings. In March the Trade Union congress condemned the disruptive tactics of the Communists, and in April the prime minister gave a general warning against communism. Early in January Arthur Deakin, secretary of the Transport and General Workers' union, had claime to have knowledge of Communist plans to disrupt industry i August; but August turned out to be a quiet month. And th general good temper was further illustrated by the action of th railwaymen as a body. Rather unskilfully led, the railwayme put forward wage claims which British railways would hav been financially unable to meet. The claims were rejected b the Conciliation board. An attempt was thereupon made to ge a "work to rule" (*i.e.*, a slow motion) movement under way but it met with a heavy defeat. (*See* also LABOUR UNIONS.)

For a large proportion of the population conditions of li were in fact fairly comfortable. Some scarcities diminishe Early in the year clothes rationing was ended together wit other minor controls. The running of the important remainin controls grew smoother as experience suggested the adoption o appropriate devices for collaboration between the ministrie and industry. The cost of living was virtually unchanged. S were wage rates.

R STAFFORD CRIPPS, British chancellor of the exchequer, passing before rowd of silent Londoners in Sept. 1949, the day after his speech announcing valuation of the pound sterling from $4.03 to $2.80

Political life developed on normal lines. Parliamentary by-ections showed the pendulum swinging slowly toward the ght but the opposition gained no seats. Some analysts ob-rved especially that Liberal voters were sharing in the move-ent to the right. This movement was manifest also in the cal government elections held in April. As a general election as due at the latest in 1950 special attention was paid to the afting of party programs. The Labour party led the way, iblishing in April a policy statement which was adopted by the rty conference in June. Nationalization was proposed for in-istrial assurance, the cement industry, sugar refining and anufacturing, the wholesale meat trade and slaughterhouses, ld storage, water supply and all suitable minerals. The chemi-l industry was to be examined and a development centre was be set up for shipbuilding and repairing. Industries already tionalized were to be gradually decentralized and the "fruit-l partnership" between private and public industry was to be tended. Some controls were to stay, others to be removed.

Conservative policy was stated in July in a booklet called *he Right Road for Britain.* The nationalized industries were be decentralized but there was no mention of wholesale de-tionalization. Some important controls were to stay as long they were necessary. Direct taxation was to be reduced, ere were to be insurance and pension reliefs, and the social rvices were to be maintained, but waste was to be cut out.

As the year went on the government came to be more on the fensive. At the Trades Union congress conference at Brid-gton in September Attlee stressed the need for higher pro-iction and urged that an increase in wages for the lowest-paid workers should not involve consequential increases all along the line. On this point the unions did not see eye to eye with the government.

The Conservative party conference was held in London in October under the shadow of the devaluation crisis. It brought promises of support for any necessary sacrifices but did not produce a detailed program for meeting the emergency. The debate on the government's economy measures in connection with the dollar crisis showed that some Conservatives were ready for more drastic measures than those outlined in *The Right Road for Britain.*

By the end of 1949 the government had completed its major program of legislation. Its main objective now was the passing of the Iron and Steel bill and of the Parliament bill. In November the government agreed to delay the vesting day for the Iron and Steel industry until after the general election; and thus the bill reached the statute book without the application of a new Parliament act.

Economics and Finance.—The serene conditions of the domestic scene were spoilt by the fact that the entire structure was built on sand: the entire economic field was dominated by the issue between national solvency and insolvency. Supplementary estimates published in February showed that an additional £58,000,000 would be needed for the national health service and a further £52,000,000 for the ministry of food. The financial year ended on March 31 with a true surplus estimated at £352,000,000 and the new budget provided for one of no more than £14,000,000. It represented a success for the forces of solvency; for the chancellor kept the subsidies (designed to keep the cost of living at a moderate level) at £465,000,000, or £103,000,000 less than the rates ruling in the previous financial

BRITISH WOMEN SHOPPERS attracted by coupon-free lingerie at a London department store, after more than seven years of clothes rationing came to an end in Great Britain on March 14, 1949

year would have cost. (*See* BUDGET, NATIONAL.)

Nevertheless, it presently appeared that the state was still spending more than it was receiving. Expenditure soon rose to a rate suggesting that long before the end of the financial year the estimates would be exceeded; there was no similar indication for revenue. The public too was in no saving mood. Savings were drawn on at a net rate of nearly £2,000,000 a week, and the turnover of money (as measured, for example, by the figures of the provincial clearings) became more rapid.

Questions of internal solvency were overshadowed (despite the continued receipt of European Recovery program aid) by those relating to the balance of trade. In the second half of 1948 the country's overseas accounts showed a small surplus. In the second half of 1949 this trend was reversed. The trouble was that, though the over-all accounts balanced on paper, Great Britain (and the sterling area as a whole) was unable to balance its accounts with the dollar area. Though it had a surplus with the rest of the world the balances thus built up could not be used to pay for imports from the United States since many of Great Britain's debtors were themselves insolvent, so far as their foreign trade was concerned. British overseas trade policy was caught in a dilemma. If it concentrated on arranging two-sided trade treaties (as with Poland and the Argentine) it did nothing to foster the growth of world trade, without which British commerce cannot flourish; if it worked toward increasing the volume of world trade (as at the Brussels conference on the convertibility of currencies in June and at the Annecy conference on tariffs which ended in October) it ran the risk of financing the weaker countries' trade at its own expense. Officially, it was claimed that a solution of this contradiction existed; it was not apparent to the eye of the man in the street.

The flow of gold and dollars continued and after consultations at Washington, D.C., it was decided to devalue the pound on Sept. 18. The rate, which had stood at $4.03 to the pound after 1939, was lowered to $2.80. It was hoped that this cheapening of the pound would stimulate exports to, and discourage imports from, the dollar area. (*See* also INTERNATIONAL TRADE EUROPEAN RECOVERY PROGRAM; ORGANIZATION FOR EUROPEAN ECONOMIC COOPERATION.)

One powerful cause of the British trading difficulties lay i the high costs of production. Devaluation drew attention t this fact and consequently placed a question mark against th entire philosophy of the welfare state. The opposition therefore pressed for a general election; the government refused In late October the government outlined fiscal steps to correc the drift toward bankruptcy. They were, however, judged inadequate. The year ended with a widespread conviction tha more drastic decisions would have to be announced after if no before the coming general election. Nonpolitical observer suspected that the opposition was exaggerating and the government was belittling imminent dangers, the motive in each party being an electioneering one. (*See* also POLITICAL PARTIES BRITISH.)

Foreign Policy.—Foreign policy was dominated by relation with the U.S.S.R. and to this extent formed part of a join policy in which the United States held the leading part. Early in the year the success of the air lift supplying Berlin move the soviet government to agree to consultations, which, in May resulted in the restoration of the *status quo,* with a promise t convene the Council of Foreign Ministers (*q.v.*) to conside German questions. The council duly went through the form o joint consultations but nothing resulted. More important wer the western attempts to build up a security system designed i reality if not in name to contain soviet expansionism. The mos important measure under this heading was the North Atlanti treaty (*q.v.*).

The Council of Europe, of roughly parliamentary form, wa meant to express the element of supranational unity existing i Europe. Its assembly (or lower house) met at Strasbourg France, in August and September. It surprised many by providing evidence of solidarity: it kindled the imagination of th fairly large body of British public opinion which saw in th attempt to introduce a measure of unity into western Europ something more than a defensive instrument. (*See* EUROPEA UNION.)

Like the U.S. administration, the British government wa ready to take energetic action on its side of the "iron curtain to restrain whatever ambitions might animate soviet policy But the government was unable to devise effective action beyond the curtain. For example, both Great Britain and the U.S addressed protests early in April to Bulgaria, Hungary an Rumania on the score of their alleged violations of the peac treaties; but it was clear that this action was prompted rathe by the wish to keep the diplomatic record straight than by th hope of weakening the Communist front. A similar inability t work out an effective policy was shown later in the year whe Marshal Tito's breach with the U.S.S.R. became more and mor violent. The impulse to assist him was evidently tempered b the desire to take no irremediable step about the Soviet Unio

As for Germany, policy was hampered by the fact that, weak, the federal republic must be a drain on its victor-sponso and a possible breeding ground for communism; but, if stron it would sooner or later pursue an independent policy, and o not necessarily accommodated to the interests of the wester powers by any pre-established harmony. The program for se ting up a western German government was pushed ahead. Th British government played a proper part in fostering its crea tion. At the same time it was accused of showing itself unab to grasp the implications of this policy. The dismantling rman factories listed as potentially dangerous continued rough most of the year to the accompaniment of vocal prots and sometimes of physical violence on the part of the rmans. Toward the end of the year it became obvious that mantling would be a major issue for the west German oppoion and could not be disregarded by the administration. Probly the British government was not prompted solely by the r of the new Germany it was helping to build up; it would t wish to present the soviet government with a cut and dried se for contending that the former enemy was being treated as riend. (*See* also GERMANY; REPARATIONS.)

On the Soviet Union's eastern flank British policy was amguous. The Chinese Communists overran most of the coun, and it was obvious that theirs was the dominant power. In w of this fact, and of the desirability of maintaining comrcial relations, the government appeared anxious to recognize Communists. Public opinion, seizing on the striking and the ential, concentrated its attention on relations with the S.S.R. and extended to every manifestation of communism hostility to that power. There was a strong craving for reurance about the status of Great Britain. This showed itself the indignation aroused by the Communist shelling of the gate "Amethyst" on the Yangtze in April, and by the efferscent celebrations occasioned by the vessel's escape in July.

Commonwealth Affairs.—Intracommonwealth relations showed at evolutionary quality which is necessary for the healthy life any political body. With respect to India, for example, means re found for expressing the dominion's continued memberp of the commonwealth as well as its changed relationship to traditional bond of empire, the crown. After exploratory nversations between British envoys and the respective domin authorities, a commonwealth conference was held in London m April 21 to 28. A formula was found declaring that India cepted the king as the symbol of the free association of the nmonwealth's independent member nations but also affirming at India was to become a sovereign independent republic. is recognition of apparently conflicting principles was apoved by the other dominions. (*See* INDIA; PAKISTAN.)

An analogous reconciliation was effected by the Ireland bill, ich was published on May 5 and declared that the Republic Ireland ceased to be part of his majesty's dominions on ril 18 but would not be a foreign country for the purposes any law in force in the United Kingdom or the colonies. The l also affirmed that Northern Ireland remained part of the itish dominions. The measure had a bad reception in the public of Ireland as perpetuating the so-called partition. But correctly stated the facts of the situation. (*See* IRELAND, PUBLIC OF.)

In the colonial empire stress was placed on economic deopment. In the commons debate on July 29 Arthur Creech nes, the colonial secretary, showed that he understood the ed to build up a higher standard of living. The difficulty lay in shortage of capital in Great Britain; and a report issued on y 29 by the Parliamentary and Scientific committee suggested operation with the United States in dealing with the underveloped areas. The hazards of colonial development were strated by the history of the government's peanuts scheme. rly in November it was officially stated that more than £29,,000 had been spent on the undertaking. It was clear that, atever its ultimate fate might be, the project was a longm pioneering endeavour and exposed to all the difficulties erent in this kind of effort.

As the year advanced the financial difficulties of Great Britain l of the sterling area received growing attention. A conence of commonwealth finance ministers sat in London from y 13 to July 18. It expressed its appreciation of the need for a single many-sided system of world trade and payments and it discussed means for expanding the sterling area's earnings of dollars. The rate of the outflow of gold and dollars did in fact decline during the third quarter of the year. Equally important, within the sterling area, were the war debts owed by Great Britain to some of the dominions. In August arrangements were concluded with India and Pakistan governing releases of sterling to these creditors. If measured against the sums owed the releases were moderate; if against the British straits, large. They were criticized on both grounds.

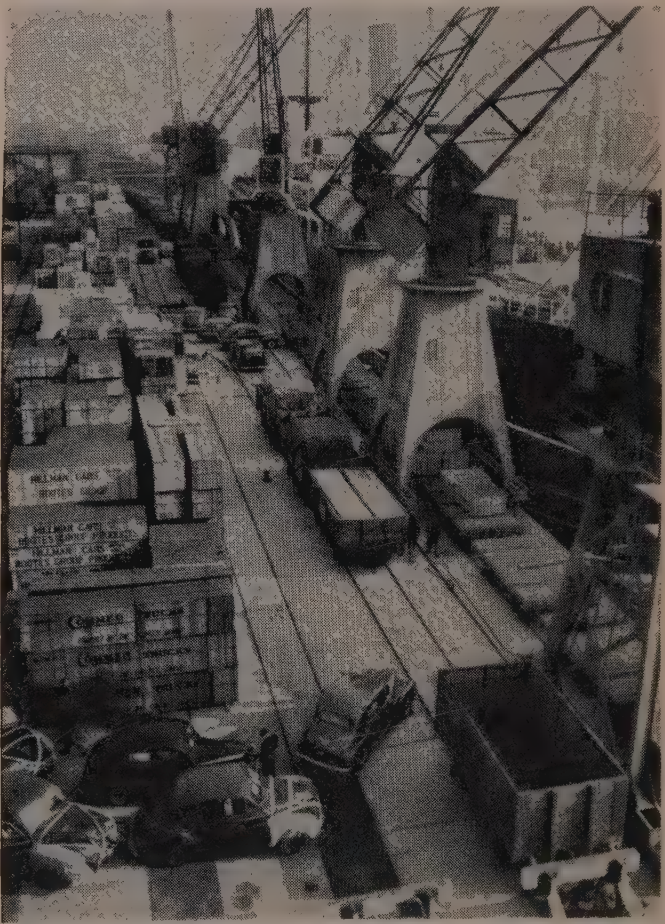
FILMS OF 1949.—*A Yank Comes Back, Royal Silver Wedding Anniversary, Robinson Charley* (British Information Services); *English Children, The British Isles* (Encyclopædia Britannica Films Inc.). (W. L. A.)

Education.—Great Britain (1948): primary and secondary schools 31,623, pupils 6,224,000; special schools 644, pupils 54,000; further schools 7,248, pupils 2,015,000; teachers, all schools 239,857. (1947–48): England, universities 12, university colleges 6, students 56,315, professors 1,018; Wales, university 1, students 4,654.

Finance and Banking.—Budget (actual, 1948–49): revenue £4,006,600,000, expenditure £3,175,600,000, surplus £831,000,000; (est. 1949–50): revenue £3,778,000,000, expenditure £3,329,000,000. Notes in circulation (Dec. 1949) £1,312,000,000. National debt (Dec. 24, 1949) £25,707,000,000. Exchange rate (after Sept. 18, 1949) £1=$2.80. Prior to Sept. 1949 the gold and dollar reserves of the sterling area were £330,000,000 at the old exchange rate. With the devaluation of the pound, gold and dollar reserves at the end of the year represented £603,000,000.

Foreign Trade.—Imports (1948) £2,078,000,000, (1949) £2,272,500,000; exports including re-exports (1948) £1,646,500,000, (1949) £1,843,000,000. Main sources of imports (1948, per cent of total imports): Canada 10.4; United States 8.7; Australia 8.1; Argentina 5.8; New Zealand 5.2. Main destinations of exports (1948, per cent of total exports): Australia 9.1; Union of South Africa 7.7; India 6.1; Ireland 4.8; Canada 4.4; United States 4.2.

Transport and Communications.—Great Britain: length of roads (1948) 183,659 mi.; licensed motor vehicles: cars (May 1948) 1,670,000, (Aug. 1949) 2,107,000; public conveyances (May 1948) 129,200, (Aug. 1949) 138,100; trucks (May 1948) 671,200, (Aug. 1949) 766,900; total



BRITISH CARS AND TRUCKS crated for export at Bristol in 1949. Passenger-car output in the first half of the year hit a new high in weekly averages as the export drive was intensified to increase dollar earnings in order to pay for imports of U.S. food, raw materials and machinery

motor vehicles (May 1948) 2,716,600, (Aug. 1949) 4,016,000 (including 262,200 agricultural tractors). Railways: total mileage (1948) 19,700 mi.; rail transport (1948) 21,259,000,000 passenger-mi.; freight traffic (1948) 21,457,000,000 ton-mi. Airlines: Aircraft miles flown (1947) 39,522,000, (1948) 44,206,000; passenger-miles flown (1947) 441,140,000, (1948) 554,536,000; freight carried (1947) 5,051 tons, (1948) 8,108 tons; mail carried (1947) 3,002 tons, (1948) 4,241 tons. Shipping: total number of vessels (steam and motor) (Dec. 1948) 12,795, of which 9,285 were vessels of less than 500 gross tons. Shipping movement at United Kingdom ports: all vessels (1948) 63,396,000 net tons. British vessels only 40,646,000 net tons. Number of telephones, private stations (Sept. 30, 1949) 5,043,465; number of radio receiving set licenses (Nov. 30, 1949) 11,900,200; number of television licenses (Nov. 1949) 206,700.

Agriculture and Fisheries.—(Long tons): wheat (1948) 2,361,000, (1949) 2,136,000; barley (1948) 2,027,000, (1949) 2,042,000; oats (1948) 2,963,000, (1949) 2,828,000; rye (1948) 47,000, (1949) 53,000; mixed corn (1948) 518,000, (1949) 640,000; potatoes (1948) 11,798,000, (1949) 8,861,000; sugar beets (1948) 4,319,000, (1949) 3,644,000, Livestock: cattle (1948) 9,806,000, (1949) 10,229,000; sheep (1948) 18,164,000, (1949) 19,473,000; pigs (1948) 2,151,000, (1949) 2,811,000; poultry (1948) 85,327,000, (1949) 95,223,000. Sales of milk in the United Kingdom amounted to 1,737,000,000 gal. in 1949. About 40% of Britain's food was home produced in 1949. At the end of the year meat, bacon, fats, milk, cheese, eggs, sugar and tea continued to be rationed. An account of the payments made on the food subsidy account was given by the chancellor of the exchequer on Nov. 3. He listed the annual rate of payments as follows:

To reduce the cost of imported food	£183,500,000
To reduce the cost of home-grown food	211,300,000
To reduce the cost of imported feedstuffs	33,800,000
To reduce the cost of home-grown feedstuffs	2,900,000
Acreage payments	16,100,000
Fertilizers	15,000,000
Total	£462,600,000

Fisheries: England and Wales (1948) 722,000 long tons, (1949) 708,600 long tons; total catch value (1948) £34,789,000, (1949) £29,479,000.

Industry.—(April 1948): Number of industrial establishments with more than 10 employees 51,040; total working population (June 1948) 23,146,000. Fuel and power: coal (1948) 209,400,000 long tons, (1949) 215,110,000 long tons; gas (1948) 505,369,000,000 cu.ft.; electricity (1948) 48,084,000,000 kw.hr. The total number of wage earners in the coal-mining industry was 724,000 in 1948. The average output in tons per manshift in 1948 was 1.11.

Petroleum: production output (refineries and distillation) (1948) 3,838,400 tons, including 1,753,200 tons of fuel oil and 617,100 tons of gasoline.

Raw materials (long tons): pig iron (1947) 7,785,000, (1948) 9,276,000; steel ingots and castings (1948) 14,877,000, (1949) 15,553,000; virgin aluminum (1947) 28,900, (1948) 30,000; copper, refined (1947) 88,900, (1948) 107,700; virgin zinc (1947) 68,300, (1948) 72,100; virgin tin (1947) 28,100, (1948) 31,000; nickel, refined (1947) 14,300, (1948) 17,100. Iron ore, total consumption 20,700,000 tons including 12,200,000 tons home extracted.

Timber (standards), softwood (1947) 66,480, (1948) 64,400; pitwood (1948) 195,000; plywood (1948) 72,700,000 sq.ft.; hardwood (1948) 38,900,000 cu. ft.

Textiles single cotton yarn (1948) 807,500,000 lb.; rayon and nylon yarn (1948) 150,500,000 lb.; wool, home production (1948) 50,000,000 lb. clean weight; wool yarn 181,700,000 lb.; woven wool fabrics (1948) 267,400,000 yd. (K. Sm.)

Great Lakes Traffic: *see* CANALS AND INLAND WATERWAYS.

Greece. A kingdom in the southern part of the Balkan peninsula, Greece has an area of 51,182 sq.mi. including the Dodecanese Islands (1,035 sq.mi.); the mainland accounts for 41,328 sq.mi. and the islands, the largest being Crete (3,235 sq.mi.), for 9,854. Pop.: (1928 census) 6,204,684 including 1,221,849 transferred from other countries, but mainly from Turkey (1,104,216); (Oct. 16, 1940 census) 7,344,860; (Dec. 31, 1949 est.) 7,960,000. Chief towns (1940 census, municipal area only): Athens (cap., 481,225); Piraeus (205,404); Salonika or Thessaloniki (226,147); Patras (79,570); Volo (54,919). Language: Greek (93%). Religion: Greek Orthodox (96.5%). Ruler, King Paul I; prime ministers in 1949, Themistocles Sophoulis and (from June 30) Alexander Diomedes (*q.v.*)

History.—The early months of 1949 were marked by a deterioration of security in Greece, with the Communist rebels reaching the climax of their military effort. On Jan. 14, rebel forces captured the industrial town of Náousa, in Macedonia, and held it for three days before being ejected by government troops. Many of the factories and other buildings of the town were destroyed by the retreating rebels, who also executed the mayor and many prominent citizens. This raid was followed by an attack on Karpenísion, in central Greece, which th rebels captured on Jan. 21 and occupied for a fortnight before government troops recaptured it.

This proved to be the last success for the rebels. The appointment of General Alexander Papagos, Greece's wartime leader, as supreme commander of the Greek armed forces and the drastic changes which the new commander in chief enforced in army commands and military tactics resulted in the methodical liquidation of the rebel forces beginning with the Peloponnesos, which was cleared by the end of March, and culminating in the large-scale offensives of August–September in the last remaining strongholds of the rebels in the Mount Vitsi and Mount Grammos areas, on the Greco-Albanian frontier. By the middle of October all organized resistance on the part of the rebels had collapsed, and on Oct. 16 the rebel radio announced the "temporary cessation of hostilities." Casualty figures issued by the Greek general staff showed that, from June 1, 1946, when guerilla activities began, to March 31, 1949, the Greek army lost 10,927 killed, 23,251 wounded and 3,756 missing; casualties inflicted on the rebels during the same period totalled 70,028 (28,992 killed, 13,105 captured and 27,931 surrendered). Noncombatant casualties were 4,247, of whom 3,516 were executed by the rebels and 731 were killed by rebel-laid mines. Damage to property included many bridges blown up, more than 11,000 houses destroyed and nearly 7,000 villages looted. About 700,000 persons were obliged to abandon their farms and homes in rebel-infested parts of the country and seek refuge in safe areas and more than 28,000 were abducted by the rebels and removed to Communist countries north of Greece.

In the domain of internal politics there were also several developments during 1949. The Liberal-Populist coalition government of Themistocles Sophoulis, which on Nov. 21, 1948, had obtained a vote of confidence by a majority of only 1, was obliged to resign on Jan. 15 after various attempts to broaden its basis had failed. Following a vigorous statement by the king that, unless a national government were formed at once he would be obliged to seek "another solution," Sophoulis succeeded in forming a new government on Jan. 19, comprising not only the two main parties (Populist and Liberal) but also the Unionist party of Panayotis Kanellopoulos and the New party of Spyros Markezinis, with Alexander Diomedes, a non-party elder statesman, as deputy premier. Although this government obtained an overwhelming vote of confidence a fortnight later, it had a brief life; allegations against Markezinis led to its resignation on April 12 and the formation, two days later, of a new government which was identical with its predecessor, with the exception that the New party was excluded. This government remained in office until June 24 when the prime minister, Sophoulis, died. Attempts by K. Tsaldaris, leader of the Populist (majority) party in the chamber of deputies, to form a government having failed, the king entrusted Diomedes with the formation of a new government, which was sworn in on June 30. The new government was again a Populist-Liberal-Unionist coalition, with Diomedes as prime minister and the leaders of the Populist and Liberal parties, Tsaldaris and Sophocles Venizelos, as deputy prime ministers.

The Greek question again came up for discussion before the fourth general assembly of the United Nations in September–December. The U.N. Special Committee on the Balkans (U.N.S.C.O.B.) presented its report, covering the period Oct. 1948–July 1949, in which it was stated that continued Albanian and Bulgarian aid to the Greek rebels had made the situation a threat to the political independence and territorial integrity of Greece and to peace in the Balkans, and that both these countries had allowed the rebels "extensive use" of their territori d had actively campaigned for guerilla recruitment. The re- t added that Yugoslav aid had decreased and "may have sed." (In a speech at Pola on July 10, Marshal Tito an- unced that the Yugoslav frontier with Greece would be sed.)

After a lengthy and acrimonious discussion, the general assem- adopted on Nov. 18, by 50 votes to 6 with 2 abstentions, a olution naming Albania, Bulgaria and Rumania as having ac- ely assisted the Greek guerillas; calling upon Albania, Bul- ria and other states concerned to cease assistance to the erillas, including the use of their territories as a base for ned action; and recommending to all states to: (1) refrain m action designed to assist any armed group fighting Greece;) refrain from direct or indirect provision of arms or other r materials to Albania and Bulgaria until U.N.S.C.O.B. or other competent U.N. organ determined that unlawful as- tance by these states to the Greek guerillas had ceased; (3) e into account, in their relations with Albania and Bulgaria, e extent to which these countries abided by the recommenda- ns of the general assembly in their relations with Greece.

The resolution renewed U.N.S.C.O.B.'s mandate and called on Albania, Bulgaria and Yugoslavia to co-operate with it. addition, all states harbouring Greek nationals as a result of erilla operations were called upon to facilitate the peaceful patriation to Greece of those who desired to return and "live accordance with the law of the land." Another resolution, opted unanimously by the assembly, noted that Greek children moved by the rebels to other countries had not yet been urned to their homes (as recommended by the resolution ssed unanimously by the U.N. general assembly on Nov. 27, 48) and urged all states harbouring Greek children to arrange their speedy return to Greece.

A conciliation commission set up on Sept. 29 under Gen. rlos Romulo, president of the U.N. general assembly, reported Oct. 23 that its efforts had broken down, mainly because of e insistence of the U.S.S.R. and Albania that the existing eco-Albanian frontier should be regarded as permanent and t, in consequence, Greece should finally renounce its claims northern Epirus.

On Oct. 31, Christopher Mayhew, the British under secretary foreign affairs, announced in the house of commons the pending withdrawal from Greece of the British troops who d been stationed there since the liberation, stressing that this thdrawal was decided upon in view of the improvement in e situation brought about by the victories of the Greek army d did not indicate any lessening of British interest in the curity of the Greek people.

On Aug. 8, the committee of ministers of the Council of rope, at its first meeting in Strasbourg, invited Greece to n the council and allotted that country six representatives in e assembly.

On Aug. 31, Greece signed a reparations agreement with Italy, virtue of which Italy would pay Greece $105,000,000 in five arly instalments by supplying agricultural and industrial prod- ts for which Greece would provide the raw materials. (*See* o EASTERN ORTHODOX CHURCHES; UNITED NATIONS.)

(A. A. P.)

ducation.—(1947–48) Primary and infant schools 9,082, pupils 1,023,- , teachers 16,354; secondary schools 407, pupils 92,687, teachers 35; universities 2, students 7,330, professors and lecturers 294. teracy (1940) 38%.

inance.—Budget: (1949–50 estimates) revenue 3,953,000,000,000 chmas, expenditure 5,749,000,000,000 drachmas. Currency circulation ly 1949; in parentheses, July 1948): 1,292,000,000,000 drachmas 046,000,000,000 drachmas). Monetary unit: drachma with an exchange e (from Sept. 20) of 15,020 drachmas to the U.S. dollar.

oreign Trade.—1947: Imports U.S. $137,400,000 (1,103,450 metric s); exports U.S. $55,300,000 (175,041 metric tons). 1948: Imports 96,000,000,000 drachmas; exports 449,900,000,000 drachmas.

ransport and Communications.—Roads (Dec. 1948) in good condition 3,666 mi. Licensed motor vehicles (Dec. 1948): cars 6,250, commercial vehicles 16,035. Railways (Dec. 1948): operating trackage 1,328 mi. Shipping (March 1948): under Greek flag, merchant vessels 601, tonnage 1,286,161; under foreign flag (mainly Panamanian), merchant vessels 246, tonnage 1,362,827.

PAVING OPERATIONS on the asphalt Salonika-Serres road. Reconstruction of the Greek transport system, financed under the U.S. Interim Aid program, was completed in 1949 and included extensive work on highways, port and drydock facilities, bridges and railways

Agriculture and Fisheries.—Main crops (in 000 metric tons, 1948, 1949 estimates in parentheses): wheat 770 (650); barley 190; oats 110; rye 40 (30); potatoes 304; rice 9; maize 229; legumes (dry edible) 68; tobacco 37; cotton 36; must 380; table grapes 105; currants 78; sultana raisins 22; dry figs 23. Livestock (spring 1948): sheep 7,000,000; horses 240,000; donkeys 360,000; mules 148,000; bulls 700,000; buffaloes 59,000; goats 3,600,000; pigs 485,000; poultry 8,312,000. Sea fisheries: total catch (1948) 28,000 tons.

Industry.—Persons employed in industry (Oct. 1948) 122,500. Raw materials (in metric tons, 1948): iron pyrites 14,805; baryta 18,706; bauxite 44,238; magnesite 11,610; emery 12,0000; chrome ore 1,500; lead 1,834; zinc 5,712; pig lead 1,166; lead in sheets 254; caustic calcined magnesia 238; lignite 150,000.

Smogorzewski, "Greece: Three Years of Civil War," *Fortnightly* (London, Sept. 1949); F. A. Voigt, *The Greek Sedition* (London, 1949); *Labour Problems in Greece: Report of the Mission of the International Labour Office to Greece* (Geneva, 1949).

Green, William (1873–), U.S. labour leader, was born March 3 in Coshocton, O., spent much of his youth as a miner, and at the age of 27 was a subdistrict president of the United Mine Workers of America. He was elected president of the American Federation of Labor in 1924; at the A.F. of L. 1949 convention, he was re-elected to his 26th straight term. Under Green, the A.F. of L. remained predominantly a crafts union. When the Committee for Industrial Organization (the later Congress of Industrial Organizations), a group of ten A.F. of L. unions, opened its campaign to establish industrial-type unions, Green refused to sanction the move and the C.I.O., led by John L. Lewis, broke away from the parent body in 1937. Over the years Green repeatedly emerged as Lewis' chief opponent.

Green observed his pledge to keep labour peace for the duration of World War II, but at war's end he led in criticism of the Case strike-control bill of 1946 and the Taft-Hartley labour act of 1947, calling on labour to defeat in the 1948 elections all who had supported such legislation.

In 1949, however, the Taft-Hartley law remained on the books, and Green repeatedly attacked it, repeating in his Labor day speech his pledge of new efforts to elect in 1950 a congress friendly to labour. In October Lewis suggested that the United Mine Workers of America, the C.I.O. and the A.F. of L. unite to provide funds for striking steelworkers. Green termed "the pooling of labour's resources, while divided as it is today," impossible. In reply Lewis wrote: "I did not think you would do anything. You didn't. You rarely do."

Greenland.

The world's largest island (840,000 sq.mi., about 705,000 sq.mi. covered by an ice cap), in the North Atlantic ocean, northwest of Iceland, Greenland is a Danish possession. It came under temporary United States protection in 1941. Capital, Godthaab. A population of 21,384 (Oct. 1, 1945) is scattered in small settlements mostly on the west and southwest coast; 569 in all are listed as Europeans (largely Danes) and the rest are native Greenlanders. Seats of the governors are Godthaab in the south and Godhavn in the north.

History.—The political position of Greenland was clarified in 1949, and the possibility of dispute over United States protectorship and Danish sovereignty in the island was minimized. Denmark's accession to the North Atlantic treaty (*q.v.*) provided machinery for co-operative action in what was in any case regarded as a mutual interest. The United States continued to operate air bases, but the weather stations had passed into Danish hands. The U.S. navy was developing a small operating base in one of Greenland's southern fjords. And in November the navy held exercises in Davis strait, partly to the north of the Arctic circle. The air force was interested in the area as an observation point from which to spot any strange planes coming in over the "roof of the world." The interest of the United States was accented by the fact that in 1949 the U.S. alone maintained diplomatic representation in the island, through the consulate at Godthaab.

The reform of the Danish administration continued to be discussed in Copenhagen, Den. Prime Minister Hans Hedtoft emphasized in an address in April that changing circumstances in Greenland demanded an overhaul of the political system.

Increasing warmth in Greenland's climate and the fruits of years of education were two factors pointing to change. The decrease of seals in Greenland waters, and the great increase in cod—a more marketable product—had definitely shifted the economic base. The direction of carefully thought-out reform would obviously be toward greater individual and economic freedom for the people of Greenland, and less rigid control from Denmark.

A Danish commission went to Greenland during the summer and reached accord on a number of proposals including housing and public health.

In the spring of 1949 a French scientific expedition prepared to land by parachute on the great ice cap. In the summer a large expedition, international in composition, sailed from Copenhagen to investigate a deposit of lead ore in the region of Kong Oscars fjord, east Greenland. The discoverer, Lauge Koch, thought it might contain 1,000,000 tons of 84% lead ore.

Gromyko, Andrei A.

(1909–), soviet diplomat, was born on July 5 in Starye Gromyki, Byelorussia. He graduated from the Minsk Institute of Agricultural Economics in 1934. In 1938 he was taken into the commissariat for foreign affairs, and after one year's training was sent to Washington, D.C. In Aug. 1943 he succeeded Maxim Litvinov as ambassador to the U.S. and also to Cuba. He headed the soviet delegation at the Dumbarton Oaks conference in 1944, attended the San Francisco conference in 1945 and was appointed chief soviet representative to the United Nations. On April 10, 1946, he was freed from his duties as ambassador to become permanent soviet delegate to the U.N. Security council. On Dec. 29, 1947, it was announced that he had been promoted to deputy foreign minister. In July 1948, being replaced at the Security council by Jacob Malik, Gromyko left New York for Moscow. In November he was awarded the Order of the Red Banner of Labour for outstanding service in the diplomatic field. On March 4, 1949, when Andrei Y. Vishinsky succeeded Vyacheslav M. Molotov as minister of foreign affairs, Gromyko became first of the four deputy foreign ministers of the U.S.S.R.

Grotewohl, Otto

(1894–), German politician, was born at Brunswick, Germany. A printer by trade, he joined the S.P.D. (Sozialdemokratische Partei Deutschlands) after World War I, was a member of the Brunswick *landtag* 1920–25, Brunswick minister of the interior and education 1921–22, and of the interior and justice 1923–24. From 1925 to 1933 he was a member of the *reichstag*. In 1933 he was arrested and sent to a concentration camp. When in June 1945 the S.P.D. was re-organized he was elected leader of the party in the soviet zone of Germany and member of the central executive committee. He accepted the idea of a merger between the S.P.D. and the K.P.D. (Kommunistische Partei Deutschlands), which was mooted by the political advisers to the soviet military administration; and when, in April 1946, the merger took place in the soviet zone he was elected one of the chairmen of the resultant S.E.D. (Sozialistische Einheitspartei Deutschlands), the other being the Communist leader Wilhelm Pieck (*q.v.*); he also became one of the nine members of the Politburo of the S.E.D. When the Russians decided to organize a people's republic in their zone of Germany, Grotewohl was appointed prime minister of the east German government and on Oct. 12 presented his cabinet to the lower house.

Guadeloupe: *see* French Union.

Guam.

Guam is the largest and southernmost island of the Marianas, lying in the Pacific at 13° 26′ N. lat. and 144° 39′ E. long., about 5,100 mi. from San Francisco, Calif. and 1,500 mi. from Manila, Phil. Area: 206 sq.mi. Population July 1, 1949, consisted of 26,744 Guamanians and about 75,000 non-Guamanians, including U.S. military and civil service personnel. Agaña is the principal city and capital. Other important towns are Sinajana and Inarajan. The Guamanians are Chamorros, and their religion is predominantly Roman Catholic.

Guam is administered by the U.S. navy; however, on July 1, 1950, the U.S. department of the interior was scheduled to take over responsibility for the administration of the island. Rear Admiral Charles A. Pownall, who retired Sept. 1, 1949, was the last naval officer to be appointed governor; on Sept. 3, 1949 Carlton Skinner was appointed by the president of the U.S. as the first civilian governor of the island. The Guam congress composed of a house of council and a house of assembly, is a popularly elected legislature. In 1947 the Guam congress received legislative power in place of its former advisory power. The congress can also override the governor's veto. Each of island's municipalities is headed by a Guamanian commissner elected by popular vote for a four-year term.

ducation.—In 1949 there were 21 elementary and junior high schools 1 high school with 9,029 pupils and 397 teachers and principals. Inction is given in English.

inance.—During the fiscal year ending June 30, 1949, Guam's exditures amounted to $3,288,991, of which $1,082,380 came from U.S. ropriations, $1,985,824 from local revenues and the balance from the of surplus war materials and certain special funds. Revenues colted during the fiscal year amounted to $3,062,175. The Bank of am, a navy-controlled institution, had resources in excess of $22,000, on Dec. 31, 1948.

ndustry and Trade.—In 1949, 3,000 out of the 8,700 employable amanians worked for U.S. government establishments. In 1948 imports ounted to $7,946,512; exports totalled $3,887,165, almost all of ich represented surplus military materials being shipped to China or ng returned to the U.S.

ransportation and Communications.—There are about 80 mi. of paved hways on Guam and about 60 mi. of improved secondary roads. There no railroads, but 5 military airfields. Radio and wireless communicans were in 1949 under the control of the military forces.

uatemala. A Central American republic, Guatemala is bounded by Mexico, British Honduras, Honduras d El Salvador. Area: 45,452 sq.mi.; pop. (mid-1948 est.) 17,000, of whom more than half were Indians, the remainder gely of white and mixed blood. Capital: Guatemala City 946 est. pop., 225,000). Other urban centres (1940 census) are: tigua Guatemala (12,601), Chiquimula (10,868), Comalapa 0,461), Mazatenango (14,227), Puerto Barrios (15,784), ezaltenango (33,538) and Zacapa (14,443). Language: anish; religion: predominantly Roman Catholic. President 1949: Juan José Arévalo.

History.—The continued minority resistance to the leftist ministration of President Arévalo was highlighted in 1949 by o abortive revolts. Guatemala also experienced a disastrous od and two major labour disputes during the year.

The first uprising (described by the government as mere nditry) occurred April 7, when 200 armed men seized five vns near the Mexican border and sacked the customs offices. vernment troops regained the towns within two days, and st of the insurrectionists were either killed or captured.

The second and most important revolt (the 20th since Arélo took office in 1945) began July 18. It was apparently set by the assassination of Col. Francisco Javier Arana, chief the armed forces and potential successor of President Arélo. The Guardia de Honor garrison rebelled but was subed within 24 hr., after the loss of 50 lives. Labour unions, ident organizations and large numbers of other civilians gned themselves with the government during the crisis. The ministration denied rumours that Colonel Arana had been otting a coup and implied that he was assassinated by "reionaries" for having refused to lead an insurrection. In Dember a military court sentenced 14 of the accused insurgents from two to ten years' imprisonment. Constitutional guartees, suspended at the time of the revolt, were restored Sept. , but new legislation, enacted the same month, restricted the litical activities of the army, clergy and to a less extent, press.

On Dec. 8 the congress approved a motion recommending inuctions for the Guatemalan delegations before the United ations assembly and the Organization of American States to ppose a total break of commercial and diplomatic relations th the Franco government of Spain.

Rainstorms in September and October resulted in great loss life and caused property damage amounting to about $23,0,000, including cash and subsistence crops, livestock, highys and railroads. The government issued $2,000,000 in bonds finance emergency rehabilitation and relief.

BULLET-RIDDLED BUILDING in Guatemala city, scene of a military revolt which broke out in July 1949 against the government of Pres. Juan Arévalo

A slowdown strike of United Fruit Co. wharf workers at Puerto Barrios and banana harvesters in Tiquizate reached a crisis in February when the company suspended its activities, leaving 10,000 unemployed and paralyzing shipping at the chief Pacific port for several weeks. The conflict was settled March 7 through government mediation, the workers being awarded wage increases and a collective contract. A long-standing dispute between the International Railways of Central America and its unionized employees was settled by arbitration in August.

In September the United Fruit Co. announced its abandonment of more than 50,000 ac. of banana plantations in the Izabal region, because of plant disease.

Education.—In 1946 there were 4,425 elementary schools with 8,266 teachers and 225,362 students; 45 secondary schools with 819 teachers and 5,494 students. The University of San Carlos had 1,719 students; the School of Agriculture, 184; the Polytechnical and Military academy, 170; the Theological seminary, 12; and the Conservatory of Music, 407. The 1948–49 national budget allocated $6,300,000 for public education.

Finance.—The monetary unit is the quetzal, maintained at par with the U.S. dollar. The national budget for 1949–50 provided for expenditures of $41,496,265, a $10,000,000 reduction from the final 1948–49 figure. As of March 31, 1948, the public debt was $847,700, external; $3,000,000, internal. Foreign-exchange reserves on July 31, 1949, totalled $45,500,000 ($50,100,000 on the same date in 1948).

Trade and Resources.—Exports for 1948 amounted to $50,200,000, including monetary gold and silver, and imports were valued at $68,400,000. More than three-fourths of the trade was with the United States. During the first six months of 1949 exports were down 1.6% and imports up 4.4%. The leading exports in 1947 were coffee (889,000 bags of 132 lb. each), bananas (14,884,000 stems), cabinet woods (4,970,090 sq.ft.), lumber (3,658,983 sq.ft.), cinchona bark (888,201 lb.), cattle hides (975,959 lb.), essential oils (300,421 lb.) and rice (1,134,596 lb.). The exportable coffee crop for the 1949–50 season was estimated at 750,000 bags (910,000 in 1948–49). In 1947 the country had 900,974 head of cattle, 155,423 horses, 61,000 mules and asses, 617,611 sheep, 63,545 goats and 374,377 pigs and hogs.

Communications.—In 1947 railroads totalled 817,477 mi. Of the 4,800 mi. of highways in 1945, 2,400 were improved. There were about 8,500 automobiles and trucks registered in 1948. At the end of 1948 telephone lines totalled 4,025 mi. (2,893 mi. government-operated); telegraph lines 4,366 mi.; radio broadcasting stations 15; and receiving sets approximately 40,000. Gymnastics.

The 61st national Amateur Athletic union gymnastics championships, sponsored by the University of Illinois at Navy Pier, Chicago, Ill., in 1949, drew a record field of 203 men and 54 women. The new all-around champion, William Rotzheim of the University of Illinois, Navy Pier, scored 321.8 points. Clara Schroth of the Philadelphia Turners dominated the feminine stars with 285.7 points.

Men's title winners follow: calesthenics, Robert Stout, Temple university; rope climb, Don Perry, unattached; parallel bars, Joseph Kotys, Cleveland Swiss Turners; Indian clubs, George R. Hern, unattached; side horse, G. J. Rabbitt, Syracuse university; long horse, William Tom, Occidental college; trampoline, Edsel Buchanon, unattached; flying rings, Waldemir Baskovich, Chicago Sokol club; horizontal bar, Edward Scrobe, New York American Turners; tumbling, I. E. Bedard, University of Illinois, Navy Pier; team, University of Illinois, Navy Pier.

On her way to the all-around title, Clara Schroth won the parallel bars, balance beam, side horse and flying rings. Other victors were Meta Elste, Acrotheatre, University of Chicago, calisthenics; Marie Armstrong, Philadelphia Turners, tumbling; Margaret Dutcher, Ridgewood, N.J., Indian clubs; and Chicago Lincoln Turners, team drill.

Temple university won both the Eastern Intercollegiate league and the National Collegiate Athletics association team championships. (T. V. H.)

Gynaecology and Obstetrics.

Three authors of textbooks on obstetrics, J. P. Greenhill, Nicholson J. Eastman and Paul Titus, met in 1949 to standardize obstetrical terms, definitions and classifications.

Engagement of the foetal head was defined as having occurred when the largest presenting diameter of the head of the baby has passed the plane of the pelvic inlet, recognizable when the most dependent portion of the skull has reached the ischia spines, the ischia being the pelvic bones. This interspinous diameter was designated as zero station. Stations are measured by centimetres of distance of the dependent portion of the skull above the spines, designated as minus station, or below the spines, designated as plus station. Thus, progress in childbirth is as follows: minus-two station, minus-one station, zero station or engagement, plus-one station, plus-two station, etc.

Forceps were defined as follows: high forceps—upon unengaged head; low forceps—when head is upon perineal floor and visible with sagittal suture in anteroposterior position; midforceps—head located between point of engagement and perineal floor, usually with incomplete rotation.

Placenta previa was redesignated by two self-explanatory terms, total and partial. Low implantation of placenta continued as the definition for all placentas implanted low but not over the internal os or encroaching on it at the time of the vaginal examination.

Toxaemia of pregnancy was classified to designate in Group I pre-eclampsia and eclampsia, in Group II chronic hypertensive vascular disease with or without acute toxaemia. Hyperemesis or excessive vomiting was removed from the category of toxaemia *per se,* although many authorities continued to believe toxaemia and hyperemesis have a similar or related cause, particularly since it had been shown that the chorionic gonadotropin level or amount of this hormone in the blood is elevated in both conditions. Acute yellow atrophy of the liver was displaced from classification as a toxic disease of pregnancy and placed in the medical category of infectious hepatitis.

Other terms clarified included breech presentations (babi born bottom first) divided into three classes: frank breec complete breech and incomplete breech (including the foot knee). A breech birth might deliver spontaneously, or by "ex traction" (entirely by the operator), or as an "assisted" breec delivery (delivered to umbilicus by maternal forces and the extracted). Premature placental separation was termed abrupti placentae, not ablatio placentae. The authors agreed also tha external measurements of the pelvic inlet were unnecessary an might properly be deleted from teaching textbooks. The autho concentrated on an understanding agreement for the sake simplification, and of standardization, especially where com monly used terms were at variance, or not definitive.

Diethylstilbestrol, the estrogenic hormone, found a mo prominent place in the armamentarium of obstetricians. An a ticle by O. Watkins Smith in late 1948 had claimed its efficac in certain complications of pregnancy and presented a stan ardized dosage routine. The conditions apparently benefited b stilbestrol are threatened abortion, habitual abortion, essenti hypertension and diabetes mellitus. Its use for these conditio became quite widespread during 1949, but more time was nece sary for a full appraisal.

Veratrum viride was revived in some clinics for the treatme of toxaemia or hypertensive disease in the third trimester pregnancy. Results as compared to therapy with hypertonic gl cose and magnesium sulphate did not seem to represent an i provement over the latter.

Diagnosis of Rh-factor blood type in expectant mothers b came almost a universal procedure. Those Rh negative mul paras married to Rh positive husbands were now carefully fo lowed by blood titration levels throughout pregnancy, and whe rise in titre develops, foetal erythroblastosis is developing, wi some exceptions. An effective treatment was sought for perso with such a rise in titre. The extract from red blood cells, ha ten, reported in 1948 continued to bring apparently encouragi therapeutic results. Not only was hapten utilized for treati pregnant women who show rising titre, but it was used also treating erythroblastotic infants. Foetal mortality of erythr blastosis was lowered by induction of labour earlier in mothe with rise in titre and by massive transfusion of the newbo infants as needed.

Haemorrhage retained first place as the cause of matern death. Trends were evident toward more conservative treatme for both placenta previa and placenta abruptio.

Dramamine came as a new therapeutic measure against t ordinary nausea and vomiting of pregnancy. This antihistami brought such good results in motion sickness that experime were conducted in pregnant women. Relief of symptoms curred in 72% of the cases.

Various clinics continued to report additional uses for an biotics. The use of prophylactic doses of penicillin in postpart patients was reported favourably from several sources. Su drugs in a cream base were found beneficial for certain types vaginal discharge, and were found an excellent medium moistening vaginal packs for use following vaginal plastic erations.

Encouraging progress was made both in diagnosis and tre ment of pelvic malignant diseases. Education of the pu seemed to be influencing more and more women to report their physicians for routine examinations and for early investi tion of abnormal pelvic symptoms. The new practice of cyt ogy, or examination of secretions for cast-off tumour cells, ori nated by George N. Papanicolaou and Herbert F. Traut, found its important place in the early detection of canc Vaginal cytological smears proved to be a valuable adjunct ther methods of diagnosis of uterine cancer, particularly early sions. It was generally agreed that vaginal smears should be sed as an adjunct to the diagnosis of uterine cancer but should ot replace clinical and pathological examinations.

In cancer of the cervix, clinical "stage one" tumours were eing treated with radium followed by wide excision, and some linicians felt even "stage two" lesions might thus be successully treated. "Stages three" and "four" still fell into the status f inoperable lesions. One clinic, however, treated even far adanced lesions by "massive" or extensive surgery including renoval of all the pelvic organs. Modern anaesthesia plus reliable nd available blood transfusion had made this radical surgical pproach possible without former high mortality rates.

(P. T.)

laiti. The Republic of Haiti occupies the western third of the West Indian island of Hispaniola, the rest of which contitutes the Dominican Republic. Haiti's population, officially stimated in excess of 3,500,000 (1949), occupies an area of 0,748 sq.mi., with a density considerably above 300 to the q.mi. The Haitian population, speaking French and local atois, is almost wholly of African ancestry; most of the 5% ot wholly of African blood are predominantly African. The apital, Port-au-Prince, founded in 1750, has a population of nore than 125,000; the provincial centres of major importance re Cap Haïtien (15,000), Gonaïves (20,000) and Les Cayes 15,000).

History.—Pres. Dumarsais Estimé remained in power hroughout the year, notwithstanding disaffection among some nilitary officers, student disorders and efforts to bring about a eneral strike, which led to vigorous measures in mid-November. n amnesty, however, was proclaimed on Nov. 30. Friendly elations with Cuba were stressed, while those with the Dominian Republic became more tense in the closing months of 1949.

The economy is primarily agricultural, producing sugar, cofee, sisal, fine timber and vegetable oils. The population is venly dispersed. In 1949, systematic efforts were made to inroduce more advanced agricultural methods. Exports rose harply (in value) during the summer, when normally they deline, because of the brisk demand for coffee. An important talian mission was received in August. On Dec. 24, the trade greement with the United States was put into effect, the first f the bilateral agreements concluded by the United States nder the General Agreement of Annecy. This arrangement rovided for a reduction in U.S. tariff rates on Haitian rum and ther Haitian products. A new issue of metallic currency was ut in circulation.

On Dec. 8, the president opened an international fair in vhich the United States, France and other countries particiated. Later that month, the canals irrigating about 30,000 ac. n the valley of the Artibonite river were opened. (C. Me.)

Education.—Haiti had in 1949 about 1,060 primary schools attended y 87,000 pupils and 6 national *lycées* and 15 private secondary schools ttended by about 10,000 pupils. Higher education was available at the ational law and medicine schools, the Central School of Agriculture and the government-controlled University of Haiti. About 15% of the 1948–49 budget was earmarked for education.

Finance.—The monetary unit is the gourde, valued in 1949 at 20 cents U.S. currency, official rate. The budget for the fiscal year 1950 (Oct. 1, 1949-Sept. 30, 1950) balanced government revenue and expenditure at $14,643,270. The net public debt on Sept. 30, 1948, was $8,851,540. Private deposits in the two banks on Sept. 30, 1948, were about $8,000,000.

Trade and Communications.—Exports in the trade year 1948 (Oct. 1, 1947-Sept. 30, 1948) were $30,884,927; imports were $32,208,543. The chief exports were coffee (34%), sisal (26%), bananas (9%) and sugar (7%); leading imports were cotton and manufactures (26%), food and beverages (19%) and machinery, vehicles and apparatus (12%). The U.S. supplied 82% of the imports and absorbed 60% of the exports.

On Jan. 1, 1949, there were about 2,000 mi. of improved roads, of which only about 235 mi. were surfaced. There were 88 mi. of public railway and 75 mi. of industrial trackage operated by the Haitian-American Sugar company. Registered motor vehicles totalled 3,880 on Jan. 1, 1949. International air service was supplied by Pan American World Airways; the Haitian air force furnished internal air transport. In 1949 there were five small commercial broadcasting stations and about 4,900 telephones.

Agriculture.—Agriculture is the principal economic activity, but only about one-third of the total land area is under cultivation. Coffee is the chief crop; 483,509 bags of 132 lb. each were exported in the trade year 1948–49. Sisal, the second crop, had grown rapidly in importance; 28,740 short tons were exported in 1947–48. In 1948, 46,623 short tons of sugar and 2,413,123 gal. of molasses were produced. Livestock (1945) included 200,250 cattle, 13,800 sheep and 1,010,000 goats.

Manufactures.—Manufacturing is on a small scale, mainly for domestic consumption. There is one large modern sugar mill near Port-au-Prince; two smaller mills were reported to be under construction in 1949. A modern textile mill makes denim and gray goods.

Mineral Production.—Minerals are of little importance. There are said to be undeveloped deposits of copper, silver, gold, iron, tin, antimony, sulphur, coal, nickel and gypsum.

Hammer Throw: *see* Track and Field Sports.

Handball. For the first time since 1934, the annual senior national A.A.U. four-wall championships were held in New York city, at the New York Athletic club. For the first time play was held beyond the customary week, starting April 30 and continuing daily through May 7. Defending champion Gus Lewis was on hand but the ultimate winner was Victor Hershkowitz of Brooklyn, N.Y., who became the first four-wall champion also to have held (in 1948) the one-wall singles title. The doubles were won by Gus Lewis and Sam Haber, representing the Town club of Chicago, Ill. Other finalists are listed below:

National Four-Wall Rankings for 1949

Singles	Doubles
1. V. Hershkowitz, Brooklyn, N.Y.	1. Gus Lewis and Sam Haber, Chicago, Ill.
2. Walter Plekan, Buffalo, N.Y.	2. Henry Herz and Marshall Lehrer, New York, N.Y.
3. Jack Emas, Philadelphia, Pa.	3. Frank Coyle and William Baier, Chicago, Ill.

National One-Wall Rankings for 1949

Singles	Doubles
1. M. Orenstein, Brooklyn, N.Y.	1. M. Orenstein and G. Baskin, Brooklyn, N.Y.
2. M. Alexander, Brooklyn, N.Y.	2. V. Hershkowitz and A. Wolf, Brooklyn, N.Y.
3. uncontested	3. M. Alexander and A. Schneider, Brooklyn, N.Y.

(Fr. Ro.)

Harness Racing: *see* Horse Racing.

Harriman, William Averell (1891–), U.S. government official, was born on Nov. 15, and graduated from Yale university in 1913. He became a vice-president of the Union Pacific Railroad company in 1915 and in 1932 was named chairman of its board of directors. He was also a director of the Illinois Central Railroad company after 1915, becoming chairman of its executive committee in 1931. During World War I he organized a shipbuilding and operating company, and in 1920 launched W. A. Harriman & Co., investment bankers, a firm that became Brown Brothers Harriman & Co. in 1931. He served as administrative officer in the National Recovery administration, and was a member of the business advisory council of the department of commerce from its establishment in 1933. During 1940 and 1941 he served with the National Defense Advisory commission and its successor, the Office of Production Management. In March 1941 Pres. F. D. Roosevelt named Harriman lend-lease expediter to Great Britain and later to the U.S.S.R. as well; he was U.S. ambassador to the U.S.S.R. from Oct. 1943 to Feb. 1946, and he attended every major allied conference during World War II. On April 1, 1946, Pres. Harry S. Truman named him ambassador to Great Britain and on Oct. 7, 1946, secretary of commerce. In April 1948 he was named special U.S. representative abroad, with the rank of ambassador extraordinary and plenipotentiary, to assist in supervising U.S. recovery aid to western Europe. In Feb. 1949 he told the house foreign affairs committee that the European Recovery plan had arrested the "spread of tyranny" in Europe. At the end of June he was U.S. representative at the session of the council of the Organization for European Economic Cooperation in Paris that settled amicably the first serious U.S.-British dispute over administration of the aid-to-Europe plan by agreeing to a program for financing intra-European trade.

Hawaii.

The territory of Hawaii consists of a group of eight large islands and numerous islets in the Pacific ocean between latitudes 18° 55′ and 22° 15′ N. and between 154° 50′ and 160° 30′ W. longitude. The total area of the group is 6,433 mi. From southeast to northwest, the islands are Hawaii, Kahoolawe, Maui, Lanai, Molokai, Oahu, Kauai and Niihau. In addition, stretching northwestward beyond Niihau more than 1,100 mi. is an archipelago of rocks, reefs and shoals which includes Midway (longitude 177° 22′ W.). Likewise, 960 mi. S. of Honolulu and included as part of the city and county of Honolulu lies Palmyra, a coral atoll consisting of 55 islets, 5 mi. long and 2½ mi. wide. The largest island in the territory is Hawaii, with an area of 4,021 sq.mi. The capital of the territory is Honolulu, situated on the island of Oahu. Honolulu is a modern city with a population (1949 est.) of 267,755, exclusive of military and naval personnel.

The population of the territory grew from 423,330 in 1940 to 530,891 in 1949. The largest single racial group is the Japanese, which constitutes 33.8% of the total. The second largest is the Caucasian with 30.8% of the total, and the Hawaiians and part Hawaiians are third with 14%. Other important groups in origin are Filipino, Chinese, Puerto Rican and Korean.

Ingram M. Stainback became governor of Hawaii on Aug. 24, 1942, and was reappointed July 13, 1946. Joseph R. Farrington was in 1949 serving his fourth term of two years each as Hawaii's delegate to the U.S. congress.

History.—Hawaii has been a territory of the United States since 1900. Since that date the territory has made repeated petitions to congress for statehood and in a plebiscite in 1940 its electors voted in favour of statehood by a majority of more than two to one. A statehood convention was to be held in Honolulu in April 1950, with delegates from all of the major islands attending. The constitution drafted at this convention would be submitted to the territorial legislature for approval and then sent on to congress with the request that it be approved by that body.

Banking and Finance.—Bank clearings in 1948 amounted to $1,785,356,736. The volume of business transacted was $1,246,884,485.21, an increase of $45,800,766.76 over 1947. Total territorial tax collections on business and otherwise amounted to $64,757,523, compared with $54,240,000 in 1947. The net bonded indebtedness was reduced to $7,204,000. The net assessed valuation of real property was $299,188,296. Internal revenue collections for the fiscal year ending June 30, 1948, totalled $108,177,886.66, compared with $107,651,471 in 1947.

Trade and Commerce.—Hawaii purchased from the mainland United States in 1948 merchandise valued at approximately $350,000,000 and shipped to the mainland products valued at approximately $182,000,000.

Production.—Hawaii's principal crops are sugar, pineapple and coffee. For the fiscal year 1948–49 a total of 835,107 tons of sugar valued at $101,300,000 were produced; 20,322,775 cases of pineapple and juice valued at $75,000,000; 6,000,000 lb. of (green) coffee valued at $1,670,000. In addition to export crops, field crops and miscellaneous fruits, vegetables and nuts valued at $9,184,000 were marketed locally. Livestock and poultry products had a value of $21,785,000. The total catc of fish during the year amounted to 7,000 tons, valued at $4,300,000

(I. M. S.)

LONGSHOREMEN unloading their first ship at Honolulu, T.H., after seizur of the strike-bound docks under a territorial law passed Aug. 6, 1949. Th 159-day strike by members of the C.I.O. Longshoremen's and Warehousemen' union was settled Oct. 6 for a 14-cent hourly wage raise plus another 7 cent after March 1, 1950

Hay.

The 1949 U.S. crop of all kinds of hay amounted to 99,305,000 tons, only slightly less than the 99,471,000 ton of 1948 and the average for the decade of 99,539,000 tons. Th 72,835,000 ac. of harvested hay represented a slight decreas compared with either 1948 or the decade 1938–47. Averag yields of 1.36 ton per acre approximated recent averages. Except for rain damage to some of the early cuttings, particularl in the midwest, quality was good. Wisconsin, producing 6,288,000 tons, was the leading state.

An alfalfa hay crop of 38,546,000 tons set a new record a did the 8,571,000 tons of lespedeza; both were from record-hig acreages. Clover-timothy hay was the smallest crop in eigh years with 24,657,000 tons, compared with 29,169,000 tons i 1948. The wild hay crop amounted to 12,296,000 tons with Nebraska and the Dakotas the major producing area.

New methods of harvest and storage continued to be mor widely used, particularly the field chopper and grass ensilag The average farm sale price of the 1949 hay crop, all type was estimated at $21.80 per ton baled, compared with $23.6 for the 1948 crop. Though the slightly smaller crop plus a carry over of 15,151,000 tons gave a total supply of 114,270,000 ton compared with 114,974,000 tons in 1948, the tonnage per anima unit was 1.67 compared with 1.68 in 1948. No scarcity was anticipated.

Hayseed.—The 1949 crop of the six major hayseeds (alfalf red clover, alsike clover, sweet clover, lespedeza and timoth totalled 527,700,000 lb., about 8% or 9% above 1948 and th 10-yr. average, but nevertheless appeared likely to be insufficien for 1950 sowing in view of the probable government reque for retirement of 20,000,000 or more acres from tilled crop to grass. The alfalfa seed crop set a new record of 1,895,7 bu. and the lespedeza seed crop was the second largest c record, but the red clover seed crop of 1,262,900 bu. was muc aller than the 1,788,900 bu. of 1948 or the decade average of 54,210 bu. Prices appeared likely to be above or below the her high 1948 level, depending on the scarcity of the par- ular seed. (*See* also SOYBEANS.) (J. K. R.)

eart and Heart Diseases. The year 1949 was notable for one of the most funda- ntal advances in medicine—the emergence of steroid chem- ry from the laboratory into clinical research. In its broadest plications this step made possible basic investigation in the lds of degenerative diseases including those of the circulation, ncer, metabolic disorders and even acute infections. The role the adrenal corticoids in dramatically affecting the course of eumatoid arthritis was reported by P. S. Hench and his asso- tes from the Mayo clinic, Rochester, Minn., and a further port of these investigators showed a beneficial effect in rheu- tic fever with carditis. The preparations used were Com- und E (officially named cortisone—17-hydroxy-11-dehydro- rticosterone), and the pituitary adrenocorticotropic hormone CTH). It was shown that similar benefit could be attained disseminated lupus erythematosus and other diseases. hether or not these hormones merely produce remissions in eases characterized by spontaneous cycles was not yet known t they, or related steroids, may furnish important preventive erapy of rheumatic heart disease when administered early in e course of rheumatic fever.

The role of the adrenal and of adrenal tumours (phaeo- romocytoma) in hypertension was actively studied. Drugs enzodioxane and dibenamine) which temporarily depress the ood pressure were found useful in the diagnosis of such tu- ours by blocking the effect of excess epinephrine produced by e tumour. The artificial kidney, through which it was possible perfuse a patient's blood outside the body, permitted direct idy of humoural pressor mechanisms in hypertension. Purified ctions of veratrum alkaloids (protoveratrine) were shown to ve remarkable but temporary hypotensive effects in patients th high blood pressure.

The mechanisms involved in coronary atherosclerosis were in- stigated in many laboratories. A striking incidence of pre- ture coronary disease was demonstrated in families in whom percholesteraemia was an inherited trait. In the treatment of ute myocardial infarction, loss of blood supply to a portion heart muscle through blocking of a coronary blood vessel by clot, controlled studies showed the advisability of the use of ticoagulants (dicoumarol and heparin) in preventing thrombo- bolic complications.

Surgery of the heart was extended to include joining together pulmonary and azygos veins in patients with narrowing of e mitral valve without pronounced cardiac enlargement or in- eased peripheral venous pressure, but with attacks of water gging of the lung. Plastic operations for the repair of nar- wed mitral valves were attempted with some success by vari- s surgeons. An "artificial heart" or cardiopulmonary machine s described by V. O. Björk from Crafoord's laboratory in eden permitting bloodless operations on the heart in animals, d experimental repair of cardiac valves by venous and peri- rdial grafts was reported by J. Y. Templeton III and J. H. bbon, Jr.

The antibiotics aureomycin and streptomycin were found ef- ctive in certain cases of bacterial endocarditis. In the treat- ent of congestive heart failure, Thiomerin, a mercurial diu- ic which could be given subcutaneously, was introduced; cationic exchange resins added to diets were successful in removing ingested sodium and aiding diuresis; lithium salts as seasoning substitutes for sodium chloride were found dangerous.

Radioactive isotopes played an increasing part in cardiovascular research. Radioactive iodine was used in the treatment of thyrotoxicosis, and in depressing the basal metabolic rate in cases of angina pectoris and congestive failure. (*See* also CHEMOTHERAPY; MEDICINE; VITAMINS.)

Hess, Walter Rudolf (1881–), Swiss eye and brain specialist, was born at Frauenfeld, Switz., March 17. He was educated at the universities of Lausanne, Berne, Kiel, Berlin and Zürich and obtained his doctorate of medicine in 1906. From 1917 he was director of the Institute of Physiology at Zürich university and from 1931 to 1936 was also director of the scientific station, Jungfraujoch, Switz. In Aug. 1938 he presided over the 16th International Congress of Physiology which was held that year in Zürich. On Oct. 27, 1949, it was announced he had been awarded, jointly with Prof. A. E. Moniz (*q.v.*), the 1949 Nobel prize for physiology and medicine for his discovery of the functional organization of the middle brain in co-ordinating the activity of the internal organs.

Heuss, Theodor (1884–), German public official, was born at Brackenheim, Württemberg, Jan. 31. He studied at the universities of Munich and Berlin and in 1905 obtained his doctor's degree in political science at Munich. He joined the editorial board of Friedrich Naumann's Liberal weekly *Hilfe* (1905–12) and later was the editor of the *Neckarzeitung* at Heilbronn (1912–18). In 1920 he was appointed as lecturer at the newly founded democratic German Political high school in Berlin. He joined the Democratic party and was elected a member of the *reichstag* in 1924. He failed at the election of 1928 but was re-elected in 1930, twice in 1932 and on March 5, 1933. With all other members of the *reichstag*, Social Democrats excepted, he voted in favour of giving Hitler full powers on March 23, 1933. Soon afterward his 20 books (including *Hitler's Way*, published in 1932) were among those which were publicly burned in Berlin. After the dissolution of the *reichstag* in Oct. 1933 Heuss went to Heidelberg where he edited *Hilfe* until its suppression in 1936. After the capitulation of Germany in 1945 he obtained from the U.S. military government the license to publish the *Rhein-Neckar Zeitung* in Heidelberg. In 1948 he was elected chairman of the Free Democratic party and he was a member of the Parliamentary council in Bonn (Sept. 1, 1948–May 23, 1949) that drew up a constitution for western Germany. On Sept. 12, 1949, he was elected first federal president of the German federal republic.

Highways: *see* ROADS AND HIGHWAYS.

Hirohito (1901–), emperor of Japan, was born on April 29, the son of Emperor Yoshihito. For his early career see *Encyclopædia Britannica*. Hirohito was permitted by the Allies to retain his throne after World War II, but he was to be subject to the authority of the supreme Allied commander in Japan. In 1947 he was absolved of war guilt by Allied investigation.

In Jan. 1949 it was disclosed that the U.S. joint chiefs of staff had given Gen. Douglas MacArthur secret orders that Emperor Hirohito should not be prosecuted on any war crime charges. It was also disclosed that all of Japan's World War II enemies, including the U.S.S.R., had agreed in 1945 to exempt Hirohito in order to facilitate Japan's surrender and occupation. However, Sir William Webb of Australia, who presided at the Japanese war crimes trials, asserted that Hirohito should be tried. In Sept. 1949 it was disclosed that Hirohito had written a book about one of his hobbies, the study of deep-sea life; the volume was reported to be on the subject of sea horses.

Hoffman, Paul Gray (1891–), U.S. industrialist and Economic Cooperation administrator, was born in Chicago, Ill., April 26 and studied at the University of Chicago. In 1911 he became a salesman for a Studebaker dealer in Los Angeles, Calif., becoming first sales manager then district branch manager for Studebaker in Los Angeles by 1917. After serving in World War I he purchased the Studebaker retail branch in Los Angeles, and in 1925 he went to South Bend, Ind., as vice-president of the company. After the company went into receivership in 1933 he and Harold Vance, another vice-president, as receivers successfully reorganized it and he served as Studebaker president from 1935 to 1948.

An organizer of the Committee for Economic Development, he served as chairman of its board of trustees from 1942 to 1948. Pres. Harry S. Truman appointed him Economic Cooperation administrator April 5, 1948, to supervise the European Recovery program. From the beginning Hoffman urged that the nations of western Europe reorganize their trade before the E.R.P. cutoff date in 1952, and he appeared before congress to urge funds for the program. In the interest of free trade he frankly opposed the British-Argentine bilateral trade agreement in 1949, though conceding Britain had no alternative. He said Britain's economic solution was to triple exports to the U.S. by more efficient production and livelier merchandising. In November he warned western European nations that they must move more swiftly toward "integration of the Western European economy," mass production, low prices, free trade and nondependence upon the United States.

Holland, Sidney George (1893–), New Zealand prime minister, was born at Greenlade, New Zealand, Oct. 18. He was educated at Christchurch West high school and served in World War I. A businessman and farmer, he successfully contested his father's seat of Christchurch north in the house of representatives in 1935. He was re-elected for the same constituency in the general elections of 1938 and 1943, and for Fendalton in 1946 and 1949. A member of the National (conservative) party, he was elected its leader and also leader of the opposition on Nov. 26, 1940, in succession to Adam Hamilton, who was a member of the war cabinet. In the general election on Nov. 30, 1949, the National party obtained 46 seats in a house of 80 members and thus brought to an end the Labour party's 14-year period of office. The governor general, Sir Bernard Freyberg, invited Holland to form a government and he was sworn in on Dec. 13. He took the portfolio of minister of finance in addition to t premiership, and declared that close and enduring relationshi with Britain and the other countries of the British empire wou be one of his governing principles.

Home Economics. Membership in the American Hom Economics association increased in a sections in 1949. Professional memberships numbered 19,38 about 1,608 over 1948; affiliated college clubs increased in num ber to 407 and homemakers' groups to 47. The program f the year, adopted at the 1949 national meeting included:

1. Developing ways and means of interpreting democratic family li to people of the U.S. and other lands and increasing efforts to unde stand and appreciate cultural differences.
2. Combining forces and co-operating actively with other organizatio engaged in the study and improvement of family life.
3. Emphasizing the necessity for training boys and girls, men a women for homemaking and for professions in home economics throu effective guidance.
4. Recognizing the demands of a buyer's market facing the fami and stressing wise buying.
5. Supporting legislation to improve family living on local, state, n tional and international levels.
6. Encouraging investigation and research in all areas of home ec nomics, particularly in the study of relationships in homes and famili

A delegation of home economists represented the associati at the 7th International Congress of Home Economics in Stoc holm, Swed., in August. During the year the Korean, Gree and Philippine home economics associations were affiliated wi the American association.

A five-year study by the committee on criteria for evaluati college programs of home economics culminated in the public tion of a book, *Home Economics in Higher Education.*

Bureau of Human Nutrition and Home Economics.—T bureau continued its research in food and nutrition, textiles a clothing, and housing and household equipment. The first r ports of a nation-wide economics study of urban diets we published, and a study of rural diets was also reported. A tw year study of the breakfast meal was completed. Research developing chemical and microbiological methods for the qua titative determination of the ten essential amino acids w condensed for easy reference in a new technical publication. textiles, the bureau investigated the physical properties of plat fabrics—a knit fabric construction with two yarns, one on t face, one on the back of the fabric. Investigations of operati characteristics and performance of home freezers yielded help data for refrigerating engineers and provided facts for a pu cation on the selection and use of freezers.

Home Economics Extension Service.—As a result of t program, more than 1,500,000 women reported improving fa ily diets, through better selection, preparation and preservati of food. In addition, 15,252 schools were assisted in establi ing and maintaining hot lunches. Other women received h with housing problems. About 210,000 women and 26,000 m participated in child development and family relations p grams. Through 4-H club programs, the service reached 1,0 000 girls. Approximately 3,000 white and 375 Negro ho economists directed these county and community progra with help from 520,000 local leaders.

Public Schools and Colleges.—Most junior and senior h schools, except those with the smallest enrolment, were empl ing home economics teachers by 1949. About 1,750,000 g and boys were enrolled in home economics in approximat 19,000 high schools. Approximately half the high schools ceived federal funds for part payment of home econom teachers' salaries. Adult classes increased 30% over the p

us year; approximately 575,000 adults in cities, towns and
al communities studied various phases of home economics.
rolment in colleges offering home economics degrees showed
e change, but there was some increase in the number of
ior colleges teaching home economics.

Two national organizations of home economics pupils, the
ure Homemakers of America and the New Homemakers of
erica recorded total membership of approximately 300,000.

The home economics education service worked with state and
supervisors of home economics, teacher trainers and home
nomics personnel in teacher training institutions on planning,
reloping and evaluating home economics programs in schools
l colleges.

nduras. A republic of Central America, Honduras is
bounded by Guatemala, El Salvador and Nicara-
. Area: 59,160 sq.mi. Pop. (1945 census), 1,200,542, includ-
approximately 35,000 tribal Indians. As of June 30, 1949,
population was (off. est.) 1,325,936. The capital is Teguci-
pa (pop. 62,263 in 1949). Other principal cities are Co-
yaguela (16,907), La Ceiba (13,456); Puerto Cortés (8,837);
Pedro Sula (24,425) and Tela (11,544). Religion: Roman
tholic. Language: Spanish. President in 1949: Juan Manuel
lvez.

istory.—The year 1949 opened with the country's first new
sident since 1933, when Juan Manuel Gálvez took over the
vernment. In his inaugural address Jan. 1, President Gálvez
newed his campaign pledges to support agriculture, the elec-
ication program, the tourist trade, improvement of educa-
n, road-building, and hemispheric co-operation.

Honduras' first national income tax, with rates graduated up
15%, was enacted by the congress in a special session in
tober, and proposals to set up a central bank were bound
r to the regular session in December. In the face of consid-
ble popular opposition the government in November ap-
ved a contract with the Tela Railroad Co. (a subsidiary of
United Fruit Co.) for a 25-year concession for the develop-
nt of cacao, palm oil and abacá-fibre plantations in Honduras.
Plans were announced by the Standard Fruit and Steamship
for the reopening of banana plantations in the Trujillo and
erto Castilla districts. Work was begun during the summer
a $200,000 project to pipe 26,000,000 gal. of water daily to
gucigalpa from a distance of 11 mi.

ducation.—In 1949 it was announced that there were 1,700 primary
ools with 83,619 students, 27 secondary schools with 1,340, 24 normal
ools with 1,541 and 14 commercial schools with 1,073 students. The
tional university enrolled approximately 500 and the Pan American
ool of Agriculture, 171. The national budget in 1948 allowed 3,172,-
.12 lempiras for public education.

inance.—The monetary unit is the lempira, officially valued at 49.02 cents U.S. on Nov. 15, 1949. The 1948–49 budget was increased from 19,813,904 lempiras to 21,488,662 lempiras, and the 1949–50 budget provided for expenditures of 20,244,162 lempiras. On Dec. 31, 1948, total money in circulation amounted to 16,738,573 lempiras. At the same time the foreign debt stood at 1,762,516 lempiras. There were two banks with six branches and capital, resources and deposits totaling approximately 27,000,000 lempiras.

Trade and Resources.—Exports during the fiscal year 1947–48 amounted to $19,128,342.44 U.S.; imports, $34,905,933.08. The United States supplied 78.8% of the imports. The chief exports were: bananas ($7,278,000), lumber and logs ($2,642,500), unrefined silver ($1,864,700), coffee ($1,223,000), coconuts ($917,000), unrefined gold ($424,200), hogs ($357,800), rice ($236,300), corn ($212,300), plantains ($112,800), nonessential vegetable oils ($58,400) and refined gold ($8,500). The total value of agricultural production was estimated in 1948 at 20,062,000 lempiras. Cattle of all classes numbered 2,720 head. The total value of mineral products was approximately 4,000,000 lempiras, about three-fourths silver and one-fourth gold.

Communications.—In 1947 the banana area of the north was served by 922 mi. of railroad; the main towns by 1,201 mi. of highway and 63 airfields. Public telephone lines measured 2,646 mi. There were six radio broadcasting stations in 1948. At the end of the same year there were 959 automobiles, 976 trucks and 26 buses registered.

Hong Kong. British colony on coast of China consisting of the colony (Hong Kong Island, the ceded territory of Kowloon and Stonecutters' Island) and the New Territories (the remainder of the Kowloon peninsula and numerous islands) leased from China in 1898 for 99 years. Area: colony 36.5 sq.mi., New Territories 355 sq.mi. Pop. (mid-1948 est.): 1,800,000. Governor, 1949: Sir Alexander Grantham.

History.—Proposals for the institution of a municipal council partly chosen by popular election and for the reduction of the official membership of the legislative council to seven, giving an unofficial majority of one, which had been approved and were expected to come into effect in 1948, were, in fact, postponed. In 1949 new proposals were put forward with the unanimous support of the unofficial members of the legislative council; they involved the deferment of the municipal-council proposals and the reconstitution of the legislative council on broader lines and with some popularly elected members (the numbers suggested were 11 unofficial and 6 official members).

But the position in Hong Kong during the year was dominated by the sudden successes of the Communist regime in China. British military reinforcements were dispatched as a precaution against possible incidents. With the capture of Canton by the Communists, the operation of the Canton-Kowloon railway was temporarily suspended.

The nature and scale of the colony's trade made difficult the application of the strict exchange restrictions in force elsewhere in the sterling area; and in April the government banned all dealings in and the possession of gold without the express permission of the governor as, in spite of rigid import and export regulations, there had been an active gold market with prices well above those laid down by the International Monetary fund.

The long-awaited report by Sir Leslie Patrick Abercrombie, the town-planning expert who visited Hong Kong in Nov. 1947, was released in September. He recommended, *inter alia,* a tunnel between the island and the mainland, a realignment of the railway and the moving of the armed forces services from their quarters in the centre of the city.

Finance and Trade.—The unit of currency is the Hong Kong dollar, valued, as of Nov. 15, 1949, at 17.5 cents U.S. Budget (1948, in Hong Kong dollars): revenue $ 136,093,240; expenditure $ 113,960,826. Foreign trade (1948): imports $ 2,077,538,615; exports $ 1,582,739,710. (Jo. A. HN.)

Hoover, Herbert Clark (1874–), the 31st president of the United States (1929–33), was born on Aug. 10 in West Branch, Ia. For his early career see *Encyclopædia Britannica.*

In 1947 President Harry S. Truman chose Hoover to head the bipartisan Commission on Organization of the Executive Branch of the Government, which was to survey the operations of the federal government and to recommend ways of simplifying its structure. Hoover said that this would be his last public service. When the final session of the 12-man commission was held in 1949, after 19 months of hearings and investigations, the work was hailed as the most exhaustive study of the U.S. government ever made. Its chief recommendations involved ways of clarifying the chain of command in executive offices of the government, to assure adequate control by the president, and methods of improving the executive machinery through better delegation of authority, so as to free top executives of the government for policy, rather than detail, matters. Hoover suggested that acceptance of the commission's recommendations would save taxpayers $3,000,000,000 a year. Legislation embracing some of the commission's recommendations was introduced into congress, and in other instances executive action was taken to implement its findings.

Hormones: *see* ENDOCRINOLOGY.

Horse Racing.

The keen rivalry between the Greentree stable's three-year-old colt, Capot, and the Calumet Farm's Coaltown made the 1949 campaign on U.S. turf a memorable one although attendance and parimutuel figures continued to drop for the third straight year. Despite the downward trend in spending at the nation's tracks, the season proved a financial success and as the year ended official figures were expected to reveal betting that touched $1,400,000,000 and attendance close to 23,000,000.

It was generally agreed that Capot was the horse of the year, but it took triumphs over Coaltown in the Sysonby Mile and the Pimlico Special to clinch the honour for the Greentree colour-bearer. Although rated the nation's top sprinter, Capot won laurels in the three-year-old ranks by only a slight margin, being pressed by Calumet's fleet Ponder through the season.

Capot, the son of Menow, won 6 of his 16 starts and $238,335, annexing the Preakness and the Belmont Stakes to swell his earnings. Capot, however, had little if anything on Ponder, for that Calumet Farm racer scored stirring victories over Capot in the Kentucky Derby, the Peter Pan Stakes and the Arlington Classic. The edge went to Capot only after his 13-length triumph in the Pimlico Special, a race in which Ponder was withdrawn. Ponder earned a total of $321,825 for the year.

Coaltown gained undisputed ranking as the leading handicap division horse of 1949. Coaltown looked almost unbeatable for most of the long campaign, winning 12 of his 15 starts and earning purses that totalled $276,125 in addition to breaking sundry records. Coaltown set a new world mile mark of 1 min. 34 sec. for his most notable clocking of the arduous campaign. This time, coming in the Whirlaway Stakes at Washington park, Homewood, Ill., on Aug. 20, shattered the former standard around turns set at 1 min. 34$\frac{2}{5}$ sec. by the great Equipoise 17 yr. before and equalled by Prevaricator in 1948.

The Kentucky Derby at Louisville, Ky., on May 7 furnished one of the season's major surprises when Ponder, after getting away from the barrier slowly, worked his way through the field to lead home 14 rivals. Ridden by Steve Brooks, the 16 to 1 shot triumphed by three lengths, with Capot second and Isador Bieber's Palestinian third. F. W. Hooper's heavily favoured Olympia crossed the finish line sixth. The 75th jubilee running of the U.S. blue-ribbon classic proved the last Derby for Col. Matt J. Winn, who had seen every running of the colourful event since its inception in 1875. He died in October.

A stirring stretch duel in the rain marked the rich Preakness Stakes at Pimlico in Baltimore, Md., on May 14 when Capot, at odds of 5 to 2, was forced to a new track record to win by a head from a fast-closing Palestinian. With Jockey Ted Atkinson up, Capot raced the mile and three-sixteenths in 1 min. 56 sec.

Capot and Atkinson then triumphed in the Belmont Stakes at Belmont park on June 11 as Ponder, the 4 to 5 favourite, trailed by only a half length. Palestinian grabbed the show money, being another half length back.

Despite Coaltown's sparkling 1 min. 34 sec. world mile record in the Whirlaway Stakes, and despite the fact that he twice ran under the old mark and once equalled the world standard for a mile and a quarter, he proved no match for Capot in the Sysonby Mile and the Pimlico Special, both of which the Greentree racer easily won.

Ponder's earnings of $321,825 made him the year's leading money winner in U.S. racing. Capot, Ponder, Palestinian and Olympia were the best of a fine crop of three-year-old colts and Calumet's Wistful and Two Lea led the three-year-old fillies. Hill Prince, Guillotine and Middleground shared the big events for two-year-old colts. The King Ranch's Hopeful Stakes winner Middleground started off as the outstanding two-year-old colt, but was retired after the Hopeful; thereafter C. T. Chenery's Hill Prince forged to the front ranks. Then Greentree's Guillotine carried off the rosette in the Futurity, the richest and most coveted prize for two-year-olds, to gain a place with the year's best.

Alfred Vanderbilt's Bed o' Roses paced the two-year-old fillies, closing the season with a brilliant sweep of the east's richest events for fillies, the Matron, Selima, Marguerite and Demoiselle Stakes to bring her earnings for the campaign to $199,200.

The Calumet Farm's string of stars again earned more than $1,000,000 in purses to lead all rival stables, Willie Molter was tops among the trainers on the basis of the most winners saddled and young Gordon Glisson was generally acknowledged as the outstanding jockey of the campaign.

Harness racing also enjoyed a successful season, with crowds keeping the turnstiles humming and the trotters and pacers offering the keenest type of competition on an ever-growing program. The richest purse was the $69,791 Hambletonian Stakes won by Miss Tilly, a fast trotter belonging to Charles Phelli of Greenwich, Conn. Tilly, with Fred Egan at the reins, won this blue-ribbon classic of harness racing at Goshen, N.Y., on Aug. 10 in two straight heats.

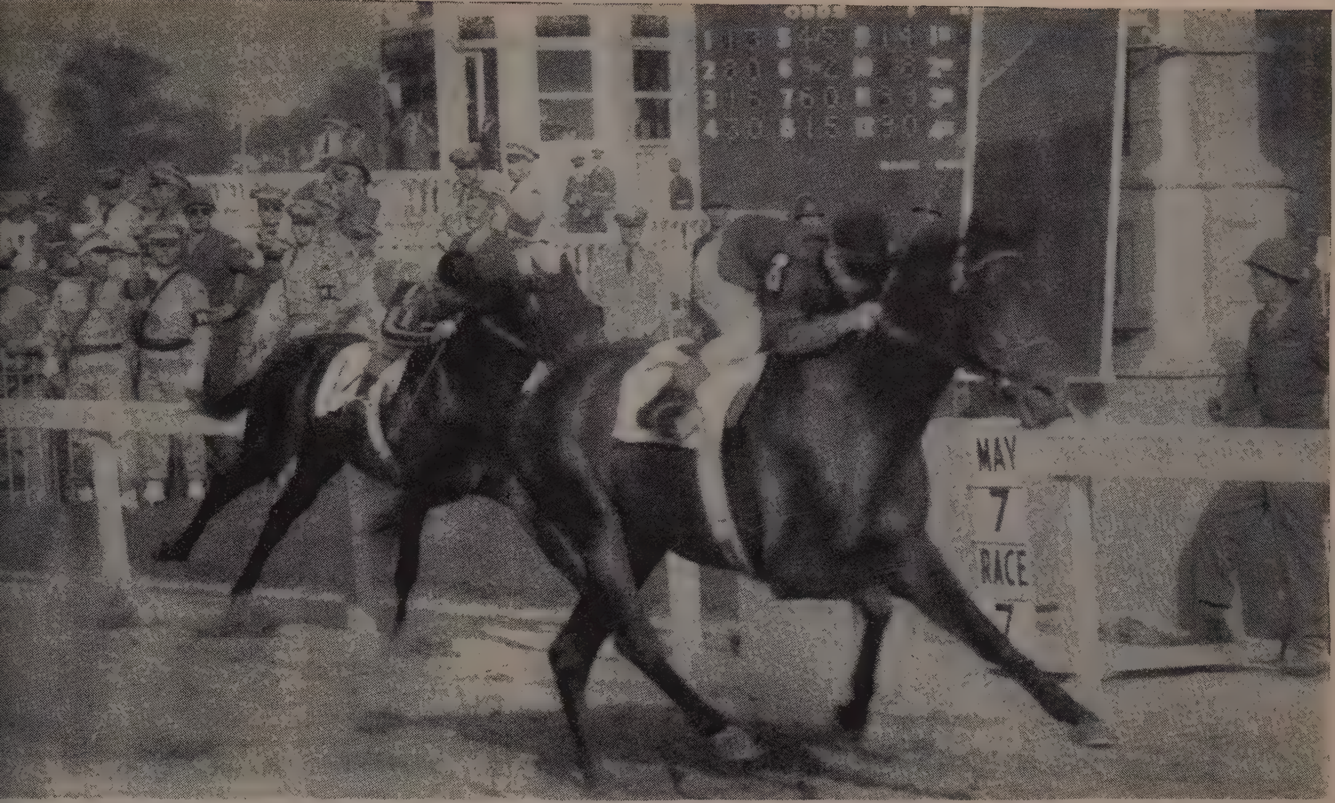
The $58,922 Kentucky Futurity was captured by Saunder Mills' Bangaway. William H. Cane's pacer Good Time annexed the $58,281 Little Brown Jug, and Harrison Hoyt's Demon Hanover triumphed in the $50,000 Roosevelt two-mile trot.

Good Time, with a series of unusual performances for a three-year-old that included a record of 1 min. 58$\frac{4}{5}$ sec., was voted the harness horse of the year. Bangaway was the top money winner, Clint Hodgins of Clandeboye, Ont., was the leading driver in number of winners and Frank Ervin of Aiken, S.C. was first among the reinsmen on the basis of money won.

New York state tracks proved the most popular in harness racing. According to figures released by the United States Trotting association, the pari-mutuel handle showed an increase of $8,810,294 over that for 1948 while attendance was up by 422,184. Roosevelt raceway handled $95,283,088 for a gain of 7.7% and showed a 15% rise in attendance to 2,281,534.

(T. V. H.)

Canada.—Increased popularity in racing was reflected in the 1949 statistics, with comparative 1948 statistics in parentheses



NDER, winner of the 75th Kentucky Derby, crossing the finish line at urchill Downs, Louisville, Ky., on May 7, 1949. Coming in second is Capot, 49 winner of the Preakness and Belmont Stakes

uring the 355 (349) days of racing at the tracks of 29 (28) cing associations which held 2,750 (2,632) races, a total of 9,550,478 ($56,178,491) was wagered. From the $59,550,478, e racing associations retained $5,263,551, of which $2,957,310 is paid in prize money ($2,755,400 in 1948), the provincial vernments collected $5,742,262 in pari-mutuel taxes and $48,4,664 went back to betters. The all-time betting high was in 21, when $75,110,551 changed hands. (C. Cy.)

Great Britain.—The National Hunt season in Great Britain d Ireland was favoured with a mild winter in 1948–49; the ly race of importance to be affected by frost was the Cheltenm Gold Cup, postponed from March to April. The winner, as 1948, was F. L. Vickerman's Cottage Rake. The Champion urdle Cup was won by Hatton's Grace, ridden, like Cottage ake, by A. Brabazon and prepared by the same trainer, M. V. Brien. O'Brien accomplished the rare feat of training the nners of the three main events at Cheltenham, for he also ined Castledermot, who won the National Hunt steeplechase dden by Lord Mildmay. The Grand National was won by . F. Williamson's Russian Hero, trained by G. Owen at Mals, Cheshire, and ridden by L. McMorrow.

In flat racing the three-year-olds, both English and French, ere of unusually poor quality, with the exception of the rinter Abernant, unrivalled over five furlongs, and the Two housand Guineas and Derby winner Nimbus, who did not race ter his Epsom success. There was a remarkable finish to the erby, for, after Nimbus, owned by Mrs. M. Glenister, and rd Derby's Swallow Tail had disputed the lead for most of e way, they were joined close home by Amour Drake and in inish in which all three horses came off a true line, the photoaph had to be inspected—for the first time in this historic ce—to show that Nimbus had beaten Amour Drake by a ad, with Swallow Tail a head away third. Nimbus was trained Newmarket by G. Colling and was ridden by E. C. Elliott. Ridge Wood who won the St. Leger was subsequently beaten in the King George VI Stakes at Ascot by M. Boussac's Marveil.

Despite the mediocrity of the colts, the fillies were in general well behind them; an exception was, of course, the Grand Prix winner Bagheera, and no less important, Boussac's Coronation V, who won the French Thousand Guineas and in October the Prix de l'Arc de Triomphe, in 1949 worth 3,000,000 fr.

The Epsom Oaks was won, like the Thousand Guineas, by Musidora.

Black Tarquin, winner of the previous year's St. Leger, won several races early in the season, but had to bow in the Ascot Gold Cup before Lord Derby's Alycidon, generally considered one of the finest stayers of his time. Alycidon also won the Goodwood and Doncaster Cups and was the first horse to win all three races since Isonomy in 1879. (M. A. Md.)

Horticulture.

Record-breaking cold weather on the Pacific coast of the United States ushered in the year 1949, with heavy damage to citrus and other commercial crops and to ornamentals. Three inches of snow fell in El Monte, Calif., important seed-producing region. Arizona had a 50% loss in oranges and grapefruit. Vegetables and especially the cabbage seed crop in the Pacific northwest were hard hit. Montana and some other western states and most of the eastern states suffered severely from drought throughout the season after May.

Despite weather conditions, the apple crop was very large throughout the country—the largest since 1939. Wholesale prices fell off sharply, and growers were faced with inadequate storage facilities. Retail prices, however, did not drop correspondingly. Normal exports, which in years before World War II had taken care of surpluses, were nonexistent, but the U.S. government subsidized large shipments to European countries. A similar plan helped farmers with the large pear crop. The U.S. department of agriculture also bought apples and pears for use in a national school lunch program.

Insect pests continued to take their toll, amounting to an estimated $95,000,000. Grasshoppers overran parts of the west, but excellent control was finally found in chlordane and toxaphene, new spray materials. The European corn borer continued to spread throughout the west and remained a serious pest in the east. However, DDT was found very effective. With this remedy, even home gardeners were able to grow sweet corn with success. DDT also proved a boon to the apple growers of the northwest, reducing the number of spray applications from six, or even eight, to three. Chlordane proved as successful as DDT in controlling the Japanese beetle and was cheaper. Applied to grass and watered in, experts expected it to be effective for two or three years. This beetle began advancing rapidly into the northern part of New England. Parathion was a new insecticide widely experimented with and seemingly effective in controlling orchard mites, pear *Psylla* and certain scales. It was tried in greenhouses with excellent results, except that ferns and a few other plants seemed to be injured. The citrus black fly appeared in Mexico as a serious threat, and U.S. scientists worked with the Mexican government to check its spread.

Gladiolus growers felt that they had found a control in Spergon for the fusarium disease (a rot), which sometimes destroys half the crop. It was applied as a dust after cleaning.

A large increase in the number of wild deer became a problem in several states, notably New York and Maine. A blueberry grower in the latter state found that the animals had eaten the entire crop on five acres. The used of coated vegetable seeds by commercial growers increased, sharply reducing the amount of labour needed for thinning.

The All-America gold medal award went to the new rose, Fashion, which was also awarded the gold medal of Bagatelle, France, and the gold medal of the British Rose society. It was the first rose of the floribunda type to win the All-America award. The colour is coral, overlaid with gold.

Netherlands' bulb growers began shipping early, and lower prices prevailed. These bulb imports created a serious problem for growers in the northwestern states of the U.S., some of whom began pressing for quotas on narcissus bulbs grown for forcing. However, some Maine farmers began experimenting with Dutch bulbs as a supplementary crop.

A long drought reduced the size of the crops in many countries. Parts of Italy had no rain for ten weeks, and water for irrigation was in short supply. Still, the fruit crops in most of Europe were larger than in 1948, although smaller than prewar. Help from the U.S. was seen in improved cultural practices, especially in the use of tractors. The practice of dusting with helicopters, purchased under the European Recovery program, was begun. The Netherlands, which largely escaped the drought, harvested large crops of bulbs and seeds, except that some growers lost heavily from attacks of the cabbage fly. Eighty growers were recorded as competing for foreign trade. A plan to increase the fertile areas of southern Netherlands was carried out by the construction of a compost factory to produce 137,000 tons of compost a year from refuse.

England suffered a heat wave, but the floral industry flourished surprisingly well and the great Chelsea flower show in May reached prewar size and attendance, making it the greatest show of the kind in the world. The British government permitted some increase in flower-seed imports as well as a greater proportion of flowers over vegetables in greenhouses. It also announced the setting up of six horticultural research stations.

Australia suffered from strikes, but more than 1,000,000 cases of apples and 500,000 cases of pears were shipped to the United Kingdom. New Zealand had serious floods in August, delaying fruit shipments. The Union of South Africa dropped its ban on the importation of tomato seed, imposed in 1945. Japan began shipping flower seeds by air to other countries. Canada produced 10,000 tons of cherries, twice the amount of the prewar average, but this crop was also up 10% in all the principal producing countries. (*See* also BOTANY; ENTOMOLOGY; VEGETABLES.) (E. I. F.)

Hospitalization Insurance: *see* HOSPITALS; INSURANCE.

Hospitals.

A new peak in construction of hospital facilities in the United States was reached during 1949. The first of the 1,000 construction projects approved for federal aid since passage of the Hill-Burton act in 1946 were completed. Construction expenditures approved under the act by Nov. 1 1949, totalled $640,000,000 and involved 35,000 general hospital beds alone. An amendment to the act, passed by congress during 1949, extended the program until June 1955, and doubled the annual federal contribution to $150,000,000. Numerous new hospitals and additions to existing hospitals were being constructed through community initiative, independent of federal aid. Construction costs fell off from the record average of $16,000 per bed in 1948 to an estimated $13,500 per bed during the last months of 1949.

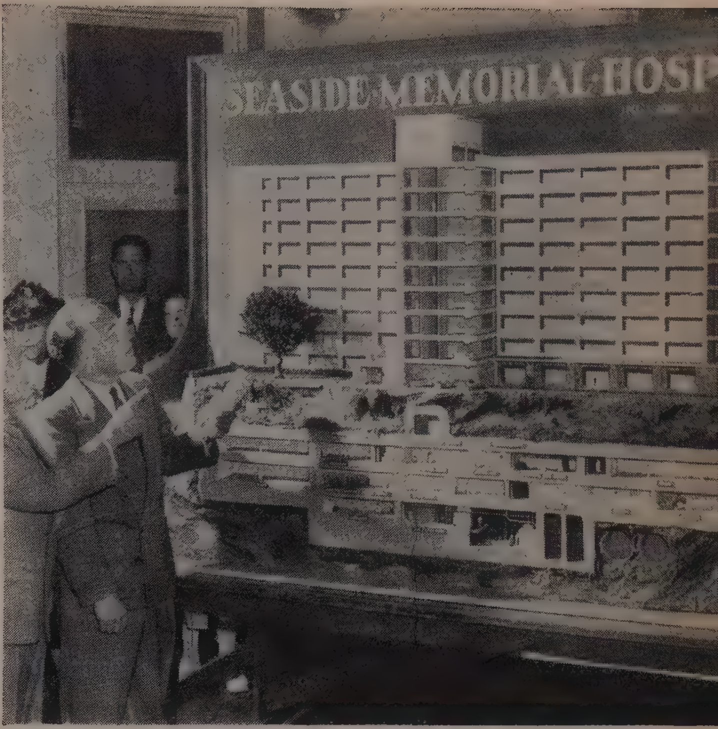
The estimated book value of U.S. hospitals in 1949 was $6,500,000,000, equal to a $45 investment for every person in the United States.

The shortage of nurses and other hospital personnel eased somewhat during the year, in keeping with the generally stabilizing employment situation. Many hospitals initiated training programs for practical nurses and other semiskilled personnel. Wage levels and employment conditions remained about the same as in 1948. Nonprofit general hospitals in 1949 averaged 173 employees for each 100 patients, as compared with 161 per 100 patients in 1948. An estimated 36,669 new students entered fall classes in 1,211 schools of nursing—a gain of about 1,00 students, despite a decrease of 34 in the number of schools.

Hospital patients, a survey of the American Hospital association showed, were paying an average 83% of the actual cos of hospital care they received. The remaining 17% was m through gifts, payments from government and charitable agencies, or comprised hospital deficits. It was estimated that fro 1945 to 1948 general hospitals in the United States gave almo $700,000,000 in hospital care for which patients did not pa directly. Average costs per patient day continued to rise fast than daily room rates or government payments for indige care. In some states, new equitable reimbursement contrac were secured between hospitals and state governments.

Organization of the Commission on Financing Hospital Ca was begun by the American Hospital association. This tw year study would investigate the costs of providing adequa hospital services in the United States, and determine the be systems of payment for such services. Like the previous Commission on Hospital Care, the new study would be financed a operated independently of the association, under 27 commissi members representing a cross section of the U.S. public.

The outstanding event of the year in hospital prepayme plans was the establishment of the National Blue Cross association. This was a stock insurance company to underwrite excess insurance for individual Blue Cross plans in the enrolme of national accounts. In its first five months of operation, t Inter-Plan Service Benefit bank paid almost $200,000,000 hospitals for about 25,000 patients cared for by host plans outside the area of their home plans. By the end of 1949, it w expected that more than 35,000,000 individuals would be members of Blue Cross plans in the United States and Canad These were enrolled through more than 260,000 industries, co



MODEL of a proposed atomic bomb-proof hospital with nine floors above ground and three below, being inspected at Long Beach, Calif., in 1949. Subterranean rooms were to be encased in eight feet of concrete and lead shielding, for protection against atomic radiation and concussion

ercial organizations and similar groups. At least 61,000,000 ersons in the United States had hospital prepayment cover-ge of some sort. (*See* also VETERANS' ADMINISTRATION, U.S.)

In Canada during 1949, the development of most interest was ne National Health program which provided extensive financial ssistance for hospital construction, education of personnel, and pecial grants for tuberculosis, mental care, cancer control, gen-ral public health and other special services. As the provinces ad to contribute at least a similar amount for construction rojects, the stimulation to construction was considerable. Since pril 1, 1948, projects for the construction of 15,000 additional eds had been approved.

The other major development in Canada was the inauguration n Jan 1, 1949, of the Hospital Insurance service in British olumbia. This was a state-sponsored hospitalization plan cov-ring practically all citizens. In many respects the plan was imilar to that which had begun in Saskatchewan two years arlier. In both cases hospitals were being paid their approxi-nate costs, and in both instances reasonably satisfactory ar-angements between the hospitals and the government were stablished. In both provinces, however, costs rose beyond nticipated figures and premiums had to be increased to sub-cribers, with a goodly portion of the cost being still absorbed y the province.

BIBLIOGRAPHY.—Statistics and Directory Section, Hospitals, pt. 2 June 1949). (GE. BU.)

Great Britain.—The new regional boards and hospital man-gement committees appointed in Great Britain under the Na-ional Health Service act were six months old at the beginning f 1949. When the first budgets were submitted to the minister f health early in 1949 it was found that the cost of the hospital pecialist and ancillary services had risen from £87,000,000, as stimated when the National Health Service bill was before arliament in 1946, to £170,000,000. In March the minister alled for economy in terms which meant that estimates would ave to be pruned and there was much consternation in hos-ital circles. The wisdom of these cuts in the estimates was otly contested throughout the summer. It was found that in nany hospitals greatly improved arrangements were desirable in ne outpatients department and in the systematic handling of nedical records, but that changes could not be effected without ncreased staff and expenditure. Payment of doctors who had ormerly given their services gratis, better pay and shorter hours or nurses and revised scales for technicians and administrative taff all played their part in increasing the bill.

The hospital management committee to whom the day-to-day ontrol of the hospitals was entrusted showed a desire to man-ge their own affairs without too much control from the regional oards. Difficulty arose, however, from the financial system, vhich lacked any objective standard by which estimates could e assessed. Estimates were therefore liable to be pruned both y the regional board and by the ministry.

In the big cities there was heavy pressure on accommodation. Iuch of the difficulty was attributed to medical discoveries vhich had lengthened the expectation of life and created a pecial problem for the hospitals. A number of hospitals set up pecial geriatric departments for dealing with the aged on more ctive lines than in the past. The increased call upon hospitals lso affected outpatient attendances; it was known that at some ondon hospitals outpatient attendances had increased by more han 100,000 in the first year of the new service.

Discussions at the International Hospital congress held in msterdam, Neth., showed that the need for some form of egional grouping of hospitals was recognized in almost all coun-ries; thus, in France, hospitals were being surveyed and classi-ed with the object of developing a regional plan; in Norway, ospitals were being organized in some 20 regions; in Denmark they were already grouped in some 18 regions and in Italy, too, under the new constitution, there were to be hospital regions.

FILMS OF 1949.—*The Sydenham Plan* (Association Films). (A. G. L. I.)

Hotels. Three spectacular happenings and developments during 1949, the opening of the new Shamrock hotel in Houston, Tex., the acquisition of the Waldorf-Astoria in New York, N.Y., by the Hilton interests and the continued extravagant expansion of resort hotel construction in Miami Beach, Fla., did little to relieve what was otherwise an uneventful year in the hotel industry. The Shamrock hotel, according to report, cost more per room to build than any hotel ever constructed. Control of the Waldorf-Astoria was acquired at a lower price per room and per dollar of original cost than any similar deal.

In general, the industry did little to redeem its record of being traditional, complacent and ultraconservative in comparison with other heavy capital enterprises. Little true progress was made in one of its most perplexing problems, cost control and accurate cost accounting.

One of the national hotel accounting firms issued a bulletin in November with the heading "Same Old Trouble in the Food Department!" It was difficult to find methods of securing useful information without the risk of being lost in a maze of unimportant statistics. One hotel began to search for an actuarial mathematician to see if some simple formulas could be evolved to give management quick and concise data.

Nor was there great imagination revealed in the expenditure of many millions of dollars for rehabilitation. There were attempts to compromise between modern and traditional architecture and decoration without achieving the best points of either. Except in Miami Beach, none of the smaller hotels constructed during 1949 took advantage of the immense strides in architecture; and even in that area very little appeared that was truly notable except in lavishness. Architectural firms specializing in hotel design did some creditable work but were apt to repeat their motifs and methods.

On the financial side, 1949 saw a continuation of the trends evident in preceding years. Room occupancy was down in varying amounts in various areas, the national average being about 4 to 5%, according to preliminary estimates. In spite of increased competition and decreased occupancy, there was no break in room rates.

Restaurant receipts showed varying tendencies, in some cases up, in some cases down, usually according to the alertness of management; but beverage and bar business continued downward trends which began in 1946. While occasionally prosperous, nightclubs in hotels were increasingly difficult to operate on a profitable basis and so-called supper spot attractions decreased in box office appeal as well as in salaries.

Wages, taxes and some food costs increased during the year; rehabilitation, except for labour, was not quite as expensive; net profits were down to an extent not yet revealed at the close of the year, but not to an alarming degree; but the margin between revenue and operating charges still decreased.

The one wholesome achievement evident throughout the entire industry was the reduction of funded debt, and an increase in current net worth and in equities. Hotels used their profits, though dwindling, for decrease of obligations as well as for improvement of the properties and additions to laboursaving devices, to put the industry as a whole in better condition to face whatever the future might bring. (E. By.)

Great Britain.—In Great Britain 1949 was another difficult year for hotels, restaurants and inns. Costs of conducting establishments increased all around; the most severe burden arose from the regulations of the Catering Wages act, 1943. As regards licensed residential premises, after prolonged representations by the employers, an amending order was issued giving certain reliefs. These did not, in the judgment of the proprietors, go far enough to restore flexibility to a wage structure of permanent application, to permit more normal services to be renewed and maintained.

Two matters of major importance to hotels, restaurants and inns which should be mentioned were: (1) 1949 was notable for another substantial increase in the number of visitors from overseas, particularly from the United States; the Travel association stated that there were some 560,000 tourists, earning for Great Britain £55,000,000—a record; (2) on the other side of the picture there was an exodus from Great Britain on a considerable scale; many persons wishing to visit the continent again after the long war years and especially as hotels and restaurants there were able to offer more attractive meals.

Indeed, in Britain, establishments at the end of the year were still subject to the severe rationing regulations of the war period almost in their entirety. The greatest disappointment was that the minister of food did not see his way to remove, or at least modify, the Meals in Establishments order, with its 5*s.* maximum and complicated build-up, where applicable, of a house charge, charges for meals served in private rooms, dancing and cabaret and service.

The most satisfactory feature perhaps was the continued recognition by the government of the important place that hotels, restaurants and inns occupied in the national economy, ranking first again among the major industries as dollar earners. For instance, the Licensing act, 1949, created new permitted hours during which alcoholic liquor could be served until 2:30 A.M., where dancing or cabaret entertainment was provided.

The government-appointed British Tourist and Holidays board, with its separate hotel and tourist committees, continued to work to attract more overseas visitors and to assist the industry to cater for them. One of its activities was a hygiene campaign among catering establishments. The new National Council for Hotel and Catering Education set up a Hotel and Catering institute, with the object of creating professional status for hotel keepers and caterers, properly trained and certificated. (H. C. Ce.)

Housing.

Home building in the United States established an all-time record in 1949 when work was started on more than 1,000,000 new family dwelling units of all types, exclusive of farm housing. After lagging behind the previous year's totals, month by month, through June, housing construction surged sharply upward to establish new monthly records for each of the last six months of 1949 and a record total for the year. The previous high figure of 937,000 established in 1925 was exceeded by more than 60,000 units.

Forecasts of both private and public agencies at the beginning of the year predicted a drop of 50,000 to 75,000 units rather than an increase of like proportions. Monthly figures for the first half of the year bore out these predictions, beginning in January with a drop of 4.9% from Jan. 1948 and showing steadily mounting losses through March when the monthly total was down 18.8% in comparison with the previous March. The next three months were likewise below comparable 1948 figures, but by narrowing margins with June coming to within 2.2% of the 1948 figure for that month. Nevertheless the first six months' figure of 546,100 new dwelling units started was still 4% below the first half of 1948, despite the fact that it included 9,600 new units of government financed and subsidized public housing which represented a jump of 350% over the public housing started in the first half of the previous year. From this lagging start, home building went on to establish a new record high fo each of the last 6 months of the year and to achieve the long sought postwar goal of 1,000,000 homes begun in a single 1 month period.

Contributing factors in the upswing were somewhat lowe residential construction costs, easing of mortgage financing, a substantial increase in the production of rental units and a greater emphasis on the lower-cost house. By Aug. 1949 residential construction costs were reported by the Housing and Home Finance agency to be at the lowest point in 20 month and almost 8% below the Oct. 1948 peak, as measured by th department of commerce national index (based on the Boekh index). Bureau of labour statistics average costs of producin privately financed one-family houses begun in June 194 amounted to $7,675—exclusive of land, site improvements selling expense, profit and other nonconstruction items—as compared with a June 1948 estimate of $8,050. The comparabl figure for 1940 was $4,075.

Availability of mortgage financing, which had been shrinkin since the fall of 1948, particularly with regard to G.I. hom loans carrying a maximum 4% interest rate, received a powerfu impetus in July. The secondary market for G.I. and FHA (Federal Housing administration insured) mortgages was increase 50% when congress gave the Federal National Mortgage association (more popularly known as Fanny May) an addition $500,000,000 for the purchase of such mortgages. Fanny May previous limit of $1,000,000,000 was all but exhausted whe congress acted.

At the same time, congress extended FHA's authority to insure 90% mortgages on rental housing under Title 608 whic undoubtedly contributed substantially to the increase in t construction of apartments. The 1949 building of rental uni constituted 25% of the record home building total and was t highest for any year since the 1920s. In the first ten months 1949, FHA received applications for mortgage insurance rental projects totalling 198,194 apartments as compared wi 63,597 units in the same period of 1948.

Home builders concentrated in greater degree on lower-pric houses and apartments for several reasons: (1) the higher-pri

lds were showing increasing
idences of saturation; (2)
ver costs made such a course
ore feasible; and (3) the
rket of modest-income fam-
es in urgent need of housing
s still largely untapped.

On July 15, 1949, President
uman signed the Housing Act
1949 marking the end of a
ter struggle between support-
; and opponents of public
using which had raged over a
ır-year period through the
th, 80th and 81st congresses,
d through one presidential
d two congressional election
mpaigns. The act greatly ex-
nded the program for govern-
ent financed and subsidized
using for low-income fami-
s, initiated a plan and author-
d substantial funds for fed-
l aid to communities in re-
ilding slum and other blight-
areas, provided federal loans
d grants for farm housing and
ınched a large-scale federal
ogram of housing research.

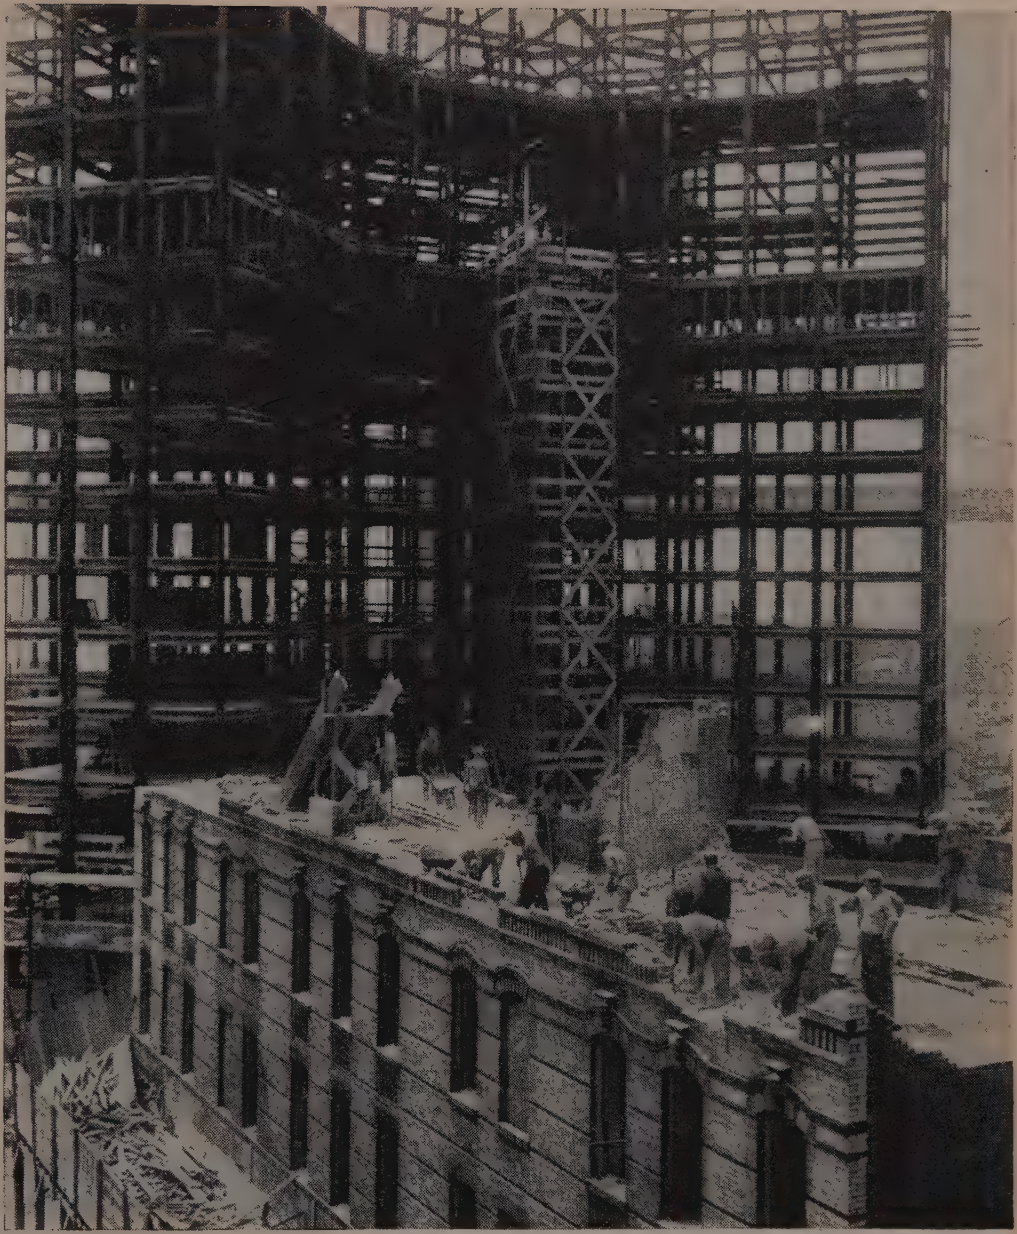
The main feature of the new
v was the public housing sec-
n which authorized the con-
uction of 810,000 dwelling
its for low-income families
er a six-year period and pro-
led grants of up to $308,000,-
o annually for 40 years to
ing rentals down within the
ancial reach of such families.
ith some modifications, the
v of 1949 extended the U.S.
ousing Act of 1937 under
iich 191,000 dwelling units
: low-income families had
en built. The 1949 act set a cost limit of $1,750 a room
: public housing constructed under its provisions which
ght be increased by not more than $750 in high construction
st areas.

By the year's end the Public Housing administration had ap-
oved preliminary loans to 227 cities to start planning a total
221,390 public housing units. Between 60,000 and 80,000
its were scheduled for construction in 1950 with full programs
135,000 to 150,000 to be built annually in the years from
51 through 1955.

Even before the new public housing program was enacted,
ention turned to the housing needs of families with incomes
ove the limits set for public housing but not sufficiently high
enable them to rent or buy housing in the open market. Union
our groups joined with housing, civic and welfare organiza-
ns to urge for such families a program of co-operative hous-
; aided by low-interest, long-term government loans. A bill
ıbodying this program was introduced in the 1949 session of
ngress but made little headway, and a stronger effort to obtain
actment was scheduled for 1950.

Activity of state and local governments indicated that the
stwar housing shortage had been only partially met in spite
of record-breaking new construction and that for modest- and low-income families the need for homes was still acute. A two-pronged program was enacted in Connecticut authorizing local authorities to initiate moderate rental housing, and the Connecticut state housing authority to assist with moderate-cost home construction. For local housing authorities the state provided temporary and definitive loans: under the state housing authority program, low interest rate loans were made available for home purchase. The state was also given authority to insure private first mortgages, purchase FHA insured mortgages, make second mortgage loans to veterans and to purchase modest-cost housing produced by private builders. Michigan launched a co-operative neighbourhood improvement program while Maine and Minnesota passed legislation to facilitate the construction of public housing.

New York state's public housing program was expanded substantially by the approval of three housing propositions in a state-wide referendum at the November elections. The proposals increased by $300,000,000 the amount the state might loan to localities for public housing construction, increased the total for which new commitments to pay annual subsidies might be



STEEL GIRDERS of the Alfred E. Smith Housing project rising in the shadow of New York city's Brooklyn bridge, as slum demolition (foreground) continued to make way for new housing units in 1949 made from $1,500,000 to $2,500,000 a year, and raised the maximum for outstanding total annual subsidy authorizations by $12,000,000 to an aggregate of $25,000,000.

New York city's first "white-collar" public housing project, Woodside Houses in Queens, received more than 30,000 applications for its 1,700 apartments. This type of public housing was built by the local housing authority but received no cash subsidy.

The first substantial step in moderating wartime rent controls was taken with the enactment by congress of the Housing and Rent Act of 1949. Controls were continued to June 30, 1950, but with two important modifications: (1) municipalities or entire states could be released from federal rent control by action of their governing bodies; and (2) landlords could be granted increases in rent where they showed that they were not receiving a fair operating return. From April 1, when the new law became effective, to Dec. 9, four states, Nebraska, Texas, Arizona and Utah, as well as a number of municipalities, were released from control by this procedure. The Federal Housing expediter released others on his own initiative so that just before the year's end a total of 2,587,000 family dwelling units had been decontrolled. In the case of two localities, this action resulted in such large rent increases that the communities requested re-establishment of controls. From April 1 to September 30, rent increases under the fair operating return formula had been granted affecting 352,037 dwelling units. The increases averaged 19%.

Late in the year it appeared that the Truman administration had determined to put the weight of the federal government's housing activities behind the fight for equal civil rights. Announcement was made that effective Feb. 15, 1950, FHA assistance to private home building would not be extended where building sites carried covenants restricting occupancy or sale on the basis of race, creed or colour. Washington let it be known also that public housing assistance would be affected by local policies on discrimination.

Some progress was made, particularly by large-scale builders, in achieving greater economy and efficiency in housing construction, but the industry and the government agencies concerned were still seeking ways to reduce costs. Research activities of the Housing and Home Finance agency stimulated the application of more economical roof construction methods by the use of trusses, a new and cheaper type of septic tank was developed and efforts were made to promote modular construction.

Modernization of building codes made some headway with more widespread adoption by municipalities of the model codes prepared by the Building Officials Conference of America and the regional conferences of building officials on the west coast and in the south. New York state took the first step toward the adoption of a state-wide code which would facilitate the use of new materials and methods of construction.

The promise of prefabrication was still some distance from realization. The Lustron steel house, into which the government had put $37,500,000 in Reconstruction Finance corporation loans, became a congressional storm-centre in midsummer and was in arrears on repayments at the year's end. Further RFC loans were cut off following the congressional inquiry.

Housing research received considerable impetus with the passage of the Housing Act of 1949 and the formation under its provisions of a Division of Housing Research as one of the major components of the Housing and Home Finance agency. An initial budget of $2,333,000 was allocated, somewhat less than half to be spent on research undertaken directly by the new division and the balance to finance studies assigned to existing university and industry research groups. The study program included research in cost data and analysis, housing
credit and finance, housing market analysis, construction prac
tices, residential design, engineering data, developing housin
statistics for which the 1950 census was to serve as a base an
developing model building codes. (*See* also ARCHITECTURE

tistics; Journal of Housing;* Publications of Housing and Home Financ
Agency and its divisions; *Architectural Forum.* (H. M. PR.)

Canada.—The number of houses completed in 1949 was esti
mated at 96,000, as compared with 85,000 in 1948 and 79,00
in 1947. Despite this brisk building program, little inroad wa
made into the nation's backlog of wanted homes—set at roughl
350,000 at 1949 prices.

To spur building, the federal government revised the Nationa
Housing act. For the first time in 15 years of bickering ove
housing responsibility, the federal government provided finan
cial assistance to the provinces in the rental field. Under th
revision, in general terms, the provinces became responsible fo
the acquisition of house-building land and for the requisite serv
ices, while the dominion became responsible for the design an
construction of the projects. The cost of development and an
profits or losses resulting from provincial management of th
projects were divided 75% to the dominion and 25% to the co
operating province. Since such dominion-provincial project
were exempt from municipal taxes, the federal government ar
ranged to pay each municipality involved a grant equal to nor
mal tax revenues. The 1949 revisions to the act also made i
easier for people with moderate incomes to purchase or buil
a home, by cutting in about half the previously required dow
payment.

The government-owned Central Mortgage and Housing cor
poration continued to be active throughout the year, and b
December had helped organize or had given assistance to com
munity planning organizations in nearly all Canadian cities ove
30,000 population and to half those between 5,000 and 30,00
population.

BIBLIOGRAPHY.—Dominion Bureau of Statistics, *Housing Bulletin N
19* (1949). (C. CY.)

Great Britain.—By the end of June, 684,045 new home
of which 526,897 were permanent and 157,146 were temporar
had been erected in the United Kingdom under the housin
program which began immediately after the general election
1945. Additional homes were also provided by the reconditio
ing of service camps, the conversion of larger houses into small
units and by other means so that by the end of Oct. 1949 mo
than 1,000,000 families in the United Kingdom had been move
from overcrowded houses into modern, well-equipped and com
paratively spacious new homes.

The actual work of construction gained momentum with t
years and whereas, in 1945, 3,014 houses were built, in 194
227,616 were built. In 1949 the building industry in the Unit
Kingdom was building 100 houses for every single house built
1945, and the monthly production figure now rose to somethi
like 25,000 houses a month. On June 30, 1949, 190,486 perm
nent houses were under construction, while bids for an add
tional 63,867 had been approved. Despite the stringency of t
economic position and the determination of the government
reduce expenditure wherever possible, no great cut in housi
expenditure was contemplated.

The government continued to give special priority to co
miners and to agricultural workers. In allocating houses
tenants, local authorities were under a statutory obligation
consider the housing needs of the families concerned; but th
now had the additional responsibility of considering also t
economic needs of the nation; and in accordance with this p
icy, by the end of June 1949, 30,528 mining families and 18,4
agricultural workers' families had been re-housed in hom

uilt by local authorities.

Housing costs remained very high and a house which would ave cost £400 before the war cost £1,500 or more. There was large inflationary element in this price, although during 1949 here was a downward tendency.

Commonwealth.—In the dominions, particularly in New ealand and Australia, the housing shortage remained acute, or was it likely to be solved until these dominions, who were ursuing a strong immigration policy, could attract a substantial orce of trained building labour from the United Kingdom. This n turn was held up by the acute shortage of shipping.

In the African colonies, housing needs were greatly accentuted by the rapid rise in native populations and by the many ew industrial enterprises which had been started after World Var II. The peanuts scheme in British East Africa gave rise to number of ambitious housing projects both for the European unicipal staff and for the African workers. In Nigeria a timber ompany acquired the land for what promised to be a model ousing estate for 2,000 workers. At Takoradi in the Gold Coast, here timber wharfs and a vast extension to the harbour were eing built, a model village of about 500 houses was being contructed on a site at Sekondi. (*See* also *Canada*, above.)

Europe.—In France, in the Normandy area where the fightng after D day was fiercest, vast reconstruction schemes were arried out; and, although the first emphasis was naturally on he essential social services, considerable headway was being ade in the provision of new homes.

In Germany, in towns such as Hamburg, considerable housing rojects had been and were being carried out. In Poland the olicy of reconstruction of war-devastated Warsaw was carried ut at almost incredible speed and a complete new city was far dvanced. In Switzerland the housing projects carried out by he cantons and the municipal authorities continued to be modls for the rest of the world. It was a standard practice in Swiss ousing schemes to provide a basement for each house, which as not used for living accommodation but which contained a ashing and laundry room equipped with washing machines and ther labour-saving devices, a store room for fruit and vegeables and a work room. Each Swiss housing project had as its entre a nursery school. (G. McA.)

Hungary.

A people's republic of southeastern Europe, Hungary is bounded on the west by Austria, on the orth by Czechoslovakia, on the east by Rumania and on the outh by Yugoslavia. Area: 35,893 sq.mi. Pop.: (Oct. 1938 est.) ,021,000; (1948 est.) 9,165,000. Chief towns (1941 census): Budapest (cap., 1,164,963; [Dec. 31, 1948, est.] 1,058,288); zeged (136,752); Debrecen (125,933); Miskolc (109,433); Kecskemét (87,269); Pécs (78,512). Languages (1947 est.): Hungarian 92.9%; German 5.1%; Slovak 0.8%; Serbo-Croat nd Slovene 0.6%; Rumanian 0.2%. Religions (1947 est.): Roan Catholic 65.6%; Greek Catholic 2.5%; Calvinist 20.8%; utheran 6%; Greek Orthodox 0.4%; Jewish 4.3%. Chairman f the presidium of the people's republic 1949, Arpad Szakasits; rime minister, Istvan Dobi.

History.—A new five-year plan, to replace the three-year plan nding in 1949, was announced at the beginning of the year. Total investment over the five years 1950–54 was to be 35,000,000,000 forints, six times the amount invested in the three-year plan. Slightly less than half was to go to industry, and about one-third to agriculture and communications. Total industrial output in 1954 was to be 80% higher than in 1949 and 130% higher than in 1938. Output of iron and steel was to be nearly doubled during the five-year period, rising to 1,500,000 tons in the last year. Aluminum output, based on Hungary's rich bauxite deposits, was to be doubled, and there were to be great increases in electric power, building and chemicals. In agriculture the use of artificial fertilizers was to be trebled and it was hoped to increase crop yields by an average of 27%. Mechanization of agriculture was expected to release cattle used as draught animals and so to raise the milk output by a quarter.

Official figures during 1949 gave the expected percentage figures of production, showing that the three-year plan targets had been exceeded considerably ahead of time. It was, however, admitted that results in some branches of industry were not as good as the all-round figures.

Collectivization of agriculture was the avowed aim of policy, but was cautiously pursued. The five-year plan did not specify what proportion of agriculture should be collectivized by 1954. In August there were 550 collective farms in Hungary.

The year opened with the conflict between the government and the Roman Catholic Church, centred round the trial of Joseph Cardinal Mindszenty. The cardinal, arrested in Dec. 1948, was accused of treason, conspiracy with foreign enemies of the republic and offences against the currency laws. The specific charges in the published indictment for the most part amounted to talk hostile to the government, which in western countries would not be regarded as treason. Of the cardinal's obstinate hostility to the regime and determination not to trust the government's promises from the first days in 1945, there had never been any doubt: and events had to a large extent justified both the obstinacy and the distrust. The trial opened on Feb. 3. The cardinal confessed that he was "essentially" guilty of the offences with which he was charged, declared that he felt an agreement between church and government to be essential and hoped that his person would not stand in its way. He was sentenced to life imprisonment. At the parliamentary elections in May the hierarchy did not object to Catholics going to the polls. But the conflict remained as irreconcilable as before.

Elections were held on May 15; 95% of the electorate was declared to have voted. The official results showed that the total number of valid votes recorded was 5,730,519: of these 5,478,515 were for the People's Front list. No opposition candidatures were tolerated. After the elections of Nov. 4, 1945, there were 70 Communists in a national assembly of 409: after the elections of Aug. 31, 1947, their number increased to 97 in a house of 411: after May 15, 1949, they were 285 in a house of 395.

The new parliament adopted a new constitution, closely modelled on those of the "people's democracies" and the Soviet Union. On Aug. 23 the national assembly elected the presidium of the people's republic (21 members) of which Arpad Szakasits was the chairman.

A purge of the United Workers' party was carried out in the first months of 1949: 17% were removed from full membership but many of these were allowed to remain as candidates. The sensation of the purge was the unmasking of Laszlo Rajk, a prominent Communist and former minister of the interior, as a nationalist deviationist and agent of western imperialists. With him were arrested a leading left-wing Social Democrat intellectual, Pal Justus; the former head of the Communist party's cadres section, Tibor Szonyi; the former chief of the political section of the general staff, Lieut. Gen. Gyorgy Palffy; and the former counsellor of the Yugoslav embassy in Budapest, Lazar

NEWS REPORTERS at the trial of Joseph Cardinal Mindszenty, examining a document allegedly written by Mindszenty to the U.S. minister at Budapest asking his help in escaping Hungary. Mindszenty was found guilty of treason and sentenced to life imprisonment on Feb. 8, 1949

Brankov. The trial, which opened on Sept. 16, was above all an indictment of the Tito regime in Yugoslavia. Brankov gave evidence that even during the war Tito was working for the British secret service against the Soviet Union. Rajk confessed to all the accusations, including that of having worked for the political police of the prewar Horthy dictatorship and of having gone to fight in Spain for the republic merely in order to undermine the antifascist movement and help the axis. The incredibility of the charges, contradictions between the alleged facts and willingness of the victims to confess on all points made the Rajk trial much more similar to the Moscow trials of 1936–37 than any of the other conspiracy trials that had so far been staged in eastern Europe.

On Sept. 24, Rajk, Szonyi and Andras Szalai, deputy to Szonyi, were sentenced to death, and on Oct. 15 they were hanged. Five others were given prison sentences. (H. S-W.)

Education.—Schools (1949): elementary, 1,432; general, 4,770; pupils, 1,220,000; secondary, 388; pupils, 83,000; universities, 8; institutions of higher education, 8; students, 28,000. Illiteracy (1941): 6.0%.

Finance and Banking.—Budget (1949 est.): revenue 11,587,000,000 forints, expenditure 11,553,000,000 forints. Currency circulation: (Sept. 1949) 3,307,000,000 forints; (Sept. 1948): 2,628,000,000 forints. Gold reserve: (Aug. 1949) U.S. $37,000,000; (Aug. 1948) U.S. $34,000,000. Savings and bank deposits: (Sept. 1949) 5,336,000,000 forints; (Sept. 1948) 2,180,000,000 forints. Monetary unit: forint with an official exchange rate of F.1=8.45 U.S. cents (Nov. 1949).

Foreign Trade.—(1948) Imports, 1,975,000,000 forints; exports, 2,965,000,000 forints.

Transport and Communications.—Roads (1949): 10,248 mi. Licensed motor vehicles (Dec. 1948): cars, 15,282; commercial vehicles, 12,317. Railways (1948): 5,173 mi.; passenger-miles, 2,987,000,000; freight net ton-miles 2,037,000,000. Danube shipping (Dec. 1947): merchant vessels, 514: total tonnage, 118,717. Telephones (1948): subscribers, 106,768. Radio receiving set licences (Dec. 1948): 475,000.

Agriculture.—Main crops (metric tons, 1948): wheat 1,579,000; maize 3,201,000; barley 696,000; rye 780,000; oats 332,000; sugar, raw, value, 153,000; rice 39,000; potatoes 2,699,000; tobacco 23,000; linseed 6,000. Livestock (May 1948): pigs 2,499,000; cattle and buffaloes 1,804,000; sheep 591,000; horses (Feb. 1949) 569,000.

Industry.—Fuel and power: coal and lignite (1948) 10,613,000 metric tons; natural gas (1947) 3,560,000,000 cu.ft.; crude oil (1947) 570,000 metric tons. Raw materials (metric tons 1947): iron ore, metal content, 244,000; pig iron 304,000; steel ingots and castings 596,000; bauxite 340,000; manganese ore 50,000. Manufactured goods (1947): cotton piece goods 126,000,000 m.; (in metric tons) cotton yarn 21,000; wool yarn 6,000; cement 199,000.

Hutchins, Robert Maynard

(1899–), U.S. educator, was born on Jan. 1 in Brooklyn, N.Y. He left Oberlin college, Oberlin, O., in 191 to enlist in the U.S. ambulance corps. Entering Yale university New Haven, Conn., in 1919, he received his A.B. in 1921 an his LL.B. (*magna cum laude*) in 1925. In 1923 he was appointe secretary of Yale university and in 1927 dean of its law school In 1929, at the age of 30, he became the fifth president (and in 1945, the first chancellor) of the University of Chicago.

The year 1949 marked the 20th anniversary of his becomin the university's chief executive. During these years the university accomplished many significant changes in educational policy (see *Encyclopædia Britannica*), and greatly enlarged it resources.

University affairs continued during the year to occupy mos of Hutchins' attention. He took an active part in presenting th answer to charges in the Illinois legislature that the universit was permitting Communist "indoctrination," both as the chie witness in the public hearings April 21 and in several speeche Throughout he reiterated the university's determination to maintain academic freedom and attacked the doctrine of "guilt b association"—the membership of faculty members in organizations which at some later period were termed "fronts"—relie upon as the evidence of indoctrination. During the year, Hutchins made a total of 41 formal speeches. His consistent theme were the purpose of education, the necessity of world gover ment, and moral values.

As chairman of the Goethe Bicentennial Convocation ar Music festival, held at Aspen, Colo., June 27–July 16, Hutchin had a leading part in the organization and direction of t observance, which he had initiated, and he gave the final addres (W. V. M.)

Ice Hockey.

The Toronto, Canada, Maple Leafs became 1949 the first team in history to capture t Stanley cup play-offs three straight seasons when it routed t l Wings of Detroit, Mich. Having placed only fourth in the ular National Hockey league race, Toronto furnished a major et by routing the circuit's title winners in four games.

lthough Detroit had won the regular league race by a good rgin, it was hard pressed in the semifinals for the Stanley , and in the final series, Toronto stopped the Wings in four ight games, 3–2, 3–1, 3–1 and 3–1.

oronto reached the last round by halting Boston's Bruins, r games to one. The Leafs triumphed 3–0, 3–2, 3–1 and 3–2, ston taking only the third contest, which was decided at 5–4 overtime.

Montreal's Canadiens carried Detroit to seven games in their nifinals. Detroit got away winging by capturing the first tle, 2–1, in three overtime sessions, but lost the second, 4–3, extra play and the third, 3–2. Detroit came back strongly h victories by 3–1 scores in the fourth and fifth contests, the Canadiens annexed the sixth battle, 3–1, and tossed the y-offs into a 3–3 deadlock. Detroit, however, got off to a fast rt in the deciding meeting on its home ice to win, 3–1, for right to face Toronto in the cup finals.

Chicago's Black Hawks could place no higher than fifth in regular six-team National league race, but furnished the leading scorers of the circuit. The veteran Roy Conacher assed 68 points to capture the crown, with his teammate ug Bentley a close second, only two points behind.

The Calder Memorial trophy, awarded to the league's out- nding rookie, was won by Pentti Lund, Finnish-born star of New York Rangers. Bill Quackenbush of Detroit received Lady Byng trophy given annually to the man who shows best sportsmanship and gentlemanly conduct combined with ying ability. Bill Durnan of Montreal achieved the unprece- nted feat of capturing the Vezina trophy for the fifth time in seasons, the prize being posted for the goalie with the best ensive mark.

The Providence (R.I.) Reds emerged triumphant in the American Hockey league play-offs for the Calder cup, setting back the Hershey (Pa.) Bears. The Spokane (Wash.) Flyers routed the Windsor (Ont.) Spitfires for U.S. senior laurels.

Y-OFF GAME in the National Hockey league semifinals, played at Boston, s., between the Toronto Maple Leafs and the Boston Bruins, March 30, 9. The Maple Leafs defeated the Bruins and went on to win the Stanley in four straight games against the Detroit Red Wings

Boston college, Chestnut Hill, Mass., enjoyed an outstanding season, climaxed when it toppled Dartmouth college, Hanover, N.H., 4–3, in the final game of the National Collegiate Athletic association championship played at Colorado Springs, Colo. The Boston college Eagles compiled a record of 21 victories in 22 starts, the lone setback coming at the hands of Dartmouth earlier in the campaign.

Dartmouth halted Harvard university, 7–2, in a play-off of a first-place deadlock in the Pentagonal league, then bowed to the University of Montreal, Canada, 4–3, in a battle for the Alexis Thompson trophy. (T. V. H.)

Iceland.

An island republic of the North Atlantic, Iceland has an area of 39,768 sq.mi., and a population (census 1940) of 121,474, (est. 1949) 138,502. Capital: Reykjavik, the only large town (pop. 1945: 46,578; est. 1949: 53,384). Religion: Lutheran Christian. President 1949: Sveinn Björnsson; prime ministers: Stefan Johann Stefansson; from Dec. 6, Olafur Thors.

History.—Iceland's problems of 1949 were much concerned with its relations to the outside world. Accession to the Atlantic defense pact was bitterly opposed by a strong Communist minority. On March 30 the *althing* voted to join, 37–13. Two Agrarians (Progressives) abstained, while one of that group joined with two Social Democrats and the solid bloc of ten Communists in opposition. Feeling was intense, and on the night of the voting a Communist mob threw stones in the windows of the parliament. The chief complaint was against the use of Iceland as a military base for great-power conflict. The foreign minister, Bjarni Benediktsson, became satisfied during a visit to Washington in March, that the United States would not demand peacetime military bases on the island. In case of actual war, of course, there was no doubt that this strategic mid-ocean position would again become involved. At Keflavik airport, just outside Reykjavik, the U.S. government was completing construction of a $2,000,000 hotel and office terminal building. The contract for civilian use of the airfield under U.S. operation was to continue to 1952.

Iceland continued to co-operate in the European Recovery program and in August went a step further by accepting membership in the Council of Europe.

Diplomatic alignment was but one of the internally divisive questions. The government's anti-inflationary measures roused antagonism, and the difficulties were accentuated by the currency devaluation in September. Communist control within the labour unions had been overthrown in the fall of 1948, and no Communists were left in the cabinet. But the deep line of division in internal affairs as in foreign affairs lay between the Communists and the bourgeois parties. On Oct. 23 the general election indicated the relative strengths:

	Popular vote	*Althing* representation	Change from 1947 election
Independent party (Conservative)	28,546	19	0
Agrarian party (Progressive)	17,659	17	+3
Communist party	14,077	9	−1
Social Democrat party	11,938	7	−2

The decline of the two workers' parties was significant, but left each with a large popular following and an important parliamentary representation. The losses of the left groups were significant enough that a few weeks later a new government was formed, with a cabinet of five members, all from the Independence party, largest single group. With Olafur Thors as prime minister, they took office on Dec. 6.

Sveinn Björnsson, when his first full four-year term expired on June 17, was re-elected by acclamation to serve another four years as president. He remained a nonparty man.

Finance.—The króna, fixed during the postwar years at an exchange rate of 15.4 United States cents, followed the British pound in a 30.5% devaluation on Sept. 21, 1949; the exchange rate became then 26.22 kr. to the pound sterling, 9.365 to the dollar; in other words, the króna was revalued at 10.7054 United States cents.

Iceland received $8,300,000 in aid from the European Recovery program during the 15-mo. period from April 1948 to June 1949, and was scheduled to receive $7,000,000 during the fiscal year 1949–50.

Trade and Communication.—In 1948 Iceland's exports totalled $63,000,000 in value, and its imports $62,000,000. Of the exports, $18,000,000 worth went to the U.K., $4,000,000 to the U.S. Germany took about $10,000,000, but the share of the U.S.S.R. dropped from $8,000,000 in 1947 to about $1,000,000 in 1948. Of the imports, $20,000,000 were from the U.K. and $13,000,000 from the U.S., with the sources for the remainder widely scattered. The major import and export commodities are shown in the table.

Major Import Commodities of Iceland, 1948

Commodity	Value in kr.	Amount in metric tons
Cereals	23,893,000	23,648
Feeds	5,878,000	7,753
Lumber	21,939,000	23,165
Textiles and clothing material	32,541,000	2,731
Coal	20,619,000	122,033
Petroleum products	32,384,000	127,944
Salt	3,453,000	20,956
Cement	11,662,000	58,427
Iron and steel	17,974,000	12,549
Machinery	57,912,000	5,893
Ships	65,607,000	22,354
Other conveyances	15,996,000	1,442

Major Export Commodities of Iceland, 1948

Commodity	Value in kr.	Amount in metric tons
Salted fish	30,810,000	16,191
Fish on ice	90,347,000	12,490
Frozen fish	64,009,000	22,464
Canned fish	4,206,000	959
Salted herring	22,794,000	109,825 (bbl.)
Cod liver oil	33,666,000	8,036
Herring oil	74,313,000	28,335
Fish meal and herring meal	40,671,000	39,185
Sheepskins	16,130,000	747,325 (pieces)

Iceland had in 1948 a merchant marine of 30 vessels; total tonnage 32,200. With the fishing fleet included the total tonnage of vessels was 81,468 at the end of 1948. New trawlers were being added for fishing, and the Icelandic government sought in England a loan of $5,000,000 to pay for them. Total fish production in 1948 was 450,000 tons.

BIBLIOGRAPHY.—Franklin D. Scott, *The United States and Scandinavia* (1950). (F. D. S.)

Ice Skating. Richard Button of Englewood, N.J., men's Olympic and world figure-skating title holder, successfully defended his world crown at Paris, France, and won the North American championships at Ardmore, Pa., and the United States meet at Colorado Springs, Colo. Yvonne Sherman of New York city capped several years of effort by winning the senior women's division of both the North American and national title tests. The 18-year-old star also was runner-up to Alena Vrzanova of Czechoslovakia for the world crown left vacant when Barbara Ann Scott of Canada turned professional.

In defeating Marlene Smith of the Toronto Skating club, who placed second, Yvonne Sherman became the first United States representative to win the women's North American championship since 1939.

A list of United States title winners follows: Button, senior men; Sherman, senior women; Karol Kennedy and Peter Kennedy of Seattle, Wash., senior pairs; Lois Waring of Baltimore, Md., and W. H. Bainbridge of Washington, D.C., gold dance team; Vera Elliott and Rex Cook of New York city, silver dance team; Sonya Klopfer of New York city, junior women; Richard Dwyer of Los Angeles, Calif., junior men; Tenley Albright of Boston, novice women; and Hugh C. Graham of Tulsa, Okla., novice men.

North American champions were Button, senior men; Sherman, senior women; Karol Kennedy and Peter Kennedy, pairs; Janet Gerhauser, Marilyn Thomsen, Marlyn Thomsen and John Nightingale of the St. Paul Figure Skating club, senior fours; and Lois Waring and W. H. Bainbridge, senior dance team.

Three titles fell the way of Ray Blum, veteran competi from Nutley, N.J., in senior men's speed skating, while honou among the women speedsters were more or less distributed.

A list of major title winners follows: eastern states, outdoo —Blum, men; Mary Lynch of Newburgh, N.Y., women eastern states, indoors—Bobby Jahn of Bogota, N.J., men Lynch, women; middle Atlantic states—Blum, men; My Shapiro of Brooklyn, N.Y., women; national—Blum, men Lorraine Sabbe of Detroit, Mich., women.

FILMS OF 1949.—*An Introduction to the Art of Figure Skating* (N tional Film Board of Canada); *Skating Fantasies* (Hawley-Lord). (T. V. H.)

Idaho. One of the far northwestern states of the U.S., b longing to the group regionally designated as t Pacific northwest and part of the original Oregon territor Idaho is the 12th largest state, with an area of 83,557 sq.m It was admitted as a territory by Pres. Abraham Lincoln 1863 and became a state on July 3, 1890. Idaho is popular known as the "Gem state." Pop. (1940) 524,873, of whi 66.3% was rural, 33.7% urban; the July 1, 1949, estimate the U.S. census bureau set Idaho population at 592,000. Th estimated population in leading cities for 1949 was Boise (cap tal), 55,000; Pocatello, 25,000; Idaho Falls, 22,000; Namp 18,000; Twin Falls, 18,000; Coeur d'Alene, 15,000; Lewisto 13,333; Caldwell, 13,500. There were 3,537 Indians in the sta in 1940. It was expected that a decided increase in populati would be shown in the Arco (southeastern) area with the esta lishment of the atomic reactor plant by the Atomic Energ commission. Work was under way on the project in late 194

History.—On Jan. 2, 1950, state elective and appointive of cials began the final year of the first four-year term in Idaho history. All, elected in 1946 and admitted to office on Jan. 1947, were Republicans. The governor was C. A. Robin Other officials were lieutenant-governor, Donald S. Whitehea secretary of state, J. D. Price; attorney general, R. E. Smy (appointed to fill term of Robert Ailshie, deceased); audit N. P. Nielson; treasurer, Lela D. Painter; superintendent public instruction, Alton Jones; inspector of mines, Geor McDowell. In Oct. 1949, Gov. Robins appointed former U Senator Henry C. Dworshak to his former congressional po replacing Bert H. Miller (Democrat), deceased, who had d feated Dworshak for the office in Nov. 1948. Miller's electi had necessitated his resignation from the Idaho supreme co bench. C. J. Taylor was appointed to the supreme court su ceeding Miller, and William Keeton was also appointed to t bench to succeed Paul Hyatt, resigned.

As a result of a law enacted during the 1949 session of t state legislature, a bipartisan committee of eight members o "Little Hoover" commission was appointed by the speaker the house and the president of the senate, who were to be officio members, to study governmental reorganization in t state. This commission was to report at a special session of t legislature called in Feb. 1950 by the governor.

Education.—During the operation of Idaho's school district reorgani tion program, which was adopted by the 1947 legislature, 681 school tricts had been eliminated by 1949. Twenty-four of the 44 counties in state had school programs completely reorganized. Of these 24 count 11 were reorganized into county-wide units; *i.e.*, one school district in entire county. Total school population in elementary schools, high scho colleges and universities, in both public and parochial systems, and 2 state institutions for industrial training and for the deaf and bl totalled 134,717 in 1949, in comparison with 132,707 in 1948. A s stantial increase was shown in enrolments, with 90,244 in element schools which had 3,287 teachers. The Idaho Industrial Training sch had an enrolment of 123, and the State School for the Deaf and Blind, The 6 colleges, 1 university and 2 junior colleges had a combined en ment of 9,308.

Social Insurance and Assistance, Public Welfare and Related Programs Idaho has two institutions for the mentally ill—one at Orofino and one Blackfoot; a home for the feeble-minded at Nampa; a school for the d and blind at Gooding; a state industrial school at St. Anthony; a tub losis hospital at Gooding. The prison, located at Boise, had an average 294 inmates during the year 1949, with a capacity of 400. The prison d operated since 1947 under a new penal system, with a rehabilitation ogram and board of correction, rather than as formerly with the governor olding the power of probation and parole.

Communications.—During the period from Jan. 1, 1949, to Oct. 1, 1949, e Idaho highway department expended $2,619,705.38 for maintaining ghways and $6,867,528.66 for construction of highways. It was estiated that during the calendar year 1949 the department would expend o,500,000 for construction and $3,500,000 for maintenance. The 1948 ssion of the legislature appropriated $50,000 for a study of Idaho's highay needs, and a report of the survey and recommendations was to be ade at the special session in Feb. 1950.

Agriculture.—The main sources of income in southern Idaho are potatoes, gar beets, beans, fruit, hay, dairying, sheep and cattle raising.

Table I.—*Leading Agricultural Products of Idaho*

Crop	1949 (est.)	1948	Average 1938–47
heat, bu. (all)	33,325,000	34,583,000	29,316,000

pples, bu.	1,743,000	1,450,000	2,092,000

Manufacturing.—Idaho is not a highly developed industrial state. In 1941 ss than 10,000 employers paid workmen's compensation taxes for slightly ss than 78,000 employees, on an annual pay roll of $85,600,000. In the st quarter of 1948, 12,893 employers had 89,861 employees and an nual pay roll of $233,525,364.

Mineral Production.—Strikes in the Coeur d'Alene mining district held up roduction for several months in the summer and fall of 1949. Figures for 948 production were made available in Oct. 1949.

Table II.—*Mineral Production in Idaho, 1948*

(C. A. Rs.)

llinois. A north central state of the United States, admitted to the union in 1818, nicknamed the "Sucker state," ometimes called the "Prairie state." Total area: 56,400 sq.mi., f which 55,947 sq.mi. are land. Pop. (1940): 7,897,241, includg 3,957,149 males and 3,940,092 females; 7,504,202 white, 93,039 nonwhite.

Population classed as urban in 1940 was 5,809,650, rural not n farms 1,119,488, rural farm 968,103.

As of July 1, 1949, the U.S. census bureau estimated the opulation at 8,489,000, showing a gain of 7% since 1940. hicago (3,632,532, 1949 census est.) is the largest Illinois ity followed by Peoria (120,000, est.); Rockford (105,000, st.); East St. Louis (85,000, est.).

History.—Because of Republican control of the state senate nd demands of pressure blocs for increased appropriations, ov. Adlai E. Stevenson's Democratic administration gained ew of its objectives in the 1949 legislative session. The proosal to call a convention to revise the state's 1870 constituon was defeated although a proposition to make the document ore amendable was to be submitted to the voters for verdict 1950. A total of 971 new laws were enacted but all proposals or tax increases were defeated.

Education.—Illinois public grade and high schools enrolled approxiately 1,250,000 pupils for the fall term in 1949 although many schools ere closed because of a polio epidemic. A total of 7,005 school districts ad been abolished since the end of World War II as the result of conolidations. The legislature increased state aid to local schools by 53%, oting $100,319,000 for the two years beginning July 1, 1949.

The state superintendent of public instruction in 1949 was Vernon L. ickell.

Social Insurance and Assistance, Public Welfare and Related Programs.—The legislature appropriated $265,465,000 for old-age pensions, aid to dependent children, blind assistance and general relief for the 1949–51 biennium. As of Oct. 1949 the Illinois public aid commission reported 4,561 blind receiving an average monthly grant of $48.43. There were 129,308 receiving an average monthly old-age pension of $47.12; 91,554 dependent children receiving an average of $27.51 and 95,257 persons receiving general assistance averaging $28.62 monthly. To avoid a deficit the commission ordered a cut of 5% in aid to dependent children and 10% in general assistance effective Sept. 1.

Investigation by the commission resulted in 2,652 relief cases being dropped at the end of the year and payments reduced in 7,563 cases. Increases were granted in 5,739 cases. One in five recipients was found to be ineligible or overpaid in four months of investigation.

At the end of the year the total number of claimants for unemployment benefits was 151,187 of whom 87,116 were in the Chicago area.

Between April 1 and December 17 compensation payments had been cut off from 76,316 jobless who had collected all their compensation but had not been re-employed.

Communications.—The state highway commission spent $37,425,000 during 1949. The state road system got 688 mi. of new and improved roads, 38 bridges and 12 grade separations. At the end of the year State Director of Public Works Charles P. Casey announced postponement of work on 1,128 mi. of highway because of insufficient funds. Expenditures totalling $70,500,000 were halted, including purchases of rights of way for superhighways in the Chicago area. Federal aid of $40,899,718 was unavailable for lack of money to comply with the requirement that the state match such funds dollar for dollar. The legislature refused to vote a two-cent additional gasoline tax to relieve this stringency.

The Illinois highway system consisted of 125,000 mi. of all types of roads. There were 11,711 mi. of railroad serving about 80% of the communities of the state.

Banking and Finance.—Active commercial banks, stock savings banks and nondeposit trust companies in Illinois numbered 887 with total deposits of $11,814,485,000. Of the total banks 870 with deposits of $11,774,756,000 were covered by the deposit insurance of the Federal Deposit Insurance corporation.

The budget voted by the legislature to carry the state government until June 30, 1951, was $1,252,990,013, highest in the state's history. The legislature also voted $7,477,494 in nonbudgeted items and $65,120,585 in deficiency and emergency appropriations to complete the preceding biennium.

State tax collections increased in 1949. In the first 11 months the 2% sales tax produced $154,357,000, a gain of $2,208,000 over the same period of 1948. Motor-fuel taxes were up $3,009,000 and motor vehicle licences gained by $6,029,000. The cigarette tax dropped $206,000 in the same period.

At the end of November the state's general revenue fund had a balance of $166,335,000. The total bonded debt of the state as of Aug. 31 was $448,021,100 compared with $469,158,500 a year before.

A total of $515,262,630 in trust funds was held in the state treasury Aug. 31 earmarked for unpaid soldiers' bonuses, social welfare obligations, uncompleted contracts, etc.

Agriculture.—Production of the principal crops in Illinois during 1949 and 1948 and the average production during 1938–47 are shown in Table I.

Table I.—*Leading Agricultural Products of Illinois*

Crop	1949	1948	1938–47 Average
Corn, bu.	518,112,000	564,372,000	398,442,000
Soybeans, bu.	82,602,000	80,496,000	59,831,000
Oats, bu.	168,990,000	181,091,000	130,320,000
Wheat, bu.	49,379,000	41,049,000	28,160,000

Manufacturing.—The value added by manufacture to products in Illinois in 1947 was $6,680,137,000, and the number of employees 1,184,820 of whom 954,415 were production workers. Total salaries and wages were $3,585,093,000, wages $2,627,318,000, number of establishments 15,988.

Principal industries and values added by manufacture were meat packing $187,695,000; blast furnaces and steel mills $205,187,000; petroleum refining $101,871,000; tractors $168,844,000.

Table II.—*Production of Coal and Petroleum in Illinois*

	1948	1949 est.
Bituminous coal, net tons	66,500,000	44,090,000
Petroleum, bbl.	64,178,600	42,500,000*

*First eight months.

Mineral Production.—Coal production in Illinois was reduced by 103 days of no work because of strikes, vacations and the three-day work week decreed by the miners' union.

Although much new oil was found by widespread drilling in 1949, the over-all decline of the state's output since the peak of 147,500,000 bbl. in 1940 continued. (L. H. L.)

Illiteracy. In underdeveloped areas of the world 78% of the population was illiterate in 1949; in transitional areas 20%; and in developed areas 5%. Denmark, Germany, the Netherlands, Norway, Sweden, Switzerland and Great Britain reported that 99.5% of their populations were literate. The United States reported 97.3% literate, with 10% or more of the population still functionally illiterate. Efforts to gain public

DR. FRANK LAUBACH, of the Committee on World Literacy, teaching a group of Nigerians to read their native language, Hausa. By 1949, Dr. Laubach had aided more than 60 governments and missions to conduct literacy campaigns in some 175 languages and dialects. Each adult taught was asked to promise to teach another illiterate

support of literacy education for adults were continuing in the United States, and there was continued emphasis on literacy education among the Indians.

France reported a literacy rate of 93% in 1949; Belgium 92%; Ireland 88%; Hungary 85%; Italy 73%; Spain 54%; Portugal 46%. However, in Italy, illiteracy varied greatly from one end of the peninsula to the other. In southern Italy the great majority both of school-age children and of adults were illiterate because of the poor economic and social conditions in that region. A large scale literacy drive was in progress during the year.

In the middle east, Lebanon reported that it had enrolled in elementary school 72.7% of its population as compared with 51.6% in Palestine (Arab); 47.4% in Egypt; 39.4% in Syria; 28% in Jordan; and 20% in Iran.

Salient among the literacy education programs in India was the Bombay experiment, where the problem was multilingual. Work on the ten-year plan initiated in 1946 was gathering momentum. The plan aimed at making all illiterate adults (over 1,000,000) in the city literate within ten years at a cost of approximately $1,500,000. The work was organized in a systematic and practical manner.

A United Nations Educational, Scientific and Cultural organization seminar on the education of adults in rural zones of Asia was held at Mysore, India, in Nov. and Dec. 1949 as part of the literacy campaign.

The U.N.E.S.C.O. project in China launched an undertaking for the preparation of model audio-visual mass education media to the end of permitting the transmission of ideas and fundamental knowledge without the aid of the written word.

An inter-American seminar was held during July and August at Rio de Janeiro, Brazil, for the purpose of studying the literacy situation in the Americas, and of providing leadership training for the literacy campaigns in this area.

In the Caribbean area, Jamaica reported that there was need for alternative and cheaper forms of schools in combating illiteracy.

In Haiti the U.N.E.S.C.O. project in fundamental education showed progress in the production of teaching materials for use with illiterate and newly-literate adults. The Haitian department of labour had assumed some responsibility in teaching workers to read.

In Africa, the Christian mission groups continued to repo remarkable gains in the campaigns against illiteracy. Norther Rhodesia produced a film telling the story of the literacy education work there. The Gaskiya corporation, Zaria, Norther Provinces, Nig., published booklets for children and adults wh were learning to read and was stimulating action for the continued production of such materials and of newspapers. I Algeria, the department of adult education issued a monthl bulletin which gave news of the development of literacy classe as well as practical suggestions for the use of the primer an for lessons in literacy.

In southeast Asia, Frank Laubach conducted his famous wor in literacy education in Thailand and the neighbouring area

Reports from the Republic of the Philippines indicated tha the government was increasingly active in literacy educatio Emphasis was on the "each-one-teach-one" method, with hig school teachers and pupils setting the example.

Immigration and Emigration.

There were about 88 000,000 admissions persons into the United States during the year ended June 3 1949.

Almost 97% of these persons, however, were citizen an alien border crossers, many of whom made frequent crossings.

Arrivals and departures during 1948 and 1949, exclusive border crossers, crewmen and agricultural labourers, were as r ported in Table I.

Table I.—*Arrivals and Departures of Aliens and Citizens*

	1949	1948
Arrivals:		
Aliens admitted	635,589	646,5
Immigrant	188,317	170,5
Nonimmigrant	447,272	476,0
U.S. citizens	620,371	542,9
Aliens debarred	3,834	4,9
Departures:		
Aliens departed	430,089	448,2
Emigrant	24,586	20,8
Nonemigrant	405,503	427,3
U.S. citizens	552,361	478,9

Immigrant aliens, those admitted for permanent residence, umbered 188,317. This was the largest number to be admitted any year since 1930.

Quota immigrants are those admitted under established quo- s from the countries of Europe, Africa and the Pacific, and e colonies and dependencies of those countries. The total au- orized quota for all countries of 153,929 was 73.4% filled as 3,046 quota immigrants were admitted to the United States. ncluded in the number of quota immigrants admitted were 39,- 34 displaced persons, who were admitted under the Displaced ersons act of 1948.

The principal countries from which immigrants came and e classes of admission were as reported in Table II.

Table II.—*Immigrant Aliens Admitted to the United States by Classes and Principal Countries of Birth*

Aliens admitted for a temporary stay and resident aliens re- rning from abroad numbered 447,272, compared with 476,006 mporary admissions in the previous fiscal year.

There were 430,089 aliens who departed from the United ates. Of these 24,586 were emigrants, or aliens who left a ermanent residence in the United States for residence else- here; 22,354 resident aliens and 6 treaty traders planned to turn to the United States after a temporary sojourn abroad, d 383,143 aliens admitted for temporary periods departed for sidence abroad. (*See* also ALIENS; CENSUS DATA, U.S.; REF- GEES.) (W. B. MI.)

Other Countries.—During the period Jan. 1946–Jan. 1949 pproximately 278,000 British emigrated to Canada, Australia, ew Zealand, South Africa and Southern Rhodesia, while more an 4,000 aliens also left the country. About 140,000 British ere registered as desiring to emigrate.

Australia, with an immigration figure which aimed at bring- g the population up to 20,000,000, agreed to accept 12,500 splaced persons yearly, offering them the possibility of attain- g Australian citizenship after five years' residence. The figure t for migration from Great Britain to Australia for the year 49 was 70,000.

Canada expected a total immigration of 100,000 to include ,000 from Great Britain. The government accepted 500 Es- nians from Sweden and, in order to balance the French-Ca- dian population, made especial, but not very successful, efforts secure immigrants from France.

On June 9, 1948, the Israeli foreign minister announced that e new government did not envisage "any measure preventing delaying the entry of Jewish immigrants to Israel irrespec- ve of age or sex." The number of immigrants in that same onth was 1,133. In July 1948 it was 12,687. For the remaining onths of 1948 the average monthly figure was 15,507. For the n months, Jan.–Oct. 1949, the total number of admissions was 1,390. (B. L. B.)

Imports: *see* INTERNATIONAL TRADE; TARIFFS. *See* also under various countries.

Income, Distribution of: *see* WEALTH AND INCOME, DISTRIBUTION OF.

Income and Product, U.S.

According to preliminary estimates, the U.S. national income amounted to $222,000,000,000 in 1949 and the gross national product for the year totalled $259,000,000,000. Both of these comprehensive measures of the nation's economic activity were less than 2% below the all-time highs established in 1948.

Also indicative of the economy's well being in 1949 was the virtual maintenance of personal income at the 1948 level. Preliminary data indicated that personal incomes aggregated $210,000,000,000 in 1949, only slightly below the record total of $212,000,000,000 in the previous year.

The pace of economic activity was not uniform throughout 1949. National income and product continued their upward postwar movement throughout 1948 but turned downward in the first half of 1949. With the recovery of industrial production and construction, there was a general firming in business activity following this moderate downward adjustment.

Meaning of Income and Product Measures.—National income, as measured by the U.S. department of commerce, is the sum of the net earnings of labour and property arising from the current production of goods and services by the nation's economy. It measures, therefore, the total factor cost of the goods and services produced by the economy. It includes income in kind as well as money income, but such receipts as relief, unemployment benefits, pensions and capital gains are excluded since they do not represent earnings derived from current productive activity. The national income consists of compensation of employees, the net income of unincorporated businesses, corporate profits, net interest and the rental income of persons.

Personal income is the current income received by persons from all sources, including transfers from government and business but excluding transfers among persons. Not only individuals (including owners of unincorporated enterprises), but nonprofit institutions and private trust and welfare funds are classified as persons. Personal income differs from national income by the inclusion of transfers (such as relief, pensions and government interest disbursements) which are not in return for current productive services, and by the exclusion of earnings (social insurance contributions, undistributed corporate income and corporate income taxes) which are not actually received by persons in the current period.

Gross national product or expenditure is the market value of goods and services produced by the nation's economy, before deduction of depreciation charges and other allowances for business and institutional consumption of durable capital goods. Other business products used up by business in the accounting period are excluded. The gross national product consists of consumers' purchases of goods and services; the gross output of capital goods retained by private business, including the change in inventories; net foreign investment; and the goods and services purchased by governmental entities.

Distributive Shares of the National Income.—A substantial reduction in the income of farm proprietors was the principal change in the distributive shares of national income from 1948 to 1949. There were comparatively minor changes in the proportions of national income formed by the other broad types of earnings. (*See* Table I.)

Wages and salaries were stable from 1948 to 1949 at a level of $135,000,000,000, as higher average earnings offset a small reduction in the total number of workers employed. Government pay rolls, including civilian and military, advanced from $19,100,000,000 to $20,700,000,000 over the two years, whereas private-industry pay rolls declined from $116,100,000,000 to $114,300,000,000. This small decline was centred in manufacturing, which was the sector in the nation's nonfarm economy most directly affected by the business downturn in the first half of 1949.

Table I.—*National Income by Distributive Shares*
(In 000,000,000s of dollars)*

Nearly all of the 1948–49 decrease of business earnings in the noncorporate sector occurred in agriculture. The aggregate net income of farm proprietors dropped from $18,400,000,000 to $15,000,000,000, chiefly because of lower farm prices. The share of national income (7%) formed by farmers' net income in 1949 was appreciably lower than in the preceding postwar years but compared favourably with that in the war and prewar periods.

The corporate profits component of national income—corporate profits and inventory valuation adjustment—was an estimated $31,500,000,000 in 1949, as compared with $32,600,000,000 in the preceding year. The decline in this measure of corporate earnings was very much less than that shown by corporate profits before tax. The sizable drop in the latter measure, from $34,800,000,000 to $28,800,000,000, reflected very largely the predominant corporate practice of charging inventories to cost of sales in terms of prior-period prices, rather than current replacement prices. In 1948, when prices were rising, the replacement cost of inventories used in production exceeded the reported book cost; and the opposite was true in 1949, when the course of prices was downward. The inventory valuation adjustment—the difference between the book cost and the current replacement cost of inventories used in production—is added reported profits before tax in order to eliminate inventory prof and losses and thus secure a measure of earnings of current pr duction appropriate for inclusion in the national income.

National Income by Industrial Origin.—Estimates of n tional income by industries are shown in Table II. National i come classified by industrial origin furnishes a measure of t net value added by each industrial segment to the net nation output. Viewed from a different standpoint, "income originating measures the earnings of the economic resources utilized in t various industries.

Relative to the all-industry decline of 2%, there was co siderable variation among industries in the rate of incom change from 1948 to 1949. Sizable declines occurred in minin (18%), agriculture (16%) and manufacturing (6%). The were increases of 12%, on the other hand, in government an in communications and public utilities. Comparatively min changes were recorded for the other industrial divisions.

Gross National Product.—The 1948–49 decline in the gro national product was accounted for by a substantial drop in i ventory investment demand. In 1948, when inventories we still rising to meet postwar requirements, there was an inve tory accumulation of $6,500,000,000. In 1949, however, the was a small liquidation of inventories. Aggregate demand f the nation's output for purposes other than inventory inves ment was higher in 1949 than in 1948, in both dollar and re terms.

Business inventories represented the major element of decl in gross private domestic investment from 1948 to 1949. Oth elements of private investment demand—constituting busine purchases of newly produced capital assets, including resident dwellings bought by owner occupants—were reduced in t aggregate only from $38,600,000,000 to $37,200,000,000. Indu trial and commercial building and business outlays for durab equipment declined moderately, but the value of residential co struction completed in 1949 virtually equalled that in the p ceding year.

Table III.—*Gross National Product or Expenditure*

Source: Department of Commerce.

Net foreign investment, which measures the net export goods and services commercially financed, expanded sharply the early postwar period because of the heavy demand for U goods by foreign countries whose economies were disrupted the war. From a negative balance of $1,400,000,000 in 1945 foreign investment rose to a peak rate of $10,200,000,000 the second quarter of 1947. It declined sharply thereafter, t level of $1,900,000,000 in 1948 and to approximately zero 1949. The decline reflected mainly the growing exhaustion foreign dollar and gold resources. It represented partly, ho ever, a shift to U.S. government grants under the Fore Assistance act as a means of financing exports. Exports financed are counted as federal government purchases in gross national product.

Government purchases of goods and services advanced from ,700,000,000 in 1948 to $43,500,000,000 in 1949. Both the eral and the state and local governments contributed to this ansion, which served as considerable offset to the decline in al demand emanating from private sectors of the economy. e sharp rise in federal purchases of goods and services, from ,900,000,000 to $25,700,000,000, stemmed largely from inased outlays for foreign aid and from larger military expendies. Expenditures for goods and services by state and local ernments rose $2,000,000,000, mainly as a result of increases public pay rolls and in outlays for schools, highways and er types of construction.

Expenditures for personal consumption, which account for re than two-thirds of the gross national product, totalled 8,500,000,000 in 1949, virtually the same as in 1948. Since average of consumer prices was somewhat reduced, coner expenditures in real terms were higher in 1949 than in previous year.

Although the total was little changed, there was a marked ft in the composition of consumer purchases from 1948 to .9. Outlays on durable goods were higher in 1949, mainly bese of larger acquisitions of automobiles. Expenditures on vices increased by about $3,000,000,000. Purchases of nonable goods, on the other hand, were reduced nearly $5,000,0,000. About half of the decline was in food and beverage lays, reflecting mainly lower prices, with reduced outlays on arel accounting for most of the remainder.

Disposition of Personal Income.—Estimates of personal ine and its disposition are provided in Table IV. As already

ed, personal income was only slightly lower in 1949 than in preceding year. With the sizable reduction in personal es, reflecting both the lower rates in effect in 1949 and reds on 1948 tax payments, disposable personal income was ually a little higher than in 1948. As a consequence, coners were able in 1949 not only to maintain the volume of ir expenditures for goods and services at the 1948 level, but to save somewhat more than they did in the previous year.

Personal saving amounted to 6% of disposable income in 9. This is in contrast to the saving rate of more than 20% ing the period 1942–45, when wartime shortages and conls and heavy borrowing to finance federal war expenditures ulted in unprecedented personal saving. After the war peral saving declined rapidly, reaching the abnormally low level 3% in 1947. This decline, which reflected the effects of the klog of deferred demand and the accumulation of liquid ets which had been built up during the war, was an impor t stimulus to economic activity in the early postwar period. e subsequent increase in the rate of personal saving to 6% 1948 had a reverse influence. It helped to check inflationary forces at the height of the postwar boom. (*See* also BUDGET, NATIONAL; BUSINESS REVIEW; DEBT, NATIONAL; WEALTH AND INCOME, DISTRIBUTION OF.)

India, Dominion of.

A self-governing member of the British Commonwealth of Nations in southern Asia comprising 9 provinces, 12 centrally administered areas and 9 Indian states' unions. Area: *c.* 1,243,886 sq.mi., including Kashmir. Pop.: (1941 census) 320,387,000, (1948 est.) 342,114,000. As a result of the partition of the Indian subcontinent in Aug. 1947, by the end of 1948 nearly 5,363,000 non-Moslems entered India and about 6,599,000 Moslems migrated to Pakistan. Languages fall into two main groups: Aryan or northern (Hindustani or Hindi, Marathi, Punjabi, Gujarati, Bengali, etc.) and Dravidian or southern (Telugu, Tamil, Kanarese, etc.); on Sept. 14, 1949, the Indian constituent assembly decided to retain English as the official language of the union, to be displaced by Hindi in Devanagari script within 15 years. Religions: mainly Hindu, with Moslem, Christian, Sikh, Buddhist, Parsee, Jewish and other minorities. Chief towns (1941 census): Delhi (cap., 521,849); Calcutta (2,108,891); Bombay (1,489,883); Madras (777,481); Hyderabad (739,159); Ahmedabad (591,257); Cawnpore (487,324); Amritsar (391,010); Lucknow (387,177). Governor general, Chakravarti Rajagopalachari; prime minister and minister for external relations, Pandit Jawaharlal Nehru (*q.v.*). (*See* also PAKISTAN, DOMINION OF.)

History.—The principal event of the year 1949 from the political point of view was the conference of commonwealth prime ministers held in London in April. They came to the unanimous decision that, after becoming a sovereign independent republic in Jan. 1950, India would continue in the interests of world peace to be a full member of the British Commonwealth of Nations. The king would remain the symbol of the free association of its independent member nations and, as such, the head of the commonwealth. This solution of a delicate problem met with general approval. Rajendra Prasad, president of the Indian constituent assembly, expressed the general opinion of the country when he said: "We wish to remain on the friendliest terms with Great Britain, so long as our sovereignty and independence of action are not affected in any way . . . I am personally satisfied with the formula which has been evolved." Under existing arrangements, India would be proclaimed an independent sovereign republic on the next Remembrance day, Jan. 26, 1950. India would be known in future by the ancient Hindu name of Bharat.

The Integration of the States.—The absorption of the princely states reached its final stage under the forcible direction of Sardar Patel. It took three forms: mergers with adjacent provinces, grouping with other states and conversion into centrally administered areas. The two great Maratha states of Kolhapur and Baroda, with a population of 17,500,000 and an area of about 100,000 sq.mi., were merged into the province of Bombay. Twenty-five, including the leading Moslem state of Bhopal, became centrally administered areas, while the bulk of the rest, covering an area of approximately 235,000 sq.mi. with a population of 37,500,000, were integrated into nine unions or groups, each under a *Rajpramukh* or prince president. The most important of these was the Union of Greater Rajasthan. The unification of these proud and independent princes was an outstanding achievement in itself. The maharaja of Bikaner became *Rajpramukh* for life, while the venerable maharana of Udaipur retained his position as titular head. In the far south, Travancore and Cochin were integrated into a single unit. India's constitution, as applicable to the states, was accepted by Mysore.

All this involved radical changes in the status of the states and their rulers. Sweeping administrative reforms, including the integration of finances, were effected; the provinces and states were placed on an equal footing with the centre, and the states' forces were merged with the Indian army. The princes became constitutional rulers, and the limitation of their privy purses meant that their courts were shorn of much of the pomp and ceremony traditionally associated with them.

Hyderabad remained under the occupation of an Indian military force under Gen. J. N. Chowdhury, assisted by a civil administrator, and the ultimate fate of the once premier Indian Moslem state was still undecided. On Nov. 24 the nizam signed an instrument of accession to the Indian union, subject to its subsequent ratification by a representative assembly.

The Kashmir Dispute.—In Kashmir, the year opened brightly with the announcement that a truce had been arranged. No one was more relieved than the members of the two armies, who had engaged with deep distaste in a fratricidal conflict with their old comrades in arms. Representatives of the United Nations conciliation commission arrived in March, and visited the heads of the two governments at New Delhi and Karachi for consultation, and a U.S. naval officer, Adm. Chester W. Nimitz, was appointed plebiscite administrator. Proceedings were to be carried out in three stages: first, a cease-fire was to be proclaimed and the troops were to be withdrawn behind agreed lines; then law and order were to be restored and invaders who had crossed the border during the disturbances ejected; finally, a plebiscite was to be held.

Each side, however, was deeply suspicious of the other and unwilling to forego the military advantages that it had gaine
and matters were further complicated by authorized violatio
of the truce and by irresponsible utterances on the part
political leaders and the press. The main obstacle in the way
an agreement was the uncompromising attitude of the India
government. Pandit Nehru and his advisers persisted in the
claim that the maharaja, Sir Hari Singh, had legally acceded
the Indian union, and that Sheikh Abdullah was *ipso facto* th
head of the government. On these grounds the government
India demanded the disbandment of the Azad forces (the Kas
mir resistance movement) and reserved four seats for repre
sentatives from Kashmir in the Indian legislature. The gover
ment of Pakistan on its part declared that this was prejudgin
the issue. The question of expelling the 2,000,000 Sikh an
Hindu refugees as well as the tribesmen before holding th
plebiscite had been evaded.

Matters reached such a deadlock by the end of August tha
Pres. Harry S. Truman and Prime Minister Clement R. Attle
in the interests of the peace and stability of the subcontinen
sent letters to both governments appealing to them to agree
the United Nations' proposals and accept Admiral Nimitz
arbitrator. On Sept. 17, Pandit Nehru announced that after d
consideration the government of India rejected the United N
tions Kashmir commission's proposal for arbitration.

Communism.—The Communist challenge remained the ou
standing problem for the Indian government. The methods e
ployed were the familiar ones of sabotage, arson and lootin
and the chief aims of the Communists were the capture of
trades unions and the dislocation of the transport system.
mass rising planned for March 5 was forestalled by prompt a
resolute action. One of the main storm centres was Calcutt
where unemployment was heavy. The government was forced
amend the labour laws with a view to preventing strikes
essential services. Matters became so alarming in August th
Pandit Nehru made a series of tours in the worst affected are
and this had a calming effect. But the movement was not co
fined to the cities, and in Bombay and Madras and adjace
districts of Hyderabad it assumed the proportions of an agrar
revolt, on lines only too familiar in Burma and Malaya. La
lords and moneylenders in outlying districts were killed,
the lands redistributed among the peasants.

Trade and Commerce.—Despite these handicaps, considera
industrial progress was made. India in 1949 had seven
transport companies, operating 27 internal schedule servic
Orders for 500 locomotives were placed in Canada and ot
countries, and more than 22 Indian ships, aggregating 150,
tons, were plying between India, America and the United Ki
dom. Large sums were spent by the ministry of rehabilitat
on evacuation and relief, and steps were taken for the lar
scale manufacture of prefabricated houses.

The financial state of the country was generally sound,
in order to carry out its ambitious program, India, like ot
countries, had to raise foreign capital, which could only
done by buying less and exporting more. For this reason I
decided to follow sterling in devaluing the rupee, 75% of
country's trade being with countries in the soft-currency a
Lasting progress was impossible until agreement, especially
the Kashmir dispute, had been reached with Pakistan and
disproportionate military expenditure thereby drastically
tailed. In October and November, Pandit Nehru paid visits
the U.S., Canadian and British governments. In October I
was elected to the U.N. Security council. (*See* also UN

LMS OF 1949.—*India, Asia's New Voice* (March of Time, Forum
ion).

ia, French: *see* FRENCH UNION.

ia, Portuguese: *see* PORTUGUESE COLONIAL EMPIRE.

iana.

An east north central state of the United States
with the popular name of "Hoosier," Indiana was
itted to the union Dec. 11, 1816, as the 19th state. Total
of the state is 36,325 sq.mi., including 314 sq.mi. of inland
s and rivers. The population of the state, according to a
1, 1949, estimate of the U.S. bureau of the census, was
4,000, a 16½% gain since 1940. The 1940 official census
wed the population to be 55.1% urban and 44.9% rural;
% native white, 3.2% foreign-born white and 3.6% Negro. Capital: Indianapolis (pop. 1940, 386,972), the largest city. Other cities: Fort Wayne (118,410); Gary (111,719); South Bend (101,268); Evansville (97,062); Hammond (70,184); Terre Haute (62,693); East Chicago (54,637); Muncie (49,720); Anderson (41,572).

Political History.—The general assembly met in regular session in 1949, with a Republican senate and a Democratic house of representatives. It distinguished itself more for the bills it resisted than for those it passed. Thus, the assembly refused to repeal the public utility compulsory arbitration law, to pass a measure sponsored by the Congress of Industrial Organizations for a state Wagner act, to boost the gasoline tax, to institute a direct primary system, to install a merit system in the department of conservation or to streamline the state government. Legislation that was enacted included a veterans' bonus act, to be financed from an increased state income tax and to be paid when sufficient funds accumulated; four school bills that increased state aid, raised minimum salaries of teachers, prohibited racial segregation and affected local school consolidations; a law permitting sex offenders to be committed to mental institutions; an act for reassessment of real estate, the first since 1932; and retention of central standard time the year around for state offices.

Officers of the state during the year were: Henry F. Schricker, governor; John A. Watkins, lieutenant governor; Charles F. Fleming, secretary of state; F. Shirley Wilcox, treasurer; James M. Propst, auditor; J. Emmett McManamon, attorney general; Deane E. Walker, superintendent of public instruction. All were Democrats.

Education.—The number of public schools in the state in 1949 was 2,311. Enrolment in the elementary or common schools was 484,945, with 13,262 teachers. Enrolment in the high schools (grades 9–12) was 164,194, with 7,100 teachers. Parochial schools had an enrolment of 46,560 in the elementary grades and 8,629 in high school. For the year 1948–49, the state appropriated $53,000,000 for the support of schools, in addition to the sums provided by local units of government. The state provided $17,214,117 for the four state colleges.

Social Insurance and Assistance, Public Welfare and Related Programs.—In 1948–49 the state's welfare program cost $29,275,342, of which $16,385,251 was furnished by federal funds, $7,884,438 by state funds and $5,005,653 by county funds. Old-age assistance cost $22,629,420, blind assistance $880,173, aid to dependent children $5,765,749. In addition, child welfare and committed adults cost $3,590,132 from state and county funds. Receipts of the state for unemployment insurance for the year ending June 30, 1949, were $18,605,810. Benefits paid out were $17,801,410, not including federal payments to war veterans.

In 1949 the state maintained nine institutions for mental patients, including an epileptic village; eight homes, hospitals and schools; and four penal and correctional institutions. As of June 30, 1949, inmates of mental institutions totalled 13,128 and inmates of correctional institutions 5,824.

Communications.—The total mileage of state highways at the beginning of 1949 was 10,482 out of a total of 76,700 mi. of roads in the state. Expenditures of the state highway commission on roads in the fiscal year 1948–49 amounted to $41,212,482. There were 6,600 mi. of steam railroads (first main tracks) and 341 mi. of electric railroads. The estimated number of telephones in the state on Dec. 1, 1949, was 1,100,000. There were 142 commercial airports, 1 seaplane base and 93 personal landing fields.

Banking and Finance.—On June 30, 1949, there were 366 state banks and trust companies with total resources of $1,481,818,165 and total deposits of $1,381,546,750. There were 125 national banks with total resources of $1,687,167,120 and total deposits of $1,580,363,608. State savings and loan companies numbered 167 as of Dec. 31, 1948, with assets of $191,487,211. The assets of the 69 federal savings and loan companies as of Nov. 30, 1949, were $273,786,324.

Leading Agricultural Products of Indiana

Crop	1949	1948	Average, 1938–47
Corn, bu.	247,052,000	285,060,000	196,245,000
Wheat, bu.	39,532,000	38,162,000	27,271,000
Oats, bu.	55,825,000	56,459,000	42,807,000
Soybeans, bu.	33,166,000	32,098,000	20,686,000
White potatoes, bu.	3,900,000	4,140,000	4,756,000
Barley, bu.	550,000	486,000	1,171,000
All tame hay, tons	2,212,000	2,231,000	2,639,000
Tobacco, lb.	15,720,000	14,370,000	10,957,000
Mint for oil, lb.	886,000	1,050,000	
Apples, bu.	1,715,000	1,018,000	1,344,000
Peaches, bu.	794,000	559,000	413,000
Watermelons, melons	2,320,000	2,782,000	
Tomatoes for processing, tons	350,400	568,000	

Agriculture.—The record corn crop produced in 1948 was not equalled in 1949. Tomatoes and mint also declined, but fruit production increased. The hay crop continued its drop.

Mineral Production.—For the year 1948 approximately 10,800,000 tons of coal were taken from 70 shaft mines. About 13,800,000 tons were taken from strip mines. Approximately 7,797,191 bbl. of oil were pumped from 2,954 wells in 1948. (H. H. P.)

Indians, American.

The action of the secretary of the interior in including in the reserves for Alaska natives the fishing waters adjacent to the Karluk Indian village on Kodiak Island had been challenged in the courts by the commercial fishing interests and carried through the supreme court of the United States. The supreme court on May 31, 1949, held that these waters constituted a legitimate part of such a reserve, but stated that the reserves authorized under the 1936 act were of a temporary nature and might be discontinued by congress at any future date without giving the natives any basis for a claim against the government. While the Karluk case was in the courts several bills were introduced in congress to discontinue the establishment of reserves and to abolish the reserves already authorized. None of these bills was passed.

On Nov. 30, 1949, the secretary of the interior authorized the establishment of three more reserves at Barrow, Hydaburg and Shungnak-Kobuk, Alaska, applications for which had been held up pending the outcome of the court action and congressional discussions.

On March 17, 1949, congress authorized the transfer of a former army hospital at Brigham City, Utah, to the Indian service to be remodelled into a boarding school for Navaho children, to relieve in some degree the lack of school facilities confronting about 14,000 children of school age. Later, $3,750,000 was appropriated by congress for the necessary remodelling and new construction to accommodate 2,000 children, making it the largest Indian school in the United States.

On Oct. 3, 1949, congress passed a bill authorizing the expenditure of about $88,000,000 over a ten-year period for the rehabilitation of the Navaho people. During its passage through congress this bill was subjected to several amendments which provided for concurrent jurisdiction of the state courts of Arizona and New Mexico in the administration of law and order on the reservation, recommended the use of the state courses of study in Navaho federal schools and set up certain requirements in connection with the reorganization of self-government on the reservation. Believing that these amendments might work to the disadvantage of the Navaho people, Pres. Harry S. Truma vetoed the bill but instructed the department of the interior an the bureau of the budget to submit as part of the 1951 budge estimates, proposals for the construction of schools, hospital roads and irrigation works, and for the extension of the of reservation placement program, all of which were importar phases of the proposed rehabilitation.

During June the second Inter-American Conference on India Affairs was held at Cuzco, Peru. The conference was to hav been held in 1943, but was postponed because of World War I The United States was again an active participant. The Nation Indian Institute of the United States, the participating repre sentative of the U.S. in the Inter-American Indian institut which was an outgrowth of the first Inter-American Indian co gress in 1940 and which had been allowed by Congress to laps for lack of funds, was revived during the year. The institut undertakes the study of problems of education, health, economi and political development of American Indian population throughout the hemisphere, and co-operates with the variou national and local governments in organizing assistance in th solution of these problems.

On April 14, 1949, Secretary of the Interior Julius A. Kr announced the appointment of John R. Nichols, president of th New Mexico College of Agriculture and Mechanical Arts ne Las Cruces, to be commissioner of Indian affairs. Five mont after taking office, Nichols announced a reorganization of th field staff of the Indian service which resulted in the establis ment of 11 area offices for the more direct administration Indian affairs. These field offices were located at Aberdeen, S.D Albuquerque, N.M.; Anadarko, Okla.; Billings, Mont.; June Alsk.; Minneapolis, Minn.; Muskogee, Okla.; Phoenix, Ari Portland, Ore.; Sacramento, Calif.; and Window Rock, Ariz.

Indonesia, Republic of the United States of.

The republic of the United States of Indonesia (Republik Ind nesia Serikat) came into being on Dec. 27, 1949, when Que Juliana of the Netherlands signed the charter of the transfer sovereignty of the territories of the Netherlands Indies (w the exception of New Guinea; area: 152,089 sq.mi.) to Indonesian people. The republic consists of seven participati states (negara) and nine independent political units (daer Total area: *c.* 583,000 sq.mi. Total pop.: about 70,000,0 Capital: Jakarta (Batavia) (pop., mid-1949 est.: 1,200,00 President of the republic: Achmed Soekarno; prime minis and minister of foreign affairs, Mohammed Hatta; Netherla high commissioner, H. M. Hirschfeld.

The seven negara of the republic are: the Indonesian public, proclaimed Aug. 17, 1945, capital, Djokjakarta; E Indonesia (Indonesia Timur), comprising Celebes, Bali, Lo bok, Sumba, Sumbawa, Flores, Halmahera, Timor and the M luccas, proclaimed Dec. 1946, capital, Makassar; West J (Pasundan), proclaimed Feb. 26, 1948, capital, Bandoeng; Java (Djawa Timur), proclaimed Dec. 3, 1948, capital, Soe baja; Madoera (Madura), proclaimed Feb. 20, 1948, cap Pamekasan; East Sumatra (Sumatera Timur), proclaimed 25, 1947, capital, Medan; South Sumatra (Sumatera Selat proclaimed Aug. 30, 1948, capital, Palembang.

The nine daera are: Central Java, Bangka, Billiton, Rio West Borneo, Great Dayak, Bandjar, South-East Borneo, E Borneo. (For the history of Indonesia in 1949 *see* NETH LANDS OVERSEAS TERRITORIES.)

ndustrial Health. The year 1949 was marked by tendencies toward co-operation between la- our, management, government and the affected professional roups with a view toward acceleration of existing programs nd avoidance of duplicated effort. The public health service of e Federal Security agency appointed an advisory board of epresentation from these major groups to give advice and uidance in the expanding services provided by its division of ndustrial hygiene. The first meeting produced resolutions advo- ating intensified research, testing of materials, field services, reater interest in medical care plans for industrial workers, in e occupational effects of atomic energy, occupational-disease eporting and air pollution. The division also completed an in- ensive investigation of the smog disaster at Donora, Pa. No ingle substance was incriminated but rather a summation of everal atmospheric contaminants, the evidence pointing par- cularly to sulphur dioxide and particulate matter. The report alled attention again to the unsatisfactory state of knowledge bout the toxicological effects of mixed irritant gases. During e year a number of symposiums were conducted on this same ubject by leading medical, engineering and smoke-prevention gencies.

Reduction in industrial accidents assumed new importance rough a conference called by Pres. Harry S. Truman, attended y the leading technical experts who prepared detailed plans for rogress. The bureau of labour standards in the department of bour undertook leadership in this national endeavour. Mean- hile, the National Safety council and the American Medical ssociation appointed a joint committee on accidents.

The demand for qualified industrial physicians stimulated reater interest in training. The American Medical association lso approved the first hospital for residency training in occu- ational medicine. Surveys were completed of industrial medical ducation provided by medical schools and schools of public ealth for undergraduate and postgraduate instruction. Many hysicians were expected to qualify for special certification by e newly created American Board of Preventive Medicine and ublic Health. The *Journal of Industrial Hygiene and Toxi- ology*, after several decades of independent publication, was erged with *Occupational Medicine,* to be published by the merican Medical association as *Archives of Industrial Hygiene nd Occupational Medicine*.

The American Academy of Compensation Medicine assumed ajor significance as a means toward improved medical service injured workers. Legislation in South Carolina, New Jersey, Vest Virginia, Nevada, Delaware, Rhode Island and Utah em- hasized the trend toward general rather than schedule coverage r occupational diseases. New York amended its workmen's ompensation act to provide disability benefits for nonoccupa- onal sickness, a significant departure from practices in several ther states where this form of administrative responsibility ad been assigned to unemployment bureaus. Indiana became e 41st state to adopt legislation authorizing a second injury und. (C. M. Pn.)

Canada.—During 1949, the industrial-health division of the epartment of national health and welfare investigated new con- itions, new processes and new substances which could create ccupational hazards unless workers were protected from undue xposure to them. At the request of provincial health depart- ents, surveys were carried out in several areas and occupa- onal exposures were determined in coal mines, foundries, fer- lizer plants, machine shops and quarries. Medical and labora- ory investigations were made for several departments of the ederal government on lighting, noise and contamination of air y toxic substances.

The health radiation branch of the federal Atomic Energy project reported that the best available method of measuring exposure of personnel to gamma rays was by means of films. Thus every person at the project wore a type-K Kodak dental film, held in a slot behind the photo badge. Additional safeguards in the form of finger and wrist films were used in the chemistry branch of the division of atomic-energy research. As film monitoring provided only for a weekly radiation check, persons who might have received the weekly permissible exposure in less than six days wore a pencil-type ionization chamber.

The most significant 1949 development in aviation medicine was a special intensive course for all physicians conducting flying-fitness examinations for Canadian pilots (for commercial pilots, every 6 mo.; for private pilots, every 12 mo.).

Bibliography.—The Industrial Health Division of the Dept. of National Health and Welfare in co-operation with the Division of Industrial Hygiene of the Ontario Dept. of Health, *A Guide to the Diagnosis of Occupational Diseases*, 1949. (C. Cy.)

Great Britain.—The National Insurance Industrial Injuries act, 1946, came into force on July 5, 1948. The comprehensive act, by including workmen's compensation, both for injury and prescribed industrial diseases, had an important bearing on industrial medicine. The administrative machine of the ministry of national insurance, which dealt with matters relating to injury and industrial disease in place of the legal procedure necessitated by the former Workmen's Compensation act, worked smoothly and fairly.

The 1948 Factories act introduced, for the first time, provision for the medical care of young persons in industry. This was an important step forward and meant that young persons between the ages of 15 and 18 could not only be examined on their entrance into industry, as had been the case before the passing of the act, but would also have a further examination once a year. These examinations took place either in the factory or at the surgery of the appointed factory doctor, a title new in English law.

In the *Annual Report* for 1948 of the chief inspector of factories, reference was made to the incidence of the pneumoconioses (diseases of the lungs caused by the habitual inhaling of minute mineral or metallic particles), and it was shown that there were 885 deaths during the year from asbestosis, silicosis and pneumoconioses. This large number of deaths illustrated only too dramatically the medical, social and industrial magnitude of this problem. A medical research council team working under the direction of C. M. Fletcher at Cardiff, Wales, was doing much to solve some of the major conflicting difficulties which had surrounded the aetiology of this disease. The latest information would appear to be that the heavy incidence of the disease in the anthracite mines of south Wales was due not necessarily to the quality of the dust produced but rather to the quantity produced and inhaled by the miner at the coal face.

The relationship of cancer of the lung to asbestosis and silicosis was demonstrated by E. R. A. Merewether in the *Annual Report* for 1947 of the factory department of the ministry of labour and national service. Of the 235 deaths from asbestosis which occurred between the years 1942 and 1946, inclusive, cancer of the lung or pleura was found to be present in 31 cases (13.2%), an incidence of statistical importance. Comparison was made in the report between the incidence of cancer in asbestosis and silicosis, and an analysis of 6,884 deaths due to silicosis demonstrated cancer of the lung or pleura at postmortem in only 1.32% of the cases examined. Infantile Paralysis.

A progressive increase in the number of cases of poliomyelitis (infantile paralysis) in the United States during 15 years reached a high peak in 1949. The average number of cases per year for the period 1935–39 was 6,784; for 1940–44, 10,885; and for 1945–49, 24,800. The epidemic of 1949, totalling almost 45,000 cases, covered most of the country, whereas previous epidemics were more limited geographically, and the affected areas tended to shift from year to year.

The incidence of poliomyelitis was also unusually high during 1949 in Austria, England, France, Germany, India and New Zealand.

An outbreak of considerable medical interest occurred in the winter of 1948–49 among the Eskimo population in the Chesterfield area just west of Hudson's bay. There was an especially high mortality and paralytic rate (estimated at 5% and 14%, respectively, of the entire population in the Chesterfield area). The infecting agent was identified by laboratory tests as poliomyelitis virus, and it appeared to have been transmitted by clinically healthy human carriers.

Following are recent developments in poliomyelitis research:

In the United States, a virus previously unknown was identified and proved responsible for a human disease so closely resembling the milder types of poliomyelitis that physicians were unable to distinguish between the two diseases. The virus is called the Coxsackie or C virus, named for the village in New York where it was first isolated by G. Dalldorf and G. M. Sickles in 1948. In addition to human beings, this virus is infectious for immature mice and hamsters, but not for adults of the same species. Several immunologically distinct types of it were found, none identical with any of the known types of poliomyelitis virus. It was isolated from flies, from sewage and from numerous human cases presenting symptoms of nonparalytic poliomyelitis. Through 1949 there was no published report of its isolation from any human paralytic case on which concomitant tests for poliomyelitis virus were clearly negative. Poliomyelitis and Coxsackie viruses had been found simultaneously, however, in stools from the same patient.

A continuing major difficulty in the preparation of poliomyelitis vaccines was the necessity of using infected monkey spinal cord as the source of virus. This limits the material available; entails a danger of inducing an allergic inflammation of the recipient's own nervous tissues; and involves technical difficulties in treatment of the material with agents designed to inactivate the virus without destroying its power to stimulate resistance. A possible solution of these problems was found in the successful growth of poliomyelitis virus in cultures of nonnervous human tissues. Two antigenically distinct types of poliomyelitis virus were so cultured, in tissues from the limbs and intestines from stillborn human infants. One type of the virus was also carried through a series of passages in cultures of skin from the prepuce of boys.

A systematic testing of poliomyelitis viruses was started in 1949 and scheduled for completion by 1952. While several hundred viruses were available, each isolated from a different human patient, the only property these were definitely known to possess in common was that each had produced typical symptoms and pathology of poliomyelitis in a susceptible animal. Their relationships to each other were still for the most part undetermined. Of 30 viruses that had been studied through 1949, all fell into three groups. An animal rendered immune to a virus in any one group was similarly immune to all others of the same group, but not to the viruses of the other two groups.

Other studies provided convincing proof that the paralytic consequences of human poliomyelitis may be minimized by bed rest during the early preparalytic stages of the disease. Additional evidence was also advanced to show that the chances of developing poliomyelitis are heightened by pregnancy and by removal of the tonsils and adenoids during a time when the virus is prevalent in the community. POLIO PATIENTS, afloat in the warm water pool at Warm Springs, Ga., as physical therapists re-educated them to muscle control

Infant Mortality.

The long-term downward trend in infant mortality in the United States continued into 1949, with a drop of about 2% from the rate for 1948, according to provisional indications. There were an estimated 113,000 deaths under one year of age in 1948, with an infant mortality rate of 31.8 per 1,000 live births. The infant mortality rate in the United States had been cut to about half within a period of two decades. Despite this record of improvement, the situation was still relatively poor among nonwhite infants who in 1947 (the latest year of complete data in 1949) experienced a death rate of 48.5 per 1,000 live births, as compared with a rate of 30.1 for white infants. Within the United States, the best showing in 1947 was made by white infants in Oregon, with a rate of 24.1 per 1,000, and in Connecticut, with a rate of 24.6 per 1,000. All of the New England, middle Atlantic, north central and Pacific coast states, with the exception of Michigan and Missouri, had lower rates for white infants than the national average; the two exceptions were only a little above the average. The states with records above average were concentrated in the south and in the mountain area. Among white infants in urban centres, the rate per 1,000 live births was 29.9, somewhat lower than the rate of 30.4 per 1,000 for rural areas. In cities of 100,000 or more, the rate was only 27.7 per 1,000.

Taking sex into account, infant mortality rates per 1,000 live births in the United States in 1947 were as follows: white—males 33.9, females 26.0; Negro—males 52.4, females 42.9;

other races—males 70.2, females 61.0. An idea of the marked variation in mortality within the first year of life may be gained by comparing the monthly experience. Thus, in 1947, there were 22.8 deaths under one month of age per 1,000 live births. For the second month of age, the rate was only 2.0 per 1,000; for the fifth month it was 1.0 and for the twelfth month, 0.3 per 1,000.

The principal causes of death in infancy in 1947, with their rates per 1,000 live births, were: premature, 11.1; congenital malformations, 4.6; pneumonia and influenza, 3.6; injury at birth, 3.5; diarrhoea and enteritis, 1.5; congenital debility, 0.5; whooping cough, 0.4; and syphilis, dysentery, tuberculosis and convulsions with 0.1 each. With the exception of congenital malformations, each of these conditions had registered sharp declines in their rates in the brief period since 1940. For example, the rates for pneumonia and influenza and for diarrhoea and enteritis were cut to less than half. All but 2% of the deaths from premature birth and from injury at birth occurred within the first month of life; practically two-thirds of the deaths from congenital malformations fell within that period. On the other hand, only one-quarter of the deaths from influenza and pneumonia were within the first month of life.

Infant mortality was found to be low where the proportion of hospitalized births was high, according to a study by Marion E. Altenderfer and Beatrice Crowther (*Public Health Reports*, vol. 64, p. 311, March 18, 1949). According to this report, the benefits come not from hospitalization per se, but from the aseptic environment, the greater skill available, the facilities for emergencies and the possibility of better prenatal care. The point was also made that the close relation of low infant mortality with high per capita income stems principally from the large proportion of births hospitalized where income is high.

Another report showed little variation in infant mortality from one calendar month of the year to another (*Statistical Bulletin*, Metropolitan Life Insurance Company, June 1949). Although the rates tended to be lowest in summer, the advantage over the other months was small. This was in definite contrast to the situation at the beginning of the century, when the summer rates rose far above the rates for the other months of the year. The principal factor in this changed picture was the sharp reduction in mortality from diarrhoea and enteritis. In New York state, this cause accounted for about one-third of all infant deaths in 1904–1908, as compared with about one-twentieth in 1944–1948.

Canada in 1948 recorded 15,163 deaths under one year of age and an infant mortality rate of 44 per 1,000 live births. The rates were lowest in British Columbia (33 per 1,000), Prince Edward Island (34) and Ontario (35); the highest rates were recorded in New Brunswick (61) and Quebec (54). The infant mortality rate in England and Wales in 1948 was 34.4 per 1,000 live births; the rate for 1949 was about 4% lower, according to provisional data for the great towns during the first nine months. New Zealand in 1948 had the very low rate of 21.9 per 1,000 live births. (*See* also DEATH STATISTICS.)

Insurance.

Life Insurance.—At the end of 1949 nearly 85,000,000 persons owned about $234,000,000,000 of life insurance protection in the legal reserve life insurance companies of the United States and Canada. This was only slightly in excess of one year's income of the United States and Canadian peoples. The premiums paid in 1949 for life insurance and annuities exceeded $7,000,000,000 or slightly more than 3% of the people's income.

Payments made to policyholders and beneficiaries by United States and Canadian companies in 1949 reached a new peak of more than $3,500,000,000. More than half of this went to living policyholders in the form of matured endowments, surrender values, dividends, etc. If the increases in reserves held to assure payment of future benefits are included with payments to policyholders and beneficiaries, then more than $7,000,000,000 was paid or credited in 1949 to United States and Canadian families by the legal reserve companies of the two countries.

In 1949 new life insurance issued exceeded $25,000,000,000 for the third year in succession. The net increase in life insurance outstanding was about $14,000,000,000.

At the end of 1949 the people of the United States also had more than $50,000,000,000 additional life insurance protection, of which about $43,000,000,000 was in United States government and National Service Life Insurance policies and the balance was in policies issued by fraternal and assessment associations, etc. In addition, the social security survivorship benefits were equivalent, in the aggregate, to a very large amount of life insurance.

During 1949 the assets of United States and Canadian legal reserve life insurance companies increased by about $4,000,000,000 to reach $63,700,000,000, of which approximately 93% was held by United States companies. The companies in the United States regained first rank among the major savings depositories of the American people, but the percentage increase since 1942 was less than for any of the other principal types of personal saving.

The opportunity for life insurance companies to invest in productive enterprises continued to be substantial in 1949 but it was somewhat less than in 1948. The United States companies' holdings of corporate securities, mostly public utility and industrial bonds and notes, increased by nearly $3,000,000.000. Their mortgage holdings, mainly on homes and commercial properties, increased by about $2,000,000,000. At the year end, they held more than $23,000,000,000 of corporate securities and nearly $13,000,000,000 of mortgages; these two categories of investments together represented about 60% of all the assets of United States legal reserve companies.

The holdings of United States government securities declined again in 1949 but such securities still totalled about $15,000,000,000 at the end of the year, or more than 25% of the assets of the United States companies. The decline in 1949 was only about half as much as in 1948, partly as a result of the decreased dollar volume of other types of new investments available in 1949 as compared with 1948.

The interest rate earned by the United States companies on their total assets was 2.88% in 1947 and 2.96% in 1948. It was anticipated that the interest rate earned by the companies in 1949 would be close to the figure for 1948. During the latter part of 1949 interest rates obtainable on new investments of funds for policyholders fell, this being in large measure a reflection of the government's easy money policy. (L. A. L.)

Fire Insurance.—The premium income of private companies in the United States showed a smaller increase in 1949 than in the two previous years, with earned volume estimated at $2,750,-

000,000, but the total fire waste for the year dropped more than $40,000,000 below the 1948 experience. The companies, generally, made a profit in addition to their increased equities in the unearned premium reserve, whereas many had underwriting losses on fire insurance in each of the four years which preceded 1948. The losses of those years and an approximate gain of 12% in 1949 averaged about 2% underwriting profit for the companies over the five-year period.

Companies registered in Canada were officially estimated to have written $103,000,000 in 1949, an increase of 5% over 1948 writings, with a loss ratio of 44%. On the basis of incurred losses to earned premiums, this ratio would be increased but would still show a profit for the companies. The year 1949 was an off year for the renewal of three-year term policies on manufacturing and mercantile properties, which accounted partly for the smaller increase in writings, compared with the two previous years.

Marine Insurance.—The year 1949 witnessed a substantial drop in the total marine premiums written in the United States, but underwriters expected that the loss experience would be better than in the previous year. In 1947 and in 1948 the marine premiums of U.S. companies were about three times those written in 1938. The higher values of vessels and increased value of cargoes contributed largely to this result. The world shortage of dollars and the small extent to which U.S. companies participated in the insurance on Economic Cooperation administration shipments, the sale to foreign owners of a large number of government owned vessels and strikes which harassed shipping on the Great Lakes all contributed to a reduced volume of premium writings. During the year adoption for general use of the York-Antwerp rules of 1924 as amended contributed to more uniform average adjusting. During the year two outstanding Marine losses occurred. The burning of the "Noronic" in Toronto, Ont., was one of the worst ship fires on the Great Lakes in a century; one of the largest hull losses ever suffered by marine underwriters resulted from the stranding and breaking up of the British steamer "Magdalena" off the Brazilian coast.

Most such insurance written in Canada is in the field of inland marine insurance. That classification produced an increase of approximately 9% over 1948 in premiums written, with losses estimated at 47½%. Allowing for the reserve for unearned premiums the underwriters anticipated a small profit on these writings. Changes in the supervision of this business, in behalf of underwriters, was expected to improve the experience, particularly in the personal property floater classification.

Casualty Insurance.—Aggregate premiums showed large increases for most companies since World War II, but not all companies showed increases for 1949. The classification produced a satisfactory profit, with the majority of lines profitable in varying degrees. More automobiles were manufactured than in any previous year and this kind of insurance, with more nearly adequate premium rates, produced the largest increase in insurance writings. Bodily injury insurance for automobiles continued to be profitable, and the underwriters expressed hope that rate adjustments would enable them to overcome the disastrous experience of previous years in property damage insurance. The passage of financial responsibility laws in several states during 1949 was expected to stimulate an increase in the number of insured cars.

Workmen's compensation insurance continued to be profitable but it was expected that the reduction of total pay rolls in many industries would cause a falling off of premium income for such insurance.

In Canada automobile insurance, which is not included in the casualty classification, continued to show a loss for the carriers. Expert estimates of the 1949 experience placed the premium increase at 12½% over the preceding year, with losses at 52% of written premiums. Calculated upon premiums earned by the companies, this ratio would be substantially increased, showing a considerable debit balance. A 15% rate increase in all Canadian provinces, effective Jan. 1, 1949, was not sufficient to make this classification profitable. In the province of Ontario a further rate increase for collision insurance on private cars became effective Jan. 1, 1950. All casualty lines in Canada, including automobile, showed an approximate increase of 14% in premium writings with a loss ratio of nearly 50%, which would be higher on an earned premium basis. (*See* also FIRES AND FIRE LOSSES; SOCIAL SECURITY; VETERANS' ADMINISTRATION, U.S.)

(L. E. F.)

Hospital, Medical and Surgical.—Inclusion by U.S. labour unions of health and welfare demands in contract negotiations, notably in the steel and automotive industries, was probably the most significant development in this field during 1949. Acceptance by management of the principle of company-paid welfare benefits provided a new stimulus toward increased prepaid health service through private channels.

At least 17 bills were introduced in the U.S. congress embodying varying approaches to the provision of health care through government, but none was reported favourably out of committee hearings. Those receiving most attention were the Thomas bill (S.1679), the 1949 version of the earlier Murray-Wagner-Dingell bills, supported by President Truman and Federal Security administrator Oscar R. Ewing, the Hill bill (S.1456) to provide care through private plans with government assistance to the states and the Taft bill (S.1581).

Membership in nonprofit Blue Cross hospital service plans reached more than 36,000,000 by the end of the year, while nonprofit Blue Shield plans covered 14,000,000 for surgical benefits and 7,000,000 for medical care. Commercial insurance covered 25,000,000 for some type of hospital benefits, 19,000,000 for surgical benefits and 3,000,000 for medical benefits. Industrial, co-operative and other miscellaneous programs included about 4,000,000 persons for each coverage. Total coverages, therefore, were 66,000,000 for hospitalization, 37,000,000 for surgical and 14,000,000 for medical. Blue Cross plans established Health Service, incorporated to supplement benefits provided by local plans to national accounts, and the Inter-Plan Service Benefit bank, to provide service benefits to subscribers hospitalized away from home on a reciprocal basis. The year was also notable for expansion of the scope of certificate benefits provided by both Blue Cross and commercial carriers.

Continuance of national government health care systems was not an election issue in any country having such a system, although labour governments in Australia and New Zealand, original sponsors of those countries' programs, were defeated. Both major parties pledged continuance of the national health scheme in England.

(A. G. S.)

Great Britain.—Trading results published during 1949 in Great Britain disclosed further expansion in premium income and considerably improved trading results. An analysis of the accounts showed that in 1948 the total premium income from fire and accident insurance combined, for 24 representative British offices, rose by £27,122,000 to £244,224,000, and produced an underwriting surplus of £15,313,000, equivalent to 6.3% of the premiums. Marine premiums were higher by £5,329,500 at £33,382,000, and trading results were favourable.

Total new ordinary life sums assured in 1948 was only slightly below the record figure of £500,000,000 attained in 1947. During 1949, much new business was brought in by the growing popularity of "family protection" assurance and staff pension schemes, but it was evident that the economic pressure on salaries and incomes would leave its mark upon the total new busiless production for the year.

The high level of new business attained by the industrial life offices, which was a feature of 1946 and 1947, was not repeated during 1948, the total new business of eight leading industrial companies, at £188,692,000, being £28,174,000 less than in 1947. It was anticipated that increased national insurance contributions would have at least a temporary restrictive effect upon the flow of new business, and this in a year of decline in the general level of savings proved 1949 one of consolidation rather than of spectacular progress.

Fire losses in the United Kingdom were again heavy in 1949, the experience in farming risks being exceptionally severe because of an abnormally dry summer. The trend of insurance values was to higher levels, consequent upon the continued inflation of values, and coverage against consequential losses following industrial fires was in increased demand. Overseas claims attributable to politically disturbed conditions continued to weigh heavily on the business.

Motor premium income was well maintained, but the high cost of repairs, especially in respect of cars of new design, combined with the heavy sums awarded as damages for personal injuries, rendered trading results variable and delicately poised.

Diminution of marine premium income arising out of the removal of the combined marine surcharge and the effects of the amendment to the Joint Hull Underwriting understanding were more than offset by the increased sterling value of a considerable portion of the premium income following the operation of the new exchange rates during the last quarter of the year.

Plans for the nationalization of the industrial assurance companies and societies—including ordinary life assurance, fire, accident and general business transacted by these institutions—were replaced toward the end of the year by a proposal that industrial assurance should be conducted on the principle of "mutual ownership." Under this modified plan the proprietary companies in the field of industrial assurance would be owned by the policyholders themselves instead of by private shareholders. The outline of the plan left many important questions unanswered.

Interior Decoration.

Trends in interior design and decoration for 1949, like those of the year before, were less notable for any novelties or drastic changes than they were for a continuing high level of professional excellence, both in design and execution. Judged by long-range standards, they could be characterized as broadening, deepening and augmenting many of those phases which had slowly been emerging since the end of World War II.

At the same time, contemporary design advanced in all phases, and it was estimated that in 1949 it could claim a good 40% of all design. This substantial gain, it was believed, could be credited to both manufacturing and retailing. On the part of designers and manufacturers, it indicated new accomplishments in attaining the right results at lower costs. And at the retailing level, a good portion of the new success was believed to be the result of the efforts of the many small shops throughout the United States.

One result of the determined efforts to meet the demands of decorative excellence and lower price was a broadening of the variety of materials used. Essentially, the need was for acceptable materials which presented the lowest initial cost and upkeep. For example, one designer turned to burlap for wall coverings. Shellacked to a fine finish, it not only provided the texture of a fabric but also was easy to clean.

Ordinary hollow red tile, used as a part of the construction as well as for interior decoration, eliminated the need for paint or plaster. Mortar was used to fill in between the tile, and wood strips were added over the mortar to create a variation in decoration; then the tile was varnished, and a handsome and efficient interior wall surface was the result.

Various types of tile for flooring in homes, aluminum sills and baseboards, and plastics and plastic coated materials of all types were added to the list of materials for home use.

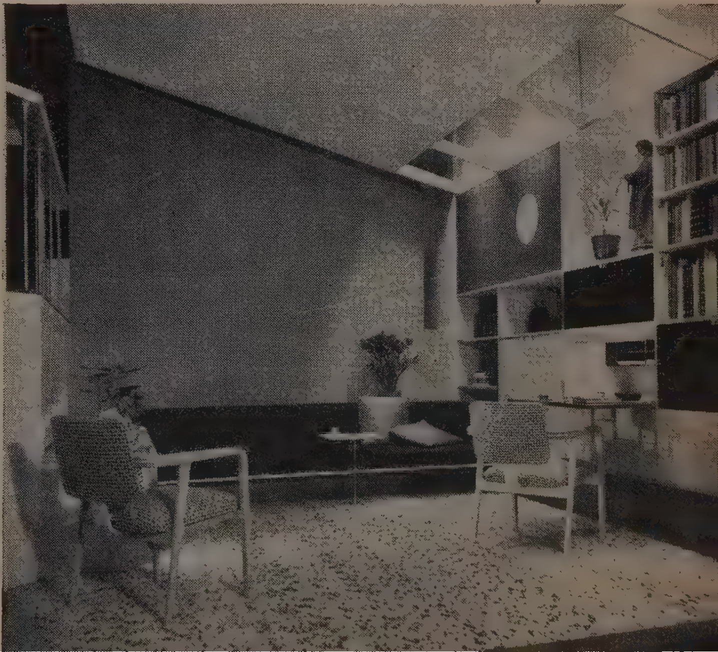
Natural woods in their natural states, neither bleached, stained nor painted, but with a protective coat only, were used in an increasing degree. Woods which had been little used, such as chestnut and beech, or ash treated with gray stain, found increased acceptance, while completely new woods from South America were introduced. Among these last were two that won particular notice, Korina and Alvoro, both tropical woods which were naturally light in colour and did not have to be bleached to achieve a true blond finish. Both had interesting grains and patterns and bore a slight resemblance to mahogany.

New finishes were toward the softer, warmer tones. Various shades of gray, especially in oak and walnut, were popular, and cordovan, a very dark brown, appeared more and more in contemporary dining room groups and occasional pieces.

Furniture design on the whole was lighter, more colourful and less bulky. Many of the designs provided comfort and support, without bulk or mass or weight, through lighter construction and use of metals with wood, with no loss of style and beauty. Pivot furniture, too, emerged from purely industrial and commercial usage to home adaptations and appeared in lounge and occasional chairs often recommended for television settings. Pivot tables were designed to be lowered or raised, to suit home use and convenience, and could also be turned around like the well-known lazy susan.

Basically significant in the construction of furniture was the increased use of foam rubber for upholstery filling. Because it is light and airy and can be shaped in any fashion desired, it fostered an entirely new look in upholstered furniture, one that was trim and tailored in feeling, light and smooth and still

A STUDY with furniture, designed by George Nelson, which formed part of a gallery of interiors at the exhibit "For Modern Living." The exhibit was opened at the Detroit Museum of Art in Sept. 1949



supremely comfortable.

In fabrics, new printed wools for upholstery and new variety in hand-woven textures provided highly decorative possibilities. Plastics and plastic coated materials were improved as were glass fibres and fabrics. Nylon glass curtains appeared in colours as well as in white and in a few beautifully printed patterns. Drapery fabrics of nylon were also introduced in heavier weaves, puckered and shirred for decorative effects.

An interesting innovation for window treatment was the blind made of flexible slats like a venetian blind, but hung vertically instead of horizontally across a window. These could be pulled back at either side to give a full window view. When covered with fabric, they took the place of draw draperies. Match-stick draperies appeared for the window in a modernized form. Made of long, slim strips of the inner core of rattan and held together by woven cotton thread, they were formerly used only as roll-up blinds. The new version could be hung vertically at the window and as draw draperies; they were available in colours as well as in the natural rattan. Like casement cloth they provided a decorative covering for the window without shutting out light and air.

In floor coverings, a significant trend during the past years had been the production of textured floor covering (not imitations but the real thing) in popular and low-priced Axminster weaves. In 1949, entirely at the other end of the price scale were the new Nylon carpets with a silvery sheen, highly decorative and guaranteed for more than a lifetime of hard, heavy wear.

In hard-surfaced floor coverings, the new patterns in plastic materials showed more diversity and style than the first presentations along this line. They were resistant to spots, stains, alkalies and grease and were waterproof and easy to keep clean. A wider choice of colours was also made available.

Newest of all plastic floor coverings was one which looked much like any other type but was manufactured by an entirely new process. The pattern was actually a very thin layer of colour sandwiched between a regular felt base and a coating of tough transparent vinyl plastic. The patterns themselves were reproduced through a photographic process which permitted infinite variety, including exact duplication of rubber or ceramic tile, wood grains and even woven rug patterns in exact patterns and colours.

Of all of the phases of interior decoration, lighting showed perhaps the least change in 1949. Emphasis was still largely on spot lighting, achieved either with concealed light and pin-spots, or with the familiar bullet-shaped fixtures.

(G. M. J.)

International Bank for Reconstruction and Development.

Activities of the International bank expanded greatly during 1949 along two main lines: in the volume of actual loans which the bank granted; and in the substantially increased amount of technical assistance and other services which the bank rendered its member countries.

With regard to lending operations, the bank, from Jan. 1 to Dec. 1, made a total of 11 loans aggregating $206,600,000. The majority of these loans were for the purpose of assisting in the economic development of member nations.

Latin America.—The bank made two loans to agencies of the Mexican government for electric power development. The first loan, of $24,100,000, was made to finance purchases by Mexico's Federal Electricity commission of equipment needed for constructing generating stations, transmission lines and distribution systems in various parts of Mexico. A second loan, of $10,000,000, was made to assist in financing a program for expansion of electric generating and distribution facilities of the Mexican Light and Power Company, Ltd., in the Mexico City area. Both loans were guaranteed by the Mexican government.

The bank made a loan of $75,000,000, which was guaranteed by the government of Brazil, to the Brazilian Traction, Light and Power Company, Ltd., a Canadian corporation, to finance most of the foreign exchange costs of a four-to-five year program for expansion of hydroelectric power and telephone facilities of the company's Brazilian subsidiaries, which operate in the Rio de Janeiro and São Paulo areas. A loan of $5,000,000 was granted to the Caja de Credito Agrario, Industrial y Minero, a developmental institution in Colombia, to finance the purchase of modern agricultural machinery. This loan was guaranteed by the Colombia government.

Europe.—The bank made a loan of $16,000,000 to the kingdom of Belgium to finance imports of equipment for the construction of two privately owned steel mills and a power plant in the industrial district of Liége. A loan of $12,500,000, which was guaranteed by the government of Finland, was made to the Bank of Finland for reconstruction and modernization of wood-working industries, electric power development and expansion of production of limestone powder used in agriculture. Another loan of $15,000,000 was granted to the Finance Corporation for National Reconstruction (Herstelbank) of the Netherlands for 24 projects involving reconstruction or modernization of Dutch industry. This loan was guaranteed by the Netherlands government.

Loans of $2,300,000 and $2,700,000, respectively, were made to the republic of Finland and the federal people's republic of Yugoslavia for the purchase of timber-producing equipment in order to develop the production and export of timber in those countries and enhance east-west trade within Europe.

Asia.—The bank extended its first credits to a member country in Asia when it granted two loans to India. The first loan, of $34,000,000, was made to assist in financing a broad program of railway improvement being carried out by the Indian government, mainly through the purchase of locomotives. A second loan, of $10,000,000, was for the purchase of heavy agricultural machinery needed for the reclamation of weed-infested lands and for clearance of jungle land.

These lending operations brought the total loans made by the bank from the time it began operations to Dec. 1, 1949, to $731,600,000.

The increased tempo of the bank's activity in 1949 was not confined to the granting of loans. As the year ended, the bank was actively investigating additional projects in about 20 member countries. Discussions with a number of other countries were also proceeding to determine how the bank could help most constructively in the solution of their problems. And there was a marked increase in the amount of technical assistance of various kinds furnished to member nations.

At the request of its members, the bank, during the year, sent about 30 missions to member countries in Latin America, Europe, the middle and far east. While the functions of these missions necessarily varied in each particular case, they included mainly the following: examining specific projects proposed for bank financing; assisting a member country in drawing up an over-all development program suited to its needs; or making comprehensive survey of the general economic situation in member country and assisting in designing measures for improving its financial stability and credit standing.

The bank engaged in no direct borrowing operations during 1949. It further developed, however, another type of marketing technique, begun in 1948, by selling from its loan portfolio securities issued to it by borrowers under its loans. During the year the bank sold, with its guarantee, to institutional investor the United States the $16,000,000 of bonds received in conection with its loan to Belgium, and the last $3,900,000 of ortgage notes received in connection with its loans to four utch shipping companies.

The bank's operations for the fiscal year ended June 30, 1949, esulted in an excess of income over expenses of approximately 10,600,000. The total excess of income over expenses since the ank began operations to Sept. 30, 1949, amounted to about 16,800,000.

Membership in the bank was increased to 48 countries with ne admission of Thailand. In addition, membership applications f Liberia and Haiti were approved by the bank's board of overnors, subject to completion of necessary formalities.

At its annual meeting held in Washington, D.C., in September, ne board of governors approved the bank's fourth annual eport. This report stated that an outstanding feature of the ear was the increased attention given to the problem of ecoomic development. It described the bank's objectives in this eld as essentially the same as those announced by Pres. larry S. Truman in the Point Four program. The bank can elp speed the rate of development by both technical and finanial assistance, the report stated, but it cautioned that there is o quick and easy way to raise production levels and living tandards, and that it is only the amount of productive investnent which takes place and not the mere availability of money vhich is important. (*See* also BANKING.) (E. R. BL.)

On July 1, 1949, Eugene R. Black assumed office as president f the International Bank for Reconstruction and Development, ucceeding John J. McCloy, who was appointed U.S. high comissioner for Germany.

nternational Court of Justice.

On April 9, 1949, the International Court f Justice gave final decision in the Corfu Channel case—*United Kingdom* v. *Albania*. It held that Albania was responsible under nternational law for the explosions that occurred in Albanian vaters on Oct. 22, 1946, resulting in the loss of one British estroyer and damage to another with heavy loss of life. The ourt reserved for later consideration the assessment of the mount of compensation to be paid by Albania.

On two other questions raised by the agreement between the arties under which the court was proceeding: *i.e.*, whether acts f the British navy in those waters (1) on Oct. 22 and (2) in weeping the waters about three weeks later, to determine the ature of the explosions, constituted a violation of Albanian overeignty, as contended by Albania, the court decided the rst question in the negative and the second one in the affirmaive. Money damages were not allowed, the court concluding hat its declaration constituted in itself sufficient satisfaction o Albania.

The Court issued an order fixing time limits for the submision of written observations regarding damages claimed by the Jnited Kingdom.

On July 1, 1949, the Albanian agent filed with the court a tatement contending that under the special agreement signed y the two agents on March 25, 1948, the court had solely to onsider the question whether Albania was obliged to pay comensation for the damage done on Oct. 22, 1946, and was not hereby authorized to fix the amount of the compensation or to ask Albania for information on the subject. Albania filed no observations and refused to appear at the hearings held on Nov. 17.

On Nov. 19 the court designated Rear Adm. J. B. Berck and G. de Rooy, both of the royal Netherlands navy, as a committee of experts to examine the figures and estimates filed by the United Kingdom covering loss of the destroyer "Saumarez" and damage to the "Volage." Their report was filed on Dec. 1 and was promptly communicated to the parties, who were given until Dec. 10 for submission of written observations.

On Dec. 6 the United Kingdom government stated that, inasmuch as the experts had concluded that the claim submitted by it might be taken as a fair and accurate estimate of the damage sustained, it did not wish to make further observations.

On Dec. 10, shortly after expiration of the time limit, the Albanian government, which, it will be recalled, had denied the jurisdiction of the court and had refused to submit observations on the claim or to appear before the court at the hearings on Nov. 17, filed with the court a letter stating that it desired to make observations in the form of direct questions to be put to the experts in a session of the court, or, in the alternative, to be given until Dec. 23 for the filing of written observations.

The court declined to accede to this request and on Dec. 15, by a vote of 14 to 2, decreed that Albania should pay to the United Kingdom the sum of £843,947.

Advisory Opinion.—By a resolution of the general assembly of Dec. 3, 1948, the court was asked for an advisory opinion as to:

> 1. Whether in the event of an agent of the United Nations suffering injury in the performance of his duties in circumstances involving the responsibility of a state, the United Nations, as an organization, had capacity to bring an international claim against the responsible government for reparation in respect of damage caused (a) to the organization, (b) to the victim or to persons entitled through him?
> 2. How, in the event of an affirmative answer to point 1 (b) just stated, action by the organization was to be reconciled with such rights as might be possessed by the state of which the victim was a national?

The court gave its opinion on April 11, 1949. It was unanimous in answering question 1 (a) in the affirmative. Eleven judges answered question 1 (b) in the affirmative and four were of opinion that no such capacity existed. They thought that under international law such claims were to be dealt with between the state responsible for the injury and the state of which the victim was a national.

On the second part of the question: *i.e.*, as to how action by the United Nations under point 1 (b) was to be reconciled with such right as might be possessed by the state of which the victim was a national, the same 11 judges were of opinion that since the organization in bringing a claim for damages caused to its agent could do so only by basing the claim upon breach of obligations due to itself, respect for this rule should usually prevent a conflict between its action and such rights as the agent's national state might possess; and that in this fashion "reconciliation" between the claims would be effected. This, they said, "must depend upon considerations applicable to each particular case, and upon agreements to be made between the Organization and individual States."

Pending Cases.—At the close of the year 1949 the following cases were pending: *Colombia* v. *Peru:* a question of asylum and safe-conduct involving a Peruvian national who was given refuge in the Colombian embassy in Peru; *Great Britain* v. *Norway:* involving the extent of Norwegian territorial waters inside which fishery interests may be reserved exclusively for Norwegian nationals; *France* v. *Egypt:* relating to the application of certain Egyptian decrees to French nationals and their property. There were requests by the general assembly for advisory opinions on: the interpretation of provisions of peace treaties between certain Allied and Associated Powers and Bulgaria, Hungary and Rumania; whether the general assembly may admit states to membership in the United Nations without a favourable report from the Security council; and the status of territory of South-West Africa over which the Union of South Africa was given a mandate by the League of Nations. (*See* also International Law; United Nations.)

(G. H. H.)

International Labour Organization. The 32nd session of the I.L.O. conference met in Geneva, Switz., June 8–July 2, 1949, with 550 accredited delegates and advisers from 50 member states. Five conventions and four recommendations were adopted. Three conventions—right to organize and collective bargaining, protection of wages and labour clauses (public contracts)—completed the second discussion of work begun at previous sessions. Two—fee-charging employment agencies and migration for employment convention (revised)—were revisions intended to facilitate wider ratification by giving alternative choices in their application.

In addition to these five conventions, the conference adopted partial revision of three maritime conventions and the four recommendations—labour clauses in public contracts; protection of wages; migration of employment (revised); and vocational guidance. This made a total of 98 conventions and 87 recommendations adopted in 30 years with more than 50 conventions in force.

The director-general's report (David A. Morse's first to the conference) stressed intensification and expansion of I.L.O. work as the complement of its deliberative and legislative function. The report was debated during most of 12 days—more than half the working hours of the conference—by 95 speakers, and its unique feature was a critique of world affairs from the viewpoint of a world-wide tripartite—governments, employers, workers. The new emphasis on operational activities was unanimously approved, as were the quest for universality and wider participation of members in ratification of conventions, regional activities, etc.

Application of conventions and ratifications were debated as matters of major concern at the conference. The total number of ratifications registered was 1,011 as reported by the conference committee in June, later increased to 1,039 (October); but the gain in both 1948 and 1949 was only about 35. The committee of experts said that reports of what was done after ratification of conventions and with recommendations were too few and too late. Both committees and the director-general said that, making due allowance for postwar conditions, this situation was critical and united in an appeal to member states for loyalty and a greater sense of obligations incurred by ratification.

The conference adopted a budget of $5,983,526 for 1950, about $800,000 more than for 1949. The increase was caused chiefly by operational activities in the fields of manpower, technical training and migration.

The governing body held three sessions, the 108th and 109th in Geneva in March and June, and the 110th in Mysore, India, in December, in connection with the postponed Asian Regional conference in Ceylon. The body appointed its own tripartite manpower committees for Europe, Asia and Latin America, and arranged for both separate and joint meetings; authorized the office to convene employment service experts in various regions; and established an I.L.O. field office on technical training in Asia. In response to U.N.'s Economic commission's request, it authorized the office to assist countries to develop systems of training supervisors and instructors within industry, and to convene a tripartite meeting of experts from Europea countries. Assistant Director General G. A. Johnson was appointed treasurer, and Wilfred Jenks, legal adviser, and Lui Alvarado of Peru, assistant directors general. Jenks was to continue also as legal adviser.

Regional activities centred in the fourth conference of American states members of the I.L.O. which met in Montevideo Uruguay, April 25–May 7. It dealt with the life and work o indigenous workers, conditions of employment of agricultura workers, industrialization and the efficiency of the labour forc in Latin American countries, particularly with respect to training and health conditions. (*See* also Child Welfare.)

Bibliography.—*Industry and Labour* appeared in enlarged form, twic a month, separate from the *International Labour Review,* with which i was combined in 1940. The *Legislative Series* appeared in Spanish, English and French. Conference documents numbered about 25 and include timely volumes such as: *Report of the Director-General, Equal Remuneration for Men and Women for Work of Equal Value, Industrial Relations* etc. General reports of the industrial committees were published for inland transport, protection of young workers on inland waterways, technical methods of selection of workers, building, civil engineering an public works, iron and steel, metal trades and coal mines. *Studies an Reports, New Series* comprised: *Labour Problems in Greece, Labou Courts in Latin America; International Standard Classification of Occupations* and *Wages and Payroll Statistics.* Miscellaneous publication were: *Year Book of Labour Statistics, 1947–48,* v. 10; *Law and Practic Relating to Safety in Factories; Third Report to the United Nations*

(S. McC. L.)

International Law. Opinions differed during 1949 o whether the world community wa moving in the direction of world federalism, international cooperation, national sovereignty, regionalism, or bipolarity. A distinguished Austrian jurist, Alfred Verdross, defined internationa law as "the law of the community of states" including both th law among states and the law regulating individual behaviou resting upon international agreement. That community, in hi opinion, had become universal, but was not a world state, and i it should become one there would no longer be "internationa law" (*American Journal of International Law* July 1949, Vol. 4 p. 438). Most international jurists emphasized the co-operativ rather than the federalistic character of the world communit stressing the phrase "sovereign equality" of states in article of the United Nations charter. Some, however, interpreted th growing recognition of the status of the individual as man festation of a movement toward world federalism. Broad inte pretations of the veto and the reservation of domestic juri diction in the charter of the United Nations convinced som that state sovereignty had been little curtailed by new instit tions and principles. Others, noting the development of regiona security arrangements, foresaw a period in which such arrang ments would dominate the world community.

Responsible officials, however, generally considered that th immediate future could be characterized by the split betwe the western and soviet groups of states. There was gener agreement that the situation was dangerous. "To be very co crete," said Charles Cheney Hyde, president of the Americ Society of International Law at its annual meeting, "the iss is this: Is there a means short of war whereby the Unit States and the countries of Eastern Europe under Russian i fluence may be convinced that there is a common and practic means of advancing the real interests of each by a process th shuns war and the use of all instruments of war" (*Proceedin* American Society of International Law, April 1949, p. 5). A bassador Philip Jessup, referring to the adverse attitude of t Soviet Union to the North Atlantic treaty, said the treaty was United Nations answer to the problem of collective security. would, he thought, increase security and further pacific sett ment but added: "We stand ready to cooperate with all who w cooperate. The focus of that international cooperation is, a will remain, the United Nations" (*Ibid.*, p. 16). Studies of t oviet attitude toward the state, sovereignty and international aw, and toward the judicial process, especially as manifested in he war-crimes trials and in the important book by Andrei Y. ishinsky, a translation of which was published under the title *he Law of the Soviet State,* gave little ground for optimism. ommunist theory seemed to assume that international relations ust be subordinate to class rivalries, that justice could only be means to party ends, and that capitalist and socialist societies ould not coexist. Consequently theoretical, in addition to many ractical, obstacles lay in the way of conciliation. Students of oslem international law, however, recalled that the doctrine of he *jihad,* which asserted permanent war between Islam and onbelievers, did not prevent the development of stable inter-ational relations between Christian and Moslem states in ourse of time.

These differing conceptions of the world community were illustrated in the United States by several resolutions introduced nto congress during 1949, each supported by a considerable umber of senators and representatives. Among them was one ntroduced by Sen. Charles W. Tobey seeking to develop the nited Nations into a world federation through amendment of he charter. Another, introduced by Sen. Estes Kefauver, sought o develop the North Atlantic pact into a federation, and another introduced by Sen. Elbert Thomas sought to strengthen he United Nations by a supplementary convention open to all embers, the parties to which would pledge themselves to use orce in collective self-defense against a state found to be an ggressor by a two-thirds vote of the general assembly including hree of the principal powers. It was apparent that jurists and tatesmen alike recognized several possibilities in the development of the world community.

General International Organizations.—The International ourt of Justice gave an advisory opinion in April 1949 at the equest of the general assembly holding that the United Nations ad an objective personality entitling it to make claims, as ould a state, against any state, whether a member or not, responsible for injury to its agents. The opinion was requested in onnection with the assassination of Count Bernadotte in Israel, nd following the opinion of the court the general assembly in he autumn of 1949 instructed the secretary-general to present uitable demands for reparation.

During the year there was much discussion of the authority nder international law of the United Nations to interfere in ivil wars and to recognize new states. President Hyde of the merican Society of International Law stated as one of two ajor problems to consider: "How far, and under what circumstances, has the United Nations or any agency thereof Charter-given authority to check or thwart an independent state, itself a ember of the United Nations Organization, in its effort to uppress a revolution within its domain, or to fix the status of revolting colony that seeks statehood by force of arms?" (*Proceedings,* American Society of International Law, 1949, p. 4). he issue was raised by the action of the United Nations in the ndonesian controversy, and in this instance the United Nations uccessfully asserted its authority.

The limitations which the domestic jurisdiction reservation in he charter (article 2, paragraph 7) imposed upon the United ations in dealing with controversies were also involved in the outh African refusal to observe repeated assembly resolutions equesting her to put the formerly mandated territory of South est Africa under trusteeship and to respect the human and reaty rights of Indians living in South African territory. Juristic pinions differed on the issue. Some held that a state could ithhold a matter from United Nations action by declaring it to e "essentially domestic" while others held that United Nations gencies themselves were free to assume that no matter was in the domestic category if it concerned a subject put within the competence of the United Nations by the charter or regulated by international law or treaty. In practice the organs of the United Nations followed the latter interpretation but certain members, resting on the former interpretation, ignored its recommendations.

WINSTON CHURCHILL speaking at the Guildhall in London, England, after receiving the gold Grotius medal presented by the Netherlands Society for International Law on Feb. 3, 1949; the medal is presented for distinguished services in the causes of international peace or international law

By admitting new states to its membership and by accepting the credentials of individuals commissioned by revolutionary governments to represent members, the United Nations undoubtedly qualified the "sovereign right" of other members to recognize or not to recognize such states or governments. Juristic analyses indicated that many types of assembly resolutions necessarily had important legal effects even though in form they were merely recommendations. This was formally true of the general assembly's resolution in the autumn of 1949 disposing of the former Italian colonies under authority given it by the peace treaty with Italy.

During 1949 the activities of the general assembly made it clear that it could exercise real powers.

The capacity of the United Nations and the specialized agencies to request advisory opinions of the International Court of Justice gave these organizations a practical status before the court. Jurists suggested that it might be advisable to open the court to contentious litigation by these international organizations although that step had not yet been taken.

The trend of opinion, practice and authoritative decisions was to augment the status and power of international organizations, thus qualifying the status of states. Appreciation that this legal position had not always been acquiesced in by members of the United Nations motivated a resolution in the general assembly in December 1949 by a vote of 53 to 5 affirming the obligations of the charter and calling upon the members to co-operate in full with the United Nations organs, to exercise restraint in the use of the veto, and to co-operate to attain regulation of conventional armaments and "to agree to the exercise of national sovereignty jointly with other nations to the extent necessary to attain international control of atomic energy." A further strengthening of the United Nations could be found in the assembly resolution recognizing the competence of the secretary-general to recruit a field service and a panel of observers to aid missions in disturbed areas.

Regional Arrangements.—Opinions varied concerning the status of regional arrangements for collective self-defense, although the permissibility of such arrangements under article 51 of the United Nations charter was generally acknowledged. The western powers had generally favoured the inter-American arrangement established by the Rio de Janeiro convention of 1947 and the western European arrangement established by the Brussels convention of 1948. On the other hand, these powers had been less enthusiastic about the Arab league established in 1944 and had generally opposed the one-sided arrangements concluded by the Soviet Union with its satellites in eastern Europe. The North Atlantic pact concluded in April 1949 was criticized on the political ground that it tended to widen the gap between the west and the soviets and tended to reduce the security of Asiatic states, and on the juristic grounds that it provided no impartial procedure or clear criteria for determining the aggressor, and no workable procedure of review to determine whether a decision on this point, made by the parties, was just. Even the majority of western commentators who supported the North Atlantic pact tended to look upon it as an unwelcome necessity forced by the excessive use of the veto in the United Nations and the evidence of soviet aggressive intent toward western Europe.

States.—Under instructions from the general assembly, the International Law commission of the United Nations approved, by a vote of 11 to 2 (the U.S. and soviet representatives joining in the dissent), a Draft Declaration on the Rights and Duties of States originally proposed by Panamá. The general assembly voted in November to transmit this document to the members for comment. The instrument was subject to much unofficial criticism by jurists from the point of view both of form and of content, though it commanded considerable support. It constituted an effort to state the basic principles of international law in brief paragraphs similar to instruments approved by the American states in the past.

Many traditional problems of international law were dealt with judicially during the year. The Kasenkina case, concerning the soviet employee who jumped out of a second-story window to escape soviet pressures, raised questions of consular immunities. The immunities of national representatives to the United Nations in the U.S. were raised in a case involving speeding by the Chilean representative. U.S. courts held that Valentin Gubitchev, an employee of the United Nations and allegedly still attached to the soviet embassy, was not immune from prosecution on charges of espionage with Judith Coplon in the United States. British courts refused to extradite Gerhard Eisler, a Communist found guilty of contempt of congress for refusing to testify before the committee on Un-American activities partly on the ground that the offense was political.

The trend toward judicial acceptance of executive decisions on matters of immunity, status, privileges, etc., continued in the United States and British courts but was less evident in continental European courts.

The International Court of Justice handed down an opinion on the merits of the Corfu Channel case in April 1949, finding Albania liable for the destruction of British ships by mines in its territorial waters. The court stated the rule of customary international law "that states in time of peace have a right to send their warships through straits used for international navigation between two parts of the high seas without the previous authorization of a coastal state, provided that the passage is *innocent*. Unless otherwise prescribed in an international convention, there is no right for a coastal state to prohibit such passage through straits in time of peace."

The International Law commission began investigating three topics of international law deemed to demand codification—the law of the high seas, of treaties and of arbitral procedure. In connection with the first topic, a whaling convention went into force during the year and several states followed the United States in claiming domain beyond the three-mile limit. By legislation of 1945 the United States had claimed domain in the bottom of the sea as far as the continental shelf. Saudi Arabia claimed six miles, both the bottom of the sea and the sea itself, as had Turkey, Syria and the Lebanon. Most of the Persian Gulf states claimed jurisdiction over the bottom of the Gulf beyond the three-mile limit, and Jamaica and the Bahamas claimed the continental shelf surrounding these islands.

U.S. courts decided that for certain purposes the U.S. bases in Bermuda were "possessions" of the United States, but Okinawa, though occupied by U.S. forces, was not. (*Vermilya-Brown Co.* v. *Connell* 69 S. Ct. 140; *Boer* v. *U.S.* 79 Federal Supplement 405). Great Britain continued its controversy with Chile and Argentina concerning the South Falklands dependency. These countries had refused to arbitrate the title, but had occupied certain islands which they claimed. During the year the western powers recognized the Korean republic (occupying the southern half of Korea) and gave a certain recognition to the German Federal republic including the three western zones of Germany. They retained ultimate power in the Occupation statute, however. Israel was admitted to the United Nations and the general assembly voted in the autumn of 1949 with only five states in opposition to admit nine states to the U.N.—Austria, Ceylon, Finland, Ireland, Italy, Jordan, Korea, Portugal and Nepal. Because of the failure of the Security council, hampered by the soviet veto, to recommend these admissions, the effect of the action was doubtful and an advisory opinion was requested of the International Court of Justice. The Soviet Union had urged that all of these states except Korea and in addition Albania, Bulgaria, Hungary, the Mongolian Peoples Republic and Rumania be admitted simultaneously, but the general assembly rejected the proposal by a vote of 32 to 12

The general assembly in dealing with the former Italian colonies as authorized by the Italian peace treaty decided that Libya should be independent by January 1, 1952, and that Somaliland should be under Italian trusteeship for ten years. It also authorized a commission to go to Eritrea to determine the wishes of the population before June 1950. Division of this area between Ethiopia and the Sudan had been considered.

The general assembly made several decisions in regard to trusteeships and dependent territories. It asked the International Court of Justice to advise on the status of South West Africa, formerly under mandate. It also limited the right of administering authorities to incorporate trusteeship areas in administrative unions with neighbouring territories and decided that the U.N. flag should fly with the flag of the administering authority in trusteeship areas. The assembly also asserted its competence to consider the political development of dependent territories not under trusteeship. These positions were criticized by some of the administering authorities. The general assembly recommended that Jerusalem be internationalized under the United Nations, over the opposition of both Israel and Jordan actual occupation of the city. (*See* TRUST TERRITORIES.)

Individuals.—This topic had become one of the most contro-ersial in contemporary international law. The international law urnals were full of discussions of human rights and inter-tional crimes during the year. In the United States the Uni-rsal Declaration of Human Rights and the genocide conven-on, both approved by the general assembly in 1948 and the tter submitted to the states for ratification, were criticized by e American Bar association. They were vigorously supported the department of state and given wide publicity by the nited Nations and U.N.E.S.C.O. A few states had ratified e genocide convention.

The Human Rights commission of the United Nations pro-uced a Draft Covenant of Human Rights. This instrument ould create legal obligations for ratifying states to observe rtain of the rights asserted in the universal declaration and ould be implemented by committees competent to investigate d give publicity to violations of the covenant. The covenant as to be considered further by the Human Rights commission its meeting in 1950. The general assembly failed to take tion on the proposed Freedom of Information convention. It d, however, consider the alleged violation of human rights in ungary, Bulgaria and Rumania and asked the International ourt of Justice for an advisory opinion on the obligation of ese states to co-operate in the procedure for the protection human rights set up in the peace treaties. These states had leged that the matter was within their domestic jurisdiction.

The International Law commission had on its agenda the awing up of a code on war crimes and other offenses against ternational security along the lines of the Nuernberg charter, d the establishment of an International Criminal Court. The cretariat had prepared a "Historical Survey of the Question of ternational Criminal Jurisdiction" and committees were set to study the matter, but no final action was taken.

While the process of providing international protection for man rights and international punishment for crimes against e law of nations was not likely to achieve positive results for number of years, progress was made during the year 1949. pinion apparently gave increased acceptance to the idea that dividuals are subjects of international law. (*See* WAR CRIMES.)

Methods of Pacific Settlement.—The Interim committee of e general assembly concerned itself particularly with the study methods of pacific settlement in order to carry out the re-onsibility of the general assembly to "initiate studies and ake recommendations for the purpose of promoting interna-nal cooperation in the political field" (article 13). The secre-riat provided the Interim committee with elaborate mem-anda tracing the history of methods of political settlement nce 1920. One result achieved was reinstatement of the Geneva eneral act of 1928 negotiated under auspices of the League Nations. A plan for panels for conciliation and inquiry was so perfected.

So long as the community of nations relied largely on co-eration among its members, with imperfect means of law en-rcement by central authority upon either states or individuals, ocedures of pacific settlement available for voluntary use by ates would be of major importance in international law. The rk of the Interim committee gave renewed emphasis to this pect of international relations developed particularly by the gue conventions of 1899 and 1907.

Status of War.—The Kellogg-Briand pact, the United Na-ns charter, the Nuernberg charter, and the Nuernberg and her war-crimes judgments had made it clear that war, as a ndition during which two or more states were equally free to ilize armed force to solve their controversies, had been out-wed. Under these instruments, as interpreted by governments and international tribunals, governments engaged in hostilities must be either lawful defenders, unlawful aggressors, or governments lawfully exercising domestic jurisdiction or participating in international sanctions. They could not be belligerents in the traditional sense. Nevertheless, hostilities might occur and, whatever the name, would acquire regulation. There was considerable discussion of the "law of war" during 1949. Proposals were made to distinguish "hostile occupation" carried on after unconditional surrender of an enemy, "pacific occupation" carried on in an allied country during hostilities, and "peaceful occupation" carried on in time of peace from "belligerent occupation" carried on in enemy country during hostilities. The prevalence of these varied types of occupation rendered the subject important. Regulation of aerial bombardments, submarine warfare and the taking of hostages was urged. Improvement in the 1929 convention for the treatment of prisoners of war was also considered necessary.

Some writers doubted whether much was to be gained from efforts to revise the laws of war under existing conditions of totalitarian war, but others considered the effort worthwhile. The numerous war-crimes trials had stabilized much of this branch of international law, among other things establishing the illegality of killing hostages. The U.N. War Crimes commission completed publication of 15 vol. of reports of war crimes trials and a history summarizing its activities. These materials together with the publication of the original Nuernberg trial with documents in 42 vol. and the projected publication of the later Nuernberg trials by the department of the army of the United States provided a significant documentation in this field. (*See* also CIVIL LIBERTIES; INTERNATIONAL COURT OF JUSTICE; UNITED NATIONS.) (Q. W.)

International Monetary Fund.

The principal spheres of activity of the International Monetary fund during 1949 related to establishment and revision of par values and exchange rates, exchange transactions, exchange restrictions, multiple currency practices, gold policy and admission of new members. As in the past, the fund provided the machinery for continuous international consultation and co-operation on these varied problems.

With the admission of Thailand the membership of the fund increased to 48 members. Thailand's quota in the fund was established at $12,500,000, bringing the total aggregate quotas up to $8,046,500,000, compared with $8,034,000,000 on Dec. 31, 1948, and $7,921,500,000 as of Dec. 31, 1947.

The use of the fund's resources continued to be governed by the same general policies as in previous years. Exchange transactions with members were submitted to the tests of the various criteria set forth in the fund's Articles of Agreement. As a general rule, countries receiving assistance from the Economic Cooperation administration could request the purchase of U.S. dollars from the fund only in exceptional or unforeseen cases. The following table summarizes the fund's exchange transactions during the year 1949.

Exchange Transactions of the International Monetary Fund, 1949

Country	Sales of U.S. dollars
Brazil	37,500,000
India	31,680,000
Australia	20,000,000
Yugoslavia	9,000,000
Egypt	3,000,000
Ethiopia	300,000

In addition, the fund sold $6,136,000 of U.S. dollars against gold. An important development for the fund was the beginning of transactions in which member countries of the fund repurchased some of their own currencies with gold and U.S. dollars.

The first country to engage in such a transaction was Costa Rica, which, in May, repurchased the equivalent of $874,000 in its own currency from the fund. In subsequent months, similar transactions were carried through by Belgium, Nicaragua and Costa Rica. As of Nov. 30, 1949, the fund held the equivalent of $1,450,563,000 in gold, plus $5,353,629,000 in currencies of member countries, of which $1,289,336,000 represented U.S. dollars.

The year 1949 saw many changes in the par values of member countries. In addition to the establishment of an initial par value for the Yugoslav dinar in May and a new par value for the Mexican peso in June, in September there took place a series of changes in the par values of a number of member countries, beginning on Sept. 18, when the United Kingdom proposed and the fund concurred in the change of the par value of sterling. Within a few days 13 member countries, not including their nonmetropolitan areas, changed their par values. The new par values are given in the following table:

Country	Currency	Date established	U.S. cents per currency unit
Yugoslavia	Dinar	May 24, 1949	2.0000
Mexico	Peso	June 17, 1949	11.5607
United Kingdom	Pound	Sept. 18, 1949	280.000
Australia	Pound	Sept. 18, 1949	224.000
Union of South Africa	Pound	Sept. 18, 1949	280.000
Norway	Krone	Sept. 18, 1949	14.000
Denmark	Krone	Sept. 18, 1949	14.4778
Egypt	Pound	Sept. 18, 1949	287.156
Canada	Dollar	Sept. 19, 1949	90.9091
Iraq	Dinar	Sept. 20, 1949	280.000
Netherlands	Guilder	Sept. 20, 1949	26.3158
Iceland	Króna	Sept. 21, 1949	10.7054
India	Rupee	Sept. 22, 1949	21.0000
Belgium	Franc	Sept. 22, 1949	2.0000
Luxembourg	Franc	Sept. 23, 1949	2.0000

As of the end of 1949, the member countries which had not yet established par values with the fund because it was felt that their domestic conditions did not warrant their adoption were Austria, China, Finland, Greece, Italy, Poland and Uruguay. Thailand, which as stated above had joined the fund during the year, also had not established a par value. In addition, France continued as in 1948 not to have a par value agreed with the fund.

In addition to the establishment of new par values and changes in established par values, a number of member countries in consultation with the fund took important steps to change their exchange rates or their existing systems. These changes did not, however, involve changes in par values. Among the countries which made such changes were Austria, Finland, France, Greece, Peru, Paraguay and Uruguay. These changes usually involved considerable simplification of the exchange rate structure. In France, the new system established uniform exchange rates for all transactions in every currency; however, this rate was not fixed, but would vary in accordance with the rate quoted from time to time on the Paris free market.

During 1949, questions relating to external sales of gold at premium prices and gold subsidies were a matter of discussion with a number of member countries; *e.g.*, Belgium, Canada, Southern Rhodesia and the Union of South Africa. The fund reviewed and decided to maintain its previous policy with regard to external transactions in gold at premium prices.

The fourth annual meeting of the board of governors of the International Monetary fund was held in Washington, D.C., in September. At this meeting the governors considered a proposal of the Union of South Africa to permit, under specified conditions, the sale, by the government of any member, of newly mined gold in any market at such premium prices as might be ruling in that market. After discussion it was agreed that this resolution be referred to the executive directors of the fund for a study of the relevant considerations and report to the board of governors.

At this conference, it was decided to admit Haiti to membership in the fund, with a quota of $2,000,000 and to extend the period in which Liberia might accept membership in the fund.

The activities of the fund involved continuous consultation and advising with member governments, and the maintenance of close contacts with the other international agencies. The fund worked together with a number of these agencies in connection with Pres. Harry S. Truman's Point Four proposal. International Trade.

Preliminary figures for the first nine months of 1949 indicated an increase in the value and the volume of international trade, at an annual rate above that of 1948, and a decline in world export prices. However, the imbalance in the trade of the rest of the world with the United States and the shortage of dollar exchange remained cause for common concern. Although increased effort was exerted by the rest of the world to reduce the high degree of dependence on purchases from the United States, declining exports to the United States and increased imports from that source resulted in trade deficits in the first and second quarters of the year which were larger than the deficit during any quarter in 1948, but considerable improvement took place in the unbalanced situation in the third and fourth quarters.

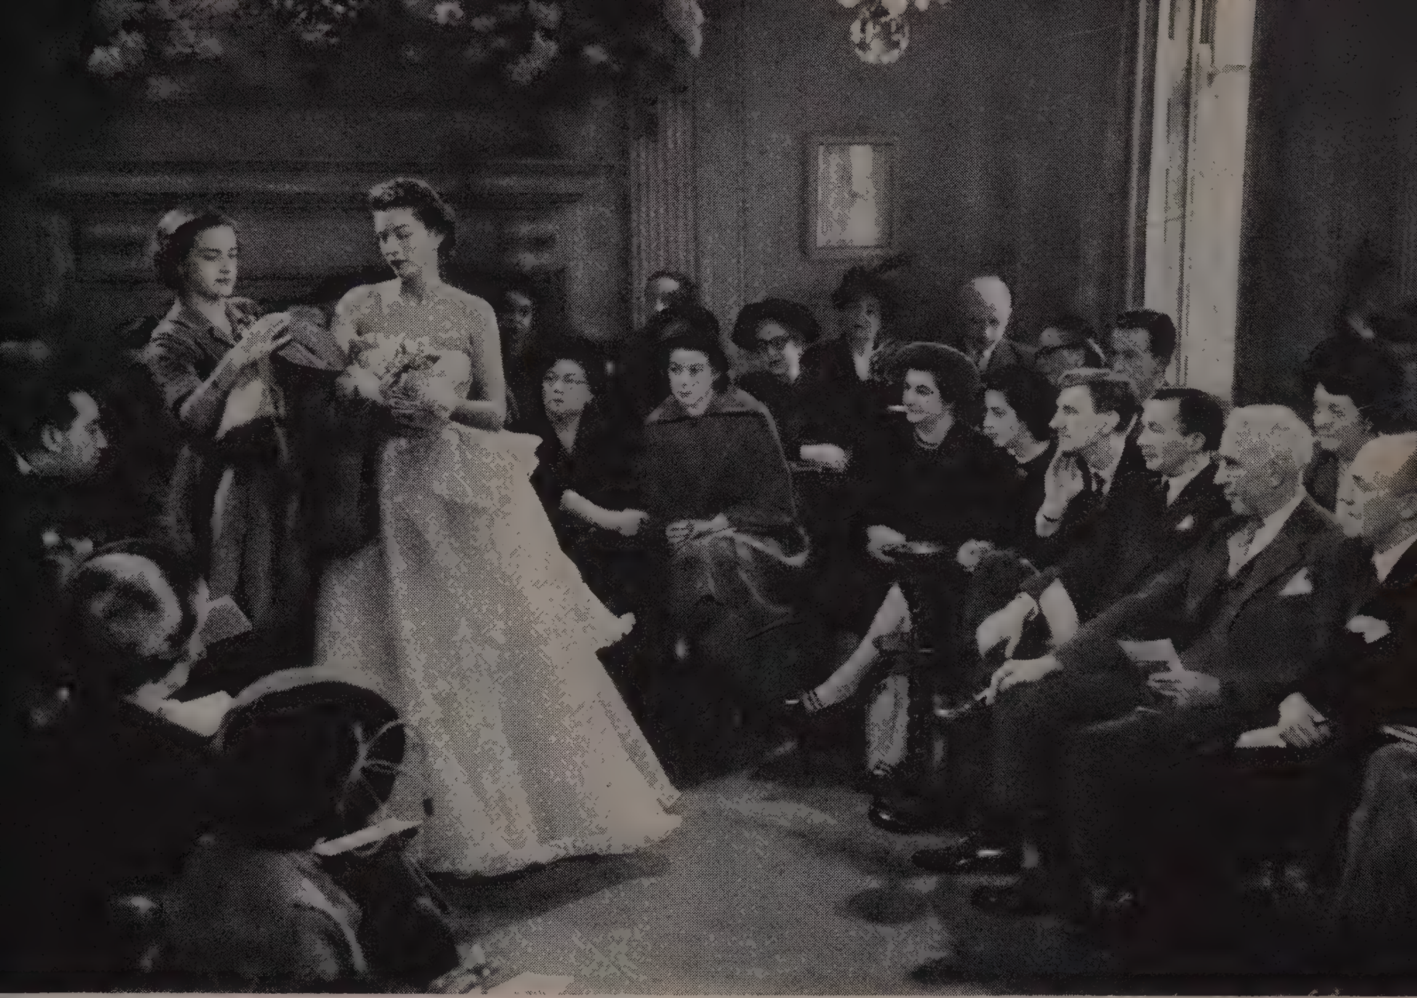
Import and exchange controls were universally maintained in 1949, and many countries intensified their controls, limiting dollar imports to goods of the highest essentiality, and attempted to divert their purchases as far as possible from hard currency to soft currency areas. Declining currency reserves were halted by a wave of currency devaluations beginning with devaluation of the pound sterling on Sept. 18, which carried with it devaluation of the currencies of the rest of the sterling area (except Pakistan). This change was followed by a general realignment of most European and several Latin American currencies. (*See* Exchange Controls and Exchange Rates.)

The stringent world dollar exchange situation was partially alleviated by continued loans and grants. A large part of goods moving in international trade channels continued to be financed in that manner.

Many countries sought to overcome the principal obstacle to trade—currency inconvertibility—by resorting increasingly to bilateral agreements and barter arrangements.

Although increased restrictions on imports were characteristic of the period, the effort to lower tariffs and other trade barriers was continued. At the Annecy conference ten countries seeking accession to the General Agreement on Tariffs an Trade negotiated with each other and with the original contracting parties to the general agreement. The results of the negotiations were contained in the Annecy Protocol of Terms of Accession to the General Agreement on Tariffs and Trade, which was opened on Oct. 10, 1949, at the headquarters of the United Nations for signature by the 33 countries concerned. (*Se* Tariffs.)

United States.—Exports from the United States, although still large in 1949, showed a decline for the second consecutive year. After increasing in the first two quarters, largely because of expanded trade with countries participating in the European Recovery program, over the last two quarters of 1948, they declined sharply in the third quarter, somewhat further in the fourth quarter, and showed a drop of about 6% in total value for the year. An estimate on the basis of January–November data placed the year's total exports at $11,900,000,000, com



RITISH FASHION SHOWING of 1949 model clothes before an audience of verseas buyers. In the spring shows London designers had considerable success extending their export market beyond woollens and tweeds to include vening dresses

ared with $15,340,000,000 in 1947 and $12,650,000,000 in 1948.

The decline from 1948 was largely the result of the downard trend in commodity prices beginning late in 1948 and connuing in 1949. In terms of quantity (which as here used refers the value figure adjusted for changes in the price level), the otal export trade for 1949 was approximately as large as in 948, although in the final quarter of the year it showed a derease of about 10% from the 1948 quarterly average.

Imports into the United States decreased in the first three uarters of the year and despite a marked upswing in the final quarter showed a decline for the year of approximately 7% from 1948. Total imports for 1949 were estimated at $6,600,000,000, compared with $5,756,000,000 in 1947 and $7,124,000,000 in 1948. Although the lower level of prices accounted partly for the drop in value from 1948, the quantity of imports also showed some reduction.

The downward trend in exports and the rise in imports after

the middle of 1949 narrowed the gap between exports and imports to approximately $800,000,000 in the fourth quarter, the smallest quarterly export balance since before World War II. At an annual rate, this quarterly balance amounted to $3,200,000,000, compared with export balances of $9,600,000,000 in 1947, $5,500,000,000 in 1948 and an annual rate of $6,000,000,000 in the first nine months of 1949.

Canada.—Canadian foreign trade continued at a high level during the first nine months of 1949 with exports valued at $2,146,000,000 and imports valued at $2,073,900,000. Exports were $12,200,000 less than during the corresponding period in 1948, while imports were $150,600,000 greater, reaching a level higher than had ever been attained for a similar period. The volume of both imports and exports (*i.e.*, value with the price factor eliminated) was far greater than before World War II. For 1948 the import volume index (1938=100) was 181; the export volume index, 173.

Exports of Canadian merchandise to the United Kingdom were $9,800,000 greater than during the first nine months of 1948, and imports from that country were $23,400,000 greater. The export balance (taking into account re-exports) in the trade with the United Kingdom dropped from $389,200,000 to $288,400,000. In the trade with the United States, comparing the same periods, exports to the United States decreased by $16,600,000 and imports increased by $147,900,000 despite continued exercise of comprehensive import controls. The import deficit in the trade with the United States for Jan.–Sept. 1949 amounted to $431,700,000, $169,000,000 greater than the deficit for the corresponding period in 1948, but $286,500,000 less than the deficit during the nine months period in 1947.

*Excluding gold.
†Imports for consumption.
‡Includes trade with Newfoundland through March 1949. (Newfoundland became the tenth province of Canada on April 1, 1949.)
§Domestic exports.

In spite of increased imports from the United States during 1949, Canadian gold and dollar reserves to the end of September had been held at about the level recorded for the end of 1948—$985,300,000, compared with $997,800,000. The important factor was the expenditure of Marshall plan dollars by European Recovery program countries for off-shore purchasing in Canada. About $450,000,000 in payments was reported in this connection in 1948; more than $300,000,000 in such payments was anticipated for 1949.

Latin America.—Available statistics indicated a decrease in foreign trade of the Latin American republics in 1949 from the record levels attained in 1947 and 1948. However, the 1949 trade was still at a high level compared with prewar years. The lower value of imports in 1949 showed the effects of intensified import and exchange controls. The heavy import demand characteristic of the postwar period continued, but, because of the shortage of gold and dollar exchange reserves, most Latin American countries limited dollar imports to the most essential commodities.

United States statistics showed a drop of 12% in United States exports to the Latin American republics in the first nine months of 1949, compared with the corresponding period in 1948. Many Latin American countries confined their purchases from the United States to current receipts of dollar exchange, derived mainly from exports to the United States.

*January-June. †Not available. ‡January-May. §January-March.

Imports from Europe increased notably in the case of Latin American countries having large export markets in Europe. Trade with Europe was facilitated by a growing number of bilateral agreements, barter transactions and compensation agreements entered into to overcome difficulties caused by inconvertibility of currencies.

Countries which altered their exchange rates subsequent to the devaluation of the pound sterling included Argentina, Uruguay, Paraguay, Peru, Bolivia, Ecuador and British Honduras.

United Kingdom.—The value of the merchandise trade of the United Kingdom continued to reach record levels in the first nine months of 1949. Exports totalled £1,315,000,000, compared with £1,150,000,000 in 1948 for the January–September period. Imports showed an 8% rise in value over 1948, reaching £1,680,000,000 for the nine months of 1949. The volume of exports for the January–September period of 1949 averaged 48% above the 1938 level. This compared with an average volume of 36% above prewar for 1948 and 9% above prewar for 1947. Retained imports were still being held below the 1938 volume, though they were greater than in any postwar year. For the first nine months of 1949 they averaged 87% of the level for 1938. In the year 1948 imports were 81% of the prewar level.

*General imports.
†United Kingdom produce.

The trade deficit with the United States which had narrowed couragingly in 1948 widened again in the first nine months of 49 when imports tended to rise and exports fell off sharply. is situation, together with a worsening of the dollar position the other sterling area countries and a drawing down of the rling area gold and dollar reserves, caused a financial crisis ich led to devaluation of the pound sterling in Sept. 1949.

About 50% of Britain's exports went to the sterling area untries in the first nine months of 1949, compared with 42% 1938. The dollar area (United States, Canada and "Amer-n Account" countries) received about 9% in 1949, but took % in 1938.

Europe.—The total value of imports into ERP countries ring January–June 1949 amounted to $13,100,000,000, an in-ease of 5% over the 1948 half year average; the value of ex-rts from the ERP countries during the same period amounted $9,900,000,000, 16% above the 1948 half-year average. The pansion in exports further narrowed the export-import gap. e trade deficit for the six months was at an annual rate of ,300,000,000, compared with a deficit of $7,500,000,000 in 48. The 1949 trade deficit in terms of real prices was com-rable with the 1938 deficit, and the ratio of exports to im-rts was 76% compared with 75% in 1938. The export-import io in 1948 was 69%, and in 1947 it was 58%.

The heavy dependence of ERP countries upon the United ates as a source of imports showed no indication of decline the group as a whole during the first six months of 1949 mpared with the previous year. Of total imports into ERP untries during the half year period in 1949, 18.4% came from e United States, compared with 18.2% in 1948. The situation came all the more difficult because of the falling off in ex-rts to the United States during the first half of 1949, and the de deficit with the United States grew progressively larger.

To relieve the dollar shortage and sustain imports into ERP untries of essential supplies, the United States continued in 49 to render financial aid to those countries. That aid, through e system of drawing rights, also enabled an increase in trade nong the countries participating in the program.

The trend of European trade in 1948 and the first half of 49 indicated a rise in volume of trade within Europe as well with the outside world. Imports into ERP countries from stern Europe in the first half of 1949 remained at about the 48 level, but exports to eastern Europe increased, bringing the de between the two groups of countries more nearly into lance.

In the fall of 1949 a systematic attempt was made to deal th the problem of intra-European trade restrictions. At the commendation of the O.E.E.C. (Organization for European onomic Cooperation) council in Paris, each participating untry removed quantitative restrictions from a substantial rtion of its import trade originating in member countries. Licences for commodities for which quantitative restrictions were removed were to be either abolished or granted automatically. This development was expected to gain momentum in the early months of 1950. (*See* also EUROPEAN RECOVERY PROGRAM; ORGANIZATION FOR EUROPEAN ECONOMIC COOPERATION.)

Preliminary data.

CHINAWARE BY ROSENTHAL on display in New York city at the U.S. military government exhibit of the wares of 511 west German manufacturers. This first U.S. showing of German goods after World War II opened April 9, 1949

Near East.—In the near east the foreign trade of most countries remained at high levels during 1949. Egyptian trade was greater in the first half of the year than during the first half of 1948. The foreign trade of Turkey was brought more nearly into balance, largely as a result of an increase in exports. Israel's trade showed some expansion, but commercial activity with neighbouring countries was still restricted. The foreign trade of Lebanon and Syria continued at a low level. Iraq's exports and imports were less than in 1948, and strict control was exercised over imports to hold down the adverse balance. Iran's trade position improved as a result of increased exports in the early part of the year.

Southern Asia.—While the foreign trade of southern Asia (India, Pakistan and Ceylon) was at a very high level during the fiscal year 1948–49, being about one-fifth more than in the previous year, a sharp drop occurred in the fiscal year 1949–50. The official import trade (sea-borne) of India during the year 1948–49 amounted to $1,563,000,000, while exports were valued at $1,254,000,000, resulting in an import balance of $309,000,000. Pakistan also had an import balance (sea-borne trade) of $72,000,000, as imports were reported to be $330,000,000 and exports $258,000,000. Those figures, covering only sea-borne trade, do not reflect the over-all trade between the two countries. It was estimated that more than three-quarters of India's imports from Pakistan and about 40% of India's exports to Pakistan were by land trade rather than sea-borne.

The trade impasse between India and Pakistan was brought to a crisis in September when the Indian rupee was devalued, while the value of the Pakistan rupee was retained. Disparity between the two currencies resulted in virtual cessation of trade between the two countries.

During the first nine months of 1949 imports into Ceylon totalled $237,000,000 while exports from Ceylon totalled $229,000,000, and the import balance amounted to $8,000,000.

Far East.—In the far east, civil wars, inflation and a shortage of hard-currency exchange continued to interfere seriously with foreign trade. Throughout the area strict controls were maintained over imports from hard-currency countries. Aid given by the United States to the Philippines, China, Japan and Korea helped to relieve the dollar shortage in those countries. The steady southward advance of hostilities in China during 1949 accelerated the deterioration of that country's foreign trade. Civil strife in Burma, Indo-China and Indonesia likewise interfered with production of rice, rubber, copra, coal, sugar and other exportable commodities upon which those countries depend for foreign exchange.

The foreign trade of Thailand showed some expansion in 1949 over the previous year. Rice exports almost reached prewar levels, and rubber exports exceeded prewar quantities.

Malaya, principal dollar earner of the sterling area, experienced a trade deficit in 1949 which exceeded that of 1948. Imports increased, while exports of tea and rubber declined.

The volume of Japan's foreign trade in 1949 increased over that in 1948, but the adverse trade balance was only slightly less than in the preceding year. On April 25, 1949, a single rate was established for the Japanese yen.

The heavy imbalance which characterized Philippine foreign trade after World War II did not appear to have diminished in 1949. Imports declined by about 6% in value, and exports declined by about 17% from the peak year 1948. Measures were taken, effective Jan. 1, 1949, to curb imports of nonessentials.

Australia and New Zealand.—During the fiscal year ended June 30, 1949, exports from Australia amounted to £*A*547,000,000, 33% greater than the value of exports during the fiscal year ended June 30, 1948; imports into Australia during the same period amounted to £*A*415,000,000, 22% greater than the value of imports during the preceding year. Greatest increases occurred in exports to the United Kingdom, Italy, France and the U.S.S.R. and in imports from the United Kingdom, Indonesia and Sweden. Exports to the United States declined from £*A*35,000,000 to £*A*32,300,000; imports from the United States dropped from £*A*66,800,000 to £*A*41,500,000.

Wool, wheat, and flour represented 60% by value of total exports from Australia in 1948–49. The value of wool exports increased from £*A* 149,000,000 in 1947–48 to a new record of £*A* 232,000,000 in 1948–49, and wheat and flour exports rose from £*A* 85,000,000 to £*A* 102,000,000. Australia continued to dispose of most of its export surpluses under long-term contracts with the United Kingdom. Principal exceptions were wool and wheat, wool being sold at auctions and wheat sales being governed largely by the provisions of the International Wheat agreement.

Imports from dollar areas were subjected to more rigid control because of the continued shortage of dollar exchange and were limited to products of high essentiality unobtainable elsewhere. The operation of that policy resulted in a noticeable diversion of imports of a wide range of products from dollar areas to soft-currency countries. Typical examples were motor vehicles and textiles which were obtained in greater proportions from the United Kingdom.

Exports from New Zealand amounted to £*N.Z.*147,800,000 during 1948, compared with £*N.Z.*129,400,000 during 1947. Imports in 1948 valued at £*N.Z.*128,000,000 were at about the same level as in the preceding year. As in the case of Australia, New Zealand's principal export surpluses continued to be sold to the United Kingdom under long-term contracts.

When the pound sterling was devalued, both Australia and New Zealand devalued their currencies.

Union of South Africa.—In 1949 the government of the Union of South Africa took further steps to arrest the continued decline in the country's gold and foreign exchange resources resulting from its trade imbalance.

Prior to 1949 the foreign trade of the Union, reflecting the postwar economic expansion taking place in the country and the virtual absence of governmental trade controls, had maintained a sharp upward trend. Imports, however, were much greater than exports, and gold output and capital inflow were insufficient to finance the large trade deficit, particularly that part with dollar areas. Consequently, the Union had to draw upon its gold and foreign holdings in alarming amounts. Because of the serious situation, the government imposed import controls on Nov. 4, 1948. The controls prohibited the importation of certain specified luxury or nonessential goods from all countries, and in addition, rationed exchange for imports from nonsterling areas. The resulting shift to sterling countries for a greater proportion of purchases, together with a decline in sterling capital inflow, created an additional shortage for the Union, a shortage of sterling. Consequently, in March 1949 the Union government expanded the list of prohibited imports, and, effective from July 1, 1949, extended its import and exchange controls to cover imports from all sources, including sterling countries.

Devaluation of the South African pound in September was expected to further modify the volume and pattern of the Union's trade. (*See* also BUSINESS REVIEW; INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT; INTERNATIONAL MONETARY FUND.)

International Trade Organization: *see* TARIFFS.

Interstate Commerce Commission. The commission was created by, and functions under, the Interstate Commerce act, originally enacted Feb. 4, 1887, and later amended and substantially broadened. The act now contains four parts, dealing with railroads and rail facilities, motor carriers, water carriers and freight forwarders. Its jurisdiction is limited to interstate and foreign commerce in so far as transportation occurs within the United States.

A change in the membership of the commission, composed of 11 members, was occasioned by the death of Commissioner George M. Barnard in Jan. 1949. He was succeeded by Commissioner Hugh W. Cross of Illinois. Commissioner Carrol Miller died Dec. 24, 1949. Charles D. Mahaffie served as chairman during 1949. J. Monroe Johnson, who, while a member o the commission, also served as director of the Office of Defense Transportation, was named chairman for the year 1950.

Among the more important activities of the commission during the year 1949 were the following:

Section 5a of the act, approved June 17, 1948, commonly known as the Reed-Bulwinkle act, provides for relief to common carriers and freight forwarders subject to the act from operation of the antitrust laws in respect of procedures for joint consideration of rates, fares and related matters established or continued by agreements which have been approved by the commission. The agreement which was the subject of the first decision under this act was submitted by railroads in the western district generally that part of the United States west of the Mississipp river. It provided for a district organization and various area uborganizations. The commission concluded that the agreement necessary to the continued and proper functioning of an essen-ially competitive rate system, and, subject to certain prescribed onditions, is and will be necessary in the effectuation of the ational transportation policy. The order approving the agree-nent became effective Dec. 15, 1949. Applications covering 13 ther agreements had been filed.

Responsive to petitions by rail carriers for increased rates to eet mounting costs, the commission heard and decided Ex Parte 68, granting an average increase of 13% in freight rates on ommodities generally, with important exceptions. These in-luded a number of key commodities, on some of which the uthorized increases were limited to 8%. These increases, cou-led with the general increases authorized in recent years, had he cumulative effect of increasing freight rates an average of bout 57% above the 1939 level.

A number of requests for increases in passenger fares were onsidered during the year. The most important of these was hat of eastern territory carriers; these carriers were authorized o increase fares 12½%. This had the effect of putting the fares n that territory on a higher level than in other sections of the ountry.

Section 20b of the act, approved in 1948, provides for modi-ications of securities of railroads without the necessity of bank-uptcy proceedings. Under this legislation modifications ap-roved by the commission and assented to by not less than 75% f each class of the securities affected become binding on minor-ty holders. Among the readjustments under that section which vere approved during 1949, the most notable were those of the ehigh Valley Railroad company and of the Central Railroad Company of New Jersey. This statute supplements section 77 of he Bankruptcy act, which the commission, in conjunction with he United States courts, had administered since 1933.

Hearings were commenced in the so-called government repara-ion cases, covering a group of complaints filed in the name of he United States which assailed as unreasonable the rates harged by railroads on wartime traffic. Large amounts of eparation were sought. On completion of the government's resentation in chief and of the carriers' testimony, the hearings vere adjourned until March 1950, for rebuttal by the govern-nent. (C. H. MA.)

ntestinal Disorders: *see* ALIMENTARY SYSTEM, DISORDERS OF.

ntoxication, Alcoholic. Leadership in the educational aspect of the problem of alco-olism continued in the hands of such agencies as Alcoholics Anonymous, the Committee on Alcohol Hygiene and the Na-ional Committee for Education on Alcoholism with its local ommunity affiliated associations. The National Committee was ided by the Yale Plan on Alcoholism, of which it became part. ts work had been augmented by the Summer School of Alcohol Studies, conducted since 1943 by the laboratory of applied hysiology of Yale university, New Haven, Conn. Two separate ut equivalent school sessions were held in 1949, one at Yale nd the other at Trinity university, San Antonio, Tex.

The literature for 1949 re-emphasized that both physiological nd emotional factors are important considerations for evalu-ting the phenomenon and nature of acute intoxication from lcohol and the relationships which the latter bears to the ventual development of habitual drunkenness. Reports con-inued to support the principle that effective application of a rogram for the solution or amelioration of the chronic alcohol roblem must embrace the triad of education, research and reatment. The treatment of alcoholism had become, in large measure, a public responsibility, to be met by providing community clinics, hospital services and other facilities for therapy; the training of personnel to undertake the duties involved; the application of measures for social readjustment of alcoholics; and the maintenance and operation of a commitment centre for intractable alcoholics. During 1949 a public-supported hospital of 50 beds with accommodations for approximately 400 outpatients, to be devoted solely to the study, treatment and rehabilitation of alcoholics, was authorized by the state of Connecticut to be erected at Hartford.

The use of Antabuse for treatment of chronic alcoholism was first reported in Danish medical literature in the late autumn of 1948 and subsequently in English medical literature for 1949. Antabuse (tetraethylthiuram disulphide) had long been known in the chemical industry as ethyl thiurad, an unrefined item of commerce for the rubber industry. For some years it had been observed that industrial workers with this compound tended to develop an intolerance for alcohol.

When administered alone in doses up to 2 g., the substance usually caused no discomfort. When a small quantity of alcohol is consumed at the same time, however, the two substances combine to form acetaldehyde in the body, and with it an attendant unpleasant reaction characterized by increased pulse rate, raised cardiac output and increased pulmonary ventilation and by flushing of the face, sweating, abdominal distress and nausea and vomiting.

These effects are produced within 7 to 12 min. after the ingestion of alcohol, reaching their height in about 30 min. No means of controlling the severity of the reaction had yet been devised in 1949, and its indiscriminate use among alcoholics was not free from danger. Daily doses of the drug alone over a period of several months produced no untoward symptoms or ill effects. Nevertheless, normal persons who ordinarily show little if any effect after the ingestion of 10 to 20 g. of alcohol present circulatory and respiratory symptoms after having taken 1.0 to 1.5 g. of Antabuse on the preceding day.

Experimental studies on the use of myanesin (tolserol) in the management of anxiety, gross tremulous states or "the shakes" following a prolonged alcoholic debauch were reported upon in 1949 to the effect that these symptoms were controlled within 30 min. to 1 hr. after the drug is administered. The drug had heretofore been used as a muscle relaxing agent to alleviate spasticity and rigidity, with variable results.

The use of adrenal cortical extract in the treatment of acute alcoholic states was also reported in 1949. Its use was based upon the premise that the craving for alcohol is to be explained by a series of symptoms similar to hyperinsulism but which leads eventually to those of hypoglycemia. Further observation and study were necessary to substantiate this premise. Inhalation of pure oxygen for the treatment of all problem drinkers including patients with delirium tremens and hallucinosis was also advocated.

The year also witnessed an increased trend in U.S. courts to admit chemical tests for blood alcohol concentration as evidence of alcoholic intoxication among those involved in motor vehicle traffic accidents. (*See* also LIQUORS, ALCOHOLIC.)

Iowa. Iowa, popularly known as the "Hawkeye state," was admitted to the union in 1846. Located in the north central region, it comprises 56,280 sq.mi., of which 294 sq.mi. are inland water surface. According to the federal census estimate for July 1, 1949, the population was 2,643,000, an increase of 105,000 over the 1940 census figure. Of this number, 99.3% were white and 94.7% native-born. The capital and largest city is Des Moines, with a 1940 population of 160,000. Other chief cities are Sioux City, 82,364; Davenport, 66,039; Cedar Rapids, 62,120; Waterloo, 51,743; Dubuque, 43,892; and Council Bluffs, 41,439. The state has 90 places classified as urban (towns of more than 2,500 population); 21 of these have populations of more than 10,000.

History.—The elective state officers, all Republicans, in 1949 were: governor, William S. Beardsley; lieutenant-governor, Kenneth A. Evans; secretary of state, Melvin D. Synhorst; attorney general, Robert L. Larson; auditor, Chet B. Akers; treasurer, John M. Grimes; secretary of agriculture, Harry D. Linn; superintendent of public instruction, Jessie M. Parker.

The Iowa general assembly met in biennial session in 1949, convening on Jan. 10 and adjourning on April 20. There were 79 Republicans and 26 Democrats in the house; 43 Republicans and 7 Democrats in the senate. During the session 1,157 bills were introduced, 316 of which were passed. The appropriation bill, providing for the expense of government departments, totalled $8,348,843.50 per year for the next biennium. For payment of the World War II soldiers' bonus, voted on favourably by the people in the 1948 general election, $50,000,000 was appropriated from the state surplus and $35,000,000 in bonds was authorized. A yearly appropriation was also voted for the operation of the three state schools and the school for the deaf at Council Bluffs, the school for the blind at Vinton and the state sanatorium at Oakdale—the appropriation being $16,973,177. The assembly also voted to increase the remuneration of its members from $10 to $20 per day.

Education.—During 1949 Iowa had 7,500 public elementary schools, 860 public high schools, 23 public junior colleges and 7 private junior colleges. The number of teachers and superintendents in the public schools in 1947–48 was 22,787.

There were 25 colleges and universities in the state in 1949, most of which were privately endowed or supported by various church organizations. The state supports three institutions: the state university of Iowa at Iowa City; the Iowa State College of Agriculture and Mechanic Arts at Ames; and the Iowa State Teachers college at Cedar Falls.

Social Insurance and Assistance, Public Welfare and Related Programs.—The 1949–50 state appropriation for old-age assistance was $13,000,000; for aid to dependent children, $1,575,000; for child welfare, $220,000; for emergency relief, $30,000; and for aid to the blind, $350,000. The total old-age assistance payments of the state for the year ending June 30, 1949, was $28,946,323, of which $15,423,222 was contributed by the federal government. Total aid for dependent children for 1948–49 was $3,737,784; for child welfare, $272,664; for the blind, $835,253; for emergency relief, $164,482.

Contributions to the state unemployment insurance fund, as of June 30, 1949, totalled $9,947,111; during the fiscal year 1948–49, $3,959,582 was paid out of this fund in benefit payments; an increase of $1,544,485 over the fiscal year 1947–48. The reserve fund, as of June 30, 1949, totalled $7,800,056.

The state penal and correctional institutions, as of Nov. 30, 1949, had the following inmates: state penitentiary, Fort Madison, 1,172; men's reformatory, Anamosa, 764; women's reformatory, Rockwell City, 72; training schools for boys, Eldora, 174; training school for girls, Mitchellville, 101. The state has four hospitals for the insane—at Cherokee, Clarinda, Independence and Mount Pleasant—with a total of 5,915 patients as of Nov. 30, 1949. In addition, there were 63 county homes for the insane with 1,882 patients, plus 6 privately operated hospitals with a total of 694 patients.

Communications.—In 1949 Iowa had 9,737 mi. of primary roads; 6,505 mi. of paved highway; 926 mi. of bituminous surfaced roads; and 2,274 mi. of gravel roads. The state highway commission, for the fiscal year 1948–49, spent $12,729,390 for construction and $6,903,671 for maintenance.

The state is served by 12 major railroads with a total of 8,731 mi. of track in 1949. In 1948 these roads carried 6,261,075 passengers and 101,909,548 tons of freight. There were 353 mi. of electric interurban roads in the state; during 1948 they carried 829,823 passengers and 4,475,779 tons of freight. The number of passengers carried by motor bus during 1948 was 26,475,995. There were, in 1948, 110 mi. of oil pipe lines, 1,260 mi. of gasoline pipe lines and 1,616 mi. of natural gas pipe lines.

In 1949, 78% of all Iowa families had telephones, and 85% of all farms had telephones. There were 43 radio stations in 24 cities in the state. A television station, the first in the state, was opened late in the year by WOC in Davenport. There were 70,000 mi. of electric transmission lines in Iowa in 1948; 80% of the farms had electricity.

Banking and Finance.—There were, as of June 30, 1949, 558 state banks, 10 private banks and 98 national banks in Iowa, making a total of 666. Besides the 558 state banks, there were 163 bank offices, 204 small loan licencees and 204 credit unions under the supervision of the state banking department. Total assets of state banks on June 30, 1949, were $1,546,423,190; total deposits, $1,445,844,346; total capital stock, $30,353,000.

The revenue received from all taxes in Iowa for the fiscal year ending June 30, 1949, was $146,039,451. Of this total, 32.9% was from the state's 2% sales tax; 17.1% from the gasoline tax; 12.1% from motor vehicle licence fees; 11.5% from individual income taxes; 5.8% from state liquor store profits; 5.4% from use taxes assessed on articles purchased outside the state; and the balance from miscellaneous taxes. There was no state debt.

Agriculture.—There were 202,153 farms in Iowa in 1949, compared with 213,318 in 1940. These farms had a total acreage of 34,725,282; the average size was 171.8 ac. Of the total Iowa farms, 48.7% are owner-operated and 51.3% tenant-operated.

The total cash income of Iowa farmers in 1948 was $2,365,481,000, of which $2,009,470,000 was from livestock, $345,263,000 from crops and $10,748,000 from government payments. On Jan. 1, 1949, there were 30,919 auto trucks on Iowa farms; 212,790 tractors and 72,757 mechanical corn pickers, all figures showing an increase over the 1948 figures.

Table I.—*Leading Agricultural Products of Iowa*

Crop	1949	1948	Average 1938–47
Corn, bu.	553,847,000	677,056,000	507,760,000
Oats, bu.	238,222,000	273,870,000	183,472,000
Wheat, bu.	7,856,000	7,393,000	4,547,000
Rye, bu.	168,000	264,000	494,000
Potatoes, bu.	1,100,000	1,430,000	4,062,000
Hay, tons	4,855,000	3,913,000	5,629,000
Popcorn, lb.	31,500,000	54,860,000	54,788,000
Soybeans, bu.	28,778,000	35,190,000	25,894,000

The greatest proportion of Iowa's corn crop was fed to livestock. On Jan. 1, 1949, there were on Iowa farms 10,836,000 hogs, 4,769,000 cattle, 1,044,000 sheep, 291,000 horses and 7,000 mules.

Manufacturing and Industry.—There were 3,936 manufacturing plants in Iowa employing in Oct. 1949 145,800 persons. The average weekly wage in 1948 was $51. The total value of manufactured products for 1948 was estimated at $2,000,000,000, an increase of $350,000,000 over the figure for 1947.

Table II.—*Principal Mineral Products of Iowa*

Mineral	1946	
	Quantity	Value
Cement	6,145,326 bbl.	$11,312,627
Clay	696,704 tons	7,715,916
Coal	1,554,000 tons	5,579,000
Gypsum	560,094 tons	1,172,500
Stone	5,162,540 tons	6,646,27
Sand and gravel	7,938,572 tons	3,059,792

Mineral Production.—Iowa ranks 29th among the states in the value o its mineral products. The latest official production figures available i 1949 were for 1946. (M. TE.)

Iran. (PERSIA). An independent kingdom of western Asia. Iran is bounded on the east by Pakistan and Afghanistan, on the north by the U.S.S.R., on the west by Turkey an Iraq and on the south by the Persian gulf and Arabian sea. Area c. 634,413 sq.mi. Pop. (no census ever taken, 1948 est.): 17,000,000. Language: mainly Persian, but some Turki and Armenian in the north, Kurd in the west, Arabic in the south an Pashtu in the east. Religion: mainly Shiah Moslem but th Kurds (750,000) are Sunni; there are also c. 50,000 Gregoria Armenians and a few thousand Catholic Armenians, 40,000 Nestorians and 80,000 Jews. Chief towns (1948 est.): Tehran (cap 850,000); Meshed (250,000); Tabriz (214,000); Isfahan (205,000); Abadan (150,000); Shiraz (129,000); Resht (122,000) Hamadan (104,000). Ruler, Shah Mohammed Riza Pahlavi prime minister, Mohammed Said Maraghei.

History.—On Feb. 4, 1949, while the shah was distributin prizes at the Tehran university, an attempt was made on hi e by a member of the left-wing Tudeh party. The assailant, khr Rai, who fired several shots at close range, injuring the ah in the lip and back, was attacked by the crowd and died ter reaching the hospital. Martial law was declared, many deh members were arrested and the party was dissolved. The ah recovered from his injuries shortly after the attempt.

On Feb. 12 the soviet government protested to Iran against atements in *majlis* (parliament) that the Tudeh party was cked by the U.S.S.R. and that the soviet government was in-erfering in the internal affairs of the country. Replying to the viet note, the Iranian government called attention to the viet radio propaganda directed against Iran; and objection s made to the assertion that Iran was under U.S. military mination and had become an American base. It reiterated e fact that U.S. officers in Iran were merely paid advisers.

In the first week of March the *majlis* passed a new press act ereby insults to the royal family and heads of foreign states which there were reciprocal provisions, blasphemy against lam and instigation to revolt could be promptly punished.

The Imperial Bank of Iran, whose concession granted 60 ars previously expired at the end of Jan. 1949, reached an reement with the government whereby the bank would in ture operate under ordinary laws, depositing with the Bank elli Iran (national bank), free of interest, all deposits in cess of two-and-a-quarter times the amount of capital em-oyed in Iran by the bank and selling a further £1,000,000 to e government as exchange. The bank's name was subsequently anged to the British Bank of Iran and the Middle East.

On May 9, revising the constitutional law of 1906, the *majlis* fined the procedure for future constitutional amendments and ve the shah the limited right to dissolve *majlis* with the ap-oval of the senate (which, though provided for in the consti-tion, did not hitherto exist).

In June two middle-eastern statesmen paid official visits to an. Liaquat Ali Khan, the prime minister of Pakistan, was e first; he was followed by Emir Abdul Illah, the regent of aq. These visits were rounded off by that of King Abdullah of rdan who paid a state visit on July 28. The exchange of urtesies and views of these middle-east rulers with the shah d his government strengthened the bonds of friendship and llaboration existing between these Moslem countries.

After protracted negotiations between the Iranian government d representatives of the Anglo-Iranian Oil company for an crease of royalties payable to Iran, agreement was reached d on July 19 the minister of finance presented to *majlis* a bill nbodying the agreement. The bill provided: (1) that from 48 the royalty on oil be raised from 4*s.* to 6*s.* a ton and that e company pay £3,360,000 in respect of 1948; (2) that the ex-se on oil be raised from 9*d.* to 1*s.* a ton and the company to y £600,000 in respect of 1948; (3) that the company should y 20% of its profits from general reserve, reckoned as before duction of British income tax instead of after deduction of x as hitherto, and to pay £5,000,000 in respect of 1948. The ajlis was dissolved at the end of June before a vote could be ken on the oil agreement.

The 1947 monetary agreement with Great Britain dealing th the convertibility of Iranian sterling credits into other rrencies for imports obtainable in Britain was extended for other year.

During October and November elections for the 16th *majlis* d the new senate were held all over the country.

On Nov. 16 the shah flew to Washington on an official visit at e invitation of President Truman and addressed both houses congress. He returned home on Jan. 2, 1950.

Education.—(1938) Schools 8,381, pupils 457,236, teachers 13,078. ere is one university at Tehran.

Finance and Banking.—Budget estimates (1948–49): revenue 7,755,000,000 rials; expenditure 8,398,000,000 rials; (1949–50) 7,705,000,000 rials; expenditure 10,835,000,000 rials. National debt (Dec. 1948): 5,400,000,000 rials. Currency circulation (July 1949): 6,120,000,000 rials. Gold reserve (July 1949): U.S. $140,000,000. Bank deposits (July 1949): 7,960,000,000 rials. Monetary unit: rial with an exchange rate Nov. 15, 1949, of 32.5 rials to the U.S. dollar.

Foreign Trade.—Imports (1948–49): 5,440,000 rials. Exports, including oil exports of the Anglo-Iranian Oil company (1948–49): 18,990,000 rials. Principal imports: sugar, cotton piece goods, metals and metal products and tea. Principal exports: oil, rugs, dried fruit and nuts and medicinal plants and seeds.

Transport and Communications.—Roads (1949): 17,000 mi., of which 8,000 mi. were suitable for vehicles. Licensed motor vehicles (Dec. 1948): cars 9,800, commercial vehicles 11,600. Railways (1948): 1,750 mi.

Agriculture.—Main crops (in metric tons): wheat (1948) 1,700,000; barley (1948) 600,000; cotton (1948) 22,000; rice (1948) 424,000; sugar (1948) 46,000. Livestock: sheep (March 1948) 13,000,000; goats (1946–47) 6,800,000; cattle (March 1946) 2,500,000; horses (1946–47) 350,000. Wool production (1948–49) 11,000 metric tons.

Industry.—Fuel and power (in metric tons): coal (1948 est.) 150,000; crude oil, production of the Anglo-Iranian Oil company (1948) 25,270,000. Raw materials (in metric tons, estimated annual production): copper ore, 1,000; sulphur 600; red oxide 10,000; arsenic ore 500. Cement production (1946) 35,000 metric tons.

Iraq.

An independent Arab kingdom of Mesopotamia, Iraq is bounded by Syria, Turkey, Iran, the Persian gulf, Saudi Arabia and Jordan. Area: *c.* 116,600 sq.mi. Pop.: (1935 official est.) 3,560,456; (Oct. 1947 census): 4,794,449. Chief towns (pop. est. 1946): Baghdad (cap., 832,927), Mosul (279,361), Basra (181,814). Religions: Moslem (91%). Languages: Arabic 67%, Kurdish 25%, Persian 3%, Turki 2%, others 3%. The Sunni Arabs are the ruling class. Ruler, King Feisal II (born May 2, 1935); regent, Crown Prince Abdul-Ilak; prime minister Gen. Nuri Pasha es-Said (to Nov. 7); from Dec. 10, Ali Jawdat al-Ayyubi.

History.—On Jan. 6, 1949, the government of Muzahim al-Pachachi resigned and was succeeded by one headed by Nuri Pasha es-Said, who at once sent messages to other Arab governments announcing the determination of Iraq to continue action to free Palestine and strengthen the Arab league.

On Feb. 14–15 Yusuf Salman Fahad, secretary-general of the Communist party of Iraq, and three other Iraqi Communist leaders were sentenced and hanged after conviction by a court martial of activities aimed at destroying the foundations of the state and instigating elements of the Iraqi armed forces to join their subversive organization. A number of further arrests of Communists and others was subsequently reported.

The cabinet was reshuffled on March 18, Abdul Ilah Hafidh being replaced at the foreign ministry by Fadhil Jamali, who as Iraqi minister in Cairo had been due to attend the meeting of the Arab league council there on March 17 but had been urgently summoned to Baghdad instead.

The prime minister's visit to Syria (*q.v.*) in April, followed by the statement that Iraq and Syria would stand together against aggression, was connected by many with the press reports that credited him with a plan to unite Syria with Iraq under King Feisal II and a council of regency. This was known as the "fertile crescent" plan, in distinction from the Greater Syria plan of King Abdullah of Jordan. In a parliamentary statement of May 3, the Iraqi foreign minister said his country's foreign policy was based on maintaining the independence and safety of Iraq according to the principles of the Arab revolt. The recent coup d'etat in Syria was a domestic affair, but Iraq would welcome unity with Syria if Syria desired it. Iraq's attitude to the Arab league was based on its character. He accused the secretary general of the league of having "given himself authority" which was not his by right. This was believed to have been prompted, among other things, by Abdul Rahman Azzam Pasha's visit to Husni ez-Zaim the day after Nuri Pasha's visit and the dictator's subsequent repudiation of all plans of union. Iraq, he said, favoured revision of the statutes so as to curtail the powers of the secretariat and to encourage bilateral alliances among the member states.

In a foreign policy statement of June 1 the prime minister told the Iraqi senate that he would send Muzahim al-Pachachi to Cairo to discuss Iraqi-Egyptian differences. With Great Britain, he said, it was necessary to negotiate a new treaty; but Iraq preferred to participate in a general pact grouping the Arab independent powers, like the North Atlantic treaty. They had been opposed in 1920–21 to the division of the Arab countries into Lebanon, Syria, Iraq and Palestine and regarded the division as exclusively imperialist. It was therefore surprising that the unification of these regions today should be called an imperialist project.

No agreement had been reached on the resumption of oil pumping through the pipe line to the Haifa refineries, and oil pumping had still not been resumed by the end of November.

It was officially announced in Baghdad on Aug. 28 that while in London that same month, Prime Minister Nuri Pasha had secured loans totalling £10,500,000, of which £3,000,000 were from the London market for the Iraqi state railways, £4,500,000 from the International Bank for reconstruction schemes up to 1952 and £3,000,000 free of interest from concessionary oil companies.

The additional 16 in. pipe line from Kirkuk to Tripoli was completed and oil began to flow on Aug. 1.

The Iraqi forces in Palestine were withdrawn during March and April and the Iraqi military government in the Jenin-Tulkarm area handed over to the Jordanian authorities. Iraq was not represented at the Palestine armistice negotiations at Rhodes, where Jordan negotiated on its behalf, nor at the meeting with the U.N. Conciliation commission in Lausanne, Switz.

On Nov. 7 Nuri Pasha resigned and on Dec. 10 a coalition government was formed under the premiership of Ali Jawdat al-Ayyubi, with Muzahim al-Pachachi as deputy prime minister and minister of foreign affairs.

Education.—Schools (1946–47): elementary, 1,057; pupils, 143,070; teachers, 5,627; intermediate and secondary, 151; pupils, 20,424; teachers, 1,174; technical, 48; students, 7,756; colleges, 7; students (excluding the engineering college), 3,644; institutions of higher education, 10.

Finance and Banking.—Budget: (1949–50 est.) balanced at 25,000,000 Iraqi dinars. Currency circulation: (Aug. 1949) 35,400,000 dinars; (Aug. 1948) 33,500,000 dinars. Bank deposits: (Aug. 1949) 12,000,000 dinars; (Aug. 1948): 12,100,000 dinars. Monetary unit: Iraqi dinar at par with the pound, on Dec. 15, 1949=$2.80 U.S.

Foreign Trade.—(1948) Imports: 46,000,000 Iraqi dinars; exports, including oil: 20,000,000 Iraqi dinars. Principal imports: cotton piece goods, iron and steel, machinery and sugar. Principal exports: oil, dates, wool and cereals. Main sources of supply: United Kingdom 43%; United States 7%; Italy 6%. Main destinations of exports (excluding oil): India 19%; United Kingdom 17%; United States 13%.

Transport and Communications.—Roads: 4,200 mi. Licensed motor vehicles (Dec. 1948): cars, 6,130; commercial vehicles, 7,600. Railways (1946–47): 966 mi.; passenger-miles, 392,000,000; freight net ton-miles, 377,000,000. Air transport (1947): miles flown, 787,451, passenger-miles, 3,868,787. Telephones (1947): subscribers, 13,043.

Agriculture.—Main crops (metric tons, 1948): barley 588,000; wheat 327,000; rice 370,000; dates (1947) 305,000; tobacco (1949) 4,000; cotton 1,000. Livestock (Dec. 1946): sheep 8,000,000; cattle (1945) 866,000; asses 435,000; horses (Dec. 1945) 198,000. Wool production (1948–49): 11,000 metric tons.

Industry.—Crude oil (1948): 3,427,000 metric tons.

Ireland, Northern.

Northern Ireland comprises the six counties of Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone; it forms part of the United Kingdom of Great Britain and Northern Ireland, but (from 1920) has its own parliament and executive (with limited powers for local purposes) although it is represented in the imperial parliament by 13 members. Area: 5,238 sq.mi. Pop. (Dec. 31, 1948, est.): 1,365,000. Chief towns (pop. est. 1948): Belfast (cap., 450,000); Londonderry (49,000); Bangor (19,000). Language: English. Religions (1937 census): Roman Catholic 33.5%, Presbyterian 30.5%, Episcopalian 27%, Methodist 4.3%, etc. Governor, Earl Granville; prime minister, Sir Basil Brooke.

History.—Sir Basil Brooke, the prime minister of Northern Ireland, had announced that there would be a general election on Feb. 10, 1949, in order that the voters could respond to the British government's assurance that the status of Northern Ireland would not be changed unless its people so wished. Sir Basil had visited Clement Attlee in London to get this assurance when Eire declared its intention of becoming an independent republic. The Nationalist opposition maintained that Sir Basil was rushing the election before the new electoral register came into force on April 1 so as to disfranchise a large number of possibly hostile voters. The campaign in Belfast, which is not noted for quiet elections, was even bitterer than usual. When the wrangling was finally over the Unionists were seen to have triumphed utterly. They were returned with 37 seats instead of their previous 35; the Nationalists secured 9 (previously 8); Independent Unionists 2, Independent Labour 1, Socialist Republican 1 and Independents 2 were all unchanged; the North of Ireland Labour party which had 3 seats was wiped out.

(R. KX.)

Education.—(1947–48) Schools: elementary 1,656, pupils 185,418; secondary 77, pupils 21,973; technical 115, students 30,124. The Queen's University of Belfast: professors and lecturers 216, students 2,685.

Finance and Banking.—Budget: (1948–49) revenue £60,306,286; expenditure £38,712,828; (1949–50 est.) revenue £65,057,000; expenditure £44,995,000. Expenditure figures exclude contribution toward imperial expenditure estimated at (1948–49) £21,500,000 and (1949–50) £20,000,000. Public debt (March 1949): £28,666,725. Currency circulation (July 1949): £11,087,282. Ulster savings certificates (Sept. 1949): £41,335,686. Trustee savings banks deposits at Belfast (Nov. 1949): £44,147,148. Commercial bank deposits (June 1948): £101,107,000.

Transport and Communications.—Roads (1947) 13,000 mi. Licensed motor vehicles (Aug. 1949): cars 41,572, commercial vehicles 16,743; Railways (1947): 644 mi.; passengers carried 17,411,803; goods 2,095,637 tons. Belfast airport (1948): flights 6,283, passengers flown 81,884, cargo carried 605,812 lb., mail 639,206 lb. Telephones (1947): subscribers 37,067. Radio receiving set licences (1947) 173,505.

Agriculture.—Main crops (metric tons, 1948): oats 398,000; potatoes 1,693,000; wheat 4,800; barley 6,600; dredge corn 7,400; hay 792,000; Livestock (June 1949): cattle 980,000; sheep 645,000; pigs 458,000; horses 55,000; goats and kids 9,600; asses 5,500; poultry 24,237,000. Food production (1948–49): sales of milk 80,000,000 gal.; eggs 74,000,000 dozen; pork 373,000 cwt.; mutton and lamb 95,000 cwt. Shipments to Great Britain (1948–49): milk 18,600,000 gal.; eggs 32,000,000 doz.; meat 752,000 cwt.; bacon and ham 131,000 cwt.; poultry 140,000 cwt.

Industry.—Electricity sales (1948): 467,000,000 kw.hr. Value of exports of linen goods to the United Kingdom for 12 months ending Sept. 30, 1948: £18,800,000.

Ireland, Republic of.

An independent republic covering five-sixths of an island to the west of Great Britain. Area: 26,602 sq.mi. Pop.: (1946 census) 2,953,452; (mid-1948 est.) 2,997,000. Language: English c. 76%, Erse (Gaelic) c. 24%. Religion: Roman Catholic 93.4%; Chief towns (1946 census): Dublin (cap., 506,635); Cork (75,361); Dun Laoghaire (44,689); Limerick (42,987); Waterford (28,332). President, Sean Thomas O'Kelly; prime minister John A. Costello.

History.—It might seem unimportant that the Irish government celebrated New Year's day by announcing that white bread of a prewar standard would once again be allowed in the shops. True, the bakers received this offer with stony refusals claiming that the 75% extraction flour was too expensive, bu the gesture was typical of the government's efforts to return to a state of life unrestricted and decontrolled. John A. Costello's inter-party government, largely composed of the conservativ Fine Gael, reiterated in the words of its minister for industry and commerce, Daniel Morrissey, that it "intends to preserv the system of private enterprise in industry." That such policy was possible in 1949 was perhaps caused by the fact tha large wage increases granted after the Emergency Powers standstill order was repealed in March 1946 had raised the earning index to a point almost exactly level with the cost-of-living index. Retail prices remained constant for over a year. And so although the prices of clothing and of whisky rose during 194 hen they were decontrolled, though interest rates rose as banks ied to draw in the horns of credit, there was comparatively ttle labour trouble in the republic. The January dockers' strike n Dublin's deep-water port and a six-week strike in the freight epartment of Coras Iompair Eireann (Irish Transport comany), during August and September, caused some inconvenince but were not indicative of any deep unrest.

The government's outstanding problem was to curb inflation hile embarking on the most expensive investment schemes the ountry had ever experienced. A ten-year housing scheme was xpected to cost £100,000,000; another £17,000,000 was to proide hospital accommodation for a further 2,540 beds; James Dillon, minister for agriculture, announced a project to reclaim ,000,000 ac. of unproductive land in ten years at a cost of 40,000,000. Yet all the signs were not pointing to inflation. In he seven months ending in June 1949 savings bank deposits ncreased by more than £2,000,000 and there was also a big ecovery in savings certificates. But John Costello pointed out n November that current savings might not be enough to nance the capital investment to which his government was ommitted and stated that Irish sterling assets in the United Kingdom, whose net total was then about £225,000,000, might ave to be transferred for use at home. There was a possibility, e said, of a separate capital budget in 1950.

Side by side with the government's believers in private enterrise and in state enterprise, marched the cabinet's left wingers, elievers in state welfare; and they found the going harder. After some delay and much toil William Norton, minister for ocial welfare and leader of the Irish Labour party, produced in October his White Paper on compulsory insurance. The scheme vas planned to cover every person over the age of 16 who vorked for an employer, though the position of state employees vas left uncertain. Meanwhile Noel Browne, Clann na Poblachta (Republican party), minister for health, continued to prepare a cheme for state medicine, while the Medical Association of reland, unable to extract any details of the plan, gathered their trength to oppose what they feared would be the worst.

Politically the drama of the year was the declaration of an ndependent Irish republic one minute after midnight on Easter Monday. The six counties of Northern Ireland ignored the leclaration, but King George VI sent a message of goodwill to he new republic. From Belfast Sir Basil Brooke announced hat this step must perpetuate partition, and he seemed in part onfirmed when in May the British parliament passed the Ireand act which, while it allowed the citizens of the republic the ame rights as those of the commonwealth, guaranteed the speial position of Northern Ireland for so long as the majority of ts people wished to preserve it. The Ireland act provoked nanimous indignation in the south and a large protest meeting vas held in Dublin.

Financially, the republic had a good year. For the first six nonths of 1949 exports were up 36% and imports down 15% against the comparable figures for 1948. It seemed that the reublic's adverse trade balance, which in the postwar years had een running at £90,000,000 to £100,000,000 a year, might be ut to about £70,000,000, and this—bearing in mind invisible xports, chiefly earned by the tourist industry—would bring the alance of payments near to equilibrium. Agriculture was exanding after a number of stagnant years; the volume of donestic exports for the first six months of 1949 increased by 2% over the figures for the 1948 period. As for industry, which together with services was producing an output valued at about two-thirds that of Irish agriculture, Morrissey pronounced himself satisfied. Unemployment had slightly decreased. One problem, especially in view of the projected government works, was the continued inability of Bord na mona (Fuel board) and the Electricity Supply board to get men to work on schemes that would take them away from their homes. There was also

IRISH CELEBRANTS thronging Dublin's O'Connell bridge, the centre of festivities at 12:01 A.M. on April 18, 1949, when a 21-gun salute announced the birth of the new Republic of Ireland a serious shortage of skilled building workers and a campaign was begun to attract Irishmen in Britain back to build homes for their countrymen.

The whole nation mourned Douglas Hyde, first president of Eire, who died on July 12. (R. Kx.)

Education.—(1947–48) Schools: elementary 4,946, pupils 444,132, teachers 12,772; secondary 404, pupils 43,780; university colleges 4, students 7,202, professors and lecturers 558.

Finance and Banking.—Budget: (1948–49) revenue £71,690,000, expenditure £71,940,000; (1949–50 est.) revenue £73,350,000, expenditure £73,140,000. National debt (March 1948): £104,800,000. Currency circulation (Sept. 1949): £51,800,000. Gold reserve (Sept. 1949): 11,000,000 U.S. dollars. Bank deposits (end 1949): £242,200,000. Monetary unit: Irish pound at par with the pound sterling.

Foreign Trade.—Imports: (1948) £136,700,000. Exports: (1948) £47,500,000. Main imports: machinery and vehicles, wheat and corn, textiles and coal. Main exports: cattle and horses, meat, fish and dairy products, ale. In 1948 54% of total imports were supplied by the United Kingdom, and 87% of total exports in 1948 went to the United Kingdom.

Transport and Communications.—Roads (1949) 49,071 mi. Licensed motor vehicles (Dec. 1948): cars 60,453, commercial vehicles 36,535. Railways (1948): 2,440 mi.; freight (net ton-mi.) 320,000,000. Shipping (1948): total tonnage 43,663. Air transport (Aer Lingus, 1948): flights 11,908, mi. flown 2,542,783, passengers flown 180,470, cargo carried 1,080 tons, mail 70 tons. Telephones (1946): subscribers 55,426. Radio receiving set licences (1948): 255,000.

Agriculture.—Main crops (metric tons, 1948): wheat 416,000; oats 805,000; barley 102,000; rye 5,000; potatoes 3,328,000; flax 3,600. Livestock (June 1948): cattle 3,921,000; sheep 2,058,000; pigs 457,000; horses 421,000; poultry 20,045,000. Fisheries: total catch (1948): weight 20,725 metric tons; value £615,446. Food production (metric tons, 1948): butter, co-operative creameries only, 28,800; cheese 2,400; meat 120,000.

Industry.—(1947) Persons employed in industrial establishments 183,444. Fuel and power (1948): coal consumption 177,000 metric tons; manufactured gas 144,000,000 cu.m.; electricity 689,000,000 kw.hr. Manufactured goods (1947): distilled spirits 1,501,000 proof gal.; stout, porter, ale and beer 1,485,000 bbl.; woollen and worsted tissues 6,345,000 sq.yd.; cotton piece goods 5,884,000 sq.yd.; boots and shoes 5,000,000 pairs; cigarettes 9,023,000 lb.

Irish Free State: *see* IRELAND, REPUBLIC OF.

Iron and Steel. For convenience in coverage, this subject is subdivided and handled under the three major headings—iron ore, pig iron and steel.

Iron Ore.—Sharp advances in 1948 not only brought world production to above the 1939 level, but so closely approached the peak of war demand that continued improvements in 1949 were expected to fill the gap. The iron ore outputs of countries normally producing 1,000,000 tons a year, and the estimated world totals during recent years, are presented in Table I.

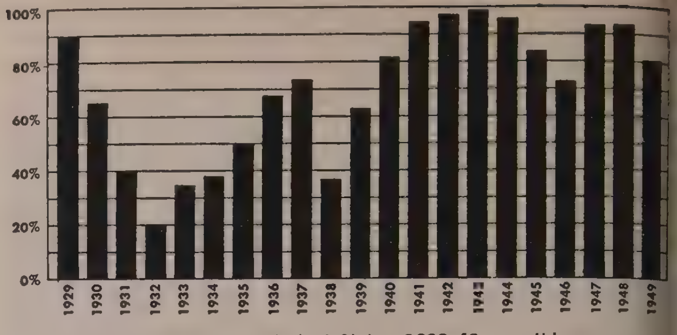
The 1949 outputs of most of the important producing countries showed a marked advance over 1948, as is indicated by the incomplete 1949 data included in the above table. These figures indicate an increase in 1949 that might be as much as 10% above 1948.

United States.—The salient statistics of the iron ore industry in the United States are presented in Table II, as reported by the U.S. bureau of mines.



STEEL PRODUCTION in the United States, 1929-49; monthly average percentage of capacity (figures compiled by American Iron and Steel Institute)

Production declined somewhat in 1949, the total for the first ten months being 90,081,583 short tons, compared with 99,761,252 tons in the same period of 1948. The decline in the remaining two months was expected to be even more marked, as the usual seasonal decline of the winter months was expected to be supplemented by a drop in demand for ore because of a coal shortage.

Table II.—*Production of Iron Ore in the United States*

(In thousands of short tons)

Consumption	112,512	111,936	96,498	80,836	107,650	112,559

Canada.—Iron ore production reported from Canada dropped from 1,919,366 short tons in 1947 to 1,354,064 tons in 1948. Through Aug. 1949 the total was 2,318,501 tons, which presumably included the Newfoundland output. Another large deposit was being developed in Labrador.

Pig Iron.—World production of pig iron in 1948 was 14% greater than in 1947, 10% greater than in 1939 and only 3% under the 1943 war peak. Outputs of pig iron and ferroalloys in countries normally producing amounts in excess of 1,000,000 tons a year are shown in Table III, with estimated world totals.

In 1949 increases in output elsewhere were offset by a decrease in the United States, so that the year's total was expected to be about the same as in 1948.

nited States.—The salient data on pig iron and ferro-
ys in the United States are presented in Table IV, as re-
ed by the U.S. bureau of mines.

otal blast furnace output in 1948 was only 1.5% under the
war peak. In 1949 production was maintained during the
five months at 10% above the 1948 average rate, but sagged
n June to September, and dropped sharply in the fourth
rter. Output through November was 48,430,195 short tons
ig iron and 545,433 tons of ferroalloys, a total of 48,975,628
. These figures did not include the output of ferroalloys in
tric furnaces.

anada.—The output of Canadian blast furnaces increased
n 2,119,679 short tons in 1947 to 2,371,568 tons in 1948,
uding 2,120,909 tons of pig iron and 250,659 tons of ferro-
ys. Production continued to improve in 1949, reaching a
l of 2,010,015 tons through October, including 1,825,023
of pig iron and 184,992 tons of ferroalloys.

teel.—World production of steel in 1948 was 11% higher
n in 1947. The steel production of countries having an out-
in excess of 1,000,000 tons a year is shown in Table V,
g with estimated world totals.

reliminary reports for 1949 indicated a year's total that
ld have run somewhat higher than in 1948, except for re-
ions in the United States because of a coal shortage, which
expected to reduce the 1949 total to something like 160,-
000 tons.

nited States.—The 1948 steel output of the United States
exceeded only in the war years 1943 and 1944, and fell
t of the war peak by a little more than 1,000,000 tons. The
nt statistics of the industry are shown in Table VI, as re-
ed by the American Iron and Steel institute.

1949 production declined sharply in each succeeding quar-
but the average monthly output did not fall below that of
8 until after July. Heavy reductions were recorded in the
quarter, especially in October, because of a coal shortage,
the total through November dropped to 70,080,776 tons.

Canada.—Canadian steel production advanced from 2,945,166 short tons in 1947 to 3,201,656 tons in 1948, including 3,089,027 tons of ingots and 112,629 tons of castings. In 1949 operations continued at about the same rate as in 1948, with 2,578,272 tons of ingots and 84,987 tons of castings, or a total of 2,663,259 tons through October. Irrigation. In general 1949 was a relatively favourable year for irrigation. Where there was not plenty of water the areas of shortage were not as extensive as usual and the areas that did suffer shortage of supply were even less extensive.

When the departures of actual stream flow from the amounts forecast from the April 1949 snow survey of the department of agriculture were computed they were fairly numerous but their net effect did not constitute a serious deviation from harmony. The stream-flow year ends Sept. 30, but relatively few gauge-station records had been completed on that date.

As for the outlook for the irrigation supply for 1950, an October compilation showed a somewhat spotted promise based on existing reservoir carry-over. Generally the prospect was not quite so favourable as was the case a year earlier, but the winter began early in parts of the west, and it was possible the outlook might change for the better.

An all-time construction program was accomplished by the United States bureau of reclamation in 1949 in developing water resources for irrigation, domestic and industrial use, hydroelectric power, recreational areas and fish and game refuges and many other water conservation facilities in the 17 states lying wholly or partly west of the 97th meridian. Contracts totalling more than $170,000,000 were awarded during fiscal year 1949 for construction, equipment and materials on bureau of reclamation projects.

At the end of the fiscal year (June 30, 1949) the bureau had in operation, under construction or authorized, 81 irrigation and multipurpose projects. Of these projects or divisions of projects 60 were producing agricultural products, electric energy, or furnishing municipal-industrial water.

Under the bureau's widely diversified schedule of river-basin-wide multipurpose operations, the area of western federal project irrigated land was increased during 1948 to a total of 4,458,775 ac. The installed capacity of hydroelectric plants on the bureau's projects was increased 263,000 to a total of 2,757,000 kw., and output for the fiscal year rose to 18,500,000,000 kw.hr.

In a seven-year program extending through the 1956 fiscal year, the bureau would, with congressional authorization and appropriation, provide a full supply of water for the irrigation of about 1,662,600 additional acres of land and additional water for 2,917,700 ac. of inadequately irrigated land. The installed hydroelectric generating capacity would be increased by about 2,472,200 kw.

The largest single contract awarded by the bureau during the 1949 fiscal year amounted to $13,348,419 and covered the completion of the gigantic pumping plant at Grand Coulee dam, Wash. Another large contract, nearly $11,900,000, covered construction of Canyon Ferry dam and power plant on the Missouri river, near Helena, Mont. The two largest equipment contracts awarded totalled $7,747,985 and covered the last three generators and turbines for Grand Coulee power plant. Other major equipment contracts totalling $4,797,748 covered the installation of two 82,500-kw. generators and turbines for the power plant at Hoover dam, 726 ft. high, the world's highest concrete dam.

Construction was in progress at the end of the 1949 fiscal year on 23 storage dams and 1 diversion dam, 9 power plants, 22 pumping plants, 440 mi. of main canals and more than 2,000 mi. of transmission lines.

Ten outstanding construction jobs were completed by the bureau during the year, namely: Jackson Gulch dam, Mancos project, Colo.; Cascade dam, Boise, Ida.; Long Lake dam, Columbia basin, Wash.; Olympus dam, Horsetooth reservoir dam, Aspen Creek siphon and Prospect Mountain conduit, Colorado-Big Thompson project, Colo.; Cambridge diversion dam, Missouri river basin, Neb.; Heart Mountain power plant, Shoshone project, Wyo.; and Phoenix-Tucson No. 2 transmission line, Davis dam, Ariz.-Nev.

Construction was started during the 1949 fiscal year on seven new dams, namely, North Coulee, Wash.; Dickinson, N.D.; Shadehill, S.D.; Platoro, Colo.; Canyon Ferry, Mont.; Cedar Bluff, Kan.; and Bonny, Colo.

Major accomplishments under the bureau's programs in 1949 included: Expansion of generating facilities at Grand Coulee dam, Wash., to bring the total name plate capacity to 1,100,000 kw.—the greatest installed capacity in a single hydroelectric plant any place in the world; the starting of major construction activity at Hungry Horse dam, near Kalispell, Mont., which would be 564 ft. high, making it the third highest and fourth largest concrete dam in the world; the initiation of United Western Investigations to determine the feasibility of transfer of surplus Columbia river water and of coastal streams in the Pacific northwest southward to California; the beginning of reconnaissance studies for the development of hydroelectric power and other water resources in Alaska; and power production at Hoover dam, Parker dam and Siphon Drop power plants, all on the Colorado river, which fell short only about 8% of the 1944 war year record of 7,205,218,623 kw.hr.

Crops aggregating 13,256,688 tons and valued at $534,623,541, averaging $113.76 per acre, were produced on the 60 operating federal reclamation projects during the 1948 crop year. The cumulative value of these crops since 1906, exceeding $6,000,000,000, was more than four times the total reclamation investment to date.

A total of 296 farm units, located on five bureau projects, were opened to settlement by veterans during the fiscal year ending June 30, 1949. More than 9,300 applications were received by local examining boards for the 296 farm units totalling 30,729 irrigable acres.

Mexico.—The ministry of hydraulic resources, a unit of the government of Mexico, in 1949 had 37 large and 162 small irrigation projects under construction and in addition was developing many wells for irrigation water supply. Included in the program of construction were several large projects such as the Obregón dam on the Yaqui river in the state of Sonora, with an estimated storage capacity of 2,500,000 ac.ft. to irrigate 500,000 ac.; the Moreles diversion dam on the Colorado river in a stretch where the river forms the boundary between the United States and Mexico. This dam would cost $10,000,000 and provide sufficient storage to irrigate 550,000 ac. in Mexico. Construction was about to start on the Falcon dam on the Bravo river. This structure was to be constructed in co-operation with the government of the United States and would include hydr electric installations. The project was expected to be complet in 1953 at a cost of $50,000,000. (*See* also Aqueducts; Dam Floods and Flood Control; Meteorology; Soil Erosion a Soil Conservation.)

Islam. The social and political instability characteristic the world after World War II did not fail to ha grave repercussions upon the cultural evolution of Islam 1949, especially as it was also suffering from its own trouble Thus the defeat of the Arab league in its war against Israel pr duced a sharp reaction of public opinion in Egypt, Iraq a Syria. The situation of Pakistan (*q.v.*) was seriously affect by its conflict with India over Kashmir. Soviet political activ ties created disquietude among Moslem countries. It was on at the end of 1949 that Indonesia came to an agreement wi the Netherlands. The problems of French North Africa a Eritrea continued to remain unsolved.

Further cultural progress nevertheless was achieved, especial in the sphere of public instruction and of the emancipation woman—the latter especially in Syria, the first country of t middle east to grant the franchise to women. The progress public instruction was noticeable in Pakistan, where central a provincial authorities opened some 1,500 new schools of kinds. No less interesting were the results of the cultural acti ity of the Arab league. For instance, it undertook a systemat publication of ancient Arabic manuscripts and the publicati of a bulletin dealing with the intellectual life of Arab countri All Moslem countries, especially Turkey, Egypt and Pakista sent more of their students abroad, chiefly to Great Britain a the U.S. The re-establishment in Turkey of theological educ tion in its universities contributed to the intensification religious life.

On Feb. 18–19, 1949, the 5th International Moslem co gress took place at Karachi, India, affirming once more t unity of Islam. On Sept. 11–16 the Islamic Cultural congre assembled at Tunis, Tunisia; unfortunately the restrictive mea ures taken by the French authorities prevented the Mosle from abroad being present. From Nov. 25 to Dec. 10 the fi Economic congress of all Moslem countries met at Karachi a was attended by 300 technical experts, economists and indu trialists.

In 1949 the International Islamic committee was founded Karachi. At the end of the year Chaudhury Khaliquzzama president of the All-Pakistan Muslim league, suggested the cre tion of a confederation of Moslem states under the name Islamistan, the capital of which should be in Iran. (A. Md.)

In *Mohammedanism* (Oxford, 1949) H. A. R. Gibb, profess of Arabic at the University of Oxford, gives the following es mates of the number of Moslems: Pakistan and India 90,00 000, Malaya and Indonesia 55,000,000, Arab-speaking popul tions in western Asia 15,000,000, Egypt and Sudan 17,000,0 North Africa 16,000,000, Iran 15,000,000, Afghanistan 12,00 000, Turkey 18,000,000, Asiatic U.S.S.R. and China 30,000,0 Moslem Negroes in Africa 24,000,000, Balkans and Europe U.S.S.R. 3,000,000—total 295,000,000.

by the general assembly of the United Nations, the state of Israel was to cover 5,579 sq.mi. (with Negev); but this area was reduced to 2,124 sq.mi. (without Negev) by Count Folke Bernadotte, the U.N. mediator, in his plan dated Sept. 16, 1948. After armistices concluded with all the neighbours during 1949 the *de facto* area of Israel was estimated at about 7,800 sq.mi. According to a census of Nov. 8, 1948, this area had a population of 782,000, including 713,000 Jews; one year later the million mark was reached. Chief towns (pop. Dec. 1949 est.): Jaffa-Tel Aviv (capital, more than 300,000); Haifa (150,000). President of the republic, Chaim Weizmann (*q.v.*); prime minister, David Ben-Gurion (*q.v.*).

History.—The year 1949 was one of progress for the young state of Israel. By the beginning of 1949 the government was in control of practically the whole area over which it claimed jurisdiction with the exception of the Negev, the southern part of the country. There fighting was taking place along the Egyptian frontier in the Gaza district, and Israeli forces were actively consolidating their positions to the south and east. Egyptian opposition was rapidly overcome, and by Jan. 13 armistice talks opened at Rhodes, under the auspices of United Nations Acting Mediator Ralph Bunche.

The first general election in Israel, to a constituent assembly, was held on Jan. 25. Twelve parties competed for the 120 seats. The total number of voters was 484,000, including 39,000 non-Jews (Moslems and Christians). The result was an outright victory for the Israel Labour party, known as Mapai, which gained 46 seats. The United Workers' party or Mapam (19 seats) was second; the United Religious front (16 seats), third; and the Freedom (Herut) party (14 seats), fourth. The Communists polled 3.4% of the votes and were awarded four seats. On Feb. 17 Chaim Weizmann was elected first president of Israel.

Although it had been proclaimed that the primary task of the constituent assembly would be to adopt a constitution, the *knesset hagdola* (assembly) found itself confronted with so many and such urgent tasks that comparatively little time was devoted to this subject, but an interim or small constitution was adopted immediately before the president was elected. The most pressing task with which the government had to deal was the assimilation of the thousands of immigrants who had arrived in the country; 330,000 arrived during the period from May 15, 1948, to Nov. 15, 1949, an average of 18,300 per month.

The country's natural resources were extremely limited, and it was obliged to depend upon imports for a large proportion of its food supplies, nearly all its industrial raw materials and the majority of its manufactured goods. With the oil refineries at Haifa and the potash works on the Dead sea virtually closed down, Israel was left with its orange crop as its sole important visible export. A resulting serious inflationary situation was produced, and when Finance Minister Eliezer Kaplan introduced his budget on June 14 he stressed the importance of bringing down the cost of living, increasing production and restricting imports. Severe measures were taken to attain these objects and an austerity regime, modelled on that in Great Britain, was adopted which had the effect of holding inflation in check. When the pound sterling was devalued in September, Israel immediately followed (although it did not technically belong to the sterling area) by reducing its pound from $4.03 to $2.80 (U.S.). The economy of the country was strongly supported by world Jewry, and in addition a credit of $100,000,000 was granted by the Export-Import bank in January, and commercial agreements were negotiated with many other countries, including Great Britain.

Recognition, either *de jure* or *de facto*, which many countries had been reluctant to grant in the first months following th declaration of independence, became general for practically a the nations of the world with the exception of the Arab an most of the Moslem countries. Israel was admitted to th United Nations on May 11.

Armistice agreements were concluded with all the neighbou ing states, and relations with the Arab countries improve slightly though they were far from reaching normality. Th U.N. Conciliation commission, which was set up in Dec. 194 made many attempts to convert the armistice agreements int a peace settlement but without success. The main stumblin block in these negotiations was ostensibly the question of th Arab refugees, whom the Arab states demanded that Israe should bring back to their homes and of whom Israel declare that it could not take more than 100,000 and that this con cession was subject to the signing of a general peace settlemen In its interim report the U.N. Economic Survey Mission fo the Middle East had stated that the total number of destitut refugees was 652,000.

A question which had given rise to much discussion durin the year and on which the Vatican had expressed strong opin ions was that of the future of Jerusalem and the holy place The Conciliation commission proposed a plan which was place before the autumn session of the U.N. general assembly an envisaged a permanent international regime for Jerusalem dividing it into Arab and Jewish demilitarized zones, th boundary of which would follow approximately that suggeste in the partition resolution of Nov. 29, 1947. It was explaine that the plan did not propose a complete separation of the are from the political life and authority of the adjoining states. Th scheme was bitterly opposed by the government and people Israel and also by the kingdom of Jordan, which was equall concerned. Nevertheless, when the matter came up for dis cussion at the general assembly, an Australian-sponsored reso lution, based on this proposal but giving the suggested inte national authority even greater powers, was carried on Dec. by 38 votes to 14 with 7 abstentions. The means whereby th scheme was to be carried out was left to the Trusteeship counc to devise but not before the assembly had voted $8,000,000 f the plan. On Dec. 26 the *knesset* was moved from Tel Aviv Jerusalem. The seat of government remained, however, at T Aviv. (*See* also Egypt; Jordan; Palestine; United Nations

talian Colonial Empire.

Under this heading are grouped the former four Italian prov-nces of Libya, the former military territory of Libyan Sahara, he colonies of Eritrea and the Italian Somaliland. The total rea of these territories is 918,937 sq.mi., and the total popu-ation (1948 est.), 3,192,600. Certain essential information on he composing parts of the former Italian colonial empire is iven in the table.

History.—During 1949 the fate of the former Italian colo-ies remained as an international bone of contention until late the year. Power politics were pursued in the matter with ess hesitation, but in spite of the steady support of Latin merica in the United Nations, Italy's hope of returning to frica dwindled. The main reason for this was the increase in he influence and claims of the Arabs as a whole, as also of ative African nationalism.

Because of the failure to arrive at any solution of the prob-em in Sept. 1948, the whole matter came before the political ommittee of the United Nations at Lake Success on April 6, 949. At first the great powers each put forward only a slight odification of their respective proposals of the previous utumn. The U.S.S.R., that is to say, continued to advocate Jnited Nations trusteeship for ten years as a preface to inde-endence, while France supported Italian trusteeship. On the ther hand, Great Britain and the United States wished the ritish to be the trustees in Cyrenaica at least. There was agree-ent on one point alone and that was that concessions of some ind must be made to Ethiopia in Eritrea.

At this point Ernest Bevin and Count Carlo Sforza unexpect-dly put their heads together and produced fresh proposals ccording to which the Italians were to take over the trusteeship f Tripolitania in 1951 while the British remained in Cyrenaica nd the French in the Fezzan, but the whole of Libya was to ecome independent at the end of ten years. The Italians were o be the trustees also in Somalia, and Eritrea was to be divided etween Ethiopia and the Anglo-Egyptian Sudan. The Bevin-forza proposals were rejected by one vote in the U.N. general ssembly on May 18.

While this rejection was resented in Italy the proposals them-elves raised a storm in Libya; the Moslems of Tripolitania declared that they would fight to the death rather than allow the Italians to return, and they demanded the unity as well as independence of Libya. This thirst for Libyan unity was not placated by the next British step in Cyrenaica. On June 1 the British chief administrator announced to the national congress at Bengasi that the United Kingdom agreed to the formation of a Cyrenaican government under the Emir Idris el Senussi who was thereupon invited to Britain to discuss further measures to be taken. The Emir arrived in London in July, and, after his return home, the Cyrenaican constitution was enacted on Sept. 18, and Cyrenaica became autonomous: in the future the country would manage its own internal affairs although its external relationships would remain under British control. A National congress, which had met at Tripoli in August to choose a delegation for the autumn U.N. assembly meeting, again insisted that Libya should be united as well as independent.

It was the French who were most disconcerted by the rising Arab tide, for Libyan unity would expel them from the Fezzan, and Libyan independence would disturb the already uneasy atmosphere in neighbouring Tunisia. When the United Nations met once again at Lake Success in Sept. 1949, the French were, however, left behind, while the other powers competed in a race to catch up with Libyan aspirations. The British and U.S. delegates advocated independence for Tripolitania in from three to five years, while the U.S.S.R. proposed the immediate independence of all the former Italian colonies and the evacuation of Libya by the British within three months. The Italians themselves now backed Libyan unity and supported the independence of Tripolitania where they suggested that there should be elections for a constituent assembly within six months. At the same time the Italians pressed for the unity and independence of Eritrea.

Meanwhile former Italian Somaliland, which the four powers had all but consigned to Italian trusteeship in 1948, was the scene of commotion. The African Somalis, like the Arabs in Libya, were also determined upon unity and independence; and in Aug. 1949 declarations to this effect were made by the Somali Youth league and other nationalist organizations. This would mean the union of Somalia with French and British Somaliland, a plan which the British had considered at one moment in 1948. While the U.N. political committee was debating at Lake Success a crowd of about 2,000 Somalis assembled in Mogadishu on Oct. 5 and threatened the local Italians. They were dispersed by

*The political units listed were in 1949 under British trusteeship pending ultimate decision by the United Nations assembly concerning disposal of the pre-1940 Italian colonial empire.

†In 1934 Libya was divided into four provinces. By a decree of Jan. 9, 1939, these provinces (213,821 sq.mi.) were incorporated in the national territory of Italy. The territory of byan Sahara (465,362 sq.mi.) was not affected by this decree. Under British military administration Libya was divided into Tripolitania (provinces of Tripoli and Misurata) and Cyrenaica rovinces of Bengasi and Derna, and the eastern part of Libyan Sahara). The western part of Libyan Sahara (Fezzan) was divided between British and French military administrations 23,153 and 19,300 sq.mi. respectively; total pop. c. 50,000).

‡The areas given here are those before the annexation of Ethiopia by Italy. A decree of June 1, 1936, established the colony of Italian East Africa comprising Ethiopia, Eritrea and lian Somaliland. The greater Eritrea (86,166 sq.mi.) included three northern provinces of Ethiopia, and the Ethiopian Ogaden was assigned to the greater Somaliland (270,972 .mi.). These new Italian colonies ceased to exist with the liberation of Ethiopia in 1941, but until Aug. 1948 Ogaden remained under British military administration.

order of the British military authorities; two rioters were killed and three died of wounds, and a British officer and six native constables were injured.

On Nov. 12 the U.N. political committee accepted the drafting committee's proposals on all the former Italian colonies, and on Nov. 21 the general assembly agreed to them en bloc. Thus at last it was settled that:

1. A unified Libya should become independent by Jan. 1, 1952; in the interim period administration was to be carried on by a U.N. commissioner with an advisory council of the representatives of Egypt, France, Italy, Pakistan, the U.K. and the U.S. and four representatives of the local population.

2. Somalia, former Italian Somaliland, was to come under Italian trusteeship with a three-power advisory council (Colombia, Egypt and the Philippines) for ten years and during that period be prepared for independence.

Only in the case of Eritrea was a decision once more postponed for a year in order that a U.N. commission of enquiry might once again attempt to ascertain the wishes of the Eritrean peoples. (E. Wi.)

Italian Literature.

In contrast with the ferment of the preceding few years, the production of Italian writers showed a decisive trend toward consolidation and clarification in 1949. The literary experiments in Marxism and neorealism, veering from extremisms, achieved a certain equilibrium. War experiences were transmuted into a meditated lyrical form which retained a touch of human kindness and sympathy for man's suffering peculiar to postfascist literature. There was an impressive effort by new young writers to explore the tortured bewilderment of their generation living, after the holocaust that they had considered a war of liberation in the political, social and moral sense, in a world which had inherited the defects and injustices of prewar society. It was this restlessness and search for new values which made Italian literature of 1949 lively, and which explained in some measure the awarding of Italy's most conspicuous literary prize (Viareggio) to the Liberal Catholic Arturo Carlo Jèmolo for his historical treatise on the problem of relations between church and state.

Several first novels won wide critical acclaim: Renata Viganò's *L'Agnese va a morire* (co-winner of the Viareggio second prize), a notable though uneven work about a woman partisan; Guglielmo Petroni's *Il mondo è una prigione*, an objective but moving account of life under the German occupation; Nello Sáito's *Maria e i soldati*, a vigorous study of the effects of war on human relations; and Italo Calvino's *Ultimo viene il corvo*, a striking collection of short stories, with surrealist overtones, about partisan warfare. The military and political collapse of 1944 and the moral abyss into which the people sank during the following months received dramatic treatment in two fast-moving, documentary-type novels: *In principio era l'odio* by Mario Vicentini, and *Uomini nel canneto* by Vincenzo Filipponi. The most widely read works of fiction were Vitaliano Brancati's *Il bell'Antonio* and Alba de Céspedes' *Dalla parte di lei*. Both novels, significantly enough, made skilful use of the war as a backdrop for the study of marital problems, the former portraying with a Pirandellian palette a man unfit to love, the latter describing the hopes and disillusionments that lead a wife to kill her husband. The problem of whether a nazi and a fascist can be redeemed if given a chance was treated brilliantly and affirmatively by Elio Vittorini in *Le donne di Messina*, and poorly and negatively by Vasco Pratolini in *Un eroe del nostro tempo*.

The havoc of war on the mental and moral fibre of men was analyzed by two distinguished writers, Cesare Pavese in *Prima che il gallo canti*, and Enrico Pea in *Zitina*, and by three new writers, Manlio Magini (*Morte dell'adolescenza*), Dante Arful (*I superflui*, Venice prize) and Ugo Moretti (*Vento caldo*, Ver silia fiction prize).

An oasis of peace and quiet and a retrospective view were offered war-weary readers by such veterans as Enrico Pea (*Vita in Egitto*), winner of the St. Vincent prose prize, G. B. Angio letti (*La memoria*), Dario Ortolani (*Il lido dei maschi*) and Leonardo Sinisgalli (*Belliboschi*). Provincial life was exhumed by Augusto Monti (*Tradimento e fedeltà*), Armando Meon (*L'ombra dei vivi*, Prato prize) and Michele Prisco (*La pro vincia addormentata*). Alberto Moravia contributed an excel lent collection of short stories (*L'amore coniugale*).

The theatre, despite prizes and the commendable efforts o four major literary figures (Bontempelli, Bacchelli, Savinio and Alvaro), rated no outstanding works.

Numerous books of poetry were printed as usual but few reaped the pecuniary laurels of the year. The Versilia poetry prize was shared by Biagio Zagarrio (*Sereno*) and Libero de Libero (*Banchetto*), who also won half of the Viareggio second prize, while Camillo Sbarbaro (*Trucioli*) received the St. Vin cent poetry prize. (M. F. C.)

Italy.

A republic of southern Europe, bounded on land by France to the northwest, by Switzerland and Austria to the north and by Yugoslavia to the northeast. The country includes not only the whole of the Apennine peninsula, but also the large Mediterranean islands of Sicily and Sardinia as well as a number of smaller islands. Area: 116,235 sq.mi excluding Venezia Giulia, Zara and the islands (2,843 sq.mi. ceded to Yugoslavia, the five small areas in the Alps ceded to France (397 sq.mi.) and the Free Territory of Trieste (*q.v.*) Pop.: (April 21, 1936, census) 42,993,602; (mid-1948 est. 45,706,000. Language: mainly Italian. Religion: mainly Roman Catholic. Chief towns (pop., Jan. 1, 1948, est.): Rome (capi tal, 1,613,660); Milan (1,277,013); Naples (995,257); Turin (719,528); Genoa (657,634); Palermo (470,780); Florence (377,203); Bologna (329,964); Venice (308,677). President in 1949: Luigi Einaudi; prime minister: Alcide de Gasperi (*q.v.*)

History.—During 1949 the predominantly Christian Demo cratic government led by Alcide de Gasperi continued in office The smaller groups it contained—Liberals (meaning a small strongly conservative party), Republicans and moderate Social ists—all being anticlerical, criticized cabinet policy fairly openly The moderate Socialists, led by Giuseppe Saragat, who was dep uty prime minister and minister of the mercantile marine, were constantly on the verge of resigning. On Oct. 31 they made u their minds to do so, because the other anti-Communist Socialis groups might be readier to try to reunite the Socialist party i the *Saragatiani* were not actually members of a clerical admin istration. On Nov. 7, De Gasperi deputed their posts temporaril to other ministers, evidently not taking the resignations ver seriously. By the end of the year there were still no signs o a real reunion between the Saragat Socialists and the Socialis followers of Giuseppe Romita and of Ignazio Silone, so that th traditional Socialist party remained divided and impotent.

When the Christian Democratic party conference was hel at Venice at the beginning of June, one of its favourite topic of discussion proved to be a demand that the government coal tion should be replaced by a homogeneous cabinet which, it wa claimed, would be able to make a clearer appeal to the publi De Gasperi, however, continued on his way, and in the next fe months the position of the government appeared to be consol dated by a number of factors. For instance the cabinet showe considerable activity in the way of putting forward projects for fiscal and tariff reform, for the revision of social legislation and for the restriction of the right to strike. The housing plans of the minister of labour, Amintore Fanfani, began slowly to materialize, and in the chamber of deputies in September he was able to state that 20,000,000,000 lire had been invested in housing for workers and that more was to follow.

Communism and Trade Unions.—In the course of the summer, irritation and fatigue, because of Communist agitation, combined with fear of the police and fear of unemployment, reduced Communist influence very considerably in the industrial north of Italy. On July 13 the papal threat of excommunication against communism made a further contribution to this tendency (*see* ROMAN CATHOLIC CHURCH). The disruption of the Communist-dominated C.G.I.L. (*Confederazione Generale Italiana del Lavaro,* or General Confederation of Labour), which had begun with the establishment of the "free" or Catholic L.C.G.I.L. (*Libera Confederazione Generale Italiana dei Lavoratori*) in Sept. 1948, continued; and in June 1949 the Republican and anti-Communist Socialist labour groups also broke away to form the Italian Federation of Labour (F.I.L.). At the national conference of the C.G.I.L. at Genoa early in October its secretary general, Giuseppe di Vittorio, admitted membership losses in the north, and since June 1947 the loss of about 800,000 members altogether, but at the same time he claimed that the C.G.I.L. had gained sufficient ground in other parts of the country to keep its membership figure up to 5,000,000. When the L.C.G.I.L. congress was held in Rome early in Nov. 1949, its secretary general, Giulio Pastore, claimed a membership already reaching 1,300,000.

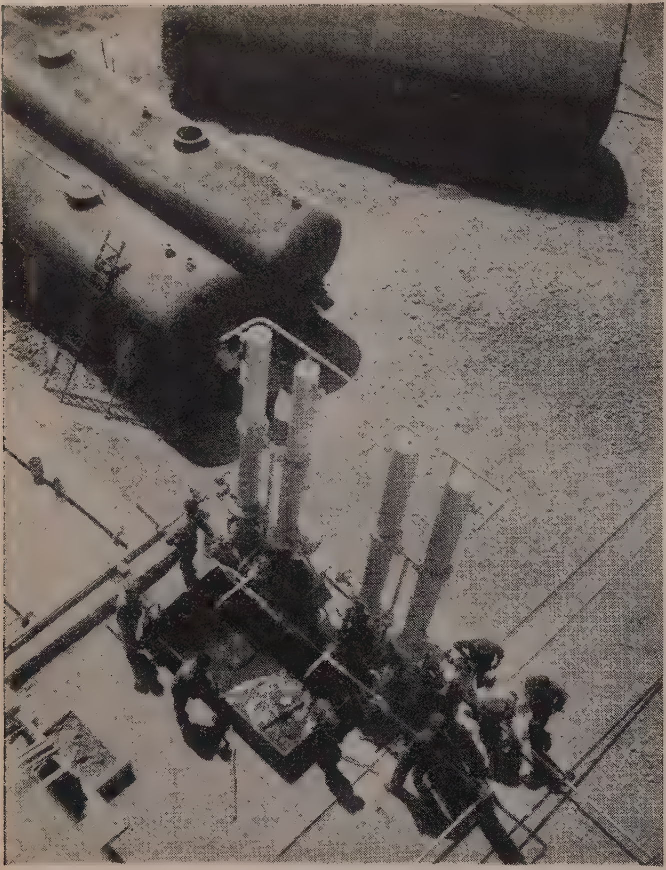
Peasant Movement.—While Communist influence was weakening, particularly among the highly skilled workmen of the northern industrial triangle, it remained fairly steady in central Italy, where many peasants were prosperous and agricultural industries flourished; at the same time it continued to grow in the very poor districts of southern Italy, which had never been industrialized and where it was scarcely known before 1948.

On Easter Sunday (April 17), after many vague promises, De Gasperi gave an interview to the press in which he outlined a specific plan for land reform. The plan proposed that nearly 8,000 owners of big landed properties should be compelled to sell portions of their land varying from a fifth to a half. Only the most profitable land, not the largest, most neglected estates, was, it seemed, to be affected. The land liberated in this way was to form a land pool out of which small peasants and labourers were to be supplied. This project was not well received, and the months dragged on and nothing further developed. The long drought, followed by floods and devastation in the autumn, brought great suffering, especially in the south, and at the end of October there were clashes near Crotone in Calabria between the police and unarmed peasants who had squatted on the land. (In 1944 a decree had permitted squatting in neglected land, although more recently squatters had frequently been punished.) Public opinion reacted strongly in favour of the peasants, and on Nov. 20 and 21 De Gasperi toured Calabria where no Italian prime minister had ever been. The peasants' co-operatives were promised some of the land they claimed, and money for improvements was guaranteed. Similar disturbances took place in Sicily and at the end of November in the San Severo wine-growing district of Apulia.

Improved Economic Position.—While agrarian unemployment was increasing there was some improvement with regard to industrial unemployment in the summer of 1949. Though in a country crammed with unregistered workers, small industries and casual seasonal employment, statistics could easily mislead, at the end of July 1949 there were nearly 470,000 less registered unemployed than at the end of July 1948, while about 200,000 more people had come on to the labour market as the population grew; there were also about 100,000 Italians whose contracts in Switzerland had been ended. Internal prices continued fairly stable during 1949, and in September, thanks in part to the excellent grain harvest, it was possible to announce an average 10% reduction in the price of bread from the middle of October.

The financial policy of the government continued to be very cautious though in the spring a little more play was allowed by a reduction of the official rate of discount from 5½% to 4½%. Exports reached their highest postwar level during the first six months of 1949, and the adverse balance of trade was at times eliminated. After June things became more difficult, partly because of the contraction of the world market. The problem of the constantly increasing sterling balance in Italy, which had reached the figure of £70,000,000 by September, was sharpened by sterling devaluation which practically meant a partial British default. But the Italian government had been fortunate in the acquisition of a considerable quantity of gold in the U.S. before Sept. 18, and this, of course, rose in value. The lira was left to find its own value as against the dollar and steadied at a rate which implied a devaluation of not quite 10%. The outlook for exports had, however, darkened very seriously by the end of the year. A basic reason for this was the excessive cost of industrial manpower; and this was due, as much as to anything, to the short-sightedness of the Italian industrialists who had spent their postwar profits heedlessly, making no attempt to replace worn-out plants or to expand their

ITALIANS demonstrating in Rome against the import of American-made motion pictures as causing widespread unemployment in the Italian film industry in 1949



OIL REFINERY which went into operation near Milan, Italy, in 1949, following the discovery of large oil deposits 50 mi. southeast of Milan by the General Italian Petroleum Corp., a government-controlled company

industrial potentialities.

In so far as Italy's storms were weathered in 1949, the chief factor undoubtedly was the supply of Marshall aid, and the news that the 1949–50 allocation was to reach only $407,000,000 was unwillingly received. It should be added that the reconstruction of Italy's mercantile marine with the consequent reduction of the charges for freight had made a far from negligible contribution to the country's economic health.

One promising event for Italy's economic future, though its effects were scarcely felt by the end of 1949, was the discovery in June of oil at a small Emilian town called Cortemaggiore just south of the Po. More immediately important, because upon a larger scale, was the organization of the natural gas around Ferrara and at Lodi near Milan.

Foreign Policy.—There was no change in Italian foreign policy in 1949. The foreign minister, Count Sforza, followed up Tito's difficulties with Moscow by friendly expressions and the extension of commercial relations with Yugoslavia. In August he led the Italian delegation to the Council of Europe at Strasbourg, France, while a good deal of sympathy was felt in Italy for drawing closer its ties with the other countries of western Europe. A considerable section of the Italian press continued, especially after the abortive Bevin-Sforza proposals and until after the Mogadishu incident in October (*see* ITALIAN COLONIAL EMPIRE), to attack Great Britain as the obstacle in Italy's colonial path. It also criticized British behaviour in the matter of European co-operation, particularly after the devaluation of sterling. Economically Italy continued to lean heavily upon the United States. The Franco-Italian customs union did not bear much fruit because the two countries' production was so much the same.

Education.—(1946–47) Elementary schools 37,131, pupils 4,703,228, teachers 144,815; secondary schools 5,799, pupils 894,037, teachers 82,673; technical schools 957, pupils 134,969, teachers 13,721; universities and institutions of higher education 27, students 180,134, professor and lecturers 8,625. Illiteracy (1931) 21.6%.

Finance and Banking.—Budget: (1948–49) revenue 800,752,000,00 lire; expenditure 1,251,756,000,000 lire; (1949–50) revenue 1,222,783, 000,000 lire; expenditure 1,396,915,000,000 lire. National internal deb (March 1949): 2,014,573,000,000 lire. Currency circulation (Au 1949): 882,700,000,000 lire. Gold reserve (Aug. 1949): $134,000,00 U.S. Bank deposits (March 1949): 1,099,000,000,000 lire. Monetar unit: lira, with an exchange rate (Dec. 1949) of 624 lire to $1 U.S.

Foreign Trade.—(1948) Imports: 847,200,000,000 lire; exports: 570, 000,000,000 lire.

Transport and Communications.—Roads (1948): 105,800 mi. License motor vehicles (Dec. 1948): cars, 206,773; commercial vehicles, 211,636 Railways (1948): 13,000 mi.; passenger-miles 13,260,000,000; freigh carried, 37,000,000 tons. Shipping (July 1948): number of merchan vessels of 100 tons and upward, 852; total tonnage, 2,109,067. Ai transport (1948): miles flown, 5,348,600; passengers flown, 190,640 cargo carried, 1,568,000 tons; air mail carried, 189,000 tons. Telephone (1947–48): subscribers, 751,900.

Agriculture and Fisheries.—Main crops (in metric tons, 1948): whea 6,136,000; maize 2,254,000; barley 230,000; oats 483,000; rye 122,000 rice 619,000; potatoes 3,014,000; sugar, raw, 397,000; hemp 76,80 Livestock (1948): cattle, 7,923,000; sheep 9,434,000; pigs 3,757,000 horses 720,000; poultry 65,000,000. Fisheries: total catch (1948) 113,476 metric tons.

Industry.—Fuel and power (in metric tons, 1948): coal 972,000; lignit 907,000; natural gas 117,000,000 cu.m.; manufactured gas 1,524,000,00 cu.m.; electricity 22,692,000,000 kw.hr.; crude oil (in metric tons) 9,20 Raw materials (in metric tons 1948): iron ore, metal content 543,000 pig iron 526,000; steel ingots and castings 2,124,000; lead 26,800; zin 26,400.

Jamaica.

A British colony consisting of the largest of th British West Indian islands. Area: 4,765 sq.m Pop. (1948 est.): 1,364,000, mainly of African descent. De pendencies: Cayman Islands and Turks and Caicos Islands Chief towns: Kingston (cap., census 1943, 109,056); Spanis Town (12,028); Montego Bay (11,500). Governor, 1949: S John Huggins.

History.—The constitution, introduced in Nov. 1944, for five-year trial period, became due for review during 1949. Th house of representatives agreed on these proposals: the execu tive council should consist of one official, two nominated an eight elected members; the legislative council should not b permitted to hold up legislation for more than six months; an a candidate for the house of representatives should be able t stand for any constituency in the island. The last proposal wa immediately accepted and brought into force; the other re mained subject to consideration. A general election was fixe for Dec. 20.

In February the government passed the Pioneer Industrie (encouragement) law, granting substantial concessions in regar to exemption from income tax, tonnage tax and customs dut in connection with the establishment of new industries. Ther was a flood of industrial and other economic development. Th shares of a £1,200,000 Caribbean Cement company were issued construction of the factory was due to start at an early dat and production was scheduled to commence by the beginning 1951. The West Indian Sugar company's new factory at Mony musk, one of the largest in the British commonwealth, bega operations in April. Plans for an industrial estate in wester Kingston were well under way.

Jamaica Welfare, Ltd., which, since its foundation in 193 had done much valuable welfare work, was wound up an handed over to a new Social Welfare commission with a civ servant as chairman.

Finance and Trade.—Currency: pound sterling. Budget (1949–50 est. revenue £10,314,313; expenditure £10,307,275. Foreign trade (1948 imports £19,680,859; exports £11,387,350. Principal exports: suga bananas, rum, cigar tobacco and cocoa. The 1949 sugar crop totall 237,749 tons, or approximately three times the average prewar cro The rapidly developing tourist trade contributed largely to invisib

ports, and Tower Isle, the latest luxury hotel, opened in January.
(Jo. A. Hn.)

apan. An island nation located in the western Pacific, Japan has been under Allied occupation since its defeat and rrender in 1945. In accordance with the Cairo and Potsdam eclarations, Japan was stripped of its former overseas posses-ons and reduced to the four main islands of Honshu, Kyushu, hikoku and Hokkaido (total area 146,690 sq.mi.) and minor ljacent islands. Total population (est. Sept. 1, 1949) 82,466,-31. Chief cities (1946 pop.): Tokyo (capital) (3,442,106); saka (1,293,501); Kyoto (914,655); Nagoya (719,382); Yoko-ma (706,557); Kobe (443,844). Emperor: Hirohito. Prime inister: Shigeru Yoshida. Principal religions: Buddhism, Shin-ism.

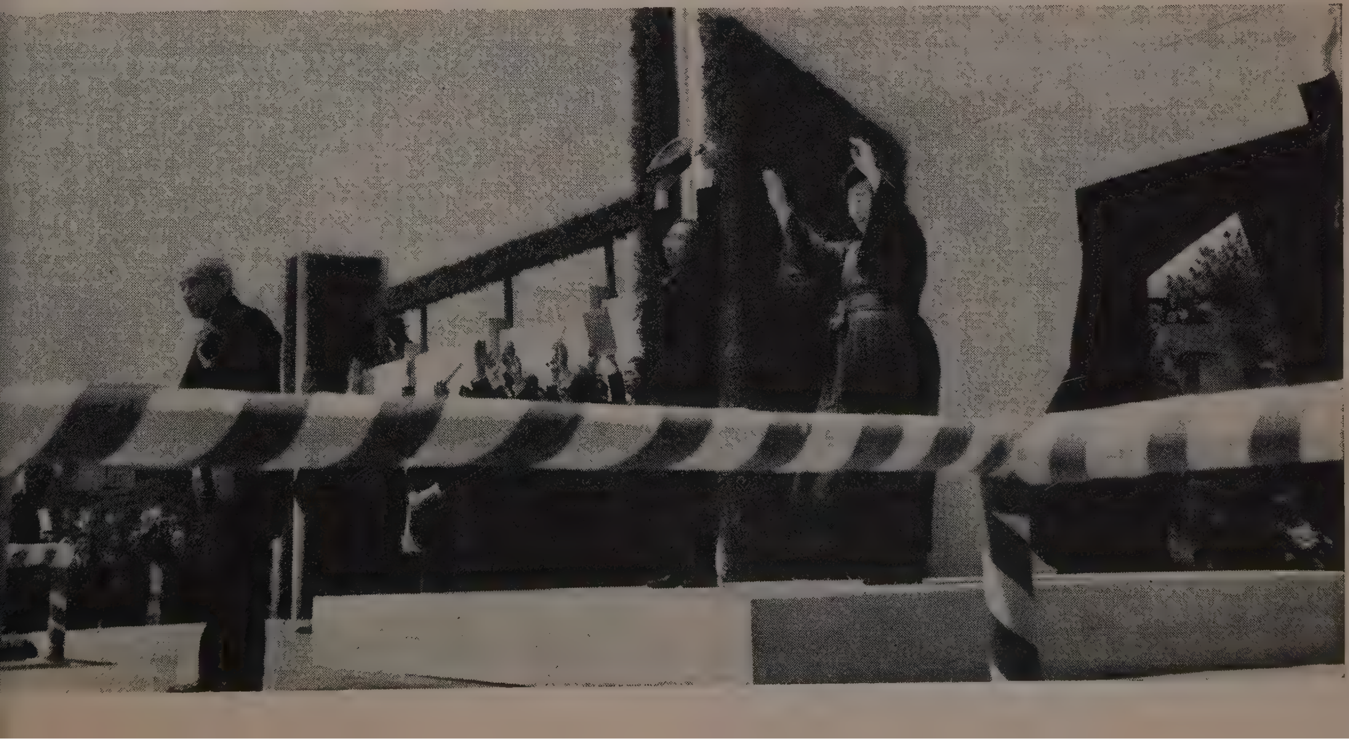
History.—*Inter-Allied Policies.*—Throughout 1949 Japan con-nued under Allied military occupation, with Gen. Douglas acArthur as the supreme commander in Tokyo, the Far East-n commission (F.E.C.) as the policy-making body in Wash-gton and the Allied Council for Japan in an advisory role in okyo. On Nov. 17 Burma and Pakistan were added to the 11 embers previously constituting the Far Eastern commission. axwell M. Hamilton replaced Gen. Frank R. McCoy as the S. representative and was elected chairman on Dec. 8. New cupation directives approved by the commission during the ear included, *inter alia:* principles of agrarian reform in Japan; policy for a Japanese patent system; a decision that no more panese leaders should be tried on charges of waging a war of gression. (*See* also War Crimes.)

Inter-Allied negotiations looking to the conclusion of a peace eaty remained deadlocked over questions of procedure. The nited States, with the support of several other powers, pro-osed that all members of the F.E.C. participate in the settle-ent. The Soviet Union insisted on a preliminary negotiation major issues by the Big Four, *i.e.,* the United States, the oviet Union, the United Kingdom and China. Meanwhile U.S. licies in Japan were denounced as antidemocratic and im-rialistic by soviet representatives on the F.E.C. and the Allied ouncil. They were defended by the U.S. authorities as fully nsistent with basic occupation objectives of disarmament and democratic reform. The Soviet Union was accused in turn with failure to live up to its Potsdam pledge to repatriate all Japanese prisoners of war. About 95,000 were reported shipped back to Japan in 1949. In May the Russians had stated that this number would complete their repatriation program, but Japanese records showed 377,000 still unaccounted for in soviet areas. The United States pressed for an impartial investigation. Lieut. Gen. Kuzma Derevyanko, Soviet representative on the Allied council in Tokyo, walked out of the meeting of Dec. 21 when the question was placed on the agenda.

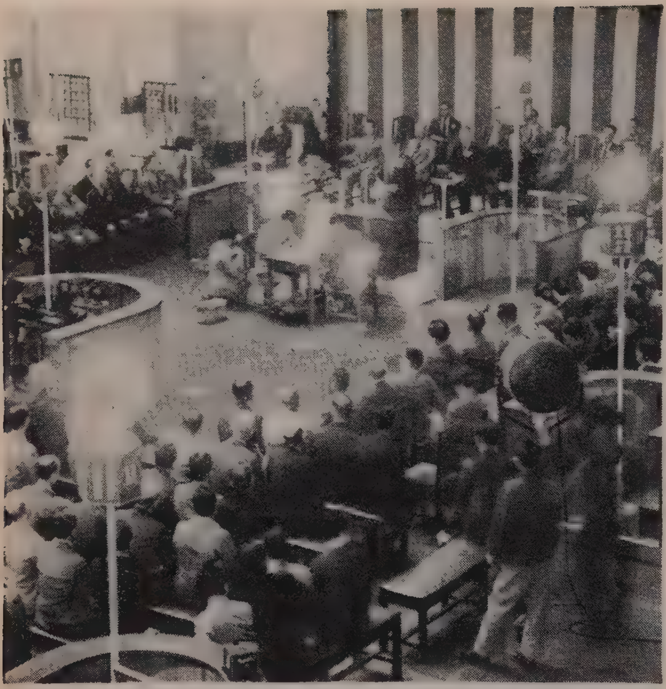
The United States retained the preponderant position in administering occupation policies within the framework of the F.E.C.'s basic post-surrender policy for Japan. Except for a token British commonwealth force, the occupation troops remained wholly American, comprising four infantry divisions plus the far east air force. Civilian relief supplies furnished by the U.S. armed forces to Japan (including Okinawa) totalled $410,000,000 in the year ending June 30, 1949. They had amounted to $1,265,000,000 in the four years since V-J day.

A move to grant the Japanese greater autonomy in managing their own affairs was evidenced in August when General MacArthur announced the reduction of military government supervision of civilian affairs at the prefectural and local levels. In the economic realm, however, the year was marked by tightened pressure on the Japanese government to retrench its finances and revive production and exports. A Washington directive of Dec. 1948, called on the supreme commander to "direct the Japanese government to carry out an effective economic stabilization program." Subsequently, detailed proposals for balancing the budget, reforming the tax structure and stabilizing prices and wages were put forward by the U.S. authorities. The latter also made clear their opposition to labour strikes disrupting key industries.

The emphasis in occupation policy thus shifted toward economic recovery, and away from the punitive and reform measures of earlier years. In May the United States unilaterally halted interim reparations deliveries of industrial equipment to China and other Pacific nations. As the F.E.C. was still unable to agree on a final reparations program, and the United States increasingly concerned to conserve Japanese assets for recovery, the prospect of any further deliveries seemed remote. (*See* also



IPEROR HIROHITO and Empress Nagako joined the cheering in May 1949 Japanese celebrated the second anniversary of the adoption of the current tional constitution



TOKYO STOCK EXCHANGE reopened under revised laws in May 1949, for its first session since Sept. 1945. Authorization was given by Gen. Douglas MacArthur as a move toward normalizing Japanese economy

Reparations.) In August it was announced that the program to break up excessive concentrations of economic power in Japan was virtually completed. This suggested that the original aims had been scaled down considerably. The agrarian reform meanwhile moved into its final stage. More than 5,000,000 ac. of farm land had been purchased from former owners and resold to small farmers, while rent ceilings and written contracts had been instituted on the 10% of Japan's cultivated area still farmed by tenants.

Domestic Affairs.—The Democratic Liberal party, headed by Shigeru Yoshida, won a sweeping victory in the national diet elections of Jan. 23. Campaigning on a platform of "free enterprise" and anticommunism, Japan's right-wing party gained a working majority of 264 out of 466 seats in the house of representatives. Premier Yoshida thus continued in office through the year. The centre parties, the Democrats and Social Democrats, suffered heavily from the corruption and internecine strife revealed in their earlier coalition governments. In the 1949 elections they dropped to 68 and 49 seats respectively. Symptomatic of the polarization taking place in Japanese politics, the Communists showed a marked accession of strength, increasing their seats from 4 to 35.

Despite the general swing to the right, and the lesser drift from the centre to the left, no stable pattern of political parties had yet emerged in postwar Japan. Premier Yoshida, spokesman of the old-line bureaucracy and large business interests, continued his efforts to draw the Democratic party into a merger which would create an ultraconservative bloc of preponderant strength.

On the left also there were manoeuvres to form some more stable coalition. The Communist party campaigned vigorously against the policies of the Yoshida government, especially in the labour field. They also attracted support by their overtly nationalist and antioccupation propaganda. Toward the close of the year, however, it appeared that they had lost ground in their stronghold, the trade unions. Anti-Communist "democratization leagues" had drawn large numbers of workers away from Communist leadership, and the latter's attempt to stage a strong labour offensive against the government proved ineffectual. Communist influence among Japan's 2,500,000 employees in government offices and enterprises was also weakened by the purging of many party members and sympathizers in the course of the government's campaign to dismiss surplus employees from its payrolls. The strongest organized force in Japanese politics continued to be the conservative bureaucracy allied at various points with business interests and commanding strong support in rural regions. Only the presence of Allied authority prevented a sharper and perhaps more violent clash between the right and left.

National politics in Japan continued to be dominated by the issues of economic stabilization and reconstruction. Under insistent pressure from Allied headquarters, the diet approved Japan's first balanced budget since 1930. A series of Allied directives brought a sharp reduction in government subsidies the suspension of deficit loans from the Reconstruction Finance bank, large-scale dismissals of public employees, slashes in public investment, the relaxation of commodity controls and far-reaching plans for tax reform. On April 25 the yen was officially pegged at 360 to the dollar, as a further step in the return to trade normalcy. Agricultural harvests were good, and industrial output increased 46% from January to October.

Late in the year the authorities announced that monetary stabilization had been achieved. Symptomatic was the marked decline in the black market, and the stability of prices and wages through 1949. It appeared, indeed, that the problem of inflation might be superseded by deflationary pressures. Business complained increasingly that the austerity program had brought about a crippling shortage of funds and mounting stockpiles. This was accentuated by the lag in making available counterpart funds—the yen proceeds of U.S. relief funds—to finance industrial expansion. Labour unrest was widespread especially over the dismissal of some 200,000 public employees and the government's policy of no wage increases. The Japanese economy, moreover, still continued to be heavily dependent upon U.S. aid. Exports failed by a wide margin to cover import requirements of food and raw materials, even though living standards remained far below prewar levels. The "balanced economy" projected for 1953 by the Economic Rehabilitation Planning commission called for exports of $1,500, 000,000 to support a standard of living 10% below that of 1930-34. This was three times the actual level of exports in the year ending June 1949.

Finance.—National government expenditures (general account) were budgeted for 1949–50 at 704,600,000,000 yen. This was 231,500,000,000 yen above the previous year, and came to 26.7% of estimated national income. The principal items were 202,200,000,000 yen for price adjustment (subsidies) and 129,600,000,000 for war-termination expenses (chiefly occupation costs). Revenues were budgeted at 704,900,000,000 yen, of which 514,600,000,000 was to come from taxes and stamp revenues and 121,000,000,000 from government monopoly profits. The Bank of Japan's outstanding note issue declined from 355,300,000,000 yen at the end of 1948 to 298,200,000,000 on Sept. 30, 1949. Meanwhile the bank's holdings of government debt (including Reconstruction Finance bank bonds) dropped from 332,500,000,000 to 237,400,000,000 yen. Total sight and time deposits of all other banks rose from 463,700,000,000 yen on Dec. 31, 1948, to 600,700,000,000 on Aug. 31, 1949. On the latter date the national debt was 518,400,000,000 yen. The gradual tapering off of price inflation is shown in the following indices (1937 100):

	Wholesale Prices	Cost of Living in 28 Cities	Daily Earnin of Mo in Man facturi
1947	3,720	4,470	3,2
1948	9,850	8,643	8,8
1949			
January	14,700	11,100	15,60
August	16,200	12,000	16,20

Trade and Transport.—Japanese foreign trade was again characterized 1949 by a heavy import deficit, financed by U.S.-appropriated funds. Plans for 1949–50 called for exports of $520,000,000 as against imports of $820,000,000. Actual exports increased substantially during 1949, but failed by a wide margin to cover import requirements of food, cotton and other materials. The figures were as follows (in millions of dollars):

	1947	1948	Jan.-Oct., 1949
Imports, c.i.f..	526.1	682.6	780.2
Exports, f.o.b.	173.6	258.3	433.2

The United States provided 65% of Japan's 1948 imports, of which grain and flour comprised 23%, sugar 12%, raw cotton and wool 17% and fertilizer 6%. Exports went mainly to sterling and other non-dollar areas, the U.S. taking only 25%. Cotton manufactures accounted for 38% of 1948 exports, raw silk 9% and other textiles 12%. In terms of quantity, imports were only 40% of the 1930–34 level and exports 16%. The revival of private trade and the replacement of multiple-exchange rates by a single official rate (360 yen to the dollar on permissible transactions), brought a gradual readjustment of Japan's cost-price structure to the world economy. Trade agreements were signed with a number of countries, including a £143,000,000 agreement with the sterling area in November. However, the austerity program created a shortage of working capital in Japanese industry, and exporters likewise felt the pressure of sagging world prices and the devaluation of sterling and other currencies. At the end of the year, as export contracts lagged, unsold stocks of export goods were reported to have reached 80,000,000,000 yen. Japanese officials and businessmen displayed keen interest in the resumption of trade relations with China, Japan's once important market now controlled by a Communist government.

Railway traffic in Japan was as follows in 1948 (monthly average): passenger-kilometers, 6,590,000,000; freight ton-kilometers, 2,109,000,000; freight tons, 9,638,000. Corresponding monthly averages for January-July 1949 were 5,841,000,000, 2,200,000,000 and 9,626,000 respectively. Japan's merchant fleet remained far below prewar standards. In Oct. 1949 the country had only 1,654,178 gross tons of steel vessels of 100 gross tons or over. Only 66 vessels of 405,000 tons could be used in overseas trade.

Food and Agriculture.—Some improvement in Japan's food position was achieved in 1949. The index of agricultural production (1934–38=100) was 83 in 1947–48 and 95 in 1948–49. For the fourth postwar year, however, Japan was unable to provide sufficient food from its own resources for its expanded population, or to assure equitable distribution to the cities. Food imports totalled 2,489,000 metric tons in the year ending June 1949, and were expected to equal if not exceed this figure in fiscal 1950. Production of rice and rice substitutes was as follows in the calendar years 1948 and 1949:

	1948		1949 (prelim.)
	Area (hectares)	Production (metric tons)	Production (metric tons)
Rice	3,150,000	11,632,000	11,474,000
Wheat	680,000	1,042,000	1,064,000
Barley	903,000	1,569,000	1,667,000
Potatoes	226,000 (1949)	2,178,000	—

High food prices remained a major problem for urban workers, who were still forced to devote 60% of their total family expenditure to food. By the end of the year, average national consumption was put at about 2,000 cal. per person daily. But the official ration supplied only 1,348 cal., and the remainder had to be purchased in the open market where costs ran two to three times the official prices. With heavy food imports still financed by U.S. funds, Allied headquarters turned down the request of the Japanese government to raise the basic rice ration above 2.7 *go* (.88 dry pts.).

Manufacturing and Mining.—Industrial activity in Japan climbed steadily from November 1946 to March 1949. Thereafter it showed a tendency to level off, reflecting deflationary pressures in domestic and export markets. By Sept. 1949 the index of industrial output stood at 53% of the 1937 level, a rise of 40% from the 1948 average. Based on 1932–36 as 100, the September indices were as follows: general industrial activity, 93.2; utilities, 164.1; mining 106.2; manufacturing, 75.3; machinery, 111.7; metals, 87.6; chemicals, 77.4; textiles, 25.5. Employment in Japanese industry, transport and the service trades was estimated in Aug. 1949 to be about the same as Oct. 1947. Manufacturing employment was down 22%, however, and real wages were hardly more than 50% of prewar levels. This situation bred continuing discontent and unrest among Japanese workers, about 6,700,000 of whom were organized in trade unions.

Industrial Production

Monthly Average	1947	1948	1949 (Jan.–Oct.)
Coal (1,000 metric tons)	2,270	2,810	3,148
Crude petroleum (metric tons)	15,500	13,600	16,200
Gas (1,000 cubic meters)	49,000	68,500	74,860
Electricity (million kw.hr.)	2,461	2,802	2,964
Pig iron (1,000 metric tons)	31	70	127
Steel ingots & castings (1,000 metric tons)	78	143	246
Refined copper (metric tons)	3,070	4,530	6,126
Cement (1,000 metric tons)	103	154	259
Motor vehicles (units)	930	1,670	2,365
Cotton yarn (metric tons)	10,200	10,200	12,710
Rayon staple fiber (metric tons)	730	1,330	2,038
Woven cotton fabrics (1,000 sq. meters)	46,200	64,400	67,030
Wheat flour (1,000 metric tons)	66	84	153
Raw silk (bales of 132 lbs.)	9,295	11,248	13,524*

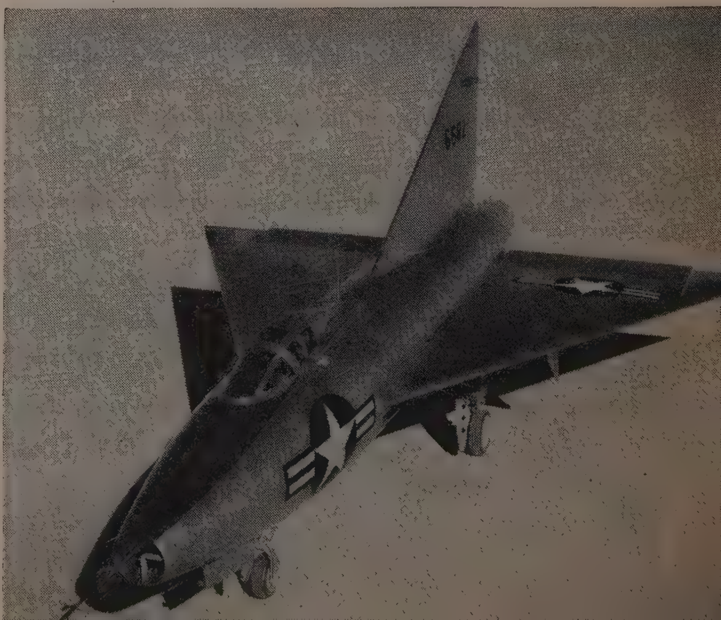
Jessup, Philip C.

(1897–), U.S. government official, was born in New York city on Jan. 5. He attended Hamilton college, Clinton, N.Y., Yale university and Columbia university, where he received his doctor's degree in 1927. That same year he was admitted to the New York bar. He taught international law at Columbia, becoming Hamilton Fish professor of international law and diplomacy in 1946. He held numerous private and governmental appointments in the field of international law, serving, for example, in 1929 as assistant to Elihu Root at the Conference of Jurists on the Permanent Court of International Justice at Geneva and as lecturer at the Academy of International Law in The Hague, Netherlands. From 1942 to 1944 he was assistant director of the Naval School of Military Government and Administration, and at the same time lectured in a similar school for the army. He held executive positions with the United Nations Relief and Rehabilitation administration (1943) and the U.N. Monetary and Finance conference at Bretton Woods, N.H. (1944). On Jan. 3, 1948, President Truman named him deputy representative of the U.S. on the "Little Assembly" of the U.N. general assembly, in May made him deputy to the U.S. delegate on the U.N. Security council, and in December gave him the personal rank of ambassador.

On Jan. 11, 1949, Jessup told the U.N. Security council that the Dutch invasion of Indonesia was in disregard of council orders, and demanded that the Dutch remove their armies from the republic and set up a procedure for transfer of sovereignty to a United States of Indonesia. On Feb. 10 he was given a new position as ambassador-at-large to represent the U.S. at major international conferences and special U.N. meetings. He represented the U.S. in initial discussions that ended the Russian blockade of Berlin. He was one of the U.S. advisers at the meeting of foreign ministers in Paris in May; and he was appointed in July to direct a review of U.S. diplomatic policy toward the far east.

Jet Propulsion.

The outstanding event in the field of jet propulsion during 1949 was the flight of the De Havilland Comet, the world's first commercial jet air liner. Other notable items included the flight of the English



THE CONVAIR XF-92A, a jet-powered research plane built for the U.S.A.F. featuring the triangular-shaped Delta wing. The plane was test-flown at Muroc Air Force base, Calif., in 1949

Electric company's twin-jet Canberra bomber, powered by two Rolls-Royce Avon engines; the flight of A. V. Roe Canada's prototype commercial jet liner, with four Rolls-Royce Derwent 5 turbojets; the flight testing of Consolidated Vultee's advanced Delta wing experimental fighter XF-92A (two Allison J35 jets); the unveiling of Allison's 5,500 h.p. doubled turbine propeller engine XT-40, one of the most powerful and most efficient yet seen; and announcement of Canada's first production turbojet engine, the Avro Orenda.

Turbojets.—In the U.S. a new turbojet engine went into production for the air force and navy at United's Pratt and Whitney Aircraft division. Designated J48, it was based on the Rolls-Royce Tay, an advanced version of the Nene, lighter in weight through the extensive use of magnesium, and more powerful (6,250-lb. thrust) by internal redesign permitting increased flow of air.

Allison's redesigned version of the General Electric TG-180 (J35-GE-1 to -15) was introduced as the power plant of the greatly improved Republic F-84E model Thunderjet. Known as the J35-A-17 and -19, the engine had a dry rating of 5,000 lb. of thrust.

General Electric's TG-190A (J47-GE-1 to -11) was stepped up from 5,000 lb. thrust to 5,400 lb. as the series advanced. It supplanted the J35 in the North American B-45C Tornado attack bomber, the Boeing B-47 Stratojet bomber (which unofficially broke a cross-country speed record by flying to Andrews field, Camp Springs, Md., at an average speed of 607 m.p.h.), and as the "jet pod" auxiliary power plants for the Convair B-36 heavy bomber. This engine also powered the Republic XF-91 interceptor and Martin's new three-jet bomber, XB-51. The J47 was given an approved type certificate for commercial use by the CAA, the first U.S. axial-flow jet engine to achieve this goal.

The latest production model of the Westinghouse 24C was the J34-WE-30, with a thrust of 3,200 lb. It was the power plant of Chance Vought's spectacular twin-jet tailless fighter, the XF7U-1 Cutlass, test-flown during 1949. It was also the main power unit in the Douglas 558-2 Skyrocket, with Reaction Motors rocket engine as tail-booster; this navy experimental aircraft unofficially exceeded 763 m.p.h. (speed of sound at sea level) several times during the year. The J34 also powered the McDonnell XF-88 Voodoo and the Lockheed XF-90 air force long-range jet fighters.

An advanced version of the 24C (XJ34-WE-34) passed an endurance test run of 495.7 hr., being the standard air force-navy 150-hr. qualification test repeated three times plus 45.7 hr. extra for verification purposes by Westinghouse engineers. The same engine later passed successfully the newly set up and more stringent MIL-E-5009 150-hr. "simulated service condition" test.

Experimental jet engines in the 8,000 to 9,000-lb. thrust class were discussed during the year. These include the Westinghouse XJ-40, General Electric XJ-53, Pratt and Whitney XJ-57 and a unit in the same power bracket by Allison. These engines were in various stages of development.

In England Rolls-Royce company's first axial-flow turbojet engine RA-1 Avon was flown in the English Electric Canberra twin-jet bomber and in the Avon-Meteor experimental twin-jet fighter, which climbed to 40,000 ft. in a little more than four minutes. The RA-2 Avon was rated at 7,000-lb. thrust, with an advanced version running on the bench at a considerably higher figure. In this same power bracket was the Metropolitan-Vickers F8 Sapphire which was turned over to Armstrong Siddeley Motors for production and further development.

The Rolls-Royce Nene 2 (centrifugal compressor) powered the Hawker P 1052 and Vickers-Supermarine 510 swept-back wing high-speed research aircraft in their first test flights. This basic engine was produced in the U.S. as the Pratt and Whitney Turbo-Wasp, in France by Hispano-Suiza, in Australia by Commonwealth Aircraft and in Argentina by Tecnica Aeronautica. A few Nenes were exported to the U.S.S.R. in 1946, and it was reported as the power plant of the new YAK-17 single-jet fighter, but it was not known if the soviet engineers had succeeded in getting a Russian copy of the engine into limited production. The advanced Nene, known as the Tay, was announced as powering an experimental pure jet version of the Vickers Viscount.

The De Havilland Ghost (5,000-lb. thrust) was the power plant of the 500 m.p.h. Comet jet air liner which had undergone nearly 100 test flights since it first flew in late July. The Ghost was also the engine used in the new D.H. 112 Venom high-altitude fighter.

Canada advanced further into the jet propulsion field by introducing the Avro C-102 Jetliner and the Orenda jet engine. This was a powerful unit in the 6,000 to 7,000 lb. of thrust class—11 ft. long, with straight-through multi-stage axial-flow compressor and six combustion chambers. It was scheduled to power the Avro XC-100 high-speed twin-jet fighter and probably the production models of the jet liner. The Orenda was put through an unprecedented 750-hr. test run, during which it met the requirements of six major British, Canadian and U.S. test schedules.

Sweden went into production on D. H. Goblin jet engines for Vampire fighters and announced that the other fighter for the Swedish air force would be the SAAB J29. Development also continued on two original jet engine projects. Belgium announced that it would build Rolls-Royce Derwent jet engines. In France production of the Hispano version of the Nene began, and development of two or more French designs was continued.

At the Soviet Aviation day show near Moscow in July, three 600 m.p.h. jet fighters were seen in some quantity. They were the Lavochkin LA-8, the Mikoyan-Gurevich MIG-7 and the earlier YAK-15. The first two were powered by the Chelomey jet engine of 6,000-lb. thrust; this was an advanced development, based on better metallurgy and some redesign, of the German Jumo 004H of 4,000-lb. thrust, about ready for production at the end of World War II. A four-jet bomber was also reported as under development.

Turboprops.—Partly as a result of the second joint conference of the Institute of the Aeronautical Sciences and the Royal Aeronautical society in New York during May, the turbine propeller engine received increased attention by U.S. aviation authorities. In December Allison announced details of its 5,500 h.p. XT-40 turboprop developed for the navy. It consisted of two XT-38 units (with 17-stage axial compressor) geared together for one large dual rotation Aeroprop propeller. Weight of the engine alone was only 2,000 lb., and fuel consumption a highly favourable .67 lb. per horsepower per hour. The XT-40 was installed in the Convair XP5Y-1 high-speed flying boat and scheduled for one or two navy attack planes. A commercial application was seen as likely as two single XT-38 units were installed in a Convair liner and Martin 2-0-2 for tests.

A flight testing program for the XT-37 Turbodyne was begun in a modified Northrop Flying Wing, and development continued on the Pratt and Whitney and Ranger turboprops. However, the status of the General Electric XT-31 (test-flown in the Convair XF-81 and Ryan XF2R-1), the Wright XT-35 Typhoon (test-flown in the nose of a B-17) and the Flader XT-33 was not determined.

In Great Britain turbine propeller engines and related aircraft made further advances. The Dart-Viscount (four Rolls-

Royce RDa-1 1,200 h.p. Darts) passed a full year of successful test flying, and the production model 700 with four RDa-3 Darts of 1,400 h.p. was announced. The Mamba-Apollo air liner (four 1,200 h.p. Mambas), the Mamba-Marathon feeder liner (two Mambas) and Theseus-Hermes 5 (two 2,500 h.p. Bristol Theseus turboprops) all flew at the Society of British Aircraft Constructors' highly successful tenth Flying Display and Exhibition at Farnborough.

During the year a 2,500 h.p. double-Mamba (Armstrong Siddeley) and 2,700 h.p. double-Naiad (Napier) were announced, and development continued on Bristol's 6,500 h.p. double-Porteus for the Bristol 167 (Mk.2) and the Saunders-Roe Princess-type flying boat. A pair of Mamba 3 turboprops (1,400 h.p.) was also installed in a Dakota (Douglas DC-3).

Ramjets, Pulsejets and Rocket Engines.—During 1949 development of nonturbine jet engines showed important progress, largely in the military field, hence details were scarce. Besides the navy's bureau of ordnance ramjet program headed by the applied physics laboratory at Johns Hopkins, the air force ramjet program was given new impetus by developments at Marquardt Aircraft on the west coast and at Wright Aeronautical Corp., Wood-Ridge, N.J. Ramjet and pulsejet helicopters were also test-flown. A pulsejet guided missile for target practice was developed by the navy.

In the rocket engine field, Reaction Motors continued development of more powerful units than those used in the Bell X-1 and Douglas 558-2 Skyrocket. Curtiss brought out a powerful unit for the Republic XF-91 jet-and-rocket interceptor.

Jato units for assisted take-off from small fields or high altitudes were widely used and became standard equipment for many cargo planes and for aircraft in Mexico and parts of South America. In England a 5,000-lb. thrust take-off assist rocket called the Sprite was developed by De Havilland for the Comet jet air liner. (*See* also AVIATION, MILITARY; MUNITIONS OF WAR.) (N. F. S.)

Johnson, Louis Arthur (1891–), U.S. secretary of defense, was born on Jan. 10 in Roanoke, Va., attended the University of Virginia, and received his law degree in 1912. In 1913 he formed a law firm in Clarksburg, W.Va., with Philip P. Steptoe, specializing in corporation law. He served one term in the West Virginia house of representatives beginning in 1917, served overseas in World War I, and in 1932 was national commander of the American Legion. Johnson was high in the counsels of the Democratic party from the 1920s on, and was appointed assistant secretary of war in 1937, a post he resigned in 1940. In 1942 he served as presidential emissary to India and in the same year was appointed by the Office of Alien Property to administer the General Dyestuff corporation, a division of I. G. Farbenindustrie A. G. He also was a director of the Consolidated Vultee Aircraft corporation and General Analine and Film corporation. During the 1948 presidential campaign Johnson served as chairman of the Democratic finance committee, and when James V. Forrestal resigned as secretary of defense early in 1949, Johnson was appointed (March 3) to succeed him, being confirmed March 23. His action in halting construction of a navy super-aircraft carrier brought to public notice the intense dispute between the services over the respective roles of the navy and the air force in defense strategy.

Jordan, HASHEMITE KINGDOM OF. An independent Arab kingdom of the middle east, Jordan is bounded by Israel (west), Syria (north), Iraq (east) and Saudi Arabia (southeast and south). Area (excluding Arab Palestine): 34,750 sq.mi. Pop. (est. 1948): 400,000. Capital: Amman (pop. 60,000). Arab Palestine, which was occupied by Jordani troops, covers approximately an area of 5,000 sq.mi., with a population of about 1,000,000. Languages (former Trans-Jordan): Arabic 97%, Circassian 2.5%. Religions (former Trans-Jordan): Moslem 91% (chiefly Sunni); Christian 8.5% (chiefly Arab-speaking Greek Orthodox). King: Abdullah ibn Hussein (*q.v.*); prime minister, Tawfiq Pasha Abu-Huda.

History.—Jordan was accorded diplomatic recognition by the United States on Jan. 31, 1949. The government announced on June 2 that Trans-Jordan had changed its name to the Hashemite Kingdom of Jordan and that foreign missions in Amman and the U.N. had been asked to use the new style in all correspondence and documents.

On Jan. 8 it was announced that in response to a request from the government under the Anglo-Trans-Jordan treaty of March 15, 1948, a British force had been sent to Aqaba. The government early in March informed the British minister that Israeli forces moving southward to the gulf of Aqaba had penetrated Jordanian territory at one point and were withdrawn, and on March 12 reinforcements arrived for the British detachment at Aqaba. In March it became known that the British subsidy for the Arab legion had been increased from £2,000,000 to £3,000,000. On May 4 it was announced that an interest-free loan of £1,000,000 had been granted by Britain for development work in connection with the repatriation of refugees.

A cease-fire agreement with Israel was signed at Rhodes on March 11, and an armistice agreement on April 3. The terms provided that the Arabs should retain the territory then held except that control of the Hadera-Afula road and the Lydda-Haifa railway line (except at Tulkarm) should pass to the Israelis. Partially demilitarized zones were to be established along the demarcation lines. By agreement with the Iraqi and Egyptian governments, Jordan in April took over the occupation and administration of the Jenin-Tulkarm and Hebron-Bethlehem areas which had hitherto been Iraqi and Egyptian zones of occupation respectively. The *de facto* accession to the territory of Jordan of those parts of Palestine occupied by its troops, which had been anticipated by the kingdom's change of name, did not receive formal recognition from any power during the year. The government was reshuffled on May 3, the foreign ministry and two other ministries being given to Palestinians.

King Abdullah on April 10 issued a statement on the coup d'état in Syria (*q.v.*) which said that Jordan's policy was one of co-operation with Syria until the Arab states had expressed their verdict on the Greater Syria and Arab unity moves impelled by events in Palestine.

The king visited Tehran on July 28 and on Aug. 7 it was announced that agreement had been reached between Iran and Jordan for a treaty of friendship and collaboration.

On Aug. 26 the Jordanian minister in London announced that a firm of British irrigation engineers had been employed to make the best use of the water available to the kingdom from the Jordan and Yarmuk rivers, and was engaged in drafting practical schemes of irrigation for the Jordan valley in so far as it lies within the kingdom of the Jordan. Press reports said that it was planned to irrigate 75,000 ac. at a cost of about £10,000,000.

A law was enacted in September to replace the Palestine currency, which had hitherto been legal tender, with a new currency administered by a Jordan currency board in London. (*See* also

ISRAEL; PALESTINE; UNITED NATIONS.) (C. HE.)

Education.—(1948) Schools: government 89, nongovernment 86; total pupils 15,201, total teachers 361.

Finance and Banking.—Budget (1947): revenue £P. 1,508,645, expenditure £P. 1,620,672. Monetary unit: Palestine pound at par with the pound sterling=$2.80 U.S. (Dec. 1949).

Foreign Trade.—(1948): Imports £P. 11,539,950; exports £P. 727,638; re-exports £P. 1,783,633; transit of crude oil £P. 706,313.

Transport and Communications.—Licensed motor vehicles (Dec. 1948): cars 1,241, commercial vehicles 1,123.

Agriculture.—Main crops (metric tons, 1948): wheat 100,000; barley 41,000; lentils 7,000; kersennah 9,000; horse beans 9,000; millet 9,000. Livestock (1943): goats 324,000; sheep 200,000; cattle 53,000; donkeys 30,000; horses 6,000; camels 6,000; mules 2,000.

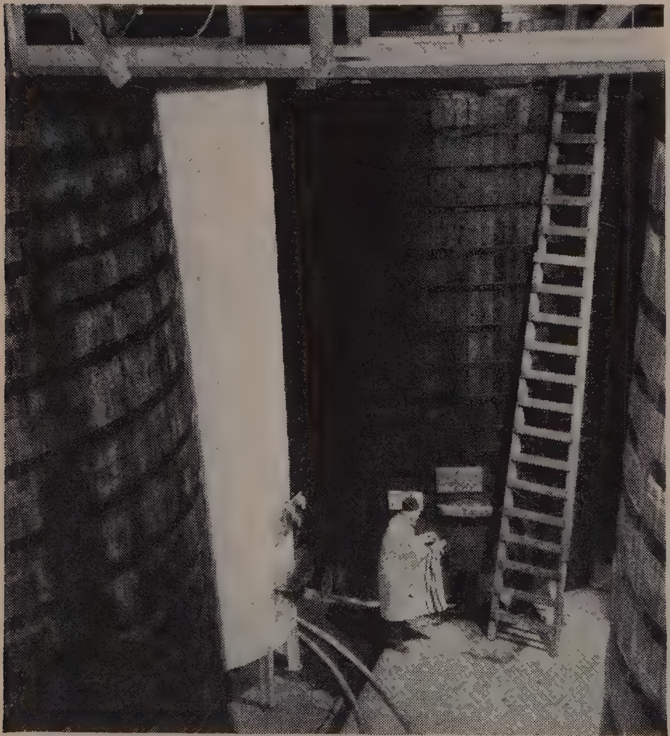
Judaism.

In western Europe a resurgence of religious feeling and interest among the Jewish survivors of nazi brutality was evident in the large attendance at services on Friday evenings and Sabbath mornings. Not only was this the case in Belgium and the Netherlands where Jewish life was wont to be vigorous and vital but also in France and to a lesser degree in Italy. Not a few European Jews who deemed themselves outside the fold because of their marriage to Christian mates were now attracted to the synagogue. The American Joint Distribution Committee in Europe, whose program was predominantly philanthropic, was taking cognizance of this revival and emphasized more than ever the satisfaction of the European Jew's religious and cultural craving.

The establishment of the Israeli state, its recognition by large and small powers and admission as a member in the United Nations, and particularly the ability of its small army to ward off the military attacks of five Arab states disposed even agnostic Jews to believe in the possibility of miracles. To the religious the feat was acclaimed as a manifestation that God is on the side of Israel whose measure of affliction exceeded their past spiritual deficiencies.

The impenetrable "iron curtain" continued to make objective evaluation of the religious disposition of the people of Russia and her satellite countries difficult.

In the western hemisphere dissatisfaction in Jewish circles with the secular conception of life also continued. Now that the establishment of a Jewish state had become a reality, many nationally minded Jews sought a new orientation and a firmer *raison d'être* for their sense of separateness from their Protestant and Catholic fellow Americans. Jewish culture and the Jewish religion acquired greater significance in their eyes. New synagogues were established throughout the United States. The Union of American Hebrew Congregations (Reform) added about 50 such units to its list. The United Synagogue of America (Conservative) pointed to a like growth, and progress of the Orthodox groups was at an even greater pace. Theological seminaries of all shades reported that never had there been as great a demand for rabbis and religious teachers as in 1949.



CASKS OF SACRAMENTAL WINE being inspected by the religious supervisor of a winery in Brooklyn, N.Y., before shipment of the wine to Israel for 1949 Passover services

Jews with religious convictions were becoming more articulate. The Synagogue Council of America continued to widen its activities and its influence. Mindful of the increasing role of religion in the life of U.S. Jewry, the local Jewish Welfare organizations were beginning to allocate greater sums for religious schools, for the institution of a place for worship in their hospitals and the support of chaplains for their inmates. Juvenile Delinquency.

During 1949 two trends were noticeable, a decrease in the juvenile population of correctional schools and an increase in the use of professional diagnostic and treatment centres. Massachusetts set up two such centres, one at the Lyman Industrial school, Westboro, serving all boys under 17, and one for girls at Lancaster. New Jersey had a diagnostic centre at Trenton, serving all delinquents under 17, staffed with adequate physicians, psychologists, social workers and psychiatrists. The youth authority of California added seven new centres to its program established in 1944. Wisconsin, Ohio, Michigan and Minnesota were following this plan.

The Interdepartmental Committee for Children and Youth, established in May 1948 by the Federal Security administrator at the request of the president of the United States submitted its report July 7, 1949. In this report, compiled by all the heads of federal agencies dealing with delinquent children under 18, it was stated that no individual series represented completely accurate statistics on the nature and extent of juvenile delinquency. Establishment of uniform standards was stressed. The federal children's bureau published summary reports on juvenile delinquency cases disposed of officially and unofficially by juvenile courts from the various states interested in co-operating. These data included information on the child's age, race, sex and length of time in an institution. The statistical gaps occurred largely in the rural and small-town areas. The new plan of the interdepartmental committee would make possible intercity and interstate comparisons of juvenile delinquency.

The children's court was no longer regarded merely as a restraining element in society, but as a welfare service to children in trouble as a result of parents' illness, death, inadequacy, ignorance or neglect. Such children often required legal protection of their person or property. Anything detrimental to the development of emotional security and good social relations was regarded as a potential breeder of juvenile delinquency. (*See* also CHILD WELFARE.) (M. V. W.)

Kansas.

Kansas was admitted to the union as the 34th state on Jan. 29, 1861. It is frequently called the "Sun lower state." The total area is 82,276 sq.mi., of which 82,113 sq.mi. are land. Kansas is located in the geographical centre of the continental United States and is the geodetic centre of the North American continent, from which all geodetic surveys are made. The population was estimated by the U.S. census bureau at 1,947,000 as of July 1, 1949, compared with a 1940 census igure of 1,801,028. The population was about equally divided between urban and rural. Capital: Topeka, pop. (1949): 89,810. The two largest cities in 1949 were Wichita (185,366) and Kansas City (148,254).

History.—The principal state officials in 1949 were: Frank Carlson, governor; F. L. Hagaman, lieutenant governor; Larry Ryan, secretary of state; George Robb, auditor; R. T. Fadely, treasurer; Harold R. Fatzer, attorney general; Adel Throckmorton, superintendent of public instruction; Frank Sullivan, nsurance commissioner. In 1948 Kansas voted to repeal the 68-year-old liquor prohibitory amendment.

Education.—As of June 30, 1948, there were 3,090 one-teacher schools in operation (1,201 having been closed), with an enrolment of 37,996. The enrolment (1948) in elementary and secondary schools was 316,812 (88,049 in secondary schools). There were 16,579 teachers employed in the state. The combined enrolment of the four state colleges and one university was 20,153. The populations of other state institutions were as follows: school for the blind, 86; school for the deaf, 231; Kansas vocational school (Negro), 164.

Social Insurance and Assistance, Public Welfare and Related Programs.—The populations of the state's welfare institutions in 1949 were as follows: hospital for epileptics, 727; state training school, 1,374; hospitals for tuberculars, 395; orphans' and receiving home, 137; hospital for insane, 5,084; industrial school for girls, 113; industrial school for boys, 115; state penitentiary, 1,180; industrial farm for women, 35; reformatory for boys, 367. The 1949 legislature appropriated approximately $20,861,000 for buildings and the welfare program of 1950–51.

Communications.—In 1949 the state had 9,411 mi. of rural highways and 503 mi. of urban highways, the latter being connecting links with state highway systems, controlled by respective municipalities. Highway funds expended during 1949 were $38,634,000. The 1949 legislature provided ncreased revenue to inaugurate a long-range highway improvement program. There were 8,448 mi. of railroads; 95 municipal, 78 privately owned and 3 Civil Aviation administration airports.

Banking and Finance.—The budget for the biennium 1950–51 totalled $58,042,806, an increase of $20,828,873 over the previous budget. Sales tax (2%) collected for 1949 fiscal year totalled $38,593,078, an increase of 2,953,276 over the previous year. The income tax totalled $15,694,409, an increase of $2,837,282 over 1948. The bonded indebtedness totalled $5,250,000. As of June 30, 1949, there were 174 national banks and 437 state banks and 4 trust companies. Of the state banks, 286 were insured under the provisions of the Federal Deposit Insurance corporation. The deposits in the national banks and the insured state banks totalled $1,396,736,986.24.

Agriculture.—Agricultural production in 1949 was below the high levels of recent years but compared favourably with the average of the last ten years. Winter wheat, Kansas' most important crop, was slightly below average and the smallest crop since 1943. Most other major crops, except oats and barley, were larger than average. Corn and sorghum yields were well above average and resulted in large crops. High yields of soybeans on an increased acreage produced the largest soybean crop of record. Hay production, although less than in 1948, was well above average. Fruit crops were the best in recent years. The livestock inventory numbers on Jan. 1, 1949, were: cattle and calves, 3,591,000; hogs, 1,203,000; sheep and lambs, 711,000. The cash farm income from marketings of Kansas agricultural products during the first half of 1949 was about 20% less than in the corresponding period of 1948. The cash net farm income for the year was $1,202,567,000.

Leading Agricultural Products of Kansas

Crop	1949 (est.)	1948	Average 1938–47
Wheat, bu.	167,244,000	231,368,000	180,657,000
Corn, bu.	69,328,000	81,304,000	61,169,000
orghum grain, bu.	21,500,000	26,576,000	19,300,000
Oats, bu.	21,384,000	26,312,000	36,391,000
arley, bu.	3,482,000	6,878,000	12,448,000
oybeans, bu.	2,982,000	2,505,000	1,471,000
Hay, tons	3,376,000	3,565,000	2,425,000

Manufacturing and Mineral Production.—In 1949 the value of the petroleum production of Kansas was $279,500,000, and of natural gas, $68,680. Kansas is also recognized for the production of zinc, cement, lead, coal and salt. In 1949 there were nearly 2,800 manufacturing and processing plants engaged in the production of more than 1,000 items. The total output, valued by the manufacturers and manufacturing establishments, was $461,100,000. (F. CN.)

Kellogg Foundation: *see* SOCIETIES AND ASSOCIATIONS.

Kentucky. An east south-central state, admitted to the union on June 1, 1792, Kentucky is popularly called the "Blue Grass state." Area: 40,395 sq.mi., of which 286 sq.mi. are water. The estimated population (U.S. census bureau) on July 1, 1949, was 2,893,000, an increase of 0.6% over the 1940 population of 2,845,627. Capital: Frankfort (pop. 16,200, est. of Jan. 1, 1949). Other cities are: Louisville (370,400); Covington (66,500); Lexington (58,600); Paducah (41,000); Newport (33,500); Ashland (32,000); Owensboro (31,900); Henderson (21,600); Bowling Green (20,000).

History.—On Jan. 17, 1949, Gov. Earle C. Clements appointed Garrett Lee Withers to fill the unexpired senatorial term of Vice-Pres. Alben W. Barkley. During the fiscal year ending June 30, 1949, Perry county, Richmond, Dawson Springs, Shelbyville, Cattlettsburg and Mt. Sterling legalized the sale of alcoholic beverages. At the close of 1949, 87 counties remained dry.

On Nov. 8, 1949, on the fifth trial, the state abolished the 1891 constitutional limitation of $5,000 on salaries for state officers, other than the governor, by a vote of 178,988 to 162,827. The top limit was set at $12,000 for state officers and the mayor of Louisville, $8,400 for circuit judges and $7,200 for local officers. The state also voted, 232,809 to 125,697, to raise the ceiling on state aid to the handicapped school districts from 10% to 25% of the entire state grant to public schools.

The principal state officers in 1949 were: Earle C. Clements, governor; Lawrence W. Wetherby, lieutenant-governor; George G. Hatcher, secretary of state; A. E. Funk, attorney general; Harry N. Jones, auditor; Edward F. Seiller, treasurer; Boswell B. Hodgkin, superintendent of education.

Education.—Public elementary schools in 1948–49 numbered 4,848 with 12,606 teachers and 461,922 pupils. In 116 public high schools there were 5,363 teachers and 90,733 pupils. The state disbursed $19,350,000 from the school fund, or $28.35 per capita. In addition to the per capita the state distributed $2,150,000 in equalization.

Social Insurance and Assistance, Public Welfare and Related Programs.—Unemployment insurance paid in Oct. 1949 amounted to $1,207,653, an average of $15.58 per payment. Old-age assistance went to 60,828 adults to the amount of $1,282,960. Aid to dependent children amounted to $767,571 for 49,938 and to the needy blind to $47,704 for 2,132. The population of the correctional institutions on Sept. 30, 1949, was: reformatory 2,012; penitentiary 1,093; women's prison 64; houses of reform 461.

Communications.—As of Oct. 31, 1949, the highway department had under regular maintenance 11,368 mi. of road and 12,840 mi. under rural highways maintenance. During the year it had opened 70 new bridges. As of Oct. 31, 1949, the highway department reported eight privately owned toll bridges. Road fund receipts for the fiscal year ending March 31, 1949, amounted to $41,249,262.12; expenditures for that period amounted to $49,379,425.24. The surplus as of March 31, 1949, was $20,820,272.28.

Banking and Finance.—On June 30, 1949, there were 92 national banks with total assets of $612,950,000; 295 state banks and trust companies with resources of $933,714,814.70. The state treasury tax receipts, according to the latest available figures, amounted to $101,355,050.74 for the fiscal year ending June 30, 1949. The major sources were: selected sales and gross receipts $55,250,422.74; income taxes $18,931,152.16; licence and privilege taxes $15,838,583.91; property taxes $8,387,536.94; inheritance and estate taxes $2,084,619.19; miscellaneous $862,735.80. Of the total state tax levies, $55,259,017.04 went to the general fund, $43,471,899.61 to the road fund and $2,624,134.09 to trust and agency funds. The seven largest drafts against the general fund were for education ($34,441,267.84), welfare and economic security ($12,077,198.09), building commission ($4,382,624.76), general administration ($3,126,898.52), courts ($2,212,927.08), health ($1,082,760.14), conservation ($1,049,570.55). The state general fund surplus as of June 30, 1949, was $24,527,097.97.

Agriculture.—The leading crops of 1949 appear in the table.

Leading Agricultural Crops of Kentucky

	1949	1948	Average 1938–47
Corn, bu.	88,762,000	100,040,000	70,856,000
Winter wheat, bu.	5,268,000	5,184,000	5,569,000
Oats, bu.	3,328,000	2,754,000	1,940,000
Barley, bu.	1,638,000	1,348,000	1,669,000
Rye, bu.	378,000	420,000	314,000
All hay, tons	2,635,000	2,194,000	2,238,000
Soy beans (for beans), bu.	2,202,000	2,299,000	892,000
Tobacco, all types, lb.	445,775,000	466,853,000	368,552,000
Potatoes, Irish, bu.	2,730,000	2,542,000	3,750,000
Potatoes, sweet, bu.	913,000	960,000	1,304,000

Mineral Products.—During 1948 coal mines yielded 82,579,453 tons and employed 75,750 miners with a loss of 134 lives, or 1 life per 616,265 tons mined. The output of petroleum in 1948 was 8,926,186 bbl. and the estimated natural gas production was 90,000,000,000 cu.ft. (W. W. Js.)

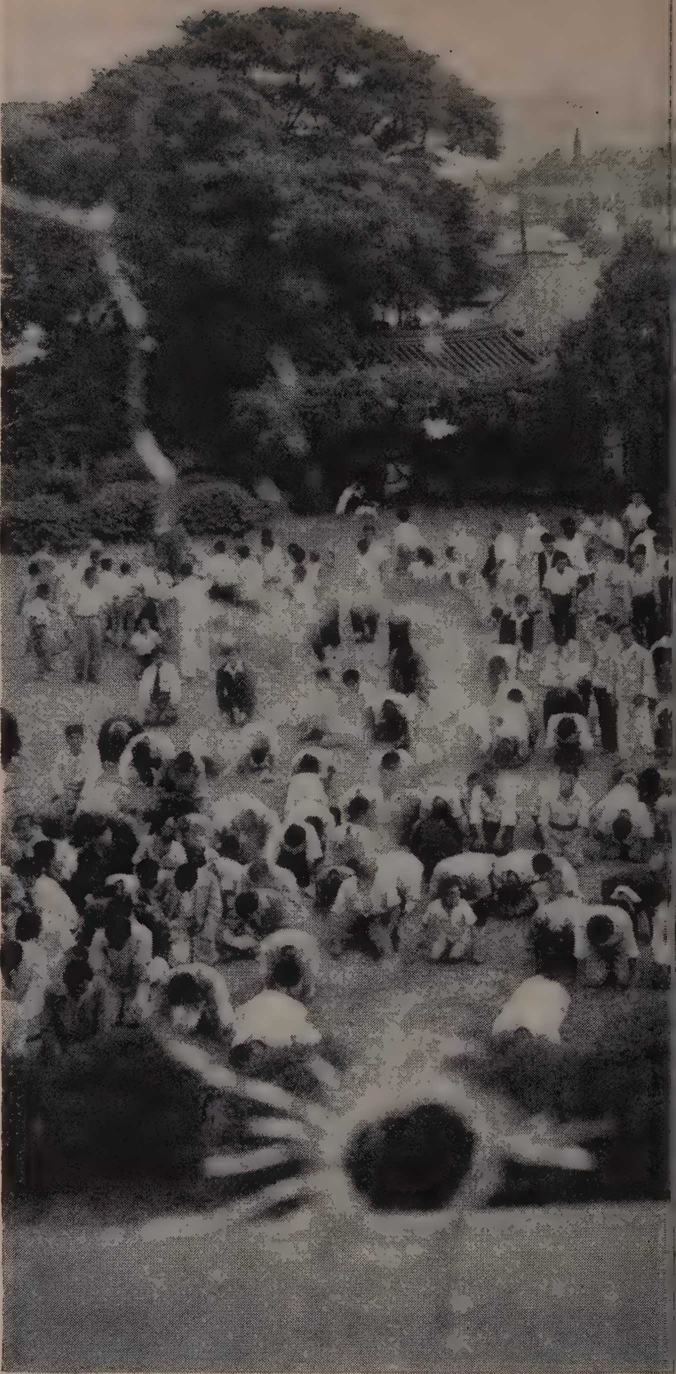
Korea. A peninsula extending from Manchuria southward 600 mi. between the Yellow sea and the Sea of Japan; for 11 mi. it borders the U.S.S.R., the rest of the boundary being with Manchuria. Area: 85,225 sq.mi. The 38th parallel north, chosen to separate soviet and U.S. troops accepting the surrender of Japanese forces, remained during 1949 as the artificial but rigid division between Korean governments organized in each zone. The south had 44% of the area, but its population of 20,188,641 (Sept. 1949 est.) was more than twice that of the north (1949 est. 9,050,000). The largest city is Kyongsong (Seoul); pop. 1,446,049 (May 1949). Other cities with May 1949 populations are Pusan, 473,619, Taegu, 313,705, and Inch'on, 265,767. In the north is P'yongyang: 450,000 (1949 est.), the northern capital. Religions: Buddhism, Confucianism and a unique eclectic religion Chun-dyo-ko. In 1939 there were roughly 500,000 Korean Christians.

History.—On Jan. 1, 1949, President Harry S. Truman announced formal recognition of the Republic of Korea by the United States; on Jan. 30 the first ambassador from the northern regime was received in the U.S.S.R. Both republics claimed suzerainty over all of Korea. The year was marked by solidification of the internal positions of each in their zones and by divergent trends to the right and to the left politically.

The Republic of Korea in the south, which is called domestically Tae Han Min Guk (Great Han Peoples country), had a tumultuous year. The national legislative assembly, for example, adopted on June 2 a resolution calling for dismissal of the entire cabinet; later five members of the assembly, who filed a petition with the U.N. Commission on Korea, were arrested on the order of President Syngman Rhee. Problems of local security made officials fearful and the police, organized on a national basis, were given wide powers which they exercised on occasion very harshly. A Korean army officer assassinated Kim Koo, former president of the Korean Provisional government, a rightist who bitterly opposed the division of the country. An important forward step was taken when an administration-sponsored land reform program was enacted; this would enable more than 1,000,000 farmers to purchase their land from Korean landlords, following a pattern established by the U.S. military authorities in distributing former Japanese-owned land. President Rhee, after a conference with Generalissimo Chiang Kai-shek Aug. 7–8, issued an appeal for a Pacific pact for security purposes but it had luke-warm reception.

The United States army, which had occupied southern Korea after the surrender of Japan, was withdrawn during the first half of the year, the final troops embarking in July. Under treaty provisions a small group of 500 U.S. army officers and men remained to aid in the training of Korean security forces. U.S. economic aid continued on a large scale and with strict U.S. supervision. An Economic Cooperation administration program calling for $150,000,000 expenditure was approved by the U.S. house foreign affairs committee on June 30, but it did not pass the senate until Oct. 12. Actual appropriation was not made by the end of the year, though some interim funds were provided.

The United Nations Commission on Korea remained in southern Korea through the year, operating under some difficulties. They tried in vain to make contacts with the northern regime and to work toward a unification of the peninsula. In reporting their failures to the U.N. general assembly, they laid the blame on the world-wide antagonism between the U.S.S.R. and the United States. The chances for unification in Korea appeared to them to be more and more remote. However, they were in structed by an assembly vote of 44–6 on Oct. 3 to continu their efforts and to pay special attention to military develop ments in Korea which might lead to full-scale civil war. Th Republic of Korea's appeal for a place in the U.N. assembl was vetoed by the U.S.S.R. The application of the Democrati Peoples' republic for membership was likewise rejected.



KOREANS mourning the death of Kim Koo are shown photographed throug the bullet-pierced window of his study. Dr. Koo, leading opponent of Pre Syngman Rhee, was assassinated in his home in Seoul, June 26, 1949

In the north, soviet troops were withdrawn in the last wee of 1948, thereby ending their occupation. A Korean-sovie agreement for economic and cultural co-operation was signed i Moscow on March 21, during a visit of northern leaders, inclu ing Kim Il-sung, the premier. The northern regime continued t use subversive and propaganda attacks on the south. Activ fighting took place along the western part of the 38th paralle

The internal patterns of the north were developed alon Communist lines with nationalization of banks, industry, trans port and commerce. A two-year plan for the national econom for 1949–50 was publicized. It called for an increase in agricu ural land sown, building of irrigation works and increase in grain production and in livestock.

The whole pattern of developments during 1949 showed a urther hardening of the cleavages between north and south Korea. The situation, especially along the 38th parallel, was grave. Both regimes were being bolstered by outside aid. Though n both areas there was some increased economic development, he lot of the common man was insecure and unhappy.

Education.—A group of U.S. educators had worked with Korean teachers in south Korea in revising the rigid system which had been established y the Japanese. The mass teaching of *hankul,* the native syllabary, was tarted after the war and the literacy rate was rapidly increasing; in he south the rate in 1949 was 66% of those over 13 years of age. n the north the claim was made that 1,740,000 students were enrolled n 4,327 primary and secondary schools and that 11 institutions of igher learning had been established.

Defense.—Native defense forces had been organized in both north and outh, and were equipped and trained in part by the respective outside owers. Troops in the north were estimated at 200,000 men. In the outh the Korean constabulary numbered about 60,000 and the military orces were estimated at 150,000.

Finance.—Complete financial data were available during 1949 only for outh Korea. The value of the won maintained its low level of 1948; he official rate of exchange was 450 won to $1 U.S. For conversion of alues in official publications a rate double that was used; however, in eptember, 1949, curb rates for greenbacks was $1 U.S. to 1,900 won. Measures slowing down the rate of inflation had not been too effective. The bank of Korea note issue used in the south increased from 8,700,000,000 won in Sept. 1945, to 49,100,000,000 won in Sept. 1949. In oth areas budgets were far unbalanced, depending on note issue to ake up deficits. In the south the 1949–50 budget called for 57,322,95,000 won for general expenditures and 166,110,909,000 won for pecial expenditures; and in the north the figure was 19,762,630,000 won or general expenditures, an increase of 44.7% over the year before.

Trade.—Trade on a barter basis between the north and south was topped in the spring, though clandestine trade continued. In the south, oreign trade was largely restricted to essential imports of food, petroleum, ertilizers, coal and raw materials for industry. Most of this was andled under ECA controls; ECA procurement authorizations for the irst 11 months of the year totalled $52,998,000, of which about onealf was in the U.S. Imports in the first nine months of 1949 exceeded xports (mostly fish products) by a ratio of nine to one.

Communications.—In 1944 there were 3,115 mi. of track in operation, arrying 106,372,624 passengers and 27,525,654 metric tons of freight.

Agriculture.—Rice is the most important agricultural product; 1948 roduction in the south was estimated at 2,500,000 metric tons. Other roducts were barley (352,393 tons), naked barley (212,780 tons), wheat (89,912 tons) and rye (18,896 tons). Fish and marine products were estimated at 300,000 metric tons in 1948. Production of crops was ided by fertilizers imported with ECA aid; in 1948–49, 600,000 tons were imported.

Manufacturing.—Production goals for 1948 announced for manufacuring in the north were claimed to have been attained in 1949; pig ron 9,000,000 tons; chemical fertilizers 332,000 tons; salt 150,000 tons; ayon yarn, 1,440 tons; reliable information on these figures was unbtainable. Communist officials made statements at the end of the year hat showed that industrial production had evidently been lagging coniderably. The north Korean action in cutting off the power supply norally furnished to the south seriously hampered manufacturing there. ndustrial facilities in the south were mostly chemical plants, food rocessing and textile factories and light consumer-goods industries such s rubber shoes, bicycle tires, etc. All of these are reported to have had considerable increase in production in 1949.

Mineral Production.—The major mineral resources are found in the orth where iron, coal, gold and many other ore deposits were exloited by the Japanese. In the south anthracite coal production was imited: 714,150 tons were mined in 1948 and monthly production eached a peak of 97,918 tons in April 1949. Bituminous coal, overwhelmingly for transport facilities, was imported from Japan, 967,903 ons in 1948. In 1944 south Korea was the world's leading producer of raphite (103,000 metric tons); production in 1948 was one-seventh of hat amount.

(*See* also UNITED NATIONS.) (S. McC.)

Krug, Julius Albert

(1907–), U.S. government official, was born on Nov. 23 in Madion, Wis., and received an M.A. degree from the University of Wisconsin, Madison, in 1930. After serving as a power engineer nd consultant for several federal agencies between 1936 and 941, he became an executive of the War Production board 1943), and after a period as a lieutenant commander in the avy returned to WPB as its chairman in the fall of 1944. He esigned in Oct. 1945, and was appointed secretary of the inerior by President Harry S. Truman on Feb. 26, 1946.

On Feb. 11, 1949, Krug told a joint congressional committee nvestigating U.S. economic conditions that nation-wide proluction of electric power was still 10% short of demand, and warned that a continuing shortage of steel might mean that voluntary allocations might have to be superseded by mandatory allocations. In August, before the United Nations Economic and Social council's conference on conservation and the utilization of resources, he told the delegates that the U.S. was ready to give "substantial" aid to backward countries in terms of both technology and investment. He presented to congress a water-resource development program for California's Central Valley project, of which one controversial section would transfer much dam-building authority from the army engineers to the interior department. He resigned as secretary of the interior, effective Dec. 1.

Labour Unions.

Political issues affecting the demands and position of organized labour in the U.S. were the leading subjects of debate in the long first session of the 81st congress. The large and unexpected victory of the Democrats in the national political campaign of Nov. 1948 persuaded leaders of the American Federation of Labor and the Congress of Industrial Organizations that the new congress, with the support of Pres. Harry S. Truman, would repeal the

"WHERE DOES HE FIT IN?" editorial query by Costello, published in the *Knickerbocker News* (Albany) in 1949

Taft-Hartley act, extend and liberalize the federal social insurance system and raise the statutory minimum wage rate.

In these hopes labour was disappointed. Although repeal of the Taft-Hartley act and restoration of the Wagner act was one of the principal campaign promises of the Democratic party, the majority of the new congress, including both Democrats and Republicans, resisted pressure from the president and union leaders. The dominant opinion of congress was that the Taft-Hartley act had corrected abuses associated with the Wagner act. Any revision of the law, therefore, would have to be moderate and limited to win the support of congress. The unions, however, wanted either the essence of the Wagner act or no change in the law at all, and they rejected a considerable revision proposed by Senator Robert A. Taft. The result was that congress adjourned without changing the law and left the Taft-Hartley act as the foremost issue in the congressional elections of 1950.

Organized labour was no more successful in its efforts to win thoroughgoing revision of social insurance legislation, since congress failed to adopt a bill to raise old-age pensions and various forms of assistance and substantially extended the coverage of the pension plan. But congress did satisfy union demands by raising the statutory minimum wage from 40 to 75 cents an hour and appropriating large federal subsidies to promote housing construction for the lower-income population.

Much of what happened in U.S. labour relations in 1949 was influenced by economic conditions. Although the year proved, in retrospect, to have been almost as good a year as 1948, there occurred within the 12 months a noticeable slump in production, employment and profits and an increase in unemployment. This turn in business, the first of the sort since 1939, made it difficult for the unions to pursue their expected demand for a fourth round of wage increases. Two national unions of clothing and textile workers renewed agreements with employers at existing wage scales, and in a few cases, notably in lead and zinc mining, the unions accepted wage cuts.

In the major negotiations for contract renewals in 1949, union policy took another direction. The C.I.O. Steel and Automobile Workers' unions added to their wage demands proposals for company financed pension and insurance benefits, it being generally understood that wage concessions would be waived in return for a satisfactory settlement of the union pension and insurance claims. As in previous years a single union, in this case the United Steel Workers, assumed the leadership in the drive for welfare benefits as a substitute for higher wages. The negotiations between the unions and the steel companies ended in disagreement, mainly because the companies considered the union proposals excessively costly and because some companies, in particular the U.S. Steel Corp., insisted on contributions by their employees to the pension funds. Failing to reach agreement the union prepared to call a national steel strike.

At this point President Truman intervened with the appointment of the Steel Fact-finding board, before which the industry reluctantly and the union eagerly appeared to present their respective cases. The findings of the board were legally not binding on either party, but it was clear that what the board recommended would have a determining influence on the ultimate settlement. That was, in fact, what happened. The board ruled against a wage increase because of unfavourable business conditions. But it recommended both pensions and social insurance to be financed by employer contributions amounting to ten cents an hour. In its argument the board found the cost of such benefits to be an appropriate charge on business and threw the weight of its influence toward noncontributory pensions. The board's report was accepted by the union and rejected by the employers. On Oct. 1 the steel industry was struck.

Pensions and welfare benefits were likewise the source of strikes and disturbances in coal mining. In this industry, pensions and welfare funds, financed by a royalty on each ton of coal produced, had been in existence since the settlement of the strike of April 1946. The royalty amounted in 1949 to 20 cents a ton. The causes of trouble were in the main peculiar to this industry and the policies of John L. Lewis. The funds, for all practical purposes administered by the union, ran out of sufficient reserves. In 1949, therefore, the United Mine Workers wanted the royalty raised and, in addition, sought a shorter work-week and a substantial rise in wages. Negotiations, which ran through a large part of the year, got nowhere. The coal operators, already suffering from the loss of business to competing fuels, were unwilling to lift costs still higher. Considering, also, the alleged wastes in the union administration of the benefit funds, they objected to making a new contract which failed to deal with this problem. The miners, unable to get what they wanted, resorted to direct action. For a large part of the year Lewis ordered his members to work only three days a week, and late in the year the entire industry was shut down by a strike. When the year ended nothing was settled, and the industry was again, by union order, on a three-day week.

The national steel and coal strikes raised the losses from labour stoppages to the unusually high level of 53,000,000 man-days, a total exceeded only in the troubled year 1946. The steel strike was settled after a month's idleness, though numerous strikes against particular companies ran beyond that time. The settlement reached in steel afforded the pattern which was being followed throughout U.S. industry. Business had assumed the cost of private pensions and insurance. The financial obligations so undertaken varied widely but were likely to average ten cents an hour and in time to exceed that sum by a substantial amount.

The outstanding development of the year in the internal affairs of organized labour was the campaign within the C.I.O. to eliminate Communists from the control of a number of its constituent unions. The fight against communism began shortly after World War II, when U.S. Communists showed themselves more friendly to the U.S.S.R. than to U.S. policies. The struggle came to a head in 1949, when the C.I.O. expelled the Electrical and Radio and Farm Equipment Workers' unions and granted jurisdiction over their members to other organizations. In addition it took steps to investigate and reorganize ten unions, including such organizations as the Longshoremen of Harry Bridges, the Fur and Leather and Mine, Mill and Smelter Workers' unions.

During 1949, total union membership increased only slightly and remained just above 14,000,000. The great rise in membership during World War II and again in 1947 and the levelling of business accounted for the slower expansion in 1948 an 1949. The large unions listed in the table continued to dominat the U.S. labour movement; their combined membership equalle about 45% of the total. (*See* also Building and Construction Industry; Business Review; Law; National Labo Relations Board; Strikes.) (L. Wo.)

Membership of Principal U.S. Labour Unions

Union	Membershi (1948 or 1949
Automobile (C.I.O.)	893,00
Steel (C.I.O.)	884,00
Machinists (Ind.)	650,00
Teamsters (A.F. of L.)	625,00
Carpenters (A.F. of L.)	600,00
Miners (Ind.)	600,00
Electrical (C.I.O.)	570,00
Hotels (A.F. of L.)	381,00
Ladies Garment (A.F. of L.)	350,00
Textile (C.I.O.)	332,00
Electrical (A.F. of L.)	330,00
Total	6,215,00

Canada.—Observers believed that Canadian labour unions gained prestige and strength during 1949 by their anticommunism stand. The warring elements within the Trades and Labour congress set up a committee to study the charges of Communist influence "far in excess of their proportionate strength." As a consequence, the Canadian Seaman's union left the T.L.C. before it could be expelled. Similar action by the Canadian Congress of Labour resulted in final suspension, after several warnings, of the United Electrical, Radio and Machine Workers and of the International Union of Mine, Mill and Smelter Workers.

By 1949 Canadian labour union membership went over the 1,000,000 mark. (C. Cy.)

Great Britain.—The British Trades Union congress held at Bridlington, Yorkshire, in Sept. 1949 represented 7,936,600 members organized in 187 trade unions, compared with 7,791,470 in 188 unions the previous year. Most groups increased their membership to a small extent; but there were small reductions in the case of the general workers, the railwaymen and one or two others. The total membership included 1,237,000 females, compared with 1,220,000 in 1948. The Trades Union congress includes nearly all the big trade unions except the National Union of Teachers (181,000) and the National Association of Local Government Officers (190,000). The latest figures of total trade union membership related to the end of 1947, when there were in all 9,114,000 trade union members, of whom 1,662,000 were females. The Scottish Trades Union congress, separate from the British T.U.C., had 809,000 affiliated members in Scottish trade unions or in Scottish branches of British unions in 1948; but most of these were also included in the British T.U.C. figures. The General Federation of Trade Unions, acting mainly as a mutual insurance society for a number of the smaller unions, had 319,000 members in 1949, including a number of small unions not belonging to the T.U.C.

A few big trade unions included a high proportion of the total membership. The biggest were the Transport and General Workers (1,271,000), the General and Municipal Workers (816,000), the Amalgamated Engineering union (743,000), the National Union of Mineworkers (611,000), the National Union of Railwaymen (455,000) and the Shop, Distributive and Allied Workers (342,000). Nine others, besides the two unaffiliated bodies already mentioned, had more than 100,000; and 14 more, between 50,000 and 100,000. The largest groups in the Trades Union congress were the Transport Workers (other than railways), with 1,383,000 in 10 unions, and the Engineering and Vehicle Workers, with 1,250,000 in 27 separate unions.

The Trades Union congress of 1949 met under the shadow of economic crisis, but before the devaluation of sterling was announced. The principal issues before it were the policy to be followed in respect of wage claims, the representation of trade unions on the boards administering nationalized industries and services and the secession of the British delegation from the World Federation of Trade Unions (*see* below).

On the first and last of these issues it was a foregone conclusion that the policy of the general council would be approved, in face of strong opposition from the pro-Communist minority. Actually, the voting on the wages issue was much the same as the year before, the general council's resolution reaffirming the policy of restraint in pressing wage claims being carried by 6,485,000 to 1,038,000. The resolution approving the general council's secession from the W.F.T.U. and its subsequent steps toward the formation of a new International was carried by 6,258,000 to 1,017,000. On the other main issue, a resolution requiring that trade union representation on the boards of nationalized industries should be drawn from the unions representing the workers in the industries concerned was defeated by the rather narrow margin of 800,000.

DELEGATES to the 1949 convention of the United Automobile Workers (C.I.O.) at Milwaukee, Wis., where Walter Reuther was re-elected to the international presidency of the union against left-wing opposition

France.—There were no strikes in 1949 comparable with the large coal strike of Oct. 1948. The most important single strike movement was a 24-hr. strike of the civil service, called originally by Force Ouvrière, but backed by the other trade union federations, to demand salary increases.

The French trade union movement continued throughout the year to be divided into rival factions. The C.G.T.-F.O. (Confédération Générale du Travail-Force Ouvrière), the anti-Communist trade union federation led by Léon Jouhaux and closely connected with the Socialist party, failed, despite some financial support from the British trade unions, to make much headway except among the nonmanual workers. The C.F.T.C. (Confédération Française des Travailleurs Chrétiens) continued its independent existence, and in Oct. 1949, a new independent federation, Confédération Syndicale du Travail, was founded by a number of unions that had held apart from the existing bodies and also included a number who had been expelled or who had seceded from the Communist-dominated C.G.T. (its secretary-general was Benoît Frachon, a Communist member of the national assembly).

Italy.—In Italy, the most important strike in 1949 broke out in May among the farm workers in the Po valley, Latium and Apulia. It was supported by both Communist and non-Communist trade union groups and resulted after five weeks' struggle in the grant of a cost-of-living bonus, in the extension of unemployment benefit to agricultural workers and in a number of other concessions. The Italian trade union movement, like the French, continued to be divided into rival factions, the largest section being organized in the C.G.I.L. (Confederazione Generale Italiana del Lavoro or General Confederation of Italian Labour), which was under the control of the Communists in conjunction with the Pietro Nenni P.S.I. (Partito Socialista Italiano). The Christian trade union organization (Corrente Sindacale Cristiana), formed in Aug. 1948, decided later in that year to transform itself into an anti-Communist L.C.G.I.L. (Libera Confederazione Generale Italiana dei Lavoratori), but failed to carry with it the bulk of the anti-Communist workers that were not organized on a definitely Christian basis. In May 1949 the dissident P.S.L.I. (Partito Socialista dei Lavoratori Italiani), led by Giuseppe Saragat, joined with the Republican party, led by Randolfo Pacciardi, in forming a new body, the F.I.L. (Federazione Italiana del Lavoro), and there were thus three rival bodies attempting to represent the Italian workers. (*See* also ITALY; SOCIALISM.)

International Movement.—The strong disagreements which had been evident for some time inside the World Federation of Trade Unions came to a head in Jan. 1949 when the British Trades Union congress and the U.S. Congress of Industrial Organizations joined in a demand that the W.F.T.U. suspend its activities for the time being and, when this proposal was rejected, withdrew from further participation in its proceedings.

The cause of this split was the carrying on by the executive bureau and officials of the W.F.T.U. of a Communist-inspired campaign against the European Recovery program and against the support given to it by the British, U.S. and other trade union groups.

In June 1949 the British Trades Union congress, in close consultation with the Americans and with other bodies which had left the W.F.T.U., called at Geneva a preparatory conference for the establishment of a new International Confederation of Free Trade Unions. The A.F. of L., which had refused throughout to join the W.F.T.U., took part in this gathering together with the C.I.O.

On Nov. 28 about 245 delegates of more than 47,000,000 members of non-Communist trade unions throughout the world met in London to adopt the constitution of the new I.C.F.T.U. Paul Finet, of Belgium, was elected chairman of the London congress and J. H. Oldenbroek (Netherlands) secretary-general. An executive board of 19 was elected on Dec. 7 with J. H. Oldenbroek as secretary-general. (G. D. H. C.)

Lacrosse. A strong Naval academy ten and a team from Johns Hopkins university, winner of the title two years in a row, shared the 1949 championship of the United States Intercollegiate Lacrosse association. The Johns Hopkins Jays and Navy Middies proved the standout teams in a season that found more schools than ever before playing regular schedules in quest of the Wingate Memorial trophy, symbol of league laurels.

A ten from the south registered its first victory since 1943 in the annual All-Star encounter with the north, winning by 11–6 at Troy, N.Y., on June 11. Led by Jim Adams, Johns Hopkins ace, who tallied three times, the southerners scored six goals in the last period to triumph.

Women's lacrosse was featured by the visit to the United States of an all-England squad which hung up ten straight triumphs in addition to conducting clinics and demonstration games during their tour. Highlight of the trip came on May 1 at Hunter college in New York city when the invaders defeated an all-United States team, 17–2.

Women's national laurels were captured by Westchester when it conquered Philadelphia, 5–3, in the annual championship at Greenwich, Conn., in May. (T. V. H.)

Latvia. From Jan. 18, 1919, to Aug. 5, 1940, when it was annexed by the U.S.S.R., Latvia was an independent Baltic republic. The British, U.S. and many other governments, however, had not granted by 1949 *de jure* recognition to this annexation. Area: 25,395 sq.mi. Pop. (Jan. 1939 est.): 1,994,500; (Jan. 1946 est.) 1,650,000. The reduction is explained by the evacuation of the German minority (*c.* 50,000) in 1939–40, by soviet deportations in 1940–41 (*c.* 34,000), by the murder by the Germans of about 90,000 Jews, by the fact that about 65,000 Latvians fled to Germany when the soviet armies returned and by a second wave of soviet deportations in 1945 (about 105,000). Chief towns: Riga (cap., pop., 1939 est., 393,210); Liepaja (1935 census, 57,098); Daugavpils (1935, 45,160). Chairman of the presidium of the supreme soviet of the Latvian S.S.R.: August M. Kirchensteins; chairman of the council of ministers: Vilis T. Lacis.

History.—Latvians who escaped to Sweden in March 1949 reported that a new wave of deportation was in progress according to a plan prepared by V. S. Abakumov, soviet minister of state security and S. N. Kruglov, soviet minister of internal affairs and director of all soviet camps of forced labour. This plan concerned not only Latvia, but also Estonia and Lithuania (*qq.v.*). Persons selected for deportation included political prisoners under investigation or arrest; families of persons accused of espionage, participation in the underground movement and contacts with foreign countries; former professional soldiers, officers and noncommissioned officers, with families; former civil servants; former teachers and professors with families; priests and members of religious organizations; and members of the free professions with families. Altogether about 70,000 were said to have been deported from Latvia.

Contrary to soviet promises in 1944, on the eve of the second occupation, collectivization was enforced during 1949 with ruthless determination. In the spring of 1947 there were only 4 *kolkhozes* (collective farms); a year later their number had increased to 189; and on July 21, 1949, V. T. Lacis announced that there were 3,879 *kolkhozes,* embracing four-fifths of the arable land. But the sowed area in the spring of 1949 amounted to only 1,900,000 hectares against 2,239,000 hectares in 1939, and milch cows numbered 380,000 against 890,200 in 1939.

The number of industrial workers in 1949 was 118,000—one-fifth more than in 1938. According to an article by J. E. Kalnberzins, about 5,000 Russian technicians—one-fourth of the total—helped to manage Latvian industries. F. Dalgavs, chairman of the state planning commission, reported that by April 1949 only about 1,500 industrial plants had been rehabilitated—one-fourth of the plants which existed in Latvia in 1939. Nevertheless, on Nov. 6, 1949, Kalnberzins and Lacis reported in a telegram to Stalin that the total industrial production was double what it had been in 1940.

Education.—According to Lacis, the total number of pupils in all schools in 1949 was 40,000 more than in bourgeois Latvia. (In 1939 ere were 1,895 elementary schools with 229,825 pupils and 114 sec- dary schools with 25,225 pupils.)

BIBLIOGRAPHY.—M. Čakste, "Latvia and the Soviet Union," *Journal of entral European Affairs* (April 1949). (K. SM.)

aw. Only the more important U.S. legal developments of general interest during 1949 are reported in this article.

Administrative Law.—The right to argue orally before an dministrative agency is not an inherent part of due process, e supreme court ruled. The Federal Communications commis- on was justified in refusing to hear oral arguments in support f a petition which was insufficient on its face to raise a legal sue (*FCC* v. *WJR*, 337 U.S. 265). The court also declined to isturb an order of the National Labor Relations board merely ecause the trial examiner had uniformly credited the board's itnesses and discredited those of the employer. This in itself id not indicate bias, nor did the record of the hearing disclose ny (*NLRB* v. *Pittsburgh S.S. Co.*, 337 U.S. 656). But agencies ust carefully follow prescribed procedures, the court said. An mmigrant may not be barred from entering the U.S. because f mental illness unless such a finding is made after strict com- liance with public health service regulations (*U.S.* v. *Shaugh- essy*, 336 U.S. 806).

The supreme court also passed upon the jurisdiction and owers of state and federal agencies in several cases. A Cali- ornia travel bureau had been convicted of violating a state atute prohibiting the sale of transportation over state high- ays by carriers not holding permits from the Interstate Com- erce commission. The travel bureau ingeniously contended at the state law was invalid because it conflicted with the risdiction of the ICC conferred upon it by congress under e Motor Carrier act. But the supreme court rejected this ew. The fact that a state law coincides with a federal law does ot render it invalid unless congress has clearly shown the tention of giving exclusive jurisdiction to the federal agency *California* v. *Zook*, 336 U.S. 725). Such exclusive jurisdiction as conferred by congress upon the NLRB in the matter of rtifying the representatives of employees for collective bar- aining in an interstate industry, according to the supreme court, hich set aside the certification of a union by the Wisconsin mployment Relations board. Even though the national agency ad not assumed jurisdiction, the state board's action was valid unless and until the NLRB expressly ceded its jurisdic- on (*La Crosse Tel. Co.* v. *Wis. ERB*, 336 U.S. 18).

A narrower view was taken by the high court of the powers the Federal Power commission under the National Gas act. n interstate gas company may sell its undeveloped gas leases ithout the permission of the FPC, the court held (*FPC* v. *anhandle Pipe Line Co.*, 336 U.S. 935). The supreme court also greed with the strict view of its own authority taken by the ivil Aeronautics board when it turned down an air carrier's etition to make a new air mail rate retroactive (*T.W.A.* v. *AB*, 336 U.S. 601).

Congress enacted the Federal Property and Administrative ervices act of 1949 to provide an economical and efficient sys- m for procurement, utilization of available property, disposal surplus property and records management. The act set up a ew General Services administration to take over the functions the bureau of federal supply, Federal Works agency, War ssets administration, national archives establishment, the ublic Buildings administration and the Public Roads admin- tration.

Congress also passed a permanent act for the reorganization the executive branch of the government giving the president thority to make such changes as would promote efficiency and onomy in operation. Reorganization plans would become ef- ctive 60 days from the time of their submission to congress by the president unless either house should pass a resolution disapproving such plans within the 60 day period.

"JOHN BULL: 'You Would Have Tossed Him Back Anyhow!' " a cartoon by Loring of the *Providence Evening Bulletin (R.I.)* referring to the British court ruling of 1949 that Gerhart Eisler, German Communist, could not be extradited to the U.S.

Agriculture.—The secretary of agriculture was authorized by congress to make "production disaster loans" to farmers and stockmen in any region where disaster had caused a shortage of credit through customary private sources. The Regional Agricultural Credit corporation was killed and its functions and authority were transferred to the secretary of agriculture, together with a revolving fund to be used for disaster loans. Provision was also made for the gradual expansion of the experimental crop insurance program, including multiple crop insurance of all major crops on a farm wide basis.

The Agriculture act of 1949 extended the price support program, assigning ranges of parity prices for classified commodities to be determined by the secretary of agriculture after consideration of factors laid down by the new law.

Congress also revised the charter of the Commodity Credit corporation, permitting it to provide storage facilities for farmers where needed to enable them to market crops at more favourable times. The Rural Electrification administration was empowered to make loans at low interest rates for financing telephone as well as electric lines in rural areas. A national forest survey was authorized, and agricultural extension work was provided for Alaska and Puerto Rico.

Aliens and Citizenship.—In two cases the supreme court insisted that proceedings affecting the right of citizenship must be conducted with scrupulous fairness. The high court reversed a district court judgment denaturalizing August Klapprott, former German-American Bund leader. He had not been given a reasonable opportunity to be heard, the court said. At the time when the denaturalization case came up, he had been ill, impoverished and a prisoner in jail awaiting trial on charges that were later dropped; and he had not been represented by counsel (*Klapprott* v. *U.S.*, 335 U.S. 601). The supreme court also gave a second chance to an immigrant who had been barred from the U.S. as a mental defective, because the report of a medical board of review did not show that its conclusions were based "upon its medical examination of the alien," as required by public health service regulations (*U.S.* v. *Shaughnessy*, 336

U.S. 806).

The ninth circuit court of appeals restored U.S. citizenship to three former citizens of Japanese descent. The court found that they had renounced their citizenship as "the result of undue influence, mistake, misunderstanding and coercion" during their enforced resettlement in relocation centres.

The Oregon supreme court knocked out a state law which barred Japanese aliens who were ineligible for citizenship from owning or leasing farm land. The Oregon court held that "the Alien Land Law was designed to effectuate a purely racial discrimination."

Armed Forces.—The supreme court considered the jurisdiction and powers of courts-martial in three cases arising out of World War II. The justices all agreed that a naval court-martial did not have the right to try a serviceman for offenses committed during a prior enlistment. A petty officer, who had rejoined the navy on the day after his honourable discharge, was convicted by a navy court of beating two fellow war prisoners in a Japanese camp in the Philippines. His sentence was set aside as illegal because the navy had lost jurisdiction to try such offenses after his discharge (*U.S. ex rel. Hirschberg* v. *Cooke,* 336 U.S. 210). Two army court-martial sentences for rape were upheld. One case had been tried during the rapid advance of the army in Germany, but after hearing evidence and arguments of counsel the charges were withdrawn because the father and mother of the victim could not attend as witnesses. The defendant was convicted at a later trial. He sought a reversal on the ground that he had been put in double jeopardy. In sustaining the conviction the supreme court said that the 125 year old ruling in the *Perez* case (9 Wheat. U.S. 579) applied to military as well as civil trials. The hearing of a criminal case may be discontinued within the discretion of the court when necessary in the interests of justice without subjecting the defendant to double jeopardy (*Wade* v. *Hunter,* 336 U.S. 684). The court also gave short shrift to the plea of a second petitioner that he had been convicted in violation of the 70th article of war which provides that "no charge will be referred to a general court-martial for trial until after a thorough and impartial investigation." The supreme court said that it could not review the evidence but was limited to jurisdictional questions. Strict compliance with article 70 was not a prerequisite to jurisdiction by the army court (*Humphrey* v. *Smith,* 336 U.S. 695).

The supreme court opened the doors of the federal courts to suits by service personnel against the United States under the Tort Claims act for injuries not arising out of their service. Suit was properly brought in a district court to recover damages for the death of one serviceman and injuries to another when the private car in which they were riding was struck by an army truck. Membership in the armed forces did not bar their right of action (*Brooks* v. *U.S.,* 335 U.S. 901).

Business Regulation.—The perennial doubt whether trust-busting as practiced by the government was really busting trusts or serving to make them bigger arose in a case involving the right of the Standard Oil Co. of California to tie up independent automobile service stations with contracts to handle the company's products exclusively. A majority of the supreme court held that such contracts violated section 3 of the Clayton act because they might substantially lessen competition. But Justice William O. Douglas, one of four dissenters, wryly remarked that "the economic theories which the court has read into the antitrust laws have favoured rather than discouraged monopoly." The majority decision, he said, would merely force the big oil companies to build service station empires of their own and drive independents completely out of business (*Standard Oil Co.* v. *U.S.,* 336 U.S. 935). The justices were unanimous, however, in ruling against a deal between an association of stitching contractors and sportswear jobbers under which the latter were required to send all their work to members of the association who were in good standing with a garment workers union. This was clearly an illegal restraint on commerce. The labour provisions did not immunize the agreement against the antimonopoly laws. "Benefits to organized labour cannot be utilized as a cat's-paw to pull employers' chestnuts out of the antitrust fires" (*U.S.* v. *Sportswear Assn.,* 336 U.S. 460).

Three state laws regulating commerce were upheld by the U.S. supreme court: a South Carolina statute prohibiting life insurance companies and their agents from engaging in the undertaking business (*Daniel* v. *F.S.L. Ins. Co.,* 336 U.S. 220); a New York city traffic regulation forbidding truckers from carrying signs on their trucks advertising anything except their own business (*Railway Express* v. *N.Y.,* 336 U.S. 106); and a California act requiring vendors of passenger transportation to obtain Interstate Commerce commission permits. But the high court by a 5 to 4 vote knocked out an order of the New York Agricultural commission denying additional milk receiving facilities within the state to an interstate milk dealer. The denial had been based solely on the ground that such additional facilities would subject other dealers to competition and would take supplies needed locally. There was no pretense that public health and safety required such an order. The majority opinion criticized the trend of the states toward "Balkanization." "Every consumer," said Justice Robert H. Jackson, "may look to the free competition from every producing area in the nation to protect him from exploitation by any. Such was the vision of the Founders" (*Hood & Sons* v. *DuMond,* 336 U.S. 525).

Civil Rights.—Two 5 to 4 decisions of the supreme court again illustrated the difficulty of drawing a legal line between the use and abuse of free speech. The court reversed the conviction of Rev. Arthur Terminiello for violating a Chicago ordinance which defines disorderly conduct as including activities which tend to a breach of the peace. The defendant had spoken at a meeting sponsored by Gerald L. K. Smith. He denounced Communists, Russians, Eleanor Roosevelt, Henry Wallace and the Morgenthau plan, while praising Francisco Franco. A mob of hecklers demonstrated outside the meeting hall, and the defendant was arrested for having stirred up the disturbance through his speech. The trial court charged that any misbehaviour which "stirs the public to anger, invites dispute, brings about a condition of unrest or creates a disturbance" may be a breach of the peace. But a majority of the supreme court disagreed. "Speech is often provocative and challenging," said Justice Douglas. "Freedom of speech, though not absolute, is nevertheless protected against censorship or punishment, unless shown likely to produce a clear and present danger of a serious substantive evil" (*Terminiello* v. *Chicago,* 335 U.S. 890).

In the second case, the high court upheld an ordinance of Trenton, N.J., banning the use of sound trucks which emit "loud and raucous noises." It was within the discretion of a city to regulate the use of loud speakers, said the majority of five justices. The unwilling listener "is practically helpless to escape this interference with his privacy except through the protection of the municipality." The majority distinguished this case from last year's *Saia* case ruling which voided a Lockport, N.Y., ordinance because it gave the chief of police discretion to license the use of loud speakers in public without setting up standards to guide him (*Kovacs* v. *Cooper,* 336 U.S. 77).

An effort to compel a school district in the state of Washington to provide transportation for children attending parochial schools was rebuffed by the state supreme court, which ruled that such action would violate a state constitutional inhibition against the use of public money for the support of a religious

IRST TWO WOMEN practising at the bar in England ever to attain the rank king's counsel. They are shown after being sworn in before the house of rds in April 1949

tablishment (*Visser* v. *Nooksack Valley School District*, 207 . 2d 198). (*See* also Civil Liberties.)

Criminal Law.—Eleven U.S. Communist party leaders were nvicted of conspiring to advocate the overthrow of the U.S. overnment by force in violation of the sedition provisions of e Alien Registration act of 1940. The record of the trial, which sted nine months, ran to more than 5,000,000 words. Judge arold Medina not only imposed prison sentences and fines pon the defendants but held their lawyers guilty of contempt court for persistently obstructive tactics during the trial. mong the important issues to be determined on appeal were e constitutionality of peacetime sedition laws, whether the dge should have instructed the jury to apply the "clear and esent danger" test to the defendants' activities, and the lee-ay to be allowed defense counsel in such trials.

The first trial of Alger Hiss, former state department official, arged with committing perjury before a grand jury, fizzled it when the jurors failed to agree. The case arose out of arges made by Whittaker Chambers, formerly a senior editor *Time* magazine, before the house of representatives commit-e on un-American activities, that Hiss had given him copies of cret documents in 1938 to be turned over to soviet agents. iss countered by suing Chambers for defamation, whereupon hambers led federal agents to a hollow pumpkin on his farm om which he produced microfilms of papers alleged to have en handed out by Hiss, who was then indicted for perjury denying complicity with Chambers in his confessed spy activi-es. On his second trial, which lasted beyond the year's end, iss was found guilty.

In other cases arising out of hearings before the committee un-American activities, circuit courts upheld convictions of ntempt of congress against witnesses who had refused to ate whether or not they were members of the Communist rty. The supreme court dodged one aspect of this issue by smissing the appeal of Gerhart Eisler, German-born Commu-st, from a contempt sentence for refusing to testify before that mmittee. The case was moot, the court said, because Eisler d fled from the U.S. to escape the consequences of this and other criminal conviction (*Eisler* v. *U.S.*, 338 U.S. 189). The preme court did, however, pass upon an important aspect of congressional committee procedure. By a 5 to 4 vote it set aside the conviction of Harold R. Christoffel, former head of United Automobile Workers local union, charged with lying to the labour committee of the house of representatives about his Communist connections, because a quorum of the committee was not present at the time the alleged perjury was committed (*Christoffel* v. *U.S.*, 338 U.S. 84).

In contrast with the widespread interest in the antired prosecutions, the public seemed only mildly concerned over the trials and convictions of Mildred Gillars (Axis Sally) and Iva Toguri D'Aquino (Tokyo Rose) for treason in giving aid and comfort to the enemy through radio broadcasts designed to lower the morale of U.S. soldiers and sailors in World War II.

A concurring opinion by Justice Jackson in the reversal of a conviction for conspiracy to violate the Mann act promised to become important when the sedition conspiracy case against the 11 Communist leaders reached the supreme court on appeal. Loose practice in the use of conspiracy charges, he said, "constitutes a serious threat to fairness in the administration of justice" (*Krulewitch* v. *U.S.*, 336 U.S. 440).

A majority of the supreme court justices made it clear that the 14th amendment did not forbid the use in state courts of evidence obtained by unlawful search and seizure. Conviction on such evidence in a state court is not a denial of due process (*Wolf* v. *Colorado*, 338 U.S. 25). In another search and seizure case the court reaffirmed previous rulings that federal agents might legally search a car without a warrant where they had proper cause, based on long observation, for believing that the driver was violating the Liquor Enforcement act (*Brinegar* v. *U.S.*, 338 U.S. 160). But the federal government was unsuccessful in its effort to justify the use of evidence taken from a defendant's hotel room during an illegal search by local police. Even though the search had not been made upon the instigation of the federal agent, the evidence was still tainted with illegality (*Lustig* v. *U.S.*, 338 U.S. 74).

The court reiterated its view that where ignorance, youth or other incapacity of a defendant makes a trial without counsel unfair, the defendant is deprived of liberty without due process of law. But the court made it clear that due process does not guarantee counsel in every criminal case. It depends upon the situation of the defendant (*Gibbs* v. *Burke*, 337 U.S. 773).

In three cases the court reversed convictions by the courts of South Carolina, Pennsylvania and Indiana which were based upon confessions obtained after long and continued grilling of the defendants (*Harris* v. *South Carolina*, 338 U.S. 68; *Turner* v. *Pennsylvania*, 338 U.S. 62; *Watts* v. *Indiana*, 338 U.S. 49).

The high court again excoriated the state of Illinois for failing to provide procedures by which persons claiming to be wrongfully convicted might have their cases reviewed. The court directed the Illinois courts to reconsider eight cases in which habeas corpus had been denied to prisoners. Illinois might set up any procedure it chose for such review, but it would have to set up some sort of procedure (*Young* v. *Ragen*, 337 U.S. 235). Following this decision, the Illinois legislature passed a law under which any convicted prisoner, who believed his federal or state constitutional rights had been violated, might file a petition and obtain a hearing in the court where he was tried. If the judge denied his plea, he might then appeal to the Illinois supreme court within six months.

The Michigan legislature abolished the state's one man grand jury system which had enjoyed a life of 32 years. A new law set up a three judge grand jury system to operate under strict limitations. In signing the bill the governor said that if the new system did not work, the traditional 23 man grand jury would still be available.

Family Relations.—A dispute between two women over the property of a dead man split the supreme court 5 to 4. Each contestant claimed a widow's share in the decedent's estate. He had left his first wife in Connecticut and obtained a divorce from her in Nevada upon service by publication in proceedings in which she took no part. He then married wife no. 2 in Nevada and moved with her to California, where he died six months later. A Connecticut court decided that the Nevada divorce did not cut off the rights of wife no. 1 in her husband's property because he had not established a bona fide residence in Nevada. The contention of wife no. 2 that the full faith and credit clause of the federal constitution required Connecticut to recognize the Nevada decree was rejected by a majority of the supreme court, which upheld the Connecticut decision. In a sharply dissenting opinion, Justice Jackson revived the epithet "divisible divorce," coined in 1948 in the *Estin* case, 334 U.S. 451, to characterize "a divorce good to end a marriage but invalid to affect dependent property rights." He advocated the adoption of a consistent policy by the court in applying the full faith and credit clause which would put an end to a situation which permitted a man "to leave a wife who cannot become his widow and to leave a widow who was no longer his wife" (*Rice* v. *Rice*, 336 U.S. 674).

The South Carolina legislature ratified a constitutional amendment approved by the voters, granting divorce on any of four grounds—adultery, desertion, physical cruelty and habitual drunkenness. The state thus lost its unique distinction of being the only one in the union which did not permit divorce. Several other states eased their divorce requirements. Among them were Idaho, which reduced from six years to three the period of insanity requisite as a ground for divorce; Wyoming, which made it possible to obtain a divorce on the ground of a spouse's incurable insanity after a residence in that state of 60 days; Maryland, which added as grounds for absolute divorce, imprisonment for felony where the sentence is at least three years; and Washington, which cut the time required for final divorce from seven to three months, but at the same time set up a family court for the purpose of attempting reconciliation where minor children were involved.

The corridors of flight from alimony payments were blocked by ten states and the Virgin Islands through the adoption of reciprocal nonsupport laws compelling the support of dependent wives and children by runaway husbands. These laws were modelled after a 1948 New York statute, sponsored by the Council of State Governments. Such acts authorized state courts to hear testimony in proceedings to compel support when the husband lives in another state having a similar law. The record of the hearing is then forwarded to the state where the husband lives, and the proper court is asked to fix the amount he must pay. The states enacting such laws in 1949 were Connecticut, Delaware, Illinois, Indiana, Iowa, Maine, New Hampshire, New Jersey, Oklahoma and Wisconsin.

Housing and Rent.—Tenants in rent control areas were given a respite from rent increases until June 30, 1950, under the Rent Control act of 1949, subject to the risk of decontrol by state legislation or by local governments after a public hearing and the approval of the governor. The housing expediter was required to fix rents so that they would return to landlords a "fair net operating income . . . in so far as possible." The expediter was authorized to sue for triple damages in case of rent overcharges and to decontrol so-called luxury apartments when he found that it would result in converting a single unit into two or more dwelling units. The act also recontrolled trailer camps and nontransient hotel apartments in New York city and Chicago.

The supreme court upheld the new rent control law. The provision granting states and cities local option to set up their own controls was not an unlawful delegation of legislative power.

Labour.—Organized labour lost substantial ground under the impact of adverse court decisions. In two sweeping opinions by Justice Hugo L. Black the supreme court rejected union attacks on state anti-closed shop laws. The court ruled that the Right to Work amendments to the constitutions of Arizona and Nebraska and a North Carolina statute, making it unlawful to deny employment to any person because he is or is not a member of a labour organization, do not violate the federal constitution. State laws prohibiting discrimination between union members and nonmembers do not impair the obligation of contracts nor deny free speech, free assembly, due process or the equal protection of the laws (*Lincoln F. L. U.* v. *N. W. I. & M. Co.*, 335 U.S. 525; *A.F. of L.* v. *Am. S. & D. Co.*, 335 U.S. 538). Similarly the high court refused to permit an ice peddlers' union to justify illegal picketing in Kansas City, Mo., as an exercise of freedom of speech. Such picketing was a violation of a state law against restraints of trade, ruled a Missouri court, granting an injunction over the union's protest that the U.S. supreme court had approved of peaceful picketing as a proper exercise of free speech. The supreme court, however, said that its prior sanctions of peaceful picketing did not extend to activities in violation of state laws (*Giboney* v. *Empire Ice Co.*, 336 U.S. 490). The high court justices also turned down a plea for the reversal of an Arkansas conviction of violating a state law making it a crime to assemble near a place where there is a labour dispute and to attempt by force to prevent anyone from engaging in any lawful vocation. Such a law does not infringe the right of assembly (*Cole* v. *Arkansas*, 338 U.S. 345).

Three supreme court cases involved alleged conflicts between the jurisdiction and powers of the Wisconsin Employment Relations board and the NLRB. In the first the court ruled that the latter agency had exclusive jurisdiction to certify union bargaining representatives in interstate industries even though it had not exercised such authority (*La Crosse Telephone Corp.* v. *Wis. E.R.B.*, 336 U.S. 18). On the other hand, the court upheld the action of the Wisconsin labour board ordering an employer to stop giving effect to a maintenance-of-membership clause in a contract with a union because it violated a provision of the state Employment Peace act making it an unfair labour practice to enter into an all-union agreement without the aproval of a majority of employees. The state law was not in nflict with national policies enacted by congress (*Algoma P.* *V. Co.* v. *Wis. E.R.B.*, 336 U.S. 301). The Wisconsin board as again sustained in ordering a union to desist from intermit-nt and unannounced work stoppages caused by calling special eetings of members during working hours without warning. he ruling of the state agency that such practices were unfair d not encroach on rights of workers to strike under federal ws nor impose involuntary servitude nor invade rights of free peech or assembly, according to a majority of five supreme ourt justices (*International Union* v. *Wis. E.R.B.*, 336 U.S. 45).

Labour scored in two cases before the supreme court involv-g unfair practices. An NLRB order directing a North Caro-na cotton mill to permit the use of a company owned meeting all in a company controlled town for union organization meet-gs was sustained (*NLRB* v. *Stowe Spinning Co.*, 336 U.S. 26), as was also an NLRB ruling that it was unfair for an em-loyer to put into effect a general wage increase substantially reater than that offered to union representatives during nego-ations which had reached an impasse (*NLRB* v. *Crompton-ighland Mills*, 337 U.S. 217). In a third case, however, the LRB was told it had erred in finding an employer guilty of nfair practices when he discharged employees on demand of a nion which had expelled them from membership because they ad been active on behalf of a rival union. The employer was arrying out the terms of a closed shop contract (*Colgate Co.* v. *LRB*, 338 U.S. 355).

Veterans Seniority.—In two decisions the supreme court ealt with job seniority rights of veterans under section 8 of the elective Service act. Seniority continues beyond the expiration f the first year of a veteran's re-employment, the court held. he provision of the law protecting a veteran against discharge ithout cause within one year after restoration to his former osition is not a statute of limitations and does not bar him rom bringing suit to enforce seniority rights after the year's nd (*Oakley* v. *L. & N. R. R. Co.*, 338 U.S. 278). But the hrase "without loss of seniority" should be construed as it is onventionally used in the processes of collective bargaining, he supreme court told another veteran who complained because e was laid off while union chairmen were kept on the job under n agreement with employer which gave them top seniority over l other employees holding similar jobs. The collective bargain-g agreement was not in conflict with section 8 of the Selective ervice act. Seniority provisions in such a contract took prece-ence over service seniority (*Aeronautical District Lodge* v. *ampbell*, 337 U.S. 521).

Wages and Hours.—The national minimum wage was raised rom 40 cents to 75 cents an hour through amendments to the air Labor Standards act. The new provisions also removed rom wage-hour coverage the employees of small newspapers, axicab companies and sawmills; changed the methods for deter-ining minimum wage and overtime requirements; tightened hild labour restrictions; authorized the administrator to sue on ehalf of workers for unpaid back wages; broadened the exemp-ons for laundries and bakeries; and removed overtime pay equirements for certain work in fish canneries, railroad and ucking companies. Congress also amended the law as to over-me compensation, so that extra pay for overtime work will o longer be deemed part of the employees regular rate in figur-g overtime. The change was made retroactive to cut off claims or "overtime on overtime" pending in court.

Taxation.—The supreme court told the tax court to take a roader view in considering the status of family partnerships or income tax purposes. The tax court had ruled that the en-re income from a cattle business run by a Texas rancher and his four sons as partners was taxable solely to the father. In so holding, the tax court had said that division of income among partners should not be recognized as valid unless each partner contributed "vital services" or "original capital" to the common business, phrases which the tax court had culled from the 1946 opinions of the supreme court in the *Tower* and *Lusthaus* cases. This was a misconstruction of those decisions, said the supreme court. The concept of a partnership for tax purposes is the same as the common law concept; namely, that the partners really intend "to join together for the purpose of carrying on business and sharing in the profits or losses or both" (*Comm'r.* v. *Culbertson*, 337 U.S. 733). (*See* also TAXATION.)

The supreme court also further restricted the use of the living trust as a means for reducing estate taxes. Overruling a 1930 precedent, the court held that the corpus of an irrevocable trust in which the settlor reserved a life income was subject to the federal estate tax upon his death, since the trust transfer did not become complete until that time (*Comm'r.* v. *Church*, 335 U.S. 632). In a companion decision the court said that if there was any possibility under the terms of a trust that the corpus might ever revert to the settlor, even though not so expressed, the trust property would be subject to the estate tax upon his death. This was an important extension of the *Hallock* decision, which held that an express reservation of a reversionary interest would make the trust property taxable (*Comm'r.* v. *Spiegel*, 335 U.S. 701).

The supreme court maintained its liberal attitude toward state taxation alleged to be in conflict with the federal constitution. In two opinions the court held that state and local governments could legally tax property intended for exportation as long as it had not entered "the export stream." The export-import clause of the federal constitution confers immunity from local taxation only upon property actually in the process of being exported. Thus gasoline held in storage for 15 months at Dearborn, Mich., in tanks marked "For Export Only" was held subject to a city ad valorem tax (*Joy Oil Co.* v. *State Tax Comm.*, 337 U.S. 286). A cement plant bought by a foreign company for dismantling and shipment to South America remained subject to local property taxes until the dismantled parts were delivered to a carrier for shipment. Intent to export is not enough to bring property within the constitutional immunity (*Empresa* v. *Merced*, 337 U.S. 154).

The supreme court also sustained taxes assessed by Oklahoma against the lessees of allotted and restricted Indian lands, overruling prior decisions to the contrary (*Oklahoma* v. *Texas Co.*, 336 U.S. 342); approved a Louisiana ad valorem tax on barges and tugboats based on the ratio between the number of miles of the carrier's lines within the state and its total line-miles (*Ott* v. *Miss. Barge Line*, 336 U.S. 169); and upheld a Mississippi privilege tax on an interstate pipe-line company measured by gross receipts from the operation of a pipe line within the state (*Interstate Pipeline Co.* v. *Stone*, 337 U.S. 662). But the court held that an Ohio tax on intangible property, which discriminated against foreign corporations, violated the equal protection clause (*Wheeling Corp.* v. *Glander*, 337 U.S. 562), and it also struck down a Wisconsin emergency tax on inheritances, in so far as it was measured by tangible property outside the state (*Treichler* v. *Wisconsin*, 338 U.S. 251). (*See* also NATIONAL LABOR RELATIONS BOARD; UNITED STATES.)

(M. DN.)

Public Law in Europe and the British Commonwealth.—In this field the most important developments of 1949 were the adoption by the parliamentary council of the basic law for the Federal Republic of Germany, and by the constituent assembly of India of a constitution based on a draft prepared by its drafting committee under the chairmanship of B. R. Ambedkhar, together with the finding and acceptance by the commonwealth conference of the ingenious formula whereby India, although proclaiming her intention to be "a sovereign independent republic" yet remained within the British Commonwealth of Nations with its "common allegiance to the crown." In Israel, the adoption of a draft constitution was being debated; and in Pakistan, an agenda was being debated for a conference to establish a constitution.

The basic law for western Germany was, as its full title implies, founded on a division between the federation on the one hand and the provinces, or *Länder,* on the other. The first section of the basic law enumerated a number of basic rights. These ranged from such general statements as that "The dignity of man shall be inviolable" (article 1) and "Everyone shall have the right to the free development of his personality" (article 2) to relatively precise statements such as that "Secrecy of the mail . . . shall be inviolable. Restrictions may be ordered only on the basis of a law" (article 10) and "The dwelling shall be inviolable. Searches may be ordered only by a judge or in the event of imminent danger by other authorities provided by law" (article 13). In their affirmation of equality before the law, freedom of expression of opinion and freedom of assembly, and in their insistence on the sanctity of the family, these articles expressed a reaction against totalitarian ideas which was the most significant feature of this section. In articles 14 and 15 there was, too, an interesting statement of a compromise between individualist and Socialist ideas; article 14 stated that, subject to certain limitations, "Property and the right of inheritance shall be guaranteed," whereas article 15 provided that "Land and landed property, natural resources and means of production may, for the purpose of socialization, be transferred to public ownership . . . by way of a law which shall regulate the nature and extent of compensation."

Section II regulated relations between the federation and the *Länder*. It declared that Germany was a democratic and social federal state; it gave the federation power, by legislation, to transfer sovereign powers to international institutions; it provided (article 28) that "The constitutional order in the *Länder* must conform to the principles of the republican, democratic and social state based on the rule of law . . . In the *Länder, Kreise* and *Gemeinden* the people must have a representative assembly resulting from universal, direct, free, equal and secret elections" and (article 31) that "Federal law shall supersede *Land* law," which presumably meant that in the event of conflict or mutual repugnancy federal law should prevail. Section III regulated the composition, powers and duties of the Bundestag and section IV provided similarly for the *bundesrat*. (*See* also GERMANY.)

The constitution of India, due to come into force in Jan. 1950, presented certain points of resemblance with the basic law for the Federal Republic of Germany; but the problem with which it had to deal was in its nature and its history even more complex than that of a constitution for Germany.

A preamble declared the resolve of the people of India to constitute India into a sovereign democratic republic and to secure to all its citizens justice, liberty, equality and fraternity as there defined. Part I provided that India should be a union of the states specified in the first schedule, comprising the former governors' provinces, the former chief commissioners' provinces and the former Indian states, parliament having the power to add to their number or to alter their boundaries. Part II dealt with the complex problem of citizenship, which it conferred on (1) every person who or either of whose parents or any of whose grandparents was born in the territory of India and who had not made his or her permanent abode in any foreign state after April 1, 1947—a provision which would seem to raise immediately the question whether a country in the commonwealth is a "foreign state"; and (2) every person who had his domicile in the territory of India. There was a proviso that such a person must not have acquired the citizenship of any foreign state before the date of commencement of the constitution.

Part III dealt with fundamental rights. Included in these were rights of equality, such as the prohibition of discrimination on grounds of religion, race, caste or sex; equality of opportunity in matters of public employment; the abolition of untouchability; freedom of speech; and the prohibition of the employment of children under 14 in factories, mines or any other hazardous employment; rights relating to religion, affirming that all persons were equally entitled to freedom of conscience and the right freely to profess, practise and propagate religion; and rights to constitutional remedies; that is, to move the supreme court for the enforcement of rights provided by the constitution. Part IV had the unusual title of "Directive Principles of State Policy." These included (article 31) the imposition on the state of the duty to secure its citizens adequate means of livelihood, that ownership and control of the material resources of the community should be equal pay for equal work for both men and women.

Part V was entitled "The Union." It provided, among other things, for the election of a president by a college consisting of elected members of both houses of parliament and of elected members of the legislatures of the states for a term of five years and of a vice-president who is ex officio chairman of the council of states. All executive business was to be done by members o the council of ministers in the president's name. This same part provided for a parliament of two houses: the council of states with 250 members, 15 nominated by the president, the res representatives of the states; and the house of the people, with not more than 500 members directly elected by the voters.

United Kingdom Case Law.—Consideration is given below to cases of exceptional public interest and to litigation that resulted in the superior courts revising or modifying doctrines that were applied by the courts below; to cases that appeared to have arisen from, and to throw light upon, novel developments in social or economic life; and to one or two decisions which, however unexceptionable in law, appeared to have raised difficult problems in the spheres of ethics, morality or con science.

Of the litigation of the first of the above categories, namely that of exceptional public interest, the outstanding example was *The Commonwealth of Australia and Others* v. *The Bank o New South Wales and Others* (decision reported in the *Times* Oct. 27, 1949). This was an appeal—or rather it was a consoli dation of five appeals—to the judicial committee of the privy council from a majority decision of the high court of Australia. It arose out of section 46 of the Banking act, 1947, part o which stated that "a private bank shall not, after the com mencement of this act, carry on banking business in Australia except as required by this act," and the effect of which was t nationalize banking in Australia. The high court of Australia held that this section contravened section 92 of the constitution of the commonwealth of Australia, which provided that "trade commerce and intercourse among the states . . . shall be abso lutely free." The privy council, although affirming the high court of Australia's decision on this point, decided the appeal in favour of the respondents on a preliminary point, namely that for an appeal to lie in a matter of this sort, a certificate of the high court was required. The duration of this appeal namely 36 days, constituted a record, at least for the privy council.

Two other cases that deserve mention in this category ar

Krajina v. Tass Agency (1949 2 All England reports 274) and Tamlin v. Hannaford (1949 2 All England reports 327). In the ormer, the court of appeal affirmed the decision of a judge and master setting aside service of a writ for an alleged libel pubished by the agency on the ground that it was an organ of the government of the U.S.S.R. and as such entitled to sovereign mmunity from the process of the English court. In the latter it was held that the British Transport commission was not a ervant or agent of the crown, and its property was therefore as much subject to the Rent Restriction acts as the property of ny other owner.

Of the second category of litigation, namely that which reulted in a superior court revising a doctrine laid down by a ower court, and long accepted as good law, the most important xample in 1949 was *Hill* v. *William Hill* (*Park Lane*) *Ltd.* (1949 2 A.E.R. 452). In this case the appellant had agreed to pay the amount of a bet he had lost in consideration of the bookmakers to whom he was to pay it refraining from reporting him to Tattersalls for nonpayment. A majority of the house of ords, overruling the decision of the court of appeal in the wellknown case of *Hyams* v. *Stuart King* (1908 2 K.B. 696) held hat the appellant's promise was to pay money won upon a wager within section 18 of the Gaming act, 1845, and the conract was therefore unenforceable.

R.E.L. v. *E.L.* (1949 Probate division 211) was an example of the third category of case, arising from, and throwing light upon, a novel social development. It was there held that the act that a wife petitioner had been artificially inseminated with her husband's seed was no bar to her obtaining a decree of nullity on the ground of his incapacity.

The fourth class of case, where there appeared to be some question of a clash between good law on the one hand and good ethics or good sense was, in the view of some, exemplified by the decision of the house of lords, affirming that of the court of appeal, in *Gilmour* v. *Coats and Others* (1949 Appeal cases 426). Following a long line of authority in charity cases, t was held that the necessary element of public benefit was acking in a gift made to cloistered nuns in the belief that their prayers would benefit the world at large; and that the necessary element of public benefit being lacking, the gift was not a valid charitable trust. This state of the law was held by others to mpose a restriction on one kind of charity that did not well accord with the liberal interpretation of the rules respecting charities where animals were concerned, although here too, of course, the consideration of public benefit was paramount. (*See* also AGRICULTURE; BANKING; BUSINESS REVIEW; CONSUMER CREDIT; INTERNATIONAL COURT OF JUSTICE; INTERNATIONAL AW; PATENTS; PUBLIC UTILITIES; RELIEF; TAXATION; WAR CRIMES.)

awn Bowling.

The National tournament was held in Chicago, Ill., July 23–27, 1949. In the rinks (four-man teams) events the winners were: first place (Rettie Memorial trophy)—L. D. McArthur (skip), Roger McArthur, r., Roger McArthur, Jr. and Joseph Ferguson, Washington Park club, Chicago; second place (Chicago trophy)—John Proctor (skip), David Campbell, Martin F. Carlson and Wilam D. Smith, Columbus Park club, Chicago; third place (Wisconsin trophy)—Alex Stewart (skip), George White, Charles Cowell and A. A. McCready, Columbus Park club, Chicago.

Doubles winners were: first place (California trophy)—David Campbell (skip) and Martin F. Carlson, Columbus Park club, Chicago; second place (Lakeside trophy)—Roger McArthur, Sr. (skip) and Roger McArthur, Jr., Washington Park club, Chicago; third place (Western New York trophy)—Harry Breckenridge (skip) and Robert Bowling, Detroit East Side club, Detroit, Mich.

Singles winners were: first place (National Singles trophy)—John Proctor, Columbus Park club, Chicago; second place (Metropolitan New York trophy)—Orrin L. Evans, Lakeside club, Chicago.

Officers of the American Lawn Bowling association (United States) for 1949 were: W. G. Hay, president; T. W. Gardiner, secretary, 8106 S. New Hampshire Ave., Los Angeles 44, Calif. (L. PR.)

While mine output showed little improvement in 1948, and refinery output declined 8%, this trend was reversed in 1949. The mine total was stepped up to 311,281 tons in the first three quarters of 1949, while the primary refinery output advanced to 399,139 tons.

Canada.—The output of primary lead in Canada increased from 161,668 tons in 1947 to 167,251 tons in 1948, but operations were slowed down in 1949, the total for the first eight months being 98,452 tons. (*See* also MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. RO.)

Leather.

U.S. leather production continued a slightly declining trend throughout 1949, with the average monthly output of all major types well below that of 1948. With the exception of calf and kip leathers, however, the in-

Average U.S. Monthly Leather Production

(000's omitted)

	1949	1948	1947	1946	1945	1931–39 Inclusive
All cattle hides (including kips for side leather)	1,964	2,173	2,402	2,253	2,297	1,628
Calf and whole kip	832	873	1,039	907	970	1,070

All sheep and lamb.	2,371	2,371	2,594	3,998	4,370	2,800

1949 figures are based on an average of the first nine months' production. Compiled from data of the Tanners Council of America and the U.S. Bureau of the Census.

dustry maintained a production pace well above the prewar level based on 1931–39 averages. Demand for all leathers continued good throughout the year, and stocks of finished leathers in tanners' hands remained at very low levels.

There was little change in the stringencies of raw stock supplies in 1949, as imports of hides and skins remained unsatisfactory because of world economic and political conditions. However, the domestic hide and skin supply situation had been steadily improving, and U.S. tanners were each year becoming less dependent upon raw stock imports.

During 1941, Argentina exported to the U.S. 136,000 tons of hides, which constituted almost 50% of total U.S. hide imports. An abrupt decline in market prices caused a large part of the Argentine offerings to be withdrawn in 1949, and U.S. imports dropped 90% from the 1948 level. As these imports represented, for the most part, high-grade raw stock, the lack affected the U.S. industry even more than the statistics indicated.

Although demand for leather continued good through the year 1949, the industry was alarmed at the tremendous rise in popularity of synthetic materials for purposes for which leather had traditionally been used. Shoe production reports by the bureau of the census revealed that synthetics had replaced leather for 35% to 40% of shoe soles and were making heavy inroads in the shoe upper leather market. These materials, chiefly rubber and plastics, were also replacing leather to some extent in the manufacture of handbags and upholstery. They dominated many of the markets formerly held by leather, and the gain was steadily increasing. Liquidation in 1949 of the 68-year-old American Oak Leather Co., one of the oldest and largest (and most successful) sole leather tanners, aroused the leather industry to a new burst of merchandising effort.

The directors of the Foundation of the Tanners Council Research laboratory authorized a grant to establish and operate a program for the analysis and testing of various leather substitutes at the council's research laboratory in the University of Cincinnati, O. The program was intended to provide more accurate and exact knowledge of other materials in order to help determine the merits of various claims.

Fred O'Flaherty, director of the council laboratory, announced the development of a new portable device which scientifically measures the amount of moisture present in hides and leather. Moisture content determines the quality of the finished leather and its workability in the manufacture of leather products. (*See* also Shoe Industry.) (R. B. B.)

Great Britain.—The leather industry in Great Britain began 1949 with its prices badly out of adjustment. Under the controls governing it, the prices for leathers most in demand were too low and those for less desirable qualities were too high. Good selections sold readily but stocks of poorer qualities accumulated on tanners' hands.

There was much agitation for greater freedom to price leather more in accordance with demand. Eventually a concession was made under which tanners were permitted to raise the prices of higher grade productions by an amount sufficient to compensate them for actual losses made by selling low grades at prices below the official levels.

Thus the overriding consideration for the industry became the prospect of some measure of decontrol. The industry contended that, if the government abandoned its policy of bulk-buying of hides and skins, tanners could then buy on private account to greater advantage, particularly in securing to each tanner the type of raw materials best suited to his production methods. The industry was confident that decontrol would result very soon in a lowering of prices.

In Sept. 1949, shoe manufacturers were demanding that leather and shoes should be decontrolled; they were confidently predicting that lower prices would follow, despite the fact that while control persisted leather prices were being subsidized to the extent of about £2,000,000 a year out of a profit made by the control on the buying of domestic hides.

The devaluation of the pound upset most price calculations and made it evident that, because most hides and skins had to be imported, dearer leather was inevitable.

A definite announcement was made in Dec. 1949 that on Jan. 1, 1950, the government would hand back to tanners the buying of a large part of the industry's raw materials and that government-bought supplies would be sold to the industry at prices about halfway between the price level before devaluation and the current world value. (C. A. Sd.)

Lebanon.

An independent Arab republic, formerly under French mandate, Lebanon is situated on the eastern Mediterranean, bounded by Syria and Israel. Area: 3,470 sq.mi. Pop. (1948 est.): 1,208,000. Religions (1947): Christian 52%, Moslem 46%, others 2%. Language: Arabic is the mother tongue of about 90% of the population, but Armenian, Greek and other languages are also spoken. Capital: Beirut (pop. 247,000). President of the republic, 1949: Sheikh Bishara al-Khuri; prime minister, Riad bey al-Sulh.

History.—On Jan. 16–19, 1949, meetings of Lebanese and Israeli representatives took place on the frontier to discuss an armistice. It received final form on March 20 and was signed on March 23 at Ras en-Naqura.

On Jan. 28 Lebanon, with Syria (*q.v.*), agreed to allow work on the Trans-Arabian pipe line, interrupted because of displeasure at U.S. support for Israel, to be resumed. Negotiations with Syria on the one hand and the Trans-Arabian Pipeline company on the other were completed, for subsequent ratification by the respective parliaments, on Feb. 5.

A treaty of friendship and commerce with Italy was signed at Beirut on Feb. 15. Economic and political relations with Syria deteriorated after March 30. Early in May the prime minister visited Cairo, Egypt, and Baghdad, Iraq, in an attempt to mediate in the dispute between Iraq and Egypt over the Arab league secretariat and the "fertile crescent" plan.

On June 11, following the arrest of about 300 of its members, the Syrian National party in Lebanon was dissolved by government decree and its headquarters searched and sealed. It was alleged to have made preparations for an armed revolt. Early in July the leader of the party, Anton Saadeh, who took refuge in Damascus, Syria, and was received by Husni ez-Zaim, staged attacks on police posts in Lebanon and scattered groups of his party followers made armed raids from Syria along the frontier. It was reported that the prime minister appealed to Egypt, which intervened with ez-Zaim. Saadeh was arrested in Damascus on July 7 and handed over by the Syrian authorities to the Lebanese police. In Lebanon he was summarily tried, sentenced and executed the next morning. On July 16 a military court in Beirut tried 68 adherents of the National Syrian party, of whom 12 were sentenced to death and 53 to terms of imprisonment varying from three years to life. More than 800 others were reported to be in prison. Two days later the government closed the offices of the Phalanges Libanaises (al-Katayeb), making 13 arrests and confiscating arms. (C. He.)

Education.—(1946–47) Schools: state 631, pupils 53,190; private 815, pils 64,769; foreign 306, pupils 50,111; universities (1948–49) 2, dents 5,110.

Finance and Banking.—Budget: (1948 est.) balanced at £L. 67,000,0; (1949 est.) balanced at £L. 75,000,000. Currency circulation: arch 1949) £L. 185,000,000; (March 1948) £L. 201,000,000. Gold rerve of the Bank of Syria and Lebanon (June 1949): U.S. $2,800,000. nk deposits: (Dec. 1948) £L. 94,000,000, (Dec. 1947) £L. 205,000,0. Monetary unit: Lebanese pound with an official exchange rate of cents U.S. (Nov. 1949).

Foreign Trade.—(1948, with Syria). Imports £L. 468,000,000, exports . 79,000,000.

Transport and Communications.—Roads (1947): 2,068 mi. Licensed otor vehicles (Dec. 1948): cars 9,100, commercial vehicles 4,300. ilways (Dec. 1948): 130 mi.

Agriculture.—Main crops (metric tons, 1947): wheat 50,000; barley ,000; maize 12,000; potatoes 32,000. Fruit production (metric tons): apes (1946) 80,000; oranges and tangerines (1947) 40,000; lemons, nes, etc. (1947) 25,000; olives (1946) 35,000. Livestock (Dec. 1947): ttle and buffaloes 22,000; sheep 21,000; horses (Dec. 1946) 8,000; ses 25,000.

eeward Islands. This British colony consists of a group of islands in the Caribbean. Politically is divided into four presidencies: Antigua (with Barbuda), . Christopher-Nevis (with Anguilla), Montserrat and the Virn Islands. The total area is 423 sq.mi.; total pop. (mid-1948 t.): 109,000. Governor in 1949: Earl Baldwin of Bewdley.

History.—It was announced in April 1949 that the secretary state for the colonies had agreed to certain constitutional anges, including the introduction of adult suffrage (subject to simple literacy test only) at the next election for the legistive council, and the removal of the property qualification for candidate, subject to further examination of the existing arngements for deposits which candidates were required to make.

The reports of the commission appointed in July 1948, to quire into the organization of the sugar industry of St. Kitts d Antigua were published in Nov. 1949. Each contained a inority report recommending the nationalization of the inistry. The majority reports recommended, *inter alia*, a vigous campaign for the improvement of rural housing; governent responsibility for housing sugar estate workers; a wages ard or council for the industry and a joint consultative asmbly for the industry in St. Kitts; a land utilization survey; construction of the cost-of-living index; review of the wholele and retail profit margins; and consolidation of basic wage tes, amendments and cost-of-living bonuses in Antigua.

eopold III (1901–), king of the Belgians, was born at Brussels Nov. 3; he acceded to the throne 1934. In World War II, after a courageous though vain restance by the Belgian army, of which he was commander in ief, to the German invasion launched on May 10, 1940, the ng capitulated on May 28. Against the views of his governent, he decided not to leave his country and retired to the stle of Laeken. On June 7, 1944, Leopold left Brussels with s family under German escort for internment at Hirschstein, ear Dresden, Ger., and on March 6, 1945, he was moved to robl, near Salzburg, Aust. He was liberated on May 8, 1945, the U.S. 7th army. The Belgian Social Christian party asked for his immediate return, but a section of the Liberals, the Socialists and the Communists advocated his abdication. Since the summer of 1945 King Leopold and his family had been living at Pregny, near Geneva, Switz. Leopold's insistence on resuming his throne created a deadlock in Belgian politics and the situation was not clarified by the result of the general election of June 25, 1949 (*see* Belgium). It was officially disclosed on Oct. 18 that in a letter to Gaston Eyskens, the prime minister, the king had affirmed that if the number of votes in his favour in the proposed referendum did not reach 55% of the total of valid votes cast he would abdicate in favour of his son Baudouin. (G-H. D.)

Leprosy. From all parts of the world reports in 1949 indicated the belief of leprologists that cases of lepromatous leprosy receiving the sulfones showed improvement far beyond that expected from use of other methods. Even though cures were not produced, the patients led a much more comfortable existence and complications were much less pronounced. According to one leprologist the drugs of choice were diasone and suphetrone for oral administration and promin for intravenous use. Treatment had not become universally standardized. In some geographic areas the cost of certain sulfones limited their use. Careful clinical and laboratory observations were still needed for patients receiving sulfones.

A summary of the problem of leprosy in the British commonwealth and outlines for treatment and policy were made in an official memorandum. The problem was still being attacked with increased vigour in the British colonial territories where there were an estimated 700,000 cases, principally in Nigeria. Isolation was recommended, and persons with leprosy were to be excluded from occupations which permitted others to be exposed. All people who lived with leprous persons were to be examined periodically. It was recommended that settlements be organized along modern village lines, that restrictions be kept at a minimum, and that patients not actively infectious be allowed to return home periodically. Practically all British colonies maintained settlements for the care of leprosy.

Under the administration of the U.S. navy a leprosarium was being developed on the depopulated island of Tinian. It was planned to take cases of leprosy among natives of the 120 islands in that region to Tinian for treatment. In keeping with the trend to abolish the word "leper" the institution was given the name "Hansen's Colony." A young naval medical officer volunteered for a two-year assignment in charge of the colony. At the invitation of the U.S. navy an advisory group of three physicians interested in leprosy visited the west central Pacific area. This group doubted the wisdom of placing the leprosarium on Tinian because it was too far removed from consulting medical services, and because insular isolation was considered an archaic method for controlling the disease.

Attempts to cultivate *Mycobacterium leprae in vitro* continued. Keizo Nakamura of the national institute of health in Japan published a method of culture which he initiated in 1930. The ingredients of the liquid medium given specific mention by the author were mucin from the submaxillary gland of the ox, phthiocol, vitamin B_1 and vitamin B_2. Nakamura was convinced that using material from seven cases of human leprosy definite multiplication of bacilli was obtained, and reported that subculturing was successful through the fourth or fifth transplanting. Since no previously reported method for culturing the leprosy bacillus had withstood the test of time, this new approach had to be successfully duplicated by other scientists before the results could be accepted by leprologists and bacteriologists.

Lewis, John Llewellyn

(1880–), U.S. labour leader, was born Feb. 12 in Lucas, Ia. (See *Encyclopædia Britannica* for his early career.)

The year 1949 was marked by the 22nd miners' strike since World War I, and by the payment of contempt-of-court fines by both the United Mine Workers union and by Lewis for failure, in face of a court order, to end a 1948 strike. The union's fine was $1,400,000; Lewis' was $20,000.

When the United Mine Workers' contract with the mine operators ended on June 30, Lewis declined to accept a renewal of the 1948 contract, asking greater concessions. In a break with the miners' earlier "no contract, no work" tradition, however, he ordered the miners to work a three-day week until further notice. In September members of the Southern Coal Producers association ceased making payments to the U.M.W. welfare fund, declaring their obligation to do so ended with the end of their contract with the miners. On Sept. 19 about 480,000 miners halted work on the grounds, "no pensions, no production; no welfare, no work." Northern producers quickly pointed out that they (representing the bulk of the coal being mined) were still paying to the fund.

On Oct. 3 approximately 100,000 miners returned to work at Lewis' orders, and on Nov. 9 all the striking miners returned to work (on a three-day week) until Nov. 30, "to enhance the remote possibility of an agreement" with the producers, as Lewis put it. Critics of the union said the miners themselves were by this time murmuring, since they had not worked full-time since June, and added that Lewis feared sanctions under the Taft-Hartley Labor act—which act, however, Pres. H. S. Truman throughout 1949 never applied against the miners. By year's end, Lewis had signed new contracts with operators representing about 18,000,000 of the 600,000,000 tons of coal mined annually.

Liberal Party: *see* POLITICAL PARTIES, BRITISH.

Liberia.

Liberia, on the great western bulge of Africa, immediately north of the equator and close by the great rain forests, is Africa's only republic. It has an area of approximately 43,000 sq.mi. and is bounded on the northwest by the British colony of Sierra Leone, on the north and northeast by the French colony of Guinea and on the east by the French Ivory Coast colony.

In lieu of an official census, the United Nations' estimate of the population in 1949 was 1,600,000. The great majority of Liberians are members or descendants of the 23 indigenous tribes, plus a probable 14,000 descendants of Negro immigrants from the United States. Though English is the official language, the living languages include at least 26 tribal languages or dialects, principally from Nilotic, Bantu or Arabic bases. Monrovia, with a population estimated at 12,000, is the national capital; it is the home of a majority of the citizens of American descent.

The government and constitution of Liberia are modelled closely after those of the United States, though the right of property ownership is limited to "persons of African descent." The presidential term is eight years. William V. S. Tubman was inaugurated in Jan. 1944. During his administration, native tribal chiefs were, for the first time (1946), inducted to membership in the national legislature. Also instituted was a yearly sequence of hinterland palavers, featuring prolonged official journeys into the more remote tribal areas by the president and his staff, for forum discussions and town-meeting-style hearings of tribal grievances, needs, petitions and other local problems not attendable from the capital.

Liberia grants religious freedom to all denominations, welcomes bona fide missionary activities and admits without limitation of nationality accredited medical and other scientists.

History.—Late in 1949 the bridge spanning the St. Paul river and linking Monrovia with the western province was officially opened. Pan American World Airways reinstated international plane services which brought Monrovia within 26 hr. of New York city. Also in 1949 tangible steps were taken to open to international exports the Bomi Hills iron concessions, in which Christie-Republic Steel interests were the principal U.S. investment factors. It was estimated that there were more than 50,000,000 tons of rich surface iron ore in the Bomi area.

A corporation code and a maritime code were among the major Liberian legislative accomplishments for 1949. The same year witnessed progress in the nation's principal industry, the production of natural rubber. Firestone, largest American investor in Liberia by way of its subsidiary, the Firestone Plantations company, increased its Liberian rubber plantations to a total of 78,861 planted acres, of which about 70,000 ac. were in bearing at the year's end. Firestone's rubber production for the fiscal year ending Oct. 31, 1949, was 57,557,721 lb. Production from groves owned by 123 citizen planters was likewise substantial.

The year 1949 was also marked by the active beginning, in the Monrovia area, of the Liberian institute, an international research centre conducted by the American Foundation of Tropical Medicine to the end of acquiring and disseminating, without regard for nationality, race, creed or colour, medical findings of potential or actual world importance.

Education.—In 1949, Liberia had 88 government schools, 78 mission schools, 23 private schools and 17 tribal schools. Institutions for advanced education include Liberia college, College of West Africa, Monrovia, and Booker T. Washington institute, Kakata, which is supported jointly by the Liberian government, the United States government, Firestone and six American churches and foundations, for the agricultural and basic industrial training of sons of native chiefs and other tribes people.

Finance and Trade.—The U.S. dollar is the monetary unit of Liberia and is supplemented by Liberian fractional coins with the dollar basis freely negotiable and at par. Revenue receipts for the year ending Aug. 31, 1949, were $3,735,353.91, an increase of $678,655.28 over those of the preceding year. The external debt stood at approximately $584,000, or roughly 40 cents per capita. The internal debt was $5,050. Exports for the 12 months ending Aug. 31, 1949, were $13,527,185; imports were $9,104,870, with the United States supplying about 81% of the latter.

Industry and Agriculture.—For 1949, industrial employment, including that of the Firestone Plantations company with approximately 30,000 native employees, was estimated at 44,800. Subsistence agriculture remains the preponderant source of employment, with rice the principal subsistence crop. Rubber is the preponderant export item, with gold, piassava fibre, palm oils and kernels and kola nuts following in that order.

During 1949 the Liberia company, organized in 1947 by Edward R. Stettinius, Jr., and associates, dismissed most of its personnel and withdrew at least temporarily from active operations, pending reorganization and refinancing.

(C. M. WI.)

Libraries.

During 1949, many foreign librarians made tours of the U.S., sponsored by the war and state departments. U.S. libraries and lay groups continued to send books abroad. The United Nations Educational, Scientific and Cultural organization had two plans in operation concerning libraries: the establishment of national exchange agencies (in the U.S., the U.S. Book exchange, continued under a Rockefeller grant), and the book coupon scheme to help "soft" currency countries buy books in "hard" currency countries.

The Westchester, N.Y., Federation of Women's Clubs con

MBERS OF A GREAT BOOKS discussion group, photographed during a eting in a branch public library at Oklahoma City, Okla. Similar discussion ups were being held in libraries of more than 300 cities throughout the ited States in 1949

ted books for German libraries. CARE (Cooperative for nerican Remittances to Europe, Inc.) sent its first technical-oks package to Louvain university, Belg., library. The Inter-tional Youth library at Munich, Ger., received a two-year nt of $20,000 from the Rockefeller foundation.

Regional Co-operation.—The Carnegie corporation ap-oved a $500,000 grant to establish a midwest interlibrary cen- as a depository and bibliographic centre; Ralph T. Ester-est was named director. A similar plant was being considered the northeastern states. The 54 college and reference li-ries participating in the Farmington plan (complete coverage foreign-book acquisitions) were receiving books from nine ntries: Mexico, Norway, Sweden, Denmark, the Nether-ds, Belgium, France, Switzerland and Italy; acquisitions re uneven but improving.

States.—Most states reported increased funds during the r for state-library operation, state aid, etc. Arkansas and wa increased permissive tax levies for public libraries. Kansas, ssissippi, New Mexico and Rhode Island reported state-wide blic library surveys. New York established its first regional rary, and Vermont its fifth. New state heads included: Min-sota, Russell J. Schunck, state director of libraries; Missouri, xton P. Price, state librarian; North Dakota, Hazel Webster rnes, director of State Library commission, succeeding Lillian Cook; Tennessee, Dan M. Robinson, state librarian.

Personnel.—There still was a shortage of professionals, and arge turnover. The U.S. bureau of labour statistics issued a ease stating that the average professional salary was $2,825, nprofessional $1,925. Salary tables, usually with at least rudi-ntary classification schemes, appeared in the *Library Journal* public libraries at Monterey, Calif., Pittsburgh, Pa., Cleve-d and Toledo, O., Minneapolis, Minn., Atlanta, Ga., Newark, J., and Hartford, Conn. Vassar college, Poughkeepsie, N.Y., d an interesting scheme, and the University of California, rkeley, issued revisions.

College and Reference Libraries.—The most spectacular quisition during the year was the private papers of James swell (4,000 pieces) by Yale university library, New Haven, nn. New college library heads included: David O. Kelley, iversity of New Mexico, Albuquerque; David A. Jonah, li-rian of Brown university, Providence, R.I., with Henry B. n Hoesen becoming director of libraries; Charles E. Butler, est Virginia university, Morgantown; John E. Burke, George abody college, Nashville, Tenn.; Robert H. Muller, Southern inois university, Carbondale; N. Orwin Rush, University of Wyoming, Laramie; and Donald E. Strout, University of Denver, Denver, Colo.

Reference library appointments included: Paul Howard, chief librarian, U.S. department of the interior libraries; Foster Mohrhardt, Veterans' administration library service head; Russell F. Barnes, head of James Jerome Hill Reference library, St. Paul, Minn., succeeding Helen K. Starr, retired.

Public Libraries.—A release from the U.S. office of education, covering public libraries in cities of more than 100,000 population, showed percentage increases since 1945: 45,142,081 vol. (+23%), 9,011,703 borrowers (+11.25%), 133,283,304 books circulated (+4.23%), $45,205,592 expenditure, excluding capital outlay (+42.66%). An American Library association midsummer study showed 736 counties having county libraries. John Deferrari, who in 1947 had given the Boston Public library a $1,000,000 trust fund, added $500,000 to it in 1949.

Costs were the main concern of most public librarians during the year, with budget increases going to improved salaries. The "book-buying power" of public libraries was set at an estimated $14,000,000; of all libraries, $32,000,000. Francis R. St. John became librarian of the Brooklyn, N.Y., Public library, succeeding Milton J. Ferguson; John C. Settelmayer became librarian of the Atlanta, Ga., Public library (renamed from the Carnegie library of Atlanta), succeeding Fanny D. Hinton.

Adult services moved ahead. Sporadic attempts at censoring the collections occurred, but positive elements in the communities defended the public libraries' book-selection policies. Improved service to Negroes in the south was reported. And provision of books on medical subjects, sex, marriage, etc., for adult readers was discussed. Group services were forwarded, the library's role being more clearly defined as one of service rather than leadership. Libraries made encouraging reports on Great Books discussions; few participants dropped out, once enrolled, and most of them re-enrolled for the second year. Special groups were served: the New York Public library maintained collections of books in labour-union headquarters, with expense shared by library and union; Rutland, Vt., Public library sponsored a small business clinic series which, because of its growing popularity, was being spoken of as the "Rutland plan."

Auxiliary bodies were becoming increasingly important, particularly Friends of Libraries. Edward L. Bernays, nationally known counsel on public relations, suggested that the "Friends" become autonomous, similar to lay bodies which supply funds to fight disease. A woman's council was organized to work on special projects at the New York Public library.

Audiovisual.—Almost 200 public libraries were known to have collections of phonograph records. "Film librarian" was becoming a familiar staff title. Film festivals and workshops increased in number during 1949. The Stamford, Conn., Public library issued a report on the effectiveness of its film program in the community. Louisville, Ky., Public library had a radio broadcasting station and, in every branch library, a television receiver.

Exhibits.—The Freedom Train exhibits were installed in the national archives, Washington, D.C., for a limited period. New York state had its own Freedom Train of six specially rebuilt coaches, making a two-year tour of the state. The New York State library held an exhibition, "20,000 Years of Comics," which later moved to the Library of Congress and would eventually tour the country.

Equipment.—Mechanical equipment gained increasing popularity in 1949, especially cheaper processes for printing catalogue cards and photographic operations for registering borrowers and lending books. An A.L.A. committee was seeking standardization of bookmobiles. Microfilm, in addition to serving some of the above operations, was used in the "rapid selector," developed by the U.S. department of agriculture from principles originated by Vannevar Bush: catalogue cards, coded and "stored" on 35-mm. film, could be "scanned," and those on selected subjects rephotographed at a rate of thousands per minute. University Microfilms, Ann Arbor, Mich., announced a plan for microfilming several hundred magazines, mainly technical, so that the paper originals could be thrown away after a year or so, and the microfilms retained. Microcards were in production.

Library Schools.—The A.L.A. board of education for librarianship announced early in the summer that it would withhold approval of further curricular changes until it had studied the situation; most changes would affect the M.A. degree. The Ballard school in New York city, guided by the Special Libraries association, began training nonprofessionals. Marie Hamilton Law became director emeritus of Drexel institute's library school (Philadelphia, Pa.), Harriet D. McPherson succeeding her.

School and Children's Librarianship.—It was expected that the next few years would see more public libraries getting out of operating school libraries, because of high costs and the inequalities of personnel requirements; Wichita, Kan., Public library returned the school libraries to the schools in 1949. Eleven states had school library supervisors. Both the *New York Times* and the *New York Herald Tribune* held successful children's book festivals. (*See* also AMERICAN LIBRARY ASSOCIATION; SOCIETIES AND ASSOCIATIONS.)

Great Britain.—One of the most important events of latter years was the establishment of an independent organization to provide an official current national bibliography, based on a scheme first drawn up by the Library association. The Council of the British National Bibliography was formed in March 1949 and consisted of representatives of the British museum, the Library association, the Publishers' association, the Booksellers' association, the National Book league, the Royal Society, the National Central library, the British Council, Aslib and the United Nations Educational, Scientific and Cultural organization Co-operating Body for Libraries. The editorial work was to be carried out at the British museum in close proximity to the copyright receipt office and the bibliography was to be issued in the form of a weekly booklist of all books published in Great Britain, commencing in the first week of Jan. 1950. All books were to be fully catalogued by the Anglo-American rules and classified in accordance with the Dewey decimal classification. There was also to be an annual volume containing the entries for the year, in classified order with appropriate indexes. The British National bibliography would thus form a central catalogue of the books published in Great Britain as well as a guide to the selection and purchase of books.

Another important event was the establishment of a British National Book centre at the National Central library. This became a new department of the National Central library activities which, it was hoped, would help the better distribution of books and periodicals which became available from time to time as gifts or as superfluous duplicates, by ascertaining the requirements of libraries and meeting them as far as possible. Many institutions had superfluous books which were not needed but which it would be unwise to destroy because experience had shown that other libraries might have been unable to obtain them. The British National Book centre acted as a central bureau in Great Britain to obtain and circulate information regarding redundant books. Its main object was the distribution of books among British libraries but it was co-operating with U.N.E.S.C.O. in encouraging international interchange of books and periodicals and working with U.S. and Canadian book centres operating on similar lines.

Statistics collected by the Library association showed that in the financial year 1948–49 more than £1,870,000 or approximately 9*d.* a head of the population was spent on books for public libraries in Great Britain and Northern Ireland; and the total expenditure on the service, which was available for all but about 50,000 people in the whole of the country, was about £7,705,000 or 3*s.* 2*d.* a head of the population. The number of books issued from the lending departments of these libraries for home reading was 312,000,000, about 12,000,000 more than in the previous year.

A new feature of British libraries, the recorded music collections, was further developed. Nearly 50 public libraries had established collections of phonograph records, which in most cases were available for loan to individuals but, in some places, only to musical clubs, societies and groups.

The work of restoring libraries which had been damaged during World War II proceeded slowly. The repair of the bomb-damaged music room and bookstacks at the University of London library and work on the completion of the tower were begun. Plans were approved for the rebuilding, on its original site, of the library of the Inner Temple, and in July the king opened a new temporary library adjoining the existing temporary building. The Inner Temple lost many books in the bombing of 1941 but the stock had gradually been built up to 80,000 volumes. At Edinburgh, Scot., work was resumed on the new building for the National Library of Scotland.

The Radcliffe Science library at Oxford celebrated its bicentenary on April 20 and marked the occasion by a public ceremony and a special exhibition illustrating the history of the library and the life of its founder, John Radcliffe. At Cambridge, A. F. Scholfield, university librarian since 1923, retired and his successor was H. R. Creswick, who was librarian of the Bodleian library, Oxford, from 1945 to 1948 and therefore had the unique distinction of serving as university librarian both at Oxford and Cambridge.

Europe.—U.N.E.S.C.O. continued to encourage the rehabilitation of libraries after World War II and the international and national library associations were active. The 15th session o e International Library committee of the International Fed-ation of Library Associations was held at Basle, Switz., in July hen reports were received from many national associations on e progress of the library movement. In Germany the *Bayer-che Staatsbibliothek* of Munich and the *Universitätsbibliothek* Erlangen organized a conference, attended by more than 100 legates, of the re-established Association of German Libra-ans. In Czechoslovakia, a mobile library service was intro-ıced in Prague. Based at the Prague Central library, the spe-ally fitted library vans toured and served areas which were thout any other library service.

The Norwegian Public Library law, which was passed in Dec. 47, took effect from July 1949. This law made it compulsory r communities to maintain public libraries. Provision was ade for subsidies on local effort and an interesting feature was at public libraries which were so well administered that they uld serve as model libraries or those to which study groups ere attached, could obtain an extra contribution from the vernment.

ie, Trygve (1896–), Norwegian diplomat and United Nations official, was born July 16 in Oslo. etween 1922 and 1940 he was identified with the Norwegian bour party, as its legal adviser and later a member of its tional council. From 1935 to June 1939 he was minister of stice, then minister of commerce, in which position he helped und the Norwegian Trade and Shipping mission, which saved ost of the 1,000 ships under its control for operations on the lied side in World War II. After the German invasion of orway he went with the exile government to London, serving its minister of foreign affairs. He was reappointed minister foreign affairs of Norway in 1945. He had served as chair-an of the commission that drafted the charter for the Security uncil at the United Nations organization conference at San ancisco, Calif., and at the London meeting of the U.N. gen-al assembly he was elected secretary-general, Feb. 1, 1946.

Consistently during the postwar years he sought to follow a utral course when the U.S.S.R. and its satellite states and e nations of the west used the U.N. as a forum to air their ews in the "cold war." Lie's fourth annual report to the gen-al assembly in Aug. 1949 reported that fear of war had creased after the lifting of the Berlin blockade. He predicted at history would view the independence movements in India d Africa as more important than the "cold war." He urged equent meetings of the foreign ministers of big powers on ajor world issues. He gave as his opinion that world economic oblems could best be solved through the U.N. rather than rough blocs of nations, and viewed Pres. Harry S. Truman's an for helping underdeveloped countries through the U.N. as ne of the most heartening events of the year."

echtenstein. A small independent principality between Switzerland and Austria, Liechtenstein has area of 61.4 sq.mi. Pop. (Dec. 1948 est.): 13,000. Language: rman. Religion: Roman Catholic. Capital: Vaduz (pop. *c.* 00). Ruler: Prince Franz Josef II; prime minister: Alexan-r Frick.

History.—On July 27, 1949, the United Nations Security uncil agreed to grant the request of Liechtenstein—which was t a member of the United Nations—to become a party to e statute of the International Court of Justice.

On Sept. 12, at Lignières, France, Prince Heinrich-Marie-Vincenz-Benedikt, heir to the throne of Liechtenstein, married Archduchess Elisabeth-Charlotte, daughter of Charles of Habsburg, the last emperor of Austria and king of Hungary, and of the empress Zita, nee of Bourbon-Parma.

Finance and Economy.—Budget: (1948, actual) revenue 3,798,000 Fr., expenditure 4,209,047 Fr.; (1949 est.) revenue 4,266,200 Fr., expenditure 4,575,749 Fr. Included since 1924 in the Swiss customs and monetary union. Liechtenstein uses Swiss currency. (Exchange rate beginning Sept. 26, 1949: 1 Swiss Fr.=23.09 U.S. cents.) It was believed that a quarter of the principality's revenue came from sales of postage stamps. The main industries are agriculture (chief products being potatoes, corn, wine and vegetables) and textiles.

Lilienthal, David Eli (1899–), U.S. government official, was born on July 8 at Morton, Ill., attended DePauw university, Greencastle, Ind., and Harvard university law school, then practised law in Chicago from 1923 to 1931 when he was named to the Wisconsin Public Service commission. In 1933 Pres. F. D. Roosevelt appointed him a director of the Tennessee Valley authority, and in 1941 he became chairman of the board of TVA. In 1946 he was chairman of a committee whose report to the state department formed the basis for U.S. proposals for establishment of atomic energy control through the U.N.

In Oct. 1946, Pres. Harry S. Truman nominated Lilienthal chairman of the U.S. Atomic Energy commission, and after protracted debate in the senate the nomination was confirmed April 9, 1947. Lilienthal again became a contentious figure. In 1949 he was charged with "incredible mismanagement" of the atomic energy program by Sen. B. B. Hickenlooper of Iowa, but the U.S. joint congressional committee on atomic energy threw out the charges after weeks of hearings.

In November Lilienthal submitted his resignation from the AEC, effective Dec. 31, explaining that he was resigning in order to "engage in public discussion and public affairs with a greater latitude," and that he had waited for a lull in the campaign against him to avoid the appearance of quitting under fire.

Limes: *see* Fruit.

Linen and Flax. The traditional linen trade between Northern Ireland and the United States received a noticeable impetus in the last quarter of 1949, because of devaluation of the British pound. Up to September, reports on the linen business were pessimistic. But, by the end of the year, exports of linens from Northern Ireland to the United States totalled 11,868,000 sq.yd. valued at £2,280,126, an increase of 10% over 1948. Prospects for 1950 were considered bright because of a demand for linen dress fabrics, principally those with new wrinkle-resistant finishes. Prices were also attractive, estimated to be from 12% to 15% below what they were prior to the currency devaluation. However, prices were still four times higher than the average before World War II.

Raw material supplies were of major concern. Central European sources were no longer available to western European weavers, and flax growing in western Europe was being encouraged. In Belfast, in October, the government published details of a three-year plan for subsidizing flax growing. Spinners agreed to buy, each three-year period, a minimum of 4,000 tons of deretted flax and 2,000 tons of rescutched tow, the rest to be taken by the government.

Progress was reported in establishing the value of the aeration ret in flax production, and a modification of the preliminary breaking arrangement in the scutching machine which produced an increased yield of flax. Reduction of temperature and humidity in the wet-spinning rooms had also been accomplished through research on spinning. High temperatures and excessive humidity had previously been blamed for poor performance by individual workers and difficulty in securing workers.

A previous attempt, reported in 1948, to utilize the shuttleless loom, had been followed by a preference for newer types of shuttle changing and pirn (bobbin) changing fully automatic looms as being more adaptable to flax. The shuttle changing loom was used for light fabrics such as sheers, cambric and aero fabrics. The pirn changing loom was widely employed for medium and heavyweight fabrics such as huck towels. Old loom buildings were remodelled, effort being concentrated on widening passages to facilitate greater freedom of movement, the use of larger warp beams and the introduction of mechanized equipment for transporting these from the beam storage to the back of the loom. Another improvement was the elimination of overhead motor drive, which resulted in better lighting conditions and greater freedom of movement. It was also discovered in 1949 that previous unsatisfactory attempts to introduce automatic weaving into linen factories resulted not from any fault of the loom mechanism but from the unsatisfactory condition of the warps produced by the old system of preparation. The inelastic nature of flax yarns called for certain modifications in construction and setting.

Belgium, one of the chief sources of flax, showed, in the 1949 exports of linen and flax, the trend toward substitution of flax yarn for linen fabric. Based on reports for 8 months of the year, the average monthly production and export of flax and linen for 1949, compared with the 12-month average for 1948, was as follows:

	Average monthly, metric tons			
	1948		1949	
	Production	Exports	Production	Exports
Flax tow.	—	1,011	—	10,878
Scutched flax.	—	3,226	—	23,492
Flax yarn	620	215	3,951	2,457
Linen fabric	418	165	2,350	1,475

In France, flax production was running well ahead of schedule and was expected to exceed 29,000 tons, compared with 22,000 tons in 1948.

Austria's flax production for 1949, according to unofficial reports, was estimated to be between 850 and 1,100 metric tons of scutched fibre, including tow. Linen yarn output for the first six months of 1949 was estimated at 546 tons and linen cloth at 931,530 metres. In 1948, output was 880 tons and 1,088,565 metres for the same period.

In Canada, all flax production was suspended in 1949 except in Quebec and Ontario. Only 7,500 ac. were planted in 1949, compared with 14,116 in 1948 and an average of 24,548 in 1943–47. The only mill spinning flax fibre used tank-retted flax from Belgium. However, even imports were drastically lower in the first six months of 1949 than in the same period of 1948. Belgium and the United States supplied most of the 1,110 cwt., compared with 8,526 cwt. in 1948.

The political and military situation in China created confusion in the United States linen market in October, and it was predicted that no shipments would be received from either central or south China until the situation resolved itself. The Linen Trade Association of New York, however, filed a protest with the U.S. secretary of state over the seizure of two United States ships by the Chinese nationalist navy on which there was a substantial quantity of linens bound for the U.S. for 1949 Christmas sales.

Like other textile groups, linen merchants were disturbed in 1949 at the rapid advance made by the Japanese in re-enterin world markets. Japan was expected to be shipping large quantities, by 1950, of low count cotton fabrics for table use tha would seriously compete with linen cloths.

No reports were available as to the production of flax or line in the U.S.S.R. (I. L. Bl.)

Liquors, Alcoholic.

Production of all types of distille spirits in the United States reache 266,542,499 proof gallons in the fiscal year ended June 30, 1949 This figure represented an increase of more than 20,000,000 gal from the previous year's total of 244,127,343. Whisky production, accounting for the bulk of all distilled spirits produced i the U.S., jumped considerably above the total of the 1948 fisca year—149,600,000 proof gallons, as contrasted with 129,600,00 gal. The remainder of distilled spirits manufactured, gin, rum brandy and other spirits, together represented 40% of the tota

Withdrawals of distilled spirits from distilleries and warehouses dropped from 161,700,000 proof gallons in the 1948 fiscal year, to 153,500,000 proof gallons for the year ended Jun 30, 1949—a decrease of about 5%. Bottled output also decline approximately 4%—from 165,900,000 wine gallons in 1948 t 160,900,000 in the 1949 fiscal year.

In June 1949, U.S. whisky inventories stood at about 511,000,000 proof gallons, or well over the 425,000,000 proof gallo average for "normal" years. However, the supply was far fro adequate, for only 23,000,000 gal., or less than 5% of the tota were composed of sufficiently aged whiskies (four years o older), as contrasted with the 1941–42 average of 23% of th annual total.

During 1948–49 there was a resurgence of "moonshining." I the calendar year 1948, 7,552 illegal stills were seized by agent of the alcohol tax unit—an increase of more than 25% fro the previous year's total. The total for the fiscal year endin June 30, 1949 indicated a similarly rising total—8,008 still seized having a daily producing capacity of 224,888 proof gallons, as against 6,757 (with a daily capacity of 173,087 proof gallons) during the fiscal year 1948.

Patterns of distilled-spirits consumption were undergoing gradual process of change in 1949, with a slowly increasing consumer preference for straight and bonded whisky and a consequent decline in the partiality for blends. In the first half o 1948, the total amount of straight whiskies placed into consume channels equalled 4,800,000 wine gallons; in the Jan.–June 1948 period, this figure had jumped to 7,700,000 wine gallons— more than 60% greater than the previous year. Blended whisk totals, on the other hand, declined. From Jan.–June, 1948, th total gallonage of blends made available for consumption wa 53,800,000; the same period in 1949 saw a decrease in output t 51,500,000 gal.

The U.S. import picture, too, was one of transition: the year 1947 and 1948 marked the change from a seller's market, whe

Table I.—*Revenues from Alcoholic Beverages*

Calendar Year	Distilled Spirits	Beer	Wine	Grand total
1941	$ 558,547,795	$348,876,726	$20,008,266	$ 927,432,7

Source: Prepared by Licensed Beverage Industries, Inc., research & statistical divisio from data of the alcohol tax unit, Bureau of Internal Revenue, Treasury Department.

virtually all imported items were either in short supply or completely unavailable, to a buyer's market, with stocks readily available and in ample quantity. Total distilled spirits imported for consumption during the calendar year 1948 amounted to 14,359,666 wine gallons, the bulk being Scotch whisky. For the first eight months of 1949, total distilled-spirits imports equalled 3,788,823 wine gallons, with whisky accounting for more than 7,000,000 gal. (A. J. Lr.)

U.S. Revenue and Control.—In spite of a decline of .4 of 1% in the apparent consumption of distilled spirits, measured in wine gallons, for the first ten months of 1949, federal tax collections for this period showed an increase of 2.7%. Total federal collections for the first ten months totalled $1,811,051,000, as against $1,763,350,000 for the similar period of 1948. Taxes on distilled spirits increased $40,000,000; wine $3,000,000 and beer, $4,000,000. Distilled spirits made up about 64% of the total; beer, about 33% and wine, about 3%. The total federal indicated collections on all alcoholic liquors for 1949 were estimated to be $2,300,000,000.

Collections of state taxes on alcoholic beverages were estimated to be about $450,000,000 in 1949. The following states changed their excise tax rates on distilled spirits in 1949: Arkansas, reduced from $2.52 to $2.50 per gallon; District of Columbia, increased from $.50 to $.75 per gallon; Florida, increased from $1.92 to $2.17 per gallon; Georgia, increased from $4 to $5 per gallon, including $1 excise tax and $4 warehouse charge; Kansas, $1 per gallon (no previous rate); Massachusetts, increased from $2 to $2.45 per gallon; Minnesota, increased from $2.50 to $2.75 per gallon; North Dakota, increased from $1.70 to $2.50 per gallon.

The apparent decline in consumption of distilled spirits undoubtedly was caused in great part by the high cost of living, continuance of the federal tax of $9 per proof gallon, and increased illegal manufacture and sale. Repeated but unsuccessful efforts were made by the liquor industry to secure legislation lowering the federal excise tax of $9 a proof gallon to the prewar figure of $6 per proof gallon.

Intensified competition in the liquor field had led in 1948 to passage of mandatory fair trade contract laws in a number of states.

These laws gave the brand owner the right to establish minimum prices below which the retailer was not permitted to sell, and made the filing of such minimum prices with the state-control authority mandatory.

In 1949 the fair-trade laws had rough going. In important states like Illinois, New York and Louisiana the courts held the state law unconstitutional, voluntary fair-trade contracts, however, remained legal; they differed from the mandatory systems in two highly important particulars: filing of minimum prices with a state authority was not compulsory, and the state authority did not take responsibility for punishing violators. A brand owner under the voluntary system might enjoin a retailer from continuing sales below the minimum price named in the contract.

The federal government took a hand in stopping import of alcoholic liquor into Oklahoma by vigorously prosecuting violators and impounding the liquor. In the federal view, Oklahoma continued to be the only dry state, as the provision in the federal constitution prohibiting importation into dry states had been construed to mean only those which were wholly dry.

Table II.—*U.S. Distilled Spirits Statistics for Fiscal Year Ended June 30, 1949*

	Production (tax gals.)	*Withdrawals* (tax gals.)	*Bottled Output* (wine gals.)
Whisky	149,595,239	52,674,964	142,633,709

"AFTER 69 YEARS!" a cartoon by Loring of the *Providence Evening Bulletin* (R.I.) noting the lifting of the ban on the sale of intoxicating liquors in Kansas, effective June 6, 1949

In New York, the New York authority banned the giving of all advertising novelties by distillers, brewers and distributors to retailers. However, in December this rule was relaxed and permission was given to furnish such novelties or advertising specialties limited in cost to $25 to retailers. The tendency throughout the country was to tighten the rules covering the furnishing of promotional material to retailers.

Important changes were made in the federal rules covering labels. Beginning in July 1949, labels on imported whiskies were required to state the age of the various kinds of product and the percentage of whisky of non-U.S. origin.

Of importance to the brewing industry was the Eberharter act, passed in 1949. This law, among other things, permitted consumption of beer tax free by brewery employees. It made the bottle shop a part of the bonded premises, permitted the manufacture of by-products on such premises, and changed the method of paying tax on malt beverages. Previously tax had been paid on the amount going into the pipe lines. Now the brewery paid only the taxes on the amount of bottled and canned beer removed from the brewery for sale.

A proposed modification of the rule prohibiting aging of whisky in used barrels was the subject of bitter controversy during 1949. After extended hearings, the federal alcohol tax unit ruled that age could be acquired (and stated on the label) by storage in used containers. Later, after a great deal of protest by Kentucky distillers, it issued a compromise ruling that age might be acquired by storage in used barrels if subsequently the product were stored in new cooperage. This was also later withdrawn. (*See* also BREWING AND BEER; INTOXICATION, ALCOHOLIC; WINES.)

FILMS OF 1949.—*Alcohol and the Human Body* (Encyclopædia Britannica Films Inc.). (M. LB.)

Literary Prizes.

The following is a selected list of literary prizes awarded during 1949:

United States.—Abingdon-Cokesbury Award.—$7,500 to Roland H. Bainton for *Here I Stand*, a biography of Martin Luther.

American Academy of Arts and Letters Award of Merit Medal.—Medal and cash prize of $1,000 to Thomas Mann.

American Historical Association Awards: John H. Dunning Prize.—About $100 awarded every two years for the best work on any subject relating to U.S. history, to William E. Livezey for *Mahan on Seapower*. Watumull Foundation Prize.—$500 for the best book on the history of India, divided between Gertrude Emerson Sen for *The Pageant of India's History*, vol. 1, and Holden Furber for *John Company at Work*.

Anisfield-Wolf Awards.—$1,000 each for the best books on race relations, to Alan Paton for *Cry, the Beloved Country* and to J. C. Furnas for *Anatomy of Paradise*.

Atlantic "Firsts".—Prizes for short stories by unestablished writers making their first appearance in the *Atlantic Monthly*. $750 first prize to Gudger Bart Leiper for "The Magnolias"; $250 second prize to Louis Auchincloss for "Maud."

Author Meets the Critics Prizes.—Honorary awards for best novel of the year and best nonfiction work of the year, chosen by majority vote of the working critics and reviewers of the U.S., to Tom Lea for *The Brave Bulls* and to Robert Frost for his *Complete Poems*.

Bancroft Prizes.—"For distinguished writings in American history," $2,000 each to Robert E. Sherwood for *Roosevelt and Hopkins* and to Samuel Eliot Morison for *Rising Sun in the Pacific*.

Bollingen Prize.—$1,000 for the best book of verse by an American author published in 1948, to Ezra Pound for *The Pisan Cantos*.

Bruce Fellowship in Fiction.—$1,800 to Mari Tomasi for *Like Lesser Gods*.

John Burroughs Medal.—For distinguished literature in the field of nature study, to Helen G. and Allan D. Cruickshank for *Flight into Sunshine*.

George Washington Carver Award.—$2,500 given by Doubleday and Co. for a manuscript making "an effective contribution to the Negro's place in American life," to Bucklin Moon for *Without Magnolias*.

Catholic Literary Award.—Honorary award for the most outstanding book published by a member of the Gallery of Living Catholic Authors, to Thomas Merton for *The Seven Storey Mountain*.

Christopher Awards.—For book-length manuscripts written "in accordance with Christian principles and not against them," $15,000 to George Howe for a novel, *Call It Treason;* $10,000 to Mrs. Richard L. Nowinson for a novel, *The Martels;* $5,000 to Charles O'Neal for a novel, *The Three Wishes of Jamie McRuin;* $5,000 to Rosemary Casey for a play, *Mother Hildebrand;* $3,000 to John L. Oberg for a play, *The Night and the Stars;* $2,000 to the Rev. Urban Nagle for a play, *City of Kings*.

Dodd, Mead Intercollegiate Literary Fellowship.—$1,200 to Claude F. Koch for a novel based on his experiences in the marine corps; Red Badge Detective Story Prizes of $1,000 each to Bart Spicer for *The Dark Light* and to Brandon Bird for *Death in Four Colors*.

Friends of American Writers Award.—$1,000 for the best novel by a midwest author, to Michael de Capite for *The Bennett Place*.

Guggenheim Fellowships.—144 fellowships awarded, of which 20 went to writers: Arna Wendell Bontemps, Rackham Holt, Arthur Stanley Link, Jeannette Mirsky, Dora Raymond, Wallace Earle Stegner, Victor Wolfgang von Hagen, Charles Maurice Wiltse, Helene Maxwell Hooker, Bertram D. Wolfe, William Oliver Everson, Eleanor Green, John Latouche, Jean Paul Malaquais, Mary McCarthy, Kenneth Rexroth, Jay Williams, Eudora Welty, Sally Carrighar, John W. Gassner.

Gutenberg Award.—$1,000 cash prize given by the Book Manufacturers' institute for the book that "most progressively influenced American thought in 1948" to Robert E. Sherwood for *Roosevelt and Hopkins*.

Harper Prize Novel.—$10,000 awarded biennially for a work of outstanding merit in fiction, to Max Steele for *Debby*.

O. Henry Memorial Award Prize Stories.—$300 first prize to William Faulkner for "A Courtship"; $200 second prize to Mark Van Doren for "The Watchman"; $100 third prize to Ward Dorrance for "The White Hound."

Houghton Mifflin Literary Fellowship.—$2,400 for a work in progress, to Fred E. Ross.

Jewish Book Council of America Award.—$250 for "the best fiction work of Jewish interest," to Howard Fast for *My Glorious Brothers*.

Limited Editions Club Gold Medal.—For book "most likely to attain the stature of a classic," to Robert Frost for *Complete Poems*.

Lyric Associates, Inc., Award.—$1,000 grant for poetry, to Robert Hillyer.

Mystery Writers of America Award.—Honorary award for the best first crime novel, to Mildred Davis for *The Room Upstairs*.

National Institute of Arts and Letters Grants.—$1,000 each to six writers: Leonie Adams, James Agee, Joseph Campbell, Vincent McHugh, James Stern and Alfred Kazin.

Newberry Fellowships in Midwestern Studies.—Given by the Newberry library for work in history, biography, literary criticism, contemporary social or political scene, fiction or poetry, to Vincent Starrett for an autobiography; to Lewis Atherton for the history of a small town in the midwest.

New York Drama Critics' Circle Award.—Given for best play produced in New York city, to Arthur Miller for *Death of a Salesman;* for best foreign play to *The Madwoman of Chaillot*, by Jean Giraudoux; for best musical, to Richard Rodgers and Oscar Hammerstein II for *South Pacific*.

Partisan Review Award.—$1,000 for "a significant contribution to literature," to George Orwell, author of *Animal Farm, Nineteen Eighty-Four* and other works.

Eugene P. Saxton Memorial Trust.—Literary fellowships for work in progress awarded by Harper and Brothers, to William Roy Shelton, Rachel L. Carson and Gudger Bart Leiper.

Shelley Memorial Award.—Awarded by the Poetry Society of America for outstanding poetry to Louis Kent.

Constance Lindsay Skinner Award.—Plaque presented by the Women's National Book association for outstanding accomplishment by a woman in the book world, to Lucile Pannell.

Southwestern Fellowship.—$2,000 given by Whittlesey House for the best in fiction or nonfiction stemming from the southwest, to Herbert Eugene Bolton for *Coronado: Knight of Pueblos and Plains*.

Special Libraries Association Award.—To Edwin T. Coman for *Sources of Business Information*.

Stanford University Writing Fellowships.—$2,000 each to Marlow Dawson, Lee Florian Gerlach, Betty Sue Gottfried, Susan E. Kuehn, Helen A. Pinkerton, Clay Putnam.

United Services Fellowships.—Two fiction fellowships of $1,000 each given by the Thomas Y. Crowell Co. for literary talent among those who served in the armed forces, to R. W. Daly for a manuscript tentatively titled *The Monitor and the Merrimac* and to Wyatt Blassingame for a novel about Stephen Crane.

Westminster Press Fiction Award.—$7,500 to Dorothy Clarke Wilson for *Prince of Egypt*.

Wendell Willkie Memorial Award.—For "best book on international relations" to John King Fairbank for *The United States and China*.

Zondervan Fiction Contest.—$10,000 to Guy Howard for *Give Me Thy Vineyard*.

U.S. Children's Books.—Caldecott Medal.—For most distinguished American picture book for children, to Elmer and Berta Hader for *The Big Snow*.

Child Study Award.—Honorary award of Child Study Association of America "for a book for young people which faces real problems in their world" to Pearl S. Buck for *The Big Wave*.

Julia Ellsworth Ford Foundation Award.—$1,250 given by the Foundation and sponsored by Julian Messner, Inc., for a distinguished contribution to current literature for children, to Marion Garthwaite for *Tomas and the Red Headed Angel*.

Herald Tribune (New York) Spring Book Festival Awards.—Three prizes of $200 each: for the best picture book for younger children, to Alvin Tresselt for *Bonnie Bess, The Weathervane Horse;* for the best book for children under 12, to Stephen Fennimore for *Bush Holiday;* for the best book for older boys and girls, to Louise Dickinson Rich for *Start of the Trail*.

Junior Book Awards.—Presented by the Boys' Clubs of America to authors of books which were favourites of boys in 58 Boys' clubs of the United States. Medals to M. I. Ross for *Green Treasure;* to John R. Tunis for *Highpockets;* to Carolyn Treffinger for *Li Lun, Lad of Courage;* to Marguerite Henry for *Misty of Chincoteague;* to Henry V. Larom for *Mountain Pony and the Pinto Colt;* to Charles S. Strong for *Ranger, Sea Dog of the Royal Mounted*. Certificates to Martin Weldon for *Babe Ruth;* to Garth Garreau for *Bat Boy of the Giants;* to May McNeer for *The Golden Flash;* to Norton Hughes Jonathan for *Guide Book for the Young Man About Town;* to Genevieve Torrey Eames for *A Horse to Remember;* to Irving Crump for *Our Oil Hunters;* to Jay Williams for *The Roman Moon Mystery;* to Louis C. Jones for *Spooks of the Valley;* to Mabel Ansley Murphy for *When America Was Young*.

John Newbery Medal.—For the most distinguished contribution to literature for American children, to Marguerite Henry for *King of the Wind*.

Young Readers' Choice Award.—Given by the Pacific Northwest Library association to the author of a book popular with boys and girls from the fourth to the eighth grades, to Shannon Garst for *Cowboy Boots*.

Canada.—Governor-General's Awards.—Silver medals awarded to Hugh MacLennan for *The Precipice* (fiction); to A. M. Klein for *The Rocking Chair and Other Poems* (poetry); to Col. C. P. Stacey for *The Canadian Army 1939–1945* (academic nonfiction); to Thomas Raddall for *Halifax, Warden of the North* (creative nonfiction); special citation to Roderick L. Haig-Brown for *Saltwater Summer* (juvenile). Hebert Medal.—For the best Canadian book for children, to B. Mabel Dunham for *Kristli's Trees*. Lorne Pierce Medal.—awarded by the Royal Society of Canada for achievement of special significance and conspicuous merit in imaginative or critical literature, to John Murray Gibbon. Leacock Memorial Medal for Humour.—To Angeline Hango for *Truthfully Yours*. Ryerson Press Fiction Award.—$1,000 to Philip Child for *Mr. Ames Against Time*. Tyrrell Medal.—Awarded by the Royal Society of Canada for research in Canadian history, to Reginald G. Trotter. (R. E. Bs.)

Great Britain.—The James Tait Black Memorial Prizes, worth about £250 each, were awarded in 1949 to Graham Greene for *The Heart of the Matter* (fiction award) and to Percy Scholes for *The Great Dr. Burney* (biography). Two awards were made from the William Heinemann Foundation for Literature, administered by the Royal Society of Literature (value up to £200). Both were for poetry: the recipients were John Betjeman for his *Selected Poems* and Frances Cornford for her *Travelling Home*. The Carnegie Medal, awarded by the Library association to the British writer of an outstanding book for boys and girls, went to Richard Armstrong for *Sea Change*. The Rose Mary Crawshay Prize, offered by the British Academy for a critical or historical work dealing with English literature by a woman of any nationality, was awarded to Rosemond Tuve for an essay on *Elizabethan and* *etaphysical Imagery*. The JOHN LLEWELLYN RHYS MEMORIAL PRIZE, ith a value of £50, was awarded to Emma Smith for her first book *aidens' Trip*. The TOM-GALLON AWARD, the object of which was to ee writers for creative work by providing an income for two years, was ven to Olivia Manning for her short story, "The Children," published her volume of stories entitled *Growing Up*.

In 1946 the Rockefeller foundation in New York made a grant of 50,000 for ATLANTIC AWARDS IN LITERATURE, to be given to young ritish writers of promise whose careers had been interrupted by the war. 1949 awards were made to Norah Kelsall Cruickshank, Joseph Jacobs, avid Paul, John Singer and Peter Norman Ross Yates. These would robably be the last awards to be made since the fund was exhausted.

The SOMERSET MAUGHAM AWARD, an annual award of about £250 be used for foreign travel by British entrants under the age of 30, ent to Hamish Henderson for his book of verse, *Elegies for the Dead Cyrenaica*. The SUNDAY TIMES BOOK PRIZE, first awarded in 1947 nd worth £1,000, was presented in 1949 to Winston Churchill for his ar memoirs. In addition two special subsidiary prizes, each consisting a gold medal and the sum of £100, were awarded to F. Spencer Chapan for *The Jungle is Neutral* and to Alan Paton for *Cry, the Beloved ountry*. The WILLIAM FOYLE POETRY PRIZE was founded in 1949 and e first award, the sum of £250, went to Edwin Muir for his volume *he Labyrinth*. (E. SE.)

France. GONCOURT PRIZE to Robert Merle for *Week-end à Zuydcoote*. HÉOPHRASTE RENAUDOT prize to Louis Guilloux for *Jeu de patience*. ÉMINA PRIZE to Maria Le Hardouin for *La Dame de coeur*. INTERALLIÉ RIZE to Gilbert Sigaux for *Les Chiens enragés*. DENYSE CLAIROUIN RIZE to Dominique Aury for the translation of Evelyn Waugh's *The oved One* and James Hogg's *Confessions of a Justified Sinner*. SAINTE-EUVE PRIZE: (novel) to Lise Deharme for *La Porte d'à côté;* (essay) to laude Mauriac for his book on the surrealist leader André Breton. YNDICAT DES CRITIQUES LITTÉRAIRES PRIZE to Antoine Adam for his *istoire de la littérature française au XVIIe siècle*. The CITY OF PARIS RIZE, after having been refused by the surrealist leader, André Breton, as awarded to Philippe Chabaneix, author of *Tendre Amie*. (*See* also OBEL PRIZES.) (M. JOL.)

ithuania. From Feb. 16, 1918, to Aug. 3, 1940, when it was annexed by the U.S.S.R., Lithuania was an indeendent Baltic republic. The British, U.S. and many other govrnments, however, had not granted by 1949 *de jure* recognition this annexation. For more than two decades Lithuania was ounded by Latvia, Poland and Germany; in 1945 the U.S.S.R. ecame its eastern and western neighbour through the Russian nclave of Königsberg (later Kaliningrad). Area: (before arch 21, 1939, including Klaipeda [Memel]) 21,330 sq.mi.; after Oct. 10, 1939, excluding Klaipeda but including Wilno Vilnius]) 24,092 sq.mi.; (from 1945, including both Klaipeda nd Vilnius) 25,173 sq.mi. Pop.: (Jan. 1939 est.) 2,575,000; Jan. 1940 est.) 2,879,000; (Jan. 1946 est.) 2,353,000. If there ad been no movement of population the last figures should have een 3,032,000. The reduction is explained by the evacuation of 4,000 Germans from Lithuania proper in 1939–40 and of 59,00 Germans from Klaipeda territory in 1945, by the first soviet eportation in 1940–41 of 35,000 people, the murder of about 08,000 Jews by the Germans, the fact that about 80,000 Lithunians fled to Germany when the soviet armies returned, by a econd wave of soviet deportations in 1944–45 (about 85,000) nd by the evacuation to Poland of about 178,000 Poles. Chief owns (Jan. 1940 est.): Vilnius (capital, pop., 209,400); Kaunas 154,100); Klaipeda (38,900). Chairman of the presidium of he supreme soviet of the Lithuanian S.S.R., Justas I. Paleckis.

History.—As in the two other Baltic republics 1949 saw a ew wave of mass deportations, the ruthless enforcement of ollectivization and the final liquidation of the Roman Catholic ierarchy. During the last four months of 1948 and the first alf of 1949 a mass deportation was carried out as part of a eneral plan extended also to Estonia and Latvia (*qq.v.*). Acording to a memorandum submitted on Nov. 2, 1949, to the nited Nations by Povilas Žadeikis, on behalf of the Lithuanian Liberation committee, about 120,000 Lithuanians were deported to the interior of the U.S.S.R.

Collectivization made great progress during the year. At the end of 1947 there had been only 20 *kolkhozes* (collective farms) in Lithuania: in a letter from Lithuanian women published in *Izvestia* on July 6, 1949, the number of *kolkhozes* was given as more than 4,000. On Nov. 3, M. A. Gedvilas reported in the same paper that there were 5,454 *kolkhozes*.

According to a broadcast from the Vatican on July 6, Mgr. Kazys Poltorakas, bishop of Panevežys and suffragan of Kaunas, was ordered to suspend his activities; his whereabouts was not known. He was the last Roman Catholic bishop tolerated by the Communist authorities. Mgr. V. Boriševicius, bishop of Telšai, and Mgr. S. Reinis, vicar general of Vilnius, were arrested during the year. Of more than 1,300 clergy left free until 1948, about half were deported during 1949.

Education.—In 1949 there were 2,777 elementary, 660 technical and 170 secondary schools with a total of 425,000 pupils. Students enrolled at the two universities of Vilnius and Kaunas numbered about 5,000. In 1938, without the Vilnius area, there were 2,601 elementary schools with 307,173 pupils, and 273 secondary and technical schools with 31,647 pupils.

BIBLIOGRAPHY.—*Lithuanian Bulletin*, published by the Lithuanian American council; *Newsletter from Behind the Iron Curtain*, compiled by the *Baltic Review*, Stockholm. (K. SM.)

Li Tsung-jen (1890–), acting president of Nationalist China, was born in Kweilin, Kwangsi. In 1928, commander of the 4th army group, he completed the northern expedition against rebellious commanders that, at least theoretically, brought all China under Nanking control. Li was then appointed a state councillor in the National government. In 1929, however, he staged a revolt in Hankow, set up a virtually independent regime in southwest China. In 1932 he was officially pardoned, and appointed to the Kuomintang central supervisory committee. After the formal outbreak of war between China and Japan in 1937, Chiang Kai-shek sent Li with his army to the northern front, where it performed outstandingly. On Jan. 21, 1949, Chiang "retired" as president of the Nationalist government of China, and Li, vice-president, became his successor. Presumably Chiang retired so that Li and others in the Nationalist government could attempt to effect peace with the Chinese Communists. Three months of peace talks, however, were ineffectual, and the Communists eventually resumed their onslaughts and conquered virtually all of China. Li, late in 1949, flew to the U.S. for medical treatment, but pledged to return to China to continue the fight against what he called "Communist forces of aggression." (*See* also CHINA.)

Liver Disorders: *see* ALIMENTARY SYSTEM, DISORDERS OF.

Livestock. Livestock on U.S. farms in 1949 reversed the trend of former years and, with the possible exception of sheep and the certain exception of horses and mules, began again to increase in numbers. The number of stock sheep on farms Jan. 1, 1949, was the lowest on record, apparently because of competition with more profitable cattle production and the high cost and scarcity of labour. Beef cattle ended the declining phase of their cycle in spite of the fact that markets were bidding strongly for high-grade slaughter cattle. Dairy herds, because of the easy feed situation, were fed more heavily and were less carefully culled. More brood sows were kept because of the large corn crop of 1948. More chickens and turkeys were produced because of the favourable demand for eggs and poultry and the easier feed situation. Horses and mules continued to decline because of mechanical replacement.

Livestock prices during 1949 followed divergent trends. High-grade beef was higher in price, setting new records. Lower quality butcher stuff and feeder and stocker cattle declined in price.

RANCHER herding the remainder of his livestock toward shelter and feed on a ranch near Cheyenne, Wyo., during the severe blizzards that swept western and mountain states of the U.S. early in 1949

The amount of beef produced in 1949 was about 4% more than in 1948, primarily because of heavier slaughter weights. The number going on feed for marketing in 1950 was high.

Stimulated by the record corn crop of 1948 and the very large one of 1949, the pig crops of 1949 were larger with the promise of a still larger one in early 1950. The spring crop of 1949 was 59,039,000 head, compared with 51,266,000 head a year earlier, and a preliminary estimate of 62,500,000 head in the spring of 1950. The fall pig crop of 1949 was estimated at 37,262,000 head, compared with 33,921,000 head a year earlier. Thus the total for 1949 was 96,301,000 head, against 85,187,000 head in 1948. In general, the hog crop of the spring of 1949 was marketed at somewhat lighter weights than usual, thus producing less total weight, particularly less lard.

Production of poultry and poultry products on U.S. farms in 1949 was large; 749,000,000 chickens were raised, exclusive of commercial broilers, or 18% more than in 1948. Layers on farms at the year's end were indicated as more numerous than the 413,000,000 head as of Jan. 1, 1949.

Livestock on U.S. Farms

(In thousands of head)

	Jan. 1, 1949	Jan. 1, 1948	Average 1938-47
Horses	5,921	6,589	9,495
Mules	2,353	2,541	3,620
Cattle (including calves)	78,495	78,126	76,312
Milk cows	24,450	25,039	26,118
Sheep	31,963	34,827	49,736
Hogs	57,139	55,028	60,584
Chickens	448,838	461,550	479,166
Turkeys	5,493	4,450	7,221

World horse numbers in 1949 were estimated at 76,000,000 head, a slight increase compared with 1948, but 21% below the prewar numbers. Increases were mostly in countries recovering from extensive war damage.

World cattle numbers at the beginning of 1949 were estimated at 761,000,000 head, a record, and about 10,000,000 head more than a year earlier, and 4% above the prewar estimate. Not only further recovery from war damage but improved feed prospects favoured building herds to higher levels. Significant increases occurred in all continents except North America and Africa. Practically all European countries increased; numbers in Argentina declined.

World sheep numbers, estimated at 720,000,000 head early in 1949, increased for the second consecutive year, but were nevertheless 20,000,000 head, or 3%, below the prewar average. Both improved grazing conditions and higher prices encouraged the expansion. The decreases in the U.S., Argentina and China were more than offset by increases in Europe, Australia and the U.S.S.R. The large wool stock pile which existed in the early postwar period dwindled rapidly, and the better-grade wools were much in demand at the auctions of the year, some at record prices.

World hog production expanded in 1948, resulting in about 261,000,000 head at the beginning of 1949, or 6% more than a year earlier. Significant increases occurred in all continents, with the devastated areas of Europe and the U.S.S.R. showing the ajor increases. (*See* also AGRICULTURE; MEAT.)

ondon.

On April 7, 1949, the triennial municipal elections took place both for the London County council and e metropolitan boroughs. In April in the elections to the Lon-on County council, by a remarkable turnover of votes from abour to the Conservative party, the two parties drew even 64:64) and the solitary Liberal elected, Sir Percy Harris, held e casting vote. The Labour party however claimed the right appoint the chairman and also to fill 6 of the 11 aldermanic acancies. In the borough elections on May 12 there was a milar trend of votes resulting in a gain of six boroughs—olborn, Paddington, St. Pancras, Lewisham, Stoke Newington d Wandsworth—all predominantly working-class districts, to e Conservative interest.

The year was for London the first after World War II of a turn to something like normal life and routine. Restoration d construction were proceeding steadily. Scaffolding on many Sir Christopher Wren's churches indicated repairs in prog-ess: the restoration of St. Clement Danes began; and the re-ored Middle Temple hall and the reconstructed north aisle of l Hallows, Barking-by-the-Tower (Toc H headquarters), were pened in July by the queen. In October the prime minister id the foundation stone of a new permanent concert hall, to rm part of the 1951 Festival of Britain exhibition buildings, the south bank of the river close to the railway between aterloo bridge and County hall.

The switching on of electric publicity signs on April 2 brought rowds to Piccadilly Circus, Trafalgar square and the West End entres to see the return of London's former nighttime gaiety; d in May, partly for the indulgence of foreign summer visi-rs, a clause was added to the Licensing bill permitting properly censed restaurants and night clubs in London to conduct busi-ess till 2 A.M.

Throughout the port of London there were steady repairs d reconstruction to wharves, transit sheds, quays, lock gates d docking machinery. The tonnage handled in the port con-nued to rise and at 45,939,095 tons at the close of March 1949 as 4,500,000 tons above the annual total at the same date in 948 and 74% of the 1939 figure.

At the British museum in September the Elgin marbles were estored to public view after ten years' seclusion. At St. Paul's athedral a design was being considered for replacing the 19th entury reredos by a baldachino of baroque style in keeping with ren's known ideas. The apsidal chapel was to become a me-orial chapel to members of the U.S. forces who lost their ves while based on Britain during World War II, the expenses be borne by British contributions. A marble roll of honour as being prepared in the United States.

Nearly all the statues removed from open-air sites during the ar returned to their positions. That of Sir Robert Peel for-erly at the junction of Newgate street and Cheapside was still osent; the Royal Marines' memorial was re-erected in the Iall close to its former site now occupied by the Admiralty tadel; the Royal Naval division memorial was to go to Green-ich and the statue of General Gordon from Trafalgar square, fter much discussion, was to stand in Whitehall place in front the new government building in course of erection.

LONDONERS watching the lights go up again, April 2, 1949, after ten years of darkened streets. The child in the picture had her first sight of street illumination, lighted shop windows and the bright neon signs of Piccadilly Circus

In addition to further discoveries relating to Roman and me-aeval London in the bombed Cripplegate area, the Mediaeval d Roman London Excavation council had to deal in circumstances of emergency with finds, principally Roman, brought to light by contractors' mechanical excavators clearing bombed sites for reconstruction in Old Jewry, Eastcheap, Wallbrook, Bankside and elsewhere in and around the city. The Wallbrook (now far below street level), which formed at Dowgate the Roman port of London, yielded remains of Roman quays, pavements, articles of use including a Roman sandal and a fragment of a presumably Roman stone bollard. (D. NN.)

Lords, House of: *see* PARLIAMENT, HOUSES OF.

Los Angeles.

Los Angeles, fifth largest city in the United States according to the 1940 census (pop. 1,504,277) and largest in area (452.2 sq.mi.), had a population estimated by the county planning commission at 2,051,348 as of Oct. 1, 1949; the estimate for the county was 4,227,413 and for the metropolitan area 4,275,000. Mayor Fletcher Bowron was re-elected to a third term in 1949.

The industrial development of Los Angeles continued to keep pace in 1949 with its population growth. In the first ten months of 1949, the county received 153 new manufacturing establishments, valued at $42,119,000. In the same period, 293 existing firms were expanded, for an additional investment of $41,227,500. The total of $83,346,500 for a ten-month industrial development was an increase of 31% over the $63,458,500 invested during the corresponding period of the year before.

Construction activity in Los Angeles county during the first ten months of 1949 lagged far behind the record set for the same period of 1948, but was well ahead of the new building figures for 1947. The value of permits issued in 45 municipalities of the county, including the City of Los Angeles and the unincorporated area, was $600,314,859. This may be compared with $738,280,213 at the same time a year before, and with $552,708,417 for the ten-month period in 1947. The bulk of the 129,308 new construction permits issued from Jan. through Oct. 1949 was for residential units.

Los Angeles county again in 1948 had the highest income for agricultural products ($227,544,690) of any U.S. county. It was a gain from $222,882,990 in 1947, and $214,800,000 in 1946.

Los Angeles county in Sept. 1949 had 1,612,000 persons gainfully employed, according to the California state department of employment. That was a gain of .6% over July.

The total tax rate for the 1949–50 fiscal year was set at $6.1711 per $100 of assessed valuation, with assessment based on approximately 50% of real estate market value. The $6.1711 figure included $1.6000 for the county, $1.6332 for the city, $2.4067 for schools and other amounts for special districts. Assessed valuations, higher because of greater value of property as well as many improvements, were $2,428,594,985 for the city and $4,749,795,235 for the county. The 1949–50 city budget was $258,578,249, including $92,029,672 general; $12,073,921 for pensions; $9,843,288 for libraries, parks and recreation; $159,436,306 for the harbour, water and power department and airport. Affecting this total was a deductible adjustment of $14,804,938. (E. V. G.)

Louisiana. One of the west south central states of the United States, admitted to the union in 1812 as the 18th state, Louisiana is popularly known as the "Pelican state," "Creole state" or "Bayou state." Area 48,523 sq.mi., of which 45,177 sq.mi. are land. Pop. (1940) 2,363,880, of which 1,383,441, or 58.5%, were rural and 980,439, or 41.5%, urban; 64% native whites, 34.3% Negroes and 1.7% foreign-born. On July 1, 1949, the bureau of the census estimated the state's population at 2,630,000. Capital, Baton Rouge (34,719). Other important cities: New Orleans (494,537), Shreveport (98,167), Monroe (28,309), Alexandria (27,066), Lake Charles (21,207), Lafayette (19,210).

History.—The legislature did not meet in 1949, and there were no important activities in state politics. Late in the year political interest was focused on the forthcoming New Orleans mayoralty election, the opposition forces seeking a candidate to run against Mayor De Lesseps S. Morrison, who was seeking re-election.

Other important events in Louisiana in 1949 were: Payment of about $58,000,000 as a bonus to about 254,000 veterans of World War II, out of a bond issue of $60,000,000 provided by the 1948 legislature, to be liquidated from proceeds of a new tax upon beer; the controversy with the United States government over ownership and control of the oil-producing tidelands along the southern coast of the state; expansion of state charity hospital facilities by constructing additions to some of the existing state hospitals and negotiating contracts with private hospitals for treatment of charity patients in sections of the state remote from existing state charity hospitals; beginning construction of a new state mental hospital to relieve overcrowded conditions in the two old state hospitals for the insane; enlarged facilities for the care of tuberculosis patients, by constructing special units for such patients at some of the charity hospitals; completion of a $6,000,000 building program at the Louisiana State university, mainly for additional dormitory facilities; expansion of existing industrial plants and the construction of several new plants, the most important of which was a $42,000,000 plant at Lake Charles for the production of lubricating oils; increased expenditures on public highways for new construction and improvement of existing highways and the gravelling of many farm-to-market roads; completion by the Louisiana Law institute of the project authorized by the 1942 legislature for the revision of the state statutes, so as to eliminate obsolete laws and to combine into single statutes all laws dealing with the same subject-matter; expansion of the rural electrification program and of existing airport facilities so as to meet the increased demand for air-transport service; opening of several new parish branches of the State library, to serve the rural areas of the state; enlargement of the state program of old-age pensions and other aid to the needy poor and underprivileged citizens; and co-operation with the southern regional plan of providing special types of professional and vocational education for Louisiana residents in other states when such facilities are not available at existing state colleges and universities.

State officers in 1949 were: Earl K. Long, governor; William J. Dodd, lieutenant governor; Wade O. Martin, Jr., secretary of state; A. P. Tugwell, treasurer; L. B. Baynard, auditor; Bolivar E. Kemp, Jr., attorney general; Shelby M. Jackson, superintendent of education; Lucile May Grace, register of land office; W. E. Anderson, commissioner of agriculture and immigration.

Education.—In 1949 the 796 public schools for whites enrolled 224,679 elementary and 54,929 high school pupils and employed 11,132 teachers; the 1,402 public schools for Negroes enrolled 158,839 elementary and 16,938 high school pupils and employed 5,094 teachers. The 191 private schools for whites enrolled 51,857 elementary and 9,669 high school pupils and employed 1,934 teachers; the 97 private schools for Negroes enrolled 12,939 elementary and 1,696 high school pupils and employed 405 teachers. The state maintained 11 public trade schools and several private trade schools were operated for training veterans of World War II.

Total state expenditures for the 1948–49 fiscal year were $83,250,477 for public education at all levels. Much of the increase over the previous year resulted from a higher salary scale for teachers and expansion of the free school lunch program.

Social Insurance and Assistance, Public Welfare and Related Programs.—Readjustment allowances paid to Louisiana veterans of World War II dropped from $9,500,000 in 1948 to about $5,000,000 in 1949; total payments to Louisiana veterans to the end of 1949 were $73,000,000. Civilian unemployment compensation rose from $6,000,000 in 1948 to $18,000,000 in 1949. Total payments made by the Louisiana division of unemployment security, for all purposes, increased from $15,500,000 in 1948 to $23,000,000 in 1949.

Louisiana expended $51,000,000 in 1948 and $95,000,000 in 1949 on public welfare, the great increase being largely caused by higher old-age pensions and liberalized eligibility rules for applicants for public assistance.

Table I.—*Louisiana Public Welfare Programs, 1949*

Type of assistance	Average number on rolls	Cost for year
Old age pensions	118,000	$66,000,000
Needy blind	2,200	850,000
Dependent children	90,000	17,000,000
Foster children	900	460,000
Special cases	28,000	11,000,000
Totals	239,100	$95,310,000

In 1949 the state maintained seven charity hospitals; two hospitals for the insane; two tuberculosis sanitoriums; one state school for the white blind and deaf and one for Negroes; a training school for the feeble-minded; a special training school for spastic children. Free ambulance service and free travelling dental clinics for the poor were expanded during the year.

The state maintained two prison farms for its 2,500 adult offenders; separate training institutes for about 200 delinquent white boys and girls and a training institute for 100 delinquent Negro boys.

State expenditures for maintenance and expansion and modernization of its charitable and correctional institutions were about $20,000,000 for the 1948–49 fiscal year.

Communications.—In 1949 Louisiana had 18,200 mi. of public highways, 14,800 mi. of which were state-maintained, 10,000 mi. being gravelled and 4,800 mi. paved. State expenditures for highway maintenance and new construction were $38,500,000 in 1949, compared with $33,000,000 in 1948. In 1949 there were 429 mi. of highways blacktopped at a cost of $10,500,000, and many farm-to-market roads were gravelled. There vere 4,400 mi. of railways and 4,800 mi. of navigable waterways.

There were about 100 land airports and 10 seaplane bases in operaion in 1949. There were about 455,000 telephones in service at the close f the year.

Table II.—*Commerce of Louisiana Ports in 1948*

(In tons)

Ports	Foreign	Coastwise and Internal	Total
ew Orleans	8,384,305	20,341,969	28,726,274
aton Rouge	1,006,986	10,324,069	11,331,055
ake Charles	326,551	12,554,417	12,880,968
Totals	9,717,842	43,220,455	52,938,297

Banking and Finance.—Louisiana had 33 national banks in 1949, with otal deposits of $1,120,000,000 and resources of $1,180,000,000; and 26 state banks, with total deposits of $500,000,000 and resources of 536,000,000. There were 62 savings and loan associations, with total esources of about $200,000,000. State budget for 1948–49 fiscal year: eceipts $305,000,000; expenditures $285,000,000. The state bonded lebt was $218,000,000 on July 1, 1949.

Agriculture.—The total value of agricultural and truck crops in 1949 vas $272,000,000, compared with $303,000,000 in 1948; total acreage arvested was 3,600,000, about the same as in 1948. The total cash ncome from crops, livestock and poultry and their products was $400,-00,000, compared with $445,000,000 in 1948; from government paynents $10,300,000, compared with $8,765,000 in 1948.

Table III.—*Leading Agricultural Products of Louisiana*

Crop	1949	1948	Average 1938-47
otton (bales)	650,000	756,000	528,000
orn (bu.)	18,446,000	17,057,000	20,296,000
ice (bu.)	24,559,000	24,924,000	21,542,000
ugar cane (tons)	6,232,000	5,722,000	5,063,000
weet potatoes (bu.)	8,330,000	7,840,000	8,616,000
ish potatoes (bu.)	1,239,000	1,416,000	2,580,000
ats (bu.)	2,929,000	3,584,000	2,919,000
lay (tons).	446,000	369,000	402,000
ecans (bu.).	13,640,000	19,000,000	8,365,000
eaches (bu.)	265,000	330,000	296,000
ears (bu.)	198,000	240,000	200,000
itrus fruits (boxes)	310,000	300,000	304,000
ruck crops (value)	$10,683,000	$13,983,000	—

Manufacturing.—About 2,400 industrial establishments, employing 150,-00 workers and paying $320,000,000 in wages and salaries, produced inished products worth $1,250,000,000 in 1949, compared with $1,200,-00,000 in 1948. Under the ten-year state tax exemption on capital nvestments in industry, large additions were made to existing plants and everal new plants were completed in 1949, the largest being the $42,-00,000 lubricating oil refinery at Lake Charles.

Forest Products, Furs, Fisheries.—Louisiana forests produced 1,272,702,-51 bd.ft. of lumber and 936,016 cords of pulpwood in fiscal year 1948–9, compared with 1,269,853,242 bd.ft. and 791,745 cords in fiscal year 947–48.

The 1948–49 trapping season in Louisiana yielded only about 3,500,-00 pelts valued at about $4,650,000, compared with 6,144,060 pelts alued at $9,248,870 for the 1947–48 season.

The total catch of Louisiana commercial fisheries was valued at bout $7,000,000 in 1949, about the same as for 1948.

Mineral Production.—Increased demand pushed production of most ouisiana minerals beyond previous levels in 1949.

Table IV.—*Principal Mineral Products of Louisiana*

Mineral	1949	1948
etroleum (bbl.)	191,000,000	174,000,000
latural gas (M. cu. ft.)	700,000,000	686,000,000
latural gasoline (bbl.)	6,000,000	4,230,000
ulphur (tons)	990,000	950,000
alt (tons)	980,000	960,000
hell and gravel (tons)	7,100,000	6,000,000
and (tons)	2,260,000	1,750,000
tone (tons)	290,000	520,000

The total value of mineral production in 1949 was estimated at about 375,000,000, compared with $350,000,000 in 1948. Many new oil nd gas wells were drilled in 1949. (W. Pr.)

Lumber.

In the year 1949, substantially the same species occupied the leading positions in lumber producion in the United States as in recent years, with southern pine, Douglas fir and ponderosa pine comprising about 60% of the otal. The last two are produced only in the west. Other leadng species were oak, white pine, hemlock, spruce, red and black um, yellow poplar and hard maple. A significant feature of umber production during the year was the advance in the tilization of species formerly little used or neglected. Among hese were the true firs, such as the white and red firs of the vest, western larch and lodgepole pine of the northern Rocky nountains, aspen of the lake states and cottonwood, pecan ickory, tupelo gum and black gum of the south.

The usual active spring building boom did not occur as expected. Although the serious housing shortage continued, many buyers refused to pay the prices at which houses were offered. The failure on the part of builders to buy for the usual spring building activity resulted in the slowing of lumber production and particularly the stoppage of marginal mills in the south. This situation continued until about Aug. 1 when the demand picked up strongly, with the result that prices advanced and a large number of mills were reopened.

Lumber production in 1949 was not as large as the 36,000,000,000 bd.ft. produced in 1948 but was estimated at about 31,000,000,000 bd.ft., divided into 25,500,000,000 bd.ft. of softwoods, composed largely of the three species first mentioned above, and 5,500,000,000 bd.ft. of hardwoods, principally oak, red gum, yellow poplar and maple.

Purchases by the Economic Cooperation administration to assist in the rehabilitation of western Europe actively stimulated exports in lumber. However, the devaluation of the British pound on Sept. 18 adversely affected the export of lumber and other forest products from the United States during the fall months.

In the leading lumber-producing section of the country, the south, production fell off about 10% to 15% for the year. Of the 23,000 mills in the 12 southern states, about 98% annually cut less than 5,000,000 bd.ft. each. The small mills accounted for about three-fourths of the entire 1949 southern pine production.

There was also a drop in the production of west coast woods although prices in that section did not fall as low relatively as they did in the south, in the lake states and in the northeast. The leading lumber-producing states of the country, in order of production, continued to be Oregon, Washington and California, followed by Alabama, Georgia, Mississippi, North Carolina and Arkansas.

An important development in 1949 was the continued interest in and adoption of labour-saving machinery. Substantial wage increases and other manufacturing costs led to the increased use of mechanical power saws for felling and bucking saw logs, as well as loading devices, mechanical log barkers, mechanical tree planters, track-type log trailers and improved skidding devices. At the mills, lift trucks and straddle buggies, mechanical lumber sorters, improved feed works and automatic lumber pilers and unpilers were installed to counteract the steadily rising operating costs.

The lumber industries' Tree Farm movement continued to expand under the leadership of the American Forest Products institute and operated in 24 states embracing about 2,000 certified tree farms with a total of more than 18,000,000 ac. In 10 of the southern states nearly 12,000,000 ac. of forest lands had been dedicated to forest management policies to maintain continuous crops of timber for the future.

About 70% to 80% of the entire lumber production was from regrowth forests. The acquisition of large timber properties by many of the lumber and pulp and paper companies continued in order to protect the heavy capital investments in plant installations and assure raw material for the future. Stumpage prices for standing timber continued very high and did not recede as much as lumber and log prices during the year. This was notably true for veneer logs, tight cooperage stock and material for poles, piling and crossties, especially in the south.

The lumber industry was also distinguished by greater integration and diversified utilization of the products. For example in the northwest much greater production from timber areas was secured from relogging, prelogging and salvage logging operations. As much as 25% more than normal production was secured from many of these areas. (N. C. B.)

British Commonwealth and Europe.—In the early part of the year the British board of trade published the report of a committee set up under the chairmanship of Sir Keith W. Price to estimate British timber requirements and possible supplies up till 1955. This report estimated the softwood requirements on a strictly austerity basis at approximately 1,500,000 standards a year, hardwood requirements at approximately 75,000,000 cu.ft. and plywood at approximately 575,000,000 sq.ft. a year. There was every prospect of the hardwood and plywood supplies being found from various sources, but Great Britain could not be certain of obtaining more than about 1,200,000 standards of softwood because of currency difficulties. The exports of both Sweden and Finland were slightly higher in quantity than those of 1948, but somewhat lower prices were accepted by shippers. There was also a distinct easing in Baltic freight rates. In the autumn of 1949, a trading agreement was signed between the U.S.S.R. and Great Britain covering the shipment of about 75,000 standards of White sea and Kara sea redwood, together with 26,000 standards from the U.S.S.R. Baltic ports. Two other eastern European countries showed their intention to resume wood exports on a considerable scale by entering into trade agreements with Great Britain. In the early part of the year Poland signed a five-year agreement under which, among other things, a quantity of timber and timber products was to be furnished to Great Britain including 70,000 standards of softwoods, 10,000 cu.m. hardwoods and 50,000 sleepers. Yugoslavia also signed a similar agreement, covering trade generally, under which that country undertook to supply Great Britain with both softwoods and hardwoods. From this source about 100,000 standards of softwoods had been received together with a considerable quantity of oak and beech, both logs and lumber.

During 1949 the first steps were taken to bring the felling program of British woodlands into some relation with the annual anticipated increments. A board of trade order enforced a cut of 25% over that of 1948.

Canadian lumber production during the year remained at levels comparable with 1948. The restriction of imports by Great Britain caused by currency problems and a somewhat lower price level increased the difficulties of a number of small marginal producers. No new general contract was negotiated between the two countries, but in the autumn under the European Recovery program a special contract for 70,000 standards of Douglas fir was negotiated for shipment to Great Britain. This was allocated approximately as to 30,000 standards to U.S.A. exporters and 40,000 standards to Canada. It was believed that somewhat lower prices were taken than in earlier contracts. The Canadian Royal commission which was appointed to investigate lumber prices, particularly in the home market, returned a clean "bill of health" to the Canadian lumber trade. The report pointed out that under control domestic prices for lumber were considerably lower than those obtained for export.

The United Nations Food and Agriculture organization in conjunction with the Timber committee of the Organization for European Economic Cooperation issued during the summer their final statistics of production for 1948. The review showed a distinct easing of the softwood shortage in Europe. European timber producing countries in 1948 actually exported 1,882,000 standards, or 33.3% more than it was estimated could be achieved. At the same time the European Recovery program office issued a commodity study on lumber and lumber products. The report estimated that in western Europe, excluding Germany, about 3,330,000 dwelling units were destroyed during World War II and to replace these alone would require 14,700,000,000 bd.ft. of lumber. Another 850,000 dwellings a year would also be needed to take care of the growth of the population.

Plywood production in Europe remained on much the same footing. There was no sign of the U.S.S.R. resuming its once great plywood export trade. The imports of both U.S.A. and Canadian plywood into Great Britain were much reduced because of currency difficulties. In Canada one large organization announced a 15% reduction in the domestic prices for Douglas fir plywood in order to encourage increased home consumption and to replace trade lost in the export market. A feature of 1949 was the marketing of considerable shipments of plywood from factories established since World War II in tropical Africa, including Nigeria and the Ivory Coast. (*See* also Forests.)

Films of 1949.—*Paper Forests* (Flory Films, Inc.). (B. L.)

Lutherans. Lutheran churches throughout the world were engaged during 1949 in three major tasks: the work of serving refugees, expanding their mission program and fighting against persecution from totalitarian states.

Within the framework of the Lutheran World federation, a department of service to refugees was giving spiritual ministrations and war made necessary the continued support of or- and expellees. Large-scale immigration from Germany, Austria and Italy to the United States, Canada, Australia, South America, New Zealand and South Africa was changing the geography of Lutheran protestantism. It had become evident that millions of Lutherans from eastern Europe would have to find a permanent place in the life of western Germany because of the limitations of mass emigration. Refugees previously settling in Italy, France, England and Sweden had created new developments. In Italy a Lutheran church body was formed in 1949, the first in history.

The absence of a peace treaty with Germany, currency restrictions and war made necessary the continued support of orphaned missions and younger churches in the near east, Africa, China, India, New Guinea and Indonesia. The Lutheran World federation organized a commission on missions to co-ordinate the evangelistic efforts of the various member bodies. An immediate result was an international approach as in Africa, where American, Swedish, Norwegian and Finnish missionaries were working in one field. Lutherans launched a new advance in their mission program in Japan when three groups began work in 1949.

The continued pressure from totalitarian states in eastern Europe created serious handicaps to minority Lutheran groups. After the arrest and imprisonment in 1948 of Bishop Lajos Ordass, new Hungarian church officials amenable to the state sought to win the favour of communism. The Lutheran World federation's representative in Czechoslovakia was ordered out of the country just a few days after the new church law went into effect. This law required that pastors and church workers be employed by the state. Opposition to totalitarian measures was extremely strong and effective in eastern Germany under the leadership of Bishop Otto Dibelius of Berlin.

A program of interchurch aid was still in progress five years after the end of the war. American Lutherans had contributed more than $50,000,000 to relief and reconstruction in Europe and Asia. Plans were in progress for continuing this type of program for at least five more years. (*See* also Church Membership.) (C. E. L-Q.)

Luxembourg. An independent grand duchy of western Europe, Luxembourg is bounded on the south by France, on the northwest by Belgium and on the northeast by Germany. Area: 1,010 sq.mi., including the 11 sq.mi. of the uninhabited Kammerwald forest and a small village annexed on April 15, 1949, as accepted under the six-power agreement on March 26, 1949. Pop.: (Aug. 20, 1945, census) 281,572, (mid-1948, est.) 292,000. Language: Luxembourgian (idiomatic) and officially) French and German. Religion: Roman Catholic 8%. Capital: Luxembourg (pop., Dec. 31, 1947, est., 61,996). uler, Grand Duchess Charlotte.

History.—The year 1949 was undisturbed by any crisis or overnment change. Linked with Belgium in an economic and ustoms union, the grand duchy aligned the Luxembourg franc ith the Belgian when the latter was devalued on Sept. 22 (*see* ELGIUM).

Having relinquished neutrality from April 15, 1948, Luxemourg took part in the various important international meetings, haping its foreign policy to conform with the general political nd economic trends of the western powers. On April 4 Joseph ech, minister of foreign affairs, signed the North Atlantic eaty and the instrument of ratification was deposited on June 7 with the state department in Washington, D.C.

Within the framework of the Organization for the European conomic Cooperation (*q.v.*) the grand duchy upheld a policy of progressive return to free circulation of goods in Europe. ech, speaking in Paris on Nov. 2, commented that, although all nust make sacrifices, no country should be asked to subscribe o the ruin of its key industry: Luxembourg was particularly ulnerable, since its steel and iron industry was the whole basis f its economic life.

Education.—(1948) Schools: elementary 966, secondary 7, technical 3.

Finance.—Budget (1949 est.): revenue 3,106,000,000 fr.; expenditure ,383,000,000 fr.

Transport and Communications.—Roads (1947): 4,254 km. Licensed notor vehicles (1948): cars 6,671, trucks 3,884. Telephones (1948): ubscribers 20,700.

Agriculture.—About one-third of the Luxembourg area is arable land. 'roduction (in metric tons, 1948): bread grains 35,958; other cereals 7,881.

Industry.—Industrial establishments (1948) 12,664, persons employed 6,513. Production (in metric tons, 1948; 1949, six months, in parenheses): pig iron 2,626,334 (1,381,034); steel ingots and castings ,452,844 (1,318,262); synthetic fertilizers 545,214 (292,178).

(G-H. D.)

Macao: *see* PORTUGUESE COLONIAL EMPIRE.

MacArthur, Douglas (1880–), U.S. general, was born on Jan. 26 at Little Rock arracks, Ark. (For his early career, *see Encyclopædia Britanica.*) After the Japanese attack on Pearl Harbor, MacArthur ed U.S. and Filipino forces in defense of the Philippines until Iarch 17, 1942, when Pres. F. D. Roosevelt ordered him to ustralia. From this point he directed and led the combined J.S.-British-Australian drive that recaptured all the territory he Japanese had seized early in the war. MacArthur himself ccepted the Japanese surrender in Tokyo bay on Sept. 2, 1945, nd was made supreme commander of Allied Powers in Japan. t was his task to carry out the occupation policies determined y the 11-nation Far Eastern commission.

In Jan. 1949, MacArthur reported that the Japanese had ccepted a democratic way of life, and "will not yield before ommunism or any other concept of enslavement." Communist lotting continued to be one of his chief problems, however, and n June 13 he accused the U.S.S.R. of inciting disorders in apan through the Communist party, and of "callous indiffernce" to repatriation of Japanese war prisoners. For a time here was discussion of the outlawing of the Communist party n Japan.

MacArthur in May recommended that Allied control of Japnese affairs be relaxed, since continued occupation was not the ault of the Japanese, he said, but of conditions in China. Later n the year he announced the end of the job of breaking up he excessively big business combines in the country. On July 8 he ordered disbanded, by year's end, occupation controls at he local level, leaving such controls operative only nationally.)n Dec. 21 he charged that thousands (the Japanese governnent said 300,000) of Japanese prisoners were still in soviet hands, and asked the U.S. government to seek the aid of a neutral nation in determining how these prisoners were being treated.

McCloy, John Jay (1895–), was born on March 31 in Philadelphia, Pa. He was educated at Amherst and Harvard, and served in World War I and in the occupation forces in Germany after that war. He later practised law in New York city, specializing in corporation law and foreign litigation. In Oct. 1940 he was appointed expert consultant to the secretary of war, and in April 1941, assistant secretary of war. He became president of the International Bank for Reconstruction and Development in Feb. 1947. Early in 1949, in that capacity, he denied charges by Poland that the International bank had discriminated against loan applications from eastern Europe and instead had helped finance French and Dutch wars against rebels in Indo-China and Indonesia.

On May 18 McCloy was appointed by Pres. Harry S. Truman as first civilian U.S. high commissioner for Germany, succeeding the retiring U.S. military governor, Gen. Lucius D. Clay. He became also chief Economic Cooperation administration representative for Germany, and U.S. representative on the three-power Allied council set up to exercise supreme Allied authority in the Federal Republic of Germany, which became operative in Sept. 1949. By a Dec. 15 agreement with McCloy, the west German government, rather than the Allied occupation forces, became recipient of ECA aid.

Macedonia: *see* YUGOSLAVIA.

McGrath, James Howard (1903–), U.S. attorney general, was born on Nov. 2 in Woonsocket, R.I. He was graduated from Providence college, Providence, R.I., in 1926 and received a law degree from Boston university, Boston, Mass., in 1929. He was city solicitor of Central Falls, R.I., 1930–34; U.S. district attorney, 1935–40; and governor of Rhode Island, 1940–45. Appointed U.S. solicitor general in 1945, he served until the next year, when he became U.S. senator from Rhode Island. From Oct. 1947 to Aug. 1949, he was chairman of the Democratic national committee. Pres. Harry S. Truman announced on July 28 that he had asked McGrath to accept an appointment as U.S. attorney general, to succeed Thomas Campbell Clark. On Aug. 1, President Truman announced that McGrath had accepted the appointment, and on Aug. 24 he was sworn in.

Machinery, Farm: *see* AGRICULTURE.

Machinery and Machine Tools. The downward trend in the machine tool industry of the United States continued during 1949, when shipments barely touched $250,000,000, compared with $286,000,000 the previous year and a wartime high of $1,360,000,000. The year opened in lively fashion, with the new-orders index of the National Machine Tool Builders' association at 93 in March (with an average month of 1946–47–48 taken as 100). Then business dropped abruptly until a low point of 47 was struck in July. Recovery was slow, but in November a sharp rise occurred which brought the index figure up to 83. It stayed close to that level in December.

Unlike other postwar years, in 1949 new machine tool orders exceeded shipments. Overseas sales accounted for one-fourth or more of all machine tool bookings, with England, Italy, France and western Germany the best overseas markets. The Economic Cooperation administration supplied the finances for much of the demand.

OVERHEAD VIEW of one of the bays at the General Electric company's turbine plant completed at Schenectady, N.Y., in 1949, at a cost of $30,000,000. Concrete pits in the foreground were to house machine tools so arranged that a unidirectional flow of material was assured

U.S. machine tool builders came to a realization during the year that they would thereafter have stiffer competition from the machine tool industries of England and European countries, especially Germany, but also Italy, Belgium, Sweden, Switzerland and France.

Near the end of 1949 the *American Machinist's* mid-century inventory of metalworking equipment revealed many facts about machine tools and other production machinery. It showed that the nation's metalworking industries had 3,118,702 production units installed in their plants. Of that number, 1,762,165 were machine tools and 471,237 were metal-forming units. If the machine tools in college shops and in maintenance departments outside the metalworking field were included, U.S. machine tool resources were in excess of 2,200,000 units. That was an all-time high.

It was also revealed, however, that about 42% of all metalworking equipment was 10 years old or older, and 19% was more than 20 years of age. On the average, the country's production equipment was considerably older in 1949 than it was at the end of World War II.

Other facts turned up by the *American Machinist's* inventory were: (1) there were installed in U.S. metalworking industries 396,464 lathes, 362,776 grinders, 361,935 drilling machines and 182,284 milling machines—the four basic types of machine tools; (2) the south had doubled its metalworking operations (based on machines installed) since World War II, and New England had increased its machine tool holdings 53% in the same period; (3) there had been a sizable shrinkage of machine tool facilities in the aircraft industry in the postwar period, and also in the automobile industry; and (4) the automobile industry had the highest percentage of old machines of all metalworking industries.

In technical developments, machining speeds tended to increase during 1949. The desired "mile-a-minute" cutting speeds were reached in grinding, even with small-diameter wheels, by developing wheelhead speeds up to 200,000 r.p.m. Lathe speeds had gone up to 1,650 f.p.m. in tests and to 1,500 f.p.m. on production units. Planer speeds had risen more than 50% to 310 f.p.m.

The problem of operating machines at so-called "super-critical speeds" was tackled more earnestly in 1949. Research was given an impetus by disclosure that a German patent was issued in 1931 to C. Salomon, who tested machining of aluminum at speeds of 55,000 f.p.m., of copper at 9,350 f.p.m. and of bronze at 5,300 f.p.m. Manufacturers were looking into the possibility of determining from the metallurgical make-up and condition of the metal just what the best machining speed should be, and ordering machines and tooling to fit the specifications.

The scope of carbide tools was broadened. Carbides were mounted so that the cutting force was compression rather than shear and required only simple end dressing of a rotatable preformed shape; new forms of holding were employed to reduce likelihood of cracking from brazing strains; and new forms of carbides themselves were developed.

Several companies offered in 1949 combined coolant-lubricants for use in screw machines, and additives for water to reduce its corrosiveness so its top potential as a coolant could be realized.

(B. Fy.)

Great Britain.—During 1949 the output of the machine building industries in Great Britain continued to be governed rather by ability to produce than by demand; and, despite the limitations imposed on the rate of re-equipment at home under the government's capital investment program, supplies failed to satisfy the urgent needs of British manufacturers on the one hand and of overseas customers on the other. Although the makers of industrial machinery were themselves still handicapped by lack of modern plant and by the scarcity of the necessarily skilled labour, considerable progress was made. The textile and hosiery machine group, for example, had an average monthly output valued at £5,589,000 during the first half of the year as compared with an average of £4,693,000 for the whole of 1948. Similarly, the machine tool industry, upon which all other forms of manufacture ultimately depend, averaged £2,800,000 between January and June as compared with a £2,591,000 monthly average in 1948.

Exports of machinery continued to increase and for the first nine months of 1949, while the figures were still unaffected by the devaluation of sterling, reached a total of £207,751,000, as against £170,307,065 in the same period of 1948. Although less marked, the corresponding increase in tonnage, namely from 577,000 in 1948 to 657,000 in 1949, was still substantial. Of the various main groups into which machinery exports were divided, textile machinery was easily the most important with a value for Jan.–Sept. of £30,795,000, representing an increase of nearly £4,000,000 over the equivalent figure for 1948. In the same period machine tool exports amounted to £12,138,000 or about £500,000 more than for the first nine months of 1948. Machinery thus made a substantial contribution to the overseas trade of the United Kingdom, accounting for more than 15% of all exports, and was of great importance in connection with the short term problem of securing a balance between exports and imports. In relation to the long term problem of raising the general level of productivity and, consequently, the average standard of living, however, the scale of machinery exports was greater than the country could afford. (C. H. Bu.)

Maine.

The extreme northeastern state of the United States, Maine was admitted as the 23rd state in 1820, and is popularly known as the "Pine Tree state." Land area 31,040 sq.mi.; water area 2,175 sq.mi.; pop. (1940) 847,226; rural, 504,169; urban, 343,057. Capital, Augusta. The estimated state population for 1949 was 909,000. The official 1940 census figures and estimated 1949 populations of Maine's principal cities are as follows: Portland 73,643, (1949 est.) 79,313; Lewiston 38,598 (41,572); Bangor 29,882 (32,118); Biddeford 19,790 (21,314); Auburn 19,817 (21,343); Augusta 19,360 (20,851).

History.—Governor Frederick G. Payne (Rep.) served his first year in 1949. The Maine legislature met in biennial session in 1949, but enacted no major bills. Its greatest problem, as in 1947, was revision of the tax structure in such a way as to provide for state and local tax needs. Maine's tax laws, under study for several decades, remained unchanged at the end of the session.

Quoddy village at Eastport, built by the federal government in 1935, was sold at auction, but hope for the realization of the Passamaquoddy tidal power project was not abandoned. A joint Canadian-U.S. commission of inquiry held hearings and gathered data in 1949 and expected to release its report in 1950.

The chief officers of Maine during 1949 were: governor, Frederick G. Payne; secretary of state, Harold I. Goss; attorney general, Ralph W. Farris; state treasurer, Frank S. Carpenter; state auditor, Fred M. Berry; commissioner of education, Harlan A. Ladd.

Education.—The net enrolment in the public schools for 1947–48 was 160,191, compared with 157,456 for 1946–47 and 154,073 for 1945–46. In 1947–48 there were 6,117 teaching positions, 6,022 in 1946–47, and 5,966 in 1945–46. The state maintained 1,721 urban and rural schools in 1947–48, of which 728 were one-room buildings. The total expenditure for general support of schools (1947–48) was $19,829,475; the cost per pupil in average daily attendance (145,502 pupils) was $136.28 for the school year.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of Nov. 30, 1949, there was a balance in the Maine employment security fund for unemployment benefits of $39,717,477, compared with $43,346,513 a year earlier. For the first 11 months of 1949 benefit payments were $10,165,385, covering 55,800 persons, as compared with an expenditure of $4,886,558 for 35,120 persons in the same period of 1948. Total benefits paid in 1948 were $5,482,189. The state expended for health, welfare and charities for the fiscal years ending June 30, 1949, and June 30, 1948, $12,967,966 and $11,720,999, respectively. Thirteen state institutions (correctional, insane hospitals, sanitoria) as of Oct. 31, 1948, had a total inmate population of 5,208; the total expended for the fiscal years 1949 and 1948 was $4,957,454 and $4,512,057, respectively.

Communications.—Highways of the state (1949) were: state highways, 3,076 mi.; state aid highways, 7,556 mi.; third class highways, 692 mi.; town ways, 10,512 mi.; miscellaneous, 28 mi.; total 21,858 mi. In the year ended June 30, 1949, the state expended for highway purposes, exclusive of debt and interest charges, $19,531,007, compared with $16,363,341 for 1948.

Steam railway mileage (1946) was 2,778 mi. The New England Telephone and Telegraph company reported 205,119 telephones in service as of December 1, 1949.

Banking and Finance.—During 1949 the Maine banking department supervised 32 savings banks, 30 trust companies, 30 loan and building and savings and loan associations. The following figures were for June 30, 1949: deposits of savings banks $236,183,000; total assets $268,525,000; trust company deposits, $226,283,000; total assets, $247,777,000; building and loan and savings and loan associations total resources, $33,702,000.

Table I.—*Leading Agricultural Products of Maine*

Crop	1949	1948	Average, 1938–47
Corn, bu.	462,000	340,000	529,000
Oats, bu.	3,990,000	2,924,000	3,339,000
Barley, bu.	155,000	128,000	111,000
Buckwheat, bu.	168,000	140,000	113,000
Hay, short tons	834,000	880,000	855,000
Potatoes, bu.	67,050,000	74,305,000	52,758,000
Apples, bu.	1,087,000	949,000	717,000
Beans (dry), tons, uncleaned	2,850	3,600	3,800

Table II.—*Principal Industries of Maine*

Industry	Value of Products 1948	Value of Products 194.
Pulp and paper	$221,526,431	$211,119,630
Cotton	149,581,955	129,368,253
Woollen	113,966,308	105,472,684
Boot and shoe	95,641,396	96,157,615

State receipts, expenditures and bonded debt for the fiscal year ending June 3, 1949, were, respectively: $58,156,895, $58,063,521, $10,221,500. For the year ending June 30, 1948, they were, respectively: $54,394,957, $51,993,381, $11,925,500.

Agriculture.—At the end of 1949 the state's water resources were below normal for the third successive year. Lack of rain in the summer months caused heavy crop damage in central and southern areas. On the other hand, potato yield in northern Maine reached a record 450 bu. per acre.

Fisheries.—During the first nine months of 1949, landings of fish at Maine ports amounted to 200,758,483 lb., valued at $10,774,945; compared with 203,758,760 lb., valued at $11,176,270, for the corresponding period of 1948. Total landings for 1948 were 305,037,517 pounds, valued at $16,183,596 to the fishermen.

Manufacturing.—There were 1,160 industrial firms in Maine during 1947, with production valued at $880,768,986 and 119,785 employees, of whom 81,991 were men and 37,794 were women.

Table III.—*Value of Principal Mineral Products of Maine*

	1946	1945
Clay products	$191,000	$ ...
Clay, raw	13,377	5,756
Feldspar (crude)	110,237	62,287
Mica, scrap	607	768
Peat	92,710	75,614
Sand and gravel	925,308	771,724
Stone	927,588	382,414
Miscellaneous	2,141,310	1,228,227
Total (eliminating duplication)	$4,389,000	$2,521,000

Mineral Production.—The principal mineral products (1946) in order of value were cement, stone, sand and gravel, slate. Other products included clay, lime, feldspar, mica, peat and semiprecious gems. Maine ranked 45th among the states in value of mineral production in 1946, with .06% of the value for the U.S. and Alaska.

Malaya (Federation of) and Singapore.

The Federation of Malaya is a British dependency consisting of the settlements of Malacca and Penang and the protected states of Johore, Kedah, Kelantan, Negri Sembilan, Pahang, Perak, Perlis, Selangor and Trengganu. Area: 50,680 sq.mi. Pop. (1948 est.): 5,000,000. Singapore is a British colony comprising the island of that name together with the Cocos-Keeling Islands and Christmas Island. Area: 282 sq.mi. Pop. (1948 est.): 964,000. High commissioner of the Federation (1949): Sir Henry Gurney; governor of Singapore: Sir Franklin Gimson. A commissioner-general for Southeast Asia exercises, as part of his functions, general supervisory authority. Commissioner-general (1949): Malcolm Macdonald.

History.—In the federation the disturbances, which had broken out in June 1948, continued to dominate the situation in 1949. The actual number of British and Gurkha troops engaged was not disclosed but was believed to be about a division; and they were assisted by the forces of the Malay regiment, air force units, naval coastal patrols and at least 20,000 police. But in spite of the strength of the forces involved and the fact that the Communist-led bandits were never assumed to number more than 5,000, the hard core of the revolt was not broken. Up to November approximately 900 bandits had been killed and 525 captured, as compared with 21 officers and 99 other ranks killed; 15 officers and 162 other ranks wounded; 264 police and 568 civilians, including 34 Europeans, killed. During September there was an intensification of the campaign, combined with an offer by the government to those who had been consorting with the bandits—in many cases unwillingly—that they would not incur the death penalty for the carrying of arms if they surrendered voluntarily to the authorities. But the offer met with small response and the campaign dragged on.

INSTALLATION of the new Sultan of Perak (seated right on dais) at Kuala Kangsar, April 16, 1949. Seated left on the dais is Sir Henry Gurney, high commissioner of the Malay federation

One effect of the troubles was to bring the leaders of the various communities closer together. In January a Communities' Liaison committee was formed; it reflected the variety of races that make up Malaya, comprising 6 Malays, 6 Chinese, 1 Indian, 1 European and 1 Eurasian under the chairmanship of a Ceylonese. In March this committee issued a statement in which it stressed the need for close understanding and cordial co-operation between all those races; and in another statement, issued in September, it showed that a basis had been agreed upon for a policy of political, social and economic development of the country.

In May it was announced in the British parliament that in view of the increased burdens which Malaya had had to bear, the British government had decided to offer a free grant of £20,000,000 toward the Malayan war damage compensation scheme in place of the £10,000,000 offered in the previous year; and also that an interest-free loan of 160,000,000 Straits dollars (approximately £18,500,000) was to be made available to the federation government to be repaid in annual instalments (to the extent that it was taken up) commencing in 1956. In the same month the federation government floated a £8,050,000 loan on the London market to finance rehabilitation and development projects including railway and road communications, drainage and irrigation schemes, and other public works.

Law and order was maintained in Singapore, which was the scene of a number of conferences, both local and international, including a conference of British governors and service chiefs in southeast Asia under the chairmanship of the commissioner-general in January.

The legislatures of both territories accepted the recommendations of the Commission on University Education in Malaya and passed legislation creating the University of Malaya, of which Malcolm Macdonald was appointed by name in the constitution as first chancellor. The university was formally opened in October.

In spite of the troubles in the federation, production of rubber and tin was maintained; and at Kuala Lumpur in February for the first time in the history of Malaya there took place a Trades Union conference attended by some 150 delegates representative of 80% of the unions of the country.

Finance and Trade.—The currency is the Straits dollar, valued on Nov. 15, 1949, at 32.67 cents U.S. Federation: revenue (1949 est.) Str.$307,302,020, expenditure (1949 est.) Str.$366,341,880, imports (1948) Str.$490,859,576, exports (1948) Str.$616,922,856. Singapore (1948): revenue Str.$73,746,016, expenditures Str.$92,492,455, imports Str.$1,300,342,063, exports Str.$1,113,120,406.

Principal exports: Rubber, tin, tin ore, palm oil, coconut oil and copra. The trade figures are exclusive of trade between Singapore and the federation; and note should be taken that as an entrepôt centre Singapore was the federation's chief source of supply and chief customer, to the extent of Str.$370,915,301 and Str.$498,967,682 respectively in 1948.

FILMS OF 1949.—*Voices of Malaya* (British Information Services).

(JO. A. HN.)

Malta.

Malta is a British colony in the central Mediterranean. Area: 122 sq.mi. Pop. (1948 census): 305,991. Governor, 1949: Sir Gerald Creasy; prime minister: Paul Boffa.

History.—A delegation from the government of Malta consisting of the prime minister, Paul Boffa, the deputy prime minister, Dom Mintoff, and the commissioner general in London, Edward Ellul, visited London during the summer of 1949 in order to obtain further assistance toward the colony's finances and economy. The three main objectives of the delegation were an indefinite prolongation of United Kingdom contributions to the cost of food subsidies (which were due to end in 1949); the maintenance of the existing high levels of employment in Malta by the British armed services and more direct benefits to Malta under the European Recovery program.

The British government requested information on the economic and financial position in Malta; but instead of supplying this information in a suitable form the Maltese government presented an "ultimatum." The British government thereupon stated that it was not willing to continue the talks and Boffa withdrew the ultimatum on Aug. 15. The talks continued but the British government was unable to concede the major claims of the Maltese government, although it was decided to reduce the rate of dismissals of persons employed in the dockyards and the war office offered to give work in Cyrenaica to Maltese workers.

Finance and Trade.—Currency: pound sterling. Budget (1949–50 est.): revenue, £5,380,962; expenditure, £5,586,683. Foreign trade (1948): imports £16,033,815; exports £1,232,258.

y the U.S. bureau of mines.

The domestic output of manganese ore continued to decline. hipments from the mines showed only a minor decline in 1948, 31,100 tons against 131,627 tons in 1947, but there was a narp drop in 1949, the total for the first three quarters being nly 86,022 tons. Receipts of foreign ores were 1,034,168 tons n the first three quarters of 1949, compared with 1,256,597 ons in the full year 1948. The drop in ore imports was partly ffset by increased imports of ferromanganese in 1947 and 1948, ut in 1949 these dropped back to the 1947 level. While the hree-quarters total of 1949 for general imports of ore was ,034,168 tons, against 984,127 tons of imports for consumption, he corresponding consumption figure was 1,060,179 tons, indi-ating even heavier withdrawals from plant stocks.

(G. A. Ro.)

Manitoba.

Central province of Canada and geographic centre of North America, Manitoba was established s a province on July 15, 1870; area: 246,512 sq.mi. (26,789 q.mi. water); pop. (1946 census): 726,923, of which 389,592 vere rural. Capital: Winnipeg (229,045). Other cities are: St. oniface (21,613); Brandon (17,551); Portage la Prairie 7,620); and Flin Flon (municipal district, 7,595).

History.—The 23rd legislature was elected on Nov. 10, 1949, nder the premiership of Douglas Lloyd Campbell, heading a oalition of Liberal-Progressive and Progressive-Conservative nembers. The principal issues of the campaign were the con-inuance of coalition and the financial and public-utility record f the government. The coalition increased its representation o 43 of the 57 member assembly.

The first step in an increasing power development was taken y the government by starting construction of a 114,000 h.p., 20,000,000 power site near Pine Falls on the Winnipeg river. ural electrification reached a total of 16,379 farms and 353 owns and villages by 1949, maintaining the objective of approx-nately 5,000 new farm units per year.

The first joint permanent provincial committee of representa-ives of municipalities, teachers and school trustees was created o deal with educational objectives of mutual interest, and like-vise a new urban municipal association was established to deal rith local government problems affecting urban and suburban itizens.

An experiment in whale meat processing was carried out at Churchill on Hudson bay when in 22 days, 206 white whales vere caught by the native population using aboriginal fishing nethods. These were converted into 88,000 lb. of meat for fur nimal and poultry feeds and 45,000 gal. of oil for English nargarine production. A modern plant was erected, and modern nethods of catch were to be adopted.

Education.—Enrolment in public schools for the year ending June 30, 948, dropped 331 to 120,482, of which 20,497 were in secondary grades. pecial permit teachers were reduced to 656 in 1948–49. A division of ublic library service was added to the department of education in 1949, nd a travelling library box and open shelf reference service were orig-nated for rural citizens.

Public Health and Welfare.—A combined Canadian-Manitoba-Red Cross ospital plan was started to provide hospitalization for the northern areas. The first municipal farm home for the aged was erected at Portage la Prairie in 1949. The Manitoba Health plan had developed to 13 health units covering 71 municipalities serving 250,000 people, 2 regional diagnostic units (Dauphin and Selkirk), with 116 new hospital beds and 718 beds under construction. Eight new hospitals had been erected, with additions and replacements to three others.

Communications.—A radio-telephone service was established for the far north by the telephone system of the Manitoba government; new lines were laid to the new mining areas of Lynn Lake and Snow Lake; and increased expansion resulted in a total of 384,691 wire miles and 126,247 subscriber stations by Sept. 30, 1949. Manitoba's highways included 9,117 mi. of gravelled road, 575 mi. of bituminous surface and 72 mi. of concrete. Seven radio stations operated in Manitoba, with the latest outlet opening in Dec. 1949, making four in the Winnipeg area, one in St. Boniface (French), one in Brandon and one in The Pas.

Finance.—No change occurred in the provincial taxation structure. At March 31, 1949, the net debt position was $47,571,470, with a self-sustaining utility debt of $46,280,000. The operating surplus for the period was $4,425,362, with revenue of $33,304,555. Expansion of telephone, electrification and highway construction was increasing the gross debt.

Agriculture.—Estimated returns for the 1949 production: field crops $165,000,000; livestock $53,000,000; poultry $19,000,000; dairying $30,000,000; including all other classes, a gross agricultural production of $275,000,000 was indicated, which would be supplemented by additional payments for coarse grains from the Canadian Wheat board. Grasshopper infestation was sharply increased. The corn borer reached Manitoba crops for the first time. A Red River co-operative farrowing centre was organized in 1949 at Morris to aid hog raising. A five-year degree course in agriculture was inaugurated in 1949 by the agricultural faculty of the University of Manitoba.

Fishing and Fur.—In 1948–49 commercial fishermen numbered 6,767 and marketed 31,528,700 lb. of fresh-water fish, valued at $3,181,286, with a market value of $5,414,583. There were 10,577 trappers in the same period, of whom 2,284 were registered. The wild catch value was $2,552,803, and 757 fur farms produced $958,483 worth of furs. The estimated value of furs processed in Manitoba was $2,367,198, and the value of furs exported from the province, including furs from other provincial areas, was $9,873,277. Resident big-game hunters, totalling 27,574 (a record), and nonresident, 489, killed in 1948 a total of 11,723 deer, 80 moose, 46 caribou (barren lands), 484 elk and 61 bear; 14,301 resident and 811 nonresident game-bird hunters killed 98,912 ducks and geese.

Manufacturing.—In 1948 the gross value of manufacturing was $483,000,000, with 42,000 employed and with a pay roll of $87,000,000. Meat packing remained the leading industry.

Mineral Production.—In 1948 production was estimated at a value of $26,767,180, of which $19,374,615 represented metals, $6,073,817 structural materials and $1,319,279 nonmetallics. Copper, gold, zinc, gypsum and salt led in production values. (J. L. J.)

Manufactures, Census of: *see* CENSUS DATA, U.S.

Mao Tse-tung

(1893–), chairman of the central committee of the Chinese Communist party, was born in Shao Shan, Hunan province, and educated in Changsha. He was an active revolutionary as early as 1911, and in 1921 he participated in Shanghai in the founding of the Chinese Communist party. After the Communists united with the Kuomintang to put down militarists of the north, Mao began organizing peasants into an army, and in 1931 he became political commissar of the 4th Red army. From 1937 to 1943 he generally led the battles against the invading Japanese, although friction between his forces and Chiang's occurred throughout the Japanese war. Mao was in charge of the noted Red 8th route army, and after 1942 was chairman of the Communist party of China.

Through much of 1948 and 1949, he led or directed the Communist forces that progressively drove the nationalists back, until by autumn of 1949 the reds controlled virtually all of China. On Sept. 30, 1949, as the Chinese People's Political Consultative council launched the new People's (Communist) government, Mao was elected chairman of the new government. (*See* also CHINA.)

Marine Biology.

Benthoscope.—Biological scientists of the Allan Hancock Foundation for Scientific Research at the University of Southern California, Los Angeles, attracted wide interest in 1949 with explorations of the depths of the sea in the new benthoscope. The 7,000-lb. round steel ball, with an inside diameter of approximately five feet, an entry hatch and two fused quartz windows, one for motion-picture taking, the other a quartz eye or observation porthole, was designed to accommodate the scientist within its hold, together with technical facilities never before used in ocean exploration. Within the ball were oxygen tanks, fans, soda lime respiratory screens for the absorption of respiratory gases, cameras and leads for surface telephonic communications. After preliminary descents in relatively shallow beach waters, the benthoscope descended approximately 4,500 ft. in the Pacific ocean 20 mi. south of the Santa Cruz Islands off southern California.

The organisms seen through the observation porthole were described as various depth gradients were passed. At 460 ft. there were many lantern fish; at 2,500 ft., schools of luminescent shrimp), at 4,000 ft., eerie flashes of light from lantern fish and other unidentified phosphorescent organisms.

Research on Marine Life.—In an attempt to discover what factors operated to reduce the schools of sardines along the northern Pacific coastal waters, scientists at the Scripps Institute of Oceanography, La Jolla, Calif., launched a six-ship survey which covered over 100,000 sq.mi. of ocean, extending from Lower California to the mouth of the Columbia river. Commercial catches which in former years averaged 600,000 tons annually, dropped to only 150,000 tons in 1948. From the data gathered it was deduced that changes in the relative distribution of ocean currents altered the spawning grounds as well as the biological constitution of the waters which furnish the food of the fish. Such a biological shift naturally created ecological factors unfavourable to the sardines, but perhaps favourable to other populations such as the *hake,* which were found in greater numbers in the surveys completed.

A scientist at the American Museum of Natural History, New York city, reported the appearance of a lone specimen of the rare whale shark (*Rhineodon typus*) in the Caribbean sea near the Venezuela coast. Previous records showed only two such specimens reported from the Caribbean. The 30 ft. specimen with a 4-ft. width of mouth typified its kind; it had a 4-in.-thick hide of tough fibres which nothing that swims in the sea can penetrate. Man's harpoons and bullets glance off harmlessly save when the animal is relaxed, or when it is shot exactly at a perpendicular angle.

The recording of undersea noises continued to engage scientists at the Woods Hole Oceanographic institution, Mass. With microphones set at a depth of 60–90 ft. in the lower Saguenay river, Que., Can., many recordings of the noises of the white porpoise (*Delphinapterus leucas*) were made. It was hoped that careful differentiation of the sounds might eventually result in distinguishing various cretaceans.

After reviewing previous work on the feeding habits of oysters, a scientist at the Marine Biological laboratory, Milford, Conn., completed an investigation which indicated that not only do oysters discriminate in the matter of relative size and shape of food particles, but also qualitatively utilize a sort of chemotaxis, whereby the nature of the chemical secretions of various microorganisms may be distinguished.

Such discrimination suggests that it may be possible to enrich the food supply of suitable microorganisms and thus hasten growth and maturity of this valuable sea food.

A specimen of a western Atlantic bivalve, *Tellina magna,* normally found plentifully from the Carolinas to the West Indies, was recovered in some seaweed (*Lamnaria*) at Inveresk Gate, Musselburgh, Midlothian by scientists of the Institute of Seaweed Research. This was the first recorded instance of any marine invertebrate native to the American coast being found in British waters.

LOWERING A TRAWL NET from the "Albatross III," fishery investigation vessel of the U.S. fish and wildlife service, to catch samples of deep-sea fish off the North Carolina coast in 1949. A population check on the New England fishing banks was also made from the vessel in 1949

According to a report from the British museum, a narwhal (*Monodon monoceros*) from arctic waters was found stranded at Rainham, Essex, Eng., in the estuary of the Thames river, the fourth to be recorded in British waters since 1588. It was a female 12 ft. in length, of usual body shape and pigmentation.

A rather important contribution to knowledge of antarctic flora, with special emphasis upon the lichens, was published in the *Antarctic Research Report.* The report covered materials collected in the several expeditions sponsored by the British, Australian and New Zealand governments in 1907–09, 1911–14 and 1929–31. The study indicated that species found are characteristically endemic, the majority (118 out of 124) occurring nowhere else in the world. This pointed to prolonged isolation of the antarctic islands from the rest of the world.

Other Research.—Studies made by the department of scientific and industrial research indicated that the odours and spoilage of catches of commercial fishes on trawlers result from the presence of sea water bacteria at first associated with the fish surfaces and later by invasion of these organisms into the flesh. To correct these conditions it was recommended that fish be thoroughly iced after gutting and washing and that care be taken not to bruise, tear or crush the fish in storage tanks.

A scientist of the French navy's information service described how radar and echo-ranging devices had been used to locate and identify schools of fish. Such detection and identification could be applied at distances varying from 650 ft. to more than one mile distance from the ship. This report was further substantiated by the director of fisheries of the United Kingdom, who asserted that the application of similar techniques made it possible to identify schools of herring, sardines and other fish at considerable distances.

The Swedish expedition of the "Albatross" reported after examining 65-ft. cores taken from the Atlantic ocean bottom that unexpectedly large amounts of radium and uranium are precipitated by the sea. A scientist found these elements 20 times as concentrated in the ocean muds as in continental rock. He estimated that if a core could be obtained from a depth of 10,000 ft., the story of earth stratification would date back approximately 400,000,000 yr. (*See* also OCEANOGRAPHY; ZOOLOGY.)

Marine Corps.

The United States marine corps, established Nov. 10, 1775, by resolution of the continental congress, has been an integral part of the United States naval establishment since 1798. It is headed by a four-star general, who serves a four-year term as commandant by appointment of the president. The 19th commandant, Gen. C. B. Cates, assumed office Jan. 1, 1948.

The missions of the marine corps during 1949 were mainly those set forth in the National Security act of 1947: to provide fleet marine forces of combined arms, with supporting aviation, for service with the fleet; to develop tactics, technique and equipment for amphibious warfare, and to provide security detachments for the naval establishment ashore and afloat.

The fleet marine force, the amphibious striking arm of the fleet, was maintained in a high state of readiness during 1949. Composed of two marine divisions of infantry and two air wings (peacetime strength), the fleet marine force held manoeuvres or training exercises in the Caribbean, Alaska, North Atlantic, southern California and Chesapeake bay areas, and at Guam. One reinforced infantry battalion of the fleet marine force was assigned to duties afloat throughout the year with the U.S. naval forces in the Mediterranean.

Marine corps aviation, in conjunction with the fleet marine force, continued to develop techniques and procedures for close support of amphibious operations during the year, and participated in manoeuvres with the fleet marine force.

Efforts were concentrated in 1949 on bringing the marine corps reserve up to strength and improving the training. The reserve expanded to approximately 125,300 in 1949, of whom approximately 40,690 were organized reserves. In the summer, 1,103 officers and 15,898 enlisted men of the organized reserve (ground) received annual field training for 15-day periods. A total of 1,036 officers and 2,468 enlisted men of the organized reserve (aviation) participated in training and manoeuvres at regular summer encampments.

During the year the regular marine corps reached a top trength of 87,417.

In June the marine corps established an annual women officers training class at Quantico, Va., to provide commissioned officers for both the marine corps and its reserve. (C. B. Cs.)

Marriage and Divorce.

During 1949 most of the evidence indicated a return to prewar patterns of marriage and family life. Both marriage and divorce rates declined generally.

Shortly after World War II, divorce rates rose sharply in the British Isles, western Europe, including the occupied countries and the United States. In 1949 there seemed little doubt that this postwar peak was past. In spite of further decreases in many nations, comparable with those of the previous year, divorce rates were expected to resume shortly the upward trend of the previous several decades.

BILLBOARD in Frankfurt, Ger., carrying unequivocal ads for marriage partners in 1949; because of German war losses, women continued to out-number men during the year

United States.—The marriage rate (10.8 per 1,000 population) declined for the third successive year; the number of marriages was estimated at 1,625,000, a drop of nearly 10% from the provisional total of 1,802,895 in 1948 and a decrease of over 18% from the final total of 1,991,878 for 1947. The U.S. public health service estimated that 29,953 of the marriage licences issued in 1948 and 22,965 in 1947 were not used, and concluded that for any given year marriages tend to be from 1 to 3% below the number of marriage licences issued. Including annulments (about 2% of the total), divorces were not expected to exceed 380,000—decreases respectively of 6% and 21% from the 405,000 divorces of 1948 and 483,000 in 1947.

*Marriages and Divorces with Crude Rates: United States, 1870–1948**

(Rates per 1,000 estimated midyear population. Figures for 1948 provisional, for 1947 revised)

Year	Estimates: midyear population	Marriages Number	Marriages Rate	Divorces Number	Divorces Rate
1948	146,113,000	1,802,895	12.3	405,000	2.8
1947	143,414,000	1,991,878	13.9	483,000	3.4
1946	141,235,000	2,291,045	16.4	610,000	4.3
1945	139,585,518	1,612,992	12.2	485,000	3.5
1944	138,083,449	1,452,394	11.0	400,000	2.9
1943	136,497,049	1,577,050	11.8	359,000	2.6
1942	134,664,924	1,772,132	13.2	321,000	2.4
1941	133,202,873	1,695,999	12.7	293,000	2.2
1940	131,970,224	1,595,879	12.1	264,000	2.0
1930	123,076,741	1,126,856	9.2	195,961	1.6
1920	106,466,420	1,274,476	12.0	170,505	1.6
1910	92,406,536	948,166	10.3	83,045	0.9
1900	76,094,134	709,000	9.3	55,751	0.7
1890	63,056,438	570,000	9.0	33,461	0.5
1880	50,262,382	453,000	9.0	19,663	0.4
1870	39,904,593	352,000	8.8	10,962	0.3

*Adapted from Tables 8 and 9, "Provisional Marriage and Divorce Statistics," *Vital Statistics—Special Reports,* Nov. 4, 1949, U.S. Public Health Service.

Studies found that not until the 15th year of marriage does death dissolve as many unions as divorce; that one-fourth of the total labour force was female, of which approximately one-half was married, one-sixth divorced; that about 36,000,000 men were married (13% more than once), of whom nearly one-third were under 35 yr. (6% previously married); that one-fifth of all men married a second time had marriages exceeding 20 years in duration; that one-sixth of all recent brides had been widows or divorcées; that the total birth rate of women married a second time was one-seventh less than for wives whose marriages were not interrupted during the childbearing period; and that, for all ages of 15 yr. and above, the number of males per 1,000 females was 977, the first time in history that females had outnumbered males, with the surplus by 1955 expected to exceed 1,000,000 over males of 30 years and older.

Effective in April, the first divorce law passed in South Carolina cited grounds of adultery, desertion, physical cruelty and habitual drunkenness. In the Catholic archdioceses of New York, N.Y., Rochester, N.Y. and Hartford, Conn., a new rule permitted mixed marriages to be performed in church but they could not be celebrated at the altar or with a nuptial mass.

Great Britain.—The long-awaited report of the royal commission on population included recommendations that the national health service be empowered to give contraceptive information to all married persons desiring it, that parenthood clinics be set up to deal with the increasing number of childless marriages, that sex education and homemaking should be widely developed as well as adult extension courses in marriage, that family allowances should be increased, and that incentives should be found to encourage the professional classes to have more children. On the basis of the 1947 census, the registrar general estimated that in England and Wales the total number of women exceeded that of men by 2,308,000. The Marriage Reform committee, claiming that 100,000 British couples were living out of wedlock because either the man or woman was unable to divorce the legal mate, demanded that a royal commission be established to study existing divorce laws and to consider their liberalization.

The Birmingham Marriage Guidance council reported that the three major causes of marital disharmony were ignorance of sex, lack of spiritual foundation and inadequate or unsuitable housing and, that of the marriages investigated, half of them involved civil rather than church weddings. The London Catholic Marriage Advisory council tabulated the problems of 1,543 clients and reported that 17% concerned annulments, 13% related to legal problems, 10% were medical, 8% dealt with church rules or moral questions, 6% were premarital and the rest were miscellaneous; of 447 clients with marital problems, 159 represented marriages between Catholics and non-Catholics.

Canada.—The dominion bureau of statistics found that the size of families was decreasing steadily among younger French-Canadian married couples. Another study indicated that in 1926 the divorce rate was $\frac{1}{17}$ that of the United States, but within the intervening years it had increased to one-seventh. There was continuing demand from Quebec and Newfoundland for separate divorce laws since all actions from these provinces must be adjudicated by the Canadian parliament. At the first National Congress of the Service of Preparation for Marriage, it was reported that of 15,000 marriages in the province of Quebec in 1948 about 3,000 started with the aid of the service.

Other Countries.—In Europe generally, the divorce rate was falling, particularly in Belgium, Denmark, France, the Netherlands and Norway and Sweden, although the marriage rate showed no great decline.

Offering a bonus of 22,000 fr. upward, Belgium was encouraging families to build new homes. Czechoslovakia and Poland made civil marriages mandatory but these could be followed by religious ceremonies; divorce restrictions were tightened, with divorce by mutual agreement no longer permitted; illegitimate children were given legal rights equal to those of children born in wedlock. In France the Young Women's Family service was providing training in homemaking to girls in several centres. After the ban on marriages of U.S. soldiers to German civilians was lifted, Frankfurt army headquarters reported that about 2,000 such weddings had been authorized. From Israel came the report of a drop of 40% from the divorce rate under British mandate.

Both marriage and divorce rates were increasing in Italy and its first marriage-counselling centre was opened at Milan under the direction of Dino Origlia; the general council of the International Union of Family Organizations convened at Rome in September. In Japan, where concern was expressed at the alarming rise in abortions, parent-teacher associations were formed in a majority of the new elementary and secondary schools. To encourage parenthood, Luxembourg extended its allotment system to provide 5,000 fr. for the first child and 3,000 fr. for each additional birth. Through its church and school department, Norway was utilizing a national committee of physicians and clergymen to deal with problems of family-life education.

The supreme court of the Soviet Union urged the lower courts to strengthen marriage and family ties by not granting divorces for accidental or transitory causes (including "casual cohabitation"), by encouraging sex education through parental example and by leading a social but disciplined life; the ministry of justice prohibited its citizens from marrying foreigners. As of July 1, working-class couples in Spain were granted outright $230 to help found new homes and families. In Sweden, the Institute for Spiritual Guidance and Psychic Counselling began marriage counselling in its branches at Gottenburg, Hernösand, Norrköping, and Uppsala.

At Buenos Aires, Argentina, the first International Congress of Mothers resolved to establish an institute of family education in every Latin-American state. The second Pan-American Congress of Social Work met in Rio de Janeiro with the support of the family as its theme. An association for the study of sterility was formed in Uruguay. (*See* also BIRTH STATISTICS; LAW.)

aryland.

One of the original states, long known as the "Old Line state," and, in later years, as the "Free tate," Maryland is bounded on the north by Pennsylvania and elaware, on the east by Delaware and the Atlantic ocean, on he south and west by Virginia and West Virginia. The total rea is 10,577 sq.mi. of which 690 sq.mi. are water. Population n 1940 was 1,821,244, of which 1,518,481 were white. The .S. census bureau estimated the population of the state as ,175,000 as of July 1, 1949. Annapolis (pop. 1940, 13,069) is he capital. Other cities in the state, with 1940 populations, are altimore (859,100), Cumberland (39,483), Hagerstown (32,-91), Frederick (15,802) and Salisbury (13,313).

History.—The special commission on subversive activities ubmitted its report at the regular session of the general assem-ly in Jan. 1949, as a result of which a bill was passed, known s the Ober bill, to prohibit certain subversive activities. This ct was held invalid in the lower court and at the close of the ear was before the state court of appeals.

Important legislation relating to mental hospitals was also assed at this session.

There was also a one-day special session on Dec. 17, 1949, to uthorize $50,000,000 of school bonds and to make an emer-ency appropriations for public welfare.

William Preston Lane, Jr., Democrat, was elected governor n Nov. 1946, for a four-year term beginning Jan. 8, 1947.

Education.—In 1948–49, there were 879 public elementary and occupa-ional schools in the state (including Baltimore city), with a total nrolment of 211,998 and a teaching staff of 6,137. There were 224 econdary and vocational schools, with an enrolment of 104,458 and a eaching staff of 4,624. In the elementary schools, approximately one tudent in four was a Negro and in the higher schools, approximately ne in six was a Negro. The enrolment in Catholic schools for the ntire state was 62,646 white and 2,416 Negro students. The enrolment n non-Catholic private schools was 12,335 white and 182 Negro tudents. Thomas G. Pullen, Jr., was state superintendent of schools.

Social Insurance and Assistance, Public Welfare and Related Programs.—s of June 30, 1949, old-age assistance was being given to 11,786 per-ons, with a total cost for the fiscal year ended June 30, 1949, of 5,052,874; public assistance was being given to 470 needy blind per-ons, with a total cost of $217,609 for the fiscal year; aid to dependent hildren was being given to 5,297 families, with a total cost of $5,069,-10 for the fiscal year. Unemployment compensation benefits paid for he benefit year ending March 31, 1949, were $13,179,546 as compared ith $10,122,931.70 in the preceding year.

As of Dec. 1, 1949, there were 423 white and 348 Negro inmates in he four training schools for juvenile delinquents. As of Dec. 1, 1949, here were 1,563 white inmates and 2,545 Negro inmates, or a total of ,108 inmates in the four state penal institutions.

Communications.—The state roads commission expended $46,114,351 or the fiscal year ended June 30, 1949. The total road mileage in the tate highway system was 4,557, in the county system 11,979 and in he municipalities 1,075.

There were 1,320 line miles and 2,800 track miles of steam railroads nd 60.86 mi. of electric interurban railways. As of Dec. 1, 1949, there ere 606,466 telephone instruments in service.

Banking and Finance.—As of June 30, 1949, state banks and trust ompanies had deposits of $813,792,668 and total resources of $889,-72,372; mutual savings banks had deposits of $398,696,988 and total esources of $446,436,392. There were 61 national banks in the state ith deposits of $687,416,000 and resources of $740,914,000. The total esources of all state and national banks were $2,076,822,764. As of ec. 31, 1948, 374 savings, building and loan associations were com-uted to have assets of $310,746,435.

State appropriations for the year ended June 30, 1949, were $135,903,283 and expenditures were $114,560,024. State appropriations for the year ending June 30, 1950, were $131,184,376. The total bonded indebtedness of the state as of June 30, 1949, was $25,849,000 and there was a general fund surplus of $4,102,151.

Table I.—*Leading Agricultural Products of Maryland*

	1949	1948	Average 1938–47
arley, bu.	2,822,000	2,325,000	2,019,000

Agriculture.—During the first ten months of 1949, Maryland farmers received $74,264,000 from marketing of principal crops as compared with $74,641,000 for the similar period in 1948. Livestock and livestock products brought a total of $135,525,000 in 1949 as compared with $140,505,000 in 1948. The aggregate receipts from all such sources amounted to $209,789,000 in 1949 and $215,146,000 in 1948.

Manufacturing.—The Maryland employment security board estimated the number of manufacturing establishments as of June 30, 1949, to be 3,181, employing 218,967 persons, as compared with 239,279 as of June 30, 1948, and the nonmanufacturing establishments (covered by unemployment compensation) at 33,569, employing 320,676 persons, as compared with 328,384 as of June 30, 1948.

The total payroll for the three months ended June 30, 1949, was: manufacturing, $160,315,180; nonmanufacturing, $191,291,103, making total quarterly payrolls for the 13-week period $351,606,283, as compared with $352,461,659 for the similar period of 1948.

Mineral Products.—The department of geology, mines and water resources reported the production of coal at 1,780,067 net tons in 1948 and 2,252,050 tons in 1947.

Table II.—*Mineral Products of Maryland*

	Tons	Value
Fire clay	202,054	
Other clays	465,436	$ 521,754.00
Stone	1,576,990	2,752,285.00
Sand and gravel	4,624,094	4,792,554.00
Lime	71,892	673,241.00
Miscellaneous	451,759	3,857,621.00

After numerous unsuccessful attempts, the first commercial gas well came in near Redhouse, in Garrett county, late in 1949.

Oysters.—The commercial catch of oysters in Maryland waters during the 1948–49 season was 2,702,814 bu., as compared with 2,027,381 bu. for the 1947–48 season and 2,157,858 bu. for the 1946–47 season.

(H. E. F.)

Massachusetts.

A north Atlantic state of the U.S., Massachusetts was admitted to the union on Feb. 6, 1788. It is popularly known as the "Bay state." Area: 8,257 sq.mi., including 350 sq.mi. of water; population (Massachusetts census 1945) 4,493,281; (July 1, 1949, est.) 4,713,000. The capital is Boston (pop. 1940, 770,816); other important cities (with 1940 pop.): Worcester (193,694); Springfield (149,554); Fall River (115,428); Cambridge (110,879); New Bedford (110,341); Somerville (102,177); Lowell (101,389); Lynn (98,123).

History.—State officials elected for the biennium 1949–50 were: governor, Paul A. Dever; lieutenant governor, Charles F. Jeff Sullivan; secretary of state, Edward J. Cronin; treasurer, John E. Hurley; attorney general, Francis E. Kelley; auditor, Thomas J. Buckley. Leverett Saltonstall, Republican, was reelected to the United States senate.

The 1949 session of the general court of the Commonwealth of Massachusetts was the 156th session. The legislature convened on Jan. 5 and adjourned on Aug. 31, the longest session in the history of the state. The grand total of appropriations for the fiscal year 1950 was $363,000,000 an increase of $92,000,000 over the preceding year. Included in the appropriation were bond issues of $34,000,000 for capital outlay, $3,000,000 for new construction of mental hospitals and $100,000,000 for highways.

Laws affecting civil rights and liberties were enacted, including the Fair Education Practices act. This law empowered the state department of education to order a school to admit a qualified student if he could prove that he was rejected for reasons of race, creed or colour. Religious or denominational institutes were exempt from its provisions.

Another law provided that there should be no discrimination in the Massachusetts national guard against persons wishing to join, based on race, creed, or colour.

Any one who was a member of, or supported any organization which advocated the overthrow, by force, violence or other illegal or unconstitutional methods, of the government of the United States, or of the Commonwealth of Massachusetts was barred from employment in any job in the public service.

Paul Revere Liberty Bowl.—A joint convention of the Massachusetts senate and house of representatives was held on Feb. 15, 1949, to commemorate the return to Massachusetts of the historic Paul Revere Liberty bowl. After the convention in the state house, the Liberty bowl was placed on public exhibition at the Boston Museum of Fine Arts.

Fifteen members of that secret organization of patriots, the Sons of Liberty, commissioned Paul Revere to design and make this bowl in tribute to the 92 heroic members of the Massachusetts bay house of representatives, who in 1768 defied the king's order to rescind a resolution authorizing a circular letter to the other colonies calling on them to unite in protest against unjust taxation. Their courageous stand was an important step toward a United States of America.

Paul Revere engraved this tribute on the Liberty bowl:

> To the Memory of the Glorious NINETY-TWO: Members of the Hon'bl House of Representatives of the Massachusetts-Bay, who, undaunted by the insolent Menaces of Villains in Power, from a strict Regard to Conscience and the LIBERTIES of their Constituents, on the 30th of June 1768, Voted NOT TO RESCIND

The bowl remained in the possession of the Sons of Liberty and was present at their secret meetings at the Bunch of Grapes tavern in Boston, where they plotted their resistance to the impositions of king and parliament.

Education.—In 1949 there were 1,764 public elementary schools with 356,281 pupils; 111 junior high schools with 74,515 pupils; 311 senior high schools with 132,075 pupils. The public schools of the state employed a total of 23,746 teachers at an average salary of $2,879.92. The total expenditure for public schools for support and outlay amounted to $106,054,367.82. The total enrolment in all colleges amounted to 67,144 students, a decrease of 5,375 over the preceding year. John J. Desmond, Jr. was the state commissioner of education.

Social Insurance and Assistance, Public Welfare and Related Programs.—During 1949 old-age assistance was extended to include an average of 93,596 persons at an estimated annual expenditure of $68,860,819. This was an increase of $10,000,000 over the preceding year. An average of 10,179 families received assistance for the care of dependent children at an estimated cost of $15,939,160, an increase of $3,500,000; general relief was extended to an average of 46,514 persons monthly, at an estimated cost of $13,070,435.

For the year ending July 1, 1950, the commonwealth appropriated $5,737,365 to maintain correctional institutions, including the state prison (583 inmates), prison colony (929 inmates), reformatory for men (810) reformatory for women (342 including babies under 2 years) and state farm (2,228, including the criminally insane).

Banking and Finance.—Revenue receipts of the commonwealth for the fiscal year ending June 30, 1949, were $303,548,484.29, including bonds of $18,800,000; expenditures for state government amounted to $292,901,001.30. The direct gross debt was $134,460,800 less a sinking fund of $5,248,762.92, for a net debt of $129,212,037.07.

The assessed valuation in the state, Jan. 1, 1948 totalled $6,816,385,502. The estimated valuation on Jan. 1, 1949 was $7,098,814,149.

As of Oct. 31, 1948, bank deposits in savings banks amounted to $3,185,086,795; and commercial departments of trust companies, $902,651,336; in savings departments, $277,026.189; in credit unions, $62,701,407; and in co-operative banks, $555,060,665.

Table 1.—***Principal Agricultural Products of Massachusetts***

Crops	1949	Production 1948	Average 1938–47
Corn, all bu..	1,517,000	1,435,000	1,705,000
Cranberries, bbl.	530,000	605,000	437,600
Apples, bu.	3,842,000	2,194,000	2,488,000
Hay, tons	561,000	653,000	569,000
Potatoes, bu.	2,850,000	3,548,000	2,997,000
Tobacco, lb..	12,624,000	12,017,000	9,423,000
Onions, (50 lb. bags)	417,000	361,000	—
Oats, bu	248,000	272,000	194,000
Asparagus, (30 lb. crates)	112,000	96,000	—

Table II.—***Estimated Value of Principal Products Manufactured in Massachusetts***

Products	Estimated Value, 1949
Electrical machinery, apparatus and supplies	$450,000,000
Woollen and worsted goods	440,000,000
Boots and shoes, other than rubber	356,000,000
Clothing, men's and women's, including work clothing	321,000,000
Cotton goods	229,000,000
Leather: tanned, curried and finished	194,000,000
Foundry and machine-shop products	188,000,000
Printing and publishing, book and job and newspapers	165,000,000
Rubber goods, including rubber tires and inner tubes	163,000,000
Bread and other bakery products	162,000,000
Paper and wood pulp	142,000,000
Boot and shoe, cut stock and findings	120,000,000
All other industries	3,428,000,000
Total value	$6,358,000,000

Agriculture.—Preliminary revised figures for cash receipts for 1948 (including government payments amounting to $979,000) totalled $207,418,000. This included total crop cash receipts of $78,593,000 and total live stock products of $127,846,000.

Manufacturing.—In 1949 there were 2,036 labour unions, with a total membership of 576,358.

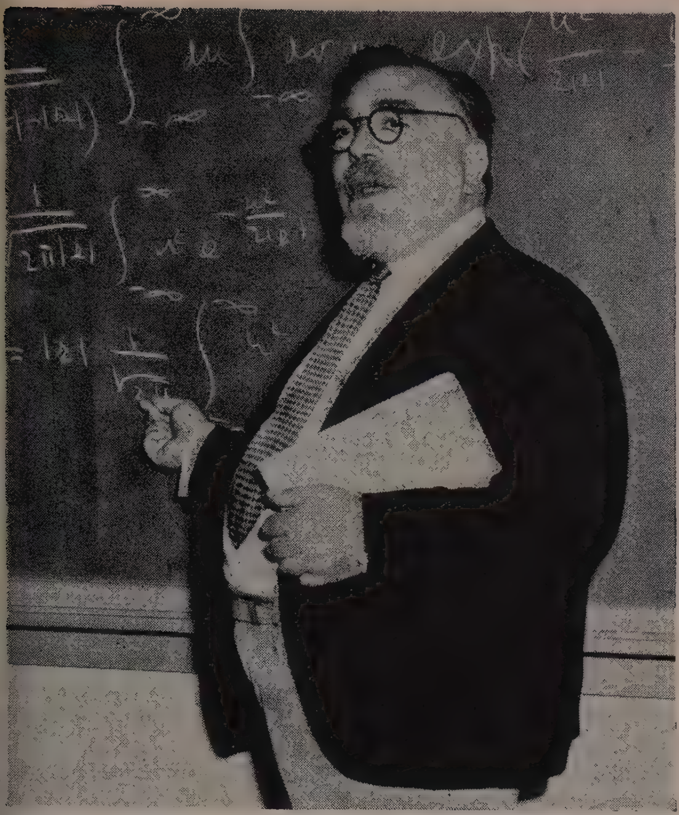
Mineral Production.—During 1946, mineral production amounted to a value of $9,745,000, of which the chief items were: lime $1,136,428, clay products 1,235,000, sand and gravel $2,909,784 and stone $4,135,238. (D. A. Dy.)

Mathematics.

The year 1949, in contrast to 1948, was not distinguished mathematically by any striking discovery. Apparently no outstanding old problem was solved, nor was any promising new method devised. Nevertheless, the output of highly technical mathematics accelerated and almost equalled in bulk that of the late 1930s. Much European work, especially German, that had been delayed in publication by World War II got into print, further overcrowding the already overcrowded journals. At the close of the year, it was too early to sift and appraise this mass of detailed contributions. The resumption of publication in both Germany and Italy, and to a far lesser extent in Japan, burdened the available space for printing to the limit. This was but one of several details indicating that, as the century approached the halfway mark, the cultivation and production of mathematics was likely to be governed by economic and military considerations to an extent which would have seemed fantastic prior to World War II. Such considerations appear to have been the significant feature of the troubled year 1949 in the progress of mathematics. They affected mathematics in all countries. Further, many mathematicians who before the war had not worked in applied mathematics were deflected from their previous interests, in which they had made their reputations, into governmental work of one kind or other.

On the economic level, the continuing increase in the cost of printing drastically curtailed the publication of mathematical research. The most urgent problem facing the mathematicians of the United States, for example, was how to finance publication. Since about 1920 this problem had steadily become more acute, until in the critical year 1949 it was imperative that a totally new policy be adopted. With the exception noted in the next paragraph, mathematical research is unpaid. It is done, mostly by university professors, on the researchers' own free time. A mathematical discovery may contain the germ of a lucrative industry, yet the man who makes the discovery receives no financial reward. His discovery can be neither patented nor copyrighted. His compensation has been that some academy or mathematical society has printed his work without cost to him. For the reasons indicated this was no longer possible. Several of the European academies suspended publication. With great reluctance the American Mathematical society (with the largest membership of any body of professional mathematicians in the world) reversed its policy of publication cost-free to authors, a policy of over half a century's standing, and would henceforth ask either the author of a research paper or the institution with which he was connected to bear a substantial part of the cost of publication. Indicative of the financial crisis of 1949 was the plight of the abstract journal, *Mathematical Reviews*, founded in 1940 to anticipate the suspension of similar European journals, which was sustained only by a subvention of $21,500 for one year from the office of air research.

The last is illustrative of the way in which the military had aided mathematical research since the close of World War II. Some of the subsidized research was in fields which, at least to a layman, seemed to have no possible connection with military needs; for example, a special case of the decision problem in mathematical logic. This type of work was not classified in the technical sense of military security and was given freely to the



NORBERT WIENER, professor of mathematics at the Massachusetts Institute of Technology and author of *Cybernetics; or Control and Communication in the Animal and the Machine*, a study which grew out of his work in mathematics and became a meeting point for a number of the social and physical sciences

public, ultimately, of course, at public expense.

The other side of the picture is typified by the report (June 27, 1949) of the Policy Committee for Mathematics. This committee in Feb. 1949 "established a Committee on Liaison with the Department of the Army and Department of the Air Forces." This and the following quotations are transcribed from the report of the Policy committee of the American Mathematical society, Aug. 1949. Their application, with obvious qualifications, is world-wide.

> The technical uses of mathematics in the Army, as well as of the other Services, began to multiply rapidly in World War II and have continued to do so. Adequate and effective utilization of mathematical skills in the National Military Establishment is therefore to some degree still a matter for pioneering. The fact that the number of highly trained mathematicians is limited creates a personnel problem which would become critical in an emergency. . . . It was decided, therefore, that the Committee on Liaison should hold itself ready to . . . act as a panel of Consultants to assist the Department of the Army in attaining the optimum technical utilization of the available mathematical skills, and to advise upon the proper allocation of available mathematical manpower, especially in time of emergency.

Subsequent to the issue of the Policy committee report, liaison relationships were established by the committee with the Personnel Policy board of the national military establishment. The Policy committee was composed of representatives of the American Mathematical society, the Mathematical Association of America, the Institute of Mathematical Statistics and the Association for Symbolic Logic.

BIBLIOGRAPHY.—A complete list of publications for 1949, with concise abstracts, is given in *Mathematical Reviews*, vol. 10. (E. T. B.)

Matthews, Francis Patrick

(1887–), U.S. government official, was born on March 15 at Albion, Neb. He was graduated from Creighton university in Omaha, Neb., in 1910 and received his law degree from the same institution in 1913. He became a successful lawyer and engaged in a number of business and civic enterprises, and in 1932 was elected chairman of the Democratic committee for Douglas county, Neb., in which Omaha is situated. From 1933 to 1949 he was counsel for the Reconstruction Finance corporation in Nebraska and Wyoming. In 1942 he was made chairman of the executive committee of the National Catholic Community service, one of the elements of the United Service Organizations. For his U.S.O. work he was given the medal of merit by Pres. Harry S. Truman; he also was accorded high honours by the pope. In 1946 President Truman appointed him to the president's committee on civil rights, and on May 13, 1949, announced that he had nominated Matthews as secretary of the navy.

Maurice and Laura Falk Foundation, The: *see* SOCIETIES AND ASSOCIATIONS.

Mauritania: *see* FRENCH UNION.

Mauritius.

A British colony in the Indian ocean. Area: *c.* 720 sq.mi. Pop. (mid-1948 est.): 442,000, including 279,000 Indians. The capital is Port Louis. Dependencies: area, *c.* 87 sq.mi.; pop. *c.* 14,000. Governor in 1949: Sir Hilary Blood.

History.—A campaign to stamp out malaria was inaugurated during 1949 and made good progress. A commission of inquiry into the workings of the supply control department cleared the controller of charges of bribery but was in general critical of the department and found apparent evidence of fraud among minor employees. The visit to the island in May of the Indian cruiser "Delhi" was the social event of the year.

Finance and Trade.—The unit of currency is the rupee, which in Nov. 1949 was valued at 21 cents U.S. Budget (1947–48): revenue Rs. 39,856,646; expenditure Rs. 49,147,495. Foreign trade (1948): imports Rs. 136,265,540; exports Rs. 144,345,359. Principal export: sugar. The 1949 sugar crop was estimated to reach the record size of 410,000 metric tons. (Jo. A. Hn.)

Meat.

U.S. production of all meats increased very moderately in 1949, the total being estimated at 22,130,000,000 lb. at least, compared with 21,599,000,000 lb. in 1948; the average in 1937–41, however, was only 17,675,000,000 lb. Pork accounted for most of the increase. The total meat supply per capita in 1949 was estimated at 147 to 150 lb., compared with 146.6 lb. in the previous year and 126-lb. average in 1935–39. Per capita consumption of beef was estimated at 64.1 lb., slightly more than the 63.3 lb. of 1948 but well below the record of 73 lb. consumed in 1945. Veal consumption in 1949 was 8.5 lb., compared with 9.4 lb. in 1948 and 8.1 lb. prewar. Pork consumption per capita for 1949 was estimated at 70.2 lb., compared with 68.7 lb. in 1948 and 79.2 lb. in 1944. The spring pig crop of 1949 was 59,030,000 head, compared with 51,266,000 head a year before, the increase being in line with the record feed supply; the fall crop of 1949 was reported as 37,262,000 head, against 33,921,000 head in 1948; the spring crop of 1950 was forecast at 62,500,000 head, or 6% higher than in 1949.

Lamb and mutton meat production declined to 600,000,000 lb. in 1949, or 4.0 lb. per capita, compared with 753,000,000 lb. in 1948 and an average consumption prewar of about 6.8 lb. per capita. Stock sheep numbers on Jan. 1, 1949, were only 27,818,000 head. Lamb feeding was the smallest in 20 years, primarily because of scarcity of feeder lambs.

At the end of 1949 storage supplies of meat were about 15% less than in 1948.

U.S. exports of meats were small, estimated at 73,000,000 lb. (carcass weight) during 1948–49, compared with 152,000,000 lb. in the preceding year and 1,376,000,000 lb. in 1945–46, lower even than the 123,000,000 lb. average prewar.

Prices of meat animals in 1949 followed divergent trends.

U.S. Meat Production

(In millions of pounds, dressed weight)

	1950*	1949	1948	1947	1946	Average 1937-41
Beef.	9,550	9,580	9,181	10,429	9,373	7,196

Lamb and mutton.	570	600	753	802	970	884
Pork.	11,500	10,650	10,246	10,605	11,173	8,573
Total. . . .	22,920	22,130	21,599	23,435	22,956	17,675

*Forecast by U.S. Department of Agriculture.

Hog prices in general declined; levels very near to support levels were reached in the autumn, but purchases of lard for export provided sufficient, although somewhat indirect, support. Prices to farmers ranged between a high of $20.10 per hundredweight in January to a low of $14.80 per hundredweight in December; in general they were more than $7 per hundredweight below the previous year. The best beef cattle reached new high price levels in the late summer but other grades were rather sharply lower, feeder cattle selling at $3 to $7 per hundredweight below the previous year. High-quality beef set new high record prices during 1949, well above $40 per hundredweight. The grand champion steer of the International Live Stock show sold for a record $11.50 per lb. Lamb prices held at high levels during most of the year, reaching a top average to producers of $25.80 per hundredweight in April and in general were not much below the high levels of 1948.

Because of the large number of hogs, the production of lard in 1949 was forecast at 2,850,000,000 lb., as compared with 2,526,000,000 lb. in 1948 and a prewar average of 2,091,000,000 lb. Exports of lard were very large, amounting to 513,200,000 lb. in the period Jan. to Sept. 1949, as compared with 235,100,000 lb. during the same period of 1948. Lard prices for much of the year were below 12 cents per lb., as compared with nearly 20 cents in 1948. Storage stocks in December of 38,285,000 lb. were less than half those of the previous year.

Poultry meat, both chicken and turkey, was produced and consumed in larger amounts in 1949, averaging about 10% more than in 1948, the volume being 164% of the prewar average (1935–39=100), compared with 153% in 1948. Prices were substantially lower and turkey prices were supported by a government purchase program. Storage stocks were at high levels.

Fish were consumed in approximately the same amounts in 1949 as a year before. The supply situation eased, also the price, particularly in regard to some canned types. A record storage level was reached in December with 162,000,000 lb. of frozen fish products, compared with 147,000,000 lb. a year earlier.

World meat supplies increased substantially during 1949, largely because of the improved situation in western Europe. The 400,000 head of cattle usually imported into the U.S. from Mexico were strictly embargoed because of the foot-and-mouth disease in the latter country. (*See* also VETERINARY MEDICINE.) Export of meat from Argentina, Australia, Canada and New Zealand, primarily to the United Kingdom under bulk purchasing agreements, continued on approximately the same level as in 1948. (*See* also FOOD SUPPLY OF THE WORLD; LIVESTOCK.)

(J. K. R.)

Medical Rehabilitation of the Disabled.

The most encouraging developments during 1949 were the creation of additional facilities and programs for rehabilitation, particularly in the field of cerebral palsy, and the broadening of the concept of the responsibility of medicine and society for the total care of the handicapped patient. Most discouraging developments were the continued shortages of trained personnel and the continued increase in the incidence of chronic disease and its resulting physical disability.

As evidence of the growing interest in medical rehabilitation of the disabled as an integral part of medical care, new departments of rehabilitation and physical medicine were created in a number of medical schools and hospitals, and additional hospital residencies leading to specialty certification for physicians in this field were established.

In the United States during the year, the Council on Physical Medicine of the American Medical association was broadened to the Council on Physical Medicine and Rehabilitation; the American Board of Physical Medicine became the American Board of Physical Medicine and Rehabilitation; and a permanent section on physical medicine and rehabilitation was created within the American Medical association. The Baruch Committee on Physical Medicine, largely responsible for accelerated research and graduate training in this field, became the Baruch Committee on Physical Medicine and Rehabilitation.

In addition to new programs in hospitals, the growth of community rehabilitation centres continued. Largely through the efforts of such groups as the British Council for the Welfare of Spastics, the National Society for Crippled Children and Adults, state and local public health and educational agencies and parents' groups, gains were made particularly in the field of cerebral palsy. Although developments were not as rapid in Great Britain, in the United States in 1949 there were more than 200 major centres and programs providing specialized services for the cerebral palsied as compared with an almost total lack of such services a few years before.

Major obstacle to the development of programs of medical rehabilitation of the disabled in 1949 was the shortage of trained personnel. Although the number of physicians trained in physical medicine and rehabilitation increased substantially, there were still far too few available in 1949 to meet the needs of public and private hospitals and rehabilitation facilities. The shortages of physical therapists, occupational therapists and speech therapists were made even more acute by the increased number of programs and the number of therapists needed for emergency work during the poliomyelitis epidemics.

The most fundamental differences in services to the handicapped in Great Britain and the United States during the year was in employment. Under the British system, all persons over 16 yr. of age with a disability constituting a serious handicap to employment and likely to last at least six months could voluntarily place their names on the registry of the disabled in all ministry of labour offices. The registry in 1949 carried nearly 1,000,000 names, with an average net increase from 7,000 to 8,000 names a month. By law, it was required that all businesses employing more than 20 persons select 3% of those employees from this registry. Because of the great manpower shortage in Great Britain, and the ready availability of employment, most employers during 1949 hired far more handicapped persons than the law required, and the quota system was rarely resorted to.

Employment of the handicapped in the United States continued on a voluntary basis, but with a greater acceptance by industry of handicapped workers.

As medical science continued to move forward in the prevention and cure of infectious diseases, the number of chronically disabled and aged persons continued to mount. In the United States, in 1949, the chances were 2 to 3 that a young man starting his working life at 18 would live to his retirement age of 65. White men at the age of 65 could expect to live an additional 12½ yr. on the average, and white women an average of 14¼ yr. With the increase in the incidence of chronic disability resulting primarily from an ageing population, greater demands were made during the year on medical rehabilitation and welfare services. One development holding promise of a more unified approach to the problems of chronic illness in the United States came during 1949 when the Interim Commission n Chronic Illness, founded in 1946 by the American Medical ssociation, American Hospital association, American Public ealth association and American Public Welfare association, ecame the permanently organized Commission on Chronic Illess. The primary objective of this commission was to study e clinical problems (including prevention and research, institional care, noninstitutional care, rehabilitation and commuity problems) in providing better services for the chronically l. Similar developments were under way in Great Britain rough the national health service. (*See* also VOCATIONAL EHABILITATION, OFFICE OF.)

edicine. The most important announcement in the advance of medicine during 1949 was the control of eumatoid arthritis by use of an extract from the adrenal and called Cortisone or an active principle from the pituitary and called ACTH or the adrenocorticotrophic hormone. The tuitary gland develops a hormone that stimulates the adrenal and to action. The cortex or outer portion of the adrenal and elaborates several hormones. E. C. Kendall of the Mayo oundation isolated at least six of these known at first as Comounds A, B, C, D, E and F. Compound E is Cortisone. Evience showed that both Compound E and Compound F miraculusly control the symptoms of arthritis. However, patients ust apparently continue to take the preparation with every tbreak of the condition. Cortisone may be given directly to e patient or he may get ACTH which will stimulate his drenal gland to make the preparation in increased amounts and ut it into the blood. As the year ended, pharmaceutical manucturers and investigators everywhere were trying to prepare ese hormones by synthetic methods. Search was being made r a source of Cortisone which would make possible eliminaon of some of the 37 steps necessary to manufacture the drug hen beginning with bile of beef as the source. Other possible urces suggested were the plant *Strophanthus sarmentosus*, ams and soybean oil. (*See* ARTHRITIS; ENDOCRINOLOGY.) A symposium held late in 1949 indicated possible use of ACTH in controlling rheumatic fever, lupus erythematosus, psoriasis, leukemia and possibly several mental disturbances.

Another important announcement of 1949 was the information that antihistaminic drugs such as benadryl, pyribenzamine, chlor-trimeton and many others could, when used early, avert the common cold or cure it. The food and drug administration permitted public sale of these drugs, including mixtures of antihistaminic drugs with the common ingredients of cold tablets such as aspirin and phenacetin and caffeine as well as mixtures with nose drops and creams. Allergists asserted, however, that at least one-third of the people taking antihistaminic drugs suffered drowsiness and warned against the possible toxic effects of such drugs when used without medical controls or over long periods of time.

A third announcement of 1949 which attracted much attention was the elaboration in Denmark of a drug called Antabuse, technically known as tetraethyl thiuram disulphide, which creates an unpleasant reaction in persons who have previously taken alcohol. Thus the action of the drug was such as to condition the person against drinking.

Dramamine, a combination of an antihistaminic drug with aminophyllin, was hailed not only for its established usefulness in controlling seasickness and airsickness but was also being tried with some success in controlling the nausea of pregnancy and the dizziness associated with Meniere's disease.

Continued work with streptomycin indicated effectiveness in several forms of tuberculosis. Extensive studies made by the Veterans' Administration showed that streptomycin combined with a drug discovered in Sweden called para-amino salicylic acid was more effective in a considerable number of cases than either drug used alone.

Attention continued to be focused on the antibiotic drugs and their usefulness in a variety of conditions. Penicillin continued to be the mainstay against most infections with germs. Antibiotic drugs were being sought in a variety of sources, including fungi, germs such as the *Bacillus subtilis* (which yields bacitracin), also in ragweed, bananas and sweet potatoes.

Aureomycin was found especially effective in Rocky Mountain spotted fever, typhus, atypical pneumonia, undulant fever, syphilis, venereal granuloma, herpes, pemphigus and whooping cough.

Chloromycetin, renamed chloramphenicol, was also found use-

ABORATORY at the Memorial Cancer Center, New York city, where adrenal rmones were synthetically prepared in 1949. These compounds were used medical research to study their influence on tumour growth in cancer paents. This work was one phase of the study of the definition and correction chemical changes that occur in cancer patients

WHOOPING-COUGH PATIENTS, with an attendant nurse, in a portable decompression chamber being used for experimental treatment at Park hospital, London, in 1949. Children were brought gradually to pressure levels prevailing at a height of two and one-half miles and kept there for half an hour

ful in many of these conditions, and was found to be especially valuable in the treatment of infection with the germ of typhoid fever.

Several new drugs were being tried in hypertensive disease, or high blood pressure, with particular interest centred on veratrum viride and dihydroergocornine, which seemed to have the ability to knock out the sympathetic nervous system, thus achieving to a considerable extent the same result accomplished by surgical procedures on the sympathetic nervous system that had attracted interest for some years.

Research with the radioactive isotopes continued. Radioactive iodine became the chief reliance in the control of disturbances affecting the thyroid gland and was being used instead of operative procedures for excessive action of the thyroid, called hyperthyroidism. Radioactive isotopes were also used extensively in studying the physiology of the body and in tracing drugs, vaccines and other preparations injected into the body to determine their chief effectiveness.

Especially interesting in the field of research was the introduction as almost a routine procedure of injection directly into the veins of the local anaesthetic substance called procaine. Procaine was used especially for the control of pain in burns and after operation in a variety of inflammatory conditions. The drug was tested also for producing anaesthesia in childbirth, for frostbite and asthma and in painful cases of infantile paralysis. Procaine given intravenously has the special power of inhibiting action of the sympathetic nervous system. When the drug is given by injection into the vein, there is a sensation of warmth throughout the body five to seven minutes later, also dilatation of the pupils of the eyes and some lightheadedness, followed by relaxation. The drug was also recommended in severe and intolerable itching. Still another use of intravenous procaine was its application to prevent reactions of sensitivity to such drugs as penicillin. A French observer, Leriche, noted its value in the treatment of pain associated with fractures and in severe arthritis as well as in neuralgias of various types.

Among other drugs prominent in the investigative field during 1949 was paradione for the treatment of epilepsy, marphan as a substitute for morphine, and Vitamin B_{12} or Cobione as an effective treatment in pernicious anaemia and in other anaemias. Calciferrol, a highly concentrated vitamin D preparation, was found useful in lupus vulgaris. Two new drugs, parpanit and Artane, were tried for spasmodic conditions and tremors in shaking palsy and similar diseases. In amoebic dysentery a new drug called milibis (bismuth glycolyl arsenilate) was recommended.

Among surgical procedures, greatest interest continued to attach to operations on the blood vessel system, including shunt operations such as those used for the control of blue babies, also an operation for coarctation of the aorta, the largest blood vessel coming from the heart. New devices enabled partial clamping of this great blood vessel during which operative procedures could be carried out.

Other surgical procedures in the research field during 1949 included prefrontal lobotomy by a variety of techniques to change the functions of the brain as a mechanism for the control of depressive and other forms of mental disturbances. Moniz of Lisbon, Port., who devised this procedure, received the Nobel prize in medicine for 1949. The prize was shared with Walter Rudolf Hess for his discoveries of the factors in the nervous system concerned in sleep.

Among new devices which were the focus of attention were electrosonic waves for inducing heat and various changes in the tissues of the body, also the jet injectors for injecting drugs into the body without breaking the skin.

In surgical procedures for removal of portions of the lung, the operation was improved by the use of Lucite balls in a polythene sac to fill the area removed in a surgical operation called thoracoplasty, an operation performed in severe tuberculosis and also in abscess of the lung.

A gallstone detector was devised in the form of a probe which gives off an amplified sound when the probe is passed into the gall ducts and touches a stone.

Research on the causes of disease centred on the observation that poliomyelitis or infantile paralysis is not caused by one virus but by several viruses; the development of a vaccine against the disease would involve determination of the specific form of virus responsible for any individual epidemic. During 1949 the total number of cases in the United States reached more than 43,000, by far the largest number in any one year.

At Notre Dame university, South Bend, Ind., experiments were conducted on cats and chickens with a view to raising animals in an atmosphere entirely free of infective germs. Noteworthy observations included the fact that chickens raised under such conditions developed a form of jitters not occurring under ordinary conditions. The theory was that the absence of germs permits the growth of viruses which are specifically dangerous to the nervous system. Favourable to the circumstances was the absence of dental decay from animals kept under such conditions.

Rehabilitation continued to attract great public and professional interest, and many new devices were developed for this purpose. Operative procedures on the nervous system were investigated with a view to making some progress toward the control of injury to the nervous system. (M. Fi.)

Great Britain.—The first synchrotron in the world to be built and used for medical research was installed in the Royal Cancer hospital, London, under the auspices of the Medical Research council. This 30,000,000 ev instrument produced X-rays of great power and intensity. It differed from conventional X-ray machines which could not effectively be made for potentials above about 1,000,000 ev. This remarkable apparatus was first used for varied biological researches which, *inter alia*, gave data of importance in planning the later application of the machine to the treatment of patients with cancer in those organs where the particular properties of the rays had special advantage.

During World War II great advances were made in the technique of blood transfusion, and its uses were extended. One line of investigation resulted in the standardization of method preparing several fractions of human blood. In Great Britain is brought these fractions within the scope of the Therapeutic ibstances act. Owing to certain difficulties in using blood for ansfusion many possible substitutes were tried. In general ey were unsatisfactory for one or more reasons. For some ne Swedish researchers had been investigating Dextran (a ng chain molecule prepared from sugar) as a blood plasma ibstitute; and some work was published elsewhere which, al-ough critical in some respects, showed that Dextran was an ppreciable step nearer the goal of a blood plasma substitute. the autumn it was made commercially available in Great itain.

Other medical fields in which the year saw great activity were riatrics or the science of the diseases peculiar to old age; ychosomatic medicine which stressed the influence of the ind on the production of physical disease; the epidemiological searches in Great Britain by the ministry of health, the Public ealth Laboratory service and the Medical Research council, rticularly into food poisoning and the common cold; and the ork of the technical commissions of the World Health organ-ition, for example, on the nomenclature of disease (a matter great importance in pathology and medical statistics) and on e unification of pharmacopoeias.

enzies, Robert Gordon

(1894–), Australian prime minister, was born at Jeparit, ctoria, Dec. 20. He was educated in the state schools of Vic-ria, at Grenville college, Ballarat, and at Wesley college, Mel-urne. In May 1918 he was called to the Victorian bar and gh court of Australia, and 11 years later became a K.C. In 28 he was elected to the Victoria legislative council and in e following year to the Victoria legislative assembly. He was nister without portfolio, 1928–29, and attorney general, min-er for railways, and deputy prime minister of Victoria, 1932–. In the latter year he was elected to the federal house of presentatives for Kooyong, and from 1935 to 1939 was at-rney general and minister for industry. He resigned in March 39, but retained the portfolio of co-ordination of defense. ter the death of J. A. Lyons on April 7, 1939, Sir Earle Page s prime minister until April 26, when he was succeeded by enzies who had been elected leader of the United Australia ater Liberal) party. He resigned on Aug. 29, 1941, after the bour party had refused to join a coalition government. enzies remained as minister for co-ordination of defense until e fall of the Fadden ministry on Oct. 7, 1941. From 1943 he s leader of the federal opposition in the house of representa-ves. The general election of Dec. 10, 1949, resulted in a defeat for the Labour government led by J. B. Chifley, and Menzies was sworn in on Dec. 19 as the head of a coalition of the Liberal and Country parties.

Mesta, Perle (Skirvin)

(Mrs. George Mesta) (1891–), U.S. diplomatic official, was born in New York city. Her father, William B. Skirvin, later made a fortune in oil and real estate in the southwest. She was educated in private schools in Galveston, Tex., studied voice and the piano, and married George Mesta of Pittsburgh, Pa., a machine-tool manufacturer. During World War I she directed the Washington Stage Door Canteen and acquired an introduction to Washington society. She travelled abroad extensively with her husband before his death in 1925, and later gained a reputation as a skilful hostess both in Washington and at Newport, R.I. In the mid-1930s she became a member of the National Woman's party, and her introduction to politics came during her lobbying for the equal rights amendment before congress. Before 1941 she entertained and campaigned largely for the Republicans, but with the defeat of Wendell L. Willkie, whom she had favoured, she transferred allegiance to the Democrats. She worked for the Democrats in the 1944 campaign, in 1946 was hostess for the coming-out party of Margaret Truman, President Truman's daughter, and in 1948 and 1949 was co-chairman of the Democratic Jefferson-Jackson day dinners. She was appointed minister to Luxembourg in July 1949.

Metallurgy.

A few of the more important developments in the field of process metallurgy during 1949 are summarized in the following paragraphs.

Aluminum.—Steel sheets coated with aluminum were produced by hot-rolling two sheets of aluminum foil to the surfaces of a steel strip, after passing the strip through a cleaner bath and an electrolytic cell which plated on the surface of the steel a thin layer of electrolytic iron.

Cobalt.—A new plant was completed in the United States for the treatment of cobalt ores, and a new smelter was nearing completion in Canada, to handle cobalt-silver-arsenic ores from the cobalt district. The latter plant was expected to work new ores and to rework old tailing piles from which incomplete recoveries were made.

Gallium.—Gallium was being produced and sold in small quantities, after recovery as a by-product in the treatment of bauxite ores.

Magnesium.—New applications for magnesium included light-weight components in textile looms.

Titanium.—Marked advances were made in methods for the production of pure titanium metal, and extensive research was under way on possible commercial applications.

Substitutions.—Shortage of steel during 1949 resulted in considerable substitution by aluminum, especially in sheets, strips and bars. This substitution might have gone further, had the aluminum supply been more plentiful. In containers for repeated use, such as milk cans, tin plated steel was being replaced by stainless steel, for greater strength, lighter weight, freedom from corrosion and upkeep and a useful life that was expected to be from two to four times longer.

Probably the heaviest trend in substitution was in the replacement of metals by plastics. This movement was advancing rapidly and extensively, not only in toys and gadgets, but also in industrial equipment such as gears and other machine parts. The U.S. army was reported to be testing a plastic pipe, for possible use in combat oil lines. High cost was offset by light weight and ease of handling and laying, aside from the factor of saving in consumption of steel.

Welding and Soldering.—Difficulties in soldering on a metal surface plated with passivated zinc, such as a radio chassis, were overcome by devising a special technique of resistance welding. An indium-base solder was also developed which made possible the sealing of glass to glass or glass to metal. (G. A. Ro.)

Metal Prices and Production: *see* MINERAL AND METAL PRODUCTION AND PRICES.

Meteorology.

The outstanding events in meteorology and the principal results of research during the year 1949 can be grouped conveniently under the subheadings experimental meteorology, synoptic meteorology, applied meteorology, theoretical meteorology and research, international co-operation and weather of 1949.

Experimental Meteorology.—If weather as it occurs in the atmosphere could be duplicated in the laboratory many basic questions in meteorology could be quickly answered. Experimental methods that have given revolutionary results in other physical sciences have had only limited use in meteorology although there have been repeated efforts to find a laboratory approach to the secrets of the atmosphere. Renewed attacks in experimental meteorology were reported in 1948 and the approach gained ground during 1949. As in other sciences there were certain problems in meteorology that could be isolated and analyzed step by step in the laboratory and eventually broken down into their components.

Work in experimental meteorology approached laboratory techniques in two ways: one made use of radar, rocket, rawinsonde, artificial modification of clouds and other free-air experiments in an effort to make the atmosphere itself the meteorological laboratory; the other involved a more concerted effort to devise conventional laboratory techniques for simulating if not duplicating free-air conditions.

Among the latter were the laboratory studies of the rates of fall and rates of evaporation of water droplets and a new determination experimentally of the terminal velocities of falling raindrops. This research also gave new and more exact measurements of the electrical charges on falling raindrops. Other studies repeated measurements of the size and distribution of cloud droplets and their behaviour in an electrical field. Another interesting research project was a refinement of earlier attempts to simulate the circulation of a fluid on a rotating globe with opposing currents set up by applying heat at one place. The apparatus was designed to duplicate the general features of the circulation of the atmosphere about a polar hemisphere and to study the flow along the boundaries of opposing currents. These laboratory studies, although not yet conclusive, were aimed at determining quantities fundamental to full understanding of the general circulation of the atmosphere, the formation of fronts and cyclones and the condensation and coalescence of moisture into precipitation.

The results of these and other experiments were published in the *Journal of Meteorology* and the *Bulletin* of the American Meteorological society.

Research that used the atmosphere itself as the laboratory was greater in scope and diversification than meteorological research in the usual laboratory sense. Experiments in the modification of clouds, the conversion of subcooled cloud droplets into ice crystals and the precipitation of rain and snow from shower-type clouds were carried on more systematically and with more thorough scientific examination of the results during 1949 than in the preceding year. Methods were essentially the same, although refinements in techniques were reported. The chemical agents most commonly used in treatment of shower clouds from aircraft flying above or through the cloud were dry ice and silver iodide. In experiments designed to diffuse condensation nuclei into the cloud from generators on the ground silver iodide was most used.

Unfortunately, scientists disagreed about the results. Project "Cirrus," financed by the office of naval research and the signal corps of the army, reported success in causing rain to fall from shower-type clouds in southwestern United States, but the cloud physics project of the air force and the weather bureau, in extensive tests in Alabama, California and Ohio designed to investigate aspects of the subject not duplicated by Project "Cirrus," found little evidence that artificial means had been successful in increasing rainfall sufficiently to be of commercial value except possibly under very exceptional circumstances. In Canada under the National Research council field tests were reported in which seeding clouds with dry ice had caused rain in considerable quantities.

Although professional rain makers of the past had claimed power to bring rain clouds even though skies were clear, no reputable rain maker in 1949 claimed more than a means of inducing or increasing the fall of rain from clouds formed by natural causes. Artificial methods were not applied except when weather conditions were such that cumulus clouds were already present. Showers as distinguished from steady, light rain come from cumulus clouds. Thus the rain maker usually went to work when the weather was favourable for development of showers without artificial aid and it was difficult to determine whether the cloud treated with dry ice or silver iodide gave rain as result of the treatment or would have developed the same entirely from natural causes. It was well known that the moisture necessary for heavy rainfall comes from vast quantities of humid air brought into the shower cloud or the cyclonic system, in the case of widespread rain, by comparatively large scale inflow of air from other regions, sometimes far distant. However rain is not merely the moisture precipitated from the visible droplets and the invisible water vapour within the cloud itself as it first appears. Since rain makers do not usually claim to set in motion by artificial means the large scale circulation necessary for heavy rainfall except as a possible consequence of the initial rain which they do claim to produce, meteorologists pointed out that artificial rain making had not yet shown conclusive evidence or made a scientific case for its claims. In their experiments rain makers usually selected for their tests those clouds which appeared most promising as shower producers and naturally these were the clouds that were most likely to give showers without artificial aid. Meteorologists also pointed out that few commercial rain making operations had been accompanied by comprehensive and impartial observations of results and by documentation of unsuccessful as well as successful attempts. It appeared to be the consensus of scientists familiar with the subject that the quantity of rain might be increased locally by artificial means under certain relatively infrequent circumstances when naturally formed clouds were near the shower stage and air currents in the region were favourable for shower development, but in no case had there been reason to believe that artificial rain making was a solution for widespread drought when atmospheric conditions were unfavourable for rain. It was estimated that it would be much less expensive to bring water to a drought stricken region by tank car or pipeline than to create artificially the vast cyclonic circulation necessary to produce rain in the way that nature gives it. However intensive research in this important but controversial subject was being continued.

Experimental meteorology during 1949 also announced new ltitude records for high level sounding balloons. In Project Skyhook" the office of naval research reported soundings at ltitudes slightly over 100,000 ft. while the army signal corps ublished the results of one sounding in which the balloon was omputed to have reached 140,000 ft., the highest altitude ever ecorded by sounding balloon. The navy balloons are fabricated rom very thin polyethylene sheets only .001 in. in thickness. Unlike rubber sounding balloons, they do not expand much as hey ascend. Their maximum size inflated is approximately 100 t. in vertical diameter and 70 ft. in horizontal. When they each their equilibrium altitude they can remain at constant evel for many hours, and by suitable design in size, weight and other characteristics it is possible to manufacture balloons for any desired intermediate altitude within rather rough limits. This constant altitude balloon provided a new device for exploring the atmosphere especially with reference to wind flow for long distances at high altitudes.

The signal corps high level balloons are made of neoprene atex. At maximum altitude their size is about 75 ft. in diameter. Their lifting capacity is not as great as that of the larger navy balloons. In addition to their measurements of atmospheric pressure and temperature and their evidence of wind discontinuities not heretofore suspected in the upper air, these balloons were used for other physical research in ozone distribution, onization and cosmic radiation. Too costly for everyday soundngs, these high level balloons were still in experimental stages and first results could not be taken as conclusive.

Among other developments during the year in experimental meteorology were practical studies in the use of radar for identification of thunderstorms and possibly tornadoes; also research in the possibilities of radar to estimate the quantity of rainfall over an area of several hundred square miles to afford better measurements of regional precipitation than was possible with the spot sampling commonly obtained by use of standard rain gauges. Although individual studies in the use of seismographs and "sferics" recorders to detect the development and movements of hurricanes far at sea were continued as reported in the past year or two, there were no outstanding achievements in these methods during 1949. Meteorological literature for the year contained many articles on new instruments and projects in experimental meteorology but none other than those described in foregoing paragraphs appeared to have reached a point where they were of general interest.

Synoptic Meteorology.—During 1949 the principal weather forecasting centres in the United States received synoptic messages every six hours reporting the weather at about 700 places in the northern hemisphere, and in addition many of these centres received several hundred reports each hour, more than 10,000 each day, from airport weather stations conveying meteorological items of importance in air navigation. Yet these voluminous reports presented only a small part of the picture of local conditions and variations in weather of significance to agriculture, commerce and transportation, especially air and sea transportation. There was constant demand from business concerns and the general public for more comprehensive coverage by the

U.S. COAST GUARDSMEN on ocean weather duty in the North Atlantic, chopping at dangerous ice crusts that made the vessel top-heavy

*Difference between the total number of hours of sunshine during 1949 and the normal average total.

government meteorological service, and as aviation expanded there was urgent need for more and more reports of weather elements aloft with their endless changes. Surface weather observations were augmented by upper-air soundings with pilot balloons and radiosondes, by aircraft reconnaissance reports and more recently by hundreds of in-flight weather reports from commercial pilots who on their regular air transport routes encountered local storms, icing clouds and air turbulence that would otherwise not be reported for entry on the daily weather charts from which forecasts and storm warnings were prepared. The great number of incoming reports arriving in a continuous stream flooded the primitive facilities of the weather map analyst and forecaster and forced evolution toward fewer and larger analysis centres with facilities for mechanical processing of data and transmission of completely analyzed maps by facsimile to remote district and local forecasting offices. This evolutionary trend was still in progress by the close of 1949 and the practice of central analysis could not be completely adopted until communications facilities were available and other technical problems solved, but by the end of the year the use of upper-air charts and prognostics prepared by the central analysis unit in Washington, D.C., had become general throughout the United States. With further increase in pilots' reports and upper-air soundings it was obvious that greater use of centrally processed weather maps was inevitable.

The flood of weather reports led to other steps. It was impossible for the individual forecaster to assimilate and interpret mentally the innumerable items of meteorological data required to determine or define the state of the atmosphere over the country, the continent and the globe. Nevertheless this over-all analysis was important for air navigation, for long-range weather forecasting and for estimates of agricultural production and other business analyses and activities. Although progress was not great, there was some improvement during 1949 in use of machine tabulation methods and electronic computer apparatus for rapid processing of synoptic weather data. Meteorologists hoped these developments would eventually simplify the concepts and practices of theoretical and applied meteorology.

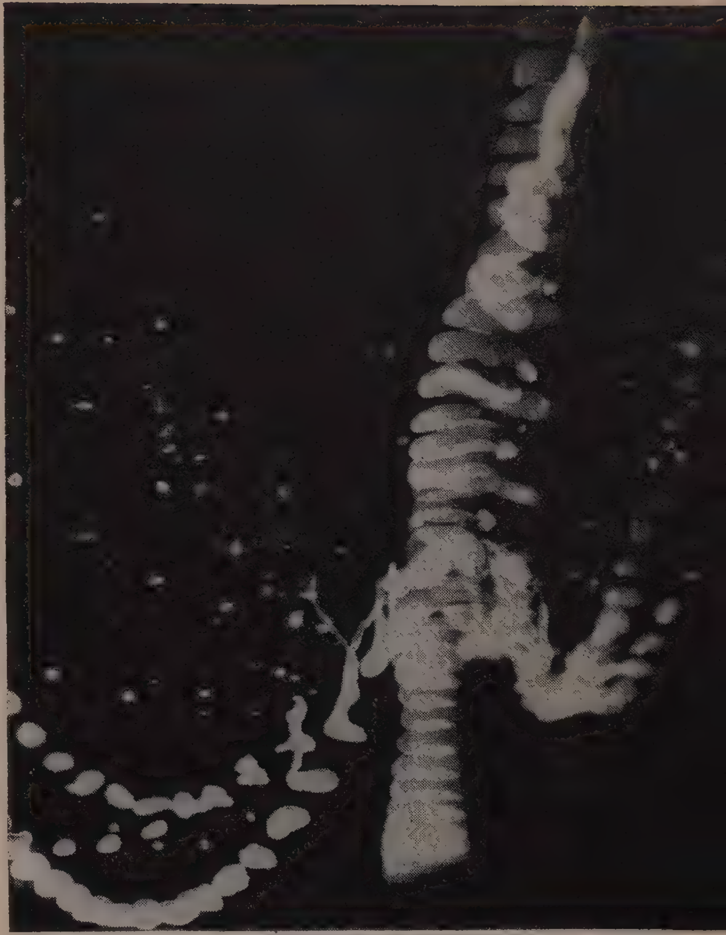
In an effort to reduce the number of spot reports required to represent the state of the atmosphere, one investigator proposed an entirely new concept of synoptic presentation, a system that would show the virtual parameters of the weather for an area rather than a point. This concept was too great a departure from customary synoptic practices and the elements it represents were too intangible for immediate acceptance by weather forecasters, but it constituted a form of solution to a pressing problem and was noteworthy as a precursor to future trends.

Surprised in recent years by evidence of distinct wind streams in the upper air, occasionally with velocities of 200 m.p.h. or more, called jet streams, and interested in the relation of these streams to the general circulation and their bearing on operation of high altitude aircraft and missiles, synoptic meteorologists during 1949 brought out new theories on the connection between fronts in the troposphere and jet streams in the stratosphere. Preliminary observations of the occurrence of these high velocity wind streams in the southern hemisphere were presented with theoretical reasons for believing the phenomenon to be less frequent and less intense than in the northern hemisphere. Direct observations urgently needed to delineate the extent and nature of jet streams five or ten miles above the ground probably depended upon wider and more frequent soundings with the constant level, high altitude balloons already described. It was formerly theorized that winds in the stratosphere were relatively constant and formed a fairly simple general global circulation, but later it was calculated that the velocities in jet streams occasionally reached 300 m.p.h. However most meteorologists, pointing to the rarified state of the atmosphere at high altitudes, believed the air and winds there had insufficient weight and driving force to exert much influence on weather in the lower troposphere near the ground. This view did not overlook the fact that the composition of the high atmosphere as regards ozone content and ionization does affect the radiation balance and other phenomena in ways that may profoundly influence the general temperature, wind circulation and storminess near the earth's surface.

Synoptic meteorologists were giving more attention to pragmatism in weather forecasting. During 1949 there were many studies and some progress in developing more objective methods for forecasting the weather locally, that is, methods based on substantive factors and engineering techniques rather than upon subjective prognostics and expert opinion alone. The oft-tried and discarded use of relative probabilities or prognostic confidence factors had further study as an aid to the businessman in calculating his weather risks. Forecasts of river stages and floods and of seasonal water supply in western states where snow accumulation in the mountains is an important source of water for irrigation in the summer growing season had been improved in recent years and were especially valuable during 1949. The close relationship of rain or snow and temperature to rainfall runoff, floods and water supply involve good co-ordination in hydrometeorological factors when these conditions are to be predicted.

The daily synoptic reports and upper-air soundings in the arctic and over the oceans, which were noteworthy new achievements within the last few years, had become routine operations in 1949. Throughout the year weather reconnaissance flights to the north pole were made by U.S. air force planes operating from Alaska, and during the hurricane season similar flights were made over tropical waters. Weather reconnaissance flights and radar observations contributed much toward keeping the hurricane warning service of the weather bureau at a high level of accuracy. For reasons of economy the nations participating in the ocean weather vessel patrol in the North Atlantic agreed to reduce the number of station vessels to 11 and for similar reasons the United States reduced the number in the Pacific to 3. Television, an excellent medium for meteorological services in which map display is important, came into wider use as a means of picturing for the general public the march of the weather from day to day. With public interest in weather bureau services still growing and in contrast thereto an increasing demand for reduction in government expenditures, it was logical to encourage more use of radio and television broadcasting channels for disseminating weather forecasts and warnings to the general public and to direct attention to the industrial or consulting meteorologist as the channel for private or individual meteorological services.

Applied Meteorology.—After World War II meteorologists redoubled their efforts to encourage and develop the practical applications of weather science and its services in the everyday operations of business and industry and the thousands of enterprises where weather and climate are important factors. During 1949 the American Meteorological society gave special attention to opportunities in applied meteorology. New in this field was the professional directory published in its monthly *Bulletin* announcing the services offered by various consultant firms in meteorology in several parts of the United States.



STROBOSCOPIC PHOTO of a falling raindrop, showing that raindrops are not tear-shaped but assume changing forms as they drop. The picture was taken as part of a joint cloud study program of the U.S. army signal corps, the office of naval research and the General Electric research laboratory at Schenectady, N.Y.

Also contributing to diffusion of weather knowledge and its practical application by the general public were the new organization called the Amateur Weathermen of America and its bimonthly periodical *Weatherwise.* The Amateur Weathermen of America sought to reach meteorological readers of all ages and interests, and in co-operation with Science Service, Washington, and the Science Clubs of America encouraged young men and women in secondary schools throughout the country to cultivate the observing of weather as a hobby or as co-operative members of the voluntary climatological service. Through articles published on its daily weather maps and through personal associations in its field offices the weather bureau continued to encourage business and industry to make better use of applied meteorology and to avail themselves of the services of professional consultants in this field.

Noteworthy was the work of the Laboratory of Applied Climatology of Johns Hopkins university, Baltimore, Md., where research in the meteorological factors relating to crop development and harvesting led to improved quality of product, better scheduling of harvest and reduced labour costs. Although in years past agriculture experiment stations of state and federal governments and agricultural colleges had worked extensively on relationship between weather and climate and crops, the work of the Laboratory of Applied Climatology was outstanding as an instance in which an industrial concern made such broad use of a scientific consultant service in meteorology.

In the building industry a preview of the applications of modern meteorology and climatology to design, construction and location of industrial and residential structures was shown through co-operation of the American Institute of Architects and one of the popular periodicals on home design and beautification. The publication aroused widespread interest and heralded closer co-operation in research for better utilization of natural resources in weather and climate for planning and selecting the best site for the particular industrial or residential purpose and for other uses such as revision of building codes and formulation of better maintenance practices to meet the diverse effects of different kinds of weather and climate.

The problem of control of air pollution focused attention on micrometeorology, especially in localities like Donora, Pa., where in Oct. 1948 local weather conditions led to concentration of factory effluents which caused many personal casualties. In Nov. 1949 the public health service published a comprehensive report of studies completed in co-operation with the weather bureau and other investigating groups. The results were of interest to all cities and industrial communities that had an air pollution nuisance. Although the Donora study had to do primarily with local meteorology rather than micrometeorology in the strict sense, it was illustrative of the attention being given to investigations into the small scale or local details of weather and climate. Studies like this brought greater appreciation of the significant local differences caused by hills, valleys, bodies of water and other features of terrain and topography that modify weather and climate.

The year saw other activities new in applied meteorology. An example was specialization in local forecasting of sea swells and hurricane winds dangerous to personnel engaged in oil drilling operations off the coasts of Louisiana and Texas. In applied climatology and microclimatology as well as in applied meteorology, scientists spoke optimistically of the possibilities and need for specialization in the work of these meteorological fields.

Theoretical Meteorology and Research.—Most technical papers contributing to knowledge in theoretical meteorology during 1949 were published in the *Journal of Meteorology* of the American Meteorological society, the *Quarterly Journal* of the Royal Meteorological society or *Tellus*, a quarterly which first appeared in March 1949 as a publication of the Swedish Geophysical society and the University of Stockholm. Other important research results on subjects of a less theoretical nature were published in the *Bulletin* of the American Meteorological society, the *Meteorological Magazine*, London, and the *Transactions* of the American Geophysical union. A number of the longer research treatises appeared as monographs of the American Meteorological society, or as separate publications and reports issued by the meteorological departments of universities, government bureaus or their contracting agencies. Good evidence of the broader and more fundamental attack on problems of weather science was seen in the increasing number of excellent research papers and the diversification of their subject matter. Research and development in weather instruments, cloud physics and other subjects incident to experimental and synoptic meteorology were reviewed. Of a more general nature were papers on energy dispersion in the atmosphere, long-period fluctuations of the general circulation, effects of wavelength variations in the long waves of the upper westerlies, effect of viscosity on circulation, large blocking highs (anticyclones) in the general circulation in the westerlies of the northern hemisphere, the mechanism for release of potential energy in the atmosphere, the effects on the surrounding atmosphere caused by subsidence of cold air masses, the instability of wind discontinuities and shower zones in planetary atmospheres, the formation and structure of a large scale disturbance in the westerlies, dynamic characteristics of a tilted model of an atmospheric pressure pattern, the energy acquired by the atmosphere over the oceans through condensation and through heating from the sea surface, confluence theory of the high tropospheric jet stream and a physical basis for numerical prediction of large-scale motions in the atmosphere.

The predominance of papers dealing with the general circulation of the atmosphere was indicative of the basic importance of this subject in the minds of meteorologists. Of special interest was the research in development of mathematical techniques for predicting the weather through use of the electronic computor to perform the very large number of computations involved. The year brought progress but the method was still far from the point of practical everyday use.

International Co-operation.—The new convention for the World Meteorological organization, proposed by the International Meteorological organization in its Washington conference of directors of national meteorological services in 1947, had been ratified by 27 nations as 1949 came to a close. During the year the United States continued its program of assistance to the Philippine meteorological service and to the services in cerin other countries where assistance was required as part of ternational co-operation in support of air commerce.

Of international interest in the Americas was the 30th anni- ersary of the American Meteorological society in December. nvitations to attend the anniversary meeting in St. Louis, Mo., e city where the society was founded, were issued to the di- ctors of national meteorological services in other countries, nd three days of concurrent technical sessions were planned r Jan. 3–6, 1950.

The Weather in 1949.—In parts of western Kansas and ebraska as well as portions of adjoining states the heavy nows and cold weather which began the first week of Jan. 1949 ractically paralyzed normal winter activities for the ensuing x weeks and one blizzard after another threatened to cut off ntirely from many localities the supply of food and other es- ntial commodities. Emergency supplies were flown in by the r force and some of the main roads were reopened with great fficulty by the corps of engineers. Traffic on main railroads as interrupted for days in parts of the middle west and near orthwest. Snowfall was the greatest ever recorded in many calities. At Deadwood, S.D., the fall in January was 77 in. laces in Arizona, New Mexico, Texas and southern California ad snow for the first time in a century. Temperatures in Texas ached the lowest ever recorded there.

In May, Ft. Worth, Tex., had the worst flood in the history the city with rainfall in 24 hr. exceeding ten inches. In the ortheastern states late spring and summer months were un- sually hot and dry. New England had the second hottest July the long meteorological records for that region. As a result the exceptionally dry summer, crop damage in New Jersey, astern New York and New England was heavy and the water pply reservoirs of many cities and towns were seriously de- eted. Toward the close of the year the long rainless period d to a serious water shortage in the entire metropolitan area New York city and bathless days were prescribed as a means keeping water consumption within the limits of available pply. (F. W. RR.; X.)

lethodist Church. The world's 13,000,000 Methodists belong to one or another of a dozen odies, organizationally independent but in close fraternal rela- onship through an ecumenical Methodist council. Its next orld conference was to meet in Oxford, Eng., in Aug. 1951.

The Methodist Church in Great Britain, parent body, in July 949 elected Harold R. Rattenbury of London as its president nd John A. Stead of Retford, Notts., vice-president. Total embership, including 258,896 in overseas districts, was re- orted as 1,002,370.

The major Methodist body in the United States, The Meth- dist Church, is inter-racial and in 1949 included 340,000 Negro embers. There are also three independent Negro Methodist enominations: the African Methodist Episcopal Church (816,- 78 members in 1949); the African Methodist Episcopal Zion hurch (527,350); the Colored Methodist Episcopal Church 381,000). Smaller Methodist bodies in the U.S. include the ree Methodist Church of North America (49,590); Wesleyan ethodist Church (31,817); and Primitive Methodist Church 11,963).

The Methodist Church, the largest Protestant body in the .S., on May 10, 1949, closed its first decade since the reunion three bodies brought it into existence. During the ten years otable advances were recorded. Membership since the merger howed a gain of 1,432,382, the number as of Jan. 1, 1950, eing 8,792,569. This figure included 24,255 ministers, but not 71,820 preparatory members or 875 full members in 50 mis- on lands.

The value of churches, parsonages and other church property rose during the decade from $704,117,614 to $1,262,838,909. In 1949 $67,000,000 was spent on new buildings and improvements. The number of preaching places, however, largely because of local mergers of congregations, declined from 42,262 in 1940 to 40,472.

Giving for all purposes during 1949 was $229,297,111. This was three times the total giving of 1939. Of this, $36,590,188 was classified as "benevolences" as contrasted with local church expenditures, ministerial support and connectional operations. The Methodist Committee on Overseas Relief expended $996,945 during 1949, largely for rehabilitation of Christian workers.

Church school membership increased for the fifth successive year. The 1949 figure, 5,807,959, included a Sunday school enrolment of 5,111,704 in 35,841 schools with an average attendance of 2,871,061.

The 30,381 local units of the Woman's Society of Christian Service, with 1,519,427 members, raised a total of $20,182,336 during 1949. Of this, $13,387,724 was for local church purposes and $6,794,612 was for the support of their missionary, educational and philanthropic program.

A record year was reported by the Methodist publishing house, its gross business, $12,285,431, showing an increase of $1,052,867 over 1948.

Progress in the 1948–52 program, the "Advance for Christ and His Church," was registered in observance of a week of dedication in March, stress being placed on lifting world service giving to offset rising costs and the underwriting by 106 annual conferences of $20,000,000 in specific new home and foreign missionary and relief projects.

The four-year study program first centred on the documents of the Amsterdam, Neth., assembly of the World Council of Churches and was followed in October by a nation-wide series of 78 all-day mass meetings to launch a formal study of, and deeper commitment to, Christian faith. Eight months of 1949 and 1950 were dedicated, each to concentration upon a specific doctrine, aided by booklets, sermons and group study.

In addition to routine dispatch of missionaries, 50 selected young people were sent in the late summer to India for three years of teaching and other lay service. Postwar scholarships for graduate students from countries outside the U.S. reached 500. About 560 U.S. students of ability were furnished college scholarships.

A building operation, involving $11,000,000, was under way at Southern Methodist university, Dallas, Tex., including a new plant for Perkins school of theology. Boston university school of theology was moved from Beacon Hill to a new building on the university's Charles river campus, costing, with Marsh chapel, under construction, $3,000,000. In Nashville, Tenn., the denomination's publishing plant was expanded at a cost of $1,500,000 and the board of education had authorized expenditure of $600,000 for a headquarters building.

During the year the section on church extension granted 783 donations for a total of $1,205,957 and approved 366 loans for a total of $2,479,646 to help meet demands created by unprecedented church building.

Bishop Ivan Lee Holt of St. Louis, Mo., was elected in April as president of the Council of Bishops, with Bishop J. Ralph Magee of Chicago, Ill., vice-president. The Latin American Central conference, which has term rather than life episcopacy, chose Santi Uberto Barbieri, president of Union Theological seminary, Buenos Aires, Arg., as bishop to succeed Arthur F. Wesley.

Ralph E. Diffendorfer, foreign mission executive for more than 25 years, retired in October and was succeeded by Eugene L. Smith. Caradine R. Hooton was elected executive secretary of the board of temperance. T. Otto Nall was elected editor of *The Christian Advocate* (Chicago), official weekly. Jameson Jones of Nashville, Tenn., was chosen president of the National Conference of Methodist Youth.

The quadrennial Methodist Student conference brought more than 2,000 collegians to Urbana, Ill., at the year's end to discuss the "Christian Use of Power in a Secular World." (*See* also CHURCH MEMBERSHIP.) (R. SY.)

Mexico. A federal republic lying between the United States of America and Central America, Mexico has an area of 767,168 sq.mi. Population (est. mid-1948) 24,447,000 (19,653,552, census 1940). An estimated (1948) 55% of the population was mestizo, 29% Indian, 15% white and 1% foreigners and other miscellaneous elements. The most important centres of population (est. 1948) were: the Federal District, including Mexico City (2,043,574); Guadalajara (282,280); Monterrey (252,639); Puebla (159,701); Mérida (114,967); Tampico (106,874); Aguascalientes (101,935); San Luis Potosí (97,416); León (93,751); Veracruz (84,012); Chihuahua (70,958); Saltillo (65,553); Pachuca (61,795); Ciudad Juárez (56,128). Language: Spanish, but an estimated 14% speak only Indian tongues. Religion: Predominantly Roman Catholic. There is no official state religion. President in 1949: Miguel Alemán.

History.—The most important events of 1949 were connected with attempts to solve the nation's economic problems. Among these problems were a continuing unfavourable balance of trade and the instability of the Mexican peso. After a series of downward fluctuations from the pegged value of 4.85 to the United States dollar, which began in July 1948, the peso was finally stabilized at 8.65 to the United States dollar on June 17, 1949. Stabilization was achieved with the help of a loan of $25,000,000 from the United States treasury through a renewed stabilization agreement between the two governments, and $22,500,000 from the International Monetary fund. These loans together with the Bank of Mexico's reserves, announced at $84,000,000, gave the 8.65 pesos to the dollar rate a total support of $131,500,000. Certain elements, such as the exporters of Mexican goods and those engaged in the tourist trade, stood to benefit. On the other hand, importers of goods from the United States feared that the new rate would accelerate an already serious inflation.

To halt inflationary tendencies, Secretary of the Treasury Ramón Beteta announced an eight-point program which included balancing the federal budget, prevention of inflationary credits by private banks, containment of monetary circulation, maintenance of wages and salaries at their maximum purchasing power, downward revision of import tariffs to lessen the blow of devaluation to importers, retention of the 15% ad valorem surtax on all exports, prohibition of certain imports (on June 21, 1949, 207 classifications of the Mexican import tariff were added to a previous list of prohibited imports) and suspension of the export permit system.

On the political scene the government, on Jan. 28, 1949, cancelled the registration of the P.F.P. (Partido Fuerza Popular), the political organ of the Unión Nacional Sinarquista. The petition of the P.R.I. (Partido Revolucionario Institucional), the government party, on which the government based its decree, charged that the P.F.P. was antidemocratic, identified with fascist doctrine and aimed at restoring the church to the position of influence it enjoyed before the laws of the reform.

The federal elections, held throughout Mexico on July 3, 1949, resulted in a sweeping victory for the government party, the P.R.I., which won 143 of the 147 contested seats in the chamber of deputies. The remaining 4 seats were won by the more conservative P.A.N. (Partido Acción Nacional). The P.R.I. announced that its candidates had also won in the six state elections for governor. Under Mexico's new compulsory registration and voting law (1948), about 3,500,000 citizens registered although only about 60% of this number voted.

Education.—Education is free, compulsory and secular. There were at the beginning of 1949 3,286,428 students enrolled in 26,343 schools and taught by 90,212 teachers and professors. They were divided in the following categories: preschool, 98,155 students, 2,887 teachers, 837 institutions; primary, 2,997,198 students, 67,860 teachers, 24,625 schools; secondary, 80,598 students, 7,805 teachers, 466 schools; normal 26,998 students, 2,854 teachers, 77 schools; technical, 41,928 students, 3,676 teachers, 199 schools; agricultural, 5,949 students, 701 teachers, 16 schools; universities, 35,602 students, 4,429 faculty members, 12 institutions.

One of the principal aims of Mexican educational policy has been the reduction of illiteracy. To that end a national campaign against illiteracy was initiated in 1944 and during the period 1944–48 1,811,110 people were taught to read and write. It was estimated by the ministry of education that approximately one-third of the population was literate by the end of 1948.

Finance.—The monetary unit is the peso of 100 centavos. After stabilization in June 1949, its value was approximately 11.56 cents, U.S. currency, at an exchange rate of 8.65 pesos to the dollar. However, in this and following sections, except where indicated, dollar sums are calculated on the basis of 6.8775 pesos to the dollar (exchange rate at the end of 1948) since most of the figures cited pertain to the period before the stabilization of June 1949.

The federal budget for 1949 totalled $370,957,155 and was broken down as follows: legislative $2,654,790; presidency $338,786; judicial $1,268,775; government $2,064,704; foreign relations $4,788,077; treasury $12,359,142; defense $38,095,238; agriculture $6,143,221; communications $64,401,818; economy $2,733,551; education $40,712,468; health $18,320,611; marine $10,076,336; labour $843,330; agrarian reform $2,047,256; hydraulic resources $35,696,111; attorney general $589,895; national resources $977,099; military industry $2,643,839; special funds $20,210,832; additional expenses $19,658,306; public debt $84,332,970.

The estimated national income for 1948 was $3,271,537,623. Provisional federal tax receipts for 1948 were $338,960,378. The public debt as of Dec. 31, 1948, was: Internal $274,771,355; external $77,552,890. In 1949, the national railroad debt stood at $557,604,382 (representing principal of $233,112,385 and back interest of $324,491,997). During the year an agreement was made with bond holders to settle the railroad debt for approximately ten cents on the dollar, or $50,000,000 (original sum in dollars). Notes in circulation as of Nov. 3, 1949, were valued at $241,963,011 (at exchange rate of 8.65 pesos to the dollar). The gross reserves of the Bank of Mexico on Dec. 31, 1949, were $144,000,000 (at exchange rate of 8.65 pesos to the dollar).

At the end of 1948, there were 331 banks, credit institutions and auxiliary organizations with 448 additional branches. Their total capital was $118,982,188; total resources $1,250,163,577; total deposits $384,529,262.

Defense.—In 1949, Mexico's budget provided for a total of 55,620 men in the air and ground forces. Of this total, 3,322 were assigned to the air force. The army, including the air force, which is not a separate service, was administered by the department of national defense. The air force had an estimated 250 planes of all types. During the year annual conscription of young men for one year's service was halted, and weekly Sunday training was substituted for those subject to military service.

The navy, merchant marine and coast guard were administered by the ministry of marine. The ministry operated 3 gunboats, 4 frigates, 2 armed transports, 17 coast guard vessels, 7 auxiliary vessels and 12 dredges.

Trade and Communications.—During 1948 and the first six months of 1949, Mexico's balance of trade continued to be unfavourable. Imports in 1948 totalled $429,152,373 and exports totalled $386,953,263. During the first eight months of 1949, imports were valued at $272,547,357, and exports at $253,510,463. The principal imports were machinery and manufactured products. The principal exports were lead, silver, copper, zinc, petroleum, coffee and cotton.

The ten leading countries in Mexico's foreign trade in 1948 with their percentages of the total were: The United States (81.0), Britain (3.0), Cuba (1.2), Canada (1.2), Belgium (1.2), France (1.1), U.S.S.R. (1.0), Sweden (1.0), Italy (0.9), Switzerland (0.6).

In Mexico the railroads were operated by a government agency, Ferrocarriles Nacionales, except for the South Pacific of Mexico which was owned by the Southern Pacific railroad.

There were approximately 15,000 mi. of railroad in Mexico in 1949. The principal lines were Laredo-Mexico City, Mexico City-Veracruz, Interoceanic railroad, Mexico-Jalapa-Veracruz and Nogales-Guadalajara. In April 1949, the government announced a two-year program for renovating its railroad system. The plan proposed to convert all lines to standard gauge, eliminate steep grades and turns and gradually modernize rolling stock. The government program was aided by credits of $17,900,000 from the Export-Import bank.

In 1949, there were approximately 18,133 mi. of passable highways in Mexico. Of this total, 5,465 mi. were hard surfaced. By the end of 1949 the Mexican section of the Pan-American highway was passable from Nuevo Laredo on the United States border, to Comitan, within a few miles of the Guatemalan border. The government had committed itself to spend $142,196,503 (at exchange rate of 8.65 pesos to the dollar) for highways by 1952. Motor vehicle registration for 1948 was:

MEXICANS waiting to vote in the July 1949 elections for a new chamber of deputies. Candidates of Pres. Alemán's party (the P.R.I.) won 143 of the 147 seats

passenger automobiles 134,079; buses 14,790; trucks 86,198; motorcycles 4,276.

In 1948, there were two United States air lines (American Airlines and Pan-American World Airways) and one Central American air line (Transportes Aéreos Centro-Americanos or T.A.C.A.) operating in Mexico. There were three major Mexican air carriers: Cía Mexican de Aviación (C.M.A.), Aeronaves de México, S.A., in which Pan-American World Airways participated, and Lineas Aéreas Mexicanas, S.A., (L.A.M.S.A.), which was wholly owned by United Air Lines. In addition, there were 31 smaller Mexican air lines operating within the country. In 1948 a new company, Aerovías Guest, began operation between Mexico City and Spain and Portugal. During 1948, 22,085,925 mi. were flown by all lines, and 815,118 passengers were carried.

Telegraph service in Mexico, with minor exceptions, was operated by the government-owned Telégrafos de México. In 1948, the Mexican telegraph system operated approximately 660 offices and 44 stations. In the same year there were 239,749 telephones, 156 standard broadcasting stations and 1,113,000 radios in use.

Agriculture.—Land utilization in 1948 was: cropland 36,746,426 ac.; pasture land 139,024,074 ac.; forest land 95,517,046 ac.; productive uncultivated land 21,765,695 ac.; agriculturally unproductive land 26,719,056 ac. It was estimated that there were 57,574,300 ac. of potential cropland.

In the field of hydroelectric development and irrigation, important advances were made in 1949. Irrigation works completed during the year opened up 274,281 ac. of land for agricultural development. Work was progressing well on two large hydroelectric projects, one on the Tepalcatepec river in the state of Michoacan and the other on the Papaloapan river in the state of Veracruz. The latter was the largest and the main dam, when completed, would hold 8,109,600,000 cu.yds. of water.

Agricultural production for 1948 (in tons) was: maize 3,120,611; wheat 525,797; rice 190,698; sugar 673,505; beans 231,072; chick-peas 131,276; bananas 330,681; pineapples exported, fresh 42,428, preserved 6,699; coffee 58,604; henequen (bales) 120,000; chicle 2,650; oranges 441,175; green peppers 41,226; dry peppers 15,846; potatoes 141,092; cotton (bales) 520,000; cottonseed 234,790; sesame 80,303; tobacco 25,474; avocados 65,909; vanilla 275,575; alfalfa, green 2,478; tomatoes 315,747; copra 34,642.

Estimates of 1949 production indicated that during the period 1946–49 the yield of 11 basic crops had increased by 1,511,231 tons and by $102,659,775 in value (at exchange rate of 8.65 pesos to the dollar).

The 1940 animal census was: cattle 11,621,879; horses 2,511,175; mules 932,522; donkeys 2,341,539; sheep 4,401,014; goats 6,849,709; hogs 5,067,642. It was estimated that by the end of 1948 the total number of animals had increased between 20% and 25%.

The year 1949 found the joint Mexican-U.S. campaign against foot-and-mouth disease in its third year. The infected area, which at its worst stage included more than 219,867 sq.mi., was reduced by May 1949 to 180,223 sq.mi., or by approximately 22%.

Timber produced in 1947 was 398,315,352 bd.ft. of sawed lumber, 35,171,424 bd.ft. of rough hewn lumber and 95,382,192 bd.ft. of logs. Production was principally of pine, oak, fir, red and white cedar and mahogany. In 1947, production of turpentine was 249,048 tons, of charcoal 13,541,988 tons, of pitches and resins 1,974,478 tons, of vegetable wax 347,014 tons and of other timber products 362,022 tons.

Manufacturing.—Total value of Mexican industrial production for 1948 was $482,852,300.

Industrial Production of Mexico

Industry	Value of product, 1948
Vegetable oils	$24,085,900
Alcohol	6,999,600
Rubber goods	24,647,300
Refined sugar	60,102,800
Drygoods	7,281,100
Shoes	8,038,400
Cabinetmaking	2,833,300
Cement	10,930,600
Matches	5,542,400
Beer	36,177,200
Cigarettes and cigars	25,482,700
Canned goods	7,661,800
Cookies, crackers and food pastes	8,229,000
Iron and steel	$30,762,100
Cotton thread and cloth	100,731,800
Woollen thread and cloth	15,258,900
Silk and rayon thread and cloth	12,720,200
Soap	28,080,300
Bricks, tile etc.	1,225,200
Flour	37,179,900
Floor and wall tile, etc.	2,113,400
Paper	15,400,900
Working clothes	3,499,400
Glass	7,868,100
Total	$482,852,300

During 1948 tourists spent $185,000,000 as compared with $118,000,000 in 1947; 207,859 tourists entered Mexico during the first eight months of 1949 compared with 175,174 during the first eight months of 1948.

Mineral Production.—Total mineral and metal production (excluding petroleum) for 1948 was 810,712 tons with an estimated value of $190,686,169. Production of the most important metals (in tons) was: lead 213,094; zinc 197,345; silver 1,972; copper 65,119; gold 12.6; antimony 8,135.

The petroleum industry was completely controlled by the government-owned Petróleos Mexicanos (Pemex). This company operated four major oil fields in the states of Tamaulipas and Veracruz and in the Isthmus of Tehuantepec. Petroleum production in 1948 was 58,507,968 U.S. barrels.

During 1949, Mexico's petroleum industry failed to solve its major problem, lack of capital for extensive exploratory drilling and for the modernization and relocation of existing refineries and the construction of new ones. During the first half of the year negotiations were in progress for a substantial loan from the Export-Import bank, but on July 19 these were discontinued on the initiative of Mexico. The basic difficulty was the difference in opinion between the two parties as to the nature and extent of participation of United States capital in the Mexican industry. However, an independent agreement was reached between Pemex and a group of United States oil companies for exploratory drilling during the next 12 yr. The United States companies were to receive a percentage of the production of the new wells they drilled.

FILMS OF 1949.—*Modern Design for Travel—Mexico* (National Education Association); *Pacific Coast of Mexico—Baja California; Pacific Coast of Mexico—Mainland* (Johnson-Hunt Productions)· *Road for San Pablo; There Were Two Doctors* (Simmel-Meservey). (L. N. M.)

Michigan. One of the north central group of states of the U.S., Michigan was the 26th state admitted to the union; it is popularly known as the "Wolverine state." Land area 58,216 sq.mi. (excluding 39,960 sq.mi. of Great Lakes water surface); pop.: (1940) 5,256,106; est. of the U.S. census bureau, July 1, 1949, 6,352,000. Of the state's population in 1940, 3,454,867 were urban; 1,801,239, rural. Whites composed 95.9% of the population; nonwhites, 4.1% (215,934). Capital: Lansing (78,743), est. Jan. 1, 1950 (115,000). Larger cities were Detroit (1,623,452), est. Jan. 1, 1950 (1,950,000); Grand Rapids (164,292), est. Jan. 1, 1950 (185,000); Flint (151,543), est. Jan. 1, 1950 (180,000); Saginaw (82,794), est. Jan. 1, 1950 (95,000).

History.—During the first four and one-half months of 1949, while the 65th legislature was in session, there was great public interest in how the Michigan Fair Deal program of the Democratic governor, G. Mennen Williams, would fare at the hands of the Republican legislative branch of the government. Williams was hopeful at first of bipartisan support for his proposals; when the legislature had adjourned, he remarked that for him the session had been "a moderate to keen disappointment." In all, 887 bills were introduced, and 328 measures were passed. Several were in the interest of veterans, including provisions for broader homestead tax exemptions and for counting time in military service toward job seniority. Workmen's compensation legislation was liberalized, and the Bonine-Tripp act, which labour had found objectionable, was somewhat modified.

Old-age assistance maximum benefits were increased to $60 per month and recipients were permitted to own $6,000 in land contracts. Free immunization of children against certain diseases was authorized. The manufacture and sale of coloured oleomargarine was legalized; referendum petitions were immediately circulated, however, and a state-wide referendum at the Nov. 1950 election was ordered. Considerable controversy attended the passage of legislation which in effect killed Michigan's one-man grand jury law by placing inquiry under three judges, and requiring that indictments be unanimous. A grant-in-aid of $82,000,000 was made to local public schools.

Among the measures rejected by the legislature were bills to repeal Michigan's century-old ban on capital punishment, to reduce the number of state boards and commissions, to repeal the secret primary election ballot law and to reapportion the state legislature. The legislature, adjourning on May 21, left the state's budget incomplete because of the inability of the two houses to reach agreement with respect to the amount of money to be appropriated to state-supported colleges and universities. Reconvening on June 19, the two houses of the legislature agreed on a compromise $29,637,335 general education appropriation.

Of the 328 bills passed by the legislature, 8 were vetoed by Governor Williams; all of the vetoes were sustained. The governor announced that the legislature would be convened in special session on March 15, 1950.

In the April election, Republican candidates for state offices made a clean sweep. In the nominally nonpartisan race for the state supreme court, George E. Bushnell and Edward M. Sharpe, incumbents, who were endorsed by the Democratic party, were re-elected, defeating Arthur E. Moore and Charles W. Rigney, who had Republican endorsement, and Morton A. Eden, who was sponsored by the Progressive party.

Education.—In 1948–49, elementary school enrolment was 661,327, with 21,108 teachers; secondary school enrolment, 353,269, with 13,453 teachers. Fall enrolment in public-supported universities and four-year colleges was 64,335. An outstanding event in the history of higher education was the gift by the Kresge foundation in October of $3,000,000 for the establishment of a medical research centre at the University of Michigan, Ann Arbor. Lee M. Thurston, incumbent by appointment, was elected state superintendent of public instruction in April.

Social Insurance and Assistance, Public Welfare and Related Programs.—The various state institutions of correction and their populations, as of June 30, 1949, were as follows: State Prison of Southern Michigan, 5,844; Michigan reformatory, 1,307; Marquette Branch prison, 816; Detroit House of Correction, 393; Cassidy Lake Technical school, 153; wayward minor boys in custody, 7. Total expenditures for the fiscal year 1948–49 amounted to $8,295,972 (including $324,289 for capital expenditures).

The Michigan Unemployment Compensation commission reported benefit payments of $100,000,000 for 1949, double that of 1948. Its reserve fund, however, was reported at more than $300,000,000. In Detroit, the commission's records showed that the number of unemployment compensation claims declined during December from 160,595 to 104,000; also that the number of persons who had exhausted their benefits through prolonged unemployment was decreasing.

Old-age assistance and aid to dependent children showed a gradual rise through 1948 and 1949. At the end of 1949, however, direct relief was down from its March 1949 peak. On the other hand, it was averaging 16% higher than the preceding year, and more than 56% above the corresponding month of the 1947–48 fiscal year.

Communications.—The total amount of money spent during 1949 for road and bridge construction, including engineering and right-of-way, was in excess of $45,000,000. Construction work completed included 248 mi. of grading and drainage structures, 155 mi. of concrete pavement, 167 mi. of bituminous concrete resurfacing, 220 mi. of other types of bituminous surfacing, 113 mi. of stabilized aggregate surfacing and 65 bridges. For the maintenance of 9,534 mi. of rural and municipal highways on the trunk line system, the cost was more than $13,000,000. During the year the state ferry system at the Straits of Mackinac, in 27,000 round trips, carried 605,000 vehicles and 1,200,000 passengers.

Banking and Finance.—As of June 30, 1949, 346 state banks had total assets of $2,552,445,206.02; 3 industrial banks, $9,190,605.25; 7 trust companies, $38,775,513.07; total assets of 78 national banks in Michigan aggregated $2,612,041,000. Total assets of 36 building and loan associations in Michigan were $133,314,876.44.

Table I.—*Leading Agricultural Products of Michigan*

Crop	1949 (Preliminary)	1948	Average 1938–47
Corn, all, bu.	85,920,000	67,119,000	55,653,000
Winter wheat, bu.	35,019,000	36,270,000	19,844,000
Oats, bu.	56,700,000	56,672,000	49,818,000
Potatoes, bu.	17,160,000	16,350,000	19,054,000
Apples, Commercial, bu.	11,735,000	4,830,000	6,840,000
Peaches, bu.	3,900,000	3,250,000	3,444,000
Barley, bu.	3,562,000	4,480,000	5,016,000
Field beans, cwt.	5,968,000	4,435,000	4,418,000
Hay, tons	3,362,000	3,606,000	3,785,000

Agriculture.—Michigan's 1949 production of field crops was substantially above that of 1948 and of the average: this was also true of the important tree fruit and grape crops. The total harvested acreage of crops was 8,321,000. Milk production was 5,689,000,000 lb. The spring and fall pig crops totalled 1,557,000.

Manufacturing.—The manufacturing record of 1949 was, in general, one of prosperity. During the closing months of the year, monthly rates of automobile production were well above those of the preceding two years, although what the delayed effect of the coal and steel strikes might be was not yet determined. Manufacturing employment, recovering from the summer's low, at the end of 1949 was about 4% below the record of the fall of 1948. Average weekly earnings for production workers in 1949 were slightly above those of the previous year.

Table II.—*Mineral Products of Michigan*

	1948		1947	
	Quantity	Value	Quantity	Value
Iron ore, long tons	12,896,478	$53,246,591	12,400,000	$47,348,160
Petroleum, bbl.	16,870,000	47,860,000	16,216,000	34,932,000
Coke, tons	2,849,601	39,637,987		
Cement, bbl.	11,116,911	23,533,001	10,470,766	18,868,187
Salt, tons	4,387,879	16,265,743	4,531,761	15,127,549
Stone, tons	19,704,150	14,620,527	18,600,370	12,601,288
Sand and gravel, tons	20,671,078	14,071,712	16,845,431	10,758,243
Copper, lb.	55,554,000	12,055,218	47,055,000	10,680,000
Bromine, lb	17,666,243	5,435,940	18,802,636	5,054,787

Mineral Products.—Production estimates for 1948 and 1947 are shown in Table II. (L. G. V. V.)

Mineral and Metal Production and Prices.

In order to present a representative picture of the distribution of mineral production throughout the world, there has been compiled in Table I as much of the world production data as can be included in one page. Lack of space makes it necessary to omit from the table many minor products and many minor producers, but the data presented are sufficiently comprehensive to indicate the general distribution of the production and the relative importance of the more important producing countries.

Similarly, in Table II will be found the prices for the leading minerals and metals, as quoted on the New York and London markets at the beginning and end of 1949. Many of these prices, and especially the major nonferrous metals, took sharp drops during the year, marking the end of the postwar period required to exhaust the backlog of industrial demand that had accumulated during the war years. Following the abandonment of price control in 1946 there was a practically continuous advance in prices.

The *E. & M. J. Metal and Mineral Markets* weighted index of nonferrous metal prices, which averaged 90.86 in 1945, rose to 142.19 in Dec. 1946, to 152.48 in Dec. 1947, to 185.52 in Dec. 1948. A peak of 185.75 in Feb. 1949 was followed by a gradual decline to 131.20 in June and a reaction to 142.24 in September, with further minor fluctuations in subsequent months, closing at approximately the level prevailing late in 1946.

Table III shows the trend of dollar value of mineral production in the United States, as reported by the U.S. bureau of mines. To secure comparative adjusted totals that, so far as possible, eliminate the distortion caused by advancing prices, the 1939 reported total was used as a base figure, from which adjusted totals were obtained by multiplying by the federal reserve board index of mineral production (base, 1939=100) for each of the succeeding years.

While these adjusted totals are not strictly accurate, they provide an approximation of production values which are more nearly in their true perspective.

(*See* also the articles on the various metals and minerals.)

otes: Each item of data previous to 1948 is followed by a reference superscript indicating the year to which the figure belongs—^{7} for 1947, ^{6} for 1946, and so on for the earlier years. A figure followed by ? or with less imals than others in the column is an estimate. The letter "p" indicates a small production unknown in amount or less than the minimum base of the table; "P" indicates a larger but unknown production.
Crude magnesite. †K_2O equivalent of salts produced. ‡Mainly crude sulphur, but includes some ore and some sulphur recovered from roaster gases. §60% WO_3 basis.

(G. A. Ro.)

Mineralogy. The occurrence in nature of the well-known nickel compound, $NiSO_4.6H_2O$, was reported by Clifford Frondel and Charles Palache and the name retgersite assigned to it as a mineral (*American Mineralogist*, vol. 34, 188–194). W. C. Smith, F. A. Bannister and M. H. Hey described cymrite, a new barium mineral, $BaAlSi_3O_8OH$, from the Benallt manganese mine, Rhiw, Carnarvonshire, Wales (*Mineralogical Magazine*, vol. xxviii, pp. 676–681).

The increased demand for single crystals, the success achieved in growing them in the laboratory, their properties and many uses were described in an illustrated article "Crystals" by Hans Jaffe (*Physics Today*, pp. 14–19, Sept. 1949).

The progress made during the decade in producing synthetic gem materials in the United States was discussed in "American Synthetic Crystals—Sapphire to Titania" by A. K. Seemann (*Gems and Gemology*, vol. vi, pp. 151–159) and by C. H. Moore, Jr., in "Formation and Properties of Single Crystals of Synthetic Rutile" (*Mining Engineering, Mining Transactions*, pp. 194–199, June 1949).

During the year the following books became available. *Story of Jade* by Herbert P. Whitlock and Martin Ehrmann. This was an important contribution to our knowledge of jade. It has 179 black and white illustrations and four full colour plates of notable jade objects. The third edition of E. S. Dana's *Minerals and How to Study Them*, which is well adapted to the needs of beginners and amateurs, was revised by C. S. Hurlbut, Jr. The first edition appeared in 1895. The revised and enlarged 10th edition of G. F. Herbert Smith's *Gemstones* was widely used. *Crystals and X-Rays* by Kathleen Lonsdale was intended for all interested in crystallographic science. *Probleme der Naturwissenschaften* by Paul Niggli (Basel) was an attempt to explain the concept, and its development, of the nature of crystals and minerals. *Gesteine und Minerallagerstätten* by Paul and Ernest Niggli (Basel) presented a modern treatment of rocks and mineral deposits. *Das Geheimnis der Kristallwelt* by H. Tertsch (Vienna) described in detail the history and development of crystallography and mineralogy.

Notable progress was made in Germany in re-establishing journals which were discontinued during the war and in launching new ones. During 1949 the leading German journal devoted to gemology and jewellery, *Die Deutsche Goldschmiedezeitung*, which ceased publication in 1943, began to reappear. Moreover, two new journals were launched: *Edelsteine und Schmuck* was published at Idar-Oberstein, recognized as a leading gem centre for more than four centuries, and *Achat*, devoted to mineralogy, emology and jewellery, was issued at Hamburg.

The greatly increased application since 1939 of X-ray analysis nd electron diffraction to the study of crystal structure and the olid state led to the formation of the Crystallographic Society f America and the American Society for X-ray and Electron)iffraction. As the functions and memberships of these socie- es overlapped, it was voted to merge them, effective Jan. 1, 950. The new organization would be known as the American rystallographic association.

The Washington A. Roebling medal was awarded to Her- ert E. Merwin of Washington, D.C., by the Mineralogical So- iety of America at its annual meeting at El Paso, Tex., Nov. 1, 1949. For 40 yr. Merwin had been on the staff of the geo- hysical laboratory of the Carnegie institution. He had con- ributed extensively to the advancement of mineralogy and etrography. (*See* also MINERAL AND METAL PRODUCTION AND RICES.)

(E. H. KR.)

Iining: *see* MINERAL AND METAL PRODUCTION AND PRICES. *ee* also under separate minerals.

Iinnesota. A north central state of the United States, popularly known as the "Gopher" or "North tar" state. Area: 84,068 sq.mi., including 4,059 sq.mi. of water. he population on July 1, 1949, was estimated at 2,977,000 by ne U.S. bureau of the census, representing an increase of 6.6% ver the 1940 population of 2,792,300.

Approximately 50% of the population lives in cities of 2,500 r over. The principal cities are St. Paul, the capital city (pop. 940 census, 287,736), Minneapolis (492,370), and Duluth 101,065). Native-born whites in 1940 numbered 2,474,078; oreign-born whites, 294,904; and Negroes, 9,928.

History.—The principal elective officials of the state in 1949 ere: governor, Luther W. Youngdahl; secretary of state, Mike Iolm; treasurer, Julius A. Schmahl; auditor, Stafford King; nd attorney general, J. A. A. Burnquist.

The 56th session of the Minnesota legislature, acting on the ecommendation of Governor Youngdahl, enacted what was aid to be the first law in any state recognizing mental illness s a sickness. The principle of this approach in mental health eatment is the complete elimination of restraints in treating ental cases.

Ralph Rossen was appointed commissioner of mental health. ppropriations provided for 1,200 additional doctors, nurses, sychiatric aides, therapists, social workers, dietitians, etc., to- ether with $100,000 for research as well as numerous other upplementary facilities and services.

Education.—State aid to local schools, including income from trust nds and fixed income tax allotments, was expected to amount to $97,- 52,200 for the biennium that began July 1, 1949. Total public school penditures for the 1948–49 school year were about $109,509,841, com- ared with $91,791,740 for the 1947–48 school year. In 1948–49 Minne- ta had 7,952 elementary schools, 642 secondary schools, 5 public state achers colleges and 10 junior colleges. Enrolment was 329,124 with ,992 teachers in elementary grades; 167,421 with 8,084 teachers in the condary grades; 1,854 with 144 teachers in junior colleges; 11,267 ith 249 teachers in adult education classes; and 220 with 16 teachers teacher-training departments. Dean M. Schweickhard was commissioner education.

Social Insurance and Assistance, Public Welfare and Related Programs. -The average grant per case in aid to dependent children rose $1.18 om Nov. 1948 to Nov. 1949. During the same period old-age assistance nd aid to the blind per recipient increased 39 cents and 94 cents, respec- vely. General relief totalled $4,160,211 during the year ending June 30, 949, with the number of cases averaging 7,363, and $30,380,983 was ent on old-age assistance to an average of 54,717 recipients. A total of ,972,791 was expended in aid to 18,228 dependent children in 7,164 milies. An average of 1,052 persons shared in the total allowance of 588,582 in aid to the blind. In 1949 the legislature increased the old- ge assistance maximum maintenance grant from $50 to $55; removed e limits of amounts to be granted for dependent children; and enabled unty welfare boards to place wards of the director of social welfare in loptive homes or for foster care.

The number of workers covered by unemployment insurance during 1948 was 815,000. In 1949 an estimated $13,600,000 in benefit payments was made under the Unemployment Compensation law. Payments under the Servicemen's Readjustment Allowance program for unemployment in 1949 were estimated to be $8,920,000.

Communications.—At the end of 1949, Minnesota had a total of 121,002 mi. of highway including 11,902 mi. of state trunk highways, 101,172 mi. of other highways and 7,928 mi. of city streets. Expenditures of the state highway department, including disbursements for construction, maintenance, right of way purchases, equipment, traffic control and safety during the fiscal year ending June 30, 1949, were $42,294,906, as compared with $37,001,721 for the year ending June 30, 1948. There were 22 railroads operating on Dec. 31, 1949, having a total main line mileage of 8,353.

The state had 76 municipally owned and 43 privately owned commercial airports, as well as 16 licensed commercial seaplane bases and 194 private landing strips. Six scheduled air carriers provided service to nine municipalities.

Banking and Finance.—Resources of Minnesota banks on July 1, 1949, were approximately .05% lower than on July 1, 1948. The 499 state banks, 1 mutual savings bank and 4 trust companies had deposits of $961,451,000 and resources of $1,032,144,000, compared with deposits of $974,678,000 and resources of $1,039,019,000 on July 1, 1948. The 179 national banks had deposits of $1,912,420,000 and resources of $2,057,297,000 on July 1, 1949, compared with deposits of $1,929,925,000 and resources of $2,064,939,000 on July 1, 1948. The state had 41 state building and loan associations on July 1, 1949, with resources of $86,860,113, as compared with resources of $77,718,000 on July 1, 1948. The 30 federal savings and loan associations had resources of $220,831,557 on July 1, 1949, compared with resources of $198,608,000 on July 1, 1948.

Total operating disbursements of the state government (exclusive of public debt redemption, stores for resale, annuities and pensions, land and interest in land) amounted to $222,478,172 for the fiscal year ended June 30, 1949, as compared with $245,522,456 for the fiscal year ended June 30, 1948. The state's total indebtedness in bonds and certificates of indebtedness on June 30, 1949, was $51,703,425, a reduction of $7,112,658 since June 30, 1948. The four principal trust funds of the state, income of which is devoted largely to schools, reached $177,282,747 on June 30, 1949.

Agriculture.—Butter production in 1949 was 222,657,000 lb. For the calendar year 1948, cash receipts from farm marketings totalled $1,332,313,000, with $913,718,000 from livestock and livestock products and $418,595,000 from crops.

Leading Agricultural Products of Minnesota

Crop	1949	1948	Average 1938–47
Corn, all, bu.	248,512,000	272,055,000	203,090,000
Oats, bu.	178,272,000	206,338,000	163,830,000
Barley, bu.	25,464,000	34,132,000	35,477,000
Wheat, all, bu.	20,058,000	18,447,000	24,066,000
Flaxseed, bu.	16,280,000	19,102,000	12,053,000
Potatoes, bu.	16,000,000	17,280,000	18,648,000
Hay, all, tons	5,021,000	5,145,000	6,522,000

Manufacturing.—Employment in manufacturing industries totalled 184,951 in Oct. 1949, 6.8% below Oct. 1948. Latest census reports indicated 4,567 manufacturing establishments to be operating in Minnesota in 1947, as compared with 4,008 in 1940.

Mineral Production.—An estimated 57,000,000 tons of iron ore were shipped from Minnesota during 1949, compared with 69,108,000 tons during the calendar year 1948.

Mint, United States: *see* COINAGE.

Minton, Sherman (1890–), was born on Oct. 20 in Georgetown, Ind. He attended Indiana university and Yale, where he received a law degree in 1916. He began the practice of law in New Albany, Ind., but interrupted it to serve in the army in World War I. After that war he resumed his law practice in Indiana and for some years in Miami, Fla. In 1933 he became public counsellor of Indiana, and next year became a Democratic candidate for the U.S. senate. He was elected and served from 1935 to 1941, becoming during his term chairman of the Senate Lobby committee. Defeated for re-election, he was appointed administrative assistant to Pres. F. D. Roosevelt on Jan. 8, 1941, and in May of that year was nominated judge of the U.S. circuit court of appeals for the 7th circuit. He served on this bench until Sept. 15, 1949, when he was appointed to the U.S. supreme court by Pres. Harry S. Truman.

Missions, Foreign (Religious). For Christian foreign missions the year 1949 was one of mingled distress and growth. In a number of lands the political situation brought great difficulty and even reverses. In Burma civil strife was a handicap to missions of all branches of the church. This was especially true because the fighting was particularly acute between the Burmese and the Karens and the latter, the largest minority group in the country, had a high percentage of Christians. The instability in Korea was reflected in the Christian communities, and in the northern part of the land, under Communist control, missions and the churches found conditions even more adverse than in 1948. In China the advance of communism brought very marked hardship. The attitude of the Communist authorities varied somewhat from section to section and from city to city. In general Roman Catholics, because of the pronounced anti-Communist policy of the Vatican and the hierarchy, suffered more than Protestants, but the latter found the new conditions by no means easy. Some church property was occupied or seized outright by the Communists, and the heavy taxation imposed by the new regime proved burdensome. Many missionaries returned to their home countries and few new missionaries could be sent. Both missionaries and Chinese Christians gave serious attention to formulating radically new methods which would comply with the demands of the Communist regime, so far as that could be done without compromising Christian principles. In some parts of Viêt-Nam Roman Catholic missions suffered severely.

Yet in several lands marked advance was witnessed. This was especially notable in Japan. The Japanese were still, as they had been since 1945, very open-minded to Christianity. To meet the opportunity many new missionaries entered the country. The majority of these were Roman Catholic, but a large proportion were Protestant. The former were predominantly from Canada and the United States and the latter almost entirely from those two countries, especially the United States. Protestants began, with Japanese and U.S. funds, the International Christian university near Tokyo. In Africa, in spite of the acute racial tensions in the Union of South Africa, Christians maintained their increase in numbers south of the Sahara and reinforcements came to the missionary body from both Roman Catholics and Protestants. The Philippines saw rapid reconstruction in the enterprises of both Roman Catholics and Protestants.

Missions in India experienced considerable inconveniences under independent India and Pakistan, but in general the Christian communities continued to grow. In Latin America the rising strength of the Protestants, or Evangelicals as they preferred to be called, was made vivid by a conference of several denominations from the entire area held in Buenos Aires in July under the direction of Latin Americans. Some missionaries were present but Protestantism had become so well rooted that these were now auxiliary rather than dominant. More and more Roman Catholic priests from the United States went to Latin America to assist their church in that area.

(K. S. L.)

Mississippi. A southern state of the U.S. admitted to the union in 1817, Mississippi is popularly known as the "Magnolia state"; area, 47,716 sq.mi. (47,420 sq.mi. land and 296 sq.mi. water); pop. (1940): 2,183,796; capital: Jackson (62,107). Other cities: Biloxi (17,475); Greenville (20,892); Gulfport (15,195); Hattiesburg (21,026); Laurel (20,598); Meridian (35,481); Natchez (15,296); Vicksburg (24,460).

Of the state's population in 1940, 432,882, or 19.8% were

ɑan; there were 1,106,327 whites; 1,074,578 Negroes; 2,177,- native-born; 6,472 foreign-born. On July 1, 1949, the U.S. reau of the census estimated the civilian population of the te at 2,130,000.

History.—For 1948–52 the chief elected officers of the state re: governor, Fielding L. Wright; lieutenant governor, Sam mpkin; secretary of state, Heber A. Ladner; attorney gen- l, Greek L. Rice; state tax collector, Mrs. Thomas L. Bailey; te treasurer, Robert W. May; state auditor, Carl N. Craig; te superintendent of public education, J. M. Tubb.

n the year 1949 an extraordinary session of the state legisla- e was convened at the call of the governor for the purpose considering a long-time state road building program. The spe- l session failed to enact adequate legislation, but a plan was lved for consideration by the regular biennial session of the islature convening in Jan. 1950—a plan for financing a 11,- -mi. state aid rural road (farm-to-market) program and the oo-mi. state highway system.

The new road system, as proposed, would be financed in t by an increase of two cents a gallon on the six-cent gas .

ducation.—In 1948–49 there were 1,165 white elementary schools in ssissippi and 3,159 Negro elementary schools, a total of 4,324. The olment in elementary schools was 462,215, of whom 214,248 were tes and 247,967 Negroes. The state had 513 white high schools and approved Negro high schools. The enrolment of these approved high ools plus enrolments in nonaccredited schools gave a total enrolment 79,290 in 1948–49. There were 9,410 white elementary and high ool teachers (including superintendents and principals) and 6,469 ro elementary and high school teachers (including superintendents and cipals), a total of 15,879 teachers. The total enrolment in white nentary and high schools was 274,417; in Negro elementary and high ools. 267,088.

ocial Insurance and Assistance, Public Welfare and Related Programs.— m July 1, 1948, to June 30, 1949, the state department of public fare paid $10,880,452 to 64,109 recipients of old-age assistance; 5,836 to 2,749 recipients of aid to the blind; and $2,265,826 for aid 9,918 families for 27,125 dependent children. Special child-welfare kers were assigned to 16 county departments of public welfare, to umbia Training school and to Oakley Training school. There is a ning unit in one county to which child-welfare workers are assigned special training before being assigned to a county unit. The state- nty program of foster boarding care for children was augmented.

Through its division for the blind, the department maintained a state- nced program of sight conservation, restoration and services and con- ed its program of training adult blind persons to work on factory- e sewing machines. The division continued to serve as the channel for eral funds for vocational rehabilitation of blind civilians.

ommunications.—In 1949 the state maintained 7,139.8 mi. of high- s. In 1949 the counties maintained approximately 53,983 mi. In the al year 1948–49 the state maintenance expenditures were estimated $3,952,662.76.

The total mileage of railroads in the state on Dec. 31, 1947, was 24.02.

anking and Finance.—On June 30, 1949, there were 179 state banks in ssissippi, with 22 branch banks and 34 branch offices; there were 24 ional banks. The resources of the state banks were $566,737,924.42, the total deposits were $527,844,592.49; the resources of the national ks were $213,945,251.51, and the total deposits were $200,905,289.26.

The balance in the general fund account as of Dec. 31, 1949, was ,772,977.34. The special fund account as of Dec. 31, 1949, was $13,- ,626.20. On Dec. 31, 1949, the full faith and credit debt of the state Mississippi was $10,752,500; outstanding highway bonds (payable n gasoline tax) amounted to $66,224,000 on Dec. 31, 1949, making otal debt of $76,976,500.

griculture.—The 1945 census reported 265,528 farms, with 19,616,533 in farms. In 1949 cropland harvested was 6,130,000 ac. The 1948 eipts from marketings were $532,541,000, of which $399,567,000 were n crops and $132,974,000 from livestock products; the value of farm ducts consumed in farm households was $135,724,000.

anufacturing.—The value of all manufactured products in Mississippi the year 1946 was $555,727,000. The amount of wages paid in 1947 to persons employed in all industries employing eight or more persons amounted to $310,320,000, as against $234,000,000.00 for 1944 and $94,000,000.00 in 1939.

Mineral Production.—The total value of mineral production in 1948, including natural gas, sand and gravel and other mineral products, was $112,663,013.40.

Table II.—*Principal Mineral Products of Mississippi*

Mineral	Value, 1948	Value, 1947
Natural gas	$ 2,289,136	$ 1,889,718
Sand and gravel	2,744,217	2,493,175
Petroleum	108,732,500	61,962,098
Other mineral products	420,000	561,000

On Dec. 31, 1948, there were approximately 1,355 producing oil wells in the state. The value of petroleum for the year 1948 was $108,732,500, and for 1949 it was $94,380,000. (A. B. Bu.)

Missouri. A west north central state of the U.S.A., Missouri was admitted to the union in 1821; it is popularly known as the "Show Me state." Area 69,674 sq.mi. of which 404 are water. Pop. (1940) 3,784,664 (51.8% urban, 48.2% rural); 3,425,062 (90.5%) native white, 114,125 (3%) foreign-born white and 244,386 (6.5%) Negro. The bureau of the census estimated that on July 1, 1949, the population of th estate was 3,935,000. Capital, Jefferson City (1940 census) (24,268). Largest cities: St. Louis (816,048), Kansas City (399,178), St. Joseph (75,711), Springfield (61,238). On Jan. 1, 1949, the population of St. Louis was estimated at 905,000.

History.—The 65th general assembly, with Democratic majorities in both houses, convened on Jan. 5, 1949, and adjourned *sine die* on Jan. 14, 1950. It set a record in its appropriation of about $604,000,000 for operation of the state government during the 1949–51 biennium. It repealed the Madison act, which prohibited jurisdictional strikes, secondary boycotts and strikes against the state government; extended absentee voting privileges to all Missouri citizens; provided for the imprisonment of sexual perverts molesting children; and authorized an increase in the state gasoline tax from two cents a gallon to four cents, subject to a referendum at a special election on April 4, 1950. Also, in co-operation with the state of Illinois, the legislature set up a bi-state development agency for the St. Louis area.

The major state officers (1949), all Democrats, were: Forrest Smith, governor; James T. Blair, Jr., lieutenant governor; Walter H. Toberman, secretary of state; W. H. Holmes, auditor; M. E. Morris, treasurer; James E. Taylor, attorney general.

Education.—For the school year ending June 30, 1949, the public school system consisted of approximately 6,728 elementary schools, with 491,342 pupils and 17,172 teachers; 736 secondary schools, with 143,947 pupils and 6,481 teachers; 9 junior colleges, with 5,038 students and 269 teachers. The state expenditure for education during that year amounted to $39,927,412. Hubert Wheeler was state commissioner of education.

Under the G. I. Bill of Rights and the Vocational Rehabilitation act for disabled veterans, 50,732 veterans of World War II were enrolled in schools and colleges in the state, 16,478 were receiving farm training, and 9,432 job training in Dec. 1949.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the year ending June 30, 1949, unemployment insurance totalled $17,044,949, paid to 105,174 persons. In Dec. 1948, 22,307 received payments and in Dec. 1949, the number was 37,315. For the year ending June 30, 1949, old-age assistance amounted to $59,336,897, aid to dependent children $13,848,585, general relief $5,344,684 and blind pensions $1,191,931. In June, 1949, 123,883 persons received old-age assistance, 23,762 families (60,549 children) aid to dependent children, 36,163 persons general relief, 2,766 persons blind pensions. During the year ending June 30, 1949, the state penitentiary had an average of 2,861 inmates per day, the reformatory 273, and the expenditures for these institutions amounted to $1,962,800.

Communications.—On Dec. 31, 1948, Missouri had 17,552 mi. of state highways and 94,858 mi. of rural roads. During 1948 the state highway department spent $49,623,748 (state and federal funds), of which $25,087,629 was for construction and $11,464,381 was for maintenance. In 1946 railroad mileage totalled 6,832 mi. There were 1,108,898 telephones in use on Dec. 31, 1949.

Banking and Finance.—On June 30, 1949, Missouri had 492 state banks, with deposits of $2,054,133,000 and resources (loans and investments) of $1,895,676,000; 79 national banks, with deposits of $1,216,017,000 and resources (loans and investments) of $1,166,027,000; 159 savings and loan associations, with resources of $272,450,542.

During the fiscal year ending June 30, 1949, the receipts of the state treasury totalled $198,555,696; disbursements $252,238,749, of which $7,789,496 was from the Post War Reserve fund. The state debt on July 1, 1948, was $49,000,000 and on June 30, 1949, $44,000,000.

Agriculture.—During 1948 cash income from crops and livestock was $1,085,717,000, and cash income from government payments was $6,398,000. The value of Missouri's 1948 crops was $636,359,000 and the value of the 1949 crops, harvested from 14,072,100 ac., was estimated at $529,343,000. The 1949 production of hay and soybeans set new records but unfavourable weather reduced yields of cotton and oats.

Table I.—*Leading Agricultural Products of Missouri*

Crop	1949	1948	Average, 1938-47
Corn, bu	173,963,000	201,110,000	128,558,000
Winter wheat, bu	35,028,000	39,270,000	21,680,000
All hay, tons	5,095,000	4,803,000	4,012,000
Cotton, bales	460,000	506,000	356,000
Oats, bu	43,248,000	48,592,000	45,128,000
Soybeans, bu.	17,997,000	15,900,000	6,534,000

Manufacturing.—The number of persons employed in Missouri's manufacturing industries in 1947 was 327,515, and salaries and wages totalled $827,184,000. The value added by manufacture of products in 1947 totalled $1,623,145,000, compared with $581,804,000 in 1939, when the previous U.S. biennial census of manufactures was taken.

Mineral Production.—In 1948 the value of Missouri's mineral production was $113,506,000, an increase of 5% over 1947. The quantity of lead produced in 1948 was 23% less than in 1947, and the quantity of zinc 62% less.

Table II.—*Principal Industries of Missouri*

Industry	Value added by manufacture 1947	1939
Food and kindred products (including malt liquors, meat packing, etc.)	$331,753,000	$128,606,000
Transportation equipment (including motor vehicles)	173,131,000	40,558,000
Apparel and related products	130,549,000	43,127,000
Chemicals and allied products (including drugs and medicines)	129,257,000	53,208,000
Leather and leather products (including footwear)	117,333,000	56,958,000
Printing and publishing industries	116,327,000	49,733,000
Fabricated metal products	112,587,000	35,353,000
Machinery (except electrical)	109,412,000	23,519,000
Electrical machinery	89,212,000	28,299,000

Table III.—*Principal Mineral Products of Missouri*

Mineral	Value, 1948	Value, 1947
Lead	$36,619,104	$38,086,848
Cement	17,911,257	15,066,390

Monaco. A sovereign principality on the Mediterranean coast, 9 mi. E. of Nice, Monaco is bounded on all land sides by the French *département* of Alpes Maritimes. Area: 0.6 sq.mi. Pop. (1946 census): 19,242 including 1,975 Monacans and 10,522 French.

Ruler: Prince Rainier III; minister of state (appointed July 12, 1949): Jacques Rueff.

History.—Prince Louis II, who died on May 9, 1949, was succeeded by his grandson, Rainier (b. May 31, 1923), son of the hereditary Princess Charlotte-Louise-Juliette and of Count Pierre de Polignac.

Social changes of the postwar period were felt in Monaco. The casino of Monte Carlo, the financial mainstay of Monaco, saw its private rooms shut and the roulette players risking only modest sums. To attract tourists the casino broke its tradition by introducing in the summer of 1949 the U.S. dice game of craps.

A discussion was initiated with the French government with a view to "liberalizing" the French-Monacan financial agreement of April 14, 1945, by which the principality was submitted to strict fiscal and exchange control by the French authorities.

Finance.—Budget (1947–48): revenue 519,500,000 fr., expenditure 496,900,000 fr. (Nov. 14, 1949: 1 franc=0.2857 U.S. cents.)

Monetary Units: *see* Exchange Control and Exchange Rates.

Mongolian People's Republic (formerly Outer Mongolia). A vast tableland bounded north by Siberia, east by the Mongol-populated fringes of the Manchurian provinces of China, west by Sinkiang (part of the frontier being in dispute), south by the Mongol-populated fringes of the Chinese provinces of Ninghsia, Suiyuan, Chahar and Jehol. The Mongolian People's Republic has an area of 580,158 sq.mi. Population, according to soviet figures published in 1948, but cited from data of 1941: 850,000. Capital: Ulan Bator, formerly Urga (pop., 1941 est., 70,000). Religion: Lama-Buddhism, followed by the majority of the population, though the properties of the great temples and monasteries, formerly untaxed, have been appropriated by the state, and the "reincarnation" of "Living Buddhas" has been forbidden. Chairman of the presidium of the Little Hural, Bumatsende; prime minister and commander in chief: Marshal Choi-Balsan.

History.—This soviet-dominated people's republic celebrated during 1949 the 28th anniversary of its national revolution and the 25th anniversary of the foundation of the existing regime.

The anniversary of the foundation of the Mongol People's Revolutionary (Communist) party in 1921 was the occasion of a solemn meeting at Ulan Bator on July 11, 1949. The main speakers were Y. Tsedenbal, secretary general, and Choizhamts, secretary of the central committee of the Mongolian People's Revolutionary party.

More important still was the celebration of the anniversary of the adoption by the first Great Hural or people's assembly of the Mongolian constitution (Nov. 26, 1924). On this occasion Joseph Stalin (*q.v.*) sent a message to Marshal Choi-Balsan congratulating the Mongolian people for having liquidated the age-old backwardness of the Mongolian people. Choi-Balsan replied by proclaiming that the Mongolian people owed their freedom and independence and all their achievements in state, economic and cultural construction of their country to "the many-sided and disinterested assistance of the great soviet people."

At a big meeting held at Ulan Bator on Nov. 25, Surunzhab, deputy prime minister, reported on progress achieved in 25 years. Land cultivation was 173 times larger than in 1927; the arats (peasants) of Mongolia had organized 121 collective stock farms; livestock (horses, cattle and sheep) numbered in 1949 twice as many head as in 1924; extraction of coal (which began in 1915) had increased 127 times and by 1949 the total number of industrial establishments was 252 times greater than a quarter of a century earlier; by the end of 1949 there were in the country about 1,000 km. of motor roads and on Nov. 7 the first railway line linking Ulan Bator to the Trans-Siberian railway was inaugurated. There were also big achievements in the cultural field: illiteracy, for example, had been reduced to 55.4%.

In April 1949 Dango Surun Neydachin, secretary general of the Revolutionary Union of Youth of Mongolia, took part in the ninth congress of the Young Communist league in Moscow, U.S.S.R. Tsedenbal, secretary general of the M.P.R.P., was present in Moscow on Dec. 21 at the celebration of Stalin's 70th birthday. Together with other people's republics, Mongolia recognized the Communist Chinese People's republic (Oct. 9).

The application of Mongolia for United Nations membership, ready rejected in 1946 and 1947, was again opposed by the curity council in 1949: the U.S.S.R. and the Ukrainian S.S.R. ted for; Canada and China against; Argentina, Cuba, Egypt, ance, Norway, the United Kingdom and the United States stained.

loniz, Antonio Caetano de Abreu Freire Egas 874–), Portuguese medical scientist, was born at Avanca, ortugal, Nov. 29. He was educated at the universities of oimbra and Bordeaux. Until 1911 he was a professor at oimbra and from 1911 was professor of neurology at Lisbon niversity. He served in the Portuguese parliament, in 1918 as minister in Madrid and in 1918–19 was minister of foreign fairs. He was a pioneer in the surgical treatment of mental sorders. In 1927 he invented cerebral angiography, a method f visualizing the blood-vessels of the brain and making it ssible to diagnose and locate cerebral tumours. On Oct. 27, 49, it was announced that he had been awarded, jointly with R. Hess (*q.v.*), the 1949 Nobel prize for physiology and edicine for his discovery of the therapeutic value of the pre- ontal leucotomy in the treatment of certain mental disorders.

lontana. A northwestern state of the United States, Montana is popularly known as the "Treasure state." and area 146,316 sq.mi.; water area 822 sq.mi.; pop. (1940): 59,456; principal cities (1947 pop. est.): Helena, the capital 8,000); Butte (39,000); Great Falls (38,000); Billings (32,- 00); Missoula (22,000); Anaconda (13,600); Bozeman (12,- 00); Kalispell (14,000). Of the total population in 1940, there ere 540,468 whites, of whom 484,826 were native-born and 5,642 were foreign-born. The urban population was 211,535, 37.8%. The Indian population numbered 16,841. The U.S. ensus bureau estimated the population as 521,000 as of July 1949.

History.—The 1949 legislative session equalized the financing Montana public schools on the county and state level and aced school transportation under the supervision of the state epartment of public instruction. Changes in the teacher retire- ent law, which included both the public schools and the uni- ersity system, provided for 5% deductions from teacher sala- es up to $5,000 and school district or state contributions of qual amount, which made possible maximum benefits of $2,500 er year after 35 years of service. Teachers would have a ested interest in the retirement benefits after 10 years of serv- e in the state. Retirement was made compulsory at 70 years age. Allocation of the $5,000,000 bond issue for new uni- ersity buildings, authorized by referendum 52 in 1948, was held by court action in 1949, following an attempt by a majority the state board of examiners to allocate this building fund nong the greater university units in a proportion drastically fferent from carefully considered recommendations made by e state board of education.

In the quadrennial election of 1948, John W. Bonner (Dem.) as elected governor with a Republican senate and a Demo- atic house of representatives. Other officers elected were aul Cannon (Dem.), lieutenant governor; Sam W. Mitchell Dem.), secretary of state; Arnold H. Olsen (Dem.), attorney eneral; Neil Fisher (Dem.), treasurer; John J. Holmes (Dem.), uditor; Mary M. Condon (Dem.), superintendent of public struction. Fisher died in Aug. 1949 and Governor Bonner opointed Alta E. Fisher to succeed her husband as state easurer.

Education.—There were 1,326 elementary schools in Montana in 1949, with an enrolment of 75,529 and a teaching staff of 3,526. There were 178 high schools with 25,339 students and 1,432 teachers. The net amount spent on the operation of these schools was $20,611,770. An additional $4,737,649 was spent for debt service and capital outlay, making a total expenditure of $25,349,419 for public school education in Montana in the 1948–49 school year.

Social Insurance and Assistance, Public Welfare and Related Programs.—Approximately 21,770 persons received public assistance in 1949. Grants totalling $9,844,781 were distributed as follows (figures in parentheses indicate the average number of recipients per month): old-age assistance (11,170) $6,426,682; aid to dependent children (5,430) $1,890,860; aid to needy blind (483) $293,042; subsistence (1,442) $553,031; medical care (620) $118,894; hospitalization (483) $518,846; burials (38) $43,426. Unemployment benefits of $1,932,360 were paid to 12,709 persons, an average of $16.77 per week for 10.88 weeks, or $182.50 per claimant. Correctional institutions with their average populations and total expenditures in 1949 were: Montana state prison, 458 inmates, $261,320; state industrial school, 92 inmates, $146,598; vocational school for girls, 30 inmates, $140,901.

Communications.—In 1949, the state highway commission maintained 8,841 mi. of highways, of which 1,053 mi. were unsurfaced. State highway expenditures in 1949 were $16,429,814, including federal aid. The local rural mileage system totalled 61,146 mi. The total number of airports listed on the U.S. aeronautical charts for Montana in 1949 was 116, not including 170 fields intermittently used by farmers and ranchers within the state boundaries. The railway mileage was 5,241. The number of telephones was 119,302.

Banking and Finance.—There were 111 banks in the state in 1949. The 39 national banks had total deposits of $270,984,000, and their total assets were $284,317,000. State banks had total deposits of $263,065,491, and their total assets were $275,576,605. There were 16 building and loan associations with assets of $23,419,118. For the fiscal year ending June 30, 1949, the net state revenue, all sources, was $72,913,076, and the expenditures were $59,183,843. The gross debt of the state on July 1, 1949, was $16,432,500 and the net debt $15,535,173.

Agriculture.—Crops harvested in Montana in 1949 were valued at approximately $223,000,000, a decline of $82,000,000 in comparison with 1948 but still 53% above the average crop value for the preceding decade. Crops were removed from 8,705,000 ac., about 309,000 ac. less than in 1948. The value of all livestock in Montana was estimated at $333,504,000 on Jan. 1, 1949, as compared with $289,381,000 one year earlier.

Table I.—*Leading Agricultural Products of Montana*

Crop	1949	1948	Average 1938–47
Wheat, bu.	64,080,000	93,718,000	64,160,000
Hay, tons	2,479,000	2,964,000	2,521,000
Barley, bu.	12,052,000	24,909,000	11,822,000
Sugar beets, tons	690,000	672,000	867,000
Oats, bu.	8,091,000	11,826,000	12,502,000
Potatoes, bu.	2,100,000	2,560,000	1,884,000
Alfalfa seed, bu.	148,000	87,000	113,400
Corn, bu.	1,572,000	3,781,000	2,991,000
Dry beans, 100-lb. bags	288,000	312,000	296,000
Flaxseed, bu.	363,000	1,410,000	1,296,000
Mustard seed, lb.	8,700,000	18,300,000	—
Seed peas, 100-lb. bags	80,000	108,000	374,000

Manufactures.—The total value added by manufacture (1947 census) in the 652 manufacturing establishments in Montana in 1947 was $92,258,000, as compared with $38,828,000 for 552 establishments in 1939. Reports of the state unemployment compensation commission show that during the two years 1948 and 1949 an average of 18,000 persons were employed in manufacturing in Montana, with total wages of $52,898,000 in 1948, and $57,250,080 in 1949. Official estimates compiled by the state unemployment service in co-operation with the U.S. bureau of labour statistics, listed total employment figures for all Montana industry aside from agriculture as 139,405 for the fiscal year 1948, and 145,000 for the 1949 fiscal year. For the year 1949, electrical power to a total of 2,840,116,000 kw.hr. was generated in the state.

Table II.—*Industrial Products in Montana*

Products	1948	1947
Cheese, lb.	2,818,390	3,731,781
Butter, lb.	8,636,503	9,177,000
Ice cream, gal.	2,721,302	2,690,000
Beet sugar, cwt.	1,879,766	2,524,421
Beer, bbl.	?	253,762
Gasoline, gal.	?	172,464,941
Electric power generated, kw.hr.	2,924,704,115	2,779,116,000
Lumber, bd. ft.	598,000,000	500,000,000

Mineral Production.—The 1949 yield of each of the five major metals in Montana was less than in 1948. The tonnage of ore treated was about 20% less than in 1948. The pronounced drop in base-metal prices, beginning in March and continuing far into the summer, was the principal factor responsible for this marked decline. The value of production during 1949 and 1948 is shown in Table III.

Crude oil production in Montana in 1949 amounted to 9,225,600 bbl., slightly under the 1948 production of 9,376,624 bbl. The coal tonnage

Table III.—*Principal Mineral Products of Montana*

Mineral	Value, 1949	Value, 1948
Copper	$21,216,900	$25,281,368
Zinc	13,011,200	15,719,270
Lead	5,668,350	6,591,138
Silver	5,423,968	6,272,648
Gold	1,634,500	2,558,185
Total value	$46,954,918	$56,422,609

produced was 2,733,364 in 1949 and 2,905,245 in 1948. Natural gas deliveries to pipe lines at wells in Montana fields were approximately 34,000,000,000 cu.ft. in 1949. (E. E. B.)

Montreal.

A city in the province of Quebec, Canada, first called Ville Marie, Montreal was founded in 1642. The population of the city proper, as estimated by *Lovell's Directory* (1949), was 1,420,057 and of greater Montreal 1,650,011.

The port of Montreal is the largest in Canada. Deep-sea vessel arrivals in 1949 (commercial) numbered 1,112, with a net tonnage of 4,113,327. The number of coastal or inland vessel arrivals (commercial) in 1949 was 3,198, with a net tonnage of 3,502,218. In addition, there were noncommercial vessels (such as warships, pleasure boats, yachts, etc.) numbering 170, with a net tonnage of 21,766.

During 1948 a total of 2,568,010 tons of cargo passed through the port, including 2,209,884 tons inward and 358,126 tons outward (exclusive of ballast, nonrevenue; bunkers; ships' stores; mail; and passengers' baggage).

The assessed value of real estate, as of April 30, 1949, was $1,442,837,390, of which $1,081,766,358 was taxable and $361,071,032 was exempt from taxation.

In 1949 building permits were issued for 4,717 new buildings, having a value of $78,246,306 and for 2,878 repairs, having a value of $10,943,625.

Bank clearings for 1949 were $13,911,260,296. (J. A. Ma.)

Mormons.

The building operations of the church continued at a high level during 1949; 61 meetinghouses were finished and dedicated, and construction of about 130 others was authorized.

The superintendency of the Deseret Sunday School union (the church Sunday school system) was reorganized during 1949—the centenary of the establishment of church Sunday schools in Utah. Approximate enrolment was 500,000.

The welfare program of the church was expanded by adding new welfare projects in various parts of the church. Missionary work continued to grow, with 4,883 missionaries in the field.

The Primary association of the church, with a total membership of 157,735 children under 12 yr. of age, was building a 70-bed hospital for crippled children, with completion scheduled for 1950.

Moscow.

Although official figures were not available, it was generally thought that the capital of the Union of Soviet Socialist Republics and of the Russian Soviet Federated Socialist Republic had in 1949 a population of about 6,000,000. The building program had by no means kept up with the growth of the city, and, in spite of police efforts to relieve the town of any citizens who had no permit to live there and of legally laid down norms of accommodation, housing conditions were difficult, with two rooms as the average allowance for a family.

The main streets, which radiate like spokes of a wheel from the crenellated walls of the Kremlin with two ring-roads which link them, showed signs in surfacing, tree planting and laying-out of flowerbeds of the civic pride of the city soviet, though the side streets failed to live up to their standards. The crowds thronging the main shopping streets showed in the general shabbiness of their dress that in 1949 the Soviet Union still had a long way to go before the needs of all could be met. However, supplies of food and consumer goods in the shops maintained signs of improvement, queues decreased and, most important of all, prices of some classes of goods were lowered. The citizens of Moscow still had to struggle with congested public transportation, in spite of the continued efforts to improve it. But, whatever the rigours of life and travel, Muscovites enjoyed the consolation of good theatres, excellent concerts and what was considered by some to be the best ballet in the world. (R. Pos.)

Motion Pictures.

In 1949 the outlook of the U.S. motion-picture industry brightened perceptibly both at home and abroad. In neither instance were the results immediately convertible into cash profits—their chief value lay in the industry's psychological reactions.

Two factors may be given as responsible for the improved outlook: the conviction that U.S. pictures stood unrivalled in world popularity, and the success of the effort to decrease production costs without sacrificing the quality of product.

The industry's morale may be said to have reached its lowest point in Feb. 1949, when only 22 pictures were under production in Hollywood, compared with a normal figure of nearly twice that number. Then a reaction set in, which was reflected both in the statements of industry leaders and in studio announcements of future product. Viewed in terms of employment, the swing to a more optimistic viewpoint may be measured by the statistics for craft employees—12,000 at work in February, increasing to nearly 15,000 at year's end.

The industry had settled to the task of grappling with production expense. Under the sponsorship of the major studios, the Motion Picture Research council undertook continuous laboratory and experimental work. One development—a strippable adhesive for wallpaper used on sets, resulted in a yearly saving of $40,000 per studio. Reduction in production costs generally was estimated at 20% to 25%.

Box-office returns for 1949 were estimated at $1,375,000,000. The net profit estimate for seven major companies was $55,000,000, about the same as in 1948. Studio financial reports generally showed profits, though not always equal to those of 1948.

Many exhibitors in 1949 energetically pushed the sale of once lightly regarded side lines such as popcorn, candy and soft drinks at their theatres. At the convention of the Theatre Owners of America held in Los Angeles, Calif., in Sept. 1949, annual sales of such concessions in U.S. theatres were estimated at $500,000,000. This figure is equal to more than 25% of the highest annual box-office gross ever recorded.

In the world market situation, the U.S. industry was still beset by restrictive regulations and dollar shortage. Predictions of a drastic cut in returns from abroad did not materialize, however, and the 1949 foreign revenue of the distributing companies was estimated at 38% of gross film rentals, only a slight reduction from 1948. As their principal method of obtaining value from frozen funds, U.S. companies greatly expanded their foreign production activities. Italy, in particular, became a focal point for such operations, though England continued to gets its share of attention from U.S. producers. Several important pictures, such as *Stromboli* and *Deported,* were filmed in Italy during the year.

Devaluation of the pound, followed by similar currency action by countries in the British economic orbit, decreased the value of blocked funds of U.S. film companies and of their potential future earnings.

At the end of 1949 the long U.S. government antitrust action

ward winners among the films and players
hosen by the Academy of Motion Picture Arts
nd Sciences for highest achievement in 1949

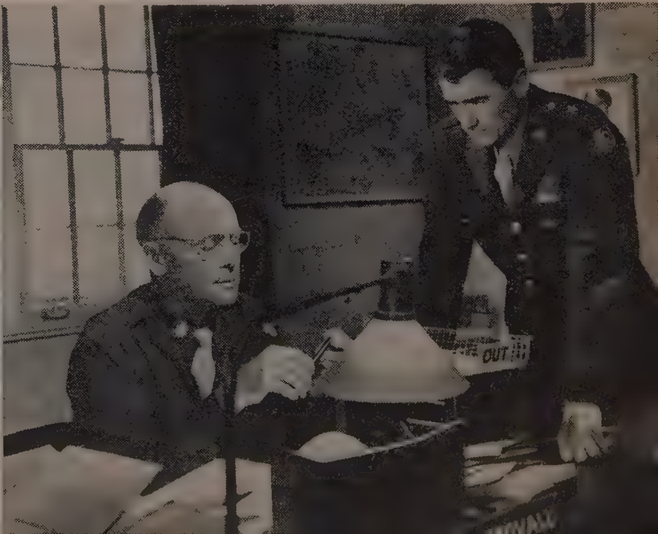
low: SCENE from *Battleground*, awarded for the best cinematography and for the
best story and screen play" (both written by Robert Pirosh)

Below: DEAN JAGGER (left), chosen the best supporting actor of the year for his performance in *Twelve O'Clock High*. The film was also awarded for the best sound recording of the year



seeking the divestiture of exhibition from producer-distributor interests had not reached a final settlement. However, Paramount followed RKO in arriving at a consent decree embracing such terms. Warner Bros., Loew's (Metro-Goldwyn-Mayer) and 20th Century-Fox continued to seek mitigation of the divorcement demand.

Two producing companies fell by the wayside during the year. Beset by financial difficulties, Eagle-Lion Films suspended production indefinitely at its Hollywood studios after about four years of operation. The company, officials said, would continue in business but only as a distributor of films made by foreign or independent producers.

At about the same time, David O. Selznick, one of the industry's leaders for many years and generally regarded as one of its most distinguished producers, closed his studio and disbanded his producing organization.

The Production Code administration in 1949 approved 362 U.S. features and 58 foreign features, a total of 420 (1948—394 U.S., 41 foreign, a total of 435).

Some competition was felt by film theatres in television centres, but not enough to register on a national scale. Film companies conducted experiments with large-screen theatre television. Late in 1949 Columbia announced a program of short subjects for television.

The outstanding development in production trend in 1949 was concern with racial questions, following previous emphasis upon anti-Semitism. The situation of the Negro in the U.S. was dealt with in such films as *Pinky*, *Intruder in the Dust*, *Lost Boundaries* and *The Home of the Brave.*

A number of the year's pictures dealt with war—*Battleground, Twelve O'Clock High, The Hasty Heart, Task Force, Sands of Iwo Jima.* Even the two highly successful comedies, *I Was a Male War Bride* and *Francis,* had war backgrounds.

Other outstanding productions were *Jolson Sings Again, The Heiress, All the King's Men, Champion, They Live by Night, Samson and Delilah, The Stratton Story.* Some of the outstanding musical productions were *The Barkleys of Broadway, Dancing in the Dark* and *On the Town.*

New faces to attract the most attention on the screen in 1949 were Kirk Douglas in *Champion* (which also introduced a new independent producer, Stanley Kramer), John Derek, Mercedes McCambridge, Keefe Brasselle and Richard Todd. Broderick Crawford, while not a newcomer, was acclaimed for his work in *All the King's Men.*

The New York film critics made the following selections for 1949: best picture of the year, *All the King's Men;* best foreign-language picture, *The Bicycle Thief;* best actress, Olivia de Havilland; best actor, Broderick Crawford; best director, Carol Reed, for *The Fallen Idol* (English).

Leading box-office stars of 1949, according to the annual poll of *Motion Picture Herald,* were Bob Hope, Bing Crosby (who had placed first in the five immediately preceding polls), Bud Abbott and Lou Costello, John Wayne, Gary Cooper, Cary Grant, Betty Grable, Esther Williams, Humphrey Bogart, Clark Gable.

The Academy of Motion Picture Arts and Sciences announced in March 1949 the following awards for 1948 (*see* accompanying page of photographs for 1949 winners):

Best picture, *Hamlet*, J. Arthur Rank-Two Cities, Universal-International (British); performances: actor, Laurence Olivier in *Hamlet,* actress, Jane Wyman in *Johnny Belinda*, Warner Bros., supporting actor, Walter Huston in *Treasure of Sierra Madre*, Warner Bros., supporting actress, Claire Trevor in *Key Largo*, Warner Bros.; best direction, John Huston for *Treasure of Sierra Madre;* writing (screen play), John Huston for *Treasure of Sierra Madre*, writing (motion picture story), Richard Schweizer and David Wechsler, for *The Search*, Praesens Film, M-G-M (Swiss); best art direction: black and white, Roger K. Furse, for *Hamlet*, colour, Hein Heckroth for *The Red Shoes*, J. Arthur Rank-Archers, Eagle-Lion (British); best cinematography: black and white William Daniels for *The Naked City*, Mark Hellinger Productions, Inc., Universal-International, colour, Joseph Valentine, William V. Skall and Winton Hoch for *Joan of Arc*, Sierra Pictures, Inc., RKO Radio; best sound recording, Thomas T. Moulton for *The Snake Pit*, 20th Century-Fox; short subjects: cartoon, *The Little Orphan*, M-G-M (Fred Quimby, producer), one-reeler, *Symphony of a City*, 20th Century-Fox (Edmund H. Reek, producer), two-reeler, *Seal Island*, Walt Disney, RKO Radio (Walt Disney, producer); best film editing, Paul Weatherwax for *The Naked City;* best scoring of a musical picture, Johnny Green and Roger Edens for *Easter Parade*, M-G-M; best scoring of a dramatic or comedy picture, Brian Easdale for *The Red Shoes;* best original song, "Buttons and Bows" from *The Paleface*, Paramount (music and lyrics by Jay Livingston and Ray Evans); best special effects: visual, Paul Eagler, J. McMillan Johnson, Russell Sherman and Clarence Slifer, for *Portrait of Jennie*, Selznick Studio, audible, Charles Freeman and James G. Stewart, for *Portrait of Jennie;* best interior decoration: black and white, Carmen Dillon for *Hamlet*, colour, Arthur Lawson for *The Red Shoes;* costume design: black and white, Roger K. Furse for *Hamlet*, colour, Dorothy Jenkins and Karinska for *Joan of Arc;* best documentaries: short subject, *Toward Independence*, U.S. army, feature, *The Secret Land*, U.S. navy, M-G-M (O. O. Dull, producer); Irving G. Thalberg Memorial award, Jerry Wald; foreign-language film award, *Monsieur Vincent* (French); special awards: Ivan Jandl, for the outstanding juvenile performance of 1948 in *The Search*, Sid Grauman, master showman, who raised the standard of exhibition of motion pictures, Adolph Zukor, for his services to the industry over a period of 40 years, Walter Wanger, for distinguished service to the industry in adding to its moral stature in the world community by his production of the picture *Joan of Arc;* special awards, scientific or technical: Academy plaque, Victor Caccialanza, Maurice Ayers and the Paramount set construction department, Nick Kalten, Louis Witti and the 20th Century-Fox mechanical effects department, honourable mention, Marty Martin, Jack Lannon, Russell Sherman and the RKO special effects department, A. J. Moran and the Warner Bros. electrical department. (L. O. P.)

Educational Motion Pictures.—During 1949 Encyclopædia Britannica Films celebrated its 20th birthday; Coronet and Teaching Films Custodians their 10th. The 1949 *Wilson Catalog* listed 7,030 films, of which 4,190 were evaluated.

Research.—The Instructional Film Research program of The Pennsylvania State college, under joint army-navy sponsorship through the special devices centre (navy), extended the total number of research projects on sound motion pictures to 45. About one-third of the projects were completed. The research, mainly on specially produced experimental films, dealt with a wide range of problems from training in perceptual-motor skills to the restructuring of attitudes.

Higher Education.—Colleges and universities became increasingly interested in audio-visual materials and in developing audio-visual centres. Ohio State university produced and released a film, *Accent on Learning,* showing audio-visual teaching methods used by instructors of geography, accounting, medicine, economics, engineering, and fine arts. The University of Chicago reported a grant of $20,000 from the Carnegie Foundation for the Advancement of Teaching, to be used in part to produce a teaching film on college teaching.

Organizational Activities.—The Educational Film Library association in 1949 had about 550 members, increasing its membership about 20% over 1948. During the year ending Aug. 31, 1949, members received evaluations of 335 films and copies of three special publications, in addition to regular issues of the *E. F. L. A. Bulletin* and service supplements.

The community film council movement, sponsored by the Film Council of America, continued to make solid advances during 1949. More than 15,000 copies of the eight pamphlets in the F.C.A.'s "How-to-do-it" series—touching such topics as how to conduct film forums, making community film surveys, obtaining and selecting films, putting on film festivals and workshops—were distributed to every state in the union and many other countries.

Six national organizations became new associate members of the F.C.A.—the Community Chests and Councils of America, the National Conference of Christians and Jews, the Cooperative League of America, the Association of Junior Leagues of America, the International Association of Lions Clubs, the Boy Scouts of America and the Girl Scouts of America.

The Department of Secondary Teachers of the National Eduation association extended the number of audio-visual demontration centres from the first group of 55 established in 1948 o 500 in 1949. The Department of Secondary Teachers sponored the third annual National Audio-visual Education week, upported by statements and proclamations by governors in 20 tates and by mayors in many cities.

Membership in the Department of Audio-Visual Instruction f the National Education association numbered more than ,100 in 1949. The membership includes almost all full-time irectors of audio-visual instruction in city school systems and nstitutions of higher education. The clearing house function of he department continued to be very important, and several housand requests for information and advice were answered.

Industrial Activities.—Membership in the Industrial Audio-Visual association increased to nearly 70 large users of films. More of the documentary or "realistic" approach was apparent n many industrial films of 1949, with clever use of magnetic ecording for location realism and more acceptance of real life characters. Julien Bryan's film for insurance personnel, *For Some Must Watch*, General Mills' film *The School That Learned o Eat*, Pan American World Airway's travel films on Ireland, Hawaii, etc., were notable examples. Progress was made in building visual information programs for employees.

Production.—The British Information service reported increased distribution and noted the release of 174 films during 1949. In the television field B.I.S. feature films were widely distributed through arrangement with commercial agencies. An outstanding release was *Waverley Steps,* first shown at the Edinburgh festival.

Coronet Instructional films reported that it had 251 subjects available for delivery as of Dec. 31, 1949, with a production schedule of six new films each month. Most productions were available in colour or black and white. In 1949 approximately 25% of all prints sold were in colour.

Encyclopædia Britannica Films expanded its production in most areas of subject matter and began experimentation on more costly productions with particular emphasis upon increasing technical quality. Several new subject areas were opened up, including American literature, economics, elementary hygiene. An expanded film program included new filmstrips for social studies, history, and geography. At the end of 1949, Encyclopædia Britannica Films had more than 500 teaching films in its library and about 75 filmstrips. Important new releases included *Productivity—Key to Plenty,* five American literature films on Franklin, Cooper, Longfellow, Jefferson and Irving; *Alcohol and the Human Body, The Loon's Necklace,* and three conservation films in colour on the living forest.

Continuing its program of producing text-films correlated directly with its textbooks, McGraw-Hill Book company in 1949 released 45 new silent filmstrips and five more motion pictures in the fields of chemistry, accounting, economics, marriage and American government. McGraw-Hill also released a series of 24 sound filmstrips on human relations in supervision. At year's end, it reported that 40 additional motion pictures and approximately 100 more filmstrips were in planning and production.

RKO Radio Pictures had a 16-mm. nontheatrical film library of more than 250 feature films distributed through its own 16-mm. film libraries, 21 in number. This list of feature films included Walt Disney classics as well as historical and biographical films. The *This is America* series of short subjects were available from RKO Radio Pictures under a three-year licence agreement to educational institutions.

United World Films, Inc., completed production of 36 two-reel films in the "Earth and its Peoples" series, produced by Louis B. de Rochemont at a cost of more than $2,000,000. Thirteen films in a complete series in zoology, 11 films in a track and field program and many additional titles in zoology, physical geography and child behaviour were also available.

Young America Films reported a total of 115 sound films and 93 filmstrips available at the end of 1949. The company announced a production schedule of 20 films and 40 filmstrips for 1950.

Teaching Film Custodians expanded its program from a highly restricted distribution for classroom use only within the continental United States to a world-wide distribution for the use of any agency with a program of "educational purpose and intent." Short subject material was excerpted from feature pictures under the supervision of committees of the National Council for the Social Studies, the Music Educators National conference and the National Council of Teachers of English.

Use of Films in Religious Education.—Sharply increased use of films was reported by the International Council of Religious Education. Three hundred persons attended the 6th International Workshop on Audio-Visual Education at Lake Geneva, Wis. Evaluation committees were set up across the country and their results were made available to local church workers through the monthly *Evaluation Bulletins* of the Visual Education Fellowship and through the *Audio-Visual Resource Guide for Use in Religious Education,* the first edition of which was released in 1949. Production conferences were set up to serve as channels of possible collaboration for the various denominations engaged in production of audio-visual materials.

The motion picture panel for the National Commission for U.N.E.S.C.O. was completing a survey and evaluation of films useful internationally in the three fields of fundamental education, international understanding and the popularization and the social implications of science. Several countries including the United States had passed the Agreement for Facilitating the International Circulation of Visual and Auditory Materials of an Educational, Scientific and Cultural Character.

Progress was made in developing a film coupon scheme which would make possible purchase of films in one's own currency. U.N.E.S.C.O. would exchange dollar or other hard currency with the soft currency countries. This plan had already been adopted in the purchase of books. (Ed. D.)

Technical Developments.—*Colour.*—Several new colour films were introduced in 1949. The Ansco process was further developed and received additional commercial use. A complete line of film types was now available for all of the necessary steps from the original taking film through the "duping" and special effects steps to release prints.

Du Pont introduced a positive film for making three-colour prints from separation negatives. This film was notable for employing a synthetic polymer which combines the functions of the gelatin and the colour former usually employed.

Eastman introduced, on an experimental basis, three-colour negative and positive film of the single film, triple emulsion type. Tests on these films were in progress in Hollywood at the close of the year. Both Eastman and du Pont continued experimenting with a negative film involving the use of three emulsions, two of which are subsequently stripped from the original base and mounted on new film bases in the laboratory before development. Polacolor corporation introduced and commercially used for a limited number of three-colour cartoons a process using a standard single emulsion, black-and-white positive film.

Photography.—Latensification, a system for increasing effective film speed, involving a low intensity, relatively long time general exposure of the film immediately before development, was used considerably in 1949 as a means of reducing the cost of producing motion pictures.

A new portable camera, the Camerette, manufactured by

Établissements Cinématographiques Éclair of France, was introduced in the United States during 1949. This camera has some excellent operating features and was well received in Hollywood.

Sound.—Magnetic recording was gradually being integrated into the production of motion pictures in Britain, Europe and the United States. Its freedom from photographic printing and developing distortions, the possibility for somewhat smaller and lighter recording equipment, and operating economies were factors stimulating its use.

A new miniature, nondirectional condenser microphone and associated amplifier was introduced in Hollywood by the Altec Lansing corporation.

Set Construction.—There was considerable activity in the application of new plastic materials to various phases of set construction. These included breakaway glass, combinations of plaster and plastic, low-temperature thermosetting plastics for casting in ornamental objects of various types, lightweight tree trunks, building columns and many other similar applications. Strippable adhesive was used with wallpaper and temporary flooring such as linoleum or asphalt tile. In both applications, this adhesive afforded easy removal of the surface material.

A new photographic backing was introduced, available in fairly large sizes, either black-and-white or in full colour. Its translucence permitted novel and realistic effects to be obtained by lighting from the back.

Theatre Television.—Two systems of theatre television were being developed and were in limited commercial use—the instantaneous projection system and the film storage system. In the former the television picture was projected from special television receiving equipment directly on the motion-picture screen. Installations of this type were made in theatres in Boston, Mass., New York, N.Y., and Philadelphia, Pa.

In the film storage system, the television picture was photographed on 35-mm. film from special television receiving equipment located in the theatre. The film was processed on a high speed basis and could be projected through the standard theatre projection equipment a few minutes after reception of the television picture. Installations of this type were made in New York city and Chicago.

The Federal Communications commission conducted hearings on theatre television at which the Society of Motion Picture Engineers and two theatre chains were requested to present briefs. One of the chains presented a detailed plan for a network of approximately 25 theatres located in nine different cities. The proposal contemplated a special television network, distributing either special programs staged for the purpose, public events of common interest or selected programs also being telecast for home reception. (W. V. W.)

Canada.—National Film board activities held the centre of the stage during 1949. The most striking films were: *What's under the Label?* to mark the 75th anniversary of Canada's first food and drug laws; *Land in Trust,* describing the soil conservation problems facing farmers in different parts of Canada; *Capital Plan,* reporting on Jacques Greber's plans to beautify Ottawa, Ont.; *Canadian Cruise,* a tour by motor cruiser through the Rideau canal; *Newfoundland—Atlantic Province,* the entry of Newfoundland into confederation. By September there were 10,000 National Film board prints circulating in the United States. Anticipating Canadian television, the board took steps to create a stock-pile of films suitable for video.

Private film production during 1949 was limited. Quebec Productions released *Un Homme et son péché* ("A Man and His Sin"), based on the popular 10-year-old French-Canadian radio show of the same name describing the life of a miser; Renaissance Films completed the shooting of *Forbidden City,* a mystery plot with a Montreal, Que., background.

The first annual Canadian film award went to *The Loon's Necklace,* an Indian legend in full colour. (C. Cy.)

Great Britain.—During 1949 the quota for British productions which must be shown in British motion-picture theatres was reduced from 45% to 40%. The supply of British films, however, began to fail, for producers found that it was difficult to finance films which, although protected as far as exhibition was concerned by an artificially high quota, did not cover their costs even when they were reasonably successful with the public. In November J. Arthur Rank, Great Britain's senior producer and studio-owner, declared he had lost £3,500,000 in production ventures. He declared that *Henry V,* made in 1943 and first released in London in 1944, had only four weeks earlier succeeded in recovering the costs of its negative—nearly five years after its initial release. In the same period it had contributed more than £400,000 in entertainments tax.

In spite of these economic difficulties Great Britain managed to produce during 1949 some films worth attention in any year. Ealing Studios, under the supervision of Sir Michael Balcon, produced a new series of comedies with something of a common style—including *Kind Hearts and Coronets* (Robert Hamer), *Whisky Galore* (U.S. title *Tight Little Island*) (Alexander MacKendrick) and *Passport to Pimlico* (Henry Cornelius). Charles Frend's *Scott of the Antarctic* in colour had been a great prestige success, but Harry Watt's second Australian film, the historical *Eureka Stockade,* was something of a disappointment, largely because of its poor acting.

Another well-intentioned realistic film which failed in part to survive the test of scripting and acting was *Blue Scar* (Jill Craigie), a film set and produced in a Welsh mining village. Two other films also in the realistic style were *Give Us This Day* (Edward Dymtryk), remarkable for its reconstruction of Italian life in New York, and *The Small Back Room* (Michael Powell and Emeric Pressburger), based on Nigel Balchin's novel of civil service research work during World War II. Films which had success during the year and which were based on novels and plays included *The Guinea Pig* (John and Roy Boulting), *The History of Mr. Polly* (John Mills), *The Passionate Friends* (David Lean)—both the latter derived from novels by H. G. Wells—and *Quartet,* based on four stories by Somerset Maugham. The most discussed films of the year were Thorald Dickinson's period piece *The Queen of Spades* and Carol Reed's *The Third Man,* which gained the Grand Prix at the Cannes Film festival.

These films, produced during the past two years but shown mainly during 1949, proved that Great Britain was capable of producing a small output of important pictures each year. Unfortunately a far greater number of poor-quality films were also released.

In documentary production, more particularly in the specialized technical and scientific films, Great Britain remained outstanding, as was shown by the many awards to British production given at the Venice festival. Many films, notably *Daybreak in Udi, Atomisation, Cornish Engine, Turbo-jet Propulsion, Digestion, Growing Girls* and the historical compilation *The Peaceful Years,* kept the standard of factual film production high.

Commonwealth.—Apart from the large output of commercial feature films in India, documentary production was the most important work done in films in the commonwealth. India, Australia, New Zealand and especially Canada (*see* above) were all consistently producing factual films under government sponsorship. The Australian National Film board's chief contribution during 1949 was the overlong but excellently shot *e Valley Is Ours,* a film about the Murray valley and its nomic and agricultural problems. An important fact was t during 1949 the Shell Film unit established a branch pro- ction unit in Australia to produce technical and scientific ns in the Pacific.

In India the government-sponsored organization, Information ms of India, produced newsreels and documentaries for both atrical and nontheatrical exhibition; the languages used re English, Hindustani, Tamil, Telugu and Bengali, and the jects were political, social and cultural.

Czechoslovakia.—After the success of the Czech war films 1946–47, the unique work of its cartoon and in particular its ppet films attracted international attention. The chief tech- ians of the puppet films were Jiri Trnka and Borivoj Zeman: ne of the latter's films used examples of the glass figures for ich another industry in Czechoslovakia is famous. Among ture films shown in 1949 were the war subjects *The Ghetto rezin* (Jiri Weiss) and *The Silent Barricade* (Otaka Vavra).

France.—French producers continued production on the ne scale as in 1948, about two-thirds that of the prewar put. Artistically speaking, it could not be said that France cupied the position it did before World War II as the leading ropean centre for the production of remarkable films. As Great Britain, there was no longer a school of French pro- ction like the work of the Italian realists. Each director of portance, Marcel Carné, Jean Cocteau, H. G. Clouzot, cques Becker, Claude Antant-Lara, Julien Duvivier or Yves égret, went his own way; perhaps all they had in common a certain extent was a taste for bitterness and disillusion.

Some new or less well-known directors came forward during year. Jacques Tati in a simple burlesque called *Jour de e,* which he produced and in which he starred, gained the tinction of being compared with Charles Chaplin. Yves égret made a controversial and bitter film, *Manèges,* in ich a man is exploited by his wife and mother-in-law to a al pitch of inevitable resentment. Jean Devaivre made a hnically interesting mystery film, *La Ferme des sept péchés,* d Louis Daquin produced a socially more healthy film called *Point du jour,* photographed in the realistic setting of the évin, France, mining area. The most controversial film of the ar was H. G. Clouzot's *Manon,* which in spite of winning the and Prix at Venice, met with considerable censorship diffi- ties in several countries through its handling of a modernized rsion of the Abbé Prévost's story. Other films of interest luded *Les Parents terribles* (Cocteau), *Rendez-vous de juillet* ecker) and *Au Royaume des cieux* (Duvivier).

Germany.—In 1949 Germany was reviving its film produc- n under the complex and varying administrations imposed the different occupying powers. The cinemas were well at- ded and on the free market of Western Germany British d U.S. films were popular with exhibitors and audiences. e best facilities for film-making were in the Russian and S. zones. The films most popular with audiences were un- rstandably films of escape. *Berliner Ballade* (R. A. Stemmle d Günther Neumann) satirized German self-pity to some ent, while *Liebe '47* (Wolfgang Liebeneiner) stressed it. her films dealing in various ways with social themes were *e Buntkarierten* (Kurt Maetzig), *Pit "Aurora"* (W. Schleif d E. Freund), *The Blum Affair* (Erich Engel) and *The Call* sef von Baky).

Italy.—For how long Italy, with the advantage of its com- ratively low production costs, would be able to continue to e directors such as Roberto Rossellini, Vittorio de Sica, Al- rto Lattuada and Luigi Zampa freedom of subject and style s debatable. Italian audiences, like those elsewhere, pre- rred romantic films to those realistic subjects which gave Italy a world-wide reputation immediately after World War II. Many of these now well-known films were produced at a cost of little more than £20,000 to £30,000; *i.e.,* at a rate less than one-sixth what their production cost would have been in Great Britain or the United States. There was no doubt that freedom of subject and treatment as exemplified by the Italian motion picture was closely related to this low production cost; were this condition to disappear these films could probably not be made. In the same way, the fine films on Italian art made by Luciano Emmer could be made because the overhead expenses involved were small.

De Sica's simple and beautiful film *The Bicycle Thief,* the story of a day in the life of an unemployed man and his son, led Italian realist production for 1949. Lattuada's *Mill on the Po,* involving the Italian agrarian labour trouble of the 19th century, was also important. Rossellini worked during the year on two films, *Terra di Dio* (*Stromboli*) with Ingrid Bergman and *La Macchina Ammazzacattivi,* a satiric fantasy set in Amalfi. Mario Camerini's *Molte Sogni per le Strade* with Anna Magnani was in a lighter style, and two good melodramas were Guiseppe de Santis's *Bitter Rice* and Pietro Germi's *In the Name of the Law.*

Poland.—Poland had been building up its film industry since 1944. By 1949 it had already achieved a fine school of documentary films as a part of its nationalized industry, but its ability to make important feature films was now also established. *The Last Stage* was a completely convincing reconstruction of life in the women's concentration camp of Auschwitz, Poland, directed by Wanda Jacubowska; *Robinson Warsaw* (Jerzy Zarzycki) dealt with the lives of a number of Warsaw citizens during the destruction of the city by the Germans; while *Truth Knows No Frontiers* showed the martyrdom of the Polish Jews in the Warsaw ghetto.

Scandinavia.—As film-producing countries, Denmark and Sweden were far ahead of Norway, which had only the smallest output of films in the documentary style. Whereas Denmark specialized in documentary production under state subsidy similar to that of Great Britain, Sweden concentrated mainly on commercial feature films, a few of which were shown widely in other countries. New directors of importance who emerged from these countries were Bjarne Henning-Jensen of Denmark and Arne Sucksdorf of Sweden. The former was noticeable for his handling of children and adolescents in his sensitively photographed films; the latter was an experimentalist in subjects involving location work and carefully contrived rhythms.

U.S.S.R.—Production in the U.S.S.R. had still not fully recovered from World War II, and the number of feature-length films produced remained comparatively small. Among films of merit were *Academician Pavlov* (G. Roshal), *Lenin* (M. Romm), *The Battle of Stalingrad* (V. Petrov), *Young Guard* (S. Gerasimov) and *The Village Teacher* (M. Donskoy). *Lenin* was a well-made historical compilation including a number of extracts from the "classical" silent films of the '20s. The others included well-acted, realistic reconstructions of the life and work of famous soviet scientists and of Joseph Stalin's conduct of the defense of Stalingrad. Soviet animated films, notably *The Little Hunchback Horse* and *A Tale about a Soldier,* were shown at the Edinburgh festival with great success.

Yugoslavia.—*Sofka,* which was shown with success at the 1949 Edinburgh Film festival, indicated, in spite of some slowness, a fine feeling for period and regional custom. Most Yugoslav film subjects, however, were still concerned with World War II as it affected Yugoslavia; and the documentary filmmakers were closely concerned with using the motion picture to develop educational work among the more illiterate sections of the country.

(R. Man.)

Motor-Boat Racing.

The 46-year-old Harmsworth trophy (British international trophy for power boats), held by American boats since 1920, returned to competition in 1949 for the first time since 1933, with a Canadian challenge by E. A. Wilson's "Miss Canada IV," driven by the owner's son, Harold Wilson. The races for it on the Detroit river, July 29–Aug. 1, were won by R. Stanley Dollar, Jr., of California, driving his "Skip-A-Long." He averaged 94.285 m.p.h., to better the previous (1931) Harmsworth record of 89.913 m.p.h.

Though it failed to take the Harmsworth trophy, "Miss Canada IV," early in October at Picton, Ont., set a new North American straightaway speed record of 139.5 m.p.h., a close call for the 10-year-old world's motor-boat speed record of 141.74 m.p.h. made by Sir Malcolm Campbell in England with "Blue Bird II." On another trial run Wilson topped the record with a mile at 142.292 m.p.h. but was unable to complete a second run of this trial as required for recognition by the national authority, the American Power Boat association.

The North American record, made by Gar Wood in "Miss America X," had stood for 17 yr., until on Aug. 20, 1949, when it was broken by Dan Arena, driving Jack Schafer's "Such Crust," on Gull lake, Mich., at 126.588 m.p.h., a mark which lasted only 6 weeks before Wilson bettered it with "Miss Canada IV."

Outstanding among unlimited speedboats in American racing during 1949 was Horace Dodge's Hacker-built, Allison-powered "My Sweetie," driven by Bill Cantrell. With the single exception of the Harmsworth, "My Sweetie" won every race it entered during the year, including the Gold cup and Silver cup events at Detroit, Mich., free-for-alls at Red Bank, N.J., and Buffalo, N.Y., and the President's cup race at Washington, D.C.

Motor cruiser racing, as a test of speed, had long been a dead issue, but the piloting contests known as "predicted log races" were gaining popularity in various countries. A high mark in this type of competition was reached in 1949 when 94 power cruisers started, and 91 finished, the 940-mi. course from Olympia, Wash., to Juneau, Alsk. The winner was George H. Patton, of Victoria, B.C., whose cruiser "Aileen" completed the course with a discrepancy of only 1.3% between its predicted and its actual logged performance for the voyage.

(W. H. Tr.)

Motor Transportation.

The production of new buses in the United States during 1949 was less than half of what it was in 1948, when 11,143 buses were put into service on city and intercity bus lines. Available information indicated 4,650 motor buses and 650 trolley buses were produced in 1949 for bus companies that were operating over regular routes.

The automobile industry's 1949 production in the United States was placed at 6,255,401 vehicles. Included in this were 5,119,911 passenger cars and 1,135,490 trucks and buses. The industry's previous record was in 1929 when 5,358,420 cars and trucks were produced. Overseas shipments declined in 1949 to about 300,000 vehicles, compared with 436,217 in 1948. In 1929, the record year, exports numbered 733,762 vehicles. At the end of 1949 it was estimated that nearly 3,000,000 more passenger cars and trucks had been registered in the United States than in 1948. According to preliminary registration totals released by the U.S. bureau of public roads, there were 35,491,000 passenger cars and 7,807,000 trucks and buses on the road. Like passenger car registrations, truck registrations were at an all-time high.

The U.S. transit industry as a whole in 1949 carried 46% more passengers than the 1936–40 average. The total of passengers or riders carried by the industry in 1949 was estimated at 19,000,000,000. While this figure was 11% lower than that for 1948, it represented a weekday average of about 63,000,000 rides on the nation's streetcars, trolley buses, buses and subway systems. Fare increases kept the industry's operating revenues at $1,490,000,000, or slightly above those of 1948. Operating expenses, including depreciation but not taxes, decreased in 1949 by approximately 1.5% to $1,324,000,000. When compared with the previous year, according to these preliminary figures, net revenue was approximately $166,000,000, or 14.52% more than in 1948. This $166,000,000 was the return on $3,900,000,000 estimated property investment by the industry. Despite poor net earnings, transit companies had purchased 3,000 surface and subway cars, 3,500 trolley buses and 37,000 motor buses, or nearly 44,000 new vehicles in the years 1944–49. Estimates placed the number of surface trolley cars in use during 1949 at 16,100, a decrease of about 41% since 1944; and buses at 59,000, an increase of 22% during the same period. The total number of passenger-carrying vehicles owned by the transit industry was estimated at slightly more than 90,000, approximately the same number as in 1948. However, the vehicles purchased in later years generally had greater seating capacity and the actual number of seats available for riders had increased.

One of the newer developments in the transit industry was the use of radio on buses and streetcars. Radio stations paid the cost of installing FM sets in vehicles and benefited from the guarantee of an assured audience for their advertisers. The transit company received either a percentage of advertising revenue or a flat monthly fee per vehicle. At the close of the year programs were being heard in more than 3,000 trolley buses, motor buses and streetcars in 15 cities. Independent studies indicated that passengers favoured programs which furnished music, weather announcements, news and sport summaries.

Approximately 97,600 buses were used daily during the school year of 1949 to transport 5,720,000 children to and from 45,256 public schools, largely in the rural areas. In this service, which covered 2,079,000 mi. of routes, the buses rolled up approximately 736,000,000 bus mi. during the year. The cost of this service for the year was about $177,500,000.

Truck registrations in the U.S. in 1949 numbered more than 7,300,000. According to the American Trucking association, trucks were performing nearly 80,000,000,000 ton-mi. of service annually, and carried approximately 60% of the total tonnage moved in the nation's commerce during the year 1948.

In the bus and the truck fields the trend continued toward the use of diesels. The number of diesel trucks in service increased from about 7,600 in 1944 to about 12,000 in 1948. In the bus field dieselization had grown more rapidly; more than 70% of the new buses delivered to companies in two months in 1949 were diesel powered. It was estimated that in 1949 almost 40% of the total bus production for common carriers in city and intercity service were diesel powered.

In bus design the year was marked by the development of the 50-passenger city-type bus for ultimate use on the municipally owned lines in New York city. This bus had staggered seats, wide and easy-moving windows, fluorescent lighting, double width exit and entrance doors and improved springing to give a smooth ride. It had a torque converter, a hydraulic power steering system and a 40-ft. turning radius. It was expected to have high schedule speed and low maintenance and operating costs.

Design of vehicles for intercity carriers was high lighted by the Greyhound "Scenicruiser," a deck-and-a-half type of luxury motor coach 40 ft. in length and powered by a 220 h.p. diesel engine, and by the "Continental," also a deck-and-a-half luxury coach built for the Continental bus system, Dallas, Tex.

During 1949, city and intercity bus companies opened or were at work on building projects costing $35,000,000, to house equipment, personnel and passengers. The bulk of this expenditure was being borne by the larger intercity companies, mainly the Greyhound, Continental, American and Trailways systems. One of the two largest projects was located in Chicago, where Greyhound was constructing a $7,000,000 terminal and office building; the other was in New York city, where the port of New York authority was at work on a $20,000,000 union bus depot. Under way in Memphis, Tenn., was a $1,000,000 project for Dixie Greyhound lines. In the truck field the most impressive project was the huge Union Motor Truck terminal in New York city opened by the port of New York authority. Located four blocks from the entrance to the Holland tunnel, this terminal was expected to reduce trucking costs, expedite deliveries and relieve traffic congestion. Howard S. Cullman, authority chairman, estimated that use of the terminal would cut the operations of the big trailer-trucks on city streets by 25% and those of smaller trucks 12%, and that the terminal would save $1,000,000 a year to the trucking industry. (*See* also AUTOMOBILE INDUSTRY.) (C. W. S.)

Great Britain.—At the end of 1948 the British Transport commission had acquired the 15 or so bus companies which made up the Tillings Motor services, one of the largest in the country. On Jan. 25, 1949, it also acquired control of the Scottish Motor Traction group for £23,500,000. Thus by the beginning of the year the commission controlled nearly 20,000 buses and coaches including those belonging to London Transport. It also held large interests in British Electric Traction and its subsidiary companies. It was never the intention, however, that the commission should directly control even a majority of the bus services in the country: the function of the Road Transport executive and of the Road Passenger executive, which succeeded it in 1949, was to co-ordinate, in conjunction with the local authorities, the bus services in different areas.

During 1949 approximately 1,600 new or reconditioned buses were put into service by the London Transport executive. Though this was twice as many as in the previous year the figure did not cover the number of old buses withdrawn from service, and the greater operating efficiency in terms of miles run was largely gained at the expense of passengers' comfort. However, Lord Latham, chairman of the London Transport executive, expressed optimism about the situation in 1950 when there was expected to be a net increase in numbers of buses and trolley buses and a consequent expansion of services. He also announced that preliminary steps were being taken for the conversion of the south London street railways into bus routes and that 16 new garages or converted depots were to be built at a cost of £4,600,000. For the more distant future the executive was preparing the reorganization of its services to meet the decentralization of population under the government's plan for London.

Under part III of the Transport act of 1947, the commission was to have the sole right to carry on long-distance haulage for "hire or reward" (except in the case of goods like gasoline, milk and timber for which specialized vehicles were needed) after an appointed day to be fixed by the minister of transport. In November the minister announced that the day had been fixed as Feb. 1, 1950. After this date only firms which had been operating on Nov. 28, 1946, and had original permits or those which had since been granted permits to operate could continue in their business, and then only until the Road Haulage executive was ready to take them over.

In 1948 a nucleus of important road haulage concerns had been taken over by the commission. Some of these were part of the assets of the railways and others had been taken over by agreement or by compulsory acquisition. By the end of 1949, 30,000 vehicles—three-quarters of the total in the A and B licence class—had been acquired and an organization comprising eight regional divisions and districts set up to control them.

In its *Report and Accounts for 1948* (published Sept. 1949) the British Transport commission called attention to the post-war growth in the numbers of C licence holders. In 1947 there had been 487,151 vehicles under C licence, and by the beginning of 1949 the figure was 590,516. These traders, who, so long as they carried their own goods, would be able to operate within any distance of their base, formed a hard core of competition to the services provided by the commission; and the *Report* stated, rather ambiguously, that although most of the vehicles were under 30 cwt. and were therefore presumably engaged in retail distribution, the increased use of C licensed vehicles affected the commission in planning, in fixing charges and in the eventual integration of its services.

It was evident that a clear indication of the future of C licence holders could not be expected until at least the appointed day when practically all other forms of transport would be controlled by the commission. (*See* also ACCIDENTS; RAILROADS.)

Municipal Government.

Significant federal legislation in 1949 affecting cities included provision of increased federal aid for airports, increased federal aid for hospital construction by municipalities, and payments in lieu of taxes to cities on low rent housing projects for fiscal 1950 and retroactive payments for fiscal 1949 and 1948. Also, the program of federal aid for local public works planning programs which terminated on June 30, 1947, was resumed in 1949 when congress authorized a two-year program of $100,000,000 interest-free loans to states, cities and other public agencies to finance plans for a $3,000,000,000 shelf of public works projects and appropriated $25,000,000 for fiscal 1950. While the backlog in needed public works throughout the country was estimated at about $100,000,000,000, materials were once more avaliable and there was a decline in construction costs; an all-time high for construction by state and local governments was reached in July, 1949, when contracts for projects costing $500,000,000 were awarded in a single month.

After hearings in May at which federal, state and local officials, members of the Commission on Organization of the Executive Branch of the Government and others appeared, a measure for establishment of a permanent National Commission on Intergovernmental Relations composed of 14 members representing the federal, state, municipal and county governments and private citizens was introduced into the senate. The commission would be responsible for continuous study of the allocation of functions between governmental levels and of intergovernmental fiscal relations. The American Municipal association at its annual conference in December adopted an extensive statement of national municipal policy on intergovernmental relations, endorsing federal legislation for establishment of a national commission, and urged increased aid by the federal government for urban streets and highway construction.

Housing.—The federal housing legislation of 1949 was designated by the president of the United States Conference of

Mayors as "the most important single piece of legislation affecting cities that has ever been enacted into law." The two sections of major interest to cities were title I, on urban redevelopment, providing federal aid in the acquisition, clearance and development of blighted or undeveloped areas, and title III, offering federal aid in the construction of low-rent public housing for low-income families. (*See* HOUSING.) The federal government would finance two-thirds of the net cost of redevelopment projects, and loan funds covering 90% of the cost of public-housing projects. Under title I, $1,000,000,000 in federal loans and $500,000,000 in federal capital grants over a five-year period were authorized; under title III, which permits construction of a total of 810,000 dwelling units over a period of 6 years at an average of 135,000 per year, $1,500,000,000 in loans and up to $308,000,000 a year for 40 years in subsidies to cover the difference between operating costs and rentals charged were authorized.

Municipal Finance.—Fiscal data on the nation's 397 largest cities for 1948—latest available in 1949—showed that expenditures by cities of more than 25,000 population, totalled $4,000,000,000 and exceeded expenditures in 1947 by 16%. Revenues amounted to $3,700,000,000 or 14% more than in 1947. Revenues from property taxes increased 10%; from city sales and gross receipts taxes 31%; and from state aid and service charges 14% each. Expenditures for current operations, constituting three-fourths of municipal spending in 1948, exceeded the 1947 total by 13%; capital outlays increased almost 50%. Debt continued the upward trend resumed in 1947.

Budgets early in 1949 reflected a cautious approach by city officials because of declines or levelling off in prices and construction costs. There were few general increases in city salaries, few extensions of municipal services and no substantial increases in property tax rates.

During 1947 and 1948, local sales and income taxes had become the largest sources of tax revenues next to the property tax. Sales taxes became effective in a few larger New York cities following the enabling legislation of 1947; but Syracuse, N.Y., repealed its sales tax in 1949, to become effective in 1950. More than 130 California cities had sales taxes in 1949; Poughkeepsie, N.Y., Washington, D.C., and Fayette, Ark., adopted sales taxes during the year. Local income taxes were adopted in several large Ohio cities in 1948, as well as in St. Louis, Mo., and Louisville, Ky., and in Dayton, O., and Portland, Ore., in 1949—subject to referendum in May of 1950 in Portland. The outstanding development, however, was in Pennsylvania, where more than 180 communities had income taxes under the "tax everything" act of 1947. Amendments to the act in 1949 modified it somewhat by prohibiting local taxes on public utility services, natural resources and farm and manufactured products, placing ceilings on a number of taxes and limiting municipal revenues to the equivalent of a 10-mill real estate tax and school district revenues to the equivalent of a 15-mill tax. The amendments also prohibited salary and wage taxes by school districts on nonresidents and limited such taxes to a rate of 1% in other units.

The work of the Hoover commission in recommending economies in the national government set the wheels in motion for similar action at the local level. Los Angeles, Calif., for instance, appointed a commission of 27 citizens to study all city departments with a view to the improvement of city organization and operating methods. In New York city, a survey of all departments with the purpose of increasing efficiency and reducing operating costs was planned. Boston, Mass., installed many improvements in its financial procedure as a result of recommendations made by a city finance commission. Berkeley, Calif., and other cities reorganized their finance and other departments, while improved budget procedures were adopted in Rochester, N.Y., Wichita, Kan., Richmond, Va., and Kansas City, Mo.

Adjusted tax rates showed an annual increase of only .06% in 1949, compared with 3.8% in 1948, according to a study of 248 cities of more than 30,000 population; the total increase for the period 1945–49 was 8.1%. Assessed valuations for these cities increased 5.1% in 1949, compared with 5% in 1948; the increase over the period 1945–49 was 26.5%. Tax collections declined slightly from 1948 to 1949, from an average of 92.26% in 1948 to 96.12% in 1949.

Cities shared in the rise of local government gross debt in 1949 to an all-time high. The total for cities, as distinguished from other local units, reached $9,496,000,000, an increase of 7% over 1948, but not the high mark for this unit of government. The 1949 city total was exceeded in 1932, 1940 and 1942, for instance, when totals were $9,909,000,000, $9,899,000,000 and $9,806,000,000, respectively. Just over half the city debt in 1949 was for general government purposes, the remainder for publicly owned enterprises.

State and municipal bonds approved by the voters reached a record high of $2,217,000,000 in 1949, compared with $1,449,000,000 in 1948—an increase of 53%. Of these approvals, $1,348,000,000 were in Nov. 1949, compared with a total of $876,000,000 in Nov. 1948 and the previous record high of $1,115,000,000 in Nov. 1947. State and municipal bond sales for 1949 totalled $2,989,900,000, compared with $2,989,700,000 for 1948—well above the previous all-time high of $2,373,000,000 of 1947.

Personnel.—The steady postwar increase in number of employees continued in 1949. In October, city nonschool employees numbered 1,099,000, an increase of 5.8% over the same month in 1948 and 25% over Oct. 1945, when the first postwar increase for that month was reflected. The increase in 1949 was the highest since 1946, when it was 8.6%. City pay rolls for nonschool employees rose considerably more rapidly than did the number of employees, though the rate of increase slackened slightly in 1949. The Oct. 1949 total was $223,400,000, compared with $206,200,000 in Oct. 1948—an increase of 13.2%. The increase a year earlier was 13.8% and the highest rate of increase, 20.1%, was in 1946. Comparative October totals as compiled by the census bureau for city nonschool employees for the decade 1940–1949 and for city school employees for four available years were as follows:

Year (October)	Number of Employees (In thousands)		Monthly Pay roll (In millions of dollars)	
	Nonschool	School	Nonschool	School
1949*	1,099	196	233.4	57.0
1948	1,039	211	206.2	59.8
1947	996	205	181.2	55.0
1946	955	199	160.0	45.9
1945	879		133.2	
1944	855		125.0	
1943	858		119.3	
1942	872		109.7	
1941	901		108.4	
1940	887		104.9	

*Preliminary data.

A survey of pay rates in 100 cities showed that fewer cities granted increases in the first half of 1949 than in the corresponding period of 1948 and 1947: 40%, compared with 61% and 47% for 1948 and 1947, respectively. Madison, Wis., one of the 20 or so cities to inaugurate a cost-of-living wage adjustment plan, was the first city to make a general wage reduction.

New York city, on the contrary, raised the mayor's salary from $25,000 per annum to $40,000 and authorized a $10,000 yearly increase for each of the seven other members of the board of estimate and a $2,000 annual increase for the 25 city councilmen, besides salary increases totalling $73,100 for 24 appointed city officials—a total increase of $208,100 effective Jan. 1, 1950.

War on Organized Crime.—The spread of organized crime throughout the nation in such cities as New York, New Orleans, La., Los Angeles, Kansas City and Chicago, Ill., resulted in unprecedented action by the American Municipal association, representing about 10,000 municipalities. At its annual convention in Dec. 1949 the trustees were directed to prepare a comprehensive program for the pooling of their resources and information by all cities faced with the problem of organized crime. DeLesseps Morrison, mayor of New Orleans and president of the association, called on the federal government for aid in the eradication of crime syndicates. The nation-wide operations of slot-machine men were exposed by a California Special Crime Study Commission report of March 7, 1949, which estimated that 20% of the gross take of the national slot-machine racket was expended annually for the bribery and corruption of municipal law enforcement officials. It was estimated that the numbers racket and illegal race track gambling provided additional huge sums for protection and graft.

Water Shortages.—A critical water shortage, caused by light rainfall and greatly expanded demands on water systems, struck the northeastern states from Maine to Virginia in the closing months of the year, resulting in emergency measures to conserve city water supplies. A state of emergency was proclaimed in heavily populated sections of New Jersey; two cities, Jersey City and Hoboken, slashed water pressure five to ten pounds. New York city embarked on a voluntary conservation program. (*See* Public Health Engineering.)

Council-Manager Government; Proportional Representation.—On Dec. 31, 1949, there were 891 council-manager cities in the continental United States and 15 council-manager counties. Of the cities, 71 adopted the plan in 1949, compared with 74 in 1948 and 75 in 1947. There were eight abandonments in the United States in 1949. Voters of Des Moines, Ia., decided to abandon the commission form of government it had adopted in 1908, known as the Des Moines Plan, in favour of council-manager government to become effective in March 1950.

Proportional representation was abolished in Massachusetts when the legislature, after several attempts, succeeded in removing it from the state's optional Plan E charter for cities. Because of an error in drafting, however, this law seemed still subject to clarification by the courts. The six cities which had already adopted proportional representation were exempted, but a referendum on the subject on petition of 10% of the voters was provided. These cities—Cambridge, Lowell, Worcester, Medford, Quincy and Revere—all elected councils and school boards by proportional representation in November. Somerville, Mass., in November and Gloucester, Mass., in December voted to adopt Plan E government, including proportional representation despite the state legislative ban. Three Ohio cities —Toledo, Cincinnati and Hamilton—also elected proportional representation councils. Toledo, however, on its fifth try, voted to supplant proportional representation with elections at large by majority vote. New York city, electing its first city council since its repeal of proportional representation in 1947, gave 24 of the 25 seats to the Democrats, who received only 52.6% of the votes cast; one Republican was returned. Under proportional representation, probably 19 seats would have gone to the Democrats, 7 to the Republicans, 3 to the Liberals and 3 to the American Labor party.

The federal-managed town of Oak Ridge, Tenn.—devoted to the production of atomic energy—chose its seven-member town council by proportional representation on Sept. 13, 1949.

(*See* also Elections; Town and Regional Planning; also under individual large cities.)

(A. M. Ds.; L. Gu.)

Canada.—Toward the end of 1949 the federal government announced a municipal aid plan, which gave grants to municipalities where the federal assessment exceeded 4% of the total assessment within the municipality. The grants amounted to 75% of the revenue loss because of lack of tax revenues.

The annual meeting of the Canadian federation of mayors and municipalities was held in Montreal, Que., out of which came a brief presented to the federal government. It asked for aid to municipalities where unemployment was present, revision of the grants-in-lieu-of-taxes formula, remission of the 8% federal sales tax on municipal purchases and delay in rental increases.

Investments of Canadian chartered banks in municipal bonds increased because of the fact that municipalities generally were in good financial condition.

Victoria, B.C., voted to become the 36th Canadian municipality to adopt the city manager system of government.

(C. Cy.)

Great Britain.—An outstanding event of the year 1949 was the setting up in January, under the authority of the prime minister, of the Local Government Manpower committee composed of representatives of government departments and local authorities. This committee originated from the request made by the government to local authorities in 1947 that the local authorities should economize in manpower. The local authorities had thereupon made representations to the government that economy in manpower was not possible while government departments continued to concern themselves with the details of local government administration and that reduction in manpower could be carried out only if departmental controls over local authorities were diminished. The work of the committee was subdivided by the appointment of a number of subcommittees and panels, each concerned with particular local government services.

The first general local government elections to be held under the Representation of the People act, 1948 (which effected certain amendments in the law of elections), took place during April and May. The alteration in the law and procedure and, in some cases, in the areas of constituencies made it difficult both to foretell the results of the elections or to compare them with those of previous elections. Politically there was a swing toward the right; some former socialist councils lost their majorities and in many cases the socialist majority was substantially reduced. The election for the London county council produced the extraordinary result that Conservatives and Socialists obtained equal numbers of seats on the council (64 each) with one Liberal in addition. The fact that a number of the aldermen remaining in office were Socialists was sufficient to ensure the election of a Socialist chairman. In the election of the new aldermen (for which only councillors may vote) the chairman of the council took the unusual step of voting. Five out of 11 of the aldermanic vacancies were secured for the Conservatives and the remaining 6 for the Socialists. In the result the council remained Socialist by a majority of 78 to 80 (aldermen and councillors together but excluding the chairman).

The local government world received with surprise the announcement by the minister of health (Aneurin Bevan) in the house of commons on June 27 that the Local Government Boundary commission was to be disbanded. The commission had, in their report for 1948, pointed out the difficulty of reviewing areas of local government without a corresponding review of the functions of local authorities. Bevan alluded to this difficulty and said that the government had come to the conclusion that it would be advisable to repeal the Local Government (Boundary Commission) act of 1945 from which the commission derived its powers; this would involve the winding up of the commission and would put the position back to what it had been before the act was passed until such time as the government had had an opportunity of reviewing the structure and functions of local government.

County councils and county borough councils were occupied during the year with the making of schemes for the setting up of valuation courts, constituted from valuation panels made up of unpaid members, to hear appeals from decisions of valuation officers of the commissioners of inland revenue who, under the Local Government act, 1948, were given the duty in place of the local assessment committees of making valuations for rating purposes. The minister of health asked that the panels should be constituted by Nov. 1949, so that the valuation courts could start functioning early in 1950. (W. E. J.)

Munitions of War.

U.S. Army.—Some of the developments in munitions and related fields during 1949 are here briefly described.

Armour.—Specially fabricated plastic armour was tested successfully in stopping a .45-calibre slug.

Battery.—The army signal corps perfected a 24-v. electric battery that would start an engine at −65° F. A dry-cell battery using magnesium instead of zinc was also made. It had twice the capacity of the conventional type and required no machinery changes for its manufacture.

Boat.—A new assault craft for use of infantry in crossing rivers was made of Fiberglas spun to one-thirtieth the thickness of a human hair. This was woven into cloth and impregnated with tough plastic. A boat so constructed weighed less than 300 lb., was powered by a 33-h.p. engine and could carry 15 men.

Deactivator.—The ordnance department worked out a process for safely removing fuses and boosters from high explosive bombs and projectiles. A television camera transmits an image of the work being done to an operator who manipulates control tools from a bombproof shelter.

Engines.—Continental Motors corporation developed an air-cooled engine for military vehicles. It ranges from 125 to 1,040 h.p.

Gases.—The chemical warfare service was responsible for testing and developing a new series of gases more deadly than lewisite or mustard gas. This new gas uses Tabun, first of the G series as a base. This series is also known as "green ring three" and includes the deadly nerve gases, sometimes referred to as psychological gases since they cause irresponsible action or behaviour among their victims. Small quantities of these new gases, inhaled or brought into contact with the skin, produce death.

Gasoline.—Congealed gasoline was developed for practical use. It may be stored in open bins and shipped in ordinary freight cars like coal. It does not explode nor does it ignite easily.

Generator.—The General Electric company built the first postwar mercury turbine generator. This used mercury vapour instead of steam to drive the turbine and was capable of producing 15,000 kw. of electricity.

Grenades.—John C. Garand patented a device for launching grenades from firearms, particularly gas-operated, semiautomatic weapons.

Laboratory.—The quartermaster corps received from a civilian manufacturer a highly developed and complete mobile laboratory for testing petroleum fuels and lubricants. It was completely self-contained and independent of other sources for electrical power, heat control, etc. It could maintain any critical range of temperature necessary for testing operations and, in a test at Wright field, O., maintained an inside temperature 140° higher than the temperature outside. In it could be tested all grades of gasoline, fuel oils, lubricating oils and greases.

Motors.—Two giant electric motors, each developing 25,000 h.p. and capable of producing a 1,500-m.p.h. gale, were built at Moffett air force base, Calif., to test full-scale aircraft at supersonic speeds.

Radio.—Brig. Gen. David Sarnoff, president of the Radio Corporation of America, developed a radio signalling system which circumvented former errors caused by fading, static or other unfavourable conditions.

Rifles.—The Firestone Tire and Rubber company, Akron, O., began mass production of two recoilless rifles which would give the infantry soldier striking power equivalent to field artillery. One was a 57-mm. shoulder weapon while the other was a 75-mm. rifle. The latter was fired from a standard machine-gun tripod and it hurled a 14-lb. high explosive shell more than four miles.

Rocket Launchers.—Several types of rocket launchers, wheeled and tank-mounted, were completed. They consisted generally of a large number of tubes, mounted in honeycomb fashion, lightweight, easily portable and capable of rapid fire with high explosive shells.

Rockets.—In firing tests with high-reaching rockets, much valuable material was heretofore lost. This condition was remedied by redesigning the war head of the rocket. At a distance of 100 mi. from the earth, the 3,600-lb. war head of the V-2 rocket is detached automatically from the rocket. This war head contains the instruments for upper-air research. When detached, the war head trails a 30-ft. diameter pilot parachute. When this assembly drops below 50-mi. altitude, the pilot parachute opens fully and drags open a 100-ft.-diameter parachute which brings the expensive instruments safely to the ground.

Steel.—The Lebanon Steel foundry produced an alloy steel which was functional at temperatures as low as −423°. It was an austenitic cast ferrous alloy containing 19.5% chromium and 9% nickel, among other metals. It could be used effectively in production of castings for pressure equipment in storage facilities for liquid oxygen used as a propellent in rocket guns.

Stock Pile.—It was estimated that $3,217,000,000 would be necessary to provide accumulation of a stock pile of strategic and critical materials to protect the United States from being shut off from access to supplies needed in an emergency. Of the planned stock pile, 40% was either on hand or under contract on June 30, 1949. It was hoped to reach 60% by June 30, 1950.

Tanks.—Greater power and manoeuvrability was secured in the "General Patton" tank by use of an improved 810-h.p. engine, by perfection of a new, rugged transmission system, and by adoption of a single "wobble-stick" control.

Teletypewriter.—An improved, waterproof teletypewriter was made which could be carried by a parachutist. It weighed 45 lb., just one-fourth the weight of the former types, and transmitted and received messages 66% faster than previously existing types. It was built to operate on radio and on wire circuits.

Weather.—The signal corps built a tropical testing chamber, composed of six rooms, wherein weather conditions could be simulated from fine fog mist to a tropical torrent of two inches an hour. (R. S. T.)

U.S. Navy.—Development of new U.S. navy weapons of offense and defense, capable of dealing effectively with anticipated future war conditions, was pursued vigorously during 1949 to keep pace with continuing rapid advances in the fields of high-speed aircraft, submarines and guided missiles. While much effort was directed toward developing radically new weapons, progress continued in providing improved interim weapons to maintain the fleet's high state of readiness.

Antisubmarine weapons continued to receive major attention. The recently commissioned U.S.S. "Robert A. Owens" and

Above: 75-MM. RECOILLESS RIFLE designed for close combat support, shown in use by U.S. army ground forces in 1949

Above, right: AEROBEE SOUNDING ROCKET leaving smoke trails in the wake of a launching at sea in 1949. The U.S. navy rocket, which soared 65 mi. above the ocean, was designed for high-altitude research into nuclear forces, and yielded data on the changes undergone by cosmic-ray particles during flight

Right: THE CONVAIR LARK, shipboard-launched guided missile powered by a rocket motor and designed to intercept and destroy enemy aircraft before ship or shore targets can be attacked

Below: THE M-46 "GEN. PATTON" TANK (foreground), an improved version of the U.S. army's M-26 medium tank (background), featuring the "wobble stick," a simplified control resembling that of a light plane, which replaced pedals and other complicated controls

U.S.S. "Carpenter," prototype navy hunter-killer destroyers carrying the latest armament and detection devices, were to be tested in 1950 against new high-speed schnorkel submarines.

Three new cruisers of the "Des Moines" class were the first to be equipped with the navy's new completely automatic rapid-fire eight-inch dual-purpose guns, capable of firing at battle ranges substantially faster than previous guns of this or larger calibres.

Fullest utilization of new weapons required advanced designs of computing machines and fire-control systems emphasizing automatic features of operation and increased speeds of probable targets.

Probably the most noteworthy progress was made in guided missiles, with research and development being conducted actively on missiles in the surface-to-air, air-to-surface, air-to-subsurface and air-to-air categories.

The U.S.S. "Norton Sound" was placed in operation to facilitate the testing of guided missiles at sea. This floating laboratory was used during the year for upper atmosphere research firings with the Aerobee missile. In the late spring of 1949 off Point Mugu, Calif., such control was achieved over 3,000 m.p.h. surface-to-air rockets that they were fired at a helium balloon labelled "friend" and then deflected to score a direct hit on another balloon labelled "foe."

Two new ordnance wind tunnels came into operation to accelerate work on guided missiles and other new weapons. One, at the Naval Ordnance laboratory, White Oak, Md., achieved Mach number 5.18 (or 5.18 times the speed of sound)—the highest speed ever attained in a tunnel of this size. The second, at the Massachusetts Institute of Technology, Cambridge, Mass., would permit the simultaneous training of technical students in advanced wind tunnel operation and the competent refinement of development designs and search for new aerodynamic knowledge. (A. G. Ne.; X.)

Air.—Evidence of the urgency and extent of the U.S. guided missiles program was shown in the fact that about $100,000,000 of the 1950–51 research and development budget was allocated to revolutionary weapons of this type. This amounted to 20% of the $500,000,000 budget approved by the Research and Development board.

Some details of the U.S. air force's first postwar air-to-air guided missile were released late in 1949. It was the Ryan Firebird, designated XAAM-A-1 (experimental, air-to-air missile, air force, first model). When this project was first announced in 1947 it was stated that it would result in one of the most compact weapons of its type yet designed, with a "built-in brain capable of doing its own thinking" once it had been launched. It was revealed in 1949 that this intelligence consisted of a complicated radar navigational and electronic system. Launched from a mother jet fighter plane, the Firebird was capable of heading off and destroying its enemy objective in a matter of seconds, even though the objective might be engaged in violent evasive action. In flight tests it showed all the speed first generated by the parent fighter plus the added power of its own booster rocket and finally its flight rockets. A direct hit is not necessary because an improved type of proximity fuze detonates its heavy explosive charge when the missile comes within lethal range of the enemy.

A further development of an air defense missile was announced which does away with the mother plane. This was a ground-to-air pilotless aircraft which was in advanced development in the U.S. It can climb much faster than a piloted aircraft and when it reaches the point where it can see the enemy with its own radar eye it cuts itself off from ground control and starts its electronic brain working. This solved a complicated mathematical equation taking into account the relative speeds of the enemy bomber and missile, and then enabling the missile to blow itself and bomber at the point of interception.

After two and one-half years of constructional work, the first long-range ground-to-ground rocket missiles were fired from the testing ground of the British Commonwealth of Nations at Woomera, New South Wales, in the summer of 1949. Between 2,000 and 3,000 personnel were employed at this station during the year. Supersonic missiles were fired on four ranges, the main range covering a course of 1,200 mi. to the western Australian coast and Indian ocean, with an extra 1,500 mi. to Christmas Island.

Intelligence reports from behind the "iron curtain" indicated that a high degree of activity in the guided missile field, especially in supersonic long-range rockets, continued to be under way.

Apart from the guided missiles field, a revolutionary tactical air development was the helicopter assault operation successfully tested by the U.S. marine corps, doing away with landing craft creeping ashore under heavy fire. (*See* also Aviation, Military; Jet Propulsion; Navies of the World.)

(N. F. S.)

Murray, Philip (1886–), U.S. labour leader, was born in Blantyre, Scot., May 25, and in 1902 went with his family to the U.S. Naturalized in 1911, he became a member of the international executive board of the United Mine Workers of America in 1912 and its international vice-president in 1920, holding that position until 1942. He was also president of the United Steelworkers of America after 1942, and in 1940 had succeeded John L. Lewis as president of the Congress of Industrial Organizations (C.I.O.). During World War II he pledged the C.I.O. to a no-strike policy, but at the end of the war he helped launch the several rounds of wage and other demands. In 1947 he publicly violated the Taft-Hartley labour law to launch a test case, but his indictment was dismissed on grounds that did not affect the constitutionality of the law. During the 1948 national elections, Murray first attacked Pres. Harry S. Truman's labour policy, but later supported Truman.

During the recession of early 1949, Murray announced that any full-scale depression would be the result of "manipulation of powerful business and financial interests." Late in 1949 he helped launch the fourth round of labour demands, this time concentrating on pensions. A six-weeks' strike against major steel companies resulted in new union agreements incorporating some pension elements. Murray was re-elected president of the C.I.O. at its national convention ending Nov. 4, at which time action was also begun to expel left-wingers from the C.I.O. executive board.

Museums. Museums of the United States grew in size and number during 1949 and were active in public education, but they were especially concerned in improving their exhibits.

The new museums of 1949 ranged widely in subject matter and location. Delaware established a state museum; Portland, Oreg., a museum of science and industry. Amherst college, Amherst, Mass., began construction of a $500,000 art centre, and the University of Georgia (Athens) completed the first of its Holbrook Memorial galleries. In Rochester, N.Y., the George Eastman house, a museum of photography, was opened. The American Museum of Atomic Energy was founded at Oak Ridge, Tenn. Historic buildings set aside during the year as museums included old Fort Wayne in Detroit, Mich., the Spanish fortresses of San Juan in Puerto Rico, the Perot-Morris house in Philadelphia, Pa., and Harriet Beecher Stowe's home in Cincinnati, O. Congress created the national trust for his-

Harris out of photographs of materials shown the exhibit

oric preservation in the United States to help save historic uildings and sites threatened with destruction.

Many museums were enlarging or renovating their buildings. he Metropolitan Museum of Art, New York city, began a 3,000,000 construction program. Additions were being built by e Baltimore (Md.) Museum of Art, the California Academy f Sciences (San Francisco), the Colorado Museum of Natural istory (Denver), the Ohio State museum (Columbus) and hers.

Much was accomplished to make the exhibits more effective struments of education. Among the reinstalled units were the Iiddle American gallery of the University museum (Philadelhia), the Near Eastern and Far Eastern galleries of the Metroolitan museum, the Fossil hall of the Carnegie museum (Pittsurgh, Pa.), the bird exhibits of the Newark, N.J., museum and e physics section of the Chicago Museum of Science and ndustry. The Detroit Institute of Arts opened a hall on the rench background of the city, and other new exhibit halls ere installed by museums in Albany, N.Y., Buffalo, N.Y., Chigo, Kansas City, Mo., Los Angeles, Calif., and Nashville, enn. Historical displays placed by the national park service the specialized museums of four park areas were representave of the newer exhibits which combined specimens with careilly planned design and colour to increase their teaching ficiency.

The educational activities of museums were keyed to the inrests of contemporary life. The Museum of Modern Art, New ork city, devoted its 20th anniversary show to "Modern Art Your Time" and erected a sample house in its garden; the etroit Institute of Arts presented a special exhibition, "For Iodern Living"; and the Baltimore Museum of Art held a mposium on "Design and the Modern Home." In Boston, Iass., the Institute of Contemporary Art formed a department design with an active program to help designers, manufacrers and consumers. Children's museums emphasized interational relations and the work of the United Nations Educaonal, Scientific and Cultural organization (U.N.E.S.C.O.). *ee* also SMITHSONIAN INSTITUTION.) (R. H. Ls.)

Accessions to Art Galleries and Art Museums.—Many otable works of art entered the public collections during 1949. he National gallery in Washington, D.C., acquired a large Murillo, "The Return of the Prodigal Son," given by the Avalon Foundation through the generosity of Mrs. Ailsa Mellon Bruce.

New York's Metropolitan museum received as a gift from John D. Rockefeller a group of five tapestry panels from the famous set of "Nine Heroes" woven in the 15th century presumably for the duke of Berry. It also acquired a rare early Italian painting, "St. Sebastian" (*c.* 1445) by Andrea del Castagno (1390–1457). The Museum of Fine Arts, Boston, Mass., purchased a great Titian, "St. Catherine of Alexandria," painted about 1568.

Two notable Tintorettos entered other New England museums—the Currier gallery at Manchester, N.H., having purchased the Pietro Capello, "Venetian Senator" (1585–90), while the "Portrait of a Courtesan," dated 1574, went to the Worcester museum, Worcester, Mass.

The Detroit Institute of Arts acquired "St. Jerome in the Wilderness" by the great Spanish baroque painter Ribera (1588–1652), the portrait of Hendrick Swalmius by Frans Hals (1580?–1666) and Baron Gros's (1771–1835) sketch for "Murat Winning the Battle of Aboukir."

A small but select collection of near eastern and oriental art was being assembled at the Cincinnati Art museum as the result of the gift of approximately $150,000 from the heirs of Charles F. Williams.

Two important American 18th-century portraits were purchased by the City Art Museum of St. Louis. These were Ralph Earle's (1751–1801) "Major Moses Seymour" (1789) and "Mrs. Moses Seymour and Son."

The Portland (Ore.) Art museum purchased, with the aid of several donors, the outstanding collection of Northwest Coast American Indian Art assembled by Axel Rasmussen, a former schoolteacher and superintendent of schools in Skagway, Alsk. This collection consists of about 5,000 objects and includes masks, potlatch boats, house posts, totem poles, etc.

The William Rockhill Nelson Gallery of Art in Kansas City, Mo., held a gala celebration of its 15th anniversary and put on view a group of new acquisitions. Outstanding among these was a statue of St. Barbara (*c.* 1570) by the French sculptor Germain Pilon; four Roman portrait busts, including the emperors Lucius Verus and Caracalla; and a stone guardian lion, Chinese, of the T'ang dynasty (A.D. 618–907).

In Chicago, Ill., the Art institute displayed three presents, all old masters of first quality. Mr. and Mrs. Joseph Winterbotham gave it El Greco's "Feast in the House of Simon"; from the Coburn fund the institute obtained Tintoretto's "Tarquin and Lucretia" (*c.* 1560) and from other funds came Magnasco's (1667–1749) spirited "Synagogue."

Perhaps the greatest collection to go to a museum during the year was received by the Baltimore museum as a bequest of Etta Cone. This collection, valued at $400,000, contained 350 paintings and 50 pieces of sculpture and included 10 Picassos, 39 paintings and 10 bronzes by Matisse (most important single group in any collection), top quality paintings by Gauguin, Van Gogh, Cézanne, Renoir and Corot. Miss Cone and her sister, Claribel Cone, were pioneer collectors of modern art. (*See* also ART EXHIBITIONS; ART SALES.) (F. A. Sw.)

British Commonwealth and Europe.—The year 1949 showed a steady improvement in the museums and art galleries of most countries of the commonwealth and British colonies and in those of Europe.

In London galleries were reopened at the British museum and the Victoria and Albert museum. At the former the Elgin marbles were on view again for the first time since 1940. The complete restoration of the Tate gallery was marked by its reopening in Feb. 1949. New galleries were opened at the Imperial War museum and at the Public Record office. Openings also took place in Edinburgh and the provinces, including a museum at Oxford devoted entirely to eastern art.

In the dominions there was steady progress though without any particularly spectacular developments. In the Union of South Africa the proposed commission to consider the further development of the research function of museums did not eventuate. In the British colonies one of the most interesting developments was the decision of the government of Nigeria to appoint a museum technical instructor to train Africans as museum technical assistants.

In France openings included three important museums in the Palais de Chaillot, the Musée de l'Homme, Musée de la Marine and the Musée des Monuments Français which had been closed in April 1948 because of the occupation of that building by the United Nations general assembly. All the state museums in Belgium and the museums of Brussels were open once again to the public; the Musée des Beaux Arts of Liége, badly damaged in 1944, was being completely modernized. There was a move on foot to extend state control to provincial museums. In the Netherlands the Rijks-museum was being systematically reorganized and the picture galleries were now open to the public. At the Stedelijk-museum 70 exhibitions of modern art had already been held since the liberation in 1945. The Museum of Archaeology, Warsaw, Poland, which was looted by the Germans in 1939 and in consequence closed throughout World War II, had recovered about half of its collections and most of its furnishings; it was installed in the beautiful Lubomirski palace toward the end of 1949. There was little news of improvements in museums in Germany; but the Deutsches museum resumed publication of its technical handbooks and the Goethe Haus at Frankfurt was restored and reopened. In Austria, Greece, Italy and Norway there was a steady but not spectacular improvement in the museum situation but, as in Germany, there could be little hope yet of permanent reconstruction or building in most of these countries. Sweden had a series of outstanding museums and, considering its limited population and resources, was probably the best country in Europe for museum buildings and display techniques.

The International Council of Museums (I.C.O.M.) decided to set up a committee to consider encouraging the various countries who were members of U.N.E.S.C.O. to publish directories of museums; only seven countries had so far produced such directories after World War II. Late in 1949 U.N.E.S.C.O. published an 18-page pamphlet entitled *Art Museums in Need*, which reviewed the war damage to museums in Europe and Asia and appealed for funds to assist in their reconstruction. (S. F. MM.)

Music.

A study of representative programs of the year 1949 revealed the continuation of two trends which had been observed in preceding years. Music, at least in its measurable aspects, continued the concert upsurge which began soon after World War II, and it continued to enjoy its own quantitative increase. Festivals were numerous in Austria, Belgium, the British Isles, Czechoslovakia, France, Germany, the Netherlands, Italy, Norway, Poland, Sweden, Switzerland, the United States and Yugoslavia. In surveying the field of festivals, some reporters found signs of a spirit of co-operation among European nations. As an example, the Holland Festival foundation planned to invite representatives of the Salzburg and Edinburgh festivals to a meeting for the purpose of discussing possibilities of co-ordination.

Representative Compositions Introduced in 1949

Composer	Country of Residence	Type and/or Name of Composition
Alfano, Franco	Italy	*Dr. Antonio* (opera)
Andriessen, Hendrik	Netherlands	*Philomela* (opera)
Antheil, George	U.S.	*Symphony No. 6*
Arnell, Richard	England	*Symphony No. 4*
Bartók, Béla	U.S.	*Viola Concerto*
Bernstein, Leonard	U.S.	*Symphony No. 2 for Piano and Orchestra*
Bliss, Arthur	England	*The Olympians* (opera)
Bloch, Ernest	U.S.	*Guignol* (opera buffa)
Britten, Benjamin	England	*Spring Symphony*
Escher, Rudolf	Netherlands	*Concerto for Strings*
Hindemith, Paul	U.S.	*Concerto for Flute, Oboe, Clarinet, Bassoon, Harp and Orchestra*
Jacobi, H.	Israel	*Symphonic Prologue*
Landré, Guillaume	Netherlands	*Symphonic Music for Flute and Orchestra*
Malipiero, G. Francesco	Italy	*Piano Concerto No. 3*
Martin, Frank	Switzerland	*Golgotha* (oratorio)
Mennin, Peter	U.S.	*The Cycle: Symphony No. 4*
Messiaen, Olivier	France	*Turangalila, Symphony*
Mignone, Francisco	Brazil	*Alegrias de Nossa Senhora* (oratorio)
Milhaud, Darius	U.S.	*Quartets Nos. 14 and 15*
Phillips, Burrill	U.S.	*Don't We All* (opera)
Poulenc, Francis	France	*Sonata for Cello and Piano*
Prokofiev, Sergei	Russia	*Symphony No. 6*
Rabaud, Henri	France	*Marouf* (opera)
Refica, Licinio	Italy	*Margherita da Cortona* (opera)
Sonzogno, G. S.	Italy	*Regina Uliva* (opera)
Sowerby, Leo	U.S.	*Symphony No. 4, in B*
Thompson, Randall	U.S.	*Symphony No. 3 in A Minor*
Wellesz, Egon	England	*Symphony No. 2*

Australia had some troubles in attempting to raise orchestral standards as a result of a ruling by the local musicians' union which prohibited immigrant British musicians from obtaining membership in the union until such musicians had been in the country for ten years. Foreign musicians were barred from membership entirely. Later in the year the situation was relaxed when certain English players were admitted to union membership and allowed to play in Australian orchestras. A permanent Australian Opera and Ballet company was launched in Melbourne under sponsorship of the National Theatre movement. In an attempt to bring an increased understanding of contemporary music to the public, there was also a revival of the Australian section of the International Society for Contemporary Music with conductor Eugene Goossens serving as president.

Music and musicians continued to obtain encouragement and some direct support from the British government, which took over the lease of Covent Garden in London and began subsidizing opera there to the amount of about $400,000 a year. One of the unusual compositions of the year was Benjamin Britten's audience-participation experiment in children's opera, *Let's Make an Opera.* Opera, particularly chamber opera, was again prominent in the productions of the year. An interesting outgrowth was the English Opera group which Benjamin Britten stated was similar to the numerous opera workshops in the United States except that it was entirely professional and operated only in the summer, thereby taking advantage of a period in which singers were usually free.

The *premières* listed in the above table constitute only

JASCHA HEIFETZ (left), violinist, Artur Rubinstein, pianist, and Gregor Piatigorsky, cellist, rehearsing for a series of chamber-music concerts given at Ravinia park, Ill., in Aug. 1949, when the trio played together for the first time

a small portion of the new works heard by the British public, which enjoyed a good musical year in 1949. Not only were they extremely active themselves, but they invited and patronized performances by various organizations of other countries. At the Edinburgh festival, for example, visiting groups included the Berlin Philharmonic orchestra, the Swiss orchestra, and the Orchestre du Conservatoire from Paris.

France contributed at least its share of new scores, *premières,* and festivals. In memory of Henri Rabaud, there was a performance of his opera, *Marouf.* Some observance in the form of small recitals was also made of the 25th anniversary of the death of Gabriel Fauré. There were of course many recitals and programs given in commemoration of the centennial of Chopin's death, as there were throughout the world. The festival at Besançon was an interesting example of the internationalism in many French festival programs and general programs. While two of the concerts of the festival featured contemporary French music, another consisted entirely of German music. Visiting festival artists included Wilhelm Furtwaengler, Andrés Segovia, and Magda Tagliafero. Other musical "commodities" imported by France included the Orchestre de Chambre of Stuttgart.

Although faced with the problem of surmounting obstacles created by the currency reform, Germany was fast regaining her artistic position and reputation in 1949. Almost every moderately sized town had its own State Theatre with drama, opera and ballet presented by resident companies. Radio deserved recognition for presenting many modern works, including *premières* of Arnold Schoenberg's *Violin Concerto* and Paul Hindemith's *Cello Sonata.* Of particular interest was a three-week summer course for modern music in Darmstadt, the course being reported as a "radio festival." The Berlin Philharmonic, playing every Sunday morning and Monday evening, was well housed in the U.S. zone in a former motion picture theatre. Performances of opera were coloured by the political zone in which they were performed; comparatively little Wagner was given, ostensibly because of the lack of suitable voices. Economic restrictions also compelled artists and conductors to alternate between the Staats, Staedtische and the Komische Opera houses in northern Germany. One of the most active cities was Hamburg, where opera under the leadership of Gunter Rennert had climbed to considerable heights. Representative performances included Britten's *Peter Grimes;* Gottfried von Einem's *Danton's Tod;* and Herman Reutter's *Saul.* Of interest to the future was the fact that the Wagnerian property, including the Festspielhaus in Bayreuth, was returned to the family early in 1949. The composer's two grandsons were reported working toward the goal of re-establishing the famous Bayreuth Wagner festival.

The Salzburg festival presented four weeks of distinguished music to an audience of international aspect.

At Athens, Greece, the Bureau Artistique d'Athens arranged for a visit of distinguished artists and also effected an artistic exchange between Greece and Turkey The bureau sponsored the first appearance of Economides with the Istanbul Municipal orchestra and Gemal Rechid, leader of that orchestra, came to Athens to lead the state orchestra. Each conductor had at least two concerts during his guest visit.

The Netherlands continued to supplement the work of its fine Bach society and its symphonic orchestra, the Concertgebouw of Amsterdam, with operatic activity. At the third annual Music festival in Amsterdam and Scheveningen the concert audience heard the music of such modern Dutch composers as Alphons Diepenbrock, Willem Pijper, and Johan Wagenaar. The Dutch government and the city of Amsterdam agreed to meet half the budget of the new Netherlands Opera until 1955.

Israel also enjoyed an active season. The Israel Broadcasting System re-established its Tuesday night concerts and continued Saturday afternoon broadcasts devoted to opera and contemporary music. The 75th birthday of Arnold Schoenberg provided impetus for a number of concerts and broadcasts. The Israel Philharmonic, with Paul Paray musical director, was increased from 73 to 90 players and was scheduled for 11 subscription concerts, each with 7 performances. The second concert series given by this organization was the Israel *première* of M. Mahler-Kalkstein's *Second Symphony.* Earlier, the orchestra under Izler Solomon introduced the Jerusalem composer H. Jacobi's *Symphonic Prologue.*

In Italy, music attracted some of the largest crowds of the year. It was claimed 350,000 visited Rome's summer opera, with a seating capacity of approximately 10,000. In the field of composition, Italy remained primarily a country of opera. One of the unique features of 1949 was a congress held in Milan by representatives of the 12-tone school of composition, attended by 30 delegates from various countries. The congress presented a series of concerts, one orchestral and two of chamber works, conducted by Hermann Scherchen. Composers whose works were presented included Ernst Krenek, Wallingford Riegger and Arnold Schoenberg, of the United States; Luigi Dallapiccola, and C. Togni from Italy; S. Gemnity from Hungary; and K. A. Hartmann from Germany.

Japan, in addition to continuing its own musical culture, was showing additional evidence of the effect of western art. In Tokyo, Gian-Carlo Menotti's opera *The Old Maid and The Thief* had seven performances by the Negato Miko Opera company.

Occidental music continued to develop in Korea in spite of a lack of money, music and instruments. The Korean orchestra, which early in 1948 had split into two groups, was again functioning as one orchestra consisting of 70 Koreans by the beginning of 1949. The work of the orchestra was not confined to the capitol, Seoul, and occasional trips were taken to nearby cities. In addition a chamber music series parallelled the symphony programs.

By the time the Soviet Composers' union had assembled at the Moscow conservatory the new works listed as the 1949 output had reached at least 220. Examples were Dmitri Shostakovich's new oratorio *The Song of the Forests,* the symphonic poem by Vano Muradeli, *The Taking of Berlin,* and Aram Khachaturian's *The Battle of Stalingrad.* Sergei Prokofiev's *Sixth Symphony,* though an item that had incurred soviet displeasure, reached the United States for a *première* by the New York Philharmonic-Symphony. Evidence that Prokofiev was again in favour could be derived from information that his new ballet based on *The Stone Flower* was to be included in the repertoire of the Bolshoi Theatre.

In the United States orchestras and conductors continued to make news. Representative orchestras, old and new, extended their seasons. Examples were the Cleveland orchestra, the Minneapolis Symphony, the Nashville Symphony, and the Tulsa Philharmonic. Sergei Koussevitzky retired from conductorship of the Boston Symphony and was succeeded by Charles Muench. The Chicago Symphony orchestra also acquired a new conductor —the Czechoslovakian, Rafael Kubelik. Antal Dorati and Walter Hendl began successful seasons with the Minneapolis Symphony and the Dallas Symphony orchestra respectively. Conductor Karl Kreuger resigned from the ailing Detroit Symphony orchestra. Hans Kindler resigned from the National Symphony orchestra and was succeeded by Howard Mitchell. Although the pavilion at Ravinia park near Chicago was destroyed by fire, the summer program was successfully carried out, in a huge tent which was once a B-29 hangar. A concluding chamber series at Ravinia brought Jascha Heifetz, Artur Rubinstein and Gregor Piatigorsky together for the first time in trio work.

A summary of new works performed in and about New York city indicated that 1949 was an encouraging year, for music. There were more than 500 performances, including 200 *premières.* In company with other nations the United States commemorated the anniversaries of Goethe and Chopin. A Goethe festival of prime significance was staged at Aspen, Colo. A variety of organizations, including orchestra managements, universities, corporations, radio, television and even private individuals, commissioned new musical works.

U.N.E.S.C.O.'s impact on the world of music continued. At its fourth session in Paris, a budget of $8,000,000 was planned for such projects as (1) A catalogue of contemporary U.S. orchestral works performed in the U.S. under the direction of Wayne Barlow; (2) A catalogue—first section—recordings of U.S. music under the direction of E. Lee Fairley and (3) A catalogue of solo and ensemble music under the direction of Harold Gleason. U.N.E.S.C.O. also made formal observance of the centennial of the death of Chopin. The main political dispute marring conference progress resulted from a discussion concerning extension of U.N.E.S.C.O.'s program in Germany. The extension was approved but only after considerable opposition. (F. B. C.)

Popular Music.—The importance of the American operetta style and the superiority of the stage songs, or "production numbers," to the routine output of Tin Pan Alley were established in 1949. Two musical shows, far in advance of all their predecessors in this field, provided the statistics for this triumph of good popular music, besides emphasizing the enormous gap that now existed between American musical comedies and the best of their foreign competitors. The two were *South Pacific,* fashioned by Richard Rodgers, Oscar Hammerstein II and Joshua Logan from the prize-winning *Tales* of James A. Michener, and *Kiss Me, Kate,* for which Cole Porter wrote both words and music, to a book by the Spewacks out of Shakespeare's *Taming of the Shrew.* Later came the Berlin-Sherwood-Hart *Miss Liberty,* which suffered only by comparison with its rivals.

"Some Enchanted Evening," sung by Ezio Pinza in *South Pacific,* was the most popular song of the year, according to the Lucky Strike Hit Parade, which presented it for more than 20 successive weeks, 13 times in first place. Actually there were better songs than this in the Rodgers-Hammerstein score, three of which, "A Wonderful Guy," "Bali Ha'i" and "Younger Than Springtime," received adequate recognition from radio's high tribunal, while there was a general appreciation of such gems as "Happy Talk" and "There Is Nothing Like a Dame," not to speak of Mary Martin's delightful parody, "Honey Bun" or the more stodgy "This Nearly Was Mine."

Unquestionably *Kiss Me, Kate* contained the best words and music ever written by Cole Porter, and there would be no exaggeration in selecting as the finest song of the year his pseudo-Shakespearian "Were Thine That Special Face," which the general public had not yet discovered. "So in Love" appeared a dozen times on the Hit Parade and was definitely the most popular number in the show, although such earthy ditties as "The Life I Late Have Led," "Always True to You in My Fashion" and "Too Darn Hot" made a host of friends through the recordings of their original interpreters.

Miss Liberty, which pleased the public more than the critics, landed two songs in the Hit Parade, "Just One Way to Say I Love You" and "Let's Take an Old-fashioned Walk." But there were other numbers fully up to the Irving Berlin standard, including the plaintive "Homework," clearly descended from its composer's best previous song, the still unappreciated "Lazy."

Beside such genial workmanship, the machine-made "pops" of Broadway fared none too well, except for the quick and automatic turnover in sheet music and transitory records. The top song of 1948, "Buttons and Bows," held its own well into 1949, as did the two Loesser hits, "My Darling, My Darling" and "On a Slow Boat to China." But after that there was little to cheer about.

Most of the popular songs were definitely reminiscent of earlier music, particularly "Far Away Places" and "Cruising Down the River." The freakish "Riders in the Sky," written by a movie director, Stan Jones, actually borrowed its chief strain from "When Johnny Comes Marching Home," and the later "Mule Train" depended largely on rhythmic appeal and sound effects.

"Powder Your Face with Sunshine" had some individuality, t there was nothing particularly distinctive about "A Little rd Told Me," "Again," "A Room Full of Roses," "You're reaking My Heart," "That Lucky Old Sun," "Don't Cry, Joe" "I Can Dream, Can't I?," all of which reached the top of e Lucky Strike list more than once. The humorous "Baby, 's Cold Outside" was handicapped by radio censorship. Late the year a line by Stephen Foster suggested the currently ccessful "Dear Hearts and Gentle People" and Christmas ought the year's real novelty in "Rudolph, the Red-Nosed eindeer."

Conventional song writers had little chance in 1949 against e inspired work of such masters of the musical stage as odgers, Hammerstein, Berlin and Porter.

BIBLIOGRAPHY.—Sigmund Spaeth, *A History of Popular Music in nerica* (1948). (S. SP.)

Music in Industry.—Planned programs for functional music ere an important factor in management's drive during 1949 r higher productivity and lower costs in factories, plants, busi- ss offices, banks, utilities, retail stores and other business terprises. By providing and maintaining better and more at- active facilities for the physical and emotional needs of their nployees, companies were able to improve personnel morale d physical well-being to a measurable extent. As a direct fluence in counteracting and relieving the tedious monotony of echanized job routines, functional music, when planned and ogrammed by experts, won increasing recognition and accept- ce from management. It became an established addition to oductive employee facilities and enlightened personnel re- tions.

Significantly, retail merchants mindful of the growing compe- ion for the customer's dollar made effective use of function- ly designed music as an element in their public-relations pro- am to create a distinctive store-wide personality and a pleas- t environment for their customers.

Apparently influenced by the functional success of wired usic in plants, offices and stores, FM radio stations, casting out for sources of revenue, attempted to broadcast experi- ental programs of so-called "background" music and com- ercial spot announcements to fixed-frequency receivers in permarkets and public transportation vehicles. Surveys showed at large segments of the travelling public were opposed to this mmercialization of background music. (*See* also RADIO.)

(X.)

Recordings.—By the end of 1949, 17 recording firms had ecided to release recordings of so-called LP (long playing) atters at 33⅓ r.p.m. Companies which followed the lead set Columbia in this field included Allegro, Cetra-Soria, Concert all, Mercury and Vox. Capitol released material with 45 .m., thus joining ranks with RCA Victor. There was some idence toward the end of the year that all major record com- nies would attempt to effect a compromise concerning pro- iction and availability of disks at the various speeds.

English Decca, under the label of "London Records," ar- nged to combine its full-frequency range process with 33⅓ .m. microgroove recording. Advance examples of this tech- que included a recording of Béla Bartók's *Concerto for Or- estra* by the Concertgebouw orchestra of Amsterdam con- icted by Eduard van Beinum. Mercury experimented with a nargin control process" which approached standards attained the full-frequency range method.

The year 1949 saw a resurgence of releases. Opera recordings ere fairly numerous. Symphonies (including a respectable out- it of contemporary music), chamber works, Mozart centennial- lebration disks, folk material, and rare music all could be und in respectable quantity. Notable folk material recordings ere released by the Ethnic Folkways library. The Haydn society began an ambitious project of recording Haydn works. Allegro continued an interesting policy of submitting recordings of unhackneyed material, typical of which was the release, *Music of the Gothic Period and the Early Renaissance.*

FILMS OF 1949.—*Barber of Seville; Opera-On-Film Series* (6 films) (Official Films, Inc.); *Christmas Slippers* (Brandon Films Inc.); *Come Where My Love Lies Dreaming* (Admiral Pictures Inc.); *Vienna Philharmonic Series* (4 films) (Abelard Educational Films, Inc.).

Narcotics and Narcotic Traffic.

The Commission on Narcotic Drugs of the United Nations at its fourth session in May 1949 made a number of decisions and recommendations with a view to suppressing illicit traffic and tightening controls over the production of opium and the distribution of all dangerous narcotic drugs. Progress was made toward the drafting of a new single convention to replace and simplify existing conventions and agreements. The commission considered the creation of only two control bodies—a policy-making body and an administrative body; a single secretariat for these two bodies; an international purchasing and selling agency for distributing opium; and an international clearing house for reviewing import permits covering narcotic drugs before issuance of export authorizations.

A subcommittee, composed of representatives of the principal opium-producing countries, India, Iran, Turkey, the U.S.S.R. and Yugoslavia, was appointed to consider the desirability of convening a conference to conclude an interim agreement for limiting the production of raw opium to medical and scientific needs. The subcommittee agreed that an *ad hoc* committee of the Commission on Narcotic Drugs composed of the representatives of these principal opium-producing countries should meet in Turkey.

The Commission on Narcotic Drugs having drawn the attention of the Economic and Social council to the large volume of illicit traffic in narcotic drugs throughout the world, the council adopted the following resolution:

> The Economic and Social Council . . . recommends that all States should
>
> (1) increase their efforts to detect and suppress the illicit production of opium, coca leaves and other raw narcotic materials from which narcotic drugs are produced, and the illicit manufacture of these drugs, as well as of those produced synthetically;
>
> (2) apply stringent measures of control to the trade in, the distribution and transportation of narcotic drugs, paying special attention to the smuggling of drugs in aircraft;
>
> (3) strengthen measures for apprehending traffickers and subject them to severe penalties.

The Commission of Inquiry on the Coca Leaf started work in Peru the second week in September. It was appointed to study the economic and social effects of the chewing of the coca leaf and to recommend measures for limiting the production of the coca leaf to medical and legitimate requirements.

Synthetic Narcotics.—An important accomplishment of 1948 in the international control of narcotic drugs had been the approval by the general assembly of the United Nations of a protocol to bring under international control manufactured drugs outside the scope of the convention of 1931. This new protocol, unanimously approved by the general assembly on Oct. 8, 1948, and thereafter opened for signature, brought all synthetic narcotic drugs under international control. If the World Health organization found that a drug is capable of producing addiction or of conversion into a product capable of producing addiction, it would notify the secretary-general of the United Nations, who would immediately inform all states members of the United Nations, nonmember states parties to the protocol, the Commission on Narcotic Drugs and the permanent central board. On receipt of this information the parties to the protocol would apply to the drug the appropriate control laid down by the 1931 convention.

U.S. Traffic.—Trends in the illicit drug traffic in the United States indicated that some of the old sources of supply, such as Turkey, France and Italy, were active as in prewar years. In addition, it appeared that India and Hong Kong were bases for the smuggling of narcotic drugs.

Raw opium seizures increased in the Atlantic coast area. Turkey and other near eastern countries served as sources of supply of raw opium and hashish.

Indian raw opium seizures were heavy in the Atlantic coast area, being second in quantity to those of Turkish opium. Iranian raw opium seizures, identified definitely as to origin, were fewer than Turkish and Indian opium seizures, but it was believed that a number of unidentified seizures were of Iranian origin.

There was a disturbing increase in the quantity of cocaine seized. Reliable information indicated that cocaine for smuggling into the United States was available in large quantities in Peru, Chile and Bolivia. Seizures of marijuana also increased.

Accidental deaths and suicides directly attributable to the effect of barbituric acid drugs continued to increase. The lack of adequate control prompted the introduction in congress of two bills to bring these drugs under federal narcotic laws. The administration opposed these measures on the grounds that there was no smuggling and no interstate illicit traffic and therefore the problem should be controlled by the states. (*See* also DRUG ADMINISTRATION, U.S.)

National Education Association.

The National Education association of the United States held its 87th annual meeting and its 28th representative assembly at Boston, Mass., July 3–8, 1949. The assembly, with 2,875 delegates, was the largest in the association's history. The work of the association was carried on through 25 commissions, councils and committees, 29 departments and 15 headquarters divisions. In the international field, the association worked through the World Organization of the Teaching Profession, which held its third meeting in Berne, Switz., July 17–25, 1949. The association, which was in the fourth year of its Victory Action program (1946–51), made much progress in the activities of its committees, in public relations, in its work with state and local associations and in the field of standards for the preparation and certification of teachers. Particularly notable was the rapid development of its work in colleges and high schools known as Future Teachers of America. In May 1949 there were Future Teachers of America chapters in 271 colleges and universities, with a membership of 13,455. There were also active clubs in 408 high schools.

The association continued its campaign for federal aid for the operation of public elementary and high schools. S. 246, a bill which would provide $300,000,000 annually for this purpose, passed the U.S. senate on May 5, 1949, by a vote of 58 to 15.

"Making Democracy Work" was the theme for American Education week, Nov. 6–12, 1949. The association was organized in Philadelphia, Pa., in 1857. It had, on May 31, 1949, a membership of 427,527, and its affiliated state associations had a membership of 824,395. There were 2,863 affiliated local associations in 1949, as compared with 2,369 in 1948. Its official organ is the *NEA Journal*, which is issued to all members monthly except June, July and August. The president for 1949–50 was Andrew D. Holt, executive secretary-treasurer, Tennessee Education association, Nashville, Tenn.; executive secretary was Willard E. Givens. (*See* also EDUCATION.) (J. E. Mo.)

National Geographic Society.

During the summer of 1949, the National Geographic society, in co-operation with the California Institute of Technology, launched a sky survey to map the reaches of outer space. This survey was being made by the new 48-in. wide-angle Schmidt photo telescope at the Palomar observatory in California. The work was to take about four years and would provide students of astronomy with a sky atlas of some 2,000 photographic plates showing billions of stars. Before the project was officially opened, test exposures had recorded one new minor planet.

Another scientific undertaking, in the field of cosmic ray research, resulted in the discard of the once widely-accepted theory that the sun possesses a permanent magnetic field somewhat similar to that of the earth. The study was conducted through the joint efforts of the society, the Bartol Research foundation of the Franklin institute, Philadelphia, Pa., and the national defense board of Canada. Evidence that the sun does not act as a magnet to keep cosmic rays from entering the earth's atmosphere was obtained by ray-recording Geiger counters sent up in high altitude (20 mi.) balloons over Churchill, Manitoba, Canada. Later, in checking the findings, a new altitude record of 136,000 ft. or almost 26 mi. was established for instrument-carrying balloons in such research.

Continued in 1949 was the investigation of the aurora borealis, or northern lights, begun by the society and Cornell university in 1938. The aurora's glow, it is now believed, comes from energy given off when electrified particles thrown out by the sun collide with atoms in the earth's rarefied upper atmosphere.

A wealth of material gathered during the 1948 solar eclipse was further studied and evaluated in 1949, yielding new data on the shape of the earth and intercontinental distances. This material, collected by observers covering the eclipse track from Burma to the Aleutians, was acquired through co-operation between the society, the U.S. army, navy and air force, the national bureau of standards and state and commerce departments.

In the natural history field, a scientific expedition dispatched to Nepal by the National Geographic society, Yale university the Smithsonian institution, returned with a rare specimen he spiny babbler. Besides this bird, the first to be taken in e than a century, the party brought back numerous other l and animal trophies from the remote Himalayan land, as l as a unique and striking photograph of Mount Everest n the southeast.

nother expedition, into primitive Arnhem Land of northern stralia, came out early in the year with thousands of photo- phs and articles from native life, plus extensive collections marsupials, birds, fish and botanical specimens. The fruit of ht months' exploration in 1948 by representatives of the iety, the Smithsonian and the Australian government, this asure of natural history and anthropological lore was being ided between the Smithsonian and Australian and certain er institutions.

n Panamá, the use of helicopters to locate digging sites high- ted a new chapter in the archaeological program that had n carried on in various parts of Mexico and Central America ce 1938. Sponsored by the society and the Smithsonian, this est expedition found fresh evidence to support belief in the nmon origin of widely separated pre-Columbian civilizations. o new archaeological cultures also were discovered, one in stern Panamá, the other east of the Canal Zone.

rom the Air Force association, in 1949, the society received itation of honour for outstanding public service in providing ps for wartime airmen. In its regular work during the year, National Geographic's Cartographic department produced ir large wall maps covering the British Isles, Europe and the ar East, the Top of the World, and Classical Lands. Issued supplements to the magazine, approximately 7,352,000 copies re distributed.

Published in the *National Geographic Magazine* during the r were more than 1,000 colour photographs, including 278 roductions of paintings.

The society's members at the end of 1949 numbered about 65,000. Headquarters of the society are in Washington, C. Officers: president and editor, Gilbert Grosvenor (who in 9 completed 50 years of service as editor); vice-president l associate editor, John Oliver La Gorce; secretary, Thomas McKnew; treasurer, Robert V. Fleming. The society's re- rch committee: chairman, Lyman J. Briggs; vice-chairman, exander Wetmore. (G. Gr.)

tional Guard.

During 1949 the U.S. national guard reached its greatest strength. As the year led, it counted more than 395,000 officers and men in its ks, an increase of approximately 86,000 since Dec. 31, 1948. ey included approximately 352,000 in 4,727 federally recog- ed army units and 44,000 officers and men in 514 air units in 48 states, the District of Columbia, Hawaii, Puerto Rico l Alaska. Six months before the end of the fiscal year the ional guard found itself close to the budgetary strength ceil- of 399,500 established for the 1950 fiscal year. A total of 196 new recruits joined the national guard during the two- nth nation-wide recruiting campaign which began on Sept. 19.

The air national guard completed the basic organization of its otted 514 units by the end of May. The 4,727 organized ny units represented 90.7% of the 5,312 such units allotted national guard. Organization of national guard tactical units wed equivalent progress. Of the 25 infantry and 2 armoured isions, 18 infantry divisions and 1 armoured division were npletely organized. The remaining 8 divisions were close to npletion, lacking only 45 units. Of the 20 national guard imental combat teams, 17 were completely organized, as were of the 659 nondivisional anti-aircraft artillery units. Also anized were the 72 fighter squadrons, the 12 light bombardment squadrons and supporting units of the air national guard.

Having already reorganized its tactical units to add greater efficiency, mobility and fire power, the national guard further kept pace with its increased strength and defensive-offensive mission during 1949 by adding eight armoured cavalry regiments to its troop basis and reorganizing the air guard's aircraft control and warning squadrons to conform with the air force's Interim Defense plan.

Congress took further steps to benefit the members of the national guard together with those of other reserve components. Public law 108 provided disability benefits for guardsmen on a par with members of the regular military services; the Career Compensation act, granting pay increases to servicemen, also applied to the national guard. National guardsmen also were eligible for substantial retirement pay at the age of 60, after at least 20 years of cumulative service, if they otherwise met requirements.

Trained under the direct supervision of the army and air force, the national guard uses the latest type weapons and techniques. All courses and schools of the regular forces are open to guardsmen. The national guard's mission as a first-line member of the national defense team is to be trained and ready to take part in all types of operations, offensive and defensive, in the United States and overseas, in case of attack.

National Labor Relations Board.

The National Labor Relations Board completed its first full fiscal year of enforcing Title I of the Labor Management Relations act, more commonly known as the Taft-Hartley act, on June 30, 1949. The Taft-Hartley act took the form of an amendment to the National Labor Relations act of 1935, which was more commonly known as the Wagner act.

The most important change in the federal statutory scheme for regulating labour-management relations was the new section 8b of the act, forbidding a labour organization or its agents to engage in certain activities which were proscribed as unfair labour practices. This section raised most of the novel questions which confronted the board during the first year. The principal practices forbidden include: the restraint or coercion of employees; the causing or attempting to cause employers to discriminate against employees on the basis of union membership; refusal to bargain in good faith; and engaging in certain types of secondary boycotts and strikes.

Entirely new was the prohibition of secondary boycotts, which presented some of the most difficult problems the board had to decide. One of the most difficult of these questions was that involving the so-called "free speech" section of the act, which permits both employers and unions to express arguments and opinions which contain no "threat of reprisal or force or promise of benefit." The board was called upon to reconcile this section with the provisions of the act which forbid unions to "induce or encourage" employees to engage in a secondary strike or boycott. A majority of the board decided that congress did not intend that the ban on secondary boycotts should be limited by the "free speech" proviso. Therefore, the board ruled, the 1947 act does not permit peaceful picketing by a labour organization for the purpose of supporting an illegal secondary strike or boycott.

Another major line of board decisions interpreting the new law grew out of the provision forbidding unions to engage in "restraint or coercion" of employees. The board held unanimously that congress intended this provision to outlaw physical violence and threats and other such coercive activities, particularly in connection with strikes and picketing. The board also held that this section prohibited mass picketing when it had the effect of forcibly blocking the entry of employees into a plant. It ruled further that a threat that an employee would lose his job unless he joined a union is banned by this provision.

Cases involving charges of unfair labour practices by employers also raised some novel questions. Mostly these were concerned with the employer's statutory duty to bargain with the representative of a majority of his employees. The act requires both employer and unions to meet "at reasonable times and confer in good faith in respect to wages, hours, and other terms and conditions of employment." The board's ruling that this requires an employer to bargain about pensions, retirement plans and various types of group insurance plans was upheld by two U.S. courts of appeals; the supreme court declined to review the lower courts' decision.

Another question which received attention of the board and the courts was whether an employer may make a wage increase without consulting the collective bargaining representative of his employees. The board ruled that an employer may make such a unilateral increase only when collective bargaining has come to a genuine impasse. The supreme court upheld this view, ruling that the board was correct in holding that it is an unfair practice for an employer to make a wage increase larger than he has offered a majority union in collective bargaining.

These rulings were among the high lights of those made by the five board members in the 484 unfair labour practice cases which they decided during the fiscal year ending June 30, 1949. All told, the board issued formal decisions in a total of 3,365 cases during the 1949 fiscal year. This was an increase of 63% over the 2,054 issued the previous year.

During the 1949 fiscal year, the agency experienced the busiest year of its 14-year history. It processed a total of 32,796 cases of all types. This was an increase of approximately 12% over the 29,151 handled in the preceding fiscal year. The board closed the 1949 fiscal year with 5,722 cases of all types on its dockets. This was a reduction of approximately 54% from the 12,644 cases on the docket, July 1, 1948.

The office of the general counsel issued formal complaints in 617 unfair practice cases. This was more than double the 305 issued in fiscal 1948. The general counsel's staff, on behalf of the board, conducted a total of 20,720 board elections of all types. In these elections, a total of 2,004,418 employees cast valid ballots. Of the elections conducted, 15,074 were polls to determine whether the employees wished to authorize their unions to negotiate union-shop contracts requiring employees to join the union as a condition to retaining their jobs. The employees authorized union-shop contracts in 14,581 such polls, or 96.7%. The remaining 5,646 elections were held to determine whether the employees wanted a collective bargaining representative and, if so, to determine their choice of representative. Bargaining representatives were chosen in 3,939 elections, or approximately 70%.

Charges of unfair labour practices were filed in 5,314 cases. Of these, 4,154, or approximately 78%, involved charges against employers. In the remaining 1,160 cases, charges of unfair practices were levelled against the unions. A large proportion of the cases involving unfair practices were settled by agreement between the parties.

Petitions for injunctions to halt alleged unfair labour practices were filed by the general counsel during the 1949 fiscal year in 32 cases, all against unions. This compares with 21 injunctions requested in fiscal 1948. Of the injunctions sought, 19 were granted, 3 were denied and 6 were withdrawn as a result of cessation of the alleged unfair practices or as a result of board decisions in the cases. The remaining 4 petitions were pending in the courts at the close of the year.

Before a labour organization may seek certification as a bargaining representative or file charges of unfair labour practices, each of its officers is required by the act to file an affidavit swearing that he is not a Communist or a supporter of subversive activities. These affidavits must be renewed annually. The union also must file certain annual financial reports with the department of labour. At the close of the 1949 fiscal year, 186 international unions and 9,101 local unions were in current compliance with the affidavit and filing requirements. Altogether, 16,967 local unions had complied, at one time or another, since passage of the amended act. Up to June 30, 1949, 156,197 officers of local unions had filed non-Communist affidavits. National Mediation Board.

The year 1949 marked completion of 15 years of administration by the National Mediation board under the amended Railway Labor act. Jurisdiction of the board, confined originally to common carrier railroads, was extended to common carriers by air under amendments to the act approved April 10, 1936.

It is the duty of the board to aid in maintaining industrial peace in the railroad and air-line industries and thereby prevent interruptions to the free flow of commerce between the states. There are approximately 1,000 separate operating carriers employing more than 1,500,000 workers subject to the dispute-settling procedures of the act. In discharging its duty under the law, the work of the board falls into two general categories: (1) mediating disputes involving changes in rates of pay, rules or working conditions; and (2) designating collective bargaining representatives in disputes over representation which arise among employees.

The tension which had characterized railroad and air-line labour relations during the postwar years did not lessen during 1949. Threatened strikes frequently occurred. The underlying causes of these threats involved many novel and perplexing problems. In the vast majority of cases patient and persistent efforts to find a peaceful solution through mediation were effective and the threatened work stoppages averted. Of the total of 309 cases mediated by the board, there were only six reportable strikes during the year and two of these were minor stoppages of less than 24 hr. In the major disputes which arose during the year, the act continued to fulfil its basic purpose: *i.e.*, prevent work stoppages by making and maintaining agreements through the orderly processes of collective bargaining. For example, during 1949, wage disputes involving train and engine service employees on more than 99% of the nation's railroad mileage were settled in direct negotiations. In addition, a dispute between the railroads and their nonoperating employees was settled in direct negotiations following recommendations of an emergency board appointed under section X of the act. This settlement provided for wage increases and was of particular far-reaching significance in that it established a 40-hr. work week for approximately 1,000,000 railroad workers.

During 1949 the board reported that an increasing degree of harmony was exhibited in employer-employee relationships in e air-line industry. This was credited in large measure to ore experience and a better understanding of bargaining pro-dures under the act. (*See* also RAILROADS.)

ational Parks and Monuments.

Visitors to U.S. national parks d other areas administered by the national park service talled 31,864,180 in 1949, an increase of more than 2,250,000 er the record of 1948. Areas which attracted more than 1,000,-o visitors each were Great Smoky Mountains National park North Carolina-Tennessee; Rocky Mountain National park Colorado; Yellowstone National park in Wyoming-Montana-aho; Platt National park in Oklahoma; Shenandoah National rk in Virginia; the Blue Ridge parkway in Virginia-North rolina; the Lincoln memorial in Washington, D.C.; Lake ead National Recreational area in Arizona-Nevada; and Lake exoma National Recreational area in Texas-Oklahoma. The ke Texoma area was transferred to the jurisdiction of the rps of engineers on June 30, 1949.

Greater participation by visitors was noted in the interpretive, educational, facilities, such as campfire talks, nature walks, tomobile caravans, museum exhibits and library collections ovided by the national park service in most of the parks and onuments.

A joint decision by the secretary of the army and the secre-ry of the interior to drop the Glacier View Dam project in ontana from plans for development of the Columbia river sin saved nearly 20,000 ac. of wilderness in Glacier National rk from destruction by flooding. A threat to the Grand Can-n in Arizona was averted with the rendering of an adverse cision by the department of the interior on the proposed Kai-b tunnel in Arizona which would have diverted from the can-n virtually the entire flow of the Colorado river, the agent hich created this awe-inspiring chasm.

Three areas—all of historic significance—were established in 49. The massive fortifications in San Juan, Puerto Rico, were signated as San Juan National Historic site, with the U.S. my to have primary jurisdiction over the old Spanish-built rtifications, and the national park service to be responsible for ndling visitors and interpreting the site to the public. Bluff-nds along the Mississippi river containing unusual prehistoric rth mounds were donated to the federal government by the ate of Iowa and established as Effigy Mounds National monu-ent. The De Soto National memorial, to commemorate the nding of Ferdinando de Soto's expedition in Tampa bay, was tablished in the vicinity of Bradenton, Fla. Land for the emorial was donated to the federal government by Dr. and rs. W. D. Sugg and Dr. and Mrs. L. W. Blake of Bradenton.

Near the close of 1949, deeds to approximately 33,500 ac. of nd in the Jackson Hole region of Wyoming were donated to e federal government by John D. Rockefeller, Jr., for admin-ration as part of Jackson Hole National monument.

Sizable parcels of land were acquired for Everglades National rk in Florida and Great Smoky Mountains National park in orth Carolina and Tennessee. At the year's close, areas ad-nistered by the national park service totalled 181, with a mbined gross area of 21,754,134 ac.

Other noteworthy events and developments of 1949 were e dedication of Theodore Roosevelt National Memorial park North Dakota and the Death Valley Centennial program held in Death Valley National monument, California-Nevada, both of which attracted throngs of visitors; establishment by the secretary of the interior of an advisory committee for the Independence National Historical Park project, Philadelphia, Pa.; and enactment of legislation authorizing establishment of St. Croix Island National monument in Maine. (N. B. D.)

Canada.—The Fundy National park was officially opened during the summer of 1949. The 80 sq.mi. scenic and recreational area in New Brunswick was proclaimed a national park in April 1948, and in 1949 parliament approved the name "Fundy." Developments in the national parks included additional work on park highways in Waterton Lakes park, Prince Albert National park, Riding Mountain National park, Cape Breton Highlands National park and on the highways leading to the mountain national parks. Facilities for the protection of the park forests were also improved. During the first four months of the fiscal year 46.5% more visitors entered the parks compared with the same period in 1948. In August 1949 visitors to the parks numbered 485,133.

Great Britain.—In March 1949 the National Parks and Access to the Countryside bill was published. The main objects of the bill were to provide for the designation of national parks in England and Wales and for the establishment of a National Parks commission. The commission, appointed by the minister of town and country planning, would select any extensive and beautiful area which it considered suitable and would encourage the provision and improvement of facilities for visitors to the national parks.

The six National Forest parks, administered by the Forestry commission, became increasingly popular. More camping sites were provided and facilities for visitors improved. Additional guides to the forest parks were published, including booklets on Hardknott and Glenmore.

Kenya.—The government took over the ancient ruined city of Gedi, 10 mi. south of Malindi, as a national park. Investigation and conservation work was to be carried out by J. S. Kirkman, warden of Kenya's historic sites. The ruins of the city, which include five mosques, a ruler's palace and many large houses were first discovered 25 years before.

New Zealand.—Extending south from a track between Te Anau and Milford sound to Lake Manapouri an area of 400,000 ac. of Fiordland National park in South Island was proclaimed a bird sanctuary.

Northern Rhodesia.—In September the Legislative council passed a motion providing for the proclamation of an area of 8,650 sq.mi. in the southern, central and western provinces as a national park. The area was situated entirely in native trust lands and was almost entirely infested with tsetse fly and had extremely poor soil. It was almost uninhabited except in a small area along the Kafue river.

Southern Rhodesia.—A National Parks act was passed providing for establishment of national parks and for the preservation of wild animal and fish life and vegetation and objects of geological, ethnological, historical or other scientific interest; and for the control and management of such parks by a National Parks Advisory board appointed by the minister of internal affairs. The act scheduled the following areas as national parks: Wankie game reserve (3,256,998 ac.); Robins game sanctuary (25,398 ac.); Kazuma Pan game reserve (48,640 ac.) and Chimanimani National park (20,213 ac.). The first three were situated in the Wankie native district and the last in the Melsetter district. The act gave provision for the governor to proclaim any other area as a national park.

Navies of the World.

At the end of 1949 only two navies could be considered as being first class, that of the United States and that of Great Britain, the former being fully three times larger than the latter. The fleets of the U.S.S.R., France and Italy could be reckoned as second class, and those of Argentina, Australia, Brazil, Canada, Chile, Netherlands, Spain, Sweden and Turkey as third class. Several of the smaller navies renewed their strength by acquiring surplus warships from the United States and Great Britain. The relative strengths of the navies of the world are shown in the table.

Navies of the World, Dec. 1949

It became apparent during the year that the importance of the battleship and the cruiser had waned and that the various admiralties and navy departments were concentrating on the development of aircraft carriers, destroyers, submarines and frigates to counter the ever increasing menace of atomic weapons, more deadly aircraft and faster submarines.

Many battleships and cruisers of the two principal navies were broken up or discarded, together with prewar or war-built destroyers, submarines and smaller craft no longer required, but there were signs that this was the final reduction of the immense fleets of wartime to a postwar establishment commensurate with foreseeable needs and straitened economies.

The majority of the major warships of the principal nations were put in a state of preservation or refitted for placing in reserve, but many experiments were carried out with aircraft carriers, destroyers and submarines. While designs of the warships of the future were being prepared according to the lessons of World War II to counter the latest aircraft and submarines, most navies perforce made the best of existing warships by bringing them up to date or modifying them for new duties.

There were signs, however, that revolutionary types of warships were being prepared for the operation of atomic bombs, guided missiles, rockets and new antisubmarine and anti-aircraft weapons developed since the war, these ships being designed with novel types of propelling machinery such as atomic energy, hydrogen peroxide and gas turbines.

In most of the big navies there was a shortage of personnel to man operational ships, of which fewer than ever were in full commission. This was partly the result of a falling off in recruitment and the demobilization of wartime entries, but chiefly because of the long training in the handling of the complicated weapons and advanced scientific apparatus which an officer or enlisted man must undergo on shore before he is competent to control and maintain the equipment of modern warships.

Among the naval events of the year were the halt in the construction of the giant U.S. aircraft carrier "United States," the largest warship ever designed, only five days after it had been laid down on April 18; the trapping of the British sloop "Amethyst" by the Communists in the Yangtze river on April 20, its attempted rescue by the cruiser "London," destroyer "Consort" and destroyer "Black Swan," and its subsequent feat of navigation in escaping down the river to join the fleet on the night of July 30–31; the western European union naval Exercise "Verity" carried out by the combined fleets of Great Britain, France, the Netherlands and Belgium in July; the loss of the U.S. submarine "Cochino," which after two explosions in its battery room caught fire and sank off the north coast of Norway on Aug. 26 while on an arctic training cruise; the loss of the Argentine mine sweeper "Fournier," which sank in the Straits of Magellan on Sept. 22; the gamma ray tests on the obsolescent British cruiser "Arethusa" during the summer; and the scrapping at the end of the year of the oldest warship afloat in the world, the 148-year-old British man-of-war "Implacable," formerly the French "Duguay-Trouin," which was laid down in 1797, fought against the British at the battle of Trafalgar, was captured a fortnight later and served in, or latterly in close association with, the royal navy ever since.

United States Naval Strength.—Late in 1949 only 1 of the 15 U.S. battleships remained in full commission, the "Missouri," which led a task force of 10 warships on 2 separate midshipmen's training cruises to Great Britain and France during the summer. The battleship "Kentucky" and the battle cruiser "Hawaii," laid down during World War II, were still only 73% and 84% complete, respectively. The 27,100 ton aircraft carrier "Oriskany," modified from the original "Essex" class design while under deferred construction, was completed in December. Twelve other ships of the class were to be modified on similar lines to enable them to operate heavier aircraft. The fleet comprised 15 battleships, 2 battle cruisers, 37 fleet aircraft carriers, 66 escort carriers, 25 heavy cruisers, 44 light cruisers, 363 destroyers, 244 escort destroyers, 172 submarines, 195 mine craft, 122 patrol vessels, 844 amphibious craft and 537 miscellaneous vessels. The total strength of personnel was 394,500 in the navy and 87,000 in the marine corps.

British Naval Strength.—One battleship and 8 cruisers were removed from the effective list. Of the 5 remaining battleships none was in operational commission at the end of the year, the "Vanguard" being in the training squadron and the 4 of the "King George V" class relegated to reserve. There were 12 fleet aircraft carriers and 1 escort carrier. The large aircraft carrier "Eagle" was not completed, and her sister ship, "Ark Royal," was not launched. Little progress was made with the intermediate fleet carriers "Albion," "Bulwark" and "Centaur," and the remaining ship of the class, the "Hermes," was not launched. The light fleet carriers "Hercules," "Leviathan" and "Powerful" were still suspended. As a result of scrapping, cruisers were luced to 25. No building progress was made with the cruisers lake," "Defence" and "Tiger" begun in 1942–43 and stopped 1946. Destroyers numbered 111. Two of the 8 large destroy- of the "Daring" class ordered during World War II were nched. There were 167 frigates, including 50 former escort stroyers of the "Hunt" group, 24 former sloops and 26 former rvettes, which were all reclassified as frigates. Submarines mbered 68, including 4 "midgets." Other vessels included 2 nitors, 3 fast mine layers, 3 aircraft maintenance carriers, 66 et mine sweepers and many coastal craft, miscellaneous ves- s and auxiliaries. Naval personnel numbered 146,000.

U.S.S.R.—The soviet navy returned 1 battleship, 7 destroyers d 3 submarines to Great Britain and 1 cruiser and 27 frigates the United States; these ships had been on loan since 1944; t the U.S.S.R. was compensated by the acquisition of 1 bat- ship, 1 cruiser, 6 destroyers, 2 submarines and other warships m Italy under the peace treaty, 6 destroyers and other war- ps from surrendered Japanese tonnage and a considerable mber of former German ships, including the incomplete air- ft carrier "Graf Zeppelin." Total available strength in 1949 s 3 battleships, 14 cruisers, 2 coast defense ships, 60 destroy- , 24 escort vessels, 360 submarines and numerous mine layers, ne sweepers, patrol vessels, torpedo boats and auxiliaries.

France.—Because of straitened finances, the battleship "Jean rt" was still not completed; the aircraft carrier "Clemenceau" s not proceeded with; and the cruiser "De Grasse" was not sumed. The fleet comprised 2 battleships, 1 light fleet carrier, escort carrier, 11 cruisers, 1 coast defense battleship, 20 fleet stroyers, 16 escort vessels and frigates, 12 submarines and merous patrol vessels and other warships. Personnel num- red 50,000.

Italy.—The fleet was reduced to the 2 battleships, 4 cruisers, leet destroyers, 16 escort destroyers, 20 corvettes and a num- r of mine sweepers and auxiliaries that were allowed under e peace treaty.

Other European Countries.—Turkey acquired 4 destroyers om the United States, and now had 1 old battle cruiser, 12 et destroyers, 10 submarines, and smaller warships. Person- l: 4,800.

The Netherlands had a well balanced fleet of 1 light fleet rcraft carrier, 2 cruisers, 7 destroyers, 3 escort vessels, 8 sub- rines and a number of other warships and auxiliaries, among em a sloop converted into a radar training ship and a former rman whaler adapted as a submarine detection ship. Person- l: 27,700.

Sweden had 4 cruisers, 5 coast defense ships, 13 fleet destroy- , 8 escort vessels, including 2 older destroyers being con- rted into antisubmarine vessels, 24 submarines, 2 mine layers d numerous other warships, including a hospital ship con- rted into a radar training ship. Personnel: 13,500.

Spain possessed 6 cruisers, 13 fleet destroyers, 15 escort ves- s, 6 submarines, 6 mine layers and 7 fleet mine sweepers, o many minor warships and auxiliaries. Personnel: 22,300.

Greece had 1 cruiser, 2 destroyers, 8 escort destroyers, 6 sub- rines, 8 corvettes and numerous smaller craft. Personnel: ,000.

Norway had 6 destroyers, 7 escort destroyers, 5 submarines, orvettes, 2 fleet mine sweepers and sundry minor warships.

Portugal acquired 3 submarines and 2 frigates from Great itain and completed the reconstruction and modernization of 5 fleet destroyers. At the end of 1949 there were 5 destroy- , 8 sloops and frigates, 6 submarines and various ancillary ssels.

Poland had 2 destroyers, 4 submarines, and smaller craft.

Denmark possessed 10 torpedo boats or small escort destroy- , 2 frigates, 3 submarines, 1 corvette and minor vessels.

THE BATTERED CRUISER H.M.S. "London," one of four British ships damaged by Communist gunfire on the Yangtze river in April 1949. The vessel is shown docked at Shanghai, as stretcher-bearers removed a wounded crew member

Rumania had 2 destroyers, 1 submarine, 2 mine layers and minor craft.

Yugoslavia had 3 escort destroyers and 7 submarines.

Belgium possessed 2 sloops and 1 frigate, with minor craft.

Finland had only minor craft, but its navy was to be built up to the 10,000 tons aggregate allowed under the treaty of Paris.

Bulgaria had a few coastal craft.

South and Central America.—Argentina had 2 old battleships, 3 cruisers, 1 coast defense ship, 11 destroyers, 4 escort destroyers, 4 frigates, 3 submarines, 1 corvette, 2 patrol vessels and a considerable number of mine sweepers and other craft.

Brazil had 1 battleship, 7 fleet destroyers, 8 escort destroyers and 4 submarines, also 6 trawler type corvettes and smaller craft.

Chile possessed 1 battleship, 2 coast defense ships, 6 destroyers, 3 frigates, 7 submarines, 3 corvettes and various other vessels.

Peru had 2 obsolete cruisers, 1 old destroyer, 3 frigates and 4 submarines.

The Dominican Republic had greatly strengthened its navy by the acquisition of 2 destroyers from Great Britain and 3 frigates from the United States. It also had a former frigate presidential yacht, 5 corvettes and a number of patrol vessels and coastal craft.

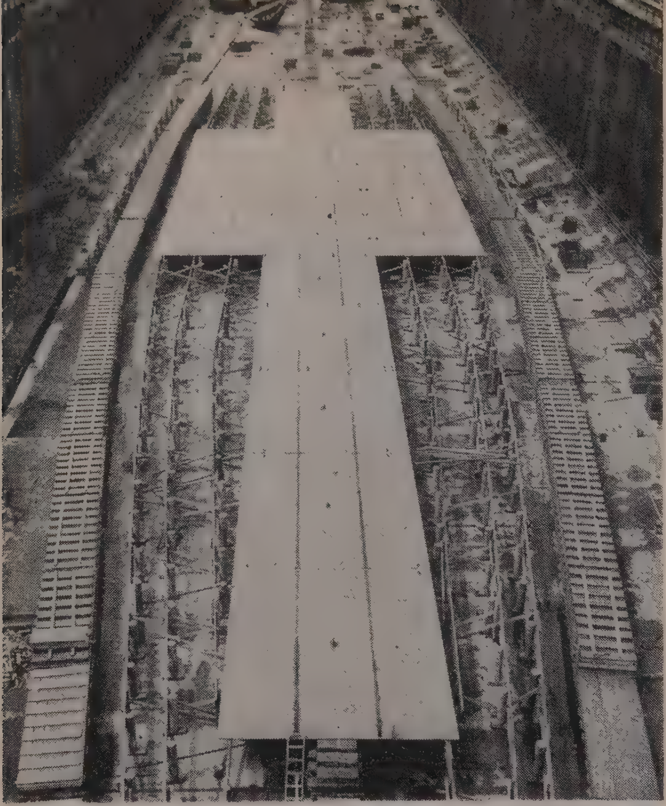
Colombia had 2 destroyers, 1 frigate and several smaller craft.

In the Mexican navy were 4 sloops, 4 frigates, 5 submarine-chaser type patrol vessels, and minor craft.

Venezuela possessed 6 corvettes, 2 gunboats and a few small craft.

Cuba had 2 sloops, 3 frigates, 2 patrol vessels and a number of minor war vessels.

Asia.—China's navy was very divided. The cruiser "Chungking," formerly H.M.S. "Aurora," and the sloop "Chang Shih" (formerly the Japanese "Uji") were lost in the civil war in March and September, respectively, and the escort destroyer "Lin Fu," formerly H.M.S. "Mendip," was returned to the



KEEL of the projected supercarrier "United States," which was designed to accommodate long-range bombers that could carry atomic bombs. Construction of the 65,000-ton warship was halted in April 1949 by order of Defense Secretary Louis Johnson

royal navy in May. The fleet comprised 4 destroyers, 10 vessels of the escort destroyer and sloop type and numerous corvettes, mine sweepers, gunboats, patrol vessels and coastal craft.

Thailand (Siam) possessed 4 small coast defense ships, 4 submarines, 2 sloops, 2 corvettes, 1 old destroyer, 1 fleet mine sweeper, 10 torpedo boats and a number of other small warships.

Iran acquired a frigate and a fleet mine sweeper from Great Britain.

Modern Types of Warships.—The principal types of warships in the world's navies were as follows:

Battleships.—U.S. "Iowa," 45,000 tons; nine 16-in., twenty 5-in. guns; 33 knots; 200,000 S.H.P. U.S. "South Dakota," 35,000 tons; nine 16-in., twenty 5-in. guns; 30 knots; 130,000 S.H.P. British "Vanguard," 42,500 tons; eight 15-in., sixteen 5.25-in. guns; 28 knots; 130,000 S.H.P. British "King George V," 35,000 tons; ten 14-in., sixteen 5.24-in. guns; 27 knots; 110,000 S.H.P. French "Richelieu," 38,500 tons; eight 15-in. nine 6-in. guns; 30 knots; 150,000 S.H.P.

Battle Cruisers.—U.S. "Alaska," 27,500 tons; nine 12-in., twelve 5-in. guns; 33 knots; 150,000 S.H.P.

Aircraft Carriers.—U.S. "Midway," 45,000 tons; eighteen 5-in. guns; 137 aircraft; 33 knots; 200,000 S.H.P. U.S. "Essex," 27,100 tons; twelve 5-in. guns; 82 aircraft; 33 knots; 150,000 S.H.P. U.S. "Saipan," 14,500 tons; light guns; 48 aircraft; 33 knots; 120,000 S.H.P. U.S. "Independence," 11,000 tons; light guns; 45 aircraft; 33 knots; 100,000 S.H.P. British "Implacable," 23,000 tons; sixteen 4.5-in. guns; more than 60 aircraft; 32 knots; 148,000 S.H.P. British "Glory," 13,190 tons; light guns; 40 aircraft; 25 knots; 40,000 S.H.P.

Cruisers.—U.S. "Des Moines," 17,000 tons; nine 8-in., twelve 5-in. guns; 32 knots; 130,000 S.H.P. U.S. "Oregon City," 13,700 tons; nine 8-in, twelve 5-in. guns; 33 knots; 120,000 S.H.P. U.S. "Worcester," 14,700 tons; twelve 6-in., twelve 3-in. guns; 32 knots; 120,000 S.H.P. U.S. "Fargo," 10,000 tons; twelve 6-in., twelve 5-in. guns; 33 knots; 100,000 S.H.P. U.S. "San Diego," 6,000 tons; twelve 5-in. guns; 33 knots; 75,000 S.H.P. British "Superb," 8,000 tons; nine 6-in., ten 4-in. guns; 31.5 knots; 72,500 S.H.P. British "Dido," 5,450 tons; eight 5.25-in. guns; 32 knots; 62,000 S.H.P. Swedish "Tre Kronor," 7,400 tons; seven 6-in. guns; 33 knots; 100,000 S.H.P.

Destroyers.—U.S. "Gearing," 2,400 tons; six 5-in. guns; 35 knots; 60,000 S.H.P. U.S. "Sumner," 2,200 tons; six 5-in. guns; 36 knots; 60,000 S.H.P. British "Battleaxe," 1,980 tons; four 4-in. guns; 31 knots; 40,000 S.H.P. British "Jutland," 2,400 tons; five 4.5-in. guns; 31 knots; 50,000 S.H.P. French "Hoche" (formerly German), 2,660 tons; four 6-in. guns; 36.5 knots; 70,000 S.H.P. Swedish "Öland," 1,880 tons; four 4.7-in. guns; 35 knots; 44,000 S.H.P.

Submarines.—U.S. "Balao," 1,526 tons; two 5-in. guns; ten 21-in. torpedo tubes; surface speed 21 knots; 6,500 B.H.P. British "Amphion," one 4-in. gun; 1,120 tons; ten 21-in. torpedo tubes; 18 knots; 4,300 B.H.P. U.S.S.R. (former German type), 1,600 tons; light guns; 6 torpedo tubes; 15 knots; 4,800 B.H.P. Nebraska.

One of the states formed from the territory of the Louisiana Purchase, Nebraska, popularly known as the "Cornhusker State," lies in the lower Missouri valley in the west north central part of the U.S. It was admitted to the union in 1867. Land area 76,653 sq.mi.; water area 584 sq.mi.; pop. (1940) 1,315,834; estimated 1,285,000 by the bureau of the census on July 1, 1949; capital, Lincoln (81,984), estimated 100,000 (1949); largest city, Omaha (223,844), estimated 274,000 (1949). In 1940, 39% of the population was urban. About 1% of the total population is Negro and about 7% foreign-born, principally German and Scandinavian.

History.—State officers for the 1949–51 period included: governor, Val Peterson (Rep.); lieutenant governor, Charles J. Warner (Rep.); attorney general, James H. Anderson (Rep.); auditor, Ray C. Johnson (Rep.); secretary of state, Frank Marsh (Rep.); treasurer, Edward Gillette (Rep.); state superintendent of public instruction, Wayne O. Reed (nonpartisan); chief justice, Robert G. Simmons (nonpartisan).

During the 1949 session of the legislature 318 laws were passed. The more important included: codification of the school laws, repeal of the community-property law, increase in the gasoline tax from five to six cents per gallon, removal of the tax ceiling for the county property levy, increase in maximum benefits for old-age assistance and aid to the blind, authorization for teachers colleges to grant degrees in liberal arts and a change in the organization of the Nebraska legislative council to include all members of the legislature, 43 in number.

The legislative council was directed to study and report to the 1951 session of the legislature on the following: reorganization of the state government, laws relating to children, reorganization of the county government, unfair employment practices, desirability of selling school lands, desirable changes in the state constitution and budgetary practices of the state government.

Education.—Elementary and secondary education is generally directed by local school districts, of which there were nearly 6,865 in 1949, with some supervision from the state superintendent of public instruction and with slightly more than $1,000,000 annual state aid. The total enrolment in elementary and secondary schools in 1948 was 225,536 and the teaching staffs numbered 11,858. Expenditures for 1947–48 were $35,699,444 with an additional $1,222,012 for capital outlay. Higher education is directed by the state university at Lincoln, the college of medicine at Omaha and four state colleges.

Social Insurance and Assistance, Public Welfare and Related Programs.—The state appropriation for public assistance for the 1949–51 period was $35,482,400 of which $19,622,600 were federal funds. In Oct. 1949 the number of persons receiving general relief was 1,460, and each received a monthly average of $31.65. At the same time 8,233 dependent children received an average of $35.64 monthly aid; 605 blind persons received a monthly average of $52.64; 23,835 persons received a monthly average of $43.52 for old-age assistance. The state maintained five correctional and penal institutions with a population of 1,295 as of July 1, 1949, and 12 other institutions for children, mentally ill, the handicapped, and other dependents, with a population of 6,929. These institutions were under the supervision of a board of control to which the state appropriated $18,861,910 for 1949–51.

Communications.—The total highway mileage of the state in 1949 was 100,631. Of this, 1,261 mi. were pavement, 23,258 mi. gravel and 2,73 mi. oiled. The state maintained 8,815 mi. of the total mileage. State appropriations for highway purposes for 1949–51 were $31,940,000 plus an estimated $17,322,000 in federal funds. In 1949 there were 265 airports in the state. Of these 62 were municipally owned, 32 commercial private, 5 state, 3 CAA and 163 personal use. Total railway mileage in 1949 was 5,872. Nineteen radio stations operated, eight of which were located in Omaha and Lincoln.

Banking and Finance.—State banks numbered 283 in 1949 with total assets of $379,227,765. There were 43 building and loan associations with assets of $95,059,829. There were also 130 credit unions and credit associations with resources of $13,144,366. The assets of seven trust companies amounted to $18,233,190. National banks numbered 126 with resources of $897,381,000. State government receipts for the fiscal year ending June 30, 1949, were $58,190,387 and expenditures amounted to $56,241,866. Total appropriations for 1949–51 were $125,782,635, including unexpended balances and $38,618,316 federal aid. The state had no bonded debt, although the debt of local subdivisions was $36,591,849 as of June 30, 1948.

Leading Agricultural Products of Nebraska

Crop	1949	1948	Average 1938-47
rn, bu.	239,330,000	252,468,000	180,307,000
inter wheat, bu.	53,316,000	81,938,000	57,806,000
ring wheat, bu.	1,092,000	1,050,000	1,188,000
ats, bu.	49,720,000	72,744,000	53,767,000
rley, bu.	5,833,000	9,204,000	21,398,000
e, bu.	1,606,000	2,250,000	4,107,000
tatoes, bu.	8,840,000	10,335,000	10,329,000
gar beets, tons.	559,000	496,000	801,000
falfa hay, tons.	2,290,000	2,213,000	1,460,000
ild hay, tons	2,255,000	1,793,000	1,988,000

Agriculture.—The total acreage harvested in 1949 for the crops listed the table was 18,095,000. The total farm income exclusive of any deral payments was estimated to be $920,892,000 as compared with 1,025,747,000 for 1948.

Manufacturing.—Most manufacturing establishments in Nebraska were ngaged in the processing of farm products. However, it was estimated at 45,054 persons were employed in manufacturing of all types with annual payroll of $123,448,000. More than 90% of these were coved by unemployment-compensation laws.

Mineral Production.—Aside from clay, sand, gravel and building stone, ost of which is consumed locally, the state has no mineral wealth of onsequence. There are minor deposits of petroleum which produced estimated 300,000 bbl. during 1949. (A. C. Be.)

lecrology: *see* OBITUARIES.

legroes, American. Significant gains as well as setbacks combined to intensify the issues of .S. civil rights on many fronts during 1949. Brought into harp political focus by the civil rights planks in the Demoratic election platform, remedial national legislation along hese lines was blocked in the 81st congress by a coalition of outhern Democrats and conservative Republicans, despite Pres. arry S. Truman's insistent recommendations. The test issues f fair employment, antipoll tax and antidiscrimination clauses federal education and welfare aid legislation remained as ritical issues for the succeeding session. Meanwhile, initiated y a presidential order, a committee on equality in the armed ervices effected total integration of separate Negro units in the ir forces, considerable integration in the navy and in the army, avy and air force training programs, but met considerable esistance and only slightly altered policies in the army itself. presidentially authorized statement of the Federal Housing dministration in December promised the withholding of fedral aid in housing construction wherever any discrimination, eligious or racial, was practised. The scope of this ruling was et to be determined: potentially, it was of crucial reformaory importance.

The year's events thus irrevocably joined these issues on the olitical front, and more importantly produced a ground swell f antibias discussion and planning, with some direct action, in ducational, industrial and church circles.

Legal and Political Developments.—Rep. William L. Dawon (Ill.) became chairman of the house committee on expendiures, and later vice-chairman of the Democratic national comittee. Considerable improvement was made in the employent and upgrading of Negroes in the federal bureaus, and in ivil service and United States employment service practices. Villiam H. Hastie, former governor of the Virgin Islands, was ppointed a judge in the U.S. circuit court of appeals (3rd istrict). Ralph Bunche was offered a post as an asst. sec. of tate, but declined primarily as a protest against segregation in he national capital.

The U.S. supreme court accepted for direct ruling a case nvolving discrimination in public services on southern railoads, several of which were reported as already relaxing some f their former Jim Crow practices. Oregon passed a fair emloyment act, joining the five other states with similar legisation, New York, New Jersey, Connecticut, Massachusetts nd Washington. New Jersey also passed an antidiscrimination aw for hotels, restaurants, theatres, resort and recreational facilities. State fair employment practice commissions from New York, New Jersey and Connecticut reported encouraging gains in reducing job discrimination. The annual conventions of the Congress of Industrial Organizations, the American Federation of Labor and the United Automobile Workers widened their endorsements of nondiscrimination in labour union practices, and the National Urban league at its annual convention formulated a plan for co-ordinated federal, state and municipal collaboration in antijob discrimination on a realistic "increase the consumer capacity" basis.

Educational and Cultural.—The *Crisis* annual survey reported a known but not total college enrolment of 62,938 Negro students; many mixed schools were unable to report for lack of separate statistics. Similarly reported were 7,944 bachelor graduations, 410 master's and 16 Ph.D. degrees. Roman Catholic higher institutions admitted more Negro students. Harvard university appointed its first Negro professor, William A. Hinton, in its medical school. Yale senior societies selected their first Negro member, and the National Interfraternity conference adopted, after sharp controversy, a resolution recommending elimination of restrictive membership provisions in college Greek letter societies. The National Students' association elected a Negro president, as did the Columbia college freshmen. The American Medical association extended its inclusion of Negro physicians and elected Peter Murray of New York city to its house of delegates. The U.S. Naval academy, Annapolis, Md., graduated its first Negro.

The supreme court ruling on equal educational facilities provoked a plan for separate but standardized regional postgraduate and professional schools co-operatively maintained by the southern states. Though endorsed by some Negro educators, this regional plan was opposed by the liberal forces in education, white and Negro. Though it failed of endorsement for federal aid and sanction in congress, it was scheduled to come up again for consideration. Countermoves were strong, however, in pending suits for admission to the regular state institutions in practically all of the 16 states involved. Some of these, like the University of Arkansas medical school, Fayetteville, the University of Missouri, Columbia, and the University of Kentucky, Lexington, conceded the principle by admitting a few Negro students.

Ralph Bunche, director of the division of trusteeship of the United Nations, as acting mediator in Palestine carried through successfully armistice negotiations with all of the nations involved and so attained international influence and acclaim. On his return, he received official commendation from President Truman and the U.N. and a number of public tributes and citations including nine honorary degrees. Ulysses Kay, outstanding young Negro composer, after a series of contest awards, received a National academy fellowship. Todd Duncan and a mixed cast triumphed in *Lost in the Stars*, a Maxwell Anderson-Kurt Weill dramatization of Alan Paton's novel, *Cry, the Beloved Country*. William Grant Still's Haitian opera, *Troubled Island*, was successfully produced by the New York City Opera company. The celebrated Gilpin Players organization of Cleveland, O., opened their new Karamu theatre. Noteworthy advances were made in the film portrayal of the more serious aspects of Negro life and the race problem in such films as *Pinky*, *Home of the Brave*, *Lost Boundaries*, *Intruder in the Dust* (after William Faulkner's novel) and the prizewinning documentary, *The Quiet One*. (*See* also CIVIL LIBERTIES; EDUCATION; LAW.)

Nehru, Jawaharlal (1889–), Indian prime minister, was born at Allahabad, Nov. 14. He was one of the leaders of the Indian independence movement and on Aug. 15, 1947, became the first prime minister of the dominion of India. (For his early career see *Encyclopædia Britannica.*)

In April 1949 he attended the commonwealth conference at which a solution was found whereby India could become a republic and at the same time remain within the commonwealth. On April 28 he visited Dublin, Republic of Ireland, where he was received on the floor of the *dail eireann* (house of representatives), and then went to Switzerland where at Berne on May 5 he ratified the Indo-Swiss treaty of friendship which had been signed in New Delhi in Aug. 1948. Addressing the Delhi provincial political conference on June 19 he announced that it had tentatively been decided that India should be declared a republic on Jan. 26, 1950. He broadcasted on June 29 on India's food situation and urged the nation to co-operate in a "mighty drive for food production." After outbreaks of violence in Calcutta, he paid a three-day visit to West Bengal in July. The dispute with Pakistan over Kashmir reached a climax in September; and Nehru again claimed that Kashmir was part of India. (*See* India, Dominion of; Pakistan, Dominion of.) In October he went to the United States and Canada at the invitation of the two governments and also visited London. He returned to Bombay on Nov. 14. On May 23 at Dak Pathar he laid the foundation stone of the first river-valley project in the United Provinces, known as the Yamuna hydroelectric scheme.

Nepal. An independent kingdom in the Himalayas, Nepal lies between India and Tibet. Area: *c.* 54,000 sq.mi. Pop. (1948 est.): *c.* 6,910,000. The aboriginal stock is Mongolian with an important admixture of Hindu blood. Religion: Buddhism mixed with Hinduism. Capital: Kathmandu (pop., *c.* 110,000). The ruling family are Hindu Rajputs. All power is in the hands of the prime minister, to whom it was permanently delegated by the king in 1867. Ruler: Maharajadhiraja Tribhubana Bir Bikram Jung Bahadur; prime minister: General Sir Mohan Shumshere Jung Bahadur.

History.—Constitutional reforms of a minor character had been introduced but in 1949 power was still wielded by a hereditary prime minister. The policy of isolation was little changed. There was still no modern industry and no railway link with the outside world. Schemes of development were however under consideration. A movement for popular reform in the state was receiving support from the Indian Congress party and an appeal was made by Nepalese agitators to Pandit Nehru, the Indian prime minister, imploring him to intervene. Some sympathy was given to it by the Nepalese domiciled in India, estimated at 2,000,000. (W. Bn.)

Foreign Trade.—(1944–45) Imports: 32,520,000 Nepalese rupees; exports 37,376,000 Nepalese rupees.

Transport and Communications.—Roads (1949): 237 mi. suitable for motor vehicles. Licensed motor vehicles (Dec. 1948): cars 227, commercial motor vehicles 88.

Finance and Banking.—Estimated gross revenue 12,500,000 Nepal rupees. Monetary unit: Nepalese rupee with an exchange rate (Dec. 1949) of 21 cents U.S.

Nervous System. Studies in nervous and mental diseases in 1949 were fruitful regarding Parkinsonian syndromes and convulsive diseases. Two synthetic drugs, artane and tridione, were intensively used on patients.

Artane (tri-hexyphenidyl), an antispasmodic, was used primarily in the treatment of all forms of Parkinsonian-like diseases—conditions caused by an infection of the brain (encephalitis) or disturbances of the blood vessels of the brain (vascular). The drug was found to stop or reduce the tremor found in most all cases of Parkinsonian syndromes. Other symptoms, rigidity and weakness were only relieved occasionally. Fortunately toxic effects were not often produced by this new drug.

Tridione (tri-methyloxazolidine-dione) was used in 1949 in the treatment of petit mal epilepsy (a momentary lapse of consciousness). Treatment of this condition previously had been disappointing, but tridione was found to arrest or stop the petit mal attacks. Its use, however, was found to cause harmful or toxic effects on the white corpuscles of the patient's blood. The white blood cells were reduced in number at first and then altered so that an increase in the lymphocytes and a decrease in the polymorphonuclear leucocytes resulted. Tridione produced glare phenomenon, decreased day vision, macropsia, drowsiness, epigastric distress, headache, skin rashes, and swellings of the eyelids, lips and many other regions. When such symptoms developed, the drug was eliminated and in all the cases the symptoms vanished. If the drug was not stopped early agranulocytosis (diminished white blood cells) might develop and cause death. Three deaths were reported. Although the toxic reactions were found in only a small number of cases tridione was highly recommended.

Cortisone (Compound E) was another new substance that was found to have definite value in the care of nervous and mental diseases. The drug could improve the mental capacity of the patient as well as give him a sense of well-being. Such help was often needed by patients who were afflicted with a debilitating disease. The drug was also found to be exceedingly helpful in myasthenia gravis when given with neostigmine. (*See* also Psychosomatic Medicine.)

Netherlands. A kingdom of northwest Europe, the Netherlands is bounded on the north and west by the North sea, on the east by Germany and on the south by Belgium. Area: 12,868 sq.mi. (not including the waterways and sheets of water larger than 185 ac. and minor acquisitions along the German frontier). Pop. (July 1, 1949, est.): 9,955,394. Language: Dutch. Religion (May 1947): Roman Catholic 38.50%, Dutch Reformed 31.03%, Reformed Churches 7.93%, non-church members 17.04%. Chief towns (pop., July 1, 1949, est.): Amsterdam (cap., 832,583); Rotterdam (671,901); The Hague (555,339); Utrecht (191,811); Haarlem (161,380); Eindhoven (139,320). Ruler: Queen Juliana; prime minister: Willem Drees.

History.—At the beginning of the year 1949 the country was the object of world attention and criticism because of the government's decision to resume military operations in Indonesia on Dec. 18, 1948, and the Indonesian question remained in the forefront throughout the year. It led, following the resolution of the United Nations Security council of Jan. 28, 1949, to the resignation on Feb. 11 of E. M. J. A. Sassen, minister of overseas territories, and later, after the government's acceptance of the Van Royen-Roem statements of May 7, which provided, *inter alia,* for the return of the republican government to its seat at Djokjakarta, to the resignation of the first high commissioner of the crown in Indonesia, L. J. M. Beel, and his replacement, on June 2, by A. H. J. Lovink. From Aug. 23 to Nov. 2 The Hague was the scene of the round table conference

AISING THE NETHERLANDS FLAG in the town of Tuddern, part of an area
 former west German territory awarded to the Netherlands by an Allied
greement reached in Paris, France, March 26, 1949

etween Dutch and Indonesian representatives, with observers f the U.N. Commission for Indonesia in attendance. At this onference agreement was reached on the charter transferring overeignty to the new republic of the United States of Indoesia, on the statute of union between the kingdom of the Jetherlands and the new republic and on a number of technical egulations arising out of the transfer. The ceremonial transfer f sovereignty took place in the Burgherzall of the royal palace t Amsterdam on Dec. 27. (*See* also Indonesia, Republic of he United States of.)

The year saw further important developments in the counry's postwar participation in European and world affairs. It vas a signatory of the North Atlantic treaty (*q.v.*), concluded t Washington, D.C. on April 4 and approved by the first and econd chambers on July 19 and Aug. 3, respectively. On May 5 he country was likewise a signatory of the statute of the Counil of Europe and took part in the first meeting of the new ouncil's assembly at Strasbourg, Fr., during August and Sepember and in the meeting of the Council of Foreign Ministers n Paris in November. As a member of the Brussels treaty, it ent delegates and experts to the various western European nion conferences held during the year, while, in the summer, nits of the armed forces participated in the five powers' comined fleet and air manoeuvres. That these commitments, howver, imposed heavy burdens on a country still struggling to reover from World War II was shown in the budget estimates or 1950, which provided no less than 1,901,000,000 guilders, nore than half the estimated total expenditure, for military urposes, repair of war damage and national debt payments. *See* also European Union.)

The maximum expectation of aid under the European Recovry program for 1949–50 was $258,100,000. In November an dditional $37,500,000 was granted for Indonesia up to Dec. 31, after the ban on this aid was lifted following the successful conclusion of the round table conference. On July 13, it was agreed with the U.S. that 240,000,000 guilders should be made available from the special E.R.P. local currency account to finance four important building and drainage schemes, and, in the same month, a U.S. loan of $15,000,000 was arranged through the International bank for the purchase of vital industrial equipment abroad.

Despite the serious technical difficulties involved, the immediate Benelux goal of full economic union between the Netherlands, Belgium and Luxembourg was neared during the year. At the conference in March at The Hague, July 1, 1950, was fixed as the date on which this union would become a reality; and, at Luxembourg, in October, agreement was reached on the last preparatory steps to be taken. The "pre-union," originally planned for July 1, whereby restrictions on the exchange of certain goods between the three countries were removed, came into operation on Oct. 17. Discussions were also begun between experts from the Benelux countries and France and Italy concerning an integration of all five national economies.

As a result of U.S. aid, Benelux and the nation's own efforts, visible progress was made during the year toward economic recovery. On Sept. 20 the minister of finance presented for 1950 what was, with the exception of the capital expenditure section, the first balanced budget since World War II. On the same day he announced a 30.5% devaluation of the guilder in terms of the dollar, as a consequence of a similar devaluation of the British pound. The rationing of all consumers' goods, apart from coffee and fuel, ceased on Nov. 3.

Yet, despite these improvements, the government warned that great effort and sacrifice and a larger measure of industrialization were required if the country was to solve the difficulties ahead, difficulties accentuated by growing competition on the export market and the rapid increase of the home population.

On April 23, 20 minor adjustments were made to the eastern frontier, whereby the Netherlands acquired about 27 sq.mi. of territory, inhabited by 9,404 Germans. The adjustments—agreed upon by the six western union powers on March 26, 1949—were of an interim character pending the peace treaty with Germany and were designed to remove anomalies in communications and to facilitate customs control.

Local government elections were held in June. The results reflected the slight shift to the right observed in the general elections of the previous year and again mainly at the expense of the Communist party. (*See* also Netherlands Antilles; Surinam.) (J. T. Br.)

Education.—(1947) Elementary schools 7,936, pupils 1,293,000, teachers 39,050; secondary schools 446, pupils 100,960, teachers 6,121; technical schools 797, pupils 194,837, teachers 8,567; training colleges 88, students 6,552, teachers 1,006; agricultural schools (1946) 192, pupils 42,851; universities and institutions of higher education 10, students 25,036, professors and lecturers 769.

Finance and Banking.—(Guilders) budget: (1949 est.) revenue 4,004,000,000, expenditure 4,299,000,000; (1950 est.) revenue 3,520,000,000, expenditure 3,500,000,000. National debt (Jan. 1948) 21,586,000,000. Currency circulation (Aug. 1949) 3,073,000,000. Gold reserve (Sept. 1949) $162,000,000 U.S. Bank deposits (Aug. 1949) 4,199,000,000. Monetary unit: florin or guilder with an exchange rate (Nov. 1949) of 1 guilder = 26.32 cents U.S.

Foreign Trade.—(Guilders) imports: (1948) 4,966,000,000, (1949, six months) 2,669,000,000; exports: (1948) 2,718,000,000, (1949, six months) 1,708,000,000.

Transport and Communications.—Roads (1949): 9,320 mi.; Licensed motor vehicles (Dec. 1948): cars 103,000, commercial motor vehicles 87,500. Railways (1948): 2,083 mi. Shipping (Jan. 1949): number of merchant vessels 965, total gross tonnage 2,558,566. Telephones (1947) 575,995.

Agriculture and Fisheries.—Main crops (1948, in metric tons): wheat 305,000; barley 138,000; oats 316,000; rye 382,000; potatoes 5,870,000; sugar, raw value, 281,000; dry peas 32,000; flax fibre 18,300; linseed 15,000; rapeseed 27,000. Livestock (May 1948): cattle 2,313,000; sheep 425,000; pigs 871,000; horses 334,000; hens 17,405,000. Fisheries: total catch (1948): weight 257,870 metric tons; value 89,746,000 guilders. Production (1948, in metric tons): milk 4,488,000; butter

70,956; cheese 96,828; sugar 455,880; meat 168,000; whale oil 17,507.

Industry.—Industrial establishments (Oct. 1948): 9,230; persons employed 773,527. Fuel and power (1948): coal 11,033,000 metric tons.; manufactured gas delivered 49,723,000 cu.ft.; electricity 4,132,000,000 kw.hr.; crude oil 495,000 metric tons. Raw materials (1948, in metric tons): pig iron 441,000; iron castings 132,000; steel castings 8,000; steel ingots 200,000; salt 250,000. Manufactured goods (1948, in metric tons): tobacco cut 8,300; cigarettes 5,317,600,000; paper 288,000; cotton yarn 47,800; woollen yarn 26,000; rayon yarn 16,000; rayon fibre 9,800; cement 588,000; building bricks 972,000,000.

FILMS OF 1949.—*Life in Lowlands; Stories of Holland: Background for Reading* (Coronet Instructional Films).

Netherlands Antilles.

The Netherlands Antilles consist of six islands in the West Indies, with a total area of 403 sq.mi. and a total pop. (est. 1949) of 160,000, of which about one quarter are aliens. Three islands lie near western Venezuela, Curaçao (210 sq.mi.), Bonaire (95 sq.mi.) and Aruba (69 sq.mi.). The other three islands, sparsely populated, lie 500 mi. to the northeast—the southern portion of St. Martin (17 sq.mi.), St. Eustatius (7 sq.mi.) and Saba (5 sq.mi.). The largest city and capital is Willemstad, on the island of Curaçao (pop. 45,000). The official language is Dutch, but a local patois of diverse origin is equally widespread. During 1949, L. A. H. Peters continued to serve as governor.

History.—The first election in the colony since the grant of universal suffrage in 1948, occurred on March 17, 1949. The National People's party gained four of the eight seats of the island of Curaçao in the colonial legislature (*staten*), and the three representatives of the eastern islands; and these seven, with the five representatives of the Aruban People's party, set up a coalition. On April 19, the legislature was officially installed, and the head of the National People's party, M. F. da Costa Gomez, became prime minister. Ill feeling between the Aruba and Curaçao wings of the coalition soon forced the reorganization of the cabinet. After eight weeks of wrangling, in late July, there was set up a compromise cabinet, consisting in part of technicians not identified with any party, and presided over by L. C. Kwartsz. This cabinet weathered the rest of the year.

There was a decline in employment during the second half of 1949. The Shell oil refinery near Willemstad continued to operate virtually at maximum capacity throughout the year, but the Creole refinery on Aruba suffered a slack period early in 1949 because of slower operations in Venezuela. Late in the year, the pipe line to the new Creole refinery in Venezuela was opened, absorbing some of the technicians from Aruba. Gainful employment was otherwise confined to commerce, which because of Willemstad's role as a free port, had long been substantial in the capital.

An unusually severe and protracted drought affected Curaçao through the first half of 1949. An ambitious program of expanding the facilities for increasing the water supply was authorized to be undertaken immediately, in the hope of its completion in two or three years. (C. ME.)

Education.—In 1949 there were 47 elementary schools with 15,462 pupils, 25 higher elementary schools with 9,592 pupils and 1 secondary school with 133 pupils. In 1948, 6,953,234 guilders were expended on education.

Finance.—The monetary unit is the Netherlands Antilles guilder or florin, valued at $0.530264, U.S. currency, official rate, on Dec. 15, 1949. The budget for the fiscal year 1949 estimated revenue at 57,329,511 *f* and expenditure at 57,267,582 *f*. Actual revenue in 1948 was 55,788,497 *f*. The public debt on Dec. 1, 1949, was 4,884,000 *f*. Notes in circulation on Dec. 1, 1949, amounted to 37,000,000 *f*; the gold reserve was 35,000,000 *f*.

Trade and Communications.—Exports in 1948 totalled 766,000,000 *f*.; imports were 867,000,000 *f*. About 97% of the exports consisted of petroleum products and 77% of the imports consisted of crude petroleum, almost all of which is brought from Venezuela by shallow-draft tender. Total imports of crude petroleum in 1948 amounted to 245,000,000 bbl. The U.S. supplied about two-thirds of the non-petroleum imports.

The highway mileage of the islands of the Netherlands Antilles in 1949 was as follows: Curaçao, 200; Aruba, 150; Bonaire, 32.5; St. Martin, 17; Saba, 4.5 and St. Eustatius, 2.5. There were no railroads. Air service was furnished by K.L.M. and Pan American World Airways. About 5,540 motor vehicles were in use on Curaçao in 1949. Telephones (1949) totalled 2,469, of which 1,927 were on Curaçao.

Agriculture.—Farming was limited for the most part to subsistence crops, and much food had to be imported because of the scarcity of water and lack of irrigation facilities. Sorghum, beans, corn and aloes were grown; only the latter was commercially important.

Manufactures.—Petroleum refining was by far the most important industry. There were three refineries—Curacaosche Petroleum Industrie Maatschappij, N.V., at Emmastad on Curaçao and Lago Oil and Transport Co. (Standard Oil Co. of N.J.) and the Eagle Oil Co. on Aruba. Production of refined petroleum products in 1948 by the first two, which account for more than 95% of the production, amounted to 234,000,000 bbl., of which 40,000,000 bbl. consisted of gasoline, 145,000,000 of fuel oil and 49,000,000 of other petroleum products. A secondary industry was the transshipment of cargo bound to Venezuela from large vessels to lighter vessels which could pass over the bar at the entrance to Lake Maracaibo.

Mineral Production.—Activity was limited to the exploitation of salt and phosphate of lime deposits.

Netherlands Indies: *see* NETHERLANDS OVERSEAS TERRITORIES.

Netherlands Overseas Territories.

Under this heading are grouped the overseas territories whose names were formally changed on Sept. 20, 1948, to "Indonesia," "Surinam" and the "Netherlands Antilles," respectively. Certain essential information on the component parts of the Netherlands overseas territories is given in the table.

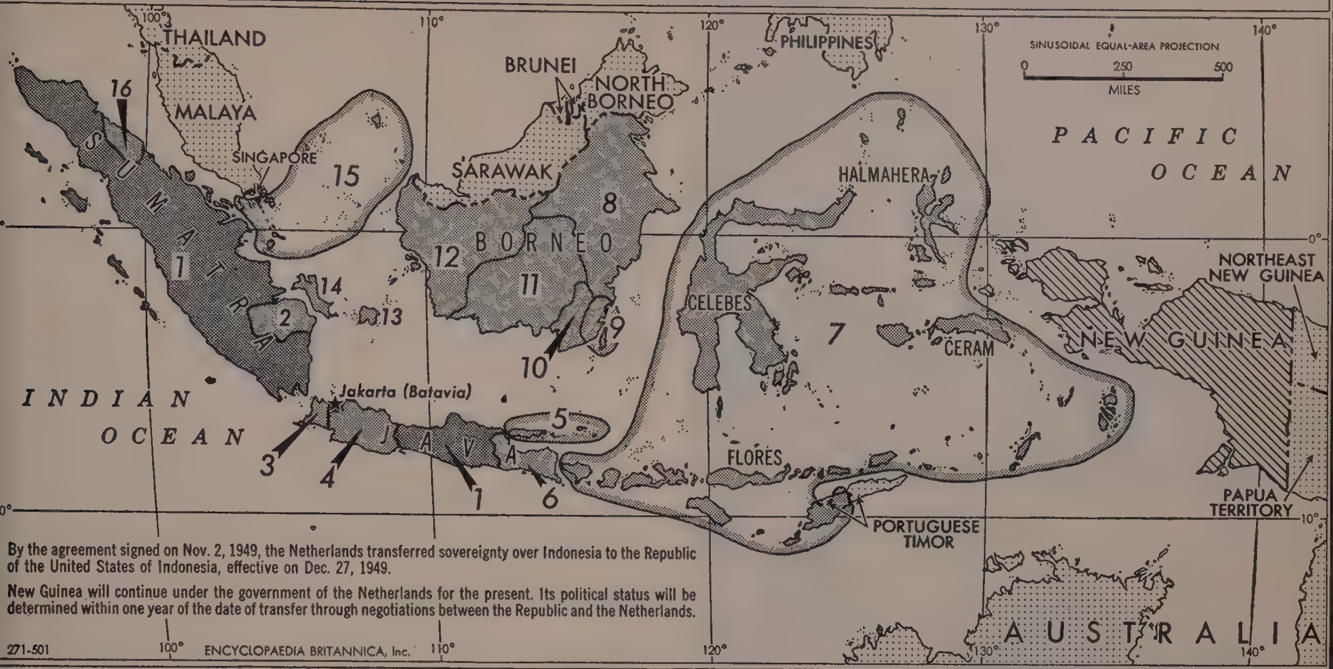
Indonesia.—The archipelago called Indonesia and comprising the territory of the former Netherlands Indies, stretches 3,000 mi. from east to west and 1,300 mi. from north to south, between 6° N. and 11° S. and from 95° to 141° E. It includes the islands of Sumatra, Java, the Celebes and Borneo (whose northern part is under British rule) and many smaller islands, together with the western half of New Guinea. Total area: *c.* 735,000 sq.mi.; total pop. (1948 est.) 76,360,000, all but 2.6% of them being indigenous (Java 40,000,000, Sumatra 8,000,000, Celebes 4,000,000, Dutch Borneo 2,500,000). Chief towns (pop., 1930 census): Batavia (cap., 435,184); (mid-1949 est., 1,200,000); Soerabaja (341,675); Semarang (217,796); Bandoeng (166,815); Soerakarta (or Solo) (165,484); Djokjakarta (139,649). Languages: Malay is to a certain extent a language of intercommunication between different population groups speaking 25 main languages and 250 dialects; Dutch is also spoken by educated Indonesians. Religions: Moslem *c.* 90%, Christian 3.4%, Hindu 1.4%. High commissioners of the crown in 1949: Louis J. M. Beels, (after June 2) Anthony H. J. Lovink and (after Dec. 27) H. M. Hirschfeld.

History.—The second police action of the Netherlands military forces intended to curb the Indonesian republic achieved its aims in the course of a few days; hostilities ceased in Java on Jan. 1, 1949, and in Sumatra on Jan. 5, 1949. Deprived of its remaining territory, which was almost entirely occupied by the Dutch, of its various armed formations which were scattered and of its leaders who had been removed elsewhere, the Indonesian republic virtually ceased to exist. And with it disappeared the uncompromising spirit in which the republicans competed with the federalists for the inheritance of power in the archipelago.

In Jan. 1949, however, the government of India summoned a conference of Asiatic countries to New Delhi, where the Dutch action in Indonesia was sharply condemned and a resolution was passed calling for the restoration of the *status ante quo* in Indonesia. The U.S. representative on the United Nations Security council sponsored a resolution, passed on Jan. 28, enjoining the Netherlands to withdraw its troops from former republican areas in Java and Sumatra, to release the captured leaders and to restore the government of the republic at Djokjakarta.

Faced with this grave development on the one hand and its responsibilities as the recognized sovereign power in Indonesia

THE REPUBLIC OF THE UNITED STATES OF INDONESIA



By the agreement signed on Nov. 2, 1949, the Netherlands transferred sovereignty over Indonesia to the Republic of the United States of Indonesia, effective on Dec. 27, 1949.

New Guinea will continue under the government of the Netherlands for the present. Its political status will be determined within one year of the date of transfer through negotiations between the Republic and the Netherlands.

the other, the Netherlands government chose to make it ear that it had to reject this intervention. The consequence of is attitude soon assumed alarming aspects, since in reply to e Netherlands' refusal to yield to the Security council's in- nctions, sanctions and suspension of aid under the European ecovery program were foreshadowed. To break the deadlock, anada's representative in the Security council made some con- ructive suggestions in March, which proved to be acceptable the Dutch and which were finally embodied in the council's ling of March 23. The ruling combined the operative part of e Security council's Jan. 28 resolution with the recommenda- ons that the republic, if it were to be restored, should in ture undertake to co-operate toward an effective cessation of ostilities in Indonesia and should, furthermore, be prepared to ke part, together with the Netherlands and the federalists, a round table conference at The Hague, which was to provide r a peaceful and lasting settlement of the Indonesian problem. he Dutch forthwith concurred with the Canadian ruling, and om then on developments moved with noticeable rapidity. On ay 7 the leaders of the Dutch and republican delegations, nego- ating on the newly recommended basis of compromise, an- ounced that agreement in principle had been reached. On June a meeting of the heads of the delegations was brought about garding a method to effectuate the cessation of hostilities t took effect on Aug. 10 in Java and on Aug. 14 in Sumatra). hereupon the evacuation of Djokjakarta and surrounding dis- icts by the Netherlands troops took place on June 24, and on ly 6 the reconstructed republican government was allowed to turn to its former capital.

Meanwhile, the governments the Indonesian federal states, hich welcomed the new policy compromise and which had ntributed their influence to ing it about, took steps to safeguard their own positions. An inter-Indonesian conference was held, bringing together federalists and republicans for the purpose of exploring the possibilities of a common policy to guide their respective delegations at the forthcoming round table conference. The inter-Indonesian conference ended in Batavia, Java, on Aug. 2 on a note of complete harmony, which covered among other things recognition of the federal structure of Indonesia as a basic conception of the new constitutional system.

The round table conference opened in The Hague on Aug. 23 in a favourable atmosphere which prevailed to the end, notwithstanding occasional clashes. Some part of this success might be attributed to the U.N. Commission for Indonesia, which attended throughout the conference and toward the end arbitrated in several delicate cases. On Nov. 2 the round table conference ended with a solemn plenary session in the mediaeval Hall of the Knights, at The Hague, where the completion of its business was announced and the documents were signed by the three delegations, Netherlands, republican and federalist, certifying agreement on the following main subjects:

1. The charter of transfer by the kingdom of the Netherlands of sovereignty over Indonesia to the republic of the Federated States of Indonesia, to be effected not later than Dec. 30, 1949. (It was also agreed that the Netherlands kingdom should retain sovereignty over the Dutch part of New Guinea (area: 152,089 sq.mi.) for the time being, a further decision on which would have to be negotiated within one year.)

2. The statute of the union to be concluded between the Netherlands and Indonesia. The union, under the queen of the Netherlands, would have to assure the co-operation of the partners in the field of their common interests through ministerial conferences twice yearly. Attached to this statute was a joint declaration on fundamental human rights and liberties, followed by a series of agreements, some of them in detail, on the principal subjects of future co-operation—foreign relations, defense, financial and economic matters (rights, concessions and enterprises; financial and monetary conditions; commercial policy; public indebtedness

Netherlands Overseas Territories

	Area (in sq.mi.)	Population		Capital	Status	Governors

Surinam (Dutch Guiana) . .	54,291	(1948 est.)	209,700	Paramaribo	colony	Governor, J. Klaasesz
Netherlands Antilles . . .	403	(1949 est.)	160,000	Willemstad	colony	Governor, L. A. H. Peters

DUTCH TROOPS leaving Batavia, Java, in May 1949, aboard ship bound for the Netherlands. A cease-fire order, the third in three years, was signed by Dutch and Indonesian officials Aug. 1, with both sides agreeing to hold to their current lines without further moves to attack

of the former Netherlands Indies and cultural interests).

3. An agreement on the transition period, covering a great many problems arising out of the change from the old to the new constitutional order (citizenship and nationality; position and rights of civil servants; military questions, such as the withdrawal of Netherlands naval, land and air forces and the setting up of a Netherlands military mission to assist the new government of Indonesia to build up sea, land and air forces of its own).

All the above-mentioned agreements and various protocols accompanying them required ratification by the Netherlands parliament and by the representative bodies of the federal states and the republic of Indonesia respectively.

The Netherlands government was the first to initiate proceedings of ratification. The first reaction of parliament was not directly favourable, the lack of precision and the absence of guarantees for the fulfilment of the agreements being among their main objections. Simultaneously with the end of the round table conference, security conditions in several parts of Java showed a marked deterioration, and the question as to how law and order were to be maintained after the withdrawal of the Dutch troops did not fail to give rise to anxiety. It was to be foreseen, however, that both the Netherlands parliament and the Indonesian representative bodies on the other hand would realize that a rejection of the results of the round table conference would create an impossible and untenable situation and that under the circumstances trust in the good faith of all parties concerned in carrying out the agreement according to the spirit rather than to the letter might be justified by future events.

While the round-table conference was still in progress, the Republican and Federalist delegations in The Hague reached complete agreement on a preliminary constitution for the Republic of the United States of Indonesia, based on the principles of federalism and parliamentary democracy, which would remain in effect until a constituent assembly, scheduled to convene within one year's time, should pass a final text. On the basis of this constitution, the Indonesians made preparations for the transfer of sovereignty. Achmed Soekarno was elected on Dec. 16, at Djokjakarta, by representatives of the Indonesian states to be the president of the republic and the first all-Indonesian cabinet was formed with Mohammed Hatta as prime minister.

The round-table conference agreements were ratified by both houses of parliament in the Netherlands and by the representative assemblies of the Indonesian states in the course of the first few weeks of December. On Dec. 27 the solemn transfer of sovereignty by the queen of the Netherlands to an Indonesian delegation headed by Premier Hatta took place at Amsterdam, the capital of the Netherlands, while simultaneously in Batavia (renamed Jakarta) the high commissioner of the crown, last representative of Netherlands constitutional authority in Indonesia, handed over the reins of government to president Soekarno. The rule of the Netherlands kingdom in Indonesia had come to an end. (*See* also Indonesia, Republic of the United States of; Netherlands; Netherlands Antilles; Surinam; United Nations.) (W. G. P.; X.)

Neutrons: *see* Physics.

Nevada. A state of the mountain group of western states, Nevada was the 36th state to be admitted to the union on Oct. 31, 1864; it is popularly called the "Sagebrush state." Land area 110,540 sq.mi.: water area 738 sq.mi. Pop. (1940 census): 110,247. The estimated population on July 1, 1949, was 174,000, according to the U.S. census bureau. The principal cities with 1940 pop. and 1949 pop. in parentheses were: Carson City, the capital, 2,478 (3,700); Reno, 21,317 (37,000); Las Vegas 8,422 (31,000); Sparks 5,318 (8,800); Ely 4,140 (5,200); Elko 4,094 (6,000).

History.—The 1949 legislature which met on Jan. 17 for the regular 60-day session was faced with the problem of providing funds for the state's pressing needs. The members stood off a determined effort for the passage of a sales tax. Increases were made in liquor and cigarette levies and new taxes were levied on marriage-licence fees and court action fees. From the expenditures of the first six months of the new biennium it appeared possible that no serious problem might arise with receipts and expenditures both showing substantial increases.

During the fiscal year ending June 30, 1948, the proceeds of the 2% gambling tax netted the state $1,102,047.17. For the nine-month period ending Sept. 30, 1949, the total collected was $908,398.31.

On Jan. 1, 1950, state officers were: governor, Vail M. Pittman; lieutenant governor, Clifford Jones; secretary of state, John Koontz; controller, J. P. Donovan; treasurer, Dan W. Franks; superintendent of public instruction, Mildred Bray; attorney general, Alan H. Bible.

Education.—On Jan. 1, 1950, Nevada had 179 elementary schools with a total enrolment of 20,019; teachers numbered 835; high schools totalled 35 with enrolment of 6,323, staffed by 328 teachers. Kindergarten enrolment was 2,047 in 15 kindergartens with 36 teachers. School population was 28,389. Average salaries paid to high school teachers was $3,319 and to elementary school teachers $2,888.

The 1949 legislature passed legislation making it possible for public school teachers to join the state employees' retirement system.

Social Insurance and Assistance, Public Welfare and Related Programs.—The amount spent for social security was $2,160,373.22 for the fiscal year ending June 30, 1949. Aid to the deaf, dumb and blind expense was $13,987.86. Nevada spent $2,069,506.62 for unemployment security benefits during the fiscal year ending June 30, 1949. On Jan. 1, 1950, the state prison had 298 men and 2 women inmates; total expenditures for the fiscal year ending June 30, 1949, were $208,300.86. The state industrial home, on Jan. 1, 1950, had 50 boys and 3 girls under school control; total expenditures for the fiscal year ending June 30, 1949, were $29,691.62. The state hospital for mental diseases had 339 inmates on Jan. 1, 1950; expenditures for the 1949 fiscal year were $269,055.89. The orphans' home had 52 boy and 43 girl inmates on Jan. 1, 1950, and the cost to the state for the 1949 fiscal year was $88,083.27.

y, tons	688,000	649,000	597,000
ts, bu.	360,000	369,000	291,000
rn, bu.	90,000	81,000	87,000

Communications.—During 1949, 70.45 mi. of oil-asphaltic highway and .50 mi. of gravel-surfaced roads were constructed; 66.12 mi. of road x were constructed and 18.93 mi. of gravel-surfaced roads were built. penditures for the fiscal year ending June 30, 1949, were $5,083,021.36. ring the last half of the year 1949 lower contract bids were being omitted by contractors with active competition resulting in moderately ver road-construction costs.

Railroad mileage in Nevada on Jan. 1, 1950, totalled 1,701 mi. of ndard gauge and main track and 2,193.36 mi. of all track including lings.

As of Jan. 1, 1950, there were 418 registered aircraft and 67 estab-hed airports. Development projects at 12 locations in Nevada were ogramed for the fiscal year 1950 which would involve construction sts of $325,000.

Banking and Finance.—On Jan. 1, 1950, there were 8 main office banks th 19 branches, a total of 27 banking units serving Nevada; the total sources of these banks on Nov. 1, 1949, were $177,922,826.66; de-sits were $166,509,384.29. Total resources were the highest in Nevada's story, reflecting both increased population and improved conditions. ring 1949 no banks were in liquidation and none were closed.

Of state funds on July 1, 1949, cash on hand was $5,277,618.08. tal cash received, including the cash balance on July 1, 1948, of ,318,782.08 was $25,569,058.14. Cash disbursements during the fiscal ar were $20,291,440.06. The state debt on Jan. 1, 1950, was $715,000. e postwar reserve fund had a balance of $1,080,000 in U.S. bonds and 5,718.61 in cash. Actual cash balance in the state treasury on Jan. 1, 50, was $4,264,132.95.

Agriculture.—The 1949 agricultural production was slightly less than 1948. Total cash receipts from crops marketed in Nevada were 5,078,000 in 1948. Cash received in 1949 from marketing of livestock s estimated at $39,449,000.

Table II.—*Mineral Production in Nevada*

Mineral Production.—According to preliminary figures, the value of cop-r, zinc, gold, lead and silver produced in Nevada during 1949 was $29,-9,731, or about 13% less than the value of the 1948 production. Of the tal in 1949, copper contributed 49% of the value, zinc 18%, gold 15%, d 12% and silver 6%. (E. C. D. M.)

ew Brunswick.

Second largest of the four maritime provinces of Canada, New Brunswick entered e confederation in 1867. Area: 27,985 sq.mi. Pop.: (1941) 7,401; (1949 est.) 516,000.

History.—The first session of the 41st legislature prorogued ril 28, 1949, having put 112 new laws on the statute books. ee treatment of tuberculosis was expanded to cover all pes and incidence, and mass X-ray services were expanded bstantially. The Labour Relations act went into force on July for industries coming within provincial jurisdiction, and pro-bited unfair practices, established a procedure for certification labour unions, made collective bargaining compulsory and ovided for appointment of conciliation officers and boards if rgaining failed. Faced with unemployment benefits running to 0,000 per week by November in the Saint John area alone, ans were formed for 11 large-scale public works to relieve any rsening of the situation.

In Jan. 1949 the McNair Liberal government announced its 48 fiscal year had closed with a surplus of $2,032,418, making e ninth consecutive annual surplus with a total of $15,556,-2, which had been used for debt retirement and for capital ojects. Although motor-vehicle fees, the gasoline tax, the to-cco tax and stumpage had shown increases, liquor revenues l off by more than $250,000.

Education.—It was announced that beginning the 1951–52 school year grade-12 course would be introduced, giving a minimum of 12 years of e education to New Brunswick youth. Provincially controlled schools d in 1946 (latest data available in 1949): total enrolment 95,227; erage daily attendance 79,476; teachers 2,776; total revenue $4,823,855.

Agriculture.—During 1948 the 67,000 ac. sown to potatoes produced 17,315,000 bu. Cash income from the sale of farm products for the first half of 1949 was $19,420,000 compared with $21,100,000 for the same 1948 period.

Fisheries.—During the year sardine canners objected strenuously to plans to harness the tides of Passamaquoddy for power, claiming dams would cut the Bay of Fundy sardines off from their chief food, the algae of Quoddy bay. In 1948 New Brunswick fishermen landed a total of 224,200,000 lb. of fish valued at $7,689,128 ($2,000,000 more than in 1947) and having an all-time-high market value of $21,000,000.

Forestry.—During 1949 there was some recession in total forest revenue, resulting from a lower pulpwood cut and loss of some of the United Kingdom lumber market. During 1948 the province's 14,000,000 ac. of forest returned $124,000,000 of products (compared with $24,000,000 in 1938), of which $72,000,000 was from pulp and paper operations and $23,000,000 from sawmill and woodworking industries.

Production.—Industrial development during 1949 was slowed down through power shortages. To overcome this the electric power commission planned new steam plants and a three-way feed provincial grid to cost $10,000,000. A plant to use anhydrite shales from the Petitcodiac river for making sulphuric acid and superphosphate fertilizer was a major 1949 industrial development.

Minerals.—Mining held its fourth place in primary production during 1949, but at an estimated better total value than in 1948, which, at $7,100,333, was a record $2,000,000 over 1947. Development of Stoney creek oil fields continued and production of gypsum increased. (*See* also CANADA, DOMINION OF).

New Caledonia: *see* FRENCH UNION.

Newfoundland and Labrador.

A province of Canada. Area: Newfoundland 42,734 sq.mi.; Labrador *c.* 110,000 sq.mi. Population: Newfoundland (1945 census) 315,643, (1947 est.) 321,897; Labrador (1947 est.) 5,639. Capital: St. John's (pop. 1947, 57,849). Lieutenant governor: Sir Leonard Outerbridge.

History.—From the suspension in 1934 of the dominion status, established under the statute of Westminster in 1931, Newfoundland, until March 31, 1949, was administered by a commission of government under the chairmanship of the governor and consisting of six commissioners, three of whom were Newfoundlanders, the other three being from the United Kingdom. The commission of government was responsible to the government of the United Kingdom.

A national convention, elected in 1946, to consider the future form of government, ended their deliberations in Jan. 1948. They recommended to the government of the United Kingdom that two forms of government; viz., the continuation of commission of government, and the restoration of responsible government, should be submitted to the people of Newfoundland in a national referendum. The United Kingdom government did not accept this recommendation. Instead, it decided to place three options on the ballot paper in the national referendum. These were as follows: (1) commission of government for a period of five years; (2) confederation with Canada; (3) responsible government as it existed in 1933.

A referendum, held on June 3, 1948, resulted as follows: 23,311 votes for (1); 64,066 votes for (2); 69,400 votes for (3). As no one choice obtained an absolute majority over the other two combined, it was necessary, under the provisions of the Referendum act, to hold a second referendum.

A second referendum was held on July 22, to decide between (2) and (3). The result was 78,323 for (2) and 71,336 for (3), a majority of 6,989 for confederation with Canada.

On Dec. 2, at Ottawa, the terms of union were signed by representatives of the Canadian government and by a Newfoundland delegation. The terms were subsequently approved by the parliament of Canada and the Newfoundland commission of government. Confederation was duly consummated on March 31, 1949. Newfoundland became the tenth province of Canada and was entitled to be represented at Ottawa by seven members of the house of commons and six members of the senate.

As a result of the first provincial election (May 1949), a

Liberal government came into power under the premiership of J. R. Smallwood, the chief architect of confederation.

Education.—(1948) Schools, 1,200; pupils, 72,940; teachers, 2,400.

Transport and Communications.—Roads, main and secondary, 6,170 mi.; motor vehicles (licensed), 8,528 cars, 4,550 trucks, 184 motorcycles. Railways, 750 mi. Gander airport, Newfoundland, and Goose Bay airport, Labrador, were important stages between Europe and America for air lines of several countries on both sides of the Atlantic.

Finance and Banking.—Budget (1948–49, in Canadian dollars): revenue $41,087,503, expenditure $39,920,447; (1949–50 est.) revenue $20,182,550, ordinary expenditure $22,984,600, capital expenditure $5,759,700. Accumulated surplus $40,250,000 as of March 31, 1949. Provincial debt $7,393,335. Savings and bank deposits (Dec. 31, 1948): $95,715,976, plus government deposits of $13,072,212. Exchange rate: Canadian dollar=90 cents U.S.

Agriculture.—Area under cultivation, 87,000 ac., mainly hay, potatoes, turnips and cabbages for home use. Livestock (1950): horses, 14,500; cattle, 22,700; sheep 84,000; pigs, 11,600; goats, 11,500; poultry, 343,000.

Industry.—Fishing industries employed 28,000 persons; paper and pulp mills 11,318; sawmills 6,400; mining 4,000; farming 10,000.

New Guinea: *see* NETHERLANDS OVERSEAS TERRITORIES; TRUST TERRITORIES.

New Hampshire. One of the New England states of the United States and one of the original group of 13, New Hampshire is popularly known as the "Granite state." Area: 9,304 sq.mi., including 280 sq.mi. of inland water. Population (1940) was 491,524, of which 57.6% was urban and 42.4% rural. Estimated population, July 1, 1949, excluding armed forces overseas, was 544,000, an increase of 10.7% since 1940. In 1940 there were 490,989 whites, including 422,693 native and 68,296 foreign born. Capital: Concord, with estimated population (1943) of 27,495. Other cities: Manchester, 78,436; Nashua, 33,914; Portsmouth, 20,530; Berlin, 16,480; and Dover, 16,393, as of 1943.

History.—The 131st general court was in session from Jan. 5 to July 27, 1949, this being the second longest session in the history of the assembly. State revenues being insufficient to meet a proposed budget of more than $35,000,000 it became necessary to consider ways and means of providing additional income. Bills providing for a sales tax, an income tax, legalized dog racing and a state lottery were introduced but failed of passage. With the state government facing a deficit of around $6,000,000, drastic budget cuts for various departments became necessary. The state was also forced to abandon its program of general aid to local school districts, which resulted in an increased tax burden on localities for the maintenance of schools. The legislative session ended with the problems arising out of increasing expense and inadequate revenue basically unsolved, and with the state compelled to operate under a so-called "austerity budget."

A commission was created to investigate "subversive activities" in New Hampshire and a bill was also passed requiring that a loyalty oath be taken by teachers. The highly controversial Willey labour law enacted in 1947 was repealed on the ground that in certain of its aspects it was in conflict with the federal Taft-Hartley law.

State officers in 1949 were: governor, Sherman Adams; secretary of state, Enoch D. Fuller; state treasurer, F. Gordon Kimball; commissary general and adjutant general, Charles F. Bowen; attorney general, Ernest R. d'Amours, succeeded in March by William L. Phinney; commissioner of education, Hilton C. Buley; commissioner of agriculture, Perley I. Fitts. U.S. senators were H. Styles Bridges and Charles W. Tobey, both Republicans.

Education.—In 1948–49 there were 53,402 students enrolled in the public elementary schools of the state, with 1,943 teachers. There were 18,406 students enrolled in secondary schools with 1,027 teachers. Total payments covering expenditures of school districts for 1948–49 amounted to $15,680,935.25. In 1947–48, Catholic parochial elementary schools had a total registration of 18,783, while other private elementary schools had a registration of 672. The total number of students enrolled in approved public academies, accredited secondary schools and other private secondary schools in 1947–48 was 6,357.

Other state educational institutions were the University of New Hampshire, at Durham; Keene Teachers college, at Keene; and Plymouth Teachers college, at Plymouth.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of Oct. 1949, recipients of old-age assistance numbered 7,181 for the month, with expenditures of $351,504. There were 1,480 families, representing 3,693 children, involved in the program of aid to dependent children, with expenditures of $142,202. There were 319 cases of needy blind receiving aid to the amount of $17,297. In spite of an increase in the direct relief caseload from 3,114 in September to 3,225 in October, expenditures decreased from $133,798 in the former month to $127,426 in the latter. During the calendar year 1948 the net income of the state unemployment compensation fund was $4,375,088 while benefit payments amounted to $3,557,594, as compared with $2,645,786 in 1947. Servicemen's readjustment allowances in 1948 amounted to $2,081,381. The unemployment compensation fund at the beginning of 1949 amounted to $27,846,933.

The net appropriation by the legislature for the operation of the state prison at Concord for the fiscal year ending June 30, 1950, was $241,330; and for the Industrial School for Committed Minors at Manchester $179,440.

Communications.—At the end of 1945 there were 12,491 mi. of rural roads in New Hampshire, including highways under state, local and federal control. Disbursements from state highway funds for the fiscal year ending June 30, 1948, amounted to $10,887,000. During 1949 the construction of the seacoast toll road extending from Maine to Massachusetts was continued. In 1946 there were 951 mi. of steam railways owned in the state. At the close of the same year there were 32,210 business and 93,529 residential telephones in operation.

Banking and Finance.—As of June 30, 1949, there were in New Hampshire 51 national banks with deposits of $168,099,000 and resources of $188,714,000, as compared with 51 banks with deposits and resources, respectively, on June 30, 1948, of $174,645,000 and $194,540,000. Fifty-eight state-chartered banks had deposits of $356,009,406 and resources of $402,973,571 as compared with 57 institutions reporting deposits and resources, respectively, of $355,929,925 and $399,607,430 on June 30, 1948. There were 25 state-chartered building and loan associations with resources of $23,887,294, as compared with $22,265,918 for the previous year. State-chartered savings banks and savings departments of trust companies reported deposits of $340,825,819 as of June 30, 1949, an amount $112,846 less than the total for June 30, 1948. This was the first year since 1942 that savings deposits had shown a decline. The Laconia Federal Savings and Loan association reported assets of $1,934,159 and savings share accounts of $1,426,305 on June 30, 1949, while the Manchester Federal Savings and Loan association reported assets of $18,047,810 and members' share accounts of $15,229,360 as of June 30. Savings institutions held $188,641,351 in U.S. government securities on June 30, 1949, a decline of $11,356,415 since July 1, 1948.

Cash receipts of the state treasury department for the fiscal year ending June 30, 1949, were $62,050,270.32; cash disbursements $64,346,566.24. Cash balance, June 30, 1949, was $3,422,728.19; cash balance, July 1, 1948, was $5,719,024.11. Gross fixed bond and note debt, June 30, 1949, $10,500,000; net bonded debt $8,311,842.59.

Agriculture.—In 1945 there were 18,786 farms in New Hampshire with a total acreage of 2,017,049 and of an average size of 107.4 ac. Estimated acreage from which crops were harvested or hay cut, or which was planted in orchards, amounted to 435,602, dropping to 383,000 by 1949. The total value of farm lands and buildings in 1945 was approximately $80,394,869. Cash receipts from farm marketings in 1948 amounted to $69,234,000, an increase of 7.2% over receipts for 1947. Cash receipts from major items in 1948 were as follows: poultry $28,671,000; dairy products $18,912,000; forest products $5,957,000; miscellaneous crops $5,417,000; meat animals $5,327,000; and fruit $2,012,000.

Leading Agricultural Products of New Hampshire

Crop	1949	1948	Average 1938–47
Corn, bu.	528,000	407,000	562,000
Oats, bu.	185,000	240,000	249,000
Hay, tons	391,000	445,000	424,000
Potatoes, bu.	968,000	968,000	1,120,000
Apples, bu. (commercial)	1,056,000	612,000	721,000
Maple syrup, gal.	41,000	39,000	55,000
Maple sugar, lb.	11,000	10,000	23,000

Lumber production in 1947 amounted to 417,993,000 bd.ft., including 53,636,000 ft. of hardwood and 364,357,000 ft. of softwood.

Manufacturing.—There were 1,124 manufacturing establishments in New Hampshire in 1947, employing an average for the year of 74,752 persons. The value added by manufacture was $306,932,000, as compared with $104,453,000 for 1939. Total of salaries and wages paid in connection with manufactures was $177,479,000 in 1947. It was estimated that in 1947 and 1948, 167 new industries manufacturing 49 different products were established in the state.

Mineral Production.—Principal mineral resources were feldspar, mica, building stone (chiefly granite), brick clays, and sand and gravel. Value of mineral products in 1946 was $1,451,000.

(W. E. Ss.)

New Hebrides: *see* FRENCH UNION; PACIFIC ISLANDS, BRITISH.

w Jersey. New Jersey was the third state to enter the union. It is situated on the middle Atlantic st between New York city and Philadelphia, Pa. Its 1940 oulation of 4,160,165 ranked it ninth among the states. The y 1, 1949, federal census estimated its population at 4,873,-. New Jersey covers 7,836 sq.mi., including 314 sq.mi. of ter. Capital: Trenton (1940, 124,697). The two largest cities Newark (429,760) and Jersey City (301,173).

History.—The outstanding event during 1949 was the re-ction of Alfred E. Driscoll (Rep.), as governor. Under the nstitution of 1844, a governor could not succeed himself after ving served his term of three years. Under the new constitu-n (1947) a governor may serve for two successive terms of r years each. Governor Driscoll was to begin his second term . 17, 1950.

)f the 767 bills considered by the regular session of the 173rd islature, Jan. 11 to April 8, 1949, 293 became law. In addi-n, a special session, May 31 to June 15, enacted 15 laws.

The 1948 session of the legislature had faced the tremendous k of implementing the newly adopted constitution of 1947. e 1949 session took its cue from the program recommended Governor Driscoll. It implemented his housing program, horized a $25,000,000 bond issue (approved at the November ction) for state institutional construction; established a 200 minimum annual salary for teachers; adopted legisla-n providing for a $105,000,000 veterans' bonus referendum ot approved by the voters); extended the existing laws against crimination in employment to prevent and eliminate discrim-tory practices in places of public accommodation; and ex-ded the Workmen's Compensation act coverage to all occu-ional diseases contracted as a result of exposure hazards in course of employment.

The 1949 legislature sought to round out the work begun by previous session in implementing the provisions of the new stitution by passing a series of acts conforming certain ctices and procedures to the new set-up.

ducation.—Pupil enrolment (1949): elementary 464,196; junior high 264; high 144,784; special schools 6,636. Day school teachers: 139. One-room schools numbered 129. Colleges numbered 9, junior eges 11, universities 4, total full-time students 30,533; state teachers eges 6, enrolment 4,360; professional and technological schools 10, olment 7,827.

ocial Insurance and Assistance, Public Welfare and Related Programs.— average monthly grant for aid to dependent children for the year ing June 30, 1949, was $84.54 per family, an increase over the pre-us year of $4.47. The related program covering guardianship of chil-n averaged $49.75 a month per capita cost in the same period.

The average monthly grant for old-age assistance to 23,653 recipients ing the month of June was $47.80. The gross expenditure for assist-e and burial cost during the fiscal year amounted to $12,754,799, resenting an increase over the previous fiscal year of $934,081.

The average monthly grant for assistance to the blind was $53.16 as June 30, 1949. The New Jersey law requires the registration of all d people. The state commission for the blind had on its register, as June 30, 1949, a total of 5,517 clients.

anking and Finance.—Deposits in the 149 banks and savings banks lled $2,691,578,000 on June 30, 1949, a decrease of $29,172,000 from e 30, 1948, the outcome of the absorption during the period of two e banks by national banks. Government deposits decreased $8,-,000 during the period. Of 126 commercial banks, 73 with 74.7% otal deposits were members of the federal reserve system. Govern-

N V. KENNY, elected mayor of Jersey City, N.J., on a fusion ticket calling an end to "boss rule." Kenny took office in May 1949, after 32 years of oken political dominance by Frank Hague (Dem.)

ment securities made up 49.9% of the total assets ($2,931,249,000) of all banks compared with 50.5% the year before. The total of banking plants and real estate in the commercial banks showed a ratio of 18.5% of total capital accounts as compared with 18.2% in June 1948. The comparable ratio for the savings banks showed 6.2% of surplus and reserve as against 7.1% a year before.

Agriculture.—In 1949 there were about 27,000 farms in New Jersey with a total of 1,900,000 ac., of which slightly more than 1,000,000 ac. were under cultivation. Dairying and poultry raising were important.

Manufacturing.—The year 1949 saw relatively little labour disturbance; there being no large-scale work stoppages in the manufacturing industry. The trend of New Jersey industry continued slightly downward during the first nine months of the year but then gradually improved, the 10,500 manufacturing establishments providing employment at the end of the year for approximately 655,000 production workers. There was considerable plant construction during the year.

New Mexico.

Fourth largest state in the southwestern United States, popularly known as the "Sunshine state"; admitted to the union in 1912. Area 121,666 sq.mi. (121,511 sq.mi. land, 155 sq.mi. water); pop. (1940) 531,818; rural 355,417; urban 176,401; native white 477,065; Negro 4,672; foreign-born 15,247. On July 1, 1949, the bureau of the census estimated the population of the state at 589,000.

History.—The administration, legislature and congressional representation were Democratic in 1949. The chief officers of the state elected in the 1948 elections were: governor, Thomas J. Mabry; lieutenant governor, Joe M. Montoya; secretary of state, Mrs. M. A. Romero; auditor, E. D. Trujillo; treasurer, H. R. (Ray) Rodgers; attorney general, Joe L. Martinez; superintendent of public instruction, Charles L. Rose; commissioner of public lands, Guy Shepard. The state gasoline tax was raised from 5 cents to 7 cents; "sabotage, force and violence, sedition or treason" was forbidden against the state or federal government; the county of Los Alamos was established; a New Mexico economic development commission, a commission on alcoholism and a state fair employment practices commission were established.

Education.—For the school year 1948–49 the total elementary school enrolment was 118,498; the high school enrolment 25,315; special students 48. Rural teachers (1,515) received an average salary of $2,806; 2,998 municipal teachers $3,091.68.

Social Insurance and Assistance, Public Welfare and Related Programs.—During the calender year 1949, $1,841,213 was paid out for civilian unemployment benefits; for unemployed veterans $1,678,967; and for self-employed veterans $234,815.

On June 30, 1949, $1,017,012 had been spent for old-age and survivors insurance, and $7,264,925 for public assistance.

The penitentiary appropriation was $272,000 for 626 inmates (Sept. 1); insane asylum $800,000, 1,040 inmates (Nov. 15); Los Lunas Mental hospital (the new name for the school for mental defectives) $85,000, 114 inmates; industrial school $102,500, 75 inmates (November); Girls' Welfare home $190,000, 101 inmates (December).

Communications.—New Mexico had an estimated 53,869 mi. of unsurfaced and 9,289 mi. of surfaced roads in 1949. The state highway department expended $14;717,757. Steam railway companies operated 2,495 mi. of main track (1948). There were 108 airports and approximately 832 mi. of airways operated by four scheduled air carriers. There were about 100,873 telephones.

Banking and Finance.—On June 30, 1949, there were 25 national banks with deposits of $210,134,000; loans $73,658,000; investments $88,027,000; and 25 state banks with deposits of $77,856,000; loans $28,051,000; investments $32,411,000. Total resources of 11 building and loan associations in 1948 were $9,308,789 and of 7 federal savings and loan associations $13,320,665.

Table I.—*Leading Agricultural Products of New Mexico*

Table II.—*Principal Mineral Products of New Mexico*

Mineral	Value, Year ending June 30, 1949	Value, Year ending June 30, 1948
Copper	$27,391,922	$29,875,899
Potash	33,529,132	42,738,880
Coal	7,069,591	6,712,043
Zinc	10,545,320	8,880,821
Lead	3,322,009	2,273,684
Silver	425,735	441,951
Molybdenum	650,483	493,111
Iron-Manganese	266,250	—
Gold	99,711	114,735

The total of all state receipts for the fiscal year ending June 30, 194 was $72,057,768. The total bonded debt was $22,271,000.

Agriculture.—The total value of agricultural production in 1949 was $90,051,000 (est.); acreage harvested 1,830,000 (est.). Livestock was valued at $179,550,000, Jan. 1, 1949.

Manufacturing.—Manufactured products were valued at $55,486,000 in 1947; an average of 7,590 employees received $18,222,000 in wages.

Mineral Production.—Potash was New Mexico's chief mineral in 1949. For the year ending Dec. 31, 1948, 47,604,665 bbl. of oil, valued at $114,251,196, were produced.

FILMS OF 1949.—*Carlsbad Caverns, N.M.*, (National Park Films).

(F. D. R.)

Newspapers and Magazines.

U.S. Newspapers.—The content of U.S. newspapers returned to a normal peacetime character in 1949. Although the continued "cold war" with the U.S.S.R. sustained the amount of foreign news, the space devoted to crime, accident and disaster news approached prewar quantity.

Every listing of "the biggest news stories of 1949"—in terms of newspaper space and headlines—gave first place to Pres. Harry S. Truman's announcement of Sept. 23 that the U.S.S.R. had produced an atomic explosion. Other "biggest news events," as selected by United Press editors, were: (2) Communist victories in China; (3) coal-steel strikes; (4) high naval officers' challenge to unification policies; (5) conviction of 11 top U.S. Communists; (6) death of small girl 95 ft. down a well pipe; (7) air liner crash at Washington, D.C., which killed 55; (8) Hungarian court's conviction of Cardinal Mindszenty; (9) Vice-president Alben W. Barkley's marriage to Missouri widow; and (10) baseball's major league races and closest finish.

The highest costs in history faced U.S. newspapers in 1949. The average hourly wage of mechanics passed the $2 mark for the first time, and a "fourth round" of wage raises was de-

FLEET STREET as it looked to Vicky of the *News Chronicle* (London) after the report of the Royal Commission on the Press was made public in June 1949. Among those caricatured are Lord Beaverbrook of the Express group (second, extreme left), and Lord Kemsley of the Kemsley group (left foreground) anded. Print paper remained at the $100-a-ton price reached uring the war. Publishers estimated profits 5% to 30% below ose of 1948; in four years newspaper costs had risen 82%.

Circulation totals in Jan. 1949 were at the all-time high of ,285,297 daily and 46,308,081 Sunday and appeared to be sing slightly, with afternoon newspapers leading. But copy ices had risen to five cents, with no one-cent and few two-cent ilies on the newsstands. For the sixth year, the number of ily newspapers grew—going above the 1,781 attained in 1948.

Advertising volume levelled off during the year despite the uyer's market." February was the first month in four years show a drop below the same month of the preceding year—own 2.7% from Feb. 1948. Media Records reported a gain of % for the first ten months over 1948, with a peak of 6.5% in ay. This contrasted with a 12.7% gain in advertising in 1948 er 1947 and showed little gain in the $389,261,000 of national lvertising in 1948. More reliance on classified want-ad income as evident.

The biggest labour news was the settlement on Sept. 18 of the -month printers' strike in five Chicago newspapers. After inting with photoengraved typewritten copy since Nov. 24, 947, Chicago dailies returned to "hot type" on Sept. 21, giving eir 1,500 printers $10 a week increase and a new contract hich met the demand of the International Typographical union r something like "closed shop" without violating the Taft-artley labour law—a contract that became a model for other ewspapers.

After months of argument, the National Labor Relations oard on Oct. 29 found I.T.U. guilty of violation of the Taft-artley law in its "closed shop" and "unilateral" bargaining, ut as late as Dec. 17 I.T.U. had taken no steps to comply with e board's order. Meanwhile, at its 91st annual convention in akland, Calif., in August, I.T.U. gave more power to its presi-ent, Woodruff Randolph, and started a drive for employer-pported pensions, but did not renew its 4½% defense assess-ent on its 75,000 members which had expired in March.

The American Newspaper guild reported a slight drop in embership to 23,238, from 24,117 in 1947, and shifted its argaining emphasis from wages to "fringe benefits." Its 16th nual convention at Columbus, O., saw an unsuccessful effort remove Sam Eubanks, vice-president, on charge of com-unistic leanings. The guild withdrew from the International rganization of Journalists in November.

The most notable ownership change was the purchase on July of the *Washington Times-Herald* by Col. R. R. McCormick, ublisher of the *Chicago Tribune* and part owner of the *New ork Daily News*. The newspaper had been bequeathed to seven aff executives by Mrs. Eleanor M. (Cissy) Patterson, who died July 24, 1948. McCormick paid $4,500,000 and put his niece, rs. Maxwell P. (Bazy) Miller, Jr., in charge.

The *New York Star*, successor in 1948 to *PM*, suspended ublication on Jan. 28, ending the adless newspaper venture arted by Ralph Ingersoll in 1940 and later owned by Marshall eld. The *New Orleans Item* was sold on July 14 for $2,000,-oo by Ralph Nicholson to David Stern, Jr. Several cities, in-uding Madison, Wis., Logansport, Ind., and Dayton, O., saw e start of joint operation of two newspapers in one plant.

The standing committee of congressional press gallery wrestled ith two new problems—admission of reporters of labour union ewspapers and of writers for "Voice of America" international oadcasts of the state department. Suggestions in the Hutchins ress Freedom commission report of 1948 led to the holding of *Editor and Publisher* Critical Panel on March 18.

U.S. Magazines.—The magazine industry reported tighter siness trends in 1949. Circulations fluctuated; among the 9 ading general magazines, 5 dropped as much as 10% while 4 gained; among the 99 largest sellers, 55 lost circulation and 44 gained; total newsstand sales were up 9.4%. Total advertising dropped about 2% during the first nine months—down to $300,990,323—and much more during the coal-steel strikes of the fall. Some publishers tried local tie-ups to boost advertising. *Life* cut its advertising rates 3% on April 4.

The greatest sales gains were reported by romance magazines, movie reviews, teen-age, popular science, home architecture and fashions, while standard women's magazines declined. More teen-age magazines were launched for ages 7–14. Cowles Magazines, Inc., attracted attention with *Quick*, a new type of slick news weekly with 68 very small pages. Morris Fishbein retired as editor of the *American Medical Journal;* David A. Smart returned as publisher of *Esquire;* and John Denson became managing editor of *Colliers*. An annual directory listed 7,800 magazines of all types in 1949; the 551 general and farm magazines totalled 9,000,000 circulation, and readers paid $1,400,000 a day for them. (G. M. Hy.)

Canada.—Increased newsprint production with a levelling-off trend in prices plus a steady advertising market brought bigger daily newspapers, but the persisting pressures for higher wages (there had been a 53.2% rise between 1939 and 1948) had four effects: (1) ratio of reading matter to advertising rarely went above 55%; (2) editions were dropped; (3) three-cent papers practically vanished; and (4) ownerships changed. Specifically, 1949 developments included: the *Windsor Star*, the *Saint John Telegraph-Journal*, the *Moncton Transcript* and the *Moncton Times* went from four cents to five cents; the 13-month-old co-operatively-organized *Winnipeg Citizen* and the labour-owned *Glace Bay* (*N.S.*) *Gazette* quit; and the morning edition of the *Ottawa Journal* was abandoned. Main changes in ownership included the sale of the *Ottawa Journal* to staff members who were directors of the company; sale of the *Victoria Times* to a syndicate controlling the *Calgary Albertan* and the *Edmonton Bulletin;* and purchase by Roy H. Thomson of controlling interest in the 185-year-old *Quebec Chronicle-Telegraph* and in the *Moose Jaw Times-Herald*.

The American Newspaper guild broke ground in Canada by organizing in whole or in part such dailies as the *Toronto Star*, the *Toronto Telegram*, the *Ottawa Citizen*, the *Montreal Gazette*, the *Vancouver Sun*, the *Vancouver News-Herald*, the *Victoria Times* and the *Victoria Colonist*. The *Canadian Register* broke away from the 1948 amalgamation with the *Ensign*, national Catholic weekly newspaper. The *London Free Press* celebrated its 100th birthday with a 232-page edition, largest in Canadian daily newspaper history. (C. Cy.)

Great Britain.—There was considerable improvement in the supply of newsprint in 1949, with the result that the British press was at last given wider scope for its enterprise. Unrestricted sales of newspapers were resumed on Jan. 3, when a more generous allocation of newsprint permitted the penny newspapers to increase their size to a daily average of five pages. Nearly four months later further supplies of paper advanced the number of pages to six and so caused the disappearance of the four-page newspaper, which had been established by government regulation in 1941.

The sales of daily newspapers rose from 19,000,000 a day before World War II to 29,000,000, but the consumption of newsprint was much less than in 1938. The equalized price of newsprint at the beginning of 1949 stood at the high price of £42 a ton, and this was reduced by stages to £33 5*s.* in October. Approximately 70% of newsprint during the year was home-produced.

The Royal Commission on the Press, which had been appointed in 1947 under the chairmanship of Sir David Ross and cost more than £20,000, published its report in June. The report

♀Correspondence, chiefly with information bureaus of embassies and consular offices in U.S.

♁Report of Royal Commission on the Press, p. 8 (London, 1947–49).

□Estimates for 1949, based on such information as was available in Jan., 1950.

—running to about 100,000 words—vindicated the press on the more exaggerated charges brought against it but criticized certain newspapers for excessive partisanship and distortion of news. The commission's chief recommendation was for the establishment of a voluntary general council of the press.

Other recommendations were that chain newspapers should be required by law to carry on the front page a statement indicating their common ownership, and that if local monopolies in a considerable area should be found not to be within the purview of the Monopolies commission, the Monopolies and Restrictive Practices act should be amended to bring newspaper monopolies in areas of this size within its scope. The commission found that the case against chain organizations had been overstated; it did not favour state ownership of newspapers; and in stating that the press was free from corruption said that it was generally agreed that the British press was inferior to none in the world.

The *Times* announced that its air edition, which made its first appearance in 1944, had attained a world circulation. The paper was available in most places in Europe on the day of issue; New York, west Africa, Egypt and the Sudan on the following day; and south and east Africa two days after leaving London. Over 14,000 copies were flown to readers abroad daily.

New periodicals included *British Farm Mechanization; World Crops; Journal of African Administration; Corona,* the journal of the colonial service; the *Cornish Review;* and *Archives,* the journal of the British Records association.

Commonwealth.—The price of all South African daily newspapers was increased from 2*d*. to 3*d*. on Dec. 1. At the beginning of the year newspapers in Australia were freed from restrictions on newsprint and from price control of advertisement rates for the first time in ten years. Daily Mirror Newspapers, Ltd., and Sunday Pictorial Newspapers (1920), Ltd., bought a controlling interest in the *Melbourne Argus* and the *Australasian Post*. The *Sydney Morning Herald* began publication of a Sunday edition, which within six months had attained a circulation of 270,000.

An agreement was concluded which made the newspapers of India joint owners with Great Britain, Australia and New Zealand, of Reuters, Ltd. Two new newspapers made their appearance in Bombay, the *Evening Star* and *Bharat;* the city then had nine English-language dailies. An American syndicate was formed to purchase newspapers in India and other Asiatic countries. Its first acquisition was the *Civil and Military Gazette* (published in Lahore and Karachi).

Europe.—The year saw some important developments in western Germany. In 1946, when certain newspapers were licensed by the occupying powers, none of the former nazi dailies were allowed to appear, but several of their owners were permitted to continue as printers. When, in Sept. 1949, the Allies gave up their licensing control over the German press it was feared that many of the pronazi newspapers would re-emerge. Some local sheets with nazi associations did in fact appear in anticipation of the ending of licensing, but these were suppressed by the British authorities. In the U.S. zone it was said that of the 106 newspapers due to start on Sept. 1, 80% would be "chauvinistic, rabble-rousing, antidemocratic, anti-Semitic and anti-American." The democratic press very soon felt the strain of competition, and there was a general decline in circulations—*Die Welt*, Hamburg, the official British German-language newspaper, dropped from nearly 1,000,000 to 500,000. A law was passed by the Allied High commission giving the high commissioners power to act in cases of printed statements derogatory to the occupation powers or which might display the nazi spirit.

Pressure in the "iron curtain" countries continued as before. Godfrey Lias, Prague correspondent of the *Times*, and John Fisher, an Australian journalist, left Czechoslovakia at the request of the Czechoslovak government. In Finland a printers' strike in March stopped all except the Communist and Social Democrat newspapers for nearly three weeks. Roman Catholic printing offices in Poland were placed under state control, so that nearly all Catholic newspapers in Poland were printed on state-owned presses. *For a Lasting Peace, for a People's Democracy!* the journal of the Cominform published in Bucharest, Rumania, was changed from a fortnightly to a weekly in September. The English-language newspaper *Moscow Daily News* closed down in February. (*See* also Advertising.)

(D. Hn.)

New York.

One of the original 13 states of the United States, popularly known as the "Empire state," New York covers an area of 49,576 sq.mi. of which 1,647 are water. With a population of 13,479,142 (federal census, 1940) and an estimated population of 14,392,000 (U.S. bureau of the census, July 1, 1949), it is the most populous state. The foreign-born population in 1940 was 2,853,530. The urban population was 11,165,893. The 1949 population of principal cities imated by the state health department, included: Albany ate capital), 144,067; New York city, 8,161,000; Buffalo, 7,967; Rochester, 337,730; Syracuse, 222,740; Yonkers 146,- 5; Utica, 98,717; Schenectady, 98,081; Niagara Falls, 89,226; nghamton, 84,510.

History.—Gov. Thomas E. Dewey approved 858 bills passed the 1949 session of the legislature. Several measures were opted for the improvement of the educational system of the te including an increase of $40,000,000 in state aid. Also icted was a new disability benefits law, designed to comple- nt the workmen's compensation law and the unemployment urance law by providing protection when the employee be- nes sick or disabled without regard to his employment. It ovided benefits of $10 to $26 weekly, payable up to 13 eks in a year. Employers and employees both were to con- bute to the costs of the program.

Under a new water pollution control law, which passed both uses of the legislature unanimously, a permanent Water llution Control board composed of the heads of the state de- rtments of health, conservation, agriculture and markets, mmerce, and public works was to make technical studies of various water courses of the state and establish water qual- standards and stream classifications.

Resignation of U.S. Senator Robert F. Wagner in June cessitated a special senatorial election to fill the remainder of term, which was to expire in 1951. John Foster Dulles, ernational affairs expert, named by Governor Dewey to fill interim term, was later nominated by the Republican party the office. The Democrats and the Liberal party chose rbert H. Lehman, a former governor, as their candidate for senate post. In the election Nov. 8 former Governor hman defeated Senator Dulles by a margin of 198,057 votes.

New York state voters in 1949 approved eight amendments to state constitution and supported three propositions. The w amendments included one which gave disabled veterans a n-point preference in open-competitive civil service exami- tions and five points on promotion tests for those already in blic service, while nondisabled veterans were granted five and o and one-half points, respectively. In contrast to the exist- system of absolute preference, whereby disabled veterans ssing civil service examinations must be appointed before ndisabled veterans and the latter before nonveterans, the ap- oved amendment effective in Jan. 1951 would allow the ap- inting authority to select any of the first three candidates. terans might use the point preference only once, either to tain original appointment or on promotion.

The chief officers of the state in 1949 were: Thomas E. ewey, governor; Joe R. Hanley, lieutenant governor; Frank Moore, comptroller; Nathaniel L. Goldstein, attorney gen- l; Thomas J. Curran, secretary of state; Francis T. Spauld- , commissioner of education.

Education.—In 1948 there were in New York state 5,688 elementary blic schools with 1,310,420 pupils; 991 public high schools with 564,- 5 students; 1,050 private and parochial schools with 372,621 pupils the elementary grades and 83,252 students in 293 secondary schools. ere were 114 colleges and universities in the state. Special state ools included seven Indian schools; 11 agriculture and technical institutions; 135 schools for nursing; 3 institutes for the blind and 6 institutes for the deaf.

*Estimates by the New York state department of commerce.

†Estimates by the New York state department of labour, division of placement and unemployment insurance.

Social Insurance and Assistance, Public Welfare and Related Programs.—The 1,060,000 persons given assistance, care or service at public expense in 1948 represented an increase of 85,000 persons over 1947. During 1948 expenditures for public assistance totalled $318,030,383. Of this sum the federal government's share was $53,829,341, the state's share $122,944,577 and the local share $141,256,465. An additional 2,383,000 persons were given assistance or care in the state as private charges.

During 1948 the state paid unemployment insurance claims of $184,407,661. At the end of 1948 the New York State Unemployment Insurance Trust fund had a balance on hand of $1,050,059,262.

The state has seven maximum security prisons, a medium security prison and a prison for women; two reformatories for males and one for females; two institutions for male defective delinquents and one for females; and two hospitals for the criminal insane. In 1948 the average cost for the care and maintenance of institutional inmates was $1,350 per person. The average yearly population of the state's correctional institutions is 16,500 inmates.

For the care and treatment of the mentally ill, mental defectives and epileptics, in 1948 the state maintained 18 hospitals for mental disease, 6 schools for mental defectives, a colony for epileptics, a state psychiatric institute and hospital for research and teaching and a psychopathic hospital for observation and temporary treatment of mental patients. In 1949 there was a great expansion of the state's mental hygiene program.

Communications.—New York state had 83,766 mi. of roads on Jan. 1, 1948, of which 14,297 mi. were state highways (exclusive of city and village streets) and 70,940 mi. county and town roads. Hard surfaced roads totalled 63,900 mi. The 40 railroads in the state operated 7,639 mi. of tracks. The state maintains a system of more than 500 mi. of canals. Including the rivers and lakes which are part of the New York State Barge Canal system, the total length is more than 800 mi. New York state leads the nation in air passenger traffic, domestic air cargo and value of airborne imports and exports. LaGuardia airport alone, prior to July 1, 1948, accounted for 80% of the country's airborne imports and for more than 40% of exports. During the first eight months of 1949 the three major commercial airports of the New York metropolitan area (LaGuardia, Newark and New York International at Idlewild), handled a combined volume of 60,000 tons of air cargo and 2,500,000 passengers. The New York state department of commerce in Dec. 1949 reported 250 airports operating in the state, including 45 municipal, 195 privately owned, 7 military, 2 CAA intermediate fields and one glider field.

Banking and Finance.—At the end of 1948 there were 782 banks with total resources of $45,398,900,293 and deposits of $40,693,238,297 operating in the state. There were also 236 savings and loan associations with $1,147,665,000 of total assets and $1,001,579,000 due private share holders.

The state's financial status for the fiscal year ending March 31, 1949, was as follows: general revenue $727,513,941.12; expenditures $725,238,738.54; total surplus $2,275,202.58; state debt $675,183,199. Capital Construction fund (formerly Postwar Construction fund) Reserve for postwar construction and reconstruction: appropriated $447,354,295.46. Under the 1949–50 budget the state was to pay to local government units more than half of the total state revenue and retain the balance for its own use. The 1949–50 fiscal year appropriations totalled $939,585,471.44 of which $422,050,014.44 were for state purposes and $517,535,457 for local assistance.

Agriculture.—Gross sales of agricultural products totalled $966,422,000 in 1948. In addition, government payments to farmers were $5,159,000 compared with payments of $7,918,000 in 1947. The sale of milk and cream in 1948 amounted to $400,453,000. The total harvested acreage in 1949, excluding orchards and vineyards, was 6,396,000 ac. The value of livestock and poultry on farms as of Jan. 1, 1949, was $515,776,000. Cattle in the state totalled 2,182,000 head. There were also 15,838,000 chickens, 167,000 horses, 2,000 mules, 236,000 hogs and 188,000 sheep. The number of turkeys raised in the state in 1948 was 763,000.

Manufacturing and Industry.—Approximately 70% of the country's total output of women's dresses, coats, blouses and furs are produced in New York state, as are 42% of men's and boys' tailored clothes. The state also leads all others in printing and publishing, the rug and carpet industry and the output of photographic goods—producing 66% of the latter. In 1947 the state's manufacturing firms added $9,635,800,000 in value to the raw and semifinished material they purchased for processing, compared with $3,313,600,000 in 1939, according to the U.S. census.

In 1949, an all-time high total of 575,000 business firms in the state was reached. As of Oct. 1949 an estimated total of 5,537,081 were employed exclusive of agricultural workers, proprietors, domestics and personnel of the armed forces. Average weekly factory earnings in Sept. 1949 were $58.24. Retail sales in the state in 1948 were estimated at $13,695,420,000.

Mining.—New York state in 1948 produced an estimated $140,000,000 in mineral products. An estimated 6,500,000 tons of crude iron ore were produced in that year.

New York City.

The 1949 population of New York city was estimated at 8,161,000. The City polled the largest mayoralty vote in its history in the 1949 election and returned Mayor William O'Dwyer and the principal officers of his first administration to office.

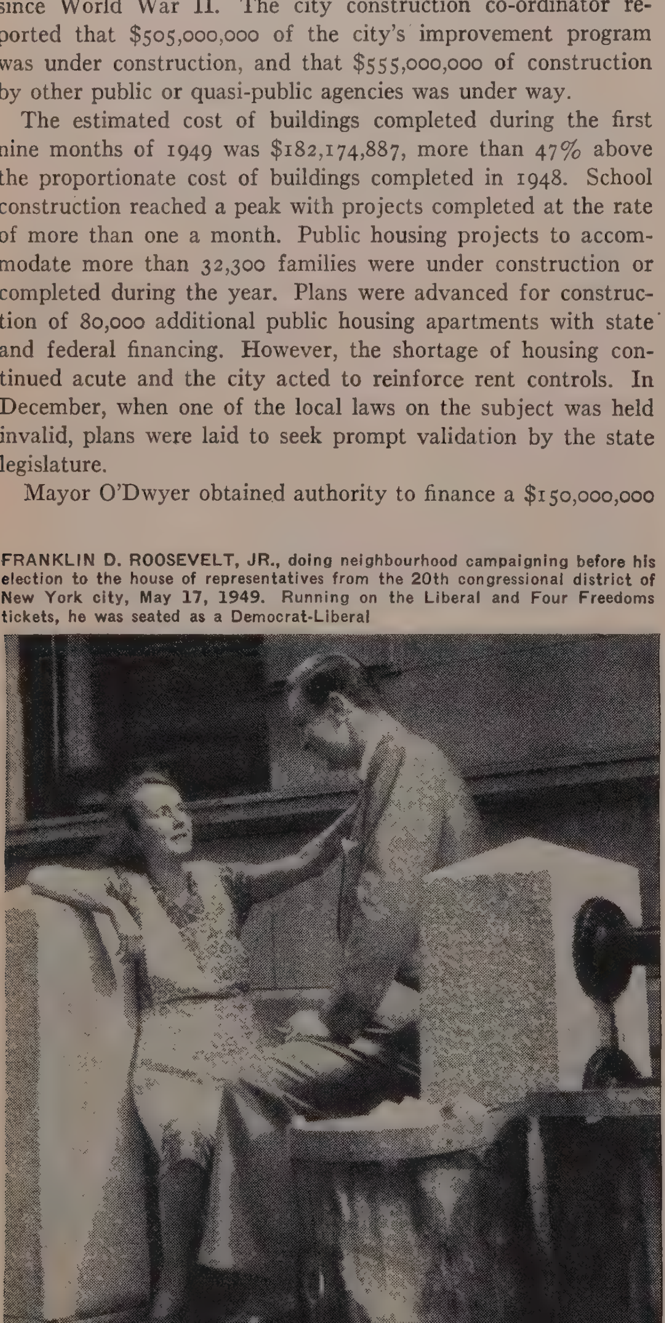
On the fourth anniversary of the founding of the United Nations, the cornerstone of its permanent home was laid in an historic meeting of the general assembly on the site. In 1949 the city of New York contributed $23,000,000 in property and services to the establishment of the permanent U.N. headquarters on the East river.

Construction, public and private, rose to the highest level since World War II. The city construction co-ordinator reported that $505,000,000 of the city's improvement program was under construction, and that $555,000,000 of construction by other public or quasi-public agencies was under way.

The estimated cost of buildings completed during the first nine months of 1949 was $182,174,887, more than 47% above the proportionate cost of buildings completed in 1948. School construction reached a peak with projects completed at the rate of more than one a month. Public housing projects to accommodate more than 32,300 families were under construction or completed during the year. Plans were advanced for construction of 80,000 additional public housing apartments with state and federal financing. However, the shortage of housing continued acute and the city acted to reinforce rent controls. In December, when one of the local laws on the subject was held invalid, plans were laid to seek prompt validation by the state legislature.

Mayor O'Dwyer obtained authority to finance a $150,000,000 hospital construction program when a state-wide vote approved an amendment to the state constitution to exclude $150,000,000 from the city's legal debt limit for this purpose. A $42,000,000 hospital construction program which was nearing completion, would furnish 3,071 beds to which would be added an estimated 8,700 financed under the constitutional amendment.

FRANKLIN D. ROOSEVELT, JR., doing neighbourhood campaigning before his election to the house of representatives from the 20th congressional district of New York city, May 17, 1949. Running on the Liberal and Four Freedoms tickets, he was seated as a Democrat-Liberal



The last months of 1949 found New York city grappling with the most critical water shortage in memory. During the summer, the New York water-sheds were parched by draught. Construction of the Delaware Water Supply system, initiated in 1937 but suspended during World War II, was several years from completion. With consumption averaging 1,150,000,000 gal. per day, 175,000,000 gal. more than in 1937, water in the reservoirs fell to one-third of capacity. A crisis was averted through a campaign for voluntary conservation which, at the end of the year, had curtailed consumption by 310,000,000 gal. per day. (*See* also MUNICIPAL GOVERNMENT.)

New Zealand, Dominion of.

A self-governing member of the Commonwealth of Nations, New Zealand consists of two large and several small islands in the south Pacific. Area: dominion proper 103,416 sq.mi.; other islands 519 sq.mi. Pop.: dominion proper (est. June 1948) 1,840,182 including 109,811 Maoris; Cook and other Pacific islands 19,167; Tokelau Islands (1945 census) 1,388. Western Samoa, a trusteeship, has an area of 1,133 sq.mi. and a pop. (est. mid-1948) of 73,000. Chief cities (est. April 1948): Wellington (cap., 186,000); Auckland (289,000); Christchurch (164,000); Dunedin (88,800); Palmerston North (30,100). Language: English. Religion: mainly Christian (Anglican 37.5%, Presbyterian 23.4%, Roman Catholic 13.5%). Ruler: King George VI; governor general, 1949: Lieut. Gen. Sir Bernard Cyril Freyberg; prime ministers: Peter Fraser and (from Dec. 13) Sidney George Holland.

History.—The principal event of the year 1949 was the defeat of the Labour party by the National party in the general election held on Nov. 30. The National party of S. G. Holland, the new prime minister, returned to office on a program of relaxation of controls, discontinuance of further schemes of nationalization and a reaffirmation of the merits of private enterprize. The National party promised not to reduce the existing system of social security.

The year saw the wave of economic prosperity in New Zealand still high, and reflected throughout the whole community. Prices for crossbred and merino wool broke all records, and high production in other primary industries made New Zealand Britain's chief supplier of meat, butter and cheese. Record production was achieved in timber milling and food processing works. The buoyancy of the prosperity wave was reflected in the conversion of a £29,000,000 debt loan domiciled within the country. Later in the year two further conversions on the London market were equally successful.

In the field of international affairs New Zealand sent an observer to the conference on Indonesia and the government recorded support for the antarctic agreement reached between Argentina and Great Britain. Representation on the Far Eastern commission was continued, while Lieut. Col. F. W. Voelcker and C. G. R. McKay represented the country on the South Pacific commission. James Thorn, high commissioner for New Zealand in Canada, was appointed president of the U.N. Economic and Social council. New responsibilities in the administration of Western Samoa and Nauru Island under the United Nations trusteeship agreement were assumed.

Legislation giving the state the sole right to transact workers'

mpensation insurance became effective. A national referen-
m on the question of gaming and hotel licensing hours was
ld, the majority favouring off-course betting through the
isting totalizator facilities. The referendum also decided to
ntinue the existing licensing laws whereby hotel bars close
6 P.M.

Emigrants from Britain in the postwar period to March 31,
49, totalled 33,786. Of this total, 5,195 of single status and
ecially selected received government assistance.

A defence scheme involving compulsory military service was
bmitted to a national referendum and approved by 535,016
152,575. The expansion of navy and air force units was also
tlined.

Foundations were laid for the development of a salt industry
Lake Grasmere and of a state factory to manufacture news-
int and other wood pulp products at Murupara. New tests
r smelting iron sands from Taranaki beaches by electrical
ocesses were successful. (A. T. CL.)

Education.—(Dec. 1947) Primary schools 2,270, pupils 259,182, teach-
8,215; secondary schools 229, pupils 37,229, teachers 1,897; sec-
dary schools for Maoris 16, pupils 804; technical schools 28, pupils
328 (part-time 18,697), teachers 706; university colleges 6, students
764; training colleges 4, students 1,564.

Finance and Banking.—Budget (consolidated fund and social security
d excluding war expenses account): (1948–49 actual) revenue £N.Z.-
,961,000, expenditure £N.Z.166,890,000; (1949–50 est.) revenue
.Z.153,033,000, expenditure £N.Z.154,939,000. Gross national debt
ec. 1947): £N.Z.5,989,000,000. Currency circulation (Sept. 1949):
.Z.45,700,000. Gold reserve (Sept. 1949): 29,000,000 U.S. dollars.
posit money (Aug. 1949): £N.Z.146,700,000. Monetary unit: New
aland pound with an exchange rate of 2.76 U.S. dollars per New Zea-
d pound, from Sept. 19, 1949.

Foreign Trade.—Imports (1948), £N.Z.128,800,000; exports (1948),
.Z.147,300,000. Main sources of imports in 1948: United Kingdom
%, Australia 11%, United States 11%. Main destinations of ex-
ts in 1948: United Kingdom 73%, United States 5%.

Transport and Communications.—Roads (1948) 76,401 mi. Licensed
tor vehicles (Dec. 1948): cars 228,562, commercial vehicles 73,570.
te railways (1948–49): 3,526 mi.; passenger journeys 26,000,000;
ight net ton-miles 980,000,000. Shipping (Dec. 1947): number of
istered vessels 478, total net tonnage 95,089. Air transport (1948–49):
es flown 7,600,000, passengers flown 215,200. Telephones (March
48): subscribers 222,504. Radio receiving set licences (March 1948)
,983.

Agriculture and Fisheries.—Main crops (in metric tons, 1948–49):
eat 150,000; barley 45,000; oats 50,000; potatoes 136,000. Livestock:
nbs (April 1948) 7,947,000; breeding ewes (April 1948) 21,055,000;
al sheep (April 1948) 32,483,000; dairy cows and heifers (Jan. 1948)
38,000; beef stock (Jan. 1948) 2,078,000; total cattle (Jan. 1948)
16,000; pigs (Jan. 1948) 548,000; horses (Jan. 1949) 200,000.
heries: total catch (1946): weight 32,047 metric tons. Food produc-
n: meat (in metric tons bone-in-weight, 1946–47): total carcasses
,873 of which beef 170,748, veal 18,514, mutton 130,697, lamb 188,-
, pig meat 35,495; edible offal (in metric tons, 1946–47) 22,476;
terfat (in metric tons, 1947–48) 190,500; creamery butter (in metric
s, 1947–48) 151,500; cheese (in metric tons, 1947–48) 87,700. Wool
duction (in metric tons, greasy basis, 1948–49) 166,000.

ndustry.—(1948) Industrial establishments 35,579; persons employed
,480. Fuel and power (1948): coal (in metric tons) 969,000; lignite
metric tons) 1,851,000; manufactured gas 155,000,000 cu.m.; elec-
city 2,590,000,000 kw.hr. Raw materials (in metric tons): pumice
47) 3,443; white arsenic (1947) 8; superphosphates (1948) 558,400.
ld ore (in fine troy ounces, 1948) 93,903; silver ore (in fine troy
nces, 1948) 232,563.

caragua.

A republic in Central America, Nicaragua is sit-
uated between Honduras on the north and Costa
ca on the south. Area: 57,145 sq.mi., of which 3,475 sq.mi. is
ter. Pop. (off. est., Dec. 31, 1948) 1,172,862. Capital, Mana-
(1948 pop., 146,819); other urban centres: Chinandega
,112), Granada (39,643), Jinotega (41,065), León (53,277),
saya (38,761) and Matagalpa (53,118). Language: Spanish;
igion: predominantly Roman Catholic. President in 1949:
ctor M. Román y Reyes.

History.—The major political issue during 1949 was the
tional conciliation program, designed to bring about a coali-
n of all parties and to present a single presidential candidate
the next election. The pact which was subscribed to by the
tionalist Liberal (administration) party and the "civilista"
nservatives in Feb. 1948, was reactivated during the year, but
ministrative attempts to bring the "genuine" Conservatives
the Independent Liberals into the coalition were fruitless.

As a conciliatory gesture to the "genuine" Conservatives, the government invited their exiled chief, Gen. Emiliano Chamorro, to return to the country. Chamorro returned June 18, but although talks between him and both President Román y Reyes and Gen. Anastasio Somoza continued until late November, no agreement was reached. The Conservative party's opposition to national conciliation was expressed in September when it ousted Carlos Cuadra Pasos from its leadership for his part in the Feb. 1948 agreement between the "civilista" Conservatives and the administration party. The temporary arrest of Arturo Velázquez Alemán, secretary-general of the Independent Liberal party, on Mar. 21, intensified the antagonism of his group toward the official party.

A major point of contention was the influence in the government and the possible presidential candidacy of General Somoza, both of which were ardently opposed by the Independent Liberals. A tour of the Atlantic coast districts by Somoza and a public demonstration in his behalf on his return to Managua in May were interpreted in some quarters as a bid by Somoza for the presidency in the next election. A new political party, the National Union of Popular Action, was organized in October by a heterogeneous group tied together by extreme nationalism and opposition to Somoza.

On the economic front, Nicaragua continued to suffer an unfavourable balance of trade and shortage of dollar reserves, but was able to repurchase 2,500,000 córdobas from the International Monetary fund and thus restore $500,000 purchased from the fund in 1948. Higher coffee prices in the latter part of the year gave promise of an improved economic position.

A strike of 1,200 workers of the Bonanza gold mines and about the same number of stevedores in the port of Corinto, on the Pacific coast, were the major labour difficulties.

Education.—During the 1948–49 school year there were 1,302 primary schools with 2,918 teachers and 89,991 students, 78 secondary schools with 556 teachers and 10,891 students and 2 universities with 620 students. For the same year the national budget provided 7,764,390 córdobas for public education.

Finance.—The monetary unit is the córdoba, officially maintained at 20 cents U.S. The 1949–50 national budget provided for expenditures of 54,303,730.16 córdobas, a 14% reduction from the previous year. As of Dec. 31, 1948, the public debt was 28,873,741.22 córdobas, internal, and 17,276,355.60 córdobas, external. At the same date there were six banks with capital and reserves amounting to 9,963,000 córdobas and current deposits of 42,534,490.53 córdobas. Gold and foreign-exchange holdings totalled $366,499.84 U.S. Bills in circulation amounted to 50,601,000 córdobas. Commercial credit extended by the National bank was reduced from approximately 28,000,000 córdobas on Feb. 28 to 12,500,000 córdobas on July 31, 1949, to meet recommendations of the International Monetary fund.

Trade and Resources.—Exports during 1948 were valued at $26,682,607 U.S. ($20,900,000 in 1947); imports, $24,133,703 ($20,800,000 in 1947). The U.S. supplied 85.5% of the imports and took 43.8% of the exports. In 1948 the leading shipments were gold (182,964.16 troy oz.), coffee (242,017 bags of 132 lb. each), bananas (678,598 stems) and sesame seed (26,565,633 lb.). Gold production in 1948 amounted to 218,019 troy oz.; silver, 214,628 oz. Coffee exports from the 1948–49 crop (the lowest since 1912) totalled 109,609 bags.

Communications.—In 1949, railroads measured 236.2 mi.; surfaced highways 417.5 mi.; all-weather dirt roads 79.4 mi.; telegraph lines 3,183.8 mi.; telephone lines (1946) 4,748 mi.; and radio broadcasting stations numbered 26. At the close of 1948 there were 1,443 automobiles, 672 trucks and 151 buses registered in the country.

*Includes gross weight (not nickel content) of ore, matte, oxide and alloys.

Canada.—There was a sharp increase in 1948 in both production and exports, and extensive development work was under way in the mines to expand the ore reserves. Proved ore reserves were increased during 1948 from 7,171,000 tons of nickel-copper content to 7,503,000 tons. Production in 1949 was maintained at about the same rate as in 1948, but exports increased, the total of production through August being 85,485 tons, and of exports 90,050 tons. (G. A. Ro.)

Nobel Prizes.

The Nobel prizes, for literature, physics, chemistry, medicine and peace, established by the Swedish industrialist, Alfred Bernhard Nobel (1833–1896), were first awarded in 1901. Each award consists of a gold medal and a sum of money which fluctuates with the income from the fund but was reported in 1949 to be approximately $30,000. In 1949, for the fourth time in the history of the award, no prize was given in literature. The award for physics went to Hideki Yukawa (*q.v.*), professor of physics at Kyoto university, Japan, and during 1949 visiting professor of physics at Columbia university. Yukawa, the first Japanese to receive a Nobel prize, received the award for his contribution to physics in predicting the existence of an elementary particle, the meson. The prize in chemistry was awarded to William Francis Giauque (*q.v.*), professor of physical chemistry at the University of California, Berkeley, for his work in the field of thermodynamics. The prize in medicine was given jointly to the brain specialists, Walter Rudolf Hess (*q.v.*), director of Zurich university's Physiological institute, Switz., and Antonio Egas Moniz (*q.v.*), professor emeritus of neurology in the faculty of medicine of the University of Lisbon, Port. The peace prize was awarded to Lord Boyd-Orr (*q.v.*), former head of the United Nations Food and Agriculture organization. (R. E. Bs.)

North Atlantic Treaty.

The North Atlantic treaty, a collective defense agreement, was signed in Washington, D.C., on April 4, 1949, by the following twelve states: Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom and the United States. The treaty was quickly ratified by the signatories and entered into force in July.

Patterned closely after the inter-American treaty of mutual assistance concluded at Rio de Janeiro, Brazil, in 1947, the North Atlantic agreement was designed to facilitate the joint defense of the signatories against any threat to their territorial integrity or political independence, or against any armed attack upon their territories in Europe or North America (including the Algerian departments of France), their occupation forces in Europe, islands under their jurisdiction in the Atlantic ocean (north of the Tropic of Cancer) or any vessel or aircraft in this area. In the event of a threat to their security, the parties agreed to consult together but not necessarily to take any collective action. On the other hand, should an armed attack against any one of them occur, they would consider it as an attack against all and assist the victim (or victims) by whatever measures, including the use of armed force, they deemed necessary, acting individually and in concert.

The treaty further stipulated that the parties should develop "continuous and effective self-help and mutual aid" in order to increase their capacity to resist aggression. With a view to implementing this provision, a consultative council was envisaged, together with such subsidiary bodies, including a defense committee, as they considered necessary. Other states might be invited to adhere to the treaty, but only with the unanimous consent of the original signatories. After 10 yr., the parties promised to consult together, if any of them so requested, for the purpose of reviewing the treaty; after 20 yr., any party might denounce the agreement on 1 yr.'s notice.

The initiative for the negotiation of the treaty came from the United States. Its underlying conception may be traced to a resolution introduced by Senator Arthur H. Vandenberg and adopted by the senate by a vote of 64 to 4 on June 11, 1948. This resolution called for the "progressive development of regional and other collective arrangements for individual and collective self-defense in accordance with the purposes, principles, and provisions of the (United Nations) Charter" and the "association of the United States, by constitutional processes," with such arrangements. As the Security council of the United Nations found itself more and more paralyzed because of the abuse of the veto by the Soviet Union, and as the latter power proceeded to consolidate its control behind the "iron curtain," an increasingly insistent demand for some effective counteraction developed in the United States and western Europe.

Conversations between the U.S. state department and the Brussels pact powers (Belgium, France, Luxembourg, Great Britain and the Netherlands), begun in July 1948, resulted in an agreed treaty text by the following March. As the negotiations neared their conclusion, it was decided for strategic reasons to invite five additional states to become parties to the proposed pact—Norway, Italy, Iceland, Denmark and Portugal. Norway's adherence was given only after considerable hesitation in view of the efforts of Sweden to promote a Scandinavian defense union, the traditional "neutrality" policy of the Scandinavian states and a threatening note from the U.S.S.R. to Norway inquiring whether the latter intended to grant air or naval bases to the Atlantic powers. Upon receiving Oslo's reply that it would do so only in case of an actual attack, the U.S.S.R. proposed a nonaggression pact, which was categorically refused. Norway then accepted the Washington offer.

Moscow was quick to denounce the projected Atlantic pact as an aggressive alliance pointed at the Soviet Union and the "people's democracies" of eastern Europe. In the soviet view, the treaty contradicted the Anglo-soviet and Franco-soviet mutual assistance treaties concluded a few years earlier and violated the provisions of article 53 of the United Nations charter relating to regional security arrangements. According to this article, observed the soviet government, no enforcement action could legally be taken under any such regional arrangement without the authorization of the Security council.

In answering these charges, U.S. Secretary of State Dean G. Acheson pointed out that the treaty was based upon "the inherent right of individual and collective self-defense" recognised in article 51 of the charter. This right could be exercised in the event of an armed attack as long as the Security council did ot take measures necessary to maintain peace and security. he treaty was not a regional arrangement in the sense of ticles 52 and 53, but a "voluntary association of freedom and eace-loving countries" to assure the defense of the North At- ntic area. Nothing in the treaty, concluded Acheson, affected e rights and obligations of the parties under the charter, or e primary responsibility of the Security council for the main- nance of international peace and security.

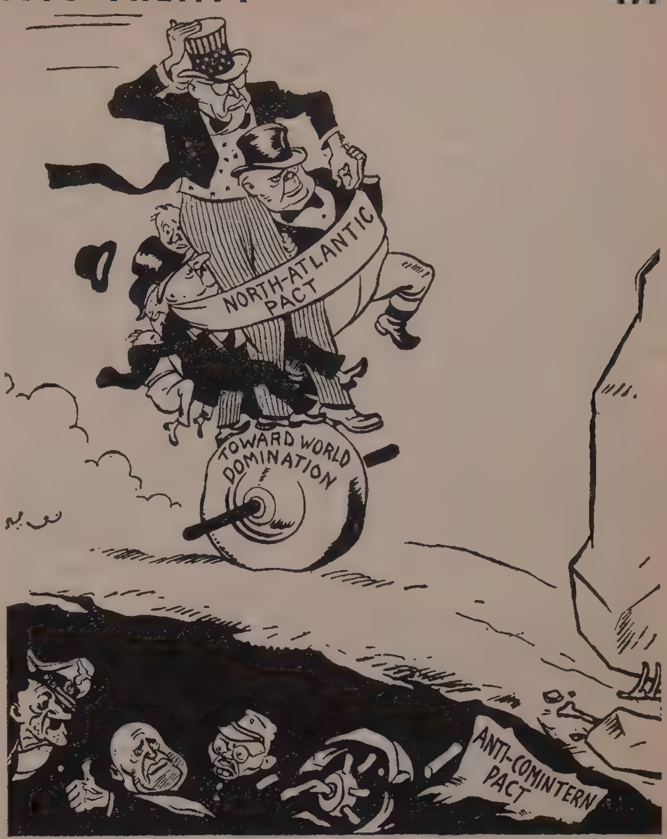
During the debate on the treaty in the United States senate, s opponents centred on the argument that its application might unge the country into war without congressional approval. he opposition also endeavored to condemn the agreement by sisting that a vote for it would in fact be a commitment to ote for the Military Assistance program shortly to be sub- itted to congress by the administration. There were some ho were afraid that the treaty would tend to widen the breach etween the soviets and the west, weaken still further the nited Nations and thereby lose its "preventive" force.

The administration met this attack by stressing that no party the treaty would be required to make any specific contribu- on to the defensive capacity of the other signatory states. east of all did it imply any "automatic obligation" to go to ar, which only congress could declare. Moreover, the treaty, r from being aimed at any particular power, was directed ainst aggression from whatever source. Even so, in the eyes certain critics not unfriendly to the foreign policy of the dministration, the treaty might better have been made an pen-ended" arrangement, leaving the door open to the .S.S.R. to enter if it wished. The debate ended, however, in overwhelming vote of 82 to 13 for ratification.

Steps were taken without delay to implement the provisions the treaty. The Consultative council, consisting of the for- gn ministers of the signatory states, held its first meeting in ashington in September and proceeded to establish a defense ommittee. This committee subsequently set up a military mmittee composed of the chiefs of staff (or their representa- ves) of each party, with headquarters in Washington. The ilitary committee in turn decided to create a "Standing roup" (representing the United States, the United Kingdom d France), whose task it would be to co-ordinate and integrate efense plans. Regional planning groups were also organized for e following geographical areas: northern Europe, western urope, southern Europe-western Mediterranean, Canada-United tates and the North Atlantic ocean.

In July the administration sent to congress its Military As- stance program which proposed an appropriation of slightly ore than $1,000,000,000 for military equipment, materials and rvices to Atlantic treaty countries requesting aid during the scal year 1949–50. After a lively discussion lasting nearly two onths, congress passed the Mutual Defense Assistance act ith only minor modifications. This act empowered the presi- ent to make available specified funds and to enter into contract thorizations as soon as he approved the recommendations of e North Atlantic council and defense committee for an in- grated plan for the defense of the North Atlantic area. Such plan was announced in November, and negotiations looking ward bilateral agreements with the principal Atlantic pact untries were then reported to be under way in Washington.

What effect the announcement in September that "an atomic plosion" had taken place in the Soviet Union might have on e military and political consequences of the North Atlantic reement remained uncertain as the year 1949 closed. Informed servers in the west appeared to agree that the long-run value the treaty would depend upon the extent to which it exerted restraining influence on soviet expansionist policy. Reflecting e growing division of the world into two armed camps, the treaty might possibly help to shift the power balance to the advantage of the west. In any case, however, the effective implementation of the new arrangement would rest on the good faith of the parties, since it did not provide for any executive machinery or procedure which would guarantee speedy and unified military action. Nor could Europe hope henceforth to become a significant makeweight in the bipolar struggle between Moscow and Washington, for the continent west of the "iron curtain" was inexorably drawn into the U.S. orbit. (*See* also ARMIES OF THE WORLD; EUROPEAN UNION.) (W. R. SP.)



SOVIET COMMENT on the North Atlantic alliance, by Yefimov, published in the *Literaturnaya Gazeta* (Moscow) in 1949 and captioned "Fascist Aggressors: 'We have already travelled along this path once.' "

NORTH ATLANTIC TREATY

PREAMBLE

The Parties to this Treaty reaffirm their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all governments.

They are determined to safeguard the freedom, common heritage and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law.

They seek to promote stability and well-being in the North Atlantic area.

They are resolved to unite their efforts for collective defense and for the preservation of peace and security.

They therefore agree to this North Atlantic Treaty:

Article 1

The Parties undertake, as set forth in the Charter of the United Nations, to settle any international disputes in which they may be involved by peaceful means in such a manner that international peace and security, and justice, are not endangered, and to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the United Nations.

Article 2

The Parties will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them.

Article 3

In order more effectively to achieve the objectives of this Treaty, the Parties, separately and jointly, by means of continuous and effective self-help and mutual aid, will maintain and develop their individual and collective capacity to resist armed attack.

Article 4

The Parties will consult together whenever, in the opinion of any of them, the territorial integrity, political independence or security of any of the Parties is threatened.

Article 5

The Parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all; and consequently they agree that, if such an armed attack occurs, each of them, in exercise of the right of individual or collective self-defense recognized by Article 51 of the Charter of the United Nations, will assist the Party or Parties so attacked by taking forthwith, individually and in concert with the other Parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area.

Any such armed attack and all measures taken as a result thereof shall immediately be reported to the Security Council. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

Article 6

For the purpose of Article 5 an armed attack on one or more of the Parties is deemed to include an armed attack on the territory of any of the Parties in Europe or North America, on the Algerian departments of France, on the occupation forces of any Party in Europe, on the islands under the jurisdiction of any Party in the North Atlantic area north of the Tropic of Cancer or on the vessels or aircraft in this area of any of the Parties.

Article 7

This Treaty does not affect, and shall not be interpreted as affecting, in any way the rights and obligations under the Charter of the Parties which are members of the United Nations, or the primary responsibility of the Security Council for the maintenance of international peace and security.

Article 8

Each Party declares that none of the international engagements now in force between it and any other of the Parties or any third state is in conflict with the provisions of this Treaty, and undertakes not to enter into any international engagement in conflict with this Treaty.

Article 9

The Parties hereby establish a council, on which each of them shall be represented, to consider matters concerning the implementation of this Treaty. The council shall be so organized as to be able to meet promptly at any time. The council shall set up such subsidiary bodies as may be necessary; in particular it shall establish immediately a defense committee which shall recommend measures for the implementation of Articles 3 and 5.

Article 10

The Parties may, by unanimous agreement, invite any other European state in a position to further the principles of this Treaty and to contribute to the security of the North Atlantic area to accede to this Treaty. Any state so invited may become a party to the Treaty by depositing its instrument of accession with the Government of the United States of America. The Government of the United States of America will inform each of the Parties of the deposit of each such instrument of accession.

Article 11

This Treaty shall be ratified and its provisions carried out by the Parties in accordance with their respective constitutional processes. The instruments of ratification shall be deposited as soon as possible with the Government of the United States of America, which will notify all the other signatories of each deposit. The Treaty shall enter into force between the states which have ratified it as soon as the ratifications of the majority of the signatories, including the ratifications of Belgium, Canada, France, Luxembourg, the Netherlands, the United Kingdom and the United States, have been deposited and shall come into effect with respect to other states on the date of the deposit of their ratifications.

Article 12

After the Treaty has been in force for ten years, or at any time thereafter, the Parties shall, if any of them so requests, consult together for the purpose of reviewing the Treaty, having regard for the factors then affecting peace and security in the North Atlantic area, including the development of universal as well as regional arrangements under the Charter of the United Nations for the maintenance of international peace and security.

Article 13

After the Treaty has been in force for twenty years, any Party may cease to be a party one year after its notice of denunciation has been given to the Government of the United States of America, which will inform the Governments of the other Parties of the deposit of each notice of denunciation.

Article 14

This Treaty, of which the English and French texts are equally authentic, shall be deposited in the archives of the Government of the United States of America. Duly certified copies thereof will be transmitted by that Government to the Governments of the other signatories.

In witness whereof, the undersigned plenipotentiaries have signed this Treaty.

Done at Washington, the 4th day of April, 1949.

North Borneo: *see* BRITISH BORNEO.

North Carolina. A south Atlantic coast state, popularly known as the "Old North state" or the "Tar Heel state," North Carolina is one of the original 13 states of the union; area: 52,712 sq.mi. (49,142 sq.mi. land, 3,570 sq.mi. water); pop. (1940): 3,571,623, of which 974,175 (27.3%) were urban, 2,597,448 (72.7%) rural and 1,005,501 (28.2%) nonwhite. The bureau of the census estimated the population of the state on July 1, 1949, at 3,864,000, a gain of 8.2% from 1940. Capital: Raleigh (46,897); other cities: Charlotte (100,899); Winston-Salem (79,815); Durham (60,195); Greensboro (59,319); Asheville (51,310).

History.—The biennial legislature, which was in session in 1949 from early January to mid-April, made record-breaking appropriations for the biennium 1949–51 of $401,417,791 to operate the state agencies and institutions. It also appropriated $25,000,000 to be distributed equally among the 100 counties to aid in the construction or repair of public school buildings, and $72,827,734 for buildings and other permanent improvements at state institutions and agencies. The appropriations provided a salary increase of 20% to teachers and state employees for the remainder of the fiscal year 1948–49, retroactive to Oct. 1, 1948, and salary increases of 28½% to public school teachers and 20% to other state employees for the biennium 1949–51. It also submitted two bond issues to a popular referendum: (1) $200,000,000 in state bonds to be allocated to the counties for secondary road purposes—if approved by the voters the state tax on gasoline would be increased from 6 cents to 7 cents per gallon; (2) $25,000,000 in state bonds to be allocated to the counties on the basis of average daily school membership to aid in the construction or repair of school buildings. The voters approved both bond issues on June 4. The legislature appropriated the current surplus, the $31,000,000 postwar reserve fund and $6,000,000 more than the estimated revenue during the biennium. It was hoped that a decline in building costs would produce enough savings from the permanent improvement appropriations to balance the general fund budget. The legislature also authorized the issue of $7,500,000 in bonds for the construction and improvement of North Carolina seaports and made the state a party to the compact of southern states for the development and maintenance of regional educational services in the south in professional, technological, scientific, literary and other fields.

State officers in 1949 were W. Kerr Scott, governor; H. P. Taylor, lieutenant governor; Thad Eure, secretary of state; Henry L. Bridges, auditor; Brandon P. Hodges, treasurer; Clyde A. Erwin, superintendent of public instruction; Harry McMullan, attorney general; W. P. Stacy, chief justice.

Education.—In 1947–48 there were 3,158 public elementary schools with 19,756 teachers and principals and 691,420 enrolled pupils, and 962 public high schools with 6,862 teachers and principals and 164,432 enrolled pupils; these schools were operated at a cost of $84,255,969, including $9,013,104 of federal funds. About three-fourths of the operating cost, excluding federal funds, was contributed by the state government. The average daily attendance in the public schools was 751,108; the number of inhabitants of school age 1,074,821. Not including principals or vocational teachers, the average salary for elementary teachers was $2,000 and for high school teachers $2,029.

Social Insurance and Assistance, Public Welfare and Related Programs.—In Oct. 1949 public grants amounting to $1,234,798 were made to 56,914 persons for old-age assistance; $541,257 to 12,868 families for aid to dependent children; $119,084 to 3,782 blind persons; and $56,088 for general relief in 3,847 cases. During the year ending June 30, 1949, the total amount of public relief funds distributed was $18,866,503 and during the first 11 months of 1949 unemployment benefits amounted to $18,010,265. In 1949 the state maintained ten charitable institutions with 10,808 inmates on Oct. 1; five correctional institutions with 699 inmates; and state highway prison camps with 8,613 prisoners.

Communications.—In 1949 the state highway and public works commission maintained 10,351 mi. of rural state highways, of which 9,526 mi. were hard-surfaced; and 51,031 mi. of rural county roads of which 5,109 mi. were hard-surfaced. There were 4,598 mi. of railroads in 1945 and 324 mi. of city bus routes, 10,277 mi. of passenger bus routes and 11,525 mi. of freight vehicle routes in 1944. There were 343,184 telephones in use in the state in 1947.

anking and Finance.—On June 30, 1949, there were 61 national banks branches with assets of $461,199,000 and 348 state banks and nches with deposits of $1,140,554,731 and assets of $1,248,875,949. January 1, 1949, there were 149 building and loan associations operat- under state charters with 168,733 shareholders and total assets of 2,178,109 and 27 federal savings and loan associations with total ets of $88,773,605. In 1948–49 state receipts were $629,188,636; oursements $573,357,494. On June 30, 1949, the state gross bonded t was $72,709,500 less $65,507,895 of bonds invested in sinking ds. The assessed value of property was $3,705,712,198 in 1948. In state general fund there was a cash surplus of approximately $13,- ,000 at the end of 1949.

griculture.—The acreage planted to cash crops in 1949 was larger n in 1948 but the total value of production was about $83,000,000 . The chief declines in production were in tobacco, cotton and pea- s. There were notable increases in corn, oats, soybeans and lespedeza d. The total value of agricultural production harvested from about 44,000 ac. in 1949 was approximately $664,945,000, of which tobacco ounted for $359,378,000 and cotton $66,930,000. The cash income of rth Carolina farmers in 1948 was $638,428,000 from crops; $153,- 5,000 from livestock and livestock products; and $7,905,000 from ernment payments. The value of the lands and buildings on the 7,412 farms in 1945, 42.6% of which were operated by tenants, s $1,002,983,012.

Manufacturing.—In 1947 manufacturing establishments numbering 22 employed 350,207 wage earners at wages of $641,966,000 and ded value by manufacture $1,646,673,000. Value added by 939 estab- ments in textiles was $846,280,000; by 69 establishments in tobacco 57,986,000; and by 372 establishments in furniture and fixtures $102,- 7,000. Estimated industrial production in 1948 was $3,091,000,000 d electric power production was 9,353,600,000 kw.hr.

Table II.—*Principal Mineral Products of North Carolina*

Mineral	Value, 1947	Value, 1946	Value, 1945	Value, 1944

Mineral Production.—The mineral production for North Carolina in 47 was $23,699,000. (A. R. N.)

orth Dakota. A west north central state of the United States, North Dakota was admitted to the ion Nov. 2, 1889. Popular name, "Flickertail state." Land ea, 70,054 sq.mi.; water area, 611 sq.mi. Population (1940) 1,935; rural 510,012; urban 131,923. Capital, Bismarck 5,496). Chief cities, Fargo (32,580); Grand Forks (20,228); d Minot (16,577). The bureau of the census estimated the pulation July 1, 1949, as 605,000.

The elected state officers in 1949–50 were: governor, Fred G. ndahl; lieutenant governor, C. P. Dahl; secretary of state, omas Hall; auditor, Berta E. Baker; treasurer, Albert Jacob- n; attorney general, Wallace Warner; superintendent of pub- instruction, G. B. Nordrum; commissioner of insurance, Otto rueger; commissioner of agriculture and labour, Math Dahl; x commissioner, John Gray.

History.—The Garrison dam, Missouri-Souris irrigation proj- t, and new enlarged plant for lignite research at the Univer- y of North Dakota at Grand Forks were expected to improve preciably the development of the natural resources and popu- tion of the state. Federal agencies were spending for that rpose a total of more than $21,000,000, $27,000,000 and 5,000,000 in the years ended June 30, 1948, 1949 and 1950, spectively. A tax levy of one mill for a state medical centre be located at the university was voted at the Nov. 1948 election by a majority of 22,000 out of 183,000 votes cast. That levy was expected to provide a basic fund of more than $400,000 per year.

Education.—School teaching positions for the year ended June 30, 1948, were 6,388 (elementary 4,862; high school 1526); enrolment 112,629 (elementary 85,620; high school 27,009); buildings, one-room and two-room, 2,677; graded elementary 241; combinations (elementary and high school) 382; high school 28; schools in session (1948–49) 3,328. Total enrolment, fall of 1949, in the state university, the state agricultural college, other state institutions of higher learning and two municipal junior colleges was 8,377 full-time and 724 part-time students; faculty, 586.

Social Insurance and Assistance, Public Welfare and Related Programs.—Public assistance in the year to June 30, 1949, was $7,330,868; contributed by federal agencies 41.9%; state 35.4%; county 22.7%. Types of aid: old age $4,522,022, with an average of 8,704 persons aided per month; care of dependent and foster home children $2,004,253, with 2,019 persons; blind $62,972, with 118 persons; general assistance $741,621, with 1,340 persons; welfare service $234,542; and administrative expense, $629,698. Cost of operating 4 charitable and 4 correctional institutions, biennium to June 30, 1951, $4,806,788. Number of patients as of Dec. 1, 1949, was: feeble-minded 1,034; blind 33; deaf 85; tubercular 270; state hospital 2,099; correctional institutions, penitentiary 237; training school 248; state farm 54. Additional appropriations for improvements, repairs, new buildings and equipment, biennium ending June, 30, 1951, $1,226,620.

Communications.—Highway mileage, state 6,891.5; rural 107,630.9; spent for construction of state highways, year ended June 30, 1949, was $9,883,871.76 including $5,190,498.46 of federal funds; spent for maintenance of state highways $4,716,894.27, and for operation $372,521.02. Additional amounts appropriated to counties were: motor fuel taxes $1,281,492.43; motor vehicle licence fees $2,121,124.27; and federal monies for county feeder roads $686,284.03. Railway mileage, 5,272.

Banking and Finance.—On June 30, 1949, the Bank of North Dakota and 108 state banks had resources of $361,123,999.24; deposits $341,-794,454.07. Resources of 41 national banks (4 with trust powers) $263,429,700; deposits, $249,874,000. On Dec. 31, 1948, 5 federal savings and loan associations had resources of $11,064,754; and 10 state building and loan associations had resources of $25,280,824.46 and share capital of $23,060,860.87. Sixty-one state chartered credit unions had resources of $4,019,030.78 and share capital of $3,810,991.52. State treasury collections, year to June 30, 1949, were $101,542,160.61; payments $64,270,165.30; and bonded debt $45,541,250 including the soldier bonus of $27,000,000.

Agriculture.—The 1949 acreage in farm crops was 20,482,000, divided into 69,000 farms. North Dakota ranked fifth among the states in the total land area harvested. The ten-year average in crops (1938–47) was 19,000,000 ac. Gross farm income in 1949 was estimated at $498,000,000 or 69% as much as in 1948. Livestock and it products made a cash income of $170,000,000 or 87% of the previous year's income; crops made $305,000,000 or 62.5% of the 1948 figure. Over-all production of corn, wheat, oats, barley and rye was 31% less in 1949 than in 1948 and 24% below the ten-year average (1938–47).

Leading Agricultural Products of North Dakota

Crop	1949	1948	Average 1938–47
Spring wheat (other than durum), bu.	77,427,000	100,876,000	96,591,000
Durum wheat, bu.	34,012,000	40,082,000	30,813,000
Corn, bu.	23,361,000	29,380,000	24,157,000
Oats, bu.	36,550,000	60,256,000	61,270,000
Barley, bu.	26,608,000	55,440,000	45,423,000
Rye, bu.	2,748,000	4,812,000	6,546,000
Flaxseed, bu.	13,155,000	16,390,000	7,103,000
Potatoes, bu.	18,530,000	20,000,000	17,787,000
Hay, tons	2,818,000	2,962,000	2,991,000

Production of creamery butter totalled 44,999,000 lb. in 1948, a drop of 9% from 1947. The five-year average (1942–46) was 57,230,000 lb.

Manufacturing.—The estimated number of employees in nonagricultural establishments in North Dakota as of June 1949 was 130,699, an increase of 26% over 1940. In manufacturing there were 6,010 employees, an increase of 20% over 1940. The estimated annual wage per worker in manufacturing was $2,650 in establishments of 8 or more.

Mineral Production.—Production of lignite coal for the year ended June 30, 1949, was 2,970,300 tons; value $6,984,272.42; employment 403 miners, 258 others. New mines 9; reopened 3; number of mines in operation in the year to June 30, 1949, was 93; natural gas from 19 wells, 11 months to Nov. 30, 1949, was 339,908,000 cu.ft.; yield from 25 wells, calendar year 1948, was 642,687,000 cu.ft. (A. V. O.)

Northern Rhodesia: *see* RHODESIA, NORTHERN.

Northwest Territories. The Northwest Territories comprise the mainland portion of Canada lying north of the 60th parallel of latitude between Hudson bay on the east and Yukon territory on the west, together with the islands lying between the mainland of Canada and the north pole, including those in James bay, Hudson bay and Hudson strait. Area, 1,304,903 sq.mi.; pop. (1941 census) 12,028, including 2,284 whites, 4,334 Indians and 5,404 Eskimos; estimated pop. (May 1949) 15,876.

For purposes of organization and administration, the territories were divided into the provisional districts of Mackenzie (527,490 sq.mi.), Keewatin (228,160 sq.mi.) and Franklin (549,253 sq.mi.), by order in council dated March 16, 1918. The Northwest Territories act (1927) provided for a territorial government composed of a commissioner, a deputy commissioner and five councillors appointed by the governor in council. The seat of government is at Ottawa. In 1949, the Northwest Territories council was composed as follows: commissioner, Hugh L. Keenleyside; deputy commissioner, Roy A. Gibson; members of council, Louis de la C. Audette, Harold B. Godwin, Donald M. MacKay, John G. McNiven, Stuart T. Wood; secretary, James G. Wright.

Education.—The education of white, native and half-breed children in the Northwest Territories was carried on during 1949 at day and residential schools operated by the Church of England and Roman Catholic missions with financial assistance from the dominion government, at government day schools operated by the Northwest Territories administration and at Indian schools operated by the Indian affairs branch of the department of mines and resources. The Northwest Territories administration erected public schools at Fort Smith and Yellowknife and operated schools at Port Brabant and Port Radium. The administration also had under construction day schools at Aklavik, Fort Simpson, Fort Resolution, Coppermine, Coral Harbour on Southampton Island and Fort Chimo, Que., and was establishing schools in conjunction with government nursing stations at Port Harrison, Que., and Lake Harbour on Baffin Island. The last five schools are located in Eskimo territory. The Indian affairs branch operated schools at Hay River, Rae and Fort McPherson, and had schools under construction at Fort Norman, Rocher River, Arctic Red River, Fort Good Hope and Fort Franklin. The School of Opportunity established at Yellowknife provided secondary education for students in the Northwest Territories. In addition, scholarships were offered by the Northwest Territories administration to assist in financing worthy students of the territories who wished to pursue advanced studies at universities in other parts of Canada.

Public Services and Welfare.—During 1949, 12 hospitals were operated in the Northwest Territories. Nine of these were maintained by the missions, one by a mining company at Port Radium, one by private enterprise at Norman Wells and one by the local administrative district at Yellowknife.

The payment of family allowances in the Northwest Territories contributed greatly to the welfare of the natives in periods of stress. In addition, in districts where the native economy was disturbed by a scarcity of game, the government issued supplies to the natives through the Royal Canadian mounted police, who are the local representatives of the administration.

When game was available, hunters were not relieved of the obligation of providing for their families.

Transportation and Communication.—The Mackenzie district and western arctic are served by water and aerial transportation. The new all-weather Mackenzie highway from Grimshaw, Alta., to Hay River settlement on Great Slave lake, which was opened in 1948, was used extensively during 1949. Regular mail, passenger and express services were maintained by air throughout the year to many points in Mackenzie district. In 1949 the annual Eastern Arctic patrol, which carries new personnel as well as mail and the year's supplies to Royal Canadian mounted police detachments, medical centres, radio and weather stations, trading posts, missions and schools, was carried out by a number of small vessels engaged by the government. A new phase of the patrol introduced in 1949 was the inspection of conditions in a number of districts by air. Spring and summer flights, carrying an officer of the Northwest Territories administration and medical personnel, covered both sides of Hudson bay and parts of Baffin Island.

Radio communication between important settlements and trading posts in the territories and outside points was maintained through government and private radio stations.

Agriculture and Fisheries.—Limited agricultural and horticultural operations were carried on in 1949 at most of the settlements in Mackenzie district. Experimental substations operated by the department of agriculture carried on field work during the year. Commercial fishing on Great Slave lake, inaugurated in 1945, produced a catch of 2,019,700 lb. during the summer of 1948, and 4,089,857 lb. during the winter of 1948–49, principally whitefish and lake trout.

Fur Trade.—Fur production in the territories during the year ended June 30, 1948 (latest complete figures available), was valued at $1,872,302, with a total of 482,420 pelts taken during that period. Trapping continued to be the chief occupation of the native population, and was strictly controlled by regulation. Reindeer herding in the Mackenzie delta region was continued.

Production and Industry.—Mineral production in the Northwest Territories for the year 1948 was valued at $4,298,089, of which gold accounted for $3,449,355.

The new hydroelectric power development on Snare river, 94 mi. northwest of Yellowknife, which was officially opened in 1948, assisted in the development of the mining industry during 1949. Tentative estimates indicated that available water-power resources of the Northwest Territories totalled about 280,000 h.p. available under conditions of ordinary minimum flow with almost 690,000 h.p. available for six months of the year.

Crude oil production was continued by Imperial Oil, Limited, at Norman Wells on the Mackenzie river. After being processed at the Norman Wells refinery the oil was shipped to Yellowknife and other points in the territories. (R. A. G.)

Norway. A democratic monarchy of northern Europe, Norway is bounded north by the Arctic ocean, east by Finland, the U.S.S.R. and Sweden and west by the North sea. Area 125,193 sq.mi.; pop. (Dec. 3, 1946, census, prelim. figs.) 3,123,883; (1948 est.) 3,181,000. Capital, Oslo (1946: 289,000; 1948, after extension of city limits, about 420,000). Other principal cities with 1946 provisional figures are Bergen (108,933); Trondheim (56,444) and Stavanger (49,218). Religion, Lutheran Christian. Ruler in 1949: King Haakon VII. Prime minister: Einar Gerhardsen.

Spitsbergen (Svalbard), Norwegian since 1925, is an archipelago lying about midway between northern Norway and the north pole. Area 24,293 sq.mi. Population in 1949 was about 1,600 Norwegians and an estimated 2,350 Russians.

History.—Norway joined in the long but futile negotiations to build a Scandinavian defense pact. Basically the disagreement lay between Norway, desiring a Scandinavian group with ties also to Great Britain and the United States, and Sweden, desiring a united Scandinavia pledged to neutrality. Norway feared that a neutral bloc in the north would be as powerless in another war as was Norway alone in 1940.

When it became clear that no compromise could save the Scandinavian idea Norway decided quickly to investigate the terms of the North Atlantic treaty. At the end of March 1949 the *storting* voted 130–13 to send Foreign Minister Halvard Lange to Washington, D.C., to sign the document. Norway and Denmark went with the west; Sweden for the time at least maintained its neutral position. Later discussions attempted to find means of technical co-ordination between the northern countries, but made little progress.

Norway rejected a soviet invitation to sign a mutual nonaggression pact; the foreign minister asserted that Spitsbergen was part of Norway for defense purposes; military conversations with the British, the Danes and others indicated a careful co-ordination of defense endeavours.

The Marshall plan, or European Recovery program, was helping Norway to build up both imports and exports, total allotments in the 15-month period, April 1948 to June 1949, running to $101,100,000, including a loan of $35,000,000, a grant of $49,600,000 and conditional aid amounting to $16,500,000. (*See* also EUROPEAN RECOVERY PROGRAM.)

Imports still far exceeded exports, and the dollar balance was unfavourable. Nevertheless, the first eight months of 1949 showed larger exports ($312,000,000) and smaller imports ($400,000,000) than expected.

Televåg, the Norwegian Lidice, wiped out by the nazis in vengeance for the killing of two Germans, was completely reconstructed, an accomplishment facilitated by contributions from all Norway. The new iron and steel plant at Mo i Rana was making substantial progress. To attain these feats of reconstruction it was necessary to hold down the consumers' standard of living in a severe austerity program. The aim of the government was to reinvest one-third of the total national income in productive enterprise.

The devaluation of the krone, forced on Norway by the British action of Sept. 18, was hard for the country to accept. The blow was lessened by the fact that Sweden, and most other countries where Norway had orders for ships and goods, also devalued. But Norway could not increase its exports significantly, for its productive apparatus was already at 150% of prewar capacity. Its ships had to carry for nondollar lands and Norway could see only additional hardship in the new exchange rate. Its trade with England was so important that it had no choice but to accept the situation.

The October elections hinged on reconstruction and financial policies, and it was expected the government would have diffi-

ORWEGIAN SKI PATROL on the Russo-Norwegian border near Kirkenes in
e arctic in 1949. Across the lines, soviet border forces were reported to be
avily armed, in marked contrast with this token Norwegian detachment

lty maintaining its one-vote majority in the *storting*. The
mber of voters was increased by the lowering of the age from
to 21. When the returns were in the Social Democrats were
ven a nine-member increase, and the Communists were
minated.

The Communists attacked the government's foreign policy as
ell as its internal policy, but lost out even in the far north
here lay their supposed strength. Actually their loss in popular
te was about 50% (considering the increased number of
ters). After the election the inner split within the party was
cognized; Peder Furubotn, general secretary, and half the
embership in the party's general council were expelled as Tito-
s, though all had been regarded as Moscow men. (F. D. S.)

Education.—Schools (1946): elementary 5,626, pupils 289,449, teachers
,766; secondary 288, pupils 44,356, teachers 3,090. Technical schools
947): day 9, pupils 1,823, teachers 233; apprentice 84, pupils 8,481,
chers 940; workshop 144, pupils 2,810, teachers 330. Two universities
d eight institutions of higher education (1948): students 7,743, pro-
ssors and lecturers 730.

Finance and Banking.—Budget: (1948–49) revenue kr. 2,782,000,000,
penditure kr. 2,610,000,000; (1949–50 est.) revenue kr. 2,584,000,000,
penditure kr. 2,320,000,000. National debt (Jan. 1949): kr. 6,090,-
o,000. Currency circulation (June 1949): kr. 2,116,000,000. Gold
erve (June 1949): $53,000,000. Savings and bank deposits (June
49) kr. 8,728,000,000. Cost of living index, mid-1949, 163 (1938=
o). The monetary unit is the krone (pl. kroner). Exchange rate (Sept.
, 1949) kr. 4.96=$1 U.S.; (Dec. 15, 1949) kr. 7.15=$1 U.S.

Foreign Trade.—(1948): Imports kr. 3,721,000,000; exports kr. 2,063,-
o,000.

Transport and Communications.—Roads (June 30, 1949): 44,247 km.
censed motor vehicles (Jan. 1948): cars 62,578; trucks 46,396. Rail-
ys (June 30, 1948): state 4,474 km., private 83 km. Shipping (Jan.
49): merchant vessels 5,136 (above 25 gross tons) totalling 4,680,000
s. Telephone subscribers (June 30, 1948) 400,200. Radio receiving
licenses (Oct. 1, 1949) 709,116.

Agriculture and Fisheries.—Main crops (metric tons, 1948): wheat
,000; barley 89,200; oats 177,100; rye 3,000; potatoes 1,454,000.
vestock (June 20, 1948): cattle 1,175,000; sheep 1,629,000; pigs
8,000; horses 206,000; poultry 4,663,000. Fisheries (1948): total
ch 1,300,000 metric tons, worth kr. 325,000,000.

Industry.—Industrial establishments (1947) 5,785, employing 186,774
nual and 28,942 salaried workers. Fuel and power: coal (1948):
5,000 metric tons; gas 46,944,000 cu.m.; electricity 12,445,000,000
.hr. Raw materials (metric tons 1948): pig iron 63,331; pyrites 735,422; ferrosilicon (calculated 45% basis) 43,991; other ferroalloys 94,862; aluminum 30,157; nickel 8,401; zinc 42,000; sulphur 78,479; mechanical wood pulp for sale (wet basis) 562,129; chemical wood pulp (dry basis) 390,219. Other products (1947): nitrate of lime 473,098 metric tons; herring oil 243,433 hl.; paper, pasteboard and cardboard 455,681 metric tons; canned fish and fish products 48,801 metric tons.

Nose: *see* EAR, NOSE AND THROAT, DISEASES OF.

Nova Scotia. Second smallest of the maritime provinces of Canada, Nova Scotia entered the confederation in 1867; area: 21,428 sq.mi.; pop.: (1941) 577,962, (1949 est.) 645,000; capital; Halifax, pop. (1943) 126,480; other cities are Sydney (1941) 28,305, and Glace Bay 25,147.

History.—The Liberal government was returned to power for the fifth election in succession in June 1949.

The government's 1949 budget was for $33,975,361 of expenditures, which was 20% above the record high budget of 1948. More money was spent on highways, public works, agricultural development, education, welfare, health, labour and development of natural resources. Despite the increased outlays, 1949 revenues ran at a surplus rate, estimated at about $500,000, which was added to previous surpluses and used for long-term low-interest loans for industrial expansion (about $3,000,000 was so used in 1949), for municipal capital projects and for debt reduction.

Education.—During 1949 the council of public instruction was replaced by a provincial department and minister of education. The latest revised statistics available were the following for 1946 provincially controlled schools: total enrolment 120,655; average daily attendance 99,367; teachers 3,706; total revenue $6,665,248.

Agriculture.—The federal government made an agreement with British food authorities, in which the latter agreed to take $1,600,000 worth of apples with the federal government paying half the bill. That sold only about a third of the 1949 crop of 1,200,000 bbl. (1948: 1,000,000 bbl.; 1947: 1,500,000 bbl.). Although for the first time egg production exceeded consumption, and hog raising became an annual million-dollar business, the province was spending $4,000,000 annually for non-Nova

Scotian agricultural foods. To help reduce this bill, the provincial government entered into a $9,000,000 agreement with the federal government for marshland reclamation running to 45,000 productive acres.

Labour and Industry.—The 1949 session of the legislature: (1) renewed the labour act which gave preference in employment to residents of the province; (2) increased workmen's compensation benefits; (3) increased from 2,000 to 4,000 hrs. the minimum time for an apprenticeship contract. Employment stood at 111.7 in Sept. 1949, compared with 118.4 in Sept. 1948 (index of June 1, 1941: 100); average weekly wages were $37.99 for Sept. 1949 and $36.72 for Sept. 1948.

Production of coal in 1948, through increasing mechanization, had risen to 6,412,000 tons compared with 4,045,237 tons for 1947.

In 1948 a total of 323,203 tourists brought $27,717,888 into the province.

Nutrition, Experimental.

A clear illustration of the experimental production of hypertension (high blood pressure) and its relation to nutrition was given in 1949 by W. S. Hartroft and C. H. Best of Toronto, Can. These investigators placed weanling albino rats on a diet low in choline, a member of the vitamin B complex, for periods of five or six days. Such brief periods of choline deficiency were sufficient to produce the typical "haemorrhagic kidney" in the young growing albino rat. In some of the experiments the rats received the ration for four five-day intervals, separated by two-day periods during which the basal diet was supplemented with choline chloride. The animals were then transferred to a stock diet and observed for periods of from three to seven months; control animals were included in the study. Blood pressure determinations were made at intervals, and at the end of the experiment, histologic studies were made of both kidneys. The amount of kidney damage observed was classified as severe, moderate, slight or none. Ten of the survivors of the haemorrhagic kidney syndrome exhibited severe persistent kidney damage. All of these animals had definite arterial hypertension, the average blood pressure being 195 mm. of mercury.

Thirteen of the survivors showed moderate residual kidney damage, with mean blood pressure of 165 mm. There were 39 of the survivors who showed only slight kidney damage and exhibited a mean blood pressure of 136 mm. For the 36 control animals, the mean blood pressure was 118 mm. For production of the hypertensive syndrome, the authors emphasized the necessity of permitting growth to occur subsequent to the time of production of the acute kidney lesions.

The explanation of the probable mechanism of this experimental hypertension seemed to lie in the nature of the observed kidney changes. Despite the conservative view of these workers as to immediate clinical application of their findings, the studies were important because they provided another tool for production of experimental hypertension.

The general use of X-ray therapy in cancer, and the possible use of atom bombs in warfare, served to increase interest in the mechanism by which radiation sickness is produced and in its treatment. In a study of agents which influence experimental radiation injury, A. Goldfeder, L. Cohen, C. Miller and M. Singer investigated the effects of dietary supplements of folic acid and of pyridoxine on the susceptibility of mice to radiation injury. These two vitamins were selected for investigation because the former was reported to be of clinical value in preventing nausea in X-ray-treated cases, whereas the latter had been of value in sprue and in treatment of leukopenia, which suggested its application in relief of the diarrhoea and leukopenia accompanying radiation sickness. The experimental studies with mice indicated that deficiencies of these two B-complex vitamins markedly increased susceptibility to irradiation injury.

Other studies in experimental nutrition related to radiation sickness dealt with nutrients in relation to haemorrhage, as excessive bleeding is a part of severe radiation injury. Dietary factors were demonstrated to be important in maintaining the integrity of the walls of blood vessels. Among materials apparently influencing capillary permeability were flavones or the group of vitamin P substances. It was claimed that naturally occurring flavones protect animals against the effects of irradiation. This was ascribed to protection afforded against capillary damage. J. B. Field and P. E. Rekers described observations concerning the activity of flavones and related substances in irradiated dogs; the effects were compared with those of ascorbic acid, another vitamin, which has a role in permeability. Many flavones were studied and some of them gave considerable protection from the haemorrhage of radiation.

Of increasing importance in experimental nutrition was the search for substances which inhibit the action of an essential nutrient such as a vitamin. Such substances generally have a chemical structure similar to the essential nutrient. This type of investigation had become important in the infectious diseases because if the action of a nutrient necessary for the growth of the infecting agent can be inhibited, then the infecting agent can be prevented from multiplying and the body can usually overcome the infection. This field of experimental nutrition was being applied in 1949 to the study of cancer in the hope of finding a substance which would inhibit a nutrient necessary for the growth of cancer tissue and hence inhibit the growth and spread of the cancer. Encouragement along these lines was provided by the findings of G. W. Kidder, Virginia C. Dewey, R. E. Parks, Jr., and G. L. Woodside. They found that a chemical substance known as guanazolo markedly inhibited experimental tumours in mice as well as naturally occurring mammary cancer in mice.

The report of Kidder and co-workers aroused much interest in centres of cancer therapy. It was pointed out that the tumours are only arrested and not killed and that they resume growth upon withdrawal of the growth inhibitor. The results illustrated the contributions that experimental nutrition could be expected to make in medical fields. (*See* also VITAMINS.)

(F. J. SE.)

Nuts.

The estimated U.S. 1949 pecan crop of 113,694,000 lb. was near the 1938–47 average of 110,620,000 lb., but only two-thirds as much as the record 177,667,000-lb. 1948 crop. Production of improved varieties (about two-fifths of the total) was only half as much as in 1948. The leading states were Texas (29,000,000 lb.), Oklahoma (20,000,000 lb.), Georgia (17,000,000 lb.), Alabama (13,780,000 lb.) and Louisiana (13,640,000 lb.). Quality was good, particularly in the eastern area which produces most of the improved varieties.

Walnut production, mostly in California but partly in Oregon, reached a record 85,500 tons, compared with 71,100 tons in 1948 and an average for 1938–47 of 64,280 tons. The walnut crop of the Mediterranean basin was estimated at 65,800 tons compared with 49,900 tons in 1948.

California almond production was estimated at 39,000 tons, a record crop 15% larger than the 1948 crop and about twice as large as the 10-year average. Almond production of the Mediterranean basin in 1949 was estimated at 61,400 tons, compared with 54,000 tons in 1948 and 77,500 tons in 1947. Harvests in Italy and Portugal were better than anticipated earlier.

Filbert production in Oregon and Washington was estimated

: 11,240 tons, a new record, compared with the 1947 record rop of 8,800 tons and an average of 5,568 tons for 1938–47.

Nut prices in 1949, compared with 1948, were 10% to 20% wer for almonds, filberts and walnuts, and about 50% higher or pecans. (*See* also PEANUTS.) (J. K. R.)

yasaland. A British protectorate in central Africa. Area: 47,949 sq.mi. Pop. (1948 est.): *c.* 2,150,000. apital: Zomba. Governor in 1949: Sir Geoffrey Colby.

History.—Membership of the legislative council was increased uring 1949 from 13 to 19 by the addition of three official and aree (two African and one Indian) unofficial members, thus or the first time providing non-European representation on the ouncil. Severe drought necessitated the introduction of large-cale precautions against famine; emergency food imports were :ranged and an African Foodstuffs commission was established control supplies. (*See* also RHODESIA, NORTHERN.)

Finance and Trade.—Budget (1949 est.): revenue £2,734,033; expendi-re £3,160,487. Foreign trade (1948): imports £4,340,468; exports ,212,424. Principal exports: tobacco, tea and cotton. (JO. A. HN.)

ylon: *see* RAYON AND OTHER SYNTHETIC FIBRES.

ats. The U.S. oat crop in 1949 of 1,322,924,000 bu. was 11% less than the 1948 crop but 7% above the 10-year aver-ge. An early spring favoured seeding of the crop on a slightly rger acreage than in 1948. However, a dry May and June in ne main area plus heat and disease damage reduced the yield 5 bu. per acre below the 1948 record, in spite of widespread se of improved varieties. As in most years, Iowa (238,222,000 u.), Minnesota (178,272,000 bu.), Illinois (168,990,000 bu.) nd Wisconsin (119,884,000 bu.) led in production, with 53% f the 1949 total.

U.S. Oat Crops

	1949	1948	1947	Average 1938–47
tal production (thousands of bushels)	1,322,924	1,493,304	1,199,422	1,234,082
reage harvested (thousands) . . .	40,560	40,198	38,451	38,347
elds (bushels per acre)	32.6	37.1	31.2	32.1

Oat prices during 1949 were substantially below those of 1948, eclining from $0.76 national average to the farmer early in the ear to a low of about $0.58 at harvest time, then recovering oderately. The government price-support loan averaged $0.70 er bu. at the farm. That, plus a record carryover of 295,000,-o0 bu. from the previous crop did much to stabilize prices. : was anticipated that the acreage devoted to this crop in 1950 night be substantially increased as a result of government pro-rams for acreage reduction of corn, wheat and possibly other rops.

The estimated 1949 world oat crop of 3,980,000,000 bu. was ubstantially below the 4,200,000,000 bu. crop of 1948 and the rewar average. The European crop of 1,375,000,000 bu. was rger than in 1948, whereas Canada's crop of 316,558,000 bu. ompared with 358,807,000 bu. in 1948. (J. K. R.)

bituaries. The following is a selected list of prominent men and women, of the United States and other ountries, who died during the year 1949.

aunza, Gustavo, Nicaraguan journalist and soldier (b. Masaya, Nic., Feb. 27, 1875—d. Leon, Nic., Nov. 25, 1949).

e, Isoh, Japanese sportsman and Socialist leader (b. Fukuoka prefecture, Jap., Feb. 4, 1865—d. Tokyo, Jap., Feb. 10, 1949).

dams, James Truslow, U.S. historian (b. Brooklyn, N.Y., Oct. 18, 1878—d. Southport, Conn., May 18, 1949), received his bachelor's degree at Brooklyn Polytechnic institute in 1898 and an M.A. at Yale university, New Haven, Conn., in 1900. He entered business and in a few years was a partner in a New York stock exchange firm. He retired from his career as a successful broker and banker in 1912 and began in 1916 his career as a historian. Commissioned by Col. E. M. House to prepare data for the World War I peace conference, he became absorbed in U.S. history, and in 1922 he won the Pulitzer prize for *The Founding of New England. The Adams Family* was a Literary Guild selection of 1930; *The Epic of America* was a best-seller of 1932; and *The March of Democracy* was a later best-seller. He also supervised the publication of such works as *The Album of American History, The Atlas of American History* and *The Dictionary of American History.*

Adler, Emanuel Philip, U.S. newspaper editor (b. Chicago, Ill., Sept. 30, 1872—d. Davenport, Ia., March 2, 1949).

Adler, Jankel, Polish-born artist (b. Lodz, Pol., July 25, 1895—d. London, Eng., April 26, 1949).

Ahnelt, William Paul, German-born publisher (b. Berlin, Ger., 1864?—d. Keyport, N.J., Oct. 5, 1949).

Aitken, Robert Ingersoll, U.S. sculptor (b. San Francisco, Calif., May 8, 1878—d. New York, N.Y., Jan. 3, 1949), studied at the Mark Hopkins Institute of Art of the University of California in San Francisco, and later was professor of sculpture there. He subsequently taught at the National Academy of Design school, New York, N.Y., and the Art Students League of New York. Among his many prominent works were the west pediment of the U.S. supreme court building in Washington, D.C.; frieze on the Gallery of Fine Arts in Columbus, O.; a monument to President William McKinley at St. Helena, Calif.; the George Rogers Clark monument at the University of Virginia, and busts of Thomas Jefferson, Daniel Webster, Benjamin Franklin and Henry Clay in the Hall of Fame in New York. He also designed the $50 gold coin issued by the government to commemorate the Panama-Pacific exposition.

Alba, Santiago, Spanish political leader (b. Valladolid, Sp., 1872?—d. San Sebastian, Sp., April 7, 1949).

Alexander, Douglas, English-born manufacturing executive (b. Halifax, Yorks., Eng., July 4, 1864—d. Stamford, Conn., May 22, 1949).

Alexander, Ronald Okeden, Canadian army officer (b. Kandy, Ceylon, Aug. 7, 1888—d. Victoria, B.C., July 27, 1949).

Allen, (William) Hervey, U.S. author (b. Pittsburgh, Pa., Dec. 8, 1889—d. Miami, Fla., Dec. 28, 1949), attended public and college preparatory schools in Pittsburgh, then entered the U.S. Naval academy at Annapolis, Md., from which he was honorably discharged after an athletic injury. He taught English at high schools in South Carolina, then lectured at Columbia university, New York City, and at Vassar, Poughkeepsie, N.Y. He began writing his most memorable work, *Anthony Adverse,* in Bermuda in 1932 and completed it a year later. The 1,000-page, 500,000-word book launched a trend toward historical romances, and was so popular it was translated into 18 foreign languages. Allen was also the author of a number of other volumes including *Israfel,* a biography of Edgar Allan Poe; *Action at Aquila;* and *The Forest and the Fort.* He was editor of the *Rivers of America* series after 1943.

Alling, Paul Humiston, U.S. diplomatic official (b. Hamden, Conn., July 15, 1896—d. Bethesda, Md., Jan. 18, 1949).

Amigo, Peter Emmanuel, British Roman Catholic archbishop (b. Gibraltar, May 26, 1864—d. Southwark, London, Eng., Oct. 1, 1949).

Anderson, Ivy, U.S. blues singer (b. Gilroy, Calif., 1904—d. Los Angeles, Calif., Dec. 28, 1949).

Andrews, Walter Gresham, U.S. congressman (b. Evanston, Ill., July 16, 1889—d. Daytona Beach, Fla., March 5, 1949), served in the national house of representatives from the Buffalo, N.Y., area for 18 years. A graduate of Princeton university, he served in World War I, becoming a major, and spent a decade in business in Buffalo before entering politics in 1930. After 1935 he was the ranking Republican member of the house military affairs committee, later the house armed services committee. As chairman of this committee he sponsored the compromise postwar draft bill, and worked for unification of the armed services.

Angell, James Rowland, U.S. educator (b. Burlington, Vt., May 8, 1869—d. Hamden, Conn., March 4, 1949), was the 14th president of Yale university. He was graduated in 1890 from the University of Michigan, Ann Arbor, Mich., did graduate work at Harvard, travelled and studied in Europe and in 1893 became instructor of philosophy at the University of Minnesota, Minneapolis, Minn. In 1894 he went to the University of Chicago, where he spent the next 25 years, becoming professor and head of the department of psychology, dean of the faculties and acting president of the university. In 1920 he became president of the Carnegie Corporation of New York, leaving that post in 1921 to become president of Yale, a position he held for 16 years.

On his retirement from Yale, Angell became educational consultant and public service counsellor of the National Broadcasting company, serving as general director of the NBC Inter-American University of the Air. He was the author of several texts, including *Psychology* (1908), *Chapters from Modern Psychology* (1911), *Introduction to Psychology* (1913) and *American Education* (1937). (*See* also *Encyclopædia Britannica.*)

Antin, Mary (MRS. A. W. GRABAU), Russian-born author (b. Polotzk, Russia, 1881—d. Suffern, N.Y., May 15, 1949).

Argyll, Niall Diarmid Campbell, 10TH DUKE OF, British peer (b. Feb. 16, 1872—d. Inveraray castle, Argyll, Scot., Aug. 20, 1949).

Armour, Bernard R., U.S. chemical manufacturing executive (b. 1891—d. New York city, Dec. 1, 1949).

Armstrong, Walter Preston, Sr., U.S. lawyer (b. Pittsboro, Miss., Oct. 26, 1884—d. Memphis, Tenn., July 27 1949).

Asafiev, Boris Vladimirovich, Russian composer (b. Leningrad [then St. Petersburg], Russia, July 29, 1884—d. Moscow?, U.S.S.R., Jan. 1949), studied under Nicolas Rimsky-Korsakov and Anatol Liadov. His first ballet was entitled *Flames of Paris,* taking its theme from the French revolution, and was a permanent success. His second, *The Fountain of Bakhtchisaray,* based on a story by Alexander Pushkin, was also a success.

During the German siege of Leningrad in World War II he composed the *Motherland Symphony.* In 1948 he was one of eight Russian composers to receive the Stalin prize of 100,000 roubles, which he won for his biography of

Michael Glinka, 19th century Russian composer.

As chairman of the Union of Soviet Composers, Asafiev headed an elite group of about 850 persons who enjoyed special privileges and high incomes. It was to this union that Sergei Prokofiev, Aram Khachaturian and Dmitri Shostakovich were required to apologize after they were accused of creating musical works that did not reflect the revolutionary spirit.

Ashbrook, Paul, U.S. etcher (b. New York city, Jan. 3, 1867—d. Mexico City, Mex., Aug. 22, 1949).

Atwood, Wallace Walter, U.S. geographer (b. Chicago, Ill., Oct. 1, 1872—d. Annisquam, Mass., July 24, 1949).

August Wilhelm, Prince of Hohenzollern (b. Jan. 29, 1887—d. Stuttgart, Ger., March 25, 1949), was the fourth son of Kaiser William II and the Empress Augusta Victoria. He was known in his youth as a democrat but in 1930 joined the nazi party, and outspokenly supported Hitler. He was arrested during the 1934 purge of the nazi party, but during World War II was again in favour with the nazis. He served as a colonel in the Imperial German army in World War I, and after the overthrow of the Hohenzollern dynasty became a bank clerk and later worked for an automobile concern. He was convicted as a war criminal by a German court in May 1948, and sentenced to serve two and one-half years in prison, but was released because he had been confined since the end of the war while awaiting trial.

Avezzana, Camillo Romano, Baron, Italian diplomat (b. 1868?—d. Eboli, It., June 16, 1949).

Avinoff, Andrey, Russian-born entomologist (b. Tulchin, Russia, Feb. 14, 1884—d. New York city, July 16, 1949).

Ayliff, Henry Kiell, British actor and theatrical producer (b. Grahamstown, U. of S.Af., 1871?—d. Cambridge, Eng., May 25, 1949).

Bailey, Margaret Emerson, U.S. author (b. Providence, R.I., 1886?—d. New Canaan, Conn., Oct. 28, 1949).

Baillie-Saunders, Margaret, British novelist (b. Scarborough, Yorks., Eng., 1873—d. St. Leonards-on-Sea, Sus., Eng., April 24, 1949).

Baker, Oliver Edwin, U.S. geographer (b. Tiffin, O., Sept. 10, 1883—d. Dec. 2, 1949).

Baldwin, Samuel Atkinson, U.S. organist and composer (b. Lake City, Minn., Jan. 25, 1862—d. New York city, Sept. 15, 1949).

Ball, Sydney Hobart, U.S. geologist (b. Chicago, Ill., Dec. 11, 1877—d. New York city, April 8, 1949).

Barazi, Muhsin, Syrian premier (d. Damascus, Syr., March 30, 1949).

Barnard, Joseph Edwin, British physician (b. London, Eng., 1870—d. Addiscombe, Sur., Eng., Oct. 25, 1949).

Barrows, Nat A., U.S. journalist and author (b. Rochester, Mass., 1905—d. near Bombay, India, July 12, 1949), began his career on the *Boston Globe*, gaining national renown from his series on the sinking and the rescue attempts involving the U.S. submarine "Squalus." This story he recounted in the book *Blow All Ballast* (1940). Transferring to the *Chicago Daily News* in 1941 he served as correspondent with U.S. forces in the Caribbean and in South America before moving to Europe to cover the reconquest of that continent by the Allies. His postwar assignments included the sessions of the United Nations, and he was cited in 1948 by Sigma Delta Chi, national journalism fraternity, for his series on the Russian air-supply line to Israel. He was killed, along with 12 other U.S. journalists, in the crash of a Dutch air liner in which they were returning from a survey of Indonesia.

Barry, Philip, U.S. playwright (b. Rochester, N.Y. June 18, 1896—d. New York city, Dec. 3, 1949), studied at Yale, spent a year as an attaché at the U.S. embassy in London, then completed his studies of dramatic writing under George P. Baker at Harvard, where he wrote his first play, *You and I*. His later plays included *The Youngest*, *In a Garden*, *White Wings*, *Paris Bound*, *Holiday*, *The Animal Kingdom*, *The Philadelphia Story*, *Without Love* and *Foolish Notion*. Among the stars who appeared in various Barry successes were Laurette Taylor, Madge Kennedy, Hope Williams, Katharine Hepburn and Tallulah Bankhead.

Bartlett, Alice Hunt (Mrs. William A. Bartlett), U.S. poet and editor (b. Bennington, Vt., July 31, 1870—d. New York city, Sept. 14, 1949).

Bartlett, Murray, U.S. educator (b. Poughkeepsie, N.Y., March 29, 1871—d. Canandaigua, N.Y., Nov. 13, 1949).

Bates, Henry Moore, U.S. legal scholar (b. Chicago, Ill., March 30, 1889—d. Berkeley, Calif., April 15, 1949).

Beach, Rex, U.S. author (b. Atwood, Mich., Sept. 1, 1877—d. Sebring, Fla., Dec. 7, 1949), studied at Rollins college, Winter Park, Fla., and in between trips to the Yukon, which he made famous in his novels, completed his law studies in Chicago. An outstanding athlete in his youth, he began writing in 1905, selling a short story to *McClure's Magazine*. His first novel, *The Spoilers*, a romance of the Yukon, appeared in 1906. Thereafter he wrote more than 30 novels, as well as many magazine articles and short stories. His fame as a chronicler of the Yukon itself helped to attract visitors to that territory. His action stories later were set in Panamá, the Texas oil fields and in Florida, where he himself had a large farm. Among his other novels were *The Silver Horde*, *Flowing Gold*, *The Ne'er-Do-Well*, *Rainbow's End*, *Alaskan Adventures* and *Jungle Gold*. He shot himself, presumably in despair because of an incurable cancer of the throat.

Beasley, John Albert, Australian government official (b. Werribee, Vict., Austr., Nov. 9, 1895—d. Sydney, N.S.W., Austr., Sept. 2, 1949), was educated at Werribee and worked for the Sydney city council electricity supply department for some years. He was an active trade unionist and for seven years from 1921 was president of the New South Wales Trades and Labour council. From 1928 until 1946 he sat in the federal house of representatives as member for west Sydney, and from 1929 to 1931 he was assistant minister for industry and external affairs in the government of J. H. Scullin. In 1940, while leader of the non-Communist Labour party, he was appointed to the advisory war council, and in the following year his party merged with the Labour party under John Curtin. When Curtin became prime minister in Oct. 1941, Beasley was made minister of supply and shipping. He was vice-president of the executive council from February to July 1945, and from July until December was minister of defense. He was then appointed minister resident in London, and in Aug. 1946 became high commissioner. He was made a privy councillor in 1946.

Beaubien, Joseph, Canadian industrialist and civic official (b. Montreal, Que., Feb. 28, 1865—d. Montreal, March 3, 1949).

Bedford-Jones, Henry James O'Brien (pseud., John Wycliffe), Canadian-born novelist (b. Napanee, Ont., April 29, 1887—d. Beverly Hills, Calif., May 6, 1949).

Beers, Catherine Virginia, U.S. geneticist (b. Chicago, Ill., 1891?—d. Los Angeles, Calif., April 23, 1949).

Beery, Wallace, U.S. stage and screen actor (b. Kansas City, Mo., April 1, 1886—d. Beverly Hills, Calif., April 15, 1949), left school to become an elephant trainer in a circus, then joined his brother Noah as a chorus man in a Broadway stage show. Within a short time he had replaced Raymond Hitchcock as the star of *The Yankee Tourist*. In 1913 he joined the Essanay motion picture studios in Chicago, Ill., and from that year until his death acted in more than 250 pictures. He was a comedian for the Keystone company in the early years in Hollywood, Calif., but by 1917 had begun to be featured in villain roles. In his later career he generally played rough but kindly characters. He won an Academy award in 1931 for his performance in *The Champ* and an Italian award for *Viva Villa* in 1934. Perhaps his best-beloved pictures were those in which he co-starred with Marie Dressler.

Bell, William Bonar, U.S. biologist (b. Milton, Ia., June 2, 1877—d. Washington, D.C., March 30, 1949).

Benelli, Sem, Italian poet and playwright (b. Prato, near Florence, It., Aug. 10, 1877—d. Zoagli, It., Dec. 18, 1949).

Benson, Stuart, U.S. sculptor (b. Detroit, Mich., Jan. 3, 1877—lost at sea, Oct. 17, 1949).

Berard, Christian, French artist and stage designer (b. 1902—d. Paris, Fr., Feb. 12, 1949).

Berdan, John Milton, U.S. educator and author (b. Toledo, O., July 9, 1873—d. New Haven, Conn., April 3, 1949), was graduated from Yale university, New Haven, Conn., in 1896 and received his Ph.D. degree there in 1899. After studying at the Sorbonne in Paris, he taught first at the Polytechnic institute in Toledo, O., then joined the Yale faculty in 1903. He became a professor of English literature in 1923. Although he himself wrote little, his chief contribution being *Early Tudor Poetry, 1485–1547* (1920), he was renowned for his pupils who included four winners of the Pulitzer prize and one winner of the Nobel prize. Among his former students were Sinclair Lewis, Stephen Vincent Benét, John Farrar, Donald Ogden Stewart, Thornton Wilder, Philip Barry, Russell Janney, William C. Bullitt, Arthur Bliss Lane, Cole Porter, Reginald Marsh and Charles P. Taft.

Bergius, Friedrich, German chemist (b. at Goldschmieden near Breslau [Wrocław], Ger., Oct. 11, 1884—d. Buenos Aires, Arg., March 30, 1949), succeeded during World War I in producing synthetic oil from coal. He also discovered the process for transforming wood into sugar. In 1931 he was awarded the Nobel prize for chemistry, jointly with Carl Bosch, for services regarding the invention and development of chemical high pressure methods. (*See* also *Encyclopædia Britannica*.)

Berlin, Meyer (Bar Ilan), Russian-born rabbi and Zionist leader (b. Volozhin, Russia, April 25, 1880—d. Jerusalem, April 17, 1949).

Berryman, Clifford Kennedy, U.S. cartoonist (b. Versailles, Ky., April 2, 1869—d. Washington, D.C., Dec. 11, 1949), was a self-taught artist. He joined the staff of the *Washington Evening Star* on Feb. 1, 1907. A friend of many presidents, most of whom he had lampooned at one time or another, generally in a gentle and humorous style, he was especially close to Theodore Roosevelt, whose nickname of "Teddy" Berryman attached to a bear in one cartoon, creating the still-famous "Teddy bear." Berryman won a Pulitzer prize for cartooning in 1944. He was a member of Washington's Gridiron club from 1906 on. He entered cartooning from the field of draftsmanship, and began his career on the *Washington Post* in 1891.

Biddulph, John Michael Gordon Biddulph, 2nd Baron, British banker (b. Nov. 19, 1869—d. Ledbury, Hereford., Eng., Dec. 7, 1949).

Biffin, Sir Rowland, British agriculturist and botanist (b. 1874?—d. Cambridge, Eng., July 14, 1949).

Bishop, Charles McTyeire, U.S. educator (b. Jefferson, Ashe county, N.C., Feb. 2, 1862—d. Houston, Tex., Nov. 30, 1949).

Bittner, Van Amberg, U.S. labour leader (b. Bridgeport, Pa., March 20, 1885—d. Pittsburgh, Pa., July 19, 1949).

Blair, William Reid, U.S. veterinarian and zoo director (b. Philadelphia, Pa., Jan. 27, 1875—d. New York, N.Y., March 1, 1949).

Bliss, Cornelius Newton, U.S. financier and philanthropist (b. New York city, April 13, 1874—d. New York city, April 5, 1949).

Bloch, Camille, French historian (b. Thillot, Vosges, Fr., July 27, 1865—d. Paris, Fr., Feb. 15, 1949).

Bloom, Sol, U.S. congressman (b. Pekin, Ill., March 9, 1870—d. Bethesda, Md., March 7, 1949), had little formal education, but became a play producer in his early teens, and when only 17 built his first theatre. He was secretary of the group that operated the Midway Plaisance at the World's Columbian exposition in Chicago (1893). He moved to New York, and in 1903 entered the real estate and construction field, building apartment houses and theatres. From 1923 until his death he represented in congress the 19th (the later 20th) congressional district of New York. He was chairman of the foreign affairs committee of the house of representatives through much of President Franklin D. Roosevelt's administration, and as such helped steer much important legislation through the house. Among these measures were the revision of the neutrality act; rearmament; naval expansion; selective service, and lend-lease.

49 OBITUARIES: James Truslow Adams, U.S. historian; Philip Barry, U.S. aywright; Wallace Beery, U.S. actor; Georgi Dimitrov, Bulgarian prime nister; James Forrestal, former U.S. secretary of defense

oomfield, Leonard, U.S. professor of linguistics (b. Chicago, Ill., April 1, 1887—d. New Haven Conn., April 18, 1949).

hnen, Roman, U.S. stage and screen actor (b. St. Paul, Minn., Nov. 24, 1901—d. Hollywood, Calif., Feb. 24, 1949).

nham, Ernie (Tiny), U.S. major baseball pitcher (b. 1913?—d. Pittsburgh, Pa., Sept. 15, 1949).

oth, Charles Gordon, English-born writer (b. Manchester, Eng., Feb. 12, 1896—d. Beverly Hills, Calif., May 22, 1949).

oth, George G., U.S. newspaper publisher and philanthropist (b. Toronto, Ont., Sept. 24, 1864—d. Detroit, Mich., April 11, 1949), was trained as an architect and later became the proprietor of a small ornamental iron foundry. He was married in 1887 to Ellen Warren Scripps, daughter of James E. Scripps, founder of the *Detroit News*, and later joined the paper, first (1888) as its business manager, then successively as its general manager (1897), president (1906) and, after his retirement in 1929, as a member of its board of directors. Booth also formed the Booth Newspapers, Inc., a chain of eight Michigan publications. In 1927 he and his wife established the Cranbrook foundation, to which they contributed more than $20,000,000 for cultural and educational work, including the endowment of schools.

rn, Wolfgang, German-born professor of art, painter and author (b. Breslau, Ger., Oct. 21, 1893—d. New York city, June 15, 1949).

wes-Lyon, Lilian, British poet, cousin of Queen Elizabeth (b. Dec. 22, 1895—d. London, Eng., July 25, 1949).

yle, Sir Algernon (Douglas Edward Harry), British naval officer (b. Oct. 21, 1871—d. London, Eng., Oct. 13, 1949).

and, Charles John, U.S. agricultural economist (b. Lac qui Parle county, Minn., Oct. 24, 1879—d. Washington, D.C., June 29, 1949).

eadon, Sam, U.S. baseball executive (b. New York, N.Y., July 26, 1876—d. St. Louis, Mo., May 10, 1949), attended grade school in New York city and went to St. Louis in 1902 to enter the garage business. A confirmed baseball fan, he contributed $2,000 in 1917 as a minor shareholder in a syndicate purchasing the franchise of the St. Louis Cardinals, National league baseball team. Within three years he was elected president of the club. By continually buying more stock, he eventually (1922) obtained control of the club, which he retained until he sold out in 1947 for a reported $3,000,000.

essart, Felix, German-born character actor (b. Eydtkuhnen, Ger., 1891?—d. Los Angeles, Calif., March 17, 1949).

ewer, Nicholas R., U.S. painter (b. Olmstead county, Minn., June 11, 1857—d. St. Paul, Minn., Feb. 15, 1949).

ewster, William, former U.S. carriage and auto body manufacturer (b. New York city, June 2, 1866—d. Bridgeport, Conn., Nov. 25, 1949).

ooks, Stratton Duluth, former U.S. college president (b. Everett, Mo., Sept. 10, 1869—d. Kansas City, Mo., Jan. 18, 1949).

otherton, Charles Frederick Ratcliff, British chemical manufacturer (b. Gravesend, Kent, Eng., Jan. 17, 1882—d. near York, Eng., July 28, 1949).

oughton, Joseph Melville, U.S. lawyer and senator (b. Raleigh, N.C., Nov. 17, 1888—d. Bethesda, Md., March 6, 1949), was graduated from Wake Forest college, Wake Forest, N.C., in 1910, taught school at Bunn, N.C., worked as a reporter on the *Winston-Salem Journal* (N.C.), then attended Harvard law school. He served in the North Carolina state senate from 1927 to 1929, and in 1936 was keynoter of the state Democratic convention. From 1941 through 1945 he was governor of North Carolina, and was noted as an advocate of the rights of Negroes. He was chairman of the National Planning association's committee of the south. In 1948 he was elected to the U.S. senate.

uce, William George, U.S. publisher (b. Milwaukee, Wis., March 17, 1856—d. Milwaukee, Aug. 13, 1949), founded in 1891 the Bruce Publishing company in Milwaukee. The company became one of the largest publishers of religious books in the world. Bruce was a prominent Roman Catholic layman, having been named a Knight of St. Gregory and awarded (1947) the Laetare medal of the University of Notre Dame and the Vercelli medal of the National Holy Name society.

rleigh, Harry Thacker, U.S. Negro composer and singer (b. Erie, Pa., Dec. 2, 1866—d. Stamford, Conn., Sept. 12, 1949), began choir singing in Erie, Pa., and went to New York in 1892 where he sang in the choir of St. Philip's Protestant Episcopal church. He was accepted for the choir in St. George's Protestant Episcopal church in 1894, after competing for a vacancy with 59 other applicants, and he sang with that choir until 1946. While studying at the National Conservatory of Music in New York, he received encouragement from both Edward Alexander MacDowell and Anton Dvorak. Among his most famous compositions are "Deep River," "Little Mother of Mine," which was a favourite of John McCormack, the Irish tenor, and musical settings for Laurence Hope's poems. He sang twice for King Edward VII, appeared from 1900 to 1925 in the choir of Temple Emanu-El in New York, and sang proficiently in Hebrew, Latin, Italian, French and German, as well as in English. In 1930 he was one of seven Negroes to receive a William E. Harmon award for distinguished achievement.

Burnaby, Davy, British actor (b. Buckland, Herts., Eng., April 7, 1881—d. Angmering, Sus., Eng., April 17, 1949).

Byers, John Frederic, U.S. steel executive and banker (b. Edgeworth, Pa., Aug. 6, 1881—d. New York city, June 11, 1949).

Byron, Frederick Ernest Charles Byron, 10th Baron, British clergyman (b. March 26, 1861—d. near Derby, Eng., June 6, 1949).

Caclamanos, Demetrius, Greek diplomat and editor (b. Nauplia, Gr., 1872—d. London, Eng., June 7, 1949).

Caldwell, Edward, U.S. editor and publishing executive (b. May 26, 1861—d. New York city, Aug. 13, 1949).

Capps, Stephen Reid, U.S. geologist (b. Jacksonville, Ill., Oct. 15, 1881—d. Washington, D.C., Jan. 19, 1949).

Capt, James Clyde, U.S. director of the census bureau (b. Texas, June 12, 1888—d. Bethesda, Md., Aug. 30, 1949).

Carlos, Don (of Bourbon-Sicily), Spanish prince (b. 1870?—d. Seville, Sp., Nov. 11, 1949).

Casanova, José Manuel, Cuban senator and industrialist (b. Bahia Honda, Pinar del Río, Cuba—d. Havana, Cuba, Dec. 22, 1949).

Cassidy, Sir Maurice Alan, British physician (b. Lancaster, Eng., Feb. 29, 1880—d. London, Eng., Oct. 22, 1949).

Cerdan, Marcel, French boxer (b. Sidi-bel-Abbes, Alg., July 22, 1916—d. São Miquel, Azores, Oct. 28, 1949), won the world middleweight boxing championship by defeating Tony Zale on Sept. 21, 1948. In March 1949 he knocked out Dick Turpin, the British champion. He lost his world title to Jake La Motta in Detroit, Mich., in June; he was flying to New York to fight La Motta again when his plane crashed in the Azores. In the 100 fights of his career Cerdan had lost only 2 outright and had been disqualified in 2. He had an immense following in France and his popularity compared with that of Georges Carpentier.

Charlemont, James Edward Caulfeild, 8th Viscount, British government official (b. London, Eng., May 12, 1880—d. Newcastle, County Down, N.Ire., Aug. 30, 1949).

Chesney, Arthur, British actor (b. 1882?—d. London, Eng., Aug. 27, 1949).

Chester, Sir George, British labour leader and Bank of England official (b. Jan. 16, 1886—d. Earls Barton, Northant., Eng., Jan. 16, 1949).

Chorley, Edward Clowes, English-born clergyman (b. England, 1865?—d. Cold Spring, N.Y., Nov, 2, 1949).

Christie, George, U.S. actor (b. Philadelphia, Pa., Feb. 27, 1873—d. near Toms River, N.J., May 20, 1949).

Chrysanthos Philippidis, former Greek Orthodox archbishop of Athens (b. Komotini, Thrace, Gr., March 3, 1881?—d. Athens, Gr., Sept. 29, 1949).

Chuchaga Tocornal, Miguel, Chilean diplomat and lawyer (b. Santiago, Chile, May 4, 1869—d. Santiago, May 3, 1949).

Churchill, Alfred Vance, U.S. painter and art critic (b. Oberlin, O., 1864—d. Northampton, Mass., Dec. 29, 1949).

Clapp, George Hubbard, U.S. industrialist (b. Allegheny, Pa., 1858?—d. Pittsburgh, Pa., March 31, 1949).

Clark, Alson Skinner, U.S. painter (b. Chicago, Ill., March 25, 1876—d. Pasadena, Calif., March 22, 1949).

Clark, Buddy, U.S. radio singer (b. 1905?—d. Los Angeles, Calif., Oct. 1, 1949).

Clark, Ellery Harding, U.S. lawyer, former Olympic track and field champion (b. Roxbury, Mass., March 13, 1874—d. aboard train in Massachusetts, July 27, 1949).

Clynes, John Robert, British politician (b. Oldham, Lancs., Eng., March 27, 1869—d. London, Eng., Oct. 23, 1949).

Cobham, John Cavendish Lyttleton, 9th Viscount, British government official (b. Oct. 23, 1881—d. Stourbridge, Worcs., Eng., July 31, 1949).

Coffey, Robert Lewis, Jr., U.S. congressman (b. Chattanooga, Tenn., Oct. 21, 1918—d. Albuquerque, N.M., April 20, 1949).

Cohen, Alfred Morton, U.S. lawyer (b. Cincinnati, O., Oct. 19, 1859—d. Cincinnati, March 9, 1949), was educated at the Cincinnati Law school and practised law in Cincinnati throughout his career. He was elected to the city council at the age of 25, and in 1896 was elected to the Ohio senate. He was a presidential elector on six occasions. From 1901 he was a member of the board of governors of Hebrew Union college in Cincinnati, and was its chairman from 1918 to 1937. He was international president of the Independent Order of B'nai B'rith from 1925 to 1938, becoming its honorary president for life after that date.

Colpitts, Edwin Henry, U.S. inventor and scientist (b. Pointe de Bute, N.B., Jan. 19, 1872—d. Orange, N.J., March 6, 1949).

Comstock, F. Ray, U.S. theatrical producer (b. Buffalo, N.Y., 1880—d. Boston, Mass., Oct. 15, 1949).

Comstock, William A., U.S. former governor of Michigan (b. Alpena, Mich., July 2, 1877—d. Alpena, June 16, 1949).

Connell, Richard, U.S. author (b. Poughkeepsie, N.Y., Oct. 17, 1893—d. Beverly Hills, Calif., Nov. 22, 1949).

Cook, Stanley Arthur, British Hebrew scholar (b. King's Lynn, Norf., Eng., April 12, 1873—d. Cambridge, Eng., Sept. 26, 1949).

Copeau, Jacques, French dramatist (b. Paris, Fr., Feb. 4, 1879—d. Beaune, Côte d'Or, Oct. 21, 1949), was educated at the Lycée Condorcet, Paris. One of the founders of the *Nouvelle Revue Française* (1908), he was a friend of André Gide and Jacques Rouché and wrote a stage version of Fyodor Dostoievski's *Brothers Karamazov* for the latter. He founded the Théâtre du Vieux Colombier, Paris (1913), and apart from a break during World War I produced plays there until he retired in 1924. He continued, however, to give special performances with a little group later known as La Compagnie des Quinze, whom he trained. *The Winter's Tale, Le Pacqueboat Ténacité, Bajazet,* were among his major productions.

Cousins, Arthur George, British publisher (b. 1882—d. Henley-on-Thames, Oxon., Eng., Sept. 25, 1949).

Coverdale, William Hugh, Canadian-born industrialist (b. Kingston, Ont., Jan. 27, 1871—d. New York, N.Y., Aug. 10, 1949).

Crosson, Joe, U.S. "bush pilot" (b. Minneapolis, Minn.—d. Seattle, Wash., June 21, 1949).

Cuppy, William Jacob (Will), U.S. author and critic (b. Auburn, Ind., Aug. 23, 1884—d. New York city, Sept. 19, 1949).

Curwen, Patric, British actor (b. London, Eng., Dec. 14, 1884—d. Rondebosch, Capetown U. of S.Af., May 31, 1949).

Cyril II, patriarch of Armenian Apostolic Orthodox Church in Jerusalem (d. Bierut, Leb., Oct. 28, 1949).

Damaskinos (George Papandreou), archbishop of Athens and primate of Greece (b. Dorvitsa, Gr., March 3, 1891—d. Psychiko, near Athens, Gr., May 20, 1949), was educated at the high school at Karditsa and the University of Athens and was ordained a priest in 1917. In 1922 he was elected bishop of Corinth. His election as archbishop of Athens and primate of Greece by the Holy Synod of the Greek Orthodox Church was annulled in 1938 by Premier John Metaxas for opposition to the regime, and he was exiled to a mountain monastery. In 1942, during the German-Italian occupation of Greece, he was invited to assume the office to which he had been elected, and he rapidly emerged as a spiritual leader. During the civil war between the royalists and the Communists and Communist-controlled groups that followed the liberation of Greece in 1944, Archbishop Damaskinos was selected late that year to serve as regent of Greece. In Sept. 1945 it was decided that before a plebiscite to determine whether Greece should be a monarchy or a republic, a general election should be held. Two months later, in Athens, an agreement was reached to hold the election on March 31, 1946, but Damaskinos, against the opposition of the king, suggested postponing the plebiscite to 1948. The election resulted in a decisive royalist victory, which was confirmed by the plebiscite of Sept. 1, 1946. On Sept. 27 King George returned to the country and Damaskinos thereafter took no direct part in political life.

Danforth, William Clark, U.S. gynecologist (b. Chicago, Ill., July 30, 1878—d. Evanston, Ill., Nov. 11, 1949).

Daryngton, Herbert Pike Pease, 1st Baron, British ecclesiastical commissioner (b. May 7, 1867—d. London, Eng., May 10, 1949).

Davenport, Harry, U.S. stage and screen character actor (b. New York, N.Y., Jan. 19, 1866—d. Hollywood, Calif., Aug. 9, 1949), began his stage career at the age of five and was still acting up to the time of his death. From 1936 to 1949 he appeared in 113 films, among them in the role of Dr. Mead in *Gone with the Wind* and in that of Col. Skeffington in *Kings Row.* He was one of ten children of E. L. Davenport, all of whom had successful acting careers.

Davis, Royall Oscar Eugene, U.S. chemist and soil expert (b. Newberry, S.C., July 11, 1880—d. Washington, D.C., Oct. 30, 1949).

Delavan, Paul Tuttle, U.S. astronomer (b. 1886?—d. Fernandina, Fla., Feb. 12, 1949).

De Los Rios, Fernando, Spanish educator and diplomat in exile (b. Ronda (Malaga), Sp., 1879?—d. New York city, May 31, 1949).

Dennett, Tyler, U.S. historian and educator (b. Spencer, Wis., June 13, 1883—d. Geneva, N.Y., Dec. 29, 1949), was graduated from Williams college, Williamstown, Mass., in 1904. He studied further at Union Theological seminary, New York city, and Johns Hopkins university, Baltimore, Md. He was chief of the division of publications in the U.S. state department from 1924 to 1929 and the department's historical adviser from 1929 to 1931, when he became professor of international relations at Princeton university, Princeton, N.J. In 1934 he was inducted as president of Williams college, and he resigned the post in 1937. He won a Pulitzer prize for his biography of John Hay in 1933.

De Pencier, Adam Urias, Canadian retired Anglican archbishop (b. Burritt's Rapids, Ont., Feb. 9, 1866—d. Vancouver, B.C., May 30, 1949).

De Salis, John Eugene De Salis, 8th Count, British member of diplomatic service and army officer (b. 1891—d. London, Eng., June 15, 1949).

Descaves, Lucien, French novelist (b. Paris, Fr., March 18, 1861—d. Paris, Sept. 6, 1949), entered journalism under the guidance of Alphonse Daudet. He became famous through the publication of his fifth novel, *Sous-offs* (1889), which involved him in a lawsuit with the state; he was accused of insulting the army but won his case. The Paris Commune inspired two of his novels, *La Colonne* (1902) and *Philémon, vieux de la vieille* (1913). In 1903, he was elected one of the 10 original members of the newly founded Académie Goncourt. In later life he turned toward the theatre where he had several successes, among them *Oiseaux de passage* (1904, in collaboration with Maurice Donnay) and *L'attentat* (1906, with Alfred Capus). He also published a number of books on international affairs. His last work was a book of memoirs entitled *Souvenirs d'un ours.*

De Silva, Angelita (Lady Martin-Harvey), British actress (b. Aug. 28, 1868—d. East Sheen, Sur., Eng., May 29, 1949).

Desmond, William, U.S. stage and motion-picture actor (b. New York, N.Y., 1878?—d. Hollywood, Calif., Nov. 2, 1949), was a matinee star on Broadway and in Los Angeles, Calif., before beginning his silent motion-picture career in 1915. His stage successes included *Quo Vadis, Bird of Paradise, Ben Hur, Alias Jimmy Valentine* and *Sign of the Cross.* Among his silent screen plays were *Ruggles of Red Gap, The Song of the Gringo, Nevada* and other movies of adventure and outdoor life. He played opposite such feminine stars as Billie Burke, Esther Ralston and Laura La Plante.

Devries, Herman, U.S. opera singer, teacher and critic (b. New York city, Dec. 25, 1858—d. Chicago, Ill., Aug. 24, 1949).

Díaz Arosemena, Domingo, president of Panamá (b. Panamá, then of the department of Panamá, United States of Colombia, June 25, 1875—d. Panamá, Aug. 23, 1949), was educated at Seton Hall college, South Orange, N.J., but returned to Panamá when his family's fortune was imperilled by the collapse of the French Canal company that had begun the Panama canal. He fought with the Liberal forces in the revolution which ended June 24, 1900, and when Panamá had won its independence from Colombia he entered the real-estate and cattle-raising fields in Panamá, building a great fortune. A champion of the underprivileged, especially the small farmers, he founded the Doctrinal Liberal party and remained its leader for many years. He was elected president in 1948. He was a lifelong friend of the United States in inter-American affairs.

Dickinson, Hobart Cutler, U.S. physicist and traffic authority (b. Bangor, Me., Oct. 11, 1875—d. Washington, D.C., Nov. 27, 1949).

Diefenbach, Elmer G., U.S. financier (b. Ebenezer, N.Y., Aug. 4, 1893—d. New York city, Feb. 27, 1949).

Dimitrov, Georgi, Bulgarian prime minister (b. Kovachevtsi, near Radomir, Bulg., June 18, 1882—d. near Moscow, U.S.S.R., July 2, 1949), joined in 1902 the Social Democratic party which in the following year divided into reformist or "broad" and revolutionary or "narrow" wings. Dimitrov sided with the "narrow" wing which followed the Russian bolshevists. In 1913 he was elected deputy to the Bulgarian national assembly, and four years later was imprisoned for sedition for opposing Bulgaria's participation in World War I. In 1919 the "narrow" Social Democrats reorganized themselves as the Bulgarian Workers' (Communist) party with Dimitrov and Vasil Kolarov as its leaders. By the end of 1920 Dimitrov reached Russia to take part in the third congress of the Comintern (1921), which elected him a member of its executive committee. Escaping into Yugoslavia after an abortive attempt to overthrow the Bulgarian government in Sept. 1923, Dimitrov was tried in his absence and sentenced to death. He lived in Vienna as head of the Balkan section of the Comintern until 1929 when he was transferred to Berlin as leader of the central European section. On March 9, 1933, he was arrested in the German capital and charged with complicity in the burning of the reichstag. Though acquitted on Dec. 23, 1933, he was released from prison only on Feb. 27, 1934 when he left for Moscow. In 1935 he was appointed secretary-general of the Comintern and held office until its official dissolution in 1943. In 1937 he was elected deputy of the supreme soviet.

He returned to Bulgaria in 1945 to transform the country into a Communist republic, and on Nov. 22, 1946, was appointed prime minister. In April 1949 it was announced that he had gone to the U.S.S.R. for medical treatment. He died three months later in the Barvikha sanatorium, near Moscow.

Dix, Richard (Ernest Carlton Brimmer), U.S. actor (b. St. Paul, Minn., July 18, 1895—d. Hollywood, Calif., Sept. 20, 1949).

Donahey, James Harrison, U.S. cartoonist (b. West Chester, O., April 8, 1875—d. Aurora, O., June 1, 1949), studied drawing and sculpture at the Cleveland School of Art and won a job as illustrator for the *Cleveland World* on the strength of busts he had made of William McKinley and William Jennings Bryan. He joined the *Cleveland Plain Dealer* in 1900, and drew cartoons almost daily for half a century. Many of his earlier cartoons were republished by the old *Literary Digest.*

Dorrance, George Morris, U.S. surgeon (b. Bristol, Pa., April 24, 1877—d. Philadelphia, Pa., Nov. 21, 1949).

Doubleday, Nelson, U.S. book publisher (b. Brooklyn, N.Y., June 16, 1889—d. Oyster Bay, L.I., N.Y., Jan. 11, 1949), entered the book publishing field as a young man, assisting in his father's firm, Doubleday, Page & Co. It became Doubleday, Doran in 1927 and Doubleday & Co. in 1945. Nelson Doubleday was president of Doubleday, Doran after 1928, and in 1934 upon the death of his father was made chairman of the board, continuing in that position after he resigned the presidency in 1946.

Under his leadership the firm developed into the largest book business of its kind in the world. He developed six book clubs, of which the Literary Guild of America and the Doubleday One Dollar Book club acquired the largest membership of any book clubs in the world. He was president of other Doubleday publishing interests, including Nelson Doubleday, Inc., Windward House, Inc., Garden City Publishing Company, Inc., The Blakiston company, the Country Life Press corporation and the Childrens Literary Guild, Inc.

Doubleday, Russell, U.S. author, editor and publisher (b. Brooklyn, N.Y., May 26, 1872—d. Glen Cove, L.I., N.Y., June 14, 1949), was associated with his brother, Nelson Doubleday, in the publishing firm that bore the family name. He served in the naval militia in the Spanish-American War, and from 1909 to 1912 was advertising manager of the publishing firm. He was later its vice-president, secretary and a director, and for much of his career was director of the editorial department. For some time after 1929 he edited the magazine *World's Work.* His books included *A Gunner Aboard the Yankee* (1898); *Cattle Ranch to College* (1899); *A Year in a Yawl* (1901); *Stories of Inventors* (1904); *Photography Is Fun* (1938); *Long Island* (1939); and *Tree Neighbors* (1940).

Dow, Willard Henry, U.S. chemist and chemical manufacturer (b. Midland, Mich., Jan. 4, 1897—d. near London, Ont., March 31, 1949).

Drayton, Alfred, British actor and comedian (b. Brighton, E. Sus., Eng., Nov. 1, 1881—d. London, Eng., April 26, 1949).

Drummond, Flora, British suffragette leader (b. Manchester, Lancs., Eng.—d. Carradale, Argyllshire, Scot., Jan. 17, 1949).

Dullin, Charles, French actor-producer (b. Yenne, Savoie, May 12, 1885—d. Paris, Fr., Dec. 11, 1949).

Dunne, John William, British aviation pioneer and philosopher (b. 1875—d. Banbury, Oxon., Eng., Aug. 24, 1949).

Dunstan, Sir Wyndham, British chemist (b. Chester, Ches., Eng., 1861—d. Farnham Common, Bucks., Eng., April 20, 1949).

Du Parcq, Herbert du Parcq, Baron (life peer), of Grouville, Jersey, British lord of appeal (b. St. Helier, Jersey Island, Channel Islands, Aug. 5, 1880—d. London, Eng., April 27, 1949).

Eames, Charles H., U.S. educator (b. Andover, Mass., Nov. 17, 1875—d. Billerica Center, Mass., Jan. 29, 1949).

Eason, Sir Herbert Lightfoot, British ophthalmic surgeon (b. July 15, 1874—d. London, Eng., Nov. 2, 1949).

Ehringhaus, John Christoph Blucher, U.S. lawyer, former governor of North Carolina (b. Elizabeth City, N.C., Feb. 5, 1882—d. Raleigh, N.C., July 31, 1949).

Ekblaw, Walter Elmer, U.S. geographer and explorer (b. Rantoul, Ill., March 10, 1882—d. North Grafton, Mass., June 5, 1949).

Elvin, Herbert Henry, British labour leader (b. Eckington, Derby., Eng., 1874?—d. Stanmore, Mdx., Eng., Nov. 9, 1949).

Ensor, James, Belgian painter (b. Ostend, Belg., April 13, 1860—d. Ostend, Nov. 19, 1949), the son of an English father and a Flemish mother, he later took over their shop in Ostend for the sale of sea shells and souvenirs. With the exception of three years at the Brussels academy he lived in Ostend throughout his life. He was essentially a painter of the fantastic and macabre in the persistent Flemish tradition of Jerom Bosch and Pieter Bruegel. His most ambitious work was "Entry of Christ into Brussels" (1888), a huge canvas packed with grotesque figures which he refused to sell. He painted also excellent seascapes, interiors and still-life subjects. He led an uneventful life and during World War II rumours of his death enabled him to hear obituaries broadcast in his honour. An exhibition of his work was held at the National gallery, London, in 1946.

Eriksson, Herman Gustav, former Swedish ambassador to U.S. (b. Uppsala, Swed., 1892—d. near Stockholm, Swed., Feb. 18, 1949).

Evangelides, Timothy (Timothy of Rhodes), Greek Orthodox prelate (b. Island of Mytilene [Lesbos], 1880?—d. Istanbul, Turk., Oct. 6, 1949).

Eysler, Edmund S., Austrian composer (b. Vienna, Aus., March 12, 1874—d. Vienna, Oct. 4, 1949).

Ferrari, Febo, Italian-born sculptor (b. Pallanza, It., Dec. 4, 1865—d. Short Beach, Conn., Aug. 13, 1949).

Fievez, Alexander Helenus Johannes Leopoldus, Dutch army officer and government official (b. Zutphen, Neth., June 22, 1902—d. The Hague, Neth., April 30, 1949).

Fitzsimmons, Cortland, U.S. mystery story writer (b. Richmond Hill, L.I., N.Y., June 19, 1893—d. Los Angeles, Calif., July 25, 1949).

Ford, Harriet French (Mrs. Fordé Morgan), U.S. playwright (b. Seymour, Conn., 1863?—d. New York city, Dec. 12, 1949).

Forrestal, James, former U.S. secretary of defense (b. Beacon, N.Y., Feb. 15, 1892—d. Bethesda, Md., May 22, 1949), was the son of an Irish immigrant. He studied at Dartmouth college, Hanover, N.H., and at Princeton university, and in 1916 began selling bonds for the banking firm of William A. Read & Co., subsequently Dillon, Read & Co., of which he was made a partner in 1923, vice-president in 1926 and president in 1938. He served in naval aviation in World War I.

Forrestal left his $180,000-a-year position in June 1940 to become one of Pres. F. D. Roosevelt's administrative assistants at $10,000 a year. In Aug. 1940 he was named under secretary of the navy with especial responsibility for procurement and production. He was appointed secretary of the navy in May 1944, following the death of Secretary Frank Knox. During the war he made many trips to the combat zone and repeatedly came under fire.

Upon the enactment of the National Security Act of 1947, Forrestal was appointed the first secretary of defense. Throughout the ensuing months he held repeated sessions with the civilian chiefs of the army, the navy and the air force and with the joint chiefs of staff, progressively effecting co-ordination looking toward eventual unification of many of the functions of the three services. He resigned as secretary, effective March 28, 1949, and shortly afterward entered the U.S. naval hospital at Bethesda, Md., suffering from what navy doctors called "a severe depression of the type seen in operational fatigue during the war." His condition improved, but on May 22 he plunged through a window to his death in what was termed a "sudder fit of despondency."

oster, Luther Hilton, U.S. educator (b. Clover, Va., 1888?—d. Petersburg, Va., July 5, 1949).

rance, Charles Vernon, British actor (b. Bradford, Eng., June 30, 1868—d. Gerrards Cross, Eng., April 13, 1949).

raser, Malcolm, Canadian-born artist and illustrator (b. Montreal, Que., April 19, 1869—d. Brookhaven, L.I., N.Y., June 12, 1949), achieved prominence as an illustrator for such magazines as *Century*, *St. Nicholas* and *Ladies' Home Journal*. He served with the Blue Devils in the French army in World War I, and was later a captain in the American Red Cross. He was known for his drawings for several of the Bret Harte stories, for the series of 56 symbolic paintings that he donated as a war memorial to the city of Ormond, Fla., and for several murals.

reeman, John ("Bucky"), U.S. baseball player, manager and coach (b. Catasauqua, Pa., 1872?—d. Wilkes-Barre, Pa., June 25, 1949).

ried, George, U.S. merchant marine captain (b. Worcester, Mass., Aug. 10, 1877—d. Yonkers, N.Y., July 3, 1949).

Friesz, Othon, French painter (b. Le Havre, Fr., 1879—d. Paris, Fr., Jan. 11, 1949).

Fuschini, Giuseppe, Italian government official (b. Ravenna, It., 1884?—d. Rome, It., July 9, 1949).

Gaige, Crosby, U.S. theatrical producer and editor (b. Nelson, N.Y., July 26, 1882—d. Peekskill, N.Y., March 8, 1949).

Garner, Curtis S., U.S. engineer (b. Shelby Grove, Tenn., 1876?—d. Ben Avon, Pa., April 11, 1949).

Gathorne-Hardy, Sir (John) Francis, British army officer (b. Jan. 14, 1874—d. Marlborough, Wilts., Eng., Aug. 21, 1949).

Gendreau, Joseph Ernest, Canadian physician, educator and cancer specialist (b. Coaticook, Que., 1880?—d. Montreal, Que., June 5, 1949), studied at St. Hyacinthe seminary, then received his M.D. and Ph.D. degrees at the University of Paris. He was also licentiate in sciences of the Sorbonne, Oxford university and the University of Leipzig. The first student of Marie Curie, he founded and became director of the Radium Institute of Cancer Research in Montreal. In 1941 he became vice-president of the American Radium society. He served as president of the Canadian Association of Radiologists and of the Canadian Chemical association, and was a fellow of the Royal College of Physicians (Can.).

Giannini, Amadeo Peter, U.S. banker (b. San Jose, Calif., May 6, 1870—d. San Mateo, Calif., June 3, 1949), the son of an Italian immigrant, entered the banking business when a legacy from his father-in-law made him a director of the Columbus Savings and Loan society in San Francisco. He founded the Bank of Italy in that city, and concentrated on making loans to small businesses. After the San Francisco earthquake, April 18, 1906, he salvaged the resources of the bank and promptly reopened, making loans for the rebuilding of the city. He anticipated the panic of 1907, to meet which he accumulated large stocks of gold. He bought up many small banks, making them branches of his Bank of Italy, and in 1919 organized the Bancitaly corporation, which was succeeded in 1928 by Transamerica corporation as a holding company for his financial interests. In 1929 he purchased the Bank of America, and in 1930 consolidated his banks into the Bank of America National Trust and Savings association, which at the end of 1948 had 517 branches in California and others abroad, and assets of more than $6,000,000,000. In 1949 Giannini was defending his properties in a federal reserve board hearing, on the question of whether Transamerica was in violation of the anti-trust laws through the establishment of a credit monopoly.

Gillespie, W. Fulton, Canadian surgeon (b. Manilla, Ont., May 22, 1891—d. Edmonton, Alta., Dec. 3, 1949).

Giraud, Henri Honoré, French general (b. Paris, Fr., Jan. 18, 1879—d. Dijon, Fr., March 11, 1949), was graduated from the St. Cyr Military academy and served as a captain of Zouaves in World War I. Taken prisoner, he subsequently escaped from a German prison camp—a feat he repeated in World War II. He served as second in command to Marshal Hubert Lyautey in the Rif war in North Africa in 1925–26, and was commander of the unit that received the surrender of the leader of the warriors, Abdel Krim. In World War II he was named commander of the 7th army group in northern France. Captured by the Germans in 1940, he escaped in April 1942 and reported to the Vichy government. He soon fled France, however, and in Nov. 1942, at the start of the Allied invasion of North Africa, he became commander in chief of all French armed forces in North Africa. After the assassination of Admiral Jean Darlan the following month, he became high commissioner of French North Africa. From June to November 1943 he was co-president, with Charles de Gaulle, of the French Committee of National Liberation, but he resigned this post and in April 1944 his position as commander in chief was abolished and he was retired. After the war he was elected a deputy to the constituent assembly and served one term.

Golay, Maurice, Swiss banker (b. Geneva, Switz., Aug. 29, 1891—d. Basle, Switz., Nov. 18, 1949).

Gollan, Sir Henry Cowper, British colonial official (b. Coquimbo, Chile, Jan. 8, 1868—d. London, Eng., Aug. 5, 1949).

Goodman, Paul, British Zionist worker and author (b. Tartu [Dorpat], Est., April 10, 1875—d. London, Eng., Aug. 13, 1949).

Gore, Thomas Pryor, U.S. attorney and senator (b. Webster county, Miss., Dec. 10, 1870—d. Washington, D.C., March 16, 1949).

Gould, Charles Newton, U.S. geologist (b. Lower Salem, O., July 22, 1868—d. Norman, Okla., Aug. 13, 1949).

Gour, Sir Hari Singh, Indian educator (b. Saugor, Central Provinces, India, Nov. 26, 1872—d. Saugor, Dec. 25, 1949).

Grabski, Stanisław, Polish government official (b. Borów, near Łowicz, Pol., April 5, 1871—d. Sulejówek, near Warsaw, Pol., May 6, 1949).

Graham, Frank Dunstone, U.S. economist (b. Halifax, N.S., Jan. 1, 1890—d. Princeton, N.J., Sept. 24, 1949).

Graham, Morland, British stage and screen actor (b. Glasgow, Scot., Aug. 8, 1891—d. London, Eng., April 8, 1949).

Grant, Robert J., U.S. director of the mint, 1923–33 (b. Nova Scotia, 1862?—d. Pasadena, Calif., Nov. 24, 1949).

Gratke, Charles (Edward), U.S. newspaperman (b. Astoria, Ore., Aug. 11, 1901—d. near Bombay, India, July 12, 1949), worked on his father's *Astoria Evening Budget* (Ore.), then on the *Detroit News*, the *Portland Oregonian* and the *Oregon City Enterprise*. He became foreign editor of the *Christian Science Monitor* in 1937, after having served on that paper's foreign staff in Berlin during the rise of Hitler. He won the annual award of Sigma Delta Chi, national journalism fraternity, in 1946 for his survey of Germany under the U.S. occupation, and in 1947 made a new and similar survey at the invitation of the secretary of the army. He was one of 13 U.S. newspaper and radio personalities killed when a Dutch air liner, returning them from a survey of Indonesia, crashed.

Graves, George, British comedian (b. London, Eng., Jan. 1, 1876—d. London, April 2, 1949).

Greacen, Edmund W., U.S. painter (b. New York city, 1877—d. White Plains, N.Y., Oct. 4, 1949).

Greaves, Leonard, British painter (b. London, Eng., May 13, 1918—d. France, 1949).

Green, George A. L., South African journalist and editor (b. Portsmouth, Hants., Eng., 1868—d. Capestown, U. of S.Af., Aug. 10, 1949).

Greenwood, Major, British epidemiologist (b. Aug. 9, 1880—d. London, Eng., Oct. 5, 1949).

Griffin, William, U.S. editor and publisher (b. Wheaton, Ill., Dec. 25, 1897—d. New York city, June 28, 1949).

Griniger, Alexander, U.S. artist and theatrical designer (b. Albert Lea, Minn., Jan. 26, 1865—d. Briarcliff Manor, N.Y., March 8, 1949).

Guggenheim, Solomon R., U.S. mining magnate and financier (b. Philadelphia, Pa., Feb. 2, 1861—d. near Port Washington, L.I., N.Y., Nov. 3, 1949), was one of seven Guggenheim brothers, who together amassed a family fortune in many disparate fields. Though Solomon Guggenheim was especially identified with nitrates and copper, he presumably helped participate in family discussions on business affairs of their interests in other fields of mining and finance as well, since tradition had it that any of the brothers could veto any business proposition, and action would be taken only by unanimous vote of the brothers. Two companies with which he was especially identified were the Kennecott Copper corporation and the American Smelting and Refining company. Though united in business affairs, the brothers acted independently in their various philanthropies. Thus, while other Guggenheim brothers set up foundations for the advancement of aviation and for fellowships for writers, Solomon established a million-dollar foundation to promote art and art appreciation, especially with reference to nonobjective art. He himself had amassed a large collection of representative works of modern art.

Guilford, Frederick George North, 8th Earl of, British civil engineer (b. Nov. 19, 1876—d. Menton, Fr., Nov. 9, 1949).

Haines, Elwood Lindsay, U.S. Protestant Episcopal bishop (b. Philadelphia, Pa., March 12, 1893—d. Los Angeles, Calif., Oct. 28, 1949).

Hajir, Abdul Hussein, Iranian statesman (b. 1897?—d. Tehran, Iran, Nov. 5, 1949), was prime minister from June 13 to Nov. 8, 1948. He was finance minister in the cabinet of Ahmad Ghavam-es-Saltaneh, 1946–47, and had previously held the portfolios of interior, commerce and industry, and roads and communications. As prime minister he enforced the strict observance of Ramadan and was afterward minister at court. On Nov. 4, 1949, while attending a religious ceremony at the Sapah Salar mosque, Tehran, he was shot at close range and died the following day.

Halsey, Sir Lionel, British officer of the royal navy (b. Feb. 26, 1872—d. Biggleswade, Beds., Eng., Oct. 26, 1949).

Halstead, Albert, former member U.S. consular service, newspaper editor (b. Cincinnati, O., Sept. 19, 1867—d. Old Lyme, Conn., May 20, 1949).

Hammerton, Sir John Alexander, British editor and author (b. Alexandria, Scot., 1871—d. London, Eng., May 12, 1949).

Hammond, John Lawrence Le Breton, British historian and journalist (b. Drighlington, Yorks., Eng., July 18, 1872—d. Hemel Hempstead, Herts., Eng., April 7, 1949). (*See* biography in *Encyclopædia Britannica.*)

Handley, Tommy, British radio comedian (b. Liverpool, Eng., Jan. 12, 1896—d. London, Eng., Jan. 9, 1949).

Hannegan, Robert Emmet, former U.S. postmaster general (b. St. Louis, Mo., June 30, 1903—d. St. Louis, Oct. 6, 1949), studied law at St. Louis university and established his law practice in St. Louis. He also became active in ward politics and in 1933 took over the post of Democratic committeeman in St. Louis' 21st ward. That same year he became chairman of the Democratic city central committee. In 1942, he was offered the post of collector of internal revenue in the eastern district of Missouri, which he at first declined but later accepted, and the following year was named U.S. commissioner of internal revenue. On Jan. 22, 1944, he was elected chairman of the Democratic national committee. He was a leading strategist in the fourth-term campaign for Pres. F. D. Roosevelt. He served as postmaster general under Pres. Harry S. Truman, but resigned from the cabinet and from the chairmanship of the national Democratic committee on Nov. 25, 1947. At that time he, as head of a syndicate, purchased the majority interest in the St. Louis Cardinals baseball club, but Hannegan stepped down as president of the Cardinals in Jan. 1949, selling his interest to Fred M. Saigh, Jr., for a reputed $1,000,000.

Hansen, William Webster, U.S. physicist (b. Fresno, Calif., May 27, 1909—d. Palo Alto, Calif., May 23, 1949).

Hapgood, Powers, U.S. labour union leader (b. Chicago, Ill., Dec. 28, 1899—d. Indianapolis, Ind., Feb. 4, 1949).

Harald Christian Frederick, Danish prince (b. Charlottenlund, Den., Oct. 8, 1876—d. Copenhagen, Den., March 30, 1949), was a brother of King Christian X of Denmark and King Haakon VII of Norway.

Harding, Malcolm Taylor MacAdam, former Canadian Anglican archbishop (b. Barkway, Herts., Eng., Jan. 20, 1863—d. Toronto, Ont., April 21, 1949).

Harlan, Byron Berry, U.S. tax court judge (b. Greenville, O., Oct. 22, 1886—d. Cogan Station, Pa., Nov. 11, 1949).

Harriman, Joseph Wright, U.S. banker (b. Belleville, N.J., Jan. 31, 1867—d. Sea Cliff, L.I., N.Y., Jan. 23, 1949).

Harrington, Philip, U.S. subway and superhighway engineer (b. Worcester, Mass., Jan. 28, 1886—d. West Palm Beach, Fla., Feb. 11, 1949).

Harris, Frederic Robert, U.S. naval officer (b. New York city, April 10, 1875—d. New York city, July 20, 1949).

Harvey, Horace, Canadian jurist (b. Elgin Co., Ont., Oct. 1, 1863—d. Edmonton, Alta., Sept. 9, 1949).

Haslehurst, Ernest William, British water-colour artist (b. Walthamstow, Ess., Eng., 1886—d. Blackheath [London suburb], Eng., July 3, 1949).

Hay, Will (William Hay Thompson), British comedian (b. Eng., Dec. 6, 1888—d. London Eng., April 18, 1949).

Heath, S. Burton, U.S. newspaperman (b. Lynn, Mass., Dec. 20, 1898—d. near Bombay, India, July 12, 1949), began newspaper work while a schoolboy as a hand compositor on a weekly in Bradford, Vt. He served in the infantry in World War I, and later worked on the staff of the *Burlington Free Press* (Vt.), while attending the University of Vermont, graduating in 1926. He later joined the *New York World Telegram* and in 1940 was awarded the Pulitzer prize for reporting. In 1942 he joined the Newspaper Enterprise association, and for the balance of his career the N.E.A. syndicate distributed his feature stories to more than 600 newspapers. He was one of 13 newspaper and radio persons who were killed in the crash of a Dutch air liner that was returning them from a survey of postwar Indonesia.

Heggen, Thomas Orlo, U.S. author (b. Fort Dodge, Ia., Dec. 23, 1919—d. New York, N.Y., May 19, 1949), was graduated from the University of Minnesota, Minneapolis. He worked for *Reader's Digest*, resigning to enlist in the navy in 1941 immediately after the Pearl Harbor attack. During his five-year navy career he spent most of his service at sea, one year in the Atlantic and the rest in the Pacific, participating in four major Pacific campaigns. Some of the original material for his novel, *Mister Roberts*, first appeared in the *Atlantic Monthly*. It sold nearly 1,000,000 copies in novel form and several thousand additional copies in the form of a play, of which he was coauthor with Joshua Logan. The play, concerning life aboard a navy supply ship, was an outstanding Broadway hit. Heggen was found drowned in the bathtub of his home in New York city.

Heil, Julius Peter, U.S. industrialist (b. Dusemond, Ger., 1876—d. Milwaukee, Wis., Nov. 30, 1949), was taken to Wisconsin as an infant, attended rural school, then learned the mechanic's trade and opened a machine shop. In 1901 he founded the Heil company of Milwaukee, which eventually employed more than 2,000 persons in the manufacture of water systems, oil heaters, tanks and heavy equipment. He served as governor of Wisconsin from 1939 through 1942.

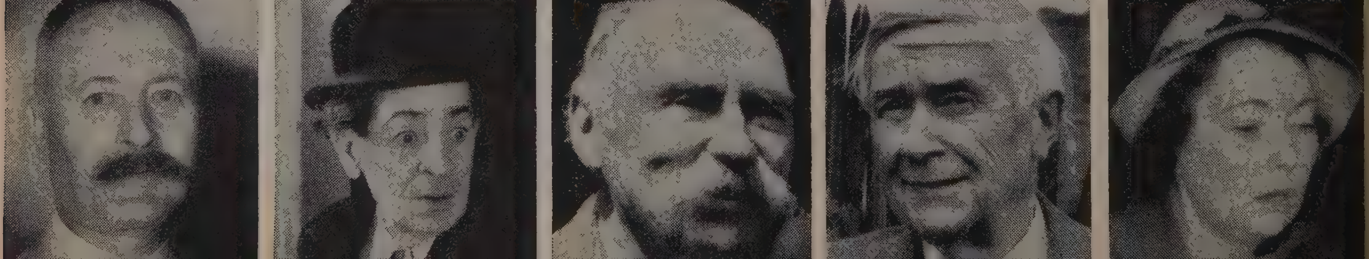
Heindel, Augusta Foss (Mrs. Max Heindel), U.S. cofounder of Rosicrucian fellowship (b. near Mansfield, O., Jan. 27, 1865—d. Oceanside, Calif., May 9, 1949).

Henderson, Alice Corbin (Mrs. William P. Henderson), U.S. poet, cofounder of *Poetry* magazine (b. St. Louis, Mo., 1881—d. Tesuque, N.M., July 18, 1949).

Hendrick, Burton Jesse, U.S. author (b. New Haven, Conn., Dec. 8, 1871—d. New York, N.Y. March 24, 1949), attended Yale, where he edited both the *Yale Courant* and the *Yale Literary Magazine*. He became editor of the *New Haven Morning News* in 1896, later moving to the *New York Post*. In 1905 he joined *McClure's Magazine*, crusading with Lincoln Steffens, Ida M. Tarbell, Ray Standard Baker and others, his specialty being the subject of life-insurance reforms. In 1913 he joined *World's Work* where he became attached to research and as a result wrote *Age of Big Business*. In 1920 he was co-author, with Vice Admiral William S. Sims, of *Victory at Sea*, the story of U.S. naval forces in Europe in World War I; this book brought Hendrick his first Pulitzer prize. His second was awarded for his *Life and Letters of Walter H. Page* (1922), and the third for *The Training of an American* (1928), covering Ambassador Page's earlier years. Other major works included *The Jews in America* (1923); *The Life of Andrew Carnegie* (1932); *The Lees of Virginia* (1935); *Bulwark of the Republic* (1937) and *Statesmen of the Lost Cause* (1939).

Hernandez, Mateo, Spanish sculptor (b. Bejar, Sp., 1888—d. Meudon, Fr., Nov. 25, 1949).

Hicks, Sir (Edward) Seymour, British actor and author (b. St. Helier, Jersey, Chan.Is., Jan. 30, 1871—d. Fleet, Hants., Eng., April 6, 1949). From 1889 to 1891 he toured Great Britain and the United States with Mr. and Mrs. Kendal. In 1901 his play *Bluebell in Fairyland* was a great success with his wife, Ellaline Terriss, in the name part. He later wrote other musical plays



1949 OBITUARIES: Henri Honoré Giraud, French general; Willie Howard, U.S. comedian; Douglas Hyde, first president of Eire; Maurice Maeterlinck, Belgian author; Margaret Mitchell, U.S. author

including *The Catch of the Season* (with Cosmo Hamilton) in which he played the lead. He built the Aldwych theatre, opened it in 1905, and in the next year built the Globe. During World War I he organized concert parties for the troops in France. In March 1922 he appeared in one of his most characteristic and successful parts *The Man in Dress Clothes* (an adaptation from the French). He wrote several books of autobiography and memoirs and in *Vintage Years* (1943) looked back with regret to the Edwardian era. He was knighted in 1935. In 1939 he became controller of Entertainments National Service association and in 1940 chairman of the Advisory Production council.

ggins, Victor, U.S. painter (b. Shelbyville, Ind., June 28, 1884—d. Taos, N.M., Aug. 23, 1949).

lles, Charles Dewey, U.S. Republican party leader (b. Belmont Co., O., June 23, 1867—d. Speonk, L.I., N.Y., Aug. 27, 1949).

oagland, Dennis Robert, U.S. botanist (b. Golden, Colo., April 2, 1884—d. Berkeley, Calif., Sept. 5, 1949).

obbins, James Russell, U.S. copper mining executive (b. Madison, Wis., Aug. 19, 1883—d. Butte, Mont., Nov. 14, 1949).

odges, Barbara K. (ELIZABETH CAMBRIDGE, pseud.), British novelist (b. Rickmansworth, Herts., Eng., Oct. 7, 1893—d. Battle, Sus., Eng., March 3, 1949).

odgkinson, Francis, English-born inventor (b. London, Eng., June 16, 1867—d. Toledo, O., Nov. 4, 1949).

ohenthal, William D., U.S. diplomat (b. California, 1896—d. San Francisco, Calif., Feb. 8, 1949).

okinson, Helen E., U.S. cartoonist (b. Mendota, Ill.—d. Washington, D.C., Nov. 1, 1949).

opson, Howard Colwell, U.S. financier (b. Fort Atkinson, Wis., May 8, 1882—d. near Greenwich, Conn., Dec. 22, 1949).

ouser, Lionel F., U.S. film writer-producer (b. New York city, April 16, 1908—d. Los Angeles, Calif., Nov. 12, 1949).

oward, Willie (WILLIAM LEVKOWITZ), U.S. comedian (b. Neustadt, Ger., April 13, 1886—d. New York, N.Y., Jan. 12, 1949), was taken to the United States with his family that year and attended school only until his early teens. His brother, Eugene, had entered show business, and Willie followed him, becoming first a song plugger, next a character imitator and eventually joining Eugene in a comedy vaudeville act. From 1903 to 1912 the brothers toured the U.S. in vaudeville, then for ten years appeared in shows produced by the Shuberts at the Winter Garden in New York.

After a return to vaudeville, they appeared in the George White *Scandals* of 1928, 1931, 1932, 1933 and 1936. Willie Howard also appeared in *Ballyhoo of 1932*, the *Follies* of 1934 and 1935 and *The Show Is On* in 1937. He appeared in the motion pictures *Millions in the Air* and *Rose of the Rancho*, and also was well known to radio.

ubback, Eva Marian, British college principal (b. 1886—d. London, Eng., July 15, 1949).

ulbert, Homer Bezaleel, U.S. professor and expert on far eastern affairs (b. New Haven, Vt., 1863?—d. Seoul, Kor., Aug. 5, 1949).

urban, Vladimir E. S., Czech diplomat (b. Turciansky Svaty Martin, Slovakia, Hung., April 4, 1883—d. Prague, Czech., Oct. 26, 1949).

yamson, Moses, Polish-born rabbi and scholar (b. Suwalki, Russian Pol., Sept. 3, 1862—d. New York city, June 9, 1949).

yde, Douglas, first president of Eire (now Ireland), historian and poet (b. Frenchpark, County Roscommon, Ire., Jan. 17, 1860—d. Dublin, Ire., July 12, 1949), was the son of the Rev. Arthur Hyde, canon of Elphin and rector of Tibohine, and was educated at Trinity college, Dublin. From his earliest days he acquired a love for the Irish language, which at that time was neglected by scholars, and in 1878 he joined the Society for the Preservation of the Irish Language. Later he left the society and started the Gaelic union which published the first periodical in the Irish language. He founded the Gaelic league in 1893 and held the position of president until 1915. He was elected a senator in 1925 and again in 1938. When the new constitution was created in 1937 all parties agreed on the election of Hyde as the first president of Eire. He held office from June 25, 1938, until June 25, 1945, when he was succeeded by Seán O'Kelly. In 1891 he was interim professor of modern languages at the University of New Brunswick, Fredricton, Canada, and from 1909 to 1932 was professor of modern Irish at University college, Dublin. Among his works in English were *Story of Early Gaelic Literature* (1895), *A Literary History of Ireland* (1899) and *Mediaeval Tales from the Irish* (1899). He also wrote many books, poems and plays in Irish and in *Mise Agus an Connradh* (1938) he told of his association with the Gaelic league. Many of his poems, plays, retelling of old legends, etc., were published under his pseudonym, *An Craoibhin Aoibhinn* ("the delightful little branch," *i.e.*, Ireland). (*See* also *Encyclopædia Britannica.*)

arra Garcia, Oscar, Argentine diplomat (b. Moron, Buenos Aires province, Arg., Sept. 15, 1899—d. Buenos Aires, Arg., July 25, 1949).

glesden, Sir Charles, British journalist and author (b. Ashford, Kent, Eng., 1861—d. Ashford, June 26, 1949).

ms, Augustus Daniel, British entomologist (b. England, Aug. 24, 1880—d. near Sidmouth, Dev., Eng., April 3, 1949).

gham, Harvey, U.S. editor and publisher (b. Algona, Ia., Sept. 8, 1858—d. Des Moines, Ia., Aug. 21, 1949).

lli, Vincenzo, Italian painter (b. Naples, It., Sept. 30, 1860—d. Naples, Nov. 27, 1949).

iwara, Kanji, Japanese military officer (b. 1889—d. Yamagata, Jap., Aug. 15, 1949).

anov, Dimiter (ELINE-PELINE, pseud.), Bulgarian author (b. Sofia, Bulg., Aug. 1, 1878—d. Sofia, Dec. 3, 1949).

anov, Vyacheslav, Russian writer (b. Moscow, Russia, Feb. 28, 1866—d. Rome, It., July 16, 1949).

Jaloux, Edmond, French novelist (b. Marseilles, Fr., June 18, 1878—d. Lausanne, Switz., Aug. 22, 1949).

James, Eldon Revare, U.S. professor of law (b. Newport, Ky., Nov. 21, 1875—d. Gloucester, Mass., Jan. 2, 1949).

Jefferson, Mark, U.S. geographer (b. Melrose, Mass., March 1, 1863—d. Ypsilanti, Mich., Aug. 8, 1949).

Jester, Beauford Halbert, U.S. governor (b. Corsicana, Tex., Jan. 12, 1893—d. Houston, Tex., July 11, 1949), was graduated from the University of Texas, Austin, in 1916 and received his LL.B. degree there in 1920. He saw action in France during World War I, and later set up his law practice in Corsicana. He was elected to the state university's board of regents in 1929, serving until 1935, the last two years as chairman. In 1942 he was a successful candidate for one of the places on Texas' three-man railroad commission. In 1946 he was elected governor of the state. A believer in states' rights, he initially sided with Gov. J. Strom Thurmond of South Carolina when the latter led a group of southern governors in opposition to Pres. Harry S. Truman's civil rights program, but he returned to full support of the Democratic party before the 1948 presidential election.

Jewett, Frank Baldwin, U.S. physicist and research engineer (b. Pasadena, Calif., Sept. 5, 1879—d. Summit, N.J., Nov. 18, 1949), was educated at Throop Polytechnic institute (later California Institute of Technology, Pasadena) and the University of Chicago, spent two years as an instructor at Massachusetts Institute of Technology (Cambridge) and entered the engineering department of American Telephone and Telegraph company. He became this company's research head and, in 1908, its transmission and protection engineer. Between 1912 and 1922 he was assistant chief engineer, chief engineer and vice-president of Western Electric company. In 1925 he was elected vice-president in charge of development and research of A.T. & T., and president of the Bell Telephone laboratories. Out of these laboratories during his tenure came such inventions and developments as the dial system, practical talking motion pictures, high-tonal-quality electrical phonographs, long-distance transmission of pictures by wire, transatlantic telephone and high-speed cable. In 1940 he was appointed by Pres. Franklin D. Roosevelt to the Office for Emergency Management. In June of that year he was named one of the eight members of the National Defense Research committee of the Office of Scientific Research and Development, and he directed its submarine warfare laboratories. He subsequently lent his advice and inventive talent to the army signal corps and army ordnance. In 1944 he was one of 12 civilian, army and navy members of a committee to create a high command in science equivalent in rank to army and navy high commands.

Johnson, George E. Q., U.S. attorney (b. Harcourt, Ia., July 11, 1874—d. Chicago, Ill., Sept. 19, 1949), studied at Tobin college, Fort Dodge, Ia., and at Lake Forest college, Lake Forest, Ill., where he received a law degree in 1900. He was named U.S. district attorney in Chicago by Pres. Calvin Coolidge in 1927 and was reappointed in 1931 by Pres. Herbert Hoover. In the fall of 1931 he began the first of the government cases against major underworld figures on charges of income tax evasion. He successfully prosecuted, among others, Al Capone, Ralph Capone, Jake and Sam Guzik, Frank Nitti, Terry Druggan and Frankie Lake, as well as other prohibition era gangsters. He was appointed a U.S. district court judge by President Hoover in Aug. 1932, but the senate failed to confirm the appointment and as the incoming Pres. F. D. Roosevelt did not reappoint him, he retired from the bench after seven months' service. He was active in midwest Republican politics.

Johnson, William Gary (BUNK), U.S. trumpet player and jazz band leader (b. 1880?—d. New Iberia, La., July 7, 1949).

Julian, William Alexander, U.S. government official (b. Franklin county, Ky., Aug. 6, 1860—d. Bethesda, Md., May 29, 1949), was graduated from Dodds college in Frankfort, Ky., in 1888, and entered the shoe business in Cincinnati, O. In 1890 he formed the partnership of Alter and Julian, and in 1891 the Julian and Kokenge company, which became an outstanding shoe manufacturing concern. He later served as president of the Queen City Trust company and as vice-president of the Citizens National bank in Cincinnati. He entered politics relatively late in life, and became Democratic national committeeman from Ohio. He ran unsuccessfully for the U.S. senate in 1920. On June 1, 1933, he was sworn in as treasurer of the United States, serving until his death in an automobile accident.

Jung, Guido, Italian government official (b. Palermo, It., Feb. 1, 1876—d. Palermo, Dec. 26, 1949).

Keeler, Leonarde, U.S. criminologist (b. Berkeley, Calif., Oct. 30, 1903—d. Sturgeon Bay, Wis., Sept. 20, 1949), studied criminology as a result of the influence of August Vollmer, former chief of police of Berkeley. While a student at Stanford university, Stanford, Calif., Keeler built a lie detector machine. This device had been introduced in police circles, but Keeler made a successful test of his in 1923 and later developed it until it was widely adopted by police agencies as well as by doctors, hospitals and various businesses. Technically called a polygraph, the lie detector records variations in blood pressure, rate of heartbeat and respiration on a moving strip of paper, and from the record it can sometimes be ascertained when the subject is lying. Keeler became an authority on deception tests and headed the scientific crime detection laboratory at Northwestern university, Evanston, Ill., but was in private practice at the time of his death.

Keller, Henry George, U.S. painter (b. Cleveland, O., April 3, 1870—d. San Diego Calif., Aug. 3, 1949).

Kelly, William J., U.S. actor (b. Newburyport, Mass., June 16, 1875—d. New York city, May 17, 1949).

Kent, Arthur Atwater, U.S. inventor (b. Burlington, Vt., Dec. 3, 1873—d. Bel-Air, Calif., March 4, 1949), attended Worcester Polytechnic institute, Worcester, Mass. Many of his inventions, of which he patented 97, were concerned with electrical equipment, and in 1902 he established the Atwater Kent Manufacturing Works in Philadelphia, Pa., to make telephones and voltmeters. He next began manufacturing his hot-spark ignition system, which was adopted by many automobile makers. His plant continued making automobile ignition, starting and lighting systems until 1923, when he produced his first radio. Within three years he had made his millionth set. He discontinued manufacturing and sold his plant in 1936.

In the early days of network radio the Atwater Kent hour on Sunday evenings was one of the most popular radio shows, featuring musical celebrities and the winners of talent searches conducted by the Atwater Kent foundation for music students. Atwater Kent also restored the Betsy Ross house in Philadelphia; bought the Franklin Institute building in Philadelphia and gave it to the city as a museum.

Keynes, John Neville, British political economist (b. Salisbury, Wilts., Eng., Aug. 31, 1852—d. Cambridge, Eng., Nov. 15, 1949).

Kimball, Katharine, U.S.-born artist and etcher (b. Fitzwilliam, N.H., April 17, 1866—d. Bath, Eng., March 23, 1949).

Kimes, Ira L., U.S. marine corps general (b. Fayetteville, Tenn., Aug. 8, 1899—d. Bethesda, Md., Feb. 4, 1949), was graduated from the U.S. Naval academy in 1923 and appointed to the marine corps. In 1927 he became a student aviator at the naval air station at Pensacola, Fla. He was in command of the marine air forces that defended the island of Midway during the crucial Battle of Midway, June 4, 1942, and received the distinguished service medal for his services in that battle. He was placed on the retired list for physical disability in Feb. 1945, but remained on active duty until Dec. 23, 1945.

Kim Koo, Korean rightest patriot (b. 1875?—d. Seoul, Kor., June 26, 1949).

Kindler, Hans, U.S. cellist and conductor (b. Rotterdam, Neth., Jan. 8, 1893—d. Watch Hill, R.I., Aug. 29, 1949), made his first solo appearance in Rotterdam at the age of 10. A graduate of the Conservatory of Music in Rotterdam, he played in many European capitals, in orchestras and as solo cellist, before moving to the U.S. in 1914. After five years with the Philadelphia orchestra, as first cellist and solo cellist, he devoted himself to solo appearances, and in 1929 set out on a world tour. In 1931, having returned to the U.S., he founded the National Symphony orchestra in Washington, D.C., which he conducted until Dec. 1948.

King, William Henry, U.S. legislator (b. Fillmore, Millard county, Utah, June 3, 1864—d. Salt Lake City, Utah, Nov. 27, 1949).

Kingsbury, Susan M(yra), U.S. social economist (b. San Pablo, Calif., Oct. 18, 1870?—d. Bryn Mawr, Pa., Nov. 28, 1949).

Kingsmill, Hugh (Hugh Kingsmill Lunn), British author (b. Madras, India, Nov. 21, 1889—d. Brighton, Eng., May 15, 1949).

Kirke, Sir Walter Mervyn St. George, British army officer (b. Jan. 19, 1877—d. near Carlisle, Cumb., Eng., Sept. 3, 1949).

Knerr, Harold H., U.S. cartoonist (b. Bryn Mawr, Pa., 1883?—d. New York city, July 8, 1949).

Knickerbocker, Hubert Renfro, U.S. newspaperman (b. Yoakum, Tex., Jan. 31, 1898—d. near Bombay, India, July 12, 1949), was graduated from Southwestern university, Georgetown, Tex., and took postgraduate studies at Columbia university in New York. He began newspaper work on the *Newark Morning Ledger*, then transferred to the *New York Evening Post* and later to the *New York Sun*. In 1925 he became a foreign correspondent for International News Service, and continued with that organization for 16 years, winning the Pulitzer prize in 1931. He covered the battles of France and Britain in 1940 and 1941, the early campaigns in the Pacific and subsequent campaigns in the European theatre. From 1941 to 1945 he was chief of foreign service of the *Chicago Sun*. His books included *The Red Menace* (1931) and *Will War Come in Europe?* (1934). He was one of 13 U.S. newspaper and radio correspondents killed in the crash of a Dutch air liner which was returning them from a survey of conditions in Indonesia.

Knox, Sir Errol Galbraith, Australian newspaper executive (b. June 25, 1889—d. Melbourne, Austr., Oct. 17, 1949).

Koopman, John R., U.S. painter (b. Falmouth, Mich., June 5, 1881—d. Saugerties, N.Y., Sept. 16, 1949).

Kostov, Donche, Bulgarian biologist (b. Lokorsco, Bulg., June 18, 1897—d. Sofia, Bulg., Aug. 9, 1949).

Kostov, Traicho, Bulgarian politician (b. Sofia, Bulg., June 17, 1897—d. Sofia, Dec. 16, 1949). After studying law at the University of Sofia he was active in the Bulgarian Workers' (Communist) party. For his part in the Sept. 1923 uprising he was arrested and sentenced in the following year to five years' imprisonment. On release from prison he went to Moscow, U.S.S.R., where he spent two years. Returning to Bulgaria in 1931, he worked there as a member of the illegal Communist party. From 1941 he engaged in partisan resistance, was arrested on April 29, 1942, and sentenced to life imprisonment. When freed in Sept. 1944, he became a member of the committee of the Fatherland front, a member of the Politburo and secretary of the central committee of the Communist party. He was elected deputy for Sofia in Nov. 1945 and Oct. 1946. He joined the second Kimon Georgiev cabinet on March 31, 1946, as deputy prime minister, retaining this position in the first Georgi Dimitrov cabinet (Nov. 23, 1946); in addition, in the second Dimitrov cabinet (Dec. 11, 1947), he became chairman of the cabinet economic and financial committee. In June 1948 he was one of the two Bulgarian delegates at the Cominform meeting at Sinaia, Rum. On April 4, 1949, it was announced in Sofia that he had been removed from the Politburo of the central committee of the Communist party and relieved of his government duties because he had formed "an insincere and unfriendly attitude to the U.S.S.R." On June 12 he was expelled from the party and on July 20 deprived of his parliamentary immunity, although he had already been arrested on June 25. He was indicted for espionage and high treason. At the trial which began in Sofia on Dec. 7 he denied the major charges and most of the depositions which, it was alleged, he had previously made. He was condemned to death on Dec. 14 and executed two days later.

Krass, Nathan, Russian-born rabbi (b. Odessa, Russia, Aug. 1, 1880—d. New York city, Nov. 22, 1949).

Krogh, Schack August Steenberg, Danish physiologist (b. Grenaa, Den., Nov. 15, 1874—d. Copenhagen, Den., Sept. 13, 1949), graduated in zoology at the University of Copenhagen in 1899 and took his doctor's degree in 1903. In 1920 he was awarded the Nobel prize in physiology and medicine for his discovery of the regulation of the motor mechanism of the capillaries. He was elected a foreign member of the Royal society in 1937 and was appointed to give the society's Croonian lecture in 1940. He retired from the chair of zoophysiology at the University of Copenhagen in 1945, and in the same year was awarded the Baly medal by the Royal College of Physicians. (*See* also *Encyclopædia Britannica.*)

Kuhn, Walt, U.S. painter (b. New York city, Oct. 27, 1877—d. New York city, July 13, 1949).

Ledbetter, Huddie ("Lead Belly"), U.S. Negro folk singer (b. Louisiana, 1889—d. New York city, Dec. 6, 1949).

Lee, Sydney, British painter, etcher and wood engraver (b. Manchester, Eng., 1866—d. London, Eng., Oct. 31, 1949).

Leech, Edward Towner, U.S. newspaper editor (b. Denver, Colo., June 17, 1892—d. Pittsburgh, Pa., Dec. 11, 1949).

Lefevre, Frederic, French author, editor and critic (b. 1889—d. Paris, Fr., Sept. 11, 1949).

Leiber, Fritz, U.S. actor (b. Chicago, Ill., Jan. 31, 1883—d. Pacific Palisades, Calif., Oct. 14, 1949), joined the theatrical company of Sir Philip Ben Greet at the age of 20 and for some time appeared also with the companies of Robert Mantell, David Warfield and Julia Marlowe. He made his motion picture debut in 1917, playing in *If I Were King*, *Antony and Cleopatra* and *The Queen of Sheba*. From 1920 to 1929 he toured with the Shakespearean Repertory company, and was later actor-director of the Chicago Civic Shakespeare society. He returned to the films in 1935 and appeared in *The Life of Louis Pasteur*, *A Tale of Two Cities* and *Anthony Adverse* among others.

Lenroot, Irvine Luther, U.S. senator and judge (b. Superior, Wis., Jan. 31, 1869—d. Washington, D.C., Jan. 26, 1949), entered politics in Wisconsin early in the 1890s and served six years in the state legislature, retiring after being defeated in the election for governor. He was admitted to the bar in 1897. He returned to political life in 1908 as a member of the national house of representatives, where he served until elected to the U.S. senate in 1918.

In the 1920 Republican national convention, after Warren G. Harding had been nominated for president, Senator Lenroot's name was proposed for vice-president, but western delegates started a convention landslide instead for Calvin Coolidge, who subsequently became president on Harding's death. Lenroot was defeated for re-election to the senate in 1926 and retired to private life, but was appointed to the U.S. court of customs and patent appeals in 1929, and served as a judge of that court until his resignation in 1944.

Leonard, Russell Henry, U.S. textile manufacturing executive (b. Somerset, Mass., Oct. 4, 1888—d. Brookline, Mass., Nov. 5, 1949).

Lerroux, Alejandro, Spanish republican leader (b. La Rambla, near Córdoba, Sp., 1864—d. Madrid Sp., June 27, 1949), was elected to the *cortes* in 1901 as deputy for Barcelona, and became known for his eloquent anticlericalism and republicanism. He spent a few years in Argentina, where he fled after his exile in 1907, but after World War I was allowed to return to Spain. He played a large part in creating the republic, and in 1931 became its first foreign minister. His progress toward the moderate centre was demonstrated by the composition of the four cabinets which he headed between 1933 and 1935. He fled from Spain on the eve of the civil war and lived for 11 years in Portugal. He was permitted to return in 1947. (*See* also *Encyclopædia Britannica.*)

Leverhulme, William Hulme Lever, 2nd Viscount, of the Western Isles, British industrialist (b. Bolton, Lancs., Eng., March 25, 1888—d. Minneapolis, Minn., May 26, 1949), was the only child of the 1st Viscount Leverhulme and was educated at Eton college and Trinity college, Cambridge. In order to gain experience in his father's business he began work as a labourer at Port Sunlight. On May 7, 1925, his father died and William Lever succeeded to the titles and became governor of Lever Brothers. In 1925 the firm had 250 associated companies in all parts of the world, but under his governorship its activities increased still further and in 1937 Lever Brothers amalgamated with Unilever Ltd., under the title Lever Brothers and Unilever Ltd. He was president of many important organizations, including the London Chamber of Commerce (1931–34); Advertising association (1931); Institution of Chemical Engineers (1932–34), and the Royal Warrant Holders' association (1933). He was high sheriff of Cheshire in 1923 and charter mayor of Bebington, Cheshire, in 1937. From 1932 to 1936 he was a pro-chancellor of Liverpool university. He was returning from a business visit to Australia when he died in a hospital at Minneapolis, Minn. His life of his father, *Viscount Leverhulme by His Son*, was published in 1927.

Lewis, Lloyd Downs, U.S. author, historian and newspaper editor (b. Pendleton, Ind., May 2, 1891—d. Libertyville, Ill., April 21, 1949), was graduated from Swarthmore college in 1913, and began work as a reporter on the *Philadelphia American*. In 1915 he went to Chicago as a member of the staff of the old *Record-Herald*. In 1917–18 he served in the navy, and from 1919 until 1930 was a theatrical publicity agent. He was named drama critic of the *Chicago Daily News* in 1930, and later became that paper's sports editor and finally its managing editor. Meantime he had published *Sherman, Fighting Prophet*, and *Myths After Lincoln*. He also collaborated with Henry Justin Smith on *Chicago—The History of Its Reputation*, and *Oscar Wilde Discovers America*. He collaborated with Sinclair Lewis on a play, *The Jayhawker*.

In 1945 he retired, but continued to write a weekly column on literature for the *Chicago Sun-Times*, while preparing the manuscript of a life of Gen. U. S. Grant, of which he had virtually completed the first volume at the time of his death.

Lewis, Roberto, Panaman painter and sculptor (b. Panamá, Pan., Sept. 30, 1874—d. Panamá, Sept. 22, 1949).

Lewis, William Draper, U.S. lawyer, educator and author (b. Philadelphia, Pa., April 27, 1867—d. Northeast Harbor, Me., Sept. 2, 1949).

ondonderry, Charles Stewart Henry Vane-Tempest-Stewart, 7TH MARQUESS OF (b. London, Eng., May 13, 1878—d. Newtownards, County Down, N.Ire., Feb. 11, 1949), was educated at Eton college and the Royal Military college, Sandhurst, and served in World War I as second in command of his regiment, the royal horse guards. He had been Conservative member of parliament for Maidstone from 1906 until he entered the house of lords on the death of his father in 1915. In 1917-18 he represented Ulster in the Irish convention. In 1920 he became undersecretary for air but resigned his office to return to Northern Ireland as minister of education and leader of the senate in the newly formed government. From 1928 to 1929 he was first commissioner of works and after the fall of the Labour government in 1931 he became minister for air. In June 1935 he was appointed lord privy seal and leader of the house of lords, but was dropped from the government when it was reformed after the general election in Nov. 1935. His book *Ourselves and Germany*, published in 1938, was the result of two visits to that country in 1936. In July 1942 he became regional commandant of the air training corps in Northern Ireland. His book *Wings of Destiny* (1943) defended his record as minister for air. (*See* also *Encyclopædia Britannica.*)

ong, John D., U.S. public health expert (b. Mt. Pleasant, Pa., Feb. 12, 1874—d. Guayaquil, Ec., Sept. 18, 1949).

otka, Alfred James, U.S. mathematician, expert on population trends (b. Lemberg, Aus., March 2, 1880—d. Red Bank, N.J., Dec. 5, 1949).

ouis II, PRINCE OF MONACO (b. July 12, 1870—d. Monaco, May 9, 1949), distinguished himself in his youth as a soldier, serving in the French Foreign Legion in Africa and also as a cavalry commander of the French army in World War I. In all he served for 30 years in French uniform, rising to the rank of brigadier general. He succeeded his father, Albert I, on June 26, 1922, as chief of the tiny state, which is renowned principally as the site of the famous Monte Carlo gambling casino. He was sometimes referred to as an absentee ruler by his subjects, because he preferred to live in France, and at least one riotous outburst of discontent among the people was attributed to this fact. Five days before his death he turned over his duties to his grandson, Prince Rainier, who succeeded him.

uden, William H., U.S. candy manufacturer (b. Reading, Pa., March 5, 1859—d. Atlantic City, N.J., May 8, 1949), began making penny candies in his mother's kitchen as a boy, and peddled them in the streets and factories of his home community. He soon developed a sufficient number of customers to open a small factory and employ salesmen. After a shipment of candy had been returned unsold, he conceived of the idea of melting the sweets down and adding a menthol flavour. He thus developed the cough drop that made him a fortune, selling more than 15,000,000 packages in 1925. In 1926 he retired as president of William H. Luden, Inc., and on Jan. 1, 1928, sold his factories and interests in the company to Food Industries, Inc., for a reported $6,500,000.

ussan, Zélie de, U.S.-born opera singer (b. Brooklyn, N.Y., Dec. 21, 1863—d. London, Eng., Dec. 18, 1949).

ynd, Robert, British writer (b. Belfast, Ire., April 20, 1879—d. London, Eng., Oct. 6, 1949), was graduated from Queen's college (now university), Belfast, in 1899 and became a literary journalist. His earliest book, *Irish and English: Portraits and Impressions* (1908), was the first of numerous collections of articles and reviews. He went to England in 1901 and worked as a dramatic critic, book reviewer and essayist. In 1908 he joined the *London Daily News* and two years later became its literary editor and that of its successor, the *London News Chronicle*, until his death. He contributed essays to the *New Statesman and Nation* for many years, over the signature "Y. Y." Among his earlier works were anecdotal volumes on Ireland, afterward succeeded by works of literary criticism, such as *The Art of Letters* (1921) and *Dr. Johnson and Company* (1928); and volumes of graceful, perceptive essays, notable among which were *The Pleasures of Ignorance* (1921), *Life's Little Oddities* (1941) and, his last, *Things One Hears* (1945).

yon, D. Willard, U.S. clergyman, founder of Y.M.C.A. in China and Korea (b. Chekiang province, China, 1879?—d. Claremont, Calif., March 16, 1949).

ytton, Henry Charles, U.S. merchant (b. New York, N.Y., July 13, 1846—d. Chicago, March 31, 1949), was the last surviving pioneer merchant of Chicago's State street shopping centre. The son of a shirt manufacturer, he attended the City College of New York, began work as an errand boy and dry-goods clerk. In 1865 he and a brother opened a clothing store in Ionia, Mich. It failed, but Lytton repaid all creditors over the ensuing 20 years. After other ventures in the clothing trade, he leased a Chicago Loop site for a store, opening it in 1887 under the name of The Hub. He retired in 1916 turning the company over to a son, but returned to the business when the latter died in 1933, and remained its head until his death.

MacArthur, Mary, U.S. actress, daughter of Helen Hayes and Charles MacArthur (b. Feb. 1930—d. New York city, Sept. 22, 1949).

McClure, Samuel Sidney, U.S. author and publisher (b. County Antrim, Ire., Feb. 17, 1857—d. New York, N.Y., March 21, 1949), spent his boyhood in Indiana, worked his way through Knox college in Galesburg, Ill., then went to Boston and began editing a magazine for cyclists. With little capital, but assured of his own literary judgment, he founded a distributing syndicate, buying stories from promising authors and selling serial rights to various newspapers. In this way he introduced, or popularized in the United States, such authors as Rudyard Kipling, A. Conan Doyle, Robert Louis Stevenson, William Dean Howells and Mark Twain. In 1893 he began publishing *McClure's Magazine*, which quickly became one of the most famous journals of its day, being especially renowned for the muckraking articles of such feature writers as Lincoln Steffens and Ida M. Tarbell. He published the first manuscripts of many famous authors, among them Willa Cather. He retired from active direction of both his syndicate and his magazine in 1914, and in that same year published his autobiography. He came out of retirement on other occasions—once to edit the *New York Evening Mail*, and once to sponsor a short-lived revival of his magazine. During the 1930s he published several volumes on political philosophy.

McCutcheon, John Tinney, U.S. newspaper correspondent and cartoonist (b. near South Raub, Ind., May 6, 1870—d. Lake Forest, Ill., June 10, 1949), was graduated from Purdue university in 1889, and soon after joined the staff of the old *Chicago Record*, later the *Record-Herald*. His cartoons became a front-page feature of the paper, especially his political cartoons which concerned the 1896 presidential campaign. He produced in all more than 10,000 cartoons, many of them marked by the laconic humour reminiscent of his native Indiana. McCutcheon also served long periods as foreign correspondent and war correspondent. He was with Admiral Dewey during the battle of Manila bay; served as a correspondent during the Filipino insurrection and the Boer War; hunted big game in Africa with Carl Akeley, and travelled with Theodore Roosevelt's African safari, besides covering for his paper the punitive U.S. expedition into Mexico in 1916. As staff cartoonist of the *Chicago Tribune* he was generally acknowledged to be dean of his profession. His most famous cartoon, "Injun Summer," has appeared by request annually in the *Tribune* since 1912, and he was awarded the Pulitzer prize for cartoons in 1932.

Mackenzie, Ian Alistair, Canadian lawyer, political leader (b. Assunt, Sutherland Co., Scot., July 27, 1890—d. Banff, Alta., Sept. 2, 1949).

McKinstry, Helen (May), U.S. educator, Y.W.C.A. leader (b. Winnebago, Minn., May 27, 1878—d. Troy, N.Y., June 11, 1949).

McMahon, (Arthur) Henry, British soldier and administrator (b. Nov. 28, 1862—d. London, Eng., Dec. 29, 1949).

McMein, Neysa (MRS. JOHN GORDON BARAGWANATH), U.S. artist and illustrator (b. Quincy, Ill., Jan. 25, 1890—d. New York, N.Y., May 12, 1949), studied at the Art Institute of Chicago, and began her career sketching hats for a manufacturer. In 1913 she sold her first fashion drawing, and in 1915 sold her first cover to the *Saturday Evening Post*. She later designed covers and illustrations for the *Woman's Home Companion, Collier's, McCall's* and other magazines. She specialized in studies of pretty girls, and was credited with creating a vogue for a feminine type called the "McMein girl." She also painted portraits of many prominent persons, including President Warren G. Harding, Chief Justice Charles Evans Hughes, Charles Chaplin, Jack Dempsey, Jascha Heifetz, Beatrice Lillie and others.

McMurray, Thomas Porter, British orthopaedic specialist (b. Belfast, Antrim, Ire., Dec. 5, 1887—d. London, Eng., Nov. 16, 1949).

McMurtrie, Francis Edwin, British editor of *Jane's Fighting Ships* (b. London, Eng., April 8, 1884—d. Hoddesdon, Herts., Eng., Feb. 22, 1949).

MacNaughton, James, Canadian-born mining executive (b. Bruce Mines, Ont., March 9, 1864—d. Calumet, Mich., May 26, 1949).

Maeterlinck, Count Maurice Polydore Marie Bernard, Belgian writer (b. Ghent, Belg., Aug. 29, 1862—d. Nice, Fr., May 6, 1949). (*See* biography in *Encyclopædia Britannica*).

Magonigle, Edith Marion Day, U.S. painter and sculptor (b. Brooklyn, N.Y., May 11, 1877—d. New York city, Aug. 8, 1949).

Mahmoud, Ali, Arabic poet (b. 1897?—d. Cairo, Egy., Nov. 17, 1949).

Mahon, William D., U.S. labour leader (b. Athens county, O., 1861—d. Detroit, Mich., Oct. 31, 1949).

Maitland, Sir Adam, British industrialist (b. Bury, Lancs., Eng., May 25, 1885—d. Henley-on-Thames, Oxon., Eng., Oct. 5, 1949).

Malvy, Louis Jean, French politician (b. Figeac, Fr., Dec. 1, 1875—d. Paris, Fr., June 9, 1949), entered the chamber of deputies in 1906 as a Socialist-Radical and, in June 1914, became minister of the interior. He acquired notoriety during World War I when Georges Clemenceau on July 22, 1917, charged him with laxity in dealing with defeatists and revolutionaries. Following his resignation on Aug. 31, 1917, he was accused of treason and on Aug. 6, 1918, was found guilty of culpable negligence. Sentenced to five years' banishment, he passed the time in Spain. In 1924 he was helped by the Radical party and the French Freemasonry to re-election to the chamber of deputies and two years later he became again, for a few weeks, minister of the interior in an Aristide Briand cabinet. Re-elected in 1928, 1932 and 1936, he was among the deputies who, on July 10, 1940, at Vichy, voted for the abolition of the republican constitution. For this action he was excluded from the Radical party after the liberation. (*See* also *Encyclopædia Britannica.*)

Mann, Klaus, German-born author (b. Munich, Ger., Nov. 18, 1906—d. Cannes, Fr., May 21, 1949).

Manning, William Thomas, U.S. clergyman, retired bishop of the Protestant Episcopal diocese of New York (b. Northampton, Eng., May 12, 1866—d. New York city, Nov. 18, 1949), was taken to the U.S. as a boy, reared in California and graduated from the University of the South at Sewanee, Tenn. He became an Episcopal priest and was made rector of a church at Redlands, Calif. In 1896 he became rector of a church in Landsdowne, Pa.; in 1898 rector of Christ church, Nashville, Tenn.; and in 1903 vicar of St. Agnes' chapel of Trinity parish in New York. In 1908 he became rector of Trinity church and head of Trinity parish, the wealthiest individual religious corporation in the country. In 1918 he served as an army chaplain, and in Dec. 1920 was elected successor on the death of Bishop Charles Sumner Burch. Bishop Manning was the centre of several controversies during his episcopate, in all of which he defended his conservatism with vigour. He especially defended the sanctity of the marriage contract against advocates of easy divorce and "companionate" marriage. His monument was the massive Cathedral of St. John the Divine on Morningside drive in New York. It was begun in 1892, the year he became a priest, and was not completed at the time of his death; but through the many millions he had raised for its construction, he had shepherded the work to the point where its ultimate design could be visualized. He retired Dec. 31, 1946.

Marchant, Sir Stanley, British professor of music (b. London, Eng., May 15, 1883—d. London, Feb. 28, 1949).

Mardrus, J. C., French orientalist (b. Claire, Fr., 1868—d. Paris, Fr., March 27, 1949).

Marlin, Mahlon Henry, U.S. firearms manufacturer (b. Windsor Locks, Conn.,

1949 OBITUARIES: Frank Murphy, U.S. jurist; José Clemente Orozco, Mexican painter; Laszlo Rajk, Hungarian government official; Robert L. Ripley, U.S. cartoonist; Bill Robinson, U.S. tap dancer

1864?—d. New Haven, Conn., Sept. 14, 1949).

Marmaggi, Francesco, CARDINAL, Italian prefect of the Congregation of the Council (b. Rome, It., Aug. 31, 1876—d. Rome, Nov. 3, 1949).

Marshall, Robert Bradford, U.S. former chief geographer for geological survey (b. 1866?—d. San Francisco, Calif., June 21, 1949).

Martin, John, South African newspaper and gold-mining executive (b. Stirling, Scot., April 19, 1884—d. Johannesburg, U. of S.Af., March 28, 1949).

Matsudaira, Tsuneo, Japanese diplomat (b. Tokyo, Jap., April 17, 1877—d. Tokyo, Nov. 14, 1949), was educated at the Imperial University of Tokyo, and in 1902 entered the foreign service. He was assigned to Peiping, China, and five years later to London. Recalled to Tokyo in 1910, he was named consul general at Tientsin, China, where he served during World War I. When U.S. and Japanese troops occupied Vladivostok, Russia, in 1918–19, he served as Japanese high commissioner to Siberia, and participated in discussions leading to the Japanese evacuation of Russian territories. In 1920 he was named chief of the American and European section of the Japanese foreign office, and in 1923 vice-minister for foreign affairs. He was ambassador to the United States, 1925–28, and ambassador to London, 1929–36. He headed the Japanese delegation to the general disarmament conference at Geneva in 1932, and in 1934 presented Japan's intention to abandon naval limitation and build up to parity with Britain and the U.S. He was cleared of responsibility for Japan's aggressions during World War II, after the U.S. occupation of Japan, and in May 1947 was elected first president of the house of councillors, the upper house of the diet. He had served as imperial household minister from 1936 to 1945, when he reportedly resigned because he held himself responsible for partial destruction by fire of the imperial palace during U.S. bombing raids. (*See* also *Encyclopædia Britannica.*)

Mead, George Jackson, U.S. aeronautical engineer and industrialist (b. Everett, Mass., Dec. 27, 1891—d. West Hartford, Conn., Jan. 20, 1949), studied at the Massachusetts Institute of Technology and in 1916 joined the Wright Martin Aircraft corporation at New Brunswick, N.J., as an experimental engineer. In 1919 he was named experimental engineer in charge of the power-plant laboratories of the U.S. air services at Dayton, O., and from 1920 to 1925 was chief engineer of the Wright Aeronautical corporation. In 1925 he helped found the Pratt & Whitney Aircraft company, which later was the United Aircraft corporation, continuing with that firm until his retirement as vice-president, director and member of the executive committee in 1939. In 1925 he had directed the design and development of the first Wasp engine, and successors to this engine powered almost half the U.S. planes used in World War II.

Mead, Gilbert Wilcox, U.S. educator (b. Pittsburgh, Pa., May 7, 1889—d. Chestertown, Md., March 25, 1949).

Meek, Alexander, British zoologist (b. Boughty Ferry, Eng., April 7, 1865—d. London, Eng., Nov. 4, 1949).

Melchett, Henry Mond, 2ND BARON, British industrialist and Zionist leader (b. London, Eng., May 10, 1898—d. Miami Beach, Fla., Jan. 22, 1949).

Mellon, William Larimer, U.S. oil industrialist (b. Pittsburgh, Pa., 1868?—d. Pittsburgh, Oct. 8 1949).

Menzies, Sir Frederick Norton Kay, British physician, public health officer (b. Nov. 2, 1875—d. London, Eng., May 14, 1949).

Miller, Bert H(enry), U.S. senator (b. St. George, Utah, 1877?—d. Washington, D.C., Oct. 8, 1949).

Mitchell, Margaret (MRS. JOHN R. MARSH), U.S. author (b. Atlanta, Ga., 1900?—d. Atlanta, Aug. 16, 1949), was a member of a long-established Atlanta family, and it was in part from her father, an attorney and one-time head of the Atlanta Historical society, that she learned some of the details of the post-Civil War reconstruction period that she incorporated in her famous novel, *Gone with the Wind.* She spent one year at Smith college, Northampton, Mass., and then worked on the *Atlanta Journal* from 1922 to 1926. *Gone with the Wind* was published in 1936, and it ultimately became one of the best-selling books of all time. By early 1949, 8,000,000 copies had been sold in 40 countries, and 50,000 copies were still being sold annually in the United States. It had been translated into 30 languages. The motion-picture version of the book became one of the most popular of all Hollywood productions, and the book itself was awarded the Pulitzer prize in 1937. The author, who said that the renown of the novel had kept her so occupied with engagements that she had never had the opportunity even to begin a second book, was struck by an automobile and fatally injured while crossing a street in Atlanta.

Mittelhauser, Eugene-Désiré-Antoine, French army officer (b. Tourcoing, Fr., 1873—d. Paris, Fr., Dec. 21, 1949).

Moffatt, Fred Cushing, U.S. stockbroker (b. New York city, Oct. 16, 1889—d. Brooklyn, N.Y., Dec. 16, 1949).

Molony, Sir Thomas Francis, Irish jurist (b. Dublin, Ire., Jan. 31, 1865—d. London, Eng., Sept. 3, 1949).

Monvel, Bernard Boutet de, French portrait painter (b. Paris, Fr., Aug. 10, 1884—d. São Miguel Island, Azores, Oct. 28, 1949).

Moore, Sir Frederick William, Irish botanist (b. Sept. 3, 1857—d. Dublin, Ire., Aug. 24, 1949).

Mora, José de la, Mexican industrialist (b. Gómez Palacio, Durango, Mex., Dec. 31, 1892—d. Dallas, Tex., Nov. 29, 1949).

Morahan, Eugene H., U.S. sculptor (b. Brooklyn, N.Y., Aug. 29, 1869—d. Santa Monica, Calif., Nov. 14, 1949).

Moran, Charles B., U.S. athlete and baseball umpire (b. Nashville, Tenn., Feb. 22, 1879—d. Horse Cave, Ky., June 14, 1949).

Moran, George (GEORGE SEARCY), U.S. stage and motion-picture comedian (b. Elwood, Kan., Oct. 3, 1882—d. Oakland, Calif., Aug. 1, 1949), began his stage career with a travelling company playing *Uncle Tom's Cabin,* learned vaudeville routines, and began a song-and-dance act in vaudeville on the Pacific coast. There he met Charles E. Mack, and the two appeared together in New York, though in separate acts, in a 1917 revue *Over the Top.* When that show closed they formed, at Mack's suggestion, a blackface team, and won immediate popularity as the "Two Black Crows." They were starred in several editions of the *Earl Carroll Vanities, Ziegfeld Follies* and George White's *Scandals.* During the 1920s and 1930s they were immensely popular as recording stars, and were among the first nationally renowned radio performers. They also appeared in successful motion pictures, including *Why Bring That Up?* in 1929 and *Hypnotized* in 1932. Mack was killed in an automobile accident in 1934, and Moran withdrew from the theatre for a time, but returned to perform the blackface act with others.

Morgan, Frank (FRANCIS PHILIP WUPPERMANN), U.S. stage and screen star (b. New York, N.Y., June 1, 1890—d. Beverly Hills, Calif., Sept. 18, 1949), was the son of George Wuppermann, who held and passed on to his family the distribution rights in the U.S. to the angostura bitters. After attending Cornell university, Ithaca, N.Y., for a time, he went to New Mexico, where he was a cowhand on a ranch near Las Vegas. His brother Ralph, already on the stage, persuaded him to try acting, and Frank began in stock company in 1914, achieving some fame by 1923. As the duke of Florence in *The Firebrand,* in 1924, he became firmly established, and the title role of *Topaze* (1930) brought him to the attention of Hollywood. He appeared in scores of films, mostly in comedy roles, including *Naughty Marietta, Reunion in Vienna, The Great Ziegfeld, The Last of Mrs. Cheyney, Rosalie, Sweethearts, Broadway Serenade, The Wizard of Oz, Tortilla Flat, The Three Musketeers, Green Dolphin Street, The Stratton Story* and *Any Number Can Play.*

Morgan, William Gerry, U.S. physician, former president of A.M.A. (b. Newport, N.H., May 2, 1868—d. Washington, D.C., July 7, 1949).

Morrison, Frank, U.S. labour leader (b. Franktown, Ont., Nov. 23, 1859—d. Washington, D.C., March 12, 1949).

Morrow, Walter Alexander, U.S. retired newspaper editor (b. Crawfordsville, Ind., March 25, 1894—d. Oklahoma City, Okla., July 14, 1949).

Mulholland, Frank L., U.S. labour lawyer (b. Disco, Mich., April 20, 1875—d. Lake Placid, N.Y., June 7, 1949).

Munthe, Axel Martin Fredrik, Swedish physician and author (b. Oskarshamn, Swed., Oct. 31, 1857—d. Stockholm, Swed., Feb. 11, 1949), was educated at the University of Uppsala; he later worked for some time under Jean M. Charcot at the Salpêtrière in Paris, France. After quarrelling with Charcot and leaving the Salpêtrière, he conducted fashionable medical practices first in Paris and then in Rome, Italy, where he lived in Keats's house. He built his villa of San Michele on the highest point of the island of Capri and created a bird sanctuary there. *The Story of San Michele,* the memoirs of a life full of incident, was written in English and published in 1929. It had an outstanding success and was later translated into almost every literary tongue. He spent his last years as a guest of the king of Sweden in the royal palace in Stockholm.

Murdock, James, Canadian statesman and labour leader (b. Brighton, Eng., Aug. 15, 1871—d. Guelph, Ont., May 16, 1949), worked as a trainman from 1890 to 1905, when he became Canadian vice-president of the Brotherhood of Railway Trainmen, a position he held until 1921. In that year he resigned to become minister of labour in the Liberal government of W. L. Mackenzie King. Defeated for re-election to the house of commons in Toronto High Park in 1925, he was re-elected to his post with the trainmen and held that position until 1933. He represented Ontario in the Canadian upper house after 1930.

Murphy, Frank, U.S. jurist (b. Harbor Beach, Mich., April 13, 1890—d. Detroit, Mich., July 19, 1949), was graduated in law from the University of Michigan in 1914 and did postgraduate work at Lincoln's Inn, London and Trinity college, Dublin. He served as a captain in World War I, after which he opened a law office in Detroit, and entered politics in 1919 as chief assistant United States attorney for the eastern district of Michigan. He served as judge of the Detroit recorder's court, 1923–30; mayor of Detroit, 1930–33; governor-general of the Philippines, 1933–35, and, when the Philippines became a commonwealth Nov. 15, 1935, for a ten-year trial period, first high commissioner. In 1936 he was elected governor of Michigan. He was a confirmed liberal, and demonstrated his liberal attitude toward labour during the critical automobile workers' strike in Michigan in 1937. In Jan. 1939, President Franklin D. Roosevelt nominated him U.S. attorney general.

In this capacity Murphy actively prosecuted both business and labour leaders charged with violations of antitrust laws, and sponsored the investigations that led to the end of the Pendergast machine's rule in Kansas City, Mo. He was appointed to the U.S. supreme court in Jan. 1940, and served as associate justice of that court until his death. (*See* also *Encyclopædia Britannica.*)

Naiditch, Isaac, Russian-born industrialist, Zionist leader (b. Pinsk, Russia, 1868—d. Paris, Fr., Dec. 22, 1949).

Naidu, Sarojini, Indian Nationalist leader, poetess and orator (b. Hyderabad, India, Feb. 13, 1879—d. Lucknow, India, March 2, 1949). (For her early career, see *Encyclopædia Britannica.*) In 1925 she became the first Indian woman to preside over the Indian National Congress. She accompanied Mohandas Karamchand Gandhi to the Round Table conference in London, England, in 1931, but on her return to India was imprisoned for her part in the civil disobedience movement. She was again imprisoned in 1942. The Asian Relations conference of 1947 was presided over by her, and in the same year, after the advent of independence, she became governor of the United Provinces, a post she held until her death.

Neveu, Ginette, French violinist (b. Paris, Fr., Aug. 11, 1919—d. Algarvia peak, Azores, Oct. 28, 1949).

Newberry, Percy Edward, British-born Egyptologist (b. April 23, 1869—d. Hascombe, near Godalming, Sur., Eng., Aug. 7, 1949), was educated at King's college, London, and began the study of Egypt in 1884. In 1890 he became officer in charge of the Archaeological Survey of Egypt of the Egypt Exploration Fund. From 1895 to 1901 he undertook the survey of the necropolis at Thebes, and then served on the staff of the Catalogue Général of the Services des Antiquités of the Cairo museum. He was Brunner professor of Egyptology in the University of Liverpool, 1906–19, and from 1929 to 1933 professor of ancient Egyptian history and archaeology in the University of Egypt, Cairo. He was a member of the group under Howard Carter who in 1922 discovered the tomb of Tutenkhamon, and five years later explored the Gebel Elba region of the Red sea province of the Sudan. He wrote many books on ancient Egypt, his best known being *Five Years' Explorations at Thebes* (1912), produced in collaboration with Lord Caernarvon and Howard Carter.

Newbold, Fleming, U.S. publisher (b. Dayton, O., April 11, 1873—d. Washington, D.C., Jan. 31, 1949).

Newte, Horace Wykeham Can, British author, playwright (b. 1870—d. London, Eng., Dec. 30, 1949).

Nicholson, Sir William Newzam Prior, British painter (b. Newark-on-Trent, Eng., 1872—d. Blewbury, Berks, Eng., May 16, 1949), educated at the Magnus school, Newark-on-Trent, he studied in London and Paris. He attracted considerable attention when, together with his brother-in-law James Pryde, he produced a series of posters under the pseudonym of the Beggarstaff Brothers. Although he also designed woodcuts and stained glass, his more serious work is found in his painting. His "Portrait of Queen Victoria" is a delightful coloured wood engraving. He was knighted in 1936. Examples of his work are to be found in the Tate gallery, London, of which he was a trustee, 1934–39, and also in the Fitzwilliam museum, Cambridge, Eng., the Luxembourg palace, Paris, and several British municipal galleries.

Nintchitch, Momtchilo, Yugoslav government leader (b. Belgrade, Yugos., 1876—d. Lausanne, Switz., Dec. 23, 1949).

Novak, Vitezslav, Czech composer (b. Kamenice-on-Lipa [Kamenitz], Bohem., Dec. 5, 1870—d. Prague, Czech., July 18, 1949).

O'Briain, Art Patrick, Irish diplomat (b. 1872—d. Dublin, Ire., Aug. 12, 1949).

Odell, George Clinton Densmore, U.S. authority on dramatic literature (b. Newburgh, N.Y., March 19, 1866—d. New York city, Oct. 17, 1949).

O'Doherty, Michael J., Roman Catholic archbishop of the Philippines (b. Charlestown, Co. Mayo, Ire., July 30, 1874—d. Manila, Phil., Oct. 14, 1949).

Ogilvie, Sir Frederick Wolff, British scholar and public servant (b. Valparaiso, Chile, Feb. 7, 1893—d. London, Eng., June 10, 1949).

Olander, Victor A., U.S. trades-union leader (b. Chicago, Ill., Nov. 28, 1873—d. Chicago, Feb. 5, 1949).

O'Laughlin, John Callan, U.S. publisher (b. Washington, D.C., Jan. 11, 1873—d. Washington, D.C., March 14, 1949).

O'Neill, Charles, U.S. coal industry spokesman (b. near Clearfield, Pa., June 25, 1887—d. New Rochelle, N.Y., Feb. 28, 1949), began working in the coal mines as a boy of 11. He was assistant secretary of District No. 2 of the United Mine Workers of America, 1908–16, and vice-president of that organization, 1916–18. He helped form the Central Pennsylvania Coal Producers association and was its secretary from 1918 to 1930. He was vice-president of the coal firm of Peale, Peacock and Kerr, Inc., of New York city from 1930 to 1934, and its president from 1934 until his death. He became spokesman for the Eastern Pennsylvania Coal Operators association in 1933, and after that date was prominent in annual negotiations with John L. Lewis of the United Mine Workers union over wages, hours and working conditions in the mines. O'Neill served as a member of the Solid Fuels Advisory council during World War II.

Orozco, José Clemente, Mexican painter (b. Zapotlán, Mex., Nov. 23, 1883—d. Mexico City, Mex., Sept. 7, 1949), lost his left hand in a childhood accident, but the handicap never interfered with his artistic ability. He studied at the National University of Mexico, Mexico City, and learned architectural drawing at the National Academy of Fine Arts, after which he became an architect's draftsman. He began painting seriously in 1913 and presented his first exhibition in Mexico City in 1915. His murals adorn many public buildings in the United States, as well as in Mexico. Among his famous works are the decorations of the National Preparatory school in Mexico, and murals at Pomona college, Claremont, Calif., at the New School for Social Research in New York city and at Dartmouth college, Hanover, N.H.

Osborn, Chase Salmon, U.S. author, publisher and political leader (b. Huntington county, Ind., Jan. 22, 1860—d. Poulan, Ga., April 11, 1949), worked successively in his youth as a newspaper boy, typesetter, mill hand, rail splitter and bellboy. He received his B.S. from Purdue university, West Lafayette, Ind., in 1880. Osborn realized great wealth from his discovery of the Michipicoten and Moose mountain iron ranges in Canada, as well as other ranges in Lapland, Africa, the orient and Latin America. In the 1880s he became a newspaper publisher at Florence, Wis., and subsequently owned the Sault Ste. Marie, Mich., *News* and was city editor of the *Milwaukee Sentinel.* He was governor of Michigan from 1911 to 1913 and actively supported both Theodore and Franklin D. Roosevelt. He was a regent of the University of Michigan. Among his books were *Madagascar; the Land of the Man-Eating Tree* (1924) and *Song of Hiawatha; Hiawatha with Its Original Indian Legends* (with Stellanova Osborn) (1944).

Ouspenskaya, Maria, U.S. actress (b. Tula, near Moscow, Russia, July 29, 1887—d. Hollywood, Calif., Dec. 3, 1949).

Owens, Clarence ("Brick"), U.S. baseball player and umpire (b. Milwaukee, Wis., 1885—d. Chicago, Nov. 11, 1949).

Pares, Sir Bernard, British historian (b. England, March 1, 1867—d. New York, N.Y., April 17, 1949), was educated at Harrow school and Trinity college, Cambridge university. He had a knowledge, unrivalled in his own country, of prerevolutionary Russia which he visited for the first time in 1898. On his second visit, in 1906, Pares met many of the important figures of the second *duma* which was at that time meeting in St. Petersburg. *Russia and Reform* (1907) was the fruit of his experiences. In 1906 he had been appointed reader in Russian history, and from 1908 to 1917 he was professor of Russian history, language and literature in the University of Liverpool. During World War I he was attached to the Russian army as official British observer, and in 1917 he joined the staff of the British ambassador in Petrograd. In 1919 he was appointed to a chair of Russian at London university, and three years later he became, in addition, the first director of the school of Slavonic and east European studies. In 1926 his distinguished verse translation of Ivan A. Krylov's fables appeared. During World War II he lectured in the U.S. for the British ministry of information, and his book *Russia* in the Penguin series enjoyed wide sales in both Great Britain and the United States. Several visits to soviet Russia had made him critical of the regime, which he saw in his *My Russian Memoirs* from the standpoint of the prerevolutionary Liberals, but in 1936 he visited Russia once more and recorded in *Moscow Admits a Critic* opinions which were not unfavourable to it.

Parker, George B., U.S. newspaper editor (b. Ithaca, Mich., Sept. 10, 1886—d. Washington, D.C., Oct. 10, 1949), studied at the University of Oklahoma, Norman, Okla., and from 1909 to 1920 was on the *Oklahoma News*, successively as reporter, city editor, managing editor and editor. From 1920 to 1922 he edited the *Cleveland Press*, then served for two years as editor in chief of the southwestern group of papers of the Scripps-Howard chain. For the last 22 years of his life he was editor in chief of the entire chain of papers. He won a Pulitzer prize for the excellence of his editorials in 1936.

Peet, Max Minor, U.S. neurosurgeon (b. Iosco, Mich., Oct. 20, 1885—d. Ann Arbor, Mich., March 25, 1949).

Pender, John Cuthbert Denison Denison-Pender, 1st Baron of Porthcurnow, British wireless and cable executive (b. May 11, 1892—d. London, Eng., Dec. 4, 1949).

Perali, Pericle, Italian archaeologist, political leader (b. Orvieto, It., July 20, 1884—d. Rome, It., Dec. 30, 1949).

Perrine, George, U.S. engineer (b. Milwaukee, Wis., Jan. 11, 1871—d. New York, N.Y., Jan. 18, 1949).

Perry, K. M., Canadian engineer and brigadier (b. Macleod, Alta., 1885—d. Montreal, Que., May 3, 1949), received his civil engineering degree from McGill university, Montreal, and in 1909 began working for a Montreal engineering company. In 1912 he joined the Lake Superior corporation. During World War I, he became a lieutenant colonel and led the 13th battalion of the Black Watch Royal Highlanders of Canada into Germany. After the war he attended the Imperial Staff college at Cambridge; served as general staff officer at Winnipeg, Man.; taught military tactics at the Royal Military college, Kingston, Ont.; and for four years was general staff officer at Montreal. In 1928 he went on the reserve and became assistant to the general manager of the Beauharnois Power corporation until 1932, when he was appointed a member of the unemployment commission. In 1940 he was elected president of the Quebec division of the Canadian Red Cross society.

Pew, Gertrude L. (Mrs. F. G. Robinson), U.S. portrait painter (b. Niles, O., March 25, 1876—d. New York city, June 28, 1949).

Peyton, Philip B., U.S. army officer (b. Nashville, Tenn., Jan. 22, 1881—d. Washington, D.C., June 24, 1949).

Pfister, Jean Jacques, Swiss-born painter (b. Hasle, Switz., July 10, 1878—d. New York city, June 7, 1949).

Pfitzner, Hans, German composer (b. Moscow, Russia, 1869—d. Salzburg, Aus., May 22, 1949).

Phillips, John Sanburn, U.S. publisher (b. Council Bluffs, Ia., July 2, 1861—d. Goshen, N.Y., Feb. 28, 1949), was graduated from Knox college, Galesburg, Ill., in 1882, and in that year entered the publishing field in Boston, Mass., with Samuel S. McClure. During the ensuing 24 yr., they, as partners, organized the S. S. McClure syndicate, perhaps the earliest modern newspaper feature syndicate, enlisting contributions from such writers as Mark Twain and Robert Louis Stevenson. In 1893 they founded *McClure's Magazine*, with Phillips as manager and treasurer, and later the McClure, Phillips and Co., Inc., book publishing firm, whose authors included Booth Tarkington, O. Henry and Ida Tarbell. In 1906 Phillips launched his own publishing company to produce the *American Magazine*, serving as its editor until 1915 and as its advisory editor from 1915 until 1938.

Pichetto, Stephen S., U.S. art restorer (b. New York, N.Y., 1888?—d. New York, Jan. 20, 1949).

Ponzi, Charles, Italian-born promoter (b. Parma, It., 1877?—d. Rio de Janeiro, Braz., Jan. 15, 1949), emigrated to Canada as a youth, and later to the U.S. In Boston, Mass., he organized an importing business and began a public promotion, claiming to double investors' money in 90 days. He declared that his promotion involved the use of investments to buy international postal union coupons throughout the world, taking advantage of favourable exchange rates. He was said to have attracted $15,000,000 in a few months of 1930. Charged with using the mails to defraud, he was declared bankrupt, and it was deduced that he had been paying off early investors with money sent in by later ones. After serving a jail term, he was deported to Italy, but he emigrated to Brazil shortly before the outbreak of World War II. He died in poverty.

Pool, Eugene Hillhouse, U.S. surgeon (b. New York city, June 3, 1874—d. Locust Valley, L.I., N.Y., April 9, 1949).

Pope-Hennessy, Dame Una, British writer (b. 1876—d. London, Eng., Aug. 16, 1949).

Portal, Wyndham Raymond Portal, 1st Viscount, of Laverstoke, British businessman and politician (b. April 9, 1885—d. Whitchurch, Hants., Eng., May 6, 1949).

Porter, Russell W., U.S. artist and astronomer (b. Springfield, Vt., 1872—d. Pasadena, Calif., Feb. 22, 1949).

Portnoff, Alexander, Russian-born sculptor (b. Russia, Jan. 1, 1887—d. Philadelphia, Pa., Dec. 20, 1949).

Potter, Thomas Albert, U.S. industrialist (b. Dresden, Ger., June 16, 1883—d. Philadelphia, Pa., Jan. 24, 1949).

Rabaud, Henri, French composer and conductor (b. Paris, Fr., Nov. 10, 1873—d. Paris, Sept. 12, 1949).

Rajk (Reich), Laszlo, Hungarian government official (b. Székely-Udvarhely [Odorhei], Transylvania, 1909—d. Budapest, Hung., Oct. 15, 1949). As a student at Budapest university he joined the illegal Communist party in 1930 and was arrested the following year. In 1936 he fought in the Spanish civil war and early in 1939 was interned in France. In 1941 the Germans allowed him to return to Hungary, where he was arrested and sentenced to a short term of imprisonment. In Oct. 1944 he was again arrested but, freed after World War II, became influential in the reorganized Hungarian Workers' (Communist) party. He was minister of the interior from Feb. 1946 until he became minister of foreign affairs in Dec. 1948. On Feb. 1, 1949, he was appointed secretary general of the reorganized People's Independence front. He was arrested on May 16, after the elections, and on Sept. 10 his indictment was published in which he was accused of plotting to murder Matyas Rakosi and four other Communist leaders, and of spying for Marshal Tito and the U.S. military intelligence. It was also alleged that from 1931 he had been a Hungarian police agent. At his trial, which opened on Sept. 16, Rajk confessed to all the crimes of which he was accused, and he was hanged on Oct. 15.

Ramos, Arthur, Brazilian anthropologist (b. Pilar Alagoas, Braz., July 7, 1903—d. Paris, Fr., Oct. 31, 1949).

Ransom, William Lynn, U.S. lawyer (b. Harmony township, Chautauqua county, N.Y., June 24, 1883—d. Cambridge, Mass., Feb. 19, 1949).

Reed, Amy Louise, U.S. author and educator (b. New York, N.Y., Nov. 22, 1872—d. Poughkeepsie, N.Y., Jan. 24, 1949).

Reed, Clyde Martin, U.S. publisher and senator (b. Champaign county, Ill., Oct. 19, 1871—d. Parsons, Kan., Nov. 8, 1949), was educated in Kansas, served with the railway mail service from 1889 to 1910, becoming head of the railway adjustment division. He resigned in 1910 to become publisher of the *Parsons Sun* (Kan.). In 1912 he joined the Bull Moose movement in Kansas, and was active in his state's Republican politics until his death. His first political office was as secretary to Gov. Henry J. Allen in 1919. Four times he campaigned for the Republican nomination for governor of Kansas, being successful in 1928. He was defeated for renomination in 1930. In 1938 he was elected to the U.S. senate, and was re-elected in 1944. During his first term he opposed prewar defense appropriations bills, lend-lease and military spending. He won the displeasure of organized labour by calling for the open shop and a 48-hr. week before payment of overtime. A strong advocate of measures benefiting his home state, Senator Reed especially supported high prices for wheat and pork and bills to expedite shipping of farm commodities. He was co-author of the Reed-Bulwinkle act, which exempted railroads from the antitrust laws with respect to rate agreements approved by the interstate commerce commission, and which became law in 1948 over Pres. Harry S. Truman's veto.

Renard, Rosita (Mrs. Otto Stern), Chilean pianist (b. Santiago, Chile, Feb. 8, 1894—d. Santiago, May 24, 1949), attended the Conservatorio Nacional de Música at Santiago and later, beginning in 1930, was a member of the faculty there. She had studied at the Stern conservatory in Berlin, Germany, on a Chilean government scholarship, and won the Liszt medal. In 1916 she became a pupil at the Rochester, N.Y., Conservatory of Music, and in 1917 gave her first recital in New York city, which was highly praised. She played as soloist with the New York Philharmonic in 1921 and subsequently with the symphony orchestras of Boston, Chicago, St. Louis and other cities of the United States. She made two extended tours with the singer, Geraldine Farrar, and gave concerts in many countries.

Rentschler, Harvey Clayton, U.S. physicist (b. Hamburg, Pa., March 26, 1881—d. East Orange, N.J., March 23, 1949), graduated from Princeton university, Princeton, N.J., and received a Ph.D. from Johns Hopkins university, Baltimore, Md., in 1908. He spent nine years as professor of physics at the University of Missouri, Columbia, Mo., then joined the Westinghouse research laboratories in 1917, remaining with the company until his retirement in 1947. He was at that time director of the research division of Westinghouse's lamp division in Bloomfield N.J. He and his assistant refined the first pure uranium samples in 1922, while searching for better lamp filament material. For 20 yr. his laboratory was virtually the sole source of uranium for experimentation, and it was producing about eight ounces a day when Arthur H. Compton at the University of Chicago, Chicago, Ill., early in 1942 requested three tons of the material—intended (as was later known) for the initial atomic generator. Within a few months Rentschler's laboratory was turning out the metal at the rate of more than 500 lb. a day. His experiments were said to have sped production of the atomic bomb by at least a year. (*See* also *Encyclopædia Britannica.*)

Reynolds, Sidney Hugh, British geologist (b. Brighton, Eng., 1867—d. Clifton, Bristol, Eng., Aug. 22, 1949).

Richardson, Alfred Madeley, English-born organist and composer (b. Southend-on-Sea, Ess., Eng., June 1, 1868—d. New York city, July 23, 1949).

Richardson, George Burr, U.S. geologist (b. New York, N.Y., Aug. 21, 1872—d. Washington, D.C., March 18, 1949), graduated from Harvard university, Cambridge, Mass., in 1895 and received a Ph.D. from Johns Hopkins university, Baltimore, Md., in 1901. He became an expert on U.S. mineral resources, serving with the U.S. geological survey from 1900 to 1942, when he retired as senior geologist. During World War I he was geologist in charge of national petroleum resources. He was a member of numerous learned societies and author of several books on mineral resources.

Rintelen, Franz von, German naval officer and spy (b. Germany, 1884—d. London, Eng., May 30, 1949), was on the staff of the German admiralty when World War I broke out. He was sent to the United States to sabotage the dispatch of munitions to the Allies and was so successful that the British authorities determined to remove him. In 1915 a false message of recall caused Captain von Rintelen to cross the Atlantic and he was arrested on his way back to Germany when the Dutch ship in which he was travelling was in British waters. He was interned until the entry of the U.S. into the war when he was sent to that country and sentenced to imprisonment for espionage activities. He was pardoned by Pres. Woodrow Wilson in 1920 and later settled in England, publishing two books of reminiscences, *The Dark Invader* (1933) and *The Return of the Dark Invader* (1935). During World War II he was interned on the Isle of Man.

Ripley, Robert LeRoy, U.S. cartoonist (b. Santa Rosa, Calif., Dec. 25, 1893—d. New York, N.Y., May 27, 1949), began drawing at the age of 14, when he sold his first cartoon to the old *Life* magazine. He began newspaper work on the *San Francisco Bulletin* in 1909, transferred to the *San Francisco Chronicle*, and in 1913 went to work for the *New York Evening Globe*. He produced his first "Believe It or Not" cartoon in 1918, on a sports subject. He left the *Globe* for the *New York Evening Post*, and continued to produce cartoons that were eventually syndicated to about 30 papers. His work first won broad national recognition with the publication of the first "Believe It or Not" book in 1929. Subsequently King Features syndicate distributed his daily and Sunday panels to more than 300 newspapers throughout the world. He also developed motion-picture short subjects, and for years conducted a radio network show, all on the "Believe It or Not" theme.

Robinson, Luther (Bill, "Bojangles"), U.S. Negro dancer (b. Richmond, Va., May 25, 1878—d. New York city, Nov. 25, 1949), had little formal schooling, but began dancing for pennies at the age of eight, when he had also begun to work as a stableboy. He eventually made a swing of a vaudeville circuit, and in 1908 entered a business association with Marty Forkins, actor's agent, who helped him to fame. He became a star of Negro musical comedies, later a top vaudeville star and finally a star of motion pictures, appearing in *In Old Kentucky*, *The Littlest Rebel* and *The Little Colonel*. His soft-shoe and tap routines were widely copied by other dancers, but Robinson was probably unmatched for ingenuity in creating new steps. He also was famed for a unique ability to run backward—almost as fast as other men could run forward; he once ran 75 yd. backward in eight and one-fifth seconds. Despite his earnings, which reached $6,600 a week for at least one year, he died in relative poverty, chiefly because of his many benefactions, to white persons and Negroes alike. On his death, he received tributes from royalty, the White House and members of the president's cabinet.

Roe, Humphrey Verdon, British pioneer in aviation (b. April 18, 1878—d. London, Eng., July 25, 1949).

Rojas Arreola, Luis Manuel, president of assembly which framed Mexico's constitution (b. Ahualulco de Mercado, Jalisco, Mex.—d. Mexico City, Mex., Feb. 27, 1949).

Rosenthal, David, U.S. painter and etcher (b. Cincinnati, O., Feb. 15, 1876—d. Cincinnati, Oct. 20, 1949).

Ross, Philip Dansken, Canadian newspaper editor (b. Montreal, Que., Jan. 1, 1858—d. Ottawa, Ont., July 5, 1949).

Rothschild, Édouard-Alphonse James de, Baron, French banker (b. Paris, Fr., Feb. 24, 1868—d. Paris, June 30, 1949), was the head of the French branch of the Rothschild family. He was a regent of the Bank of France, president of the Rothschild Brothers bank, and president of the Compagnie du Chemin de fer du Nord. He owned the largest racing stables in France and was one of the most prominent figures of the French turf. In 1926 he played an important part with Raymond Poincaré in stabilizing the franc. During World War II he was deprived of his French nationality by the anti-Semitic laws of the Vichy government and in 1940 went to live in the United States until the liberation of France, when he returned to his country.

Roy, Percy Albert, U.S. educator (b. New Orleans, La., Jan. 8, 1889—d. West Palm Beach, Fla., July 1, 1949).

Runciman of Doxford, Walter Runciman, 1st Viscount, British politician (b. South Shields, Dur., Eng., Nov. 19, 1870—d. Doxford, Northumb., Eng., Nov. 14), was educated at Trinity college, Cambridge. In 1898 he unsuccessfully contested the Gravesend division of Kent as a Liberal and in 1899 was elected for Oldham (defeating Winston Churchill). In the following year he was defeated by Churchill in the general election; Runciman again sat in the house of commons for Dewsbury, 1902–18, for Swansea West, 1924–29, and for St. Ives, Cornwall, 1929–37. After 1931 he sat as a Liberal National. He held many posts in Liberal governments, his first being parliamentary secretary to the local government board, 1905–07. He was financial secretary to the treasury, 1907–08, president of the board of education, 1908–11, and of the board of agriculture, 1911–14. He was president of the board of trade, 1914–16, and again in the national government, 1931–37. In 1937 he was created a viscount and in the following year went to Czechoslovakia as head of a mission which attempted to persuade the Czechs to accept the claims of the Sudeten Germans. The mission failed, but from the beginning it did not appear to have had any hope of success. He returned to the government as lord president of the council, 1938–39.

ushcliffe, Henry Bucknall Betterton, 1st Baron, of Blackfordby in the County of Leicester, British politician (b. Aug. 15, 1872—d. Seaford, Sus., Eng., Nov. 18, 1949), was educated at Rugby and at Christ Church, Oxford, and in 1896 was called to the bar. In 1918 he was elected Conservative member of parliament for Rushcliffe and continued to represent the division, from which he later took his title, until he was created a peer in 1935. He was parliamentary secretary to the ministry of labour, 1923–24 and Nov. 1924–29, and minister of labour from 1931 until 1934, when he became the first chairman of the assistance board, which he himself had set up as minister of labour. He retired from the assistance board in 1941 and later served as chairman of the National Service Hostels corporation, 1941–46; of the Land Title inquiry; of the Nurses' Salaries committee; and in 1945 of the Committee on Legal Aid and Legal Advice.

utledge, Wiley Blount, U.S. supreme court justice (b. Cloverport, Ky., July 20, 1894—d. York, Me., Sept. 10, 1949), studied at Maryville college, Maryville, Tenn., and the University of Wisconsin, Madison, and began teaching school in Bloomington, Ind., while studying law at Indiana University. In 1917 he went to New Mexico for his health, and in 1922 obtained his law degree from the University of Colorado, Boulder. He taught law at the University of Colorado, Washington university in St. Louis, Mo., and at Iowa State university, Iowa City, and was dean of the law schools at the latter two institutions. In 1939 Pres. F. D. Roosevelt named him an associate justice of the U.S. court of appeals for the District of Columbia. In 1943 President Roosevelt appointed him to the U.S. supreme court, where he became identified with the liberal bloc of the court, winning national attention especially for resounding dissents from certain majority opinions of the court, in which he was frequently joined by Justice Frank Murphy.

yder, Chauncey Foster, U.S. water-colour artist and etcher (b. Danbury, Conn., Feb. 29, 1868—d. Wilton, N.H., May 18, 1949).

achs, Josef Ernst, Swedish industrialist (b. Stockholm, Swed., Jan 4, 1872—d. Stockholm, June 23, 1949).

apru, Sir Tej Bahadur, Indian lawyer and government official (b. Dec. 8, 1875—d. Allahabad, United Provinces, Jan. 20, 1949). (For his early life see *Encyclopædia Britannica.*) He attended the Round Table conferences in London in 1930, 1931 and 1932. In 1933 he returned to London to confer with the parliamentary committee on Indian reforms and in the following year was made a privy councillor. During World War II Sapru favoured co-operation with Britain, provided that the composition of the viceroy's executive council was changed.

chindler, John Franklin, U.S. criminologist (b. near Philadelphia road, O., 1857?—d. Santa Barbara, Calif., Sept. 21, 1949).

chlesinger, Leon, U.S. motion-picture producer (b. Philadelphia, Pa., 1884—d. Los Angeles, Calif., Dec. 25, 1949).

chmitz, Elie Robert, French-born pianist (b. Paris, Fr., Feb. 8, 1889—d. San Francisco, Calif., Sept. 5, 1949).

clater, John Robert Paterson, Canadian clergyman (b. Manchester, Eng., April 9, 1876—d. Grantown-on-Spey, Moray, Scot., Aug. 24, 1949).

cott, John Russell, British newspaper publisher (b. July 12, 1879—d. Manchester, Eng., April 5, 1949).

eashore, Carl Emil, Swedish-born psychologist (b. Mörlunda, Swed., Jan. 28, 1866—d. Lewiston, Ida., Oct. 16, 1949).

ellers, David Foote, U.S. admiral (b. Austin, Tex., Feb. 4, 1874—d. Bethesda, Md., Jan. 27, 1949), was graduated from the U.S. Naval academy in 1894 and served in the Spanish-American War, the Samoan campaign and the Philippine insurrection. During World War I he served as commander of troop transports and later as commander of district forces afloat in the Norfolk area. After the war he served as a staff member of the Naval War college, returned for a time to the bureau of navigation in the navy department and in 1921–22 was aide to the secretary of the navy. He received a citation for his service as senior officer present during the U.S. intervention in Nicaragua, 1927–29. He was judge advocate general of the navy in 1929–30 and commander in chief of the U.S. fleet from June 10, 1933, to June 15, 1934, when he became superintendent of the Naval academy. He was on the retirement list after 1938.

naw, Charles Gray, U.S. philosopher and writer (b. Elizabeth, N.J., June 23, 1871—d. Spring Lake, N.J., July 28, 1949).

nean, Al (Al Schonberg), U.S. vaudeville and stage star (b. Dornum, Ger., May 1868—d. New York, N.Y., Aug. 12, 1949), son of a magician and ventriloquist and an uncle of the four Marx brothers, was reared in New York, where he entered on a vaudeville career at the age of 16. He joined forces with Ed Gallagher in vaudeville, and their variety act became one of the most successful of their day. Perhaps the height of their success came during their appearance in the Ziegfeld Follies of 1923–24. Their song, "Absolutely, Mr. Gallagher?—Positively, Mr. Shean!" was sung in the form of numerous parodies. Shean continued to appear in later years, both on the stage and in motion pictures, winning special praise for his portrayal of the monk in *Father Malachy's Miracle* in 1937.

He also appeared in the motion pictures *San Francisco, The Great Waltz, Broadway Serenade, Friendly Neighbors* and *Ziegfeld Girl.*

Shiels, George, Northern Ireland playwright (b. Co. Antrim, Ire., June 24, 1886—d. Ballymoney, Co. Antrim, N.Ire., Sept. 19, 1949).

Shiratori, Toshio, Japanese diplomat and government official (b. 1877—d. Tokyo, Jap., June 4, 1949).

Short, Walter Campbell, U.S. army officer (b. Fillmore, Ill., March 30, 1880—d. Dallas, Tex., Sept. 3, 1949).

Shumaker, Edward E., U.S. industrialist (b. near Somerset, Pa., 1882?—d. Merchantville, N.J., Nov. 3, 1949), financed his education by working in a coal mine, sawmill and stone quarry, and joined the Victor Talking Machine company in Camden, N.J., in 1904. He was named to its board of directors in 1920. In 1926 he was named vice-president as a result of his negotiations with the Western Electric company which gave Victor the use of certain Bell laboratories' inventions, resulting in the development of the Orthophonic Victrola. In 1927 Shumaker became president of the Victor company, and in 1930, when the company merged with the Radio Corporation of America, he was elected president of the new corporation RCA-Victor, serving until his resignation in Jan. 1932. He also was a former vice-president and director of Western Electric company; president and director of Erpi Classroom Films, Inc.; and president of Encyclopædia Britannica Films Inc.

Sims, Philip Hal, U.S. bridge expert and sportsman (b. Selma, Ala., Nov. 8, 1886—d. Havana, Cuba, Feb. 26, 1949), worked as a bank teller in Chicago, Ill., and New York, N.Y., and during World War I served in combat as a pilot with the royal naval air service. He became a tournament bridge player and was recognized as world champion in the early 1930s. An ardent follower of other sports and games, including tennis, billiards and racing, he began, at the age of 48, to engage in tournament golf.

Singh, Sir Jagatjit, maharaja of Kapurthala (b. Sept. 1872—d. Bombay, India, June 19, 1949).

Sloan, Laurence Henry, U.S. editor and economist (b. Spencer, Ind., April 29, 1889—d. New Haven, Conn., May 6, 1949).

Slocum, George Mertz, U.S. publisher (b. Caro, Mich., Jan. 24, 1889—d. Detroit, Mich., Oct. 29, 1949).

Smith, Anne (Mrs. R. H. Smith), U.S. co-organizer of Alcoholics Anonymous (b. Moline, Ill., 1881—d. Akron, O., June 1, 1949).

Smith, David Stanley, U.S. musician, conductor and composer (b. Toledo, O., July 6, 1877—d. New Haven, Conn., Dec. 17, 1949).

Smith, Elias Anthon Cappelen, Norwegian-born engineer and industrialist (b. Trondheim, Nor., Nov. 6, 1873—d. New York city, June 25, 1949).

Smith, Sydney Ure, Australian etcher and painter (b. Stoke Newington, London, Eng., Jan. 1887—d. Sydney, Austr., Oct. 11, 1949).

Smythe, Francis Sydney, British mountaineer (b. Maidstone, Kent, Eng., July 6, 1900—d. Colgate, Sus., Eng., June 27, 1949), was educated at Berkhamsted school and in 1919 entered Faraday House Engineering college. He joined the royal air force in 1926 but was invalided out of the service the following year. After gaining experience in the Alps he made his first visit to the Himalaya in 1930 as a member of the International Kanchenjanga expedition led by Dr. G. O. Dyhrenfurth, and in 1931 he led a small party of British climbers which succeeded in reaching the top of Kamet (25,477 ft.). Smythe made three attempts on Everest (29,002 ft.) in 1933, 1936 and 1938, and in the first of these he was one of three men who reached 28,000 ft.—the highest point from which any climber had returned safely. During World War II he helped to train troops in mountain warfare. New fields were explored when in 1946 and 1947 he took part in expeditions in the Canadian Rockies. His 1947 expedition in the Lloyd George range was undertaken by the use of aircraft to reach the heart of the range. He died from an illness contracted during his last visit to the Himalaya.

Snagge, Sir Harold, British banker, industrialist (b. Dec. 28, 1872—d. London, Eng., March 19, 1949).

Snow, Francis, U.S. editor and author (b. Boston, Mass., 1877—d. New York, N.Y., Feb. 6, 1949).

Solem, Erik, Norwegian jurist (b. Oslo, Nor., Aug. 23, 1877—d. Oslo, Nor., July 15, 1949).

Somerville, Edith Anna Oenone, Irish artist and authoress (b. Corfu, Gr., 1861—d. Castletownshend, County Cork, Ire., Oct. 8, 1949).

Somerville, Sir James Fownes, British admiral (b. Somerset, England, July 17, 1882—d. Wells, Som., March 19, 1949), won the distinguished service order at the Dardanelles during World War I. By 1937 he was vice-admiral, and during World War II a special task force, Force H, was formed, comprising the battleship "Renown," the carrier "Ark Royal," the cruiser "Sheffield" and supporting vessels, with Admiral Somerville in command. This force led the action against the French fleet at Oran, and was chiefly responsible for keeping the Mediterranean safe for British convoys after Italy entered the war. Planes from the force bombed Genoa in Feb. 1941, and its aircraft sighted the German battleship "Bismarck" and dogged it until it was sunk. In 1942 Sir James was commander in chief of the British fleet in the far east. From Oct. 1944 to the end of 1945, he headed the British admiralty delegation in Washington, serving on the combined chiefs of staff, the Allied strategic high command. He retired in 1946.

Sommer, William, U.S. painter (b. Detroit, Mich., 1867—d. Cleveland, O., June 20, 1949).

Sophoulis, Themistocles, Greek prime minister (b. Vathy, island of Samos, Nov. 25, 1861—d. Kifissia, Gr., June 24, 1949), an archaeologist and man of letters by profession, was the leader of the movement which sought for Samos freedom from Turkish rule. This was accomplished in 1912, and Sophoulis became head of the island's new government, which that same year proclaimed union with Greece. He was appointed governor-general of Macedonia in 1914, and was elected to represent Samos in the Greek parliament in 1915. A staunch supporter of the Liberal leader, Eleutheries Venizelos, Sophoulis assisted him in setting up the revolutionary pro-Allied government at Salonika in 1916, returning to Athens the next year, after King

Constantine had been deposed. Sophoulis was president of the chamber of deputies from 1917 to 1920, and was thereafter in and out of government office. In 1924, after the proclamation of the republic, he was for a time prime minister. Venizelos died in 1936, and Sophoulis succeeded as Liberal party chief, but during the dictatorship of Gen. John Metaxas, 1936–41, he held no public office. In 1944 he was arrested by the Germans and was detained in the Haidari concentration camp near Athens. After the liberation he took office as prime minister of a Republican cabinet on Nov. 22, 1945, but resigned after the elections of March 31, 1946, had given victory to the Populist (conservative) party. On Sept. 7, 1947, he again assumed the premiership in a coalition government composed of Liberals and Populists. He reshuffled his cabinet in May and November 1948 and in January and April 1949.

Sotomayor y Luna, Manuel, vice-president of Ecuador (b. Quito, Ec., Nov. 4, 1887—d. Guayaquil, Ec., Oct. 16, 1949).

Spoor, Simon Hendrik, Netherlands general (b. Amsterdam, Neth., Jan. 12, 1902—d. Batavia, Java, May 25, 1949), graduated from the Breda Military academy as second lieutenant in 1923. Posted to Indonesia, he returned to Holland in 1929 to study at the staff college. He was attached to the general staff in Indonesia in 1932, and returning to Holland two years later was promoted captain and appointed lecturer at the Breda academy. In 1938 he was back at Batavia and at the beginning of 1942, with the rank of major, was attached to General Douglas MacArthur's staff. After the capitulation of Japan he returned to Indonesia as a colonel and director of the Netherlands forces intelligence service. In Jan. 1946 he was promoted major-general and appointed commander-in-chief of the Netherlands forces in Indonesia and head of the war department there, becoming lieutenant-general in September. He led the military operations against the Republic of Indonesia which started on Dec. 18, 1948. He was promoted general on May 23, 1949, and died from a heart attack two days later.

Squire, Amos Osborne, U.S. physician (b. Cold Spring, N.Y., May 28, 1876—d. Ossining, N.Y., Feb. 11, 1949), was graduated from the Columbia College of Physicians and Surgeons, New York city, in 1899 and began the practice of medicine in Westchester county, N.Y. From 1906 to 1912 he served as that county's coroner and from 1910 to 1920 ran a private sanitarium in Ossining, meantime being appointed chief physician of the Sing Sing prison, 1910–25. He campaigned ceaselessly against capital punishment and was renowned for his many reforms undertaken for the advantage of prisoners at Sing Sing.

Staples, Owen, Canadian etcher and cartoonist (b. Stoke, Sub Hamdon, Som., Eng., Sept. 3, 1866—d. Toronto, Ont., Dec. 6, 1949).

Stearns, Alfred Ernest, U.S. educator (b. Orange, N.J., June 6, 1871—d. Andover, Mass., Nov. 15, 1949).

Sterling, Ross Shaw, U.S. oil magnate, former governor of Texas (b. Anahuak, Tex., Feb. 11, 1875—d. Fort Worth, Tex., March 25, 1949).

Stettinius, Edward R., Jr., U.S. industrialist and former secretary of state (b. Chicago, Ill., Oct. 22, 1900—d. Greenwich, Conn., Oct. 31, 1949), attended the Pomfret (Conn.) school and entered the University of Virginia (Charlottesville) but left without taking a degree. He began work as a stockroom clerk in the Hyatt Roller Bearing works in 1924. His father was a director of General Motors corporation, and in 1926 Stettinius became assistant to a General Motors vice-president. In 1931 he became vice-president in charge of industrial and public relations. He transferred to the United States Steel corporation, becoming vice-chairman of its finance committee in 1934 and chairman of the board of the corporation, at the age of 37, in 1938. In 1939 he became chairman of the War Resources board, and in Jan. 1941 director of priorities in the Office of Production Management. His promotion of a vital wartime synthetic rubber program prompted Pres. Franklin D. Roosevelt to select him as lend-lease administrator. In 1943 he was named under-secretary of state, and in 1944 was appointed secretary of state to succeed Cordell Hull. He held this post until June 1945, when he resigned to become first U.S. delegate to the general assembly of the United Nations, a post he held until 1946, when he resigned. He was one of President Roosevelt's advisers at the Yalta conference in 1945; was active in the Dumbarton Oaks conference preliminary to the formation of the United Nations; and was generally credited with being a leading U.S. mover in the formation of the United Nations itself.

Stevens, Albert William, U.S. army officer (b. Belfast, Me., March 13, 1886—d. Redwood City, Calif., March 26, 1949), completed his studies at the University of Maine, Orono, Me., and enlisted in World War I as a private, winning his commission and serving later as an aerial photographer. In 1930 in South America he took the first photograph showing the lateral curvature of the earth's surface. In 1932 he took the first photograph of the moon's shadow on the earth during an eclipse of the sun. In 1932 he also took a picture showing Mount Shasta's peak 331 mi. from the camera. With Orvil Anderson on Nov. 11, 1935, he ascended to 13.7 mi. in a balloon launched from near Rapid City, S.D., in a flight jointly sponsored by the National Geographic society and the army air corps. The flight not only set an altitude record but gave important information about the stratosphere.

Stevens, Neil Everett, U.S. botanist (b. Portland, Me., April 6, 1887—d. Champaign, Ill., June 26, 1949).

Stewart, Duncan George, British colonial governor (b. Wilkleifontein, Transvaal, U. of S. Af., Oct. 22, 1904—d. Singapore, Dec. 10, 1949), was educated at Winchester and Oriel college, Oxford. In 1928 he joined the colonial service and served in Nigeria. In 1944 he was transferred to the Bahamas as colonial secretary and in 1947 went to Palestine as financial secretary. He was in charge of the Palestine accounts clearance office in Cyprus when, in Sept. 1949, he was appointed governor of Sarawak in succession to Sir Charles Arden Clarke. He arrived in the colony in November. On Dec. 3, during his first visit to Sibu, the second largest town in Sarawak, he was stabbed by a 16-year-old Malay and seriously wounded. He was flown to Singapore and died a week later.

Stewart, Sir James Purves-, British neurologist (b. Edinburgh, Scot., Nov. 20, 1869—d. London, Eng., June 14, 1949).

Stewart, William Downie, New Zealand government official, publicist (b. Dunedin, N.Z., July 29, 1878—d. Dunedin, Sept. 29, 1949).

Stockdale, Sir Frank Arthur, British colonial administrator (b. June 24, 1883—d. London, Eng., Aug. 3, 1949).

Stothart, Herbert, U.S. composer and arranger (b. Milwaukee, Wis., Sept. 11, 1885—d. Los Angeles, Calif., Feb. 1, 1949), studied at the University of Wisconsin. He entered show business as producing musical director of a series of Broadway shows under Oscar Hammerstein 2nd, and eventually collaborated with Franz Lehar, Vincent Youmans, George Gershwin and Rudolf Friml. He went to Hollywood originally to score the production *The Rogue Song*, and later worked as musical director for pictures that co-starred Nelson Eddy and Jeanette MacDonald. He won an Academy award for his musical score for *The Wizard of Oz.*

Strathmore and Kinghorne, Patrick Bowes-Lyon, 15TH EARL OF, British peer, eldest brother of Queen Elizabeth (b. Sept. 22, 1884—d. Glamis castle, Scot., May 25, 1949).

Strauss, Richard, German composer and conductor (b. Munich, Ger., June 11, 1864—d. Garmisch-Partenkirchen, Ger., Sept. 8, 1949), was the son of Franz Strauss, a horn player in the opera orchestra. He began to compose at the age of six, studied music at Munich and at 21 became conductor of the Meiningen court orchestra. In 1889 he was the conductor at Weimar, five years later at Munich, and in 1898 he became conductor at the Berlin state opera. In 1905 was produced his first great opera, *Salome*, based on Oscar Wilde's libretto. In 1909 with the production of *Elektra* began his long partnership with the Austrian poet Hugo von Hoffmannsthal. From this collaboration many operas were born including the most successful, *Der Rosenkavalier* (1911), *Ariadne auf Naxos* (1912) and *Die Frau ohne Schatten* (1919). *Arabella*, composed in 1929 and produced four years later, failed to achieve success. Among symphonic poems, *Till Eulenspiegels lustige Streiche* (1895), *Don Quixote* (1898) and *Don Juan* (1889) are generally the most esteemed. To the nazis Strauss's world-wide reputation made him an acceptable president of their *Reichsmusikkammer*, but his appointment in 1933 brought him no credit and he did not remain in favour. In 1935 he produced at Dresden *Die schweigsame Frau*, an opera of which the libretto, based on Ben Jonson's comedy, *Epicoene or The Silent Woman*, was adapted by Stefan Zweig. Because the latter was a Jew the opera was banned after its second performance and Strauss resigned the presidency of the *Reichsmusikkammer*. The opera *Friedenstag*, produced at Munich in 1938, was hissed by the nazis. In 1944 and early 1945 Strauss took refuge in Switzerland. (*See* also *Encyclopædia Britannica.*)

Strean, Maria Judson, U.S. miniature and water-colour artist (b. Washington, Pa.—d. Pittsburgh, Pa., July 14, 1949).

Suhard, Emmanuel Celestine, CARDINAL, French archbishop of Paris (b. Brains-sur-les-Marches, Mayenne Dist., Fr., April 6, 1874—d. Paris, Fr., May 29, 1949).

Sullivan, Timothy, former chief justice of Eire (b. 1874—d. Dublin, Ire., March 29, 1949).

Tack, Augustus Vincent, U.S. mural and portrait painter (b. Pittsburgh, Pa., Nov. 9, 1870—d. Deerfield, Mass., July 20, 1949).

Tandy, Vertner W., Sr., U.S. architect (b. Lexington, Ky., May 17, 1885—d. New York city, Nov. 7, 1949).

Taussig, James Edward, U.S. retired railroad executive (b. St. Louis, Mo., May 4, 1865—d. St. Louis, Oct. 3, 1949).

Tchernowitz, Chaim, U.S. authority on Talmudic law (b. Sebej, Lith., 1871—d. New York, N.Y., May 15, 1949), was ordained a rabbi in 1896 and became rabbi of Odessa, where he founded a rabbinical college. He remained there until 1912. He studied at various European universities, receiving his Ph.D. degree from the University of Würzburg, Germany, in 1914. In 1923 he moved to the U.S. to become professor of Talmud at the Jewish Institute of Religion in New York city, where he was named professor emeritus in 1947. His various learned studies, produced from 1897 up to the time of his death, concerned research into Talmudic history and law, as well as essays on Zionism. He was president of the Jewish Academy of Arts and Sciences, and founder and editor of the American Hebrew monthly, *Bitzaron*. The Palestinian colony of Givath Chaim was named in his honour.

Thoeny, William, Austrian-born painter (b. Austria, 1888—d. New York city, May 1, 1949).

Thomas, James Henry, British government official and trade union leader (b. Newport, Monm., Eng., Oct. 3, 1874—d. London, Eng., Jan. 21, 1949), left school when nine years of age and started work as an errand boy. He was an active trade union organizer at Swindon and later worked for the Amalgamated Society of Railway Servants in Manchester and in south Wales, becoming its assistant secretary. He was general secretary of the National Union of Railwaymen in 1918–24 and 1925–31. From 1910, when he was elected M.P. for Derby, he took an active part in politics and when Labour took office in 1924 he became colonial secretary. In 1926 Thomas opposed the general strike but he also disapproved of the government's handling of the situation and particularly of the Trade Disputes and Trade Unions bill which was introduced in the following year. In 1929 he became lord privy seal and minister of employment in the second Labour government. When the Imperial conference met in 1930 Thomas, as secretary of state for the dominions, took an important part. In 1931 he entered the new National government continuing to hold the same office and, for a time, the secretaryship of the colonies as well. He had been repudiated by the Derby Labour party but was returned in the election of that year when he stood as an independent Labour candidate. Returned again in 1935 he became colonial secretary. In 1936 he was found by a tribunal of inquiry to be guilty of the disclosure of information about the budget. He had not profited personally by his foreknowledge but resigned nevertheless and retired from politics. In 1937 his book, *My Story*, was published. (*See* also *Encyclopædia Britannica.*)

Thompson, Fred, British musical-comedy writer (b. London, Eng., Jan. 24, 1884—d. London, April 10, 1949).

Thorndike, Edward Lee, U.S. educator and experimental psychologist (b. Williamsburg, Mass., Aug. 31, 1874—d. Montrose, N.Y., Aug. 9, 1949), was educated at Wesleyan university, Middletown, Conn., and at Harvard and Columbia universities. He taught at Western Reserve university in Cleveland, O., and in 1899 went to Columbia, where he became professor of educational psychology. He prepared basic teaching material for what was then the new subject of educational psychology, and helped devise the intelligence tests used by the U.S. army in World War I. He was one of the first experimenters in animal psychology, and developed such standard testing devices as the maze and the puzzle box. He was the author of almost 500 articles and books, among them *Human Nature and the Social Order, The Thorndike-Century Senior Dictionary,* and *The Teacher's Word Book of 30,000 Words.*

Tilden, Mrs. Linda Palmer Teece Littlejohn, Australian feminist leader (b. Sydney, Austr., 1889?—d. Sydney, March 21, 1949), became president of the United Associations of Women in Australia and of the Equal Rights International, with headquarters in Geneva, Switzerland. She was also former president of the New South Wales board of health and a director of the woman's Australian national service. She served as a radio commentator, and contributed articles to many publications besides writing a novel, *Life and Lucille.* Her second marriage was in 1942 to Charles J. Tilden, professor emeritus of engineering mechanics at Yale university.

Timken, William Robert, U.S. retired roller-bearing manufacturer (b. St. Louis, Mo., Feb. 24, 1866—d. Croton-on-Hudson, N.Y., June 11, 1949).

Tittle, Ernest Fremont, U.S. clergyman (b. Springfield, O., Oct. 21, 1885—d. Evanston, Ill., Aug. 3, 1949), attended Ohio Wesleyan university, Delaware, O., and Drew Theological seminary, Madison, N.J., and was ordained in the Methodist ministry in 1910. He occupied pastorates in various cities in Ohio and in 1918 went to the First Methodist church of Evanston, where he served for more than 30 years. An outspoken pacifist and liberal, Tittle was internationally known in church circles. He was a delegate to the World Conference on Church, Community and State, Oxford; chairman of the Commission on World Peace of the Methodist Church; a member of the Federal Council of Churches Commission to Study the Bases of a Just and Durable Peace; and a leader in the National Conference of Christians and Jews. In 1932 he held the lectureship on preaching under the Lyman Beecher foundation at Yale university, New Haven, Conn., and he had also held lectureships at the Colgate-Rochester Divinity school, Rochester, N.Y.; the Pacific School of Religion, Berkeley, Calif.; Grinnell college, Grinnell, Ia.; DePauw university, Greencastle, Ind.; Auburn Theological seminary, Auburn, N.Y.; and Ohio Wesleyan. He was the author of many books and articles on religious subjects.

Tolbukhin, Feodor Ivanovich, soviet marshal (b. Andronniki, Yaroslavl province, Russia, June 16, 1894—d. Oct. 17, 1949), was the son of a peasant. During World War I he rose from private to captain; he joined the Red army and in 1920 commanded a division. After the civil war he graduated from the Frunze Military academy, Moscow, and in 1941 was a major general and chief of staff of a military district. During World War II he distinguished himself as a tactician and an expert in tank warfare. In Nov. 1942 he commanded the army which, from the southeast, helped to encircle the German Sixth army at Stalingrad; and on Feb. 1, 1943, he personally accepted Field Marshal Friedrich von Paulus' surrender. In Aug. 1943 he defeated the Germans at Taganrog; later he took Melitopol, contributed to the liberation of the Crimea and on May 9, 1944, recaptured Sevastopol. In Aug. 1944, his armies swept through Rumania into Bulgaria, and it was he who signed the Bulgarian armistice in Moscow on Oct. 28, 1944. Promoted marshal on Sept. 12, 1944, he contributed to the liberation of Yugoslavia; in Dec. 1944 his army group reached Balaton lake in Hungary, and early in 1945 he participated in the battles of Budapest and Vienna. His last appointment was as commander of the troops of the Transcaucasian military district. His ashes were buried in the Red square in Moscow on Oct. 19.

Towne, Charles Hanson, U.S. author and editor (b. Louisville, Ky., Feb. 2, 1877—d. New York, N.Y., Feb. 28, 1949), attended public schools in New York, and spent a year at City College of New York. He served as editorial assistant on *Cosmopolitan* magazine, then became editor of *Smart Set,* later managing editor of *McClure's Magazine* (1915–20) and editor of *Harper's Bazaar* (1926–31). He was the author of 27 books, one of the last of which was his autobiography, *So Far So Good,* published in 1945. He collaborated with Deems Taylor in writing *The City of Joy* and with Amy Woodforde-Finden in writing four song cycles including "The Magic Casement."

Tredegar, Evan Frederic Morgan, 2nd Viscount, Welsh artist (b. July 13, 1893—d. near Horsham, Sus., Eng., April 27, 1949).

Trier, Charles, U.S. actor and director (b. New York city, 1864?—d. New York city, Aug. 15, 1949).

Turina Joaquín, Spanish pianist and composer (b. Seville, Sp., Dec. 9, 1882—d. Madrid, Sp., Jan. 14, 1949). (See *Encyclopædia Britannica.*)

Ullswater, James William Lowther, 1st Viscount, of Campsea Ashe, Suffolk, British parliamentarian (b. April 1, 1855—d. Campsea Ashe, Suff., Eng., March 27, 1949).

Undset, Sigrid, Norwegian author (b. Kalundborg, Den., May 20, 1882—d. Lillehammer, Nor., June 10, 1949), earned an international reputation by her three novels, *Fru Marta Oulie* (1907), *Jenny* (1911) and *Kristin Lavransdatter* (1920–22), for the last of which, a three-volume work based on mediaeval life in Norway, she was awarded the Nobel prize for literature in 1928. Historical studies made for *Kristin Lavransdatter* led to her conversion to Roman Catholicism in 1925. *Olav Audunsson* (1925–27), *Ida Elizabeth* (1932) and *Saga of Saints* (1934) continued the historical series, and in 1939 her autobiography, *Men, Women and Places,* appeared. A year later, when Norway was invaded, Fru Undset issued a strong statement urging her countrymen to resist. Eventually she fled with her younger son, Hans, through Stockholm, Moscow and Vladivostok to the United States; at Stockholm she learned that her elder son, Anders, had been killed fighting the Germans. Returning to Norway in July 1945, she lived quietly at Lillehammer. Her last book, *Happy Times in Norway,* appeared in 1942 in New York city. In 1912 she married the painter A. C. Svarstad, but the marriage was dissolved in 1925. (*See* also *Encyclopædia Britannica*).

U'Ren, William S., U.S. originator of the "Oregon system" (b. Wisconsin, 1859?—d. Portland, Ore., March 8, 1949), was reared as a farmer and worked as a blacksmith before beginning the study of law. Settling in Oregon to practise law, he became influenced by the Henry George single-tax theory, and promoted the idea of the initiative as the way to bring it about. This interest he expanded to what eventually came to be called the "Oregon system," for which he was largely responsible. This included the initiative, the referendum, the recall and the direct election of U.S. senators. The reforms he advocated and helped to execute as a member of the Oregon legislature were widely copied in other states and eventually, in part, by the congress of the United States.

Uthwatt, Augustus Andrewes Uthwatt, Baron (life peer), of Lathbury, Buckinghamshire, British lord of appeal (b. Australia, April 25, 1879—d. Sandwich, Kent, Eng., April 24, 1949).

Vanbrugh, Dame Irene, British actress (b. Exeter, Devon, Eng., Dec. 2, 1872—d. London, Eng., Nov. 30, 1949), made her first stage appearance at the age of 16 as Phoebe in *As You Like It* at the Theatre Royal in Margate. After this she toured with J. L. Toole's company and played in England, Australia and New Zealand. She first appeared on the London West End stage in 1892 and in following years was with Beerbohm Tree, George Alexander and A. Bourchier. Her work showed great versatility but it was in light comedy in which she excelled. She created among other parts those of the Hon. Gwendolen Fairfax in *The Importance of Being Earnest,* Lady Mary Lazenby in *The Admirable Crichton,* Rose Trelawny in *Trelawny of the Wells.* She made many tours of Australia, New Zealand and South Africa and during World War II worked with the Entertainments National Service association (E.N.S.A.). She appeared in films including *Catherine the Great* and *I Live in Grosvenor Square.* Her autobiography, *To Tell My Story,* was published in 1948. In 1901 she married Dion Boucicault, an actor and stage director; he died in 1929. She was created a dame commander of the Order of the British Empire on Jan. 1, 1941.

Vaugoin, Karl, former chancellor of Austria (b. Vienna, Aus., July 8, 1873—d. Krems, Aus., June 11, 1949).

Verne, Henri, French former director of the Louvre (b. 1879?—d. Paris, Fr., Feb. 16, 1949).

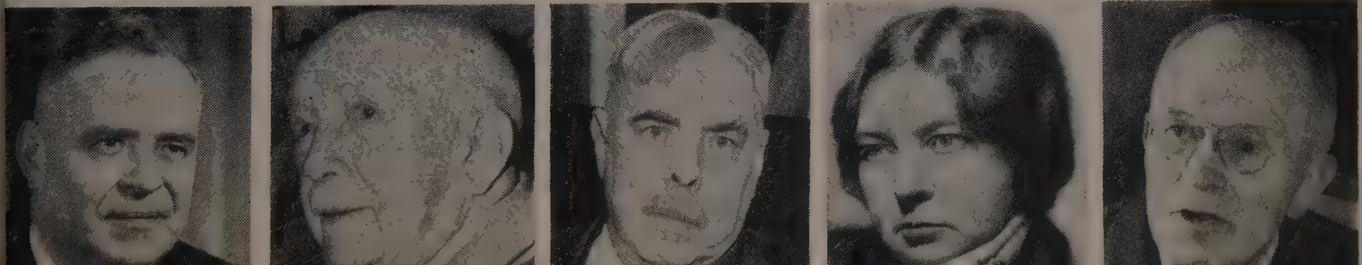
Villard, Oswald Garrison, U.S. publisher, editor and author (b. Wiesbaden, Ger., March 13, 1872—d. New York, N.Y., Oct. 1, 1949). His father, Henry Villard, was president of the Northern Pacific railroad and his mother, Fanny Garrison Villard, was the daughter of William Lloyd Garrison, great Civil War liberal. As a youth of 11 Oswald drove the final spike to complete the Northern Pacific railroad. He studied at Harvard university, was a reporter for the *Philadelphia Press,* 1896–97, and in the latter year inherited the *New York Evening Post* from his father. He made the *Post* one of the most influential papers of its day. He opposed U.S. entry into World War I, and because this stand was unpopular and was hurting the circulation of the *Post,* he sold the paper but retained control of the *Nation,* which began as a weekly supplement to the *Post.* He continued to edit the *Nation* until 1932. Besides his influential writings in periodicals, he was the author of a number of books, including an autobiography, published in 1939, and *The Disappearing Daily,* a study of his favorite theme, the daily newspaper, published in 1944.

Viskniskki, Guy T., U.S. editor of *Stars and Stripes,* World War I (b. Carmi, Ill., 1876?—d. Montclair, N.J., Sept. 5, 1949).

Wadsworth, Edward Alexander, British painter (b. Cleckheaton, Yorks., Eng., Oct. 1889—d. London, Eng., June 21, 1949).

Wagner, Elin, Swedish novelist (b. Lund, Swed., 1882—d. Bergslund, Swed., Jan. 7, 1949).

Wakatsuki, Reijiro, Baron, Japanese former premier (b. Matsuye, Jap., Feb.



1949 OBITUARIES: Wiley B. Rutledge, U.S. jurist; Richard Strauss, German composer; Edward L. Thorndike, U.S. psychologist; Sigrid Undset, Norwegian author; Oswald Garrison Villard, U.S. editor

5, 1866—d. near Ito, Jap., Nov. 21, 1949).

Walker, Hugh Kelso, U.S. clergyman (b. Rogersville, Tenn., Dec. 5, 1861—d. Hollywood, Calif., Sept. 19, 1949).

Walker, Joseph Henry, British newspaper editor (b. Warrington, Lancs., Eng., 1890?—d. Bath, Som., Eng., June 18, 1949).

Walling, Robert Alfred John, British editor, writer (b. Exeter, Dev., Eng., Jan. 1869—d. Plymouth, S. Dev., Eng., Sept. 4, 1949).

Walls, Tom Kirby, British actor and race horse owner (b. Kingsthorpe, Northants., Eng., Feb. 18, 1883—d. Ewell, Sur., Eng., Nov. 27, 1949).

Walsh, William Thomas, U.S. biographer, novelist and poet (b. Waterbury, Conn., Sept. 11, 1891—d. White Plains, N.Y., Feb. 22, 1949), attended Yale university, then spent four years as a newspaper reporter on papers in Connecticut and Philadelphia. From 1918 until 1933 he was head of the English department of the former Roxbury school, now the Cheshire academy, Cheshire, Conn., and in 1933 he joined the faculty at Manhattanville College of the Sacred Heart in New York, where he served as professor of English until he retired in 1947. Among his works that received most attention were the biographies *Isabella of Spain: The Last Crusader* (1931), *Philip II* (1937) and *St. Theresa of Avila* (1943). He was awarded the Laetare medal by the University of Notre Dame in 1941 and in 1944 the Catholic Literary award of the Gallery of Living Catholic Authors. His latest work included the books *Our Lady of Fátima* (1947) and *Saint Peter, the Apostle* (1948).

Walthour, Robert ("Bobby"), U.S. bicycle racer (b. Walthourville, Ga., Jan. 1, 1878—d. Boston, Mass., Sept. 1, 1949), held virtually every cycling record during his racing career, twice winning world championships at the Crystal Palace in London while holding the U.S. championship. He was one of the leading cyclists during the early days of the 20th century, when motor-paced events first came into vogue. At one time in Boston in 1903 he did a mile in 67 sec. in a 15-mi. race; in Germany he rode 57 mi. in the first hour of a 100-km. race; on another occasion in 1904 he smashed 26 records during a 30-mi. race. In 1902 he won virtually every competitive event in motor-paced racing. At a European appearance in 1904 he won 16 out of 17 starts in motor-paced events. In both 1904 and 1905 he won the world motor-paced title, the first year in London and the second in Antwerp, Belgium. During his cycling career he had many accidents, suffered numerous broken bones, and finally retired in 1929 after a fall fractured his collarbone, for what was said to be the 29th time.

Walton, J. C. (Jack), U.S. former governor of Oklahoma (b. Indiana, 1881?—d. Oklahoma City, Okla., Nov. 25, 1949).

Ward, John Chamberlain, U.S. Episcopal bishop (b. Elmira, N.Y., Aug. 27, 1873—d. Buffalo, N.Y., Feb. 15, 1949).

Wardle, Arthur, British painter (b. London, Eng., 1864—d. London, July 16, 1949).

Ware, Sir Fabian, British founder of Imperial War Graves commission (b. Clifton, Bristol, Eng., 1869—d. Amberley, Glos., Eng., April 28, 1949).

Warnow, Mark, U.S. orchestra leader (b. Monastrischt, Russia, April 10, 1902—d. New York, N.Y., Oct. 17, 1949), was taken to the U.S. at the age of 5, studied violin, and began his musical career leading Salvation Army bands and amateur groups. In 1932 he got his first major opportunity as a conductor by substituting as director at a Morton Downey program. His orchestra later became famous as the feature of the National Broadcasting Co. program, "Your Hit Parade," which he conducted in 493 weekly performances.

Warren, Forrest, U.S. newspaper columnist (b. 1878?—d. San Diego, Calif., July 4, 1949).

Weeks, John Elmer, U.S. ophthalmologist (b. Painsville, O., Aug. 9, 1853—d. La Jolla, Calif., Feb. 2, 1949).

Weigl, Karl, Austrian-born composer and conductor (b. Vienna, Aus., Feb. 6, 1881—d. New York city, Aug. 11, 1949).

Welch, Charles Whitefield, U.S. clergyman (b. White county, Tenn., March 11, 1878—d. Louisville, Ky., Nov. 13, 1949).

Wensley, Frederick, British official of Scotland Yard (b. Taunton, Eng., 1865—d. London, Eng., Dec. 4, 1949).

Wentz, Louis Haines (Lew), U.S. oil executive (b. Tama, Ia., 1880?—d. Ponca City, Okla., June 9, 1949).

Westcott, Foss, English-born churchman, metropolitan of India, Burma and Ceylon (b. Harrow, Mdx., Eng., Oct. 23, 1863—d. Darjeeling, India, Oct. 19, 1949).

Whitman, Frank Burton, U.S. sports editor (b. Worcester, Mass., 1886?—d. St. Louis, Mo., May 8, 1949).

Whitney, Alexander Fell, U.S. labour leader (b. Cedar Falls, Ia., April 12, 1873—d. Cleveland, O., July 16, 1949), joined the Brotherhood of Railroad Trainmen in 1896, by 1905 was a member of the board of grand trustees, by 1907 vice-president, and in 1928 was elected president of the organization, holding that position until his death. He was an acknowledged spokesman for much of railroad labour, and was frequently consulted in the drafting of legislation affecting rail workers. He drew a great deal of public notice in 1946 when, with Alvanley Johnston, president of the Brotherhood of Locomotive Engineers, he precipitated a two-day national railroad strike, which prompted President Truman to say: "It is inconceivable that in our democracy any two men can be placed in a position where they can completely stifle our economy and ultimately destroy our country."

Wickser, Philip John, U.S. lawyer (b. Buffalo, N.Y., April 4, 1887—d. Nantucket, Mass., Aug. 14, 1949).

Widdop, Walter, British singer (b. Norland, Yorks., Eng., April 19, 1892—d. London, Eng., Sept. 6, 1949).

Wilbur, Ray Lyman, U.S. educator and cabinet member (b. Boonsboro, Ia., April 13, 1875—d. Stanford, Calif., June 26, 1949), was graduated from Stanford university, and took his medical degree from Cooper Medical college, San Francisco. He became professor of medicine at Stanford in 1909, and dean of the medical school in 1911. He was president of the American Academy of Medicine in 1912–13 and of the American Medical Association, 1923–24.

In 1916 Wilbur became president of Stanford, retaining that position until he retired in 1943 with the lifetime title of chancellor of the university. Meantime, in 1917 he left Stanford to serve as chief of the conservation division of the War Food administration, headed by Herbert Hoover, Wilbur's undergraduate classmate at Stanford.

In 1929, President Hoover named Wilbur secretary of the interior, and under his jurisdiction prompt action was taken to remove the causes and sources of scandal in naval oil reserves that had created public sensations under the Harding administration. Wilbur returned to Stanford after this government service, and was thereafter best known for his leadership in education and public health. (*See* also *Encyclopædia Britannica.*)

Wilgus, William John, U.S. engineer (b. Buffalo, N.Y., Nov. 20, 1865—d. Claremont, N.H., Oct. 24, 1949).

Williams, Sidney Clark, U.S. novelist (b. Wells, Me., May 2, 1878—d. Norristown, Pa., May 24, 1949).

Willis, Bailey, U.S. geologist (b. Idlewild-on-Hudson, N.Y., May 31, 1857—d. San Francisco, Calif., Feb. 19 1949).

Wilson, David Roger, U.S. industrialist (b. Warren, O., Nov. 15, 1874—d. Pontiac, Mich., March 11, 1949), founded with his brother, Charles, in 1914 a gray-iron foundry that grew to become the largest in the world, until the construction of one by General Motors Corp. in 1934. He was named a receiver for the Willys-Overland company in 1933, and became its president under a reorganization plan in 1936

Winn, Matt J., U.S. race-track promoter (b. Louisville, Ky., June 30, 1861—d. Louisville, Oct. 6, 1949), witnessed every Kentucky Derby from 1875 until his death. With a group of friends, he took over Churchill Downs, site of the annual Kentucky Derby, in 1902, and also organized the American Turf association to build up interest in racing apart from the rather exclusive clique that then dominated the sport. From 1915 on, the fame of the Derby grew steadily; purses increased from as little as $4,000 to more than $100,000, while attendance multiplied tenfold. "Colonel" Winn (the title was honorary) helped to popularize parimutuel betting, which became common at tracks throughout the U.S.

Winter, Ezra, U.S. mural painter (b. Manistee, Mich., March 10, 1886—d. Canaan, Conn., April 7, 1949).

Wintringham, Thomas Henry, British politician and author (b. Grimsby, Lincs., Eng., May 15, 1898—d. Searby Manor, Lincs., Eng., Aug. 16, 1949).

Wise, Stephen Samuel, U.S. rabbi and Zionist leader (b. Budapest, Hung., March 17, 1874—d. New York, N.Y., April 19, 1949), was of the fourth generation of rabbis. His family settled in New York city in 1875, and he attended the public schools, College of the City of New York and Columbia university. He took a pulpit at the Congregation B'nai Jashurun, then moved to Portland, Ore., in 1900. In 1906 he resigned in Portland to return to New York to open the Free Synagogue of New York, beginning with Sunday services in the Hudson theatre there.

He was an ardent Zionist, and one of the earliest outspoken critics of Adolf Hitler's anti-Semitism. He was president of the American Jewish congress, a member of the executive board of the Jewish Agency for Palestine, co-chairman of the American Zionist Emergency council, president and founder of the Jewish Institute of Religion, and from 1936 to his death head of the World Jewish congress with headquarters in Switzerland.

Wood, Samuel Grosvenor, U.S. motion-picture director (b. Philadelphia, Pa., July 10, 1884—d. Hollywood, Calif., Sept. 22, 1949), was a real-estate investment broker in California before entering the motion-picture industry. In his 39 years in the industry, Wood directed about 70 pictures, including *Peck's Bad Boy*, with Jackie Coogan; *One Minute to Play*, with Harold ("Red") Grange; *A Night at the Opera*, with the Marx brothers; *Stablemates*; *Our Town*; *Good-Bye, Mr. Chips*; *For Whom the Bell Tolls* (which he considered his outstanding work); *Command Decision*; and his last film, *Ambush*. Among the famous actors whose work he supervised were Rudolph Valentino, Gloria Swanson, Norma Shearer, Marion Davies, Marie Dressler, Gary Cooper, Mickey Rooney, Clark Gable, Joan Crawford and Ingrid Bergman.

Woodruff, Caroline Salome, U.S. educator (b. West Burke, Vt., 1867?—d. Castleton, Vt., July 14, 1949).

Worthing, Archie Garfield, U.S. physicist (b. LeRoy, Wis., Feb. 6, 1881—d. Pittsburgh, Pa., July 30, 1949).

Wright, Walter Livingston, Jr., U.S. educator (b. Lincoln University, Pa., May 15, 1900—d. Princeton, N.J., May 16, 1949).

Xoxe, Koçi, Albanian government official (b. Negovan, Alban., May 1, 1911—d. Tiranë, Alban., June 11, 1949), a blacksmith who became active as a labour leader at Korçë and in 1937 was elected to the municipal council. Intermittently arrested for activities against King Zog I before the Italian occupation, he became in 1941 an organizer of the Albanian Communist party and two years later of the Albanian Liberation army, in which he appointed himself a lieutenant general. On Dec. 2, 1945, he was elected deputy for Korçë to the Albanian constituent assembly, and in Jan. 1946 he became vice-president of the assembly, at the same time succeeding Enver Hoxha as secretary general of the Albanian Communist party. On March 22 of the same year he was appointed deputy prime minister and minister of the interior. Between 1946 and mid-1948 it was Xoxe who held the real power in Albania, Prime Minister Hoxha being largely a figurehead. In July 1947 both Albanian leaders paid an official visit to Moscow, but on Oct. 6, 1948, Xoxe was dismissed as a supporter of Tito's Nationalist heresy and arrested with many political friends. After months of detention, he was tried *in camera* by the supreme court in Tiranë, and on June 10, 1949, was sentenced to death for anti-soviet tendencies. He was shot the following day.

ount, Barton, U.S. army officer (b. Troy, O., Jan. 18, 1884—d. in Oak canyon, northern Ariz., July 11, 1949).

aim, Husni ez- Syrian army officer (b. Aleppo, Syr., 1897—d. Damascus, Syr., Aug. 14, 1949), trained as a cadet in the Turkish army, served under Fakhri Pasha against the Arabs in 1914–18 and was taken prisoner at Medina, Saudi Arabia. In 1920 he joined the French levies in Syria. He commanded a brigade which took part in the fighting ordered by the Vichy government against the Allied forces entering Syria in 1941. After a period of imprisonment under the Allied occupation, he was appointed inspector general of police of the Syrian republic. In May 1948 he became chief of staff in the Syrian army, with the rank of colonel. On March 30, 1949, he led the military coup d'état which overthrew the Shukri al-Quwatli regime. He at first enjoyed great popularity, modelling himself on Kemal Atatürk, with an ambitious program of reforms. By a referendum of June 25 he was elected president of Syria and took the rank of marshal. However, the army turned against him and early in the morning of Aug. 14 he was taken from his residence and shot by a group of officers.

amora y Torres, Niceto Alcalá, former president of the Spanish republic (b. Priego, Sp., July 6, 1877—d. Buenos Aires, Arg., Feb. 17, 1949), was educated in Granada and Madrid universities. In 1917 he became a member of the cabinet, first as minister of public works and later as minister of war. During the agitation against the Spanish royal family in the decade following World War I, he held a moderate course, though he finally in 1930 came out publicly in favour of a republic. He was arrested for conspiracy in Dec. 1930 and spent a short time in jail before his trial in 1931, when he was sentenced to serve six months and a day and paroled. It was under his leadership that the Republicans ordered King Alphonso XIII to abdicate, and Zamora was installed, first as provisional president and later as the first constitutional president of the second Spanish republic. In April 1936 he was removed by a motion of the Socialists on grounds of having illegally dissolved the parliament. In fact, he had angered the extreme leftists in Spain by his middle-of-the-road policies. He was equally out of favour when the Francisco Franco regime acquired power through the Spanish Civil War. He spent the years from 1941 until his death in Argentina.

olnay, George Julian, Hungarian-born sculptor (b. Hungary, July 4, 1863—d. New York city, May 1, 1949).

Oceanography.

The wartime emphasis on practical applications finally subsided and during 1949 attention in oceanography shifted largely to the study of more basic problems. The rapid growth of the science was evident from papers presented in a volume of the *Journal of Marine Research*, honouring H. U. Sverdrup on his 60th birthday. The 41 papers contained in the volume together form a summary of much of the work in the marine sciences being carried on in he United States.

Tests of a new current measuring technique, based on the electromotive forces induced by the earth's magnetic field, were announced by the British board of admiralty and the Woods Hole Oceanographic institution, Massachusetts.

Investigations of the Gulf Stream, between Cape Hatteras and Georges bank, showed that the stream follows a meandering course. A portion of the Gulf Stream may move north at the rate of one or two miles per day, while another portion may move south during the same period. The swiftest part of the current, on the inshore edge, is 10 to 15 mi. wide and has a velocity of between four to five knots. Large eddies, appearing to be broken off segments of the main stream, may be found many miles away from the Gulf Stream. The meanderings, eddies and countercurrents associated with the Gulf Stream area would make it difficult to keep a ship in the swiftest porion of the current.

A series of papers, published as a result of a conference on ocean surface waves, showed the development of wave measurements and forecasting of waves on beaches. It appeared that wave forecasts made for the assault beaches during the Normandy invasion were correct 88% of the time. The autocorrelation technique was adapted in a development of statistical methods for studying ocean swell data. A tidal wave warning system was further developed in Hawaii. A network of 18 wave reporting stations was set up. Five of the stations were equipped with seismic sea wave detectors and an automatic alarm system.

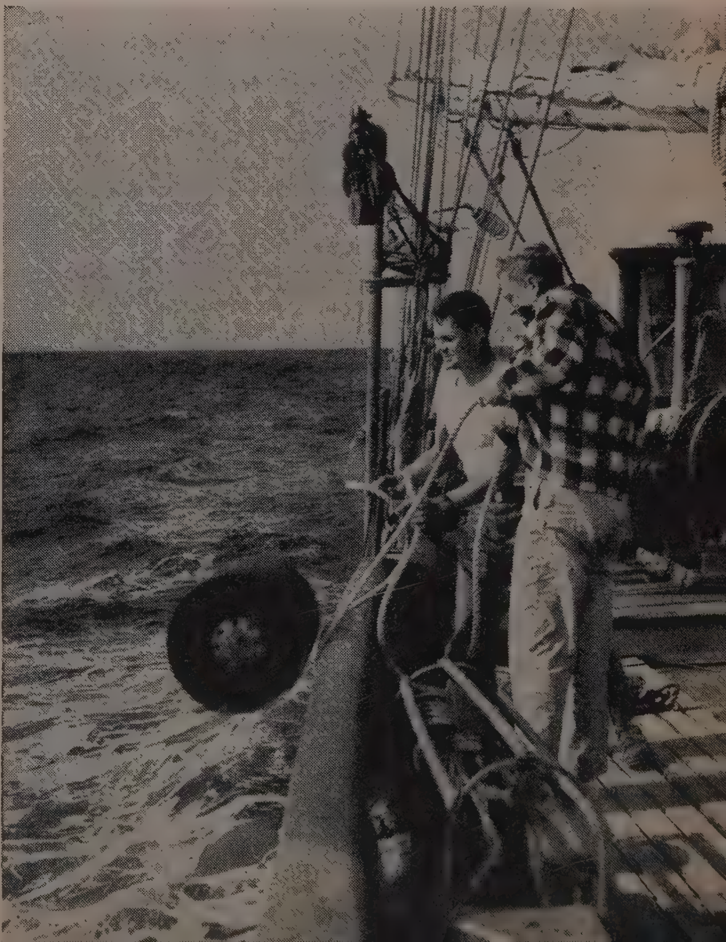
Seismic reflection and refraction methods were adapted for use at sea in Europe and North America. The first reflection from below the ocean bottom was tentatively identified as the base of the unconsolidated sediments. Reasonable estimates indicate negligible cover in some places and thicknesses of several thousand feet in other places. Insufficient data on the velocity of seismic waves in the sediment prevent the confirmation of the estimates. The velocity data must come from suitable refraction studies. The most striking result of seismic refraction observations was the apparent absence of granitic rocks below the western North Atlantic basin.

A total of 4,500 ft. of sediment cores was collected during the 1947–48 cruise on the Swedish vessel "Albatross." A study of the vertical variations in the sediment cores should make it possible to start a reconstruction of the late Pleistocene history of the ocean. Continuous echo-sounding profiles, made in the North Atlantic, presented a number of new geological problems.

Varying rates of rise in mean sea level were observed in North America. On the east coast of the United States sea level had risen about one third of a foot since 1930. The rate was lower on the west coast and higher in the Gulf of Mexico. It was not known if the phenomenon was due to a general rise in sea level, subsidence of the continent or a combination of both.

An exception to the generally accepted rule, that there are no commercially important stocks of fish in deep water was found in the North Atlantic ocean. The Danish research vessel "Dana" found great numbers of fry of the large European redfish (*Sebastes*), in deep water. Adults of the species were found

DEPTH CHARGE being thrown overboard from the research vessel "Atlantis." Seismic waves caused by explosion of the charge were recorded by a second vessel 10-30 mi. away, forming data on the nature of the ocean rockbed. The study was conducted by the Woods Hole Oceanographic institution of Massachusetts in 1949



at depths between 900 to 1,500 ft., far from the coastal banks where they are best known.

Two large-scale fishery investigations were started in the Pacific ocean. The Scripps Institution of Oceanography, La Jolla, Calif., undertook an intensive investigation of the waters off the west coast of the United States, to a line 400 mi. offshore. The U.S. fish and wildlife service, with headquarters at the University of Hawaii, Honolulu, began a study of high seas fisheries. (*See* also MARINE BIOLOGY.)

Ohio. A north central state of the United States, popularly known as the "Buckeye state," Ohio officially became a state of the union on Feb. 19, 1803. Area: 41,222 sq.mi., including 100 sq.mi. of water; pop. (1940): 6,907,612, of whom 2,294,626 were rural and 4,612,986 urban; native white 6,047,265, foreign-born white 519,266, Negro 339,461, other races 1,620. Capital: Columbus. The principal cities with their populations as shown in the 1940 census and later estimates are: Cleveland 878,336 (1948 est., 910,925), Cincinnati 455,610 (1949 est., 510,000), Columbus 306,087 (1949 est., 347,350), Toledo 282,349 (1949 est., 317,000), Akron 244,791 (1949 est., 300,000), Dayton 210,718 (1949 est., 260,000), Youngstown 167,720 (1949 est., 175,000), Canton 108,401 (1949 est., 137,500). In 1949 the bureau of the census estimated the population of the state at 7,989,000.

History.—Ohio's 98th general assembly held the longest session in the state's history—108 working days. When it officially adjourned July 29, 1949, it was called the "billion-dollar legislature," for it approved the expenditure of about that amount. That expenditure included $647,000,000 for general appropriations, $99,000,000 for capital improvements and more than $250,000,000 in rotary, liquor-store and highway funds.

Although it won a reputation for rejecting demands of organized lobbies, the general assembly passed considerable important legislation. Among other items it established a turnpike commission, created a department of natural resources, reduced the majority percentage required for the passage of bond issues and tax levies, increased unemployment compensation payments, simplified election laws, liberalized compensation to injured workmen, established a defense corps to supplement the national guard, changed the automobile drivers' licence system, increased salaries of many state employees, gave Christian Science practitioners the right to charge fees, increased payments to local governments, regulated the sale of barbiturates, equalized real estate property valuations throughout the state and gave cities authority to operate parking areas.

Three issues were placed before Ohio voters in the Nov. 8, 1949, election. They approved two of them, permitting the sale of coloured oleomargarine in the state and replacing the party-column ballot with the office-type ballot. The third issue, a proposed constitutional amendment which would have allowed more than one probate judge for each county, was rejected.

State officers in 1949 were: governor, Frank J. Lausche (D.); lieutenant governor, George D. Nye (D.); secretary of state, Charles F. Sweeney (D.); auditor, Joseph T. Ferguson (D.); treasurer, Don H. Ebright (R.).

Education.—In 1949 the state had 3,300 elementary schools with a total enrolment of 741,549 and a teaching staff of 23,355; 1,119 secondary schools with an enrolment of 324,168 and a teaching staff of 15,490; 114 junior high schools with a total enrolment of 66,892 and a teaching staff of 2,547. Kindergarten pupils numbered 53,291 and kindergarten teachers 11,306.

The six state universities were: Ohio State university at Columbus; Ohio university at Athens; Kent State university at Kent; Miami university at Oxford; Bowling Green State university at Bowling Green; and Wilberforce university at Wilberforce.

The state director of education in 1949 was Clyde Hissong.

Social Insurance and Assistance, Public Welfare and Related Programs.—The average number of recipients of general relief in Ohio in 1949 was 32,671 and the total assistance extended (December estimated in each case) was $18,467,238. The average number receiving aid for the aged was 125,568 and they received $70,314,036; aid to dependent children 12,486 cases, received a total of $9,921,986; aid to the blind 3,639 cases, received a total of $1,947,182. Unemployment compensation claims rose sharply at the close of 1949. Benefits paid by the bureau of unemployment compensation in Nov. 1949 totalled $9,604,437, an increase of 3% over October. Dependency allowances in addition to unemployment compensation were started in September and in the first three months of this program $1,425,935 was paid out.

Ohio has four penal institutions with an average daily population in 1949 of 8,648; and two industrial schools with an average daily population of 928. The total operating cost of all welfare department institutions in 1949 was estimated at $26,372,000.

Communications.—Ohio had 85,517 mi. of highways in 1949 outside of municipalities. Of this total, 16,065 mi. were classified as rural, 28,798 mi. as county and 40,654 mi. as township. Total state expenditures on highways in 1949 were estimated at $80,000,000.

The state had 8,400 mi. of railroads, 360 airports and landing fields, 3,500 mi. of certificated air-line routes within its boundaries and an estimated 2,500,000 telephones in 1949.

Banking and Finance.—There were 423 state and private banks in Ohio with deposits (Oct. 17, 1949) of $3,961,880,203 and resources of $4,282,576,357. There were 241 national banks in the state with deposits (June 30, 1949) of $3,235,255,000 and resources of $3,482,064,000. State-chartered savings and loan associations numbered 486 with total resources (June 30, 1949) of $1,237,924,904. There were 131 federal savings and loan associations with total assets (estimated as of Dec. 31, 1949) of $680,569,750.

The state budget for the 1949–51 biennium was $629,180,804. It is unconstitutional for the state to have a debt except for $200,000,000 for a soldiers' bonus for which special provision was made.

Agriculture.—The total harvested acreage of principal crops in Ohio in 1949 was 10,850,000; in 1948 it was 10,821,000. Total cash receipts from farm marketings in Ohio in 1949 through October were $753,979,000 as compared with $868,713,000 in the same period of 1948, according to the United States department of agriculture. The 1949 marketing receipts consisted of $516,112,000 from livestock and products and $237,867,000 from crops.

Weather conditions again were favourable in the state and the harvested acreage was the largest in more than 20 years of record. Fruit and soybean yields were exceptionally high.

Table I.—*Leading Agricultural Products of Ohio*

Crop	1949	1948	Average, 1938–47
Corn, bu.	202,552,000	215,924,000	160,389,000
Wheat, bu.	60,002,000	57,648,000	43,274,000
Oats, bu.	48,024,000	54,090,000	40,495,000
Barley, bu.	464,000	540,000	774,000
Rye, bu.	270,000	360,000	869,000
Buckwheat, bu.	248,000	304,000	300,000
Popcorn, lb.	20,425,000	54,600,000	19,929,000
Hay, tons	3,556,000	3,516,000	3,714,000
Soybeans, bu.	20,592,000	18,614,000	16,276,000
Tobacco, lb.	29,220,000	28,160,000	24,165,000
Sugar beets, tons	247,000	161,000	290,000
Maple syrup, gal.	150,000	111,000	208,000
Apples, bu.	5,446,000	1,936,000	3,875,000
Peaches, bu.	1,194,000	780,000	843,000
Pears, bu.	272,000	178,000	322,000
Grapes, tons	15,800	11,000	15,650
Cherries, tons	1,910	1,760	2,705
Potatoes, bu.	6,270,000	6,765,000	8,600,000

Manufacturing.—The total value added by manufacture in Ohio in 1947 was $6,359,006,000 compared with $2,116,434,000 in 1939, according to the census of manufactures made by the bureau of the census of the

Table II.—*Principal Industries of Ohio*

	Value added by manufacture	
	1947	1939
Food and kindred products	$413,216,000	$182,183,000
Tobacco manufactures	14,504,000	5,804,000
Textile-mill products	58,183,000	23,803,000

Oils and Fats, Vegetable and Animal: *see* Vegetable Oils and Animal Fats.

Oklahoma. A west south central state of the United States, Oklahoma was admitted as the 46th state on Iov. 16, 1907. The name "Oklahoma" is from the Choctaw ndian words meaning "red people," and was first applied to the ndian territory in 1866. The popular name "Sooner state" was rom the term "sooner" used in referring to a person who ntered and staked a claim sooner than the law allowed when he first public lands in the Indian territory were opened by he run for homesteads, April 22, 1889. Area: 69,283 sq.mi., ncluding 387 sq.mi of water surface. Pop. (1940): 2,336,434, f which approximately 62% was rural. Approximately 87% vas white, 7% Negro, 4% Indian, 2% foreign-born. On July 1, 949, the U.S. census bureau estimated the civilian population f Oklahoma at 2,302,000. Oklahoma City, the capital, with a opulation of 291,003 (1948 report, chamber of commerce), and 'ulsa, referred to as the "Oil Capital of the World," with a opulation of 256,430 (1948 report, chamber of commerce), are he two largest cities.

History.—Important enactments of the 22nd state legislature, n session from January to May, 1949, included provisions for he biggest program for highway construction in the history of he state, for free textbooks in the first to the eighth grades of he public schools, for reorganization of the state board of agriulture making the president of the board an appointive instead f an elective office and for a state-wide special election to vote n the governor's $36,000,000 bond issue proposal for improveient and construction of buildings at state institutions. The ond issue won by a large majority in the special election on ept. 27, and was vitalized by a special session of the state legisature, Nov. 28 to Dec. 22. Oklahoma voted for prohibition of he liquor traffic for the fifth time in its history, the question aving been submitted in the special election on Sept. 27, 1949, rough petition of the dry forces, and winning by a majority f 55,400 of the 590,670 votes cast. Chief state officers in 1949, ll Democrats elected in Nov. 1946, were Roy J. Turner, govrnor; James E. Berry, lieutenant governor; Wilburn Cartright, secretary of state; A. S. J. Shaw, auditor; Mac Q. Wilamson, attorney general; John D. Conner, treasurer; Oliver Iodge, superintendent of public instruction.

Education.—The total enrolment in Oklahoma public schools (term of 948–49) was 556,841 pupils (elementary and high school), with 18,376 aching positions. The cost of maintaining the elementary and high hools in the state was approximately $59,000,000. State institutions of gher learning included the University of Oklahoma (Norman) and the klahoma Agricultural and Mechanical College (Stillwater), both gradue schools; and Oklahoma College for Women (Chickasha), Panhandle gricultural and Mechanical college (Goodwell), Langston university Negro, at Langston), and six colleges primarily for teacher training Ada, Alva, Durant, Edmond, Tahlequah, Weatherford), all state-owned nior colleges. There were 22 two-year junior colleges accredited by the state committee, of which 7 were state-owned (including the military academy at Claremore), 4 were independent with church affiliations and 11 were municipal. There were also 6 independent senior colleges with church affiliations.

Social Insurance and Assistance, Public Welfare and Related Programs.—For Dec. 1949, the Oklahoma department of public welfare reported 101,137 persons receiving old-age assistance with an average of $51.60 each per month (total $5,268,229); 23,841 families receiving aid, with an average of $51.75 per family for 60,205 children (total $1,233,755); and 2,723 blind persons receiving an average of $53.14 each per month (total $144,690). State supported institutions included two tuberculosis sanatoriums, eight hospitals (including six mental, one school for mental defectives and one epileptic hospital), two orphanages, three schools for deaf and blind, four schools of correction, one penitentiary and one reformatory.

Communications.—The Oklahoma department of highways spent during the period from Jan. 1, 1949, to Nov. 30, 1949, on contract construction a total of $31,906,469.13 and was responsible for a highway system of 10,143 mi. The total public open-road mileage in Oklahoma for 1949 was approximately 100,000 mi. Railroad and electric mileage approximated 6,165 mi., not including sidings.

Agriculture.—The Oklahoma national stockyards (Oklahoma City) reported receipts of cattle and calves Jan. 1 to Dec. 30, 1949, inclusive, totalled 721,276 head, 15% less than receipts for the same period in 1948. The total acreage of Oklahoma crops harvested in 1949 was about the same as 1948 (13,312,000 ac.). Wheat production in 1949 was the third largest on record, with a value of $159,705,000, which was $38,219,000 less than the 1948 crop. The value of 25 Oklahoma crops and commercial truck crops was $386,039,000 in 1949, or about 9% less than for the same crops in 1948, the decline resulting from smaller production of most crops and to declines in the season average price.

Leading Agricultural Products of Oklahoma

	1949	1948	Average 1938-47
Wheat, bu.	88,725,000	98,962,000	67,428,000
Corn, bu.	29,392,000	32,125,000	28,382,000
Oats, bu.	17,460,000	16,608,000	27,370,000
Peanuts, lb.	100,800,000	153,000,000	75,851,000
Grain sorghums (forage), tons	1,008,000	1,214,000	1,417,000
Grain sorghums, bu.	10,362,000	9,680,000	8,471,000
All hay, tons	1,880,000	2,010,000	1,536,000
Cotton, bales	620,000	374,000	521,000

Manufacturing.—The Oklahoma employment security commission reported total wages paid for covered employment in Oklahoma's manufacturing industry group during the six-month period Jan. 1 to June 30, 1949, were $89,104,756, with a monthly average of 60,649 persons employed. In addition to the manufacture of petroleum by-products, manufactures included lumber, cement, products from glass sands and clays and printing products.

Mineral Production.—Minerals produced in Oklahoma included petroleum, natural gas, natural gasoline, liquefied petroleum gases, asphalt, zinc, lead, stone, sand and gravel, clay, salt, volcanic ash, wool rock, gypsum and natural crystallized calcium. The State Corporation commission reported 151,397,986 bbl. of petroleum produced in Oklahoma in the period Nov. 1, 1948, to Nov. 1, 1949. An estimated production report in Jan. 1948, of other minerals in the state for the previous year was 440,000,000 cu.ft. natural gasoline and products, 420,000,000 cu.ft. natural gas, 18,000 tons lead concentrate, 103,000 tons zinc concentrate, 3,050,000 tons coal. Ontario. Second largest Canadian province, and one of the two central provinces, Ontario joined the confederation in 1867. With an area of 412,582 sq.mi., it had a 1941 population of 3,787,655 (1949 est. 4,411,000). The chief cities are Toronto, provincial capital (pop. 1948) 747,671; (with 1946 est. pops.) Hamilton (178,686), Ottawa (165,362), Windsor (119,823).

History.—In April 1949 the interim premier Thomas L. Kennedy was replaced by the provincial treasurer Leslie Frost, who, in a Progressive Conservative leadership convention, won out on the first ballot over three other contenders. With some slight changes, the former cabinet was reinstated and later enlarged. There were two by-elections during the year, both won by the government, which held 53 out of 90 seats at the year's end.

Proroguing the stormiest legislative session in years, the lieutenant governor gave royal assent to 146 bills. Charitable foundations were debarred from owning more than 10% interest in any business, and had to comply by 1956; margarine colouring was limited to 1.6°; teachers' pensions were increased from 60% to 70% of salary; a provincial alcoholic research foundation was created; financial aid was voted to municipal fire and police departments, and to community centres.

Education.—Provincial educational grants for 1949 ran to $36,500,000, which was $3,300,000 higher than 1948. The latest revised statistics available in 1949 were the following for 1946 provincially controlled schools: total enrolment 666,451; average daily attendance 590,801; teachers 22,353; total revenue $68,684,669.

Health and Welfare.—During 1949 the provincial government spent an estimated $30,600,000 on health services, in addition to the federal grants allocated to Ontario. A $30,000,000 hospital expansion program got under way, to provide an additional 7,740 beds. Old-age pensions were increased from $30 to $40, following the federal legislation increasing the basic monthly figure.

Finance.—The government ended the 1947–48 fiscal year with a $25,628,752 surplus on ordinary account. Net ordinary revenue was $191,698,952 and expenditures were $161,182,392, plus $1,887,806 for direct relief. The gross provincial debt stood at $628,388,019.

Agriculture.—The provincial department of agriculture reported there were 179,000 farms with 500,000 persons depending directly on agriculture. Cash income from the sale of farm products for the first two months of 1949 was $295,520,000, compared with $288,472,000 for the same 1948 period.

Labour and Industry.—Legislation passed during the 1949 session increased workmen's compensation from two-thirds to three-quarters of average earnings. Industrial expansion continued unabated, and in July it was announced that within the preceding 12-month period 130 existing companies expanded their facilities, and 75 new companies launched operations, involving expenditures of more than $100,000,000 and providing 20,000 new jobs. At the end of 1949 the provincial government reported that 1949 capital investment in Ontario was about $1,600,000,000, or roughly half of the national total capital investment.

Mining.—Discovery of high-quality asbestos in northern Ontario resulted in a $3,000,000 investment to open production. Many more than 3,000 uranium claims were staked along the north shore of Lake Superior. An $8,000,000 operation to open the new Steep Rock lake iron ore bodies was begun. At the year end prospects were that 1949 mineral values would far exceed 1948 values, which were $286,658,000.

Tourist Industry.—During 1948 more than 20,000,000 Americans visited Ontario and spent about $175,000,000. To increase the appeal of the 52 different vacation districts, highway expansion was pushed. Construction and maintenance for 1949 cost $69,000,000, compared with $65,000,000 for 1948. (C. CY.)

Oregon.

A state of the United States, located in the Pacific northwest, Oregon was admitted Feb. 14, 1859, as the 33rd state of the union. Area 96,981 sq.mi., including 631 sq.mi. of water. Pop. (1940) 1,089,684; the estimate of the bureau of the census for July 1, 1949, was 1,736,000. Capital, Salem (1940 census 30,908); chief city, Portland (1940 census 305,394).

Elective state officials (administrative) in 1949: governor, Douglas McKay; secretary of state, Earl T. Newbry; state treasurer, Walter J. Pearson; attorney general, George Neuner; labor commissioner, W. E. Kimsey; superintendent of public instruction, Rex Putnam.

History.—The 45th legislative assembly of the state convened in Jan. 1949 and remained in session for 97 days, the longest in the history of the state. Important new legislation included: an increase in the state tax on gasoline of one cent per gallon, doubling of the motor-vehicle licence fee (to $10 per annum) and adoption of a permanent system for car licence plates. Benefits were increased for claimants under the workmen's accident insurance and unemployment compensation law. A fair employment practice law was adopted, banning discrimination in employment on grounds of race, colour or creed. Employment of Communists by the state was prohibited. Legislation was passed to implement a state program for rehabilitation of burned-over and cutover forest lands, the financing of which by issuance of bonds had been approved by the voters in 1948. A community property law was repealed; also laws restricting the property rights of aliens.

Two legislative enactments were suspended by invocation of the referendum: one banned daylight saving time except on a state-wide basis after proclamation by the governor; the other provided for a minimum of $50 per month for old-age assistance but made such grants a preferred claim against estates of recipients. These were to be voted on by the people in Nov. 1950.

Education.—Enrolment in public schools during the school year 1948–49 was 272,804, including 67,561 in high schools. The number of teachers was 10,050. The total value of all public-school property amounted to $96,670,712.

Enrolment at six state institutions of higher learning, 1948–49, totalled 19,409, not including 14,611 enrolled in extension classes. Expended in capital outlay by these institutions during the biennium 1947–49 was $8,300,000.

Social Insurance and Assistance, Public Welfare and Related Programs.—Payments for unemployment compensation in 1948 amounted to $7,744,169. Expenditures for public-welfare programs during the biennium 1947–49 (old-age and general assistance, aid to dependent children and to blind) totalled $44,074,467.

The number of inmates (1949) and operating expenditures in the biennium 1947–49 for state charitable, eleemosynary, penal and correctional institutions was as follows: two state mental hospitals, 4,215, $4,169,178; penitentiary, 1,351, $1,149,293; Fairview home for feebleminded, 1,197, $1,511,212; boys' training school, Woodburn, 134, $526,492; Hillcrest girls' training school, 66, $242,855; three tuberculosis hospitals, 415, $1,768,963; school for blind, 73, $195,183; blind trade school, 24, $161,829; school for deaf, 145, $332,870.

Communications.—The steam railway mileage Dec. 31, 1948, exclusive of second main track, sidings, etc., was 3,438.55. As of Dec. 31, 1948, there were 7,298 mi. of highways in the state system of which 6,765 mi. were surfaced; and 35,551 mi. of county roads of which 15,827 mi. were surfaced. A total of $34,658,293 was expended by the state highway commission for construction during the biennium ending June 30, 1949.

The number of motor vehicles registered on June 30, 1949, was 602,593. The number of telephones reported in service Dec. 31, 1948, was 376,426.

Finance.—The state bonded debt as of July 1, 1949 was: gross $27,724,440; net $2,425,000. The gross debt of municipal subdivisions July 1, 1948, was $111,121,805; the net was $99,735,617. Total state revenues for the year ending June 30, 1949, were $119,257,255. The assessed valuation of the state in 1949 was $1,539,029,071, the highest on record. The aggregate of the approved state budget for 1949–51 for all purposes was $424,198,694.

Total bank deposits as of June 30, 1949, were $153,162,700, compared with $156,025,372 on June 30, 1948. Bank debits for first nine months of 1949 were $7,810,492,865 and for same period in 1948 $8,538,332,741.

Agriculture.—Estimated cash receipts from farm marketings for the year 1948 totalled $390,758,000, including $4,196,000 of government payments. Preliminary reports for 1949 indicated a decrease of about 10% from 1948 returns.

Principal Agricultural Products of Oregon

Crop	1949	1948	Average 1938–47
All wheat, bu.	23,203,000	29,954,000	21,187,000
Oats, bu.	11,088,000	7,497,000	9,508,000
Barley, bu.	9,933,000	12,800,000	7,872,000
Corn, bu.	1,095,000	1,050,000	1,565,000
Potatoes, bu.	11,180,000	11,480,000	9,569,000
Apples, bu.	3,010,000	2,668,000	2,864,000
Pears, bu.	6,150,000	4,825,000	4,531,000
All cherries, tons	34,300	20,200	22,015
All prunes, tons	100,900	48,800	82,160

Mining.—The preliminary estimate of the U.S. bureau of mines for mineral production for 1948 was $24,980,000, of which metallic production was valued at $630,000. The total value was up 55% over 1947.

Manufacturing.—The bureau of the census report on manufactures for 1947 showed 3,075 establishments in the state employing 92,144 production workers, with total wage rolls of $265,834,000 and value added by manufacture amounting to $675,017,000.

The total volume of timber cut in 1948, not including that cut for poles and piling, was 8,395,371,000 bd.ft. Production of lumber was 7,842,402,000 bd.ft., highest of any state in the nation; of plywood, 624,000 sq.ft. Lumber production for the first nine months of 1949 showed a decrease of about 10% from 1948. (C. A. SP.)

Organization for European Economic Cooperation.

Formed in 1947 to co-operate in carrying out the United States' European Recovery program (ERP), O.E.E.C. in 1949 was active in promoting intra-European economic co-operation and in studying the problem of the economic integration of western Europe. Its membership was enlarged to 19 by the admission of the West German republic, which, on Dec. 15, signed an agreement with the Economic Cooperation administration (ECA). On April 13 Paul-Henri Spaak of Belgium had been re-elected as president of he O.E.E.C. council but was succeeded by Paul van Zeeland, ew Belgian foreign minister, Aug. 16. In order to gear in .E.E.C. recommendations with the actions of member governments a steering committee of eight ministers of foreign affairs f foreign trade was created in February, and normally met hereafter at two months' intervals.

In a January report the council recommended the sum of 4,347,000,000 of ERP aid to European reconstruction in 1949–0 and submitted a proposed allocation of dollar funds among s members. A supplementary report expressed moderate hope hat Europe could balance its trade with the dollar area after 952, on the basis of a 30% increase in production over the 948 level. When a special screening committee undertook in ugust to revise the 1949–50 program downward, in accordance vith the expected action of the United States congress, ECA dministrator Paul Hoffman rejected the O.E.E.C. recommen-ations and declared that ECA must take the responsibility of naking a final allocation of dollar aid among the recipients. fter studying the question of allocation of aid for 1950–51 .E.E.C agreed in November that with the exception of Greece, vhere the civil war had left special needs, the member countries vould divide dollar aid on the proportionate basis which had een negotiated so laboriously in August, and would base their lanning on the assumption of a 25% reduction in ERP as-istance, from the 1949–50 level.

Throughout the year O.E.E.C. devoted its primary attention o the twin problems of promoting freer intra-European trade nd freer exchange of currencies. The program, approved by he steering committee and adopted by the council of O.E.E.C. n March, called for promotion of financial and monetary sta-ility, freeing of intra-European trade and exchange and review f national investment programs in the light of the needs of he European economy as a whole.

Throughout May and June O.E.E.C. carried on intensive egotiations concerning the renewal and revision of the intra-European payments agreement of Oct. 1948, due to expire on une 30. The basic problem was how to arrange for country A for example), which had an export surplus in trade with coun-ry B, to transfer part of that favourable balance to cover pur-hases in country C, with which country B had a favourable alance. The proposals discussed also assumed that a part of he drawing rights thus transferred would consist of dollar redits held by the debtor country. Great Britain, which had a arge trade deficit with both the O.E.E.C. and dollar areas, was eluctant to enter into any extensive agreement of this nature.

On June 30 the O.E.E.C. council agreed to the transferability f 25% of intra-European credit balances. This would allow up o 25% of either intra-European drawing rights or conditional ollar aid, at the choice of the debtor country, to be transferred o any of its O.E.E.C. creditors. An agreement based on this rinciple was signed by the council in September. During De-ember the staff of O.E.E.C. was engaged in elaborating an im-roved plan of trade payments, scheduled to come into force n July 1, 1950. In order further to free intra-European trade, .E.E.C. proposed to establish a "clearing union" as a con-inuing arrangement facilitating the multilateral settlement of ayment balances within the O.E.E.C. area. It proposed that part of ECA aid for 1950–51 be set aside to finance the learing union, which would operate under the International Monetary fund.

Another major barrier to the freer movement of goods in ntra-European trade was the continuance of quantitative re-trictions or import quotas. In July O.E.E.C. urged its member tates to remove all such restrictions as rapidly as possible. t asked them to submit by Oct. 1: (1) lists on commodities f which they were prepared to abolish all import restrictions or to establish "global quotas" nondiscriminatory with respect to individual trading partners; and (2) lists of commodities on which they were willing to relax quota restrictions in return for reciprocal relaxations by one or more O.E.E.C. countries.

During September and October numerous restrictions were abolished by the principal trading countries, but it was felt that the volume of trade affected by this relaxation was not extensive. In October O.E.E.C. announced a list of quotas subject to elimination, covering about 25% of intra-O.E.E.C. trade. The O.E.E.C. council also approved a British recommendation that member governments remove one-half of the remaining quantitative restrictions by Dec. 15.

In December the O.E.E.C. staff was elaborating, for submission to the council, a plan which called for removal of 80% of intra-O.E.E.C. import quotas by June 30, 1950, and the elimination of the remaining quotas by June 30, 1951. At the close of the year some observers felt that the useful effect of gradual removal of trade quotas was being offset in part by the revival of marketing agreements based on intra-European cartel agreements and believed that O.E.E.C. would also have to take up cartel restrictions if a genuinely free European market was to emerge from its efforts. In addition, the persistence of a two-price system—higher prices for export than for domestic users—in basic commodities such as coal and steel was considered a serious obstacle to the abolition of quota and cartel arrangements.

Some Europeans and many Americans felt that these steps toward freeing intra-European trade from quota and currency restrictions pointed the way to the creation of a single large European market, able through competitive advantages in large-scale production to compete with the U.S. economy in the world market and to assure a rising standard of living for its peoples. Faced by the political pressure of the soviet bloc and assisted by U.S. aid to plan its reconstruction on a wider regional basis, Europe should now, it was urged, use this unique opportunity to develop a large and internally free and competitive market. Intra-European integration could also be supplemented by U.S. assistance in developing the economic potential of the European dependencies and colonies, under Pres. Harry S. Truman's Point Four program.

In August ECA Administrator Hoffman urged the O.E.E.C. council to act boldly in creating a single market. The resulting improvement in European productivity would, he felt, raise Europe's dollar earnings from a level of $1,250,000,000 to around $4,000,000,000 annually, and thus enable it to do without direct dollar aid after 1952. In an address to the O.E.E.C. council in October, Hoffman urged even more strongly the importance of the integration of the European economy.

On behalf of Great Britain Sir Stafford Cripps set forth certain serious limitations on his country's ability to integrate its economy with that of the continent. Britain had to work with the economy of the British commonwealth and the sterling bloc as well as with western Europe and therefore could not go much beyond completing the O.E.E.C. arrangements for freer trade and clearing. Robert Schuman of France expressed more enthusiasm for European integration and urged the establishment of a number of smaller regional units within Europe as a preparation for a united European system. Whether such regional systems, once formed, would harden and become obstacles to a wider European economic union remained a matter of speculation.

During 1949 the implementation of the agreement to establish Benelux, an economic union of Belgium, the Netherlands and Luxembourg, met with numerous obstacles arising from differences in trade and currency policies and from the different status of the Dutch and Belgian overseas dependencies.

The proposed Franco-Italian customs union remained in the discussion stage. However, in November Schuman explored with the Benelux representatives, at The Hague, Neth., a proposal for a wider customs and monetary union between Benelux, France and Italy, and the following month Schuman announced that the five countries were on the verge of signing an agreement as a first step toward economic union. From Dec. 14 to 17 British and Scandinavian representatives met at Stockholm, Swed., to discuss an Anglo-Nordic economic union; preliminary reports of the problems raised by this proposal were not encouraging.

At the close of 1949 O.E.E.C. pointed to the continued serious lag in solving the dollar deficit of European trade. As it became increasingly clear that Europe would not be able by 1952 to balance its trade with the dollar area and was also unable to maintain a high level of economic activity without large imports from that area, the problem of adjusting the European economy to post-1952 stresses was at the forefront of O.E.E.C. concern. (*See* also EUROPEAN RECOVERY PROGRAM.)

(P. E. M.)

Organization of American States.

At the beginning and again at the end of the year 1949 the Organization of American States was confronted with international situations that threatened the peace of the continent and required the application of the inter-American treaty of reciprocal assistance. This treaty, which was signed at Rio de Janeiro, Braz., on Sept. 2, 1947, and came into force on Dec. 3, 1948, is a mutual assistance pact under which the signatory states agree to act collectively in the event of an aggression or threat of aggression against any one of them.

The first application of the treaty occurred in Dec. 1948, when the government of Costa Rica alleged that its territory had been invaded by armed forces proceeding from Nicaragua. The Council of the Organization of American States, acting provisionally as the organ of consultation under the Rio de Janeiro treaty, sent a diplomatic commission of investigation, composed of representatives of Brazil, Colombia, Mexico and the United States. In Jan. 1949, following the presentation of the report of the diplomatic commission, the Council of the Organization made a series of recommendations and sent a commission of military experts to Costa Rica and Nicaragua to observe the application of its proposals. This group was composed of representatives of the four countries that comprised the diplomatic commission and Paraguay. A pact of amity was signed on Feb. 21, 1949, and subsequently ratified by both governments.

The situation in the Caribbean generally continued to be a disturbing factor throughout the year and culminated in Jan. 1950 with the invocation of the Rio de Janeiro treaty by Haiti against the Dominican Republic, and by the latter country against both Haiti and Cuba. Before this action was taken and while a definite solution of the Costa Rica-Nicaraguan dispute was still pending the government of Haiti sought to have recourse to the Rio de Janeiro treaty, alleging that the Dominican Republic was permitting its territory to be used for radio broadcasts that threatened the peace of the two countries. At that time, Feb. 1949, the Council of the Organization decided not to apply the treaty and the government of Haiti thereupon requested the good offices of the Inter-American Peace committee, composed of representatives of Argentina, Brazil, Cuba, Mexico and the United States. The committee sent a delegation to the two countries, following which representatives of the two governments signed a joint declaration on June 11, 1949. Although by this statement the two governments undertook to settle by peaceful means any difference that might arise between them, no permanent solution was found, and on Jan. 6, 1950, the Council of the Organization decided to proceed in accordance with the provisions of the treaty. This action was taken at the request of Haiti, which invoked the treaty against the Dominican Republic, and also at the request of the Dominican Republic, which made charges against both Haiti and Cuba. Acting provisionally as the organ of consultation, the Council of the Organization appointed an investigating commission of five members, composed of representatives of Bolivia, Colombia, Ecuador, the United States and Uruguay, to make an on-the-spot investigation.

The United States also sought to bring about an improvement in the Caribbean when it proposed that the Inter-American Peace committee undertake a study of the general situation in that area. Such a study was made and on Sept. 14, 1949, the committee issued a declaration of 14 points, reaffirming the basic principles of American peace and solidarity and calling upon the governments of the Caribbean to observe them.

During 1949 further steps were taken to complete the structure of the Organization of American States in accordance with the charter signed at Bogotá, Colombia, in 1948. The Council of the Organization drafted the statutes of the Inter-American Council of Jurists and the Inter-American Cultural council, and made arrangements for these agencies to hold their first meetings during 1950. The statutes of the Inter-American Economic and Social council, which had been functioning since 1945 and which constitutes the third of three technical subsidiary agencies of the Council of the Organization, were also revised.

In accordance with the Bogotá charter the Council of the Organization concluded agreements with the Pan American Institute of Geography and History and the International American Institute for the Protection of Childhood, both of which were classified as inter-American specialized organizations. Such classification was also given to the Inter-American Institute of Agricultural Sciences. The council also negotiated an agreement with the Inter-American Statistical institute, under the terms of which the secretariat of the institute was transferred to the Pan American Union. Negotiations were initiated with the Pan American Sanitary organization, the Inter-American Indian institute and the Inter-American Commission of Women, intended to define their relations with the council.

Under resolutions adopted at the ninth International Conference of American States, the Council of the Organization was also authorized to make a study of other inter-American agencies and to make recommendations with reference to those whose continued existence was no longer considered necessary. Pursuant to this authorization, the Emergency Advisory Committee for Political Defense, which had been set up during World War II to control activities of foreign agents against the war effort of the American republics, was abolished in 1948. During 1949 the council terminated the activities of the Inter-American Trade Mark bureau, the Central Pan American Bureau of Eugenics and Homiculture and the Permanent American Aeronautical committee. The Inter-American Coffee commission and the Inter-American Development commission were abolished and their functions transferred to the Pan American Union and the Inter-American Economic and Social council.

In accordance with resolution XXXIII of the Bogotá conference, the council convoked the American Committee on Dependent Territories to assemble in Havana, Cuba, on March 15, 1949. The committee was in session until July 21, 1949. A report on its work was transmitted to the council.

On Nov. 16, 1949, Ambassador Luis Quintanilla, representative of Mexico, and Ambassador Hector David Castro, representative of El Salvador, were chosen chairman and vice-chairman respectively of the Council of the Organization for 1950.

(W. MR.)

steopathy. The 75th anniversary of the founding of osteopathy was celebrated in 1949. It was on June 2, 1874, that Dr. Andrew Taylor Still, a pioneer frontier hysician, had announced the principles upon which he based is philosophy and practice of the prevention, diagnosis and eatment of human disease.

Enrolment in the six accredited osteopathic colleges in the nited States, located in Chicago, Ill., Des Moines, Ia., Kansas ity and Kirksville, Mo., Los Angeles, Calif., and Philadelphia, a., numbered approximately 1,900 students. The colleges adnitted 504 freshmen in the 1949 fall class, chosen from more nan 2,000 qualified applicants.

Expansion of the teaching facilities of the colleges and their ssociated clinical hospitals continued to show progress. The 7,500,000 Osteopathic Progress fund entered its fourth year ith substantial lay gifts augmenting the money provided by nembers of the profession.

The research project in neurophysiology, begun in 1947 at ne Kirksville College of Osteopathy and Surgery, Kirksville, Io., was continued in 1949 and further aided by an additional rant from the U.S. public health service. The profession reatly expanded its research program in 1949.

The board of trustees approved for registration 164 osteoathic hospitals as meeting the standards and qualifications of ne association's bureau of hospitals and the American College f Osteopathic Surgeons. Of these, 60 were approved for inern training and 30 for graduate training in the specialties. here was a total of 8,089 beds available in osteopathic hositals in the United States in 1949.

The 53rd annual convention of the American Osteopathic ssociation was held in St. Louis, Mo., in July 1949. Dr. H. ale Pearson, Erie, Pa., succeeded Dr. Stephen M. Pugh, verett, Wash., as president, and Dr. R. C. McCaughan, Chiago, was re-elected executive secretary of the American Osteoathic association.

On Nov. 1, 1949, there were 11,297 practising osteopathic hysicians and surgeons in the U.S., 7,984 of them being memers of the association. (J. R. Fo.)

ttawa. The capital of Canada is at the confluence of the Rideau and the Ottawa rivers in Ontario. Pop. (1941) 54,951. At midnight Dec. 31, 1949, in its 11th annexation in o years, Ottawa took over parts of bordering townships of loucester and Nepean, increasing the area of the city proper y 22,125 ac. and making its total area 28,134 ac. The populaon automatically increased by 27,500, to bring the total to 91,442 (plus about 17,000 in outlying areas and the remaing townships).

National capital planning went forward. The Federal District ommission set up a special committee to deal with expropriaon prices. The city council purchased the Ottawa Light, Heat nd Power company, making the Ottawa hydro sole distributor f electricity; and started a $6,000,000 scheme to extend the ater service.

The federal government replaced its annual flat grant of 300,000 with a grant in lieu of taxes which was based on asessment values and would run from $500,000 to $600,000 nnually. The city still wanted the $1,500,000 it would get from gular taxation of federal property. Statistics for 1948 inuded: government and industrial pay rolls at an all-time peak f $100,000,000; average weekly wages $34.48 (1947: $31.69); ssessment $184,904,965 (1947: $177,811,033). (C. Cy.)

Pacific Islands, British. These islands include the colony of Fiji (consisting of a number of islands), the British Solomon Islands protectorate, the Gilbert and Ellice Islands colony, the protected state of Tonga and Pitcairn Island; it would be incorrect to describe the New Hebrides, an Anglo-French condominium, as British, but they should be noticed here. (*See* also French Union.) Areas: Fiji 7,040 sq.mi.; Solomon Islands protectorate 12,400 sq.mi.; Gilbert and Ellice Islands 345 sq.mi.; Tonga 250 sq.mi.; Pitcairn 2 sq.mi.; New Hebrides 4,633 sq.mi. Populations (1948 est.): Fiji 270,000, including 125,674 Indians and 121,248 Fijians; Solomon Islands *c.* 95,000; Gilbert and Ellice Islands *c.* 36,000; Tonga 45,000; Pitcairn *c.* 140; New Hebrides *c.* 50,000. Governor and high commissioner, 1949: Sir Brian Freeston.

History.—The defenses of Fiji were reorganized in 1949. Its importance as a communication centre in the South Pacific made its security of special concern to New Zealand, and that government, therefore, lent an officer for the triple role of commandant of the Fiji military forces, liaison officer with the New Zealand chiefs of staff and defense adviser to the government of the colony. With his assistance, a Military Forces bill—to fix the establishments for new military units and the timetable for their creation and training—was framed and laid before the legislative council.

A committee of six members representative equally of the three (European, Fijian and Indian) communities, appointed in 1948 to consider constitutional reform in Fiji, reported unanimously in July advocating only small changes, though three members signed with reservations in respect to certain points and submitted minority reports. Their proposals recommended (1) an executive council consisting of the governor as president, four ex officio and three (one from each of the communities) unofficial members; these last to be members of the legislative council chosen by the governor from a panel of six, comprised of two members of each racial group; (2) a legislative council consisting of the governor as president, four ex officio, 12 official and 15 unofficial (comprising five Europeans elected by the European electorate, five Fijians elected by the council of chiefs and five Indians elected by the Indian electorate) members.

The quasi-nationalist political movement known as Marching Rule, which in the previous two to three years had to a large extent dominated native affairs in the British Solomons, was reported to have lost ground.

Finance and Trade.—Currency: in Fiji, the Fiji pound was valued in Nov. 1949 at $2.52 U.S.; in the Solomons, Gilbert and Ellice Islands and Tonga, United Kingdom and Australian currency are legal tender, though Tonga issues its own notes (Tonga pound=$2.24 U.S. Nov. 1949) and in all three territories the exchange standard system is based on Australian currency; in the New Hebrides, sterling and French currency are both legal tender. Revenue: Fiji (1949 est.) £F2,915,999; Solomon Islands (1948–49 est.) £A630,281, including grant in aid of £A361,368; Gilbert and Ellice Islands (1949–50 est.) £A479,290, including grant in aid of £A160,002; Tonga (1949–50 est.) £T302,000; New Hebrides (1947, condominium only) £83,209. Expenditure: Fiji (1949 est.) £F2,933,920; Solomon Islands (1948–49 est.) £A630,281; Gilbert and Ellice Islands (1949–50 est.) £A479,290; Tonga (1949–50 est.) £T323,243; New Hebrides (1947, condominium only) £49,220. Imports: Fiji (1948) £F5,944,834; Solomon Islands (April–Dec. 1948) £A320,655; Gilbert and Ellice Islands (1948) £A197,850; Tonga (1948) £T677,123; New Hebrides (1948) £400,512. Exports: Fiji (1948) £F7,789,512; Solomon Islands (April–Dec. 1948) £A154,000; Tonga (1948) £T850,000; New Hebrides (1948) £988,403. Principal exports: sugar and gold bullion (Fiji), phosphates (Ocean Island in the Gilbert and Ellice Islands) and copra. (Jo. A. Hn.)

Painting. The change of cultural and artistic atmosphere is often an imperceptible process and cannot be registered properly from year to year. Only the more obvious facts can be transcribed into an annual chronicle. Among these none was more evident during 1949 than the economic difficulties of the postwar period which led to the devaluation of most European currencies and which undoubtedly had a depressing influence on many artists throughout the world. There resulted from it a marked slowdown in the demand and the sale of works of art.

Yet the critical signs were not only of an economic nature. The cultural crisis of painting in a vacuum, allegedly concerned more and more with rarified problems of form and void of human significance, was discussed in magazine articles by some of the leaders of U.S. artistic life such as Lincoln Kirstein, Lester Longman and Francis Taylor. While these discussions were carried on, Rep. G. A. Dondero (Mich.) continued his public crusade against modern art, vigorously opposed by Alfred Barr, Jr., and Emily Genauer. Illustrated magazines such as *Life, View,* etc., contributed to bring contemporary painting in all of its aspects to the attention of millions of their readers. A number of round-table discussions held by *Life,* Columbia university and the California School of Fine Arts, San Francisco, Calif., showed a public concern with contemporary art expression in painting.

The international exchange of travelling exhibitions of old and modern masters increased. Especially important was the show of contemporary Italian art at the Museum of Modern Art, New York city. Works were contributed by 116 U.S. painters and collectors to the three museums of Israel. The sending of young artists abroad, and especially to France, under the Fulbright act was another feature of returning internationalism.

The great interest which French painting arouses in the United States became evident when the Georges Braque show was visited in New York city and Cleveland, O., by 175,000 people.

DONG KINGMAN'S "New York Bridge," winner of the $300 prize award of the American Watercolor society at its 1949 annual exhibition held in the galleries of the National Academy in New York city

ERIC ISENBURGER'S "Romantic Figure" which received the first W. A. Clark prize of $2,000 and the Corcoran gold medal at the 21st biennial exhibit of contemporary oil painting held in March 1949 at the Corcoran Gallery of Art, Washington, D.C.

In France a meaningful experiment in the field of liturgical art was in the process of completion: the building and decoration of the church of Assy, Haute-Savoie, to which some of the leading painters of France, such as Fernand Léger, Henri Matisse and Georges Rouault, had contributed paintings, mosaics and stained glass windows.

In Germany a return to the standards and ideals of pre-Hitlerian expressionism and abstraction was taking place with the younger generation guided by the influence of the older masters.

In the United States Anton Refregier finished his impressive cycle of wall paintings dealing with the history of life in early California in the Rincon Post Office annex in San Francisco. Rico Lebrun completed his vast "Crucifixion" series which was shortly to go on display at the Los Angeles County museum. Peter Blume brought to completion and displayed another of his absorbing compositions, "The Rock."

Painting applied to manufacturing processes found a new outlet in the artist decorated chinaware produced by Associated American Artists. New was the Hallmark Greeting Card competition for French and U.S. artists. Ventures by U.S. hotels and restaurants were successfully continued by the Hotel Sherman's Well of the Sea restaurant in Chicago, Ill., with ingenious paintings and lighting effects by Richard Koppe.

The first prize at the Carnegie institute's annual exhibit went in 1949 to Max Beckmann, who received an invitation to join the staff of the Brooklyn Museum Art school, Brooklyn, N.Y. The influence of this powerful artist, a newcomer to the United States, was already felt in the work of younger artists. Yet away from the main road of art Grandma Moses remained the favourite of the U.S. public. There existed a wide margin between the taste of the people and the main currents of contemporary painting. Clearly art indicated a deep-seated conflict in our civilization. Neither the artist nor the public could be blamed for it.

Paints and Varnishes.

Paint sales in the United States for 1949 were estimated at about $1,000,000,000, which would represent a 10% to 11% decrease from 1948. Gallonage dropped to a lesser extent than price since there were reductions in the prices both of finished paints and of raw materials. Drying oil prices dropped substantially as a result of the government's lower support prices on agricultural products.

After many years of experimentation and exposure tests, several leading producers offered one-coat house paints, which contained high percentages of titanium dioxide pigment to supply the necessary opacity. Peeling of house paint resulting from condensation of moisture on the inner surface of siding was more prevalent because of new techniques in construction. Government and industrial programs were set up to educate builders and owners of homes on suitable wall vapour barriers and ventilation.

Water thinnable wall finishes continued in high favour. New semigloss wall finishes based on water dispersions of vinyl copolymers were recommended as fire resistant and as more resistant to washing and abrasion than the older water thinnable paints.

Grinding and dispersion of pigments through the use of fluid (pneumatic) energy was advanced to a large commercial scale after about 15 years of research and small-scale production. Coarse particles with or without the presence of a vehicle binder were dispersed by attrition in a rapidly moving stream of high pressure air or other vapour. Pigment dispersion by sonic and ultrasonic vibrations remained in an experimental state, but strong interest was shown by a large number of organizations.

Tall oil recovery by the leading paper producers developed, in competitive effort, purer, paler grades which were satisfactory for a wide range of architectural and industrial finishes. Safflower oil became a commercially important product, with about 10,000,000 lb. produced in the United States during 1949. Larger quantities of this rival to soya and linseed oils in colour-retentive paints were expected in 1950. Tung oil supply from China was curtailed because of the civil war in that country.

Allyl sucrose, an offshoot from the department of agriculture development on allyl starch, was recommended for improvement of drying oils.

Lead silicate was given more attention as part of the family of titanium, zinc oxide, leaded zinc, white lead and other pigments for exterior white paints. Barium potassium chromate became a rival of zinc chromate in rust-inhibiting primers.

Bentonite, a water-absorbing natural clay, was modified by alkylammonium substitution to produce a new finely divided, transparent flatting agent for furniture and architectural clear finishes.

Styrene copolymers, which were announced by several companies in 1948, were extended widely in use in 1949.

(Jo. C. W.)

Pakistan, Dominion of.

A self-governing member of the British Commonwealth of Nations. Total area (excluding Kashmir): *c.* 337,524 sq.mi., composed as shown in the table.

	Area (in sq. mi.)	Population (1941 census or est.)
Sind	48,136	4,535,000
West Punjab	62,100	15,800,000
North-West Frontier province:		
(a) Administered area	14,200	3,038,067
(b) Tribal area	24,986	2,500,000
Baluchistan	134,002	857,835
Western Pakistan	283,424	26,730,902
Eastern Pakistan	54,100	41,880,000
Total	337,524	68,610,902

As a result of the partition of the Indian subcontinent in Aug. 1947, by the end of 1948 nearly 6,599,000 Moslems entered Pakistan and about 5,563,000 non-Moslems migrated to India: the net increase in population resulting from this great migration was more than 1,000,000. The total population in 1948 was estimated at 73,321,000. Chief towns (pop., 1941 census): Karachi (cap., 359,492; 1948 est., *c.* 1,000,000); Lahore (671,659; 1948 est., *c.* 1,000,000); Dacca (213,218); Rawalpindi (181,169); Multan (142,768); Sialkot (138,348); Peshawar (130,967). Languages: mainly Urdu, Punjabi, Baluchi and Pashtu in western Pakistan and Bengali in eastern Pakistan, but English remained in use as a medium of instruction in higher education. Religion: mostly Moslem (72.9%), with Sikh, Hindu, Christian, Parsee and other minorities. Governor general, 1949: Khwaja Nazimuddin; prime minister: Liaquat Ali Khan.

History.—As in the preceding year, the chief problem in 1949 was that of the "cold war" with the dominion of India over Kashmir. It was announced, on the first day of the year, that the United Nations Conciliation commission had arranged a cease-fire, preparatory to a truce and to arrangements for holding a plebiscite. The commission proposed that the cease-fire arrangements should include: (1) the withdrawal of the tribesmen and other unauthorized Pakistan nationals; (2) the withdrawal of the Pakistani army; (3) the withdrawal of the bulk of the Indian army. After this, arrangements were to be made for ascertaining the will of the people by a free and impartial vote. The subsequent delays finally ended in a deadlock (*see* INDIA, DOMINION OF). The government of India assumed an intransigent attitude throughout the proceedings and insisted as a preliminary on the disbandment of the Azad Kashmir forces, which would leave the Moslem population at the mercy of the rival faction under Sheikh Abdullah.

One of the major difficulties created by the partition was over the canals. In western Pakistan, with its low rainfall, the water supply was a matter of life and death for millions. The Ravi, Beas and Sutlej rivers rise in Indian territory and lower down they join the Indus. West Punjab and Sind depend for their livelihood on the complicated system of canals derived from this source. At the time of the partition, it was assumed that the system would remain intact and that some machinery for their joint control would be set up. After the partition, however, India put in a claim for the absolute control of all waters passing through its territories. The matter was discussed at an interdominion conference held at New Delhi in August, but no agreement was arrived at. It was felt that, failing a solution, the matter should be referred to the U.N. Security council. (*See* also UNITED NATIONS.)

The relations of the provinces with the central government were not altogether satisfactory. Serious friction arose in the North-West Frontier Province, where the Pathans had never really been reconciled to Pakistani rule. The Durand line demarcated between India and Afghanistan in 1893 had left a kind of no man's land between the two countries, where order had been kept by the establishment of strong points connected by strategic roads from which expeditions could be sent to deal with parties of raiders seeking to enter Indian territory. The position had never been satisfactory and, after the withdrawal of the British garrison, the Afghan government had sought to win over the Pathan tribesmen by encouraging malcontents like the fakir of Ipi and exploiting local grievances (*see* also AFGHANISTAN). One of the last achievements of the former governor-general, Mohammed Ali Jinnah, had been to counteract these attempts to stir up trouble by taking active measures to alleviate the poverty which was at the root of the discontent.

The key to prosperity lay in co-operation between the two dominions. Their economics were complementary. Pakistan had certain raw materials, whereas India had coal, iron and manufacturing facilities; but the two had to be harnessed together in order to attract the foreign capital necessary for their development. The chief obstacle in the way of agreement was the deadlock over Kashmir.

Despite all handicaps, the economic outlook was hopeful. The State bank accomplished the difficult task of withdrawing Indian notes circulating in Pakistan and replacing them by its own currency, and partly received Pakistan's share of the assets of the Reserve Bank of India. In order to keep down the cost of living and maintain conditions favourable to the country's development, it was decided not to devalue the rupee. Pakistan's exports, mostly jute, cotton, hides, skins and wool, did not show any appreciable expansion.

On Nov. 25 the first Islamic international economic conference and commercial exhibition was opened at Karachi, and was the first attempt to unite the Moslem world on the basis of Islamic principles rather than political alliances. Among the countries participating were Afghanistan, Egypt, Iran, Iraq, Pakistan, Saudi Arabia and Turkey.

Of special significance was the movement to cultivate friendly relations with the U.S.S.R. The prime minister, Liaquat Ali Khan, was invited to Moscow, and Shoaib Quereshi, formerly foreign minister of Bhopal state, was appointed first ambassador of Pakistan to the U.S.S.R. (H. G. RN.)

Finance and Banking.—Budget: (1948–49 est.) balanced at Rs. 950,000,000; (1949–50 est.) balanced at Rs. 1,110,000,000; (1950–51 est.) balanced at Rs. 1,156,000,000. Note circulation (Aug. 1949) Rs. 1,644,000,000. Gold reserve (Aug. 1949): $13,300,000 U.S. Bank deposits (Aug. 1949): Rs. 2,568,000,000. Monetary unit: rupee with an exchange rate (Nov. 15, 1949) of Rs. 3.20=$1 U.S.

Foreign Trade.—Imports: (1948) Rs. 842,000,000, (1949, six months) Rs. 744,000,000. Exports: (1948) Rs. 867,000,000, (1949, six months) Rs. 579,000,000.

Transport and Communications.—Licensed motor vehicles (Dec. 1948): cars 14,130, commercial vehicles 8,276. Shipping (Dec. 1948): number of merchant vessels 19, total gross tonnage 87,703.

Agriculture and Fisheries.—Main crops (metric tons, 1948): rice, paddy, 11,621,000; wheat 3,317,000; barley 136,000; sugar, in terms of gur, 998,000; jute 994,000 (71% of the Indo-Pakistani subcontinent); cotton, ginned, 212,000; linseed 13,000; sesame 35,000; tea 20,000; tobacco (with India, 1947) 454,000. Livestock (1939 est.): cattle 24,444,000; sheep 5,941,000; pigs 73,000; horses 1,461,000; goats 7,982,000; camels 5,303,000. Production of wool (in metric tons on greasy basis, 1948–49) 11,000. Fisheries annual catch estimated at 33,000,000 lb.

Industry.—Factories (1944 est.) 1,261; persons employed 186,814. Fuel and power (1948): coal and lignite 241,000 metric tons; electricity 130,000,000 kw.hr.; crude oil 47,600 metric tons. Raw materials (metric tons, 1944 est.): salt 93,000; gypsum 25,000; chromite 21,000. Manufactured goods (1948): cotton cloth 86,000,000 metres; cement 325,000 metric tons.

Palaeontology.

Accomplishments in the study of fossil backboned animals in 1949 were highlighted by numerous contributions to the synthesis and unification of evolutionary thought. Of many excellent and fundamental papers of this nature, three were especially notable. One, a Princeton university volume entitled *Genetics, Paleontology, and Evolution,* comprised 23 essays by as many international leaders of biologic thinking, on such topics as geologic time, viewpoints on evolution, evolutionary rates and trends, speciation, adaptation and human evolution. A second, *The Factors of Evolution,* presenting the theory of stabilizing selection by I. I. Schmalhausen, was made available to a wider audience through translation from the original Russian by Isadore Dordick and editing by T. Dobzhansky. The third, G. G Simpson's *The Meaning of Evolution,* interpreted the long record of life on earth and analyzed its meaning in terms of man's ethics. Also of general interest and wide utility in the field was a new comparative anatomy text, *The Vertebrate Body,* by A. S. Romer.

Fishes.—The fossil sharks, and lobe- and ray-finned fishes of the upper Jurassic lithographic limestone of Cerín, Fr., were the subjects of an extensive monograph by Pierre de Saint-Seine. On the controversial matter of the morphogenetic relationships between lateral line sensory organs and developing centres of ossification in the lower vertebrate skull, F. R. Parrington made an interesting attempt to correlate the meagre subjective experimental data and the rather more extensive objective theory. Other papers of interest included a study of a pachycormid fish and review of that family's relationships by J. P. Lehman; a review of the basic anatomical, ecological and physiological traits of Middle Devonian fishes by J. Pieteau; a description of a tropical fauna from the Oligocene of Rumania by S. Jonet; reports on Pleistocene fishes from Java by F. P. Koumans and M. Boeseman; and the definition of a new family of early Tertiary teleosts by B. Schaeffer.

Amphibians.—Continuance of basic research for the better comprehension of prehistoric life were exemplified by F. Huene's summary of advances in the phyletic classification of early tetrapods. B. Schaeffer described some leptodactylid frogs from the early Tertiary of Patagonia with critical comments on concepts of anuran differentiation, dispersal and evolution.

Reptiles.—C. M. Bogart's continued research on thermoregulation in reptiles confirmed previously expressed convictions that these specific physiological functions must have played an important role in the evolution and biogeography of cold-blooded vertebrates. Knowledge of many fossil reptiles was increased by the acquisition and study of new materials. Among such contributions were: the description of the phytosaur *Paleorhinus* from the Triassic of Texas which permitted discussion of morphological characters indicative of both ontogenetic and phylogenetic growth (W. Langston); and description of new ichthysaurian specimens which prompted comment on the general relationships of these specialized marine saurians (F. Huene). New forms described included a number of mammal-like reptiles from South Africa (R. Brown); plesiosaurs from Venezuela (E. H. Colbert), Texas and South Dakota (S. P. Welles and J. D. Bump); and a Triassic pseudosuchian from Germany (W. Janensch).

Birds.—Hildegarde Howard reported discovery of four new Pliocene localities in California yielding fossil bird bones. Five new species of birds and two indeterminate ones derived from these sites increased to 16 the number of species in the Pliocene avifauna of California. Miss Howard also reviewed the geology and marine bird faunas of seven known Pleistocene occurrences in southern California, and collaborating with L. Miller presented a detailed study of the flightless Pliocene bird, *Mancalla.*

Mammals.—Among a number of papers by R. W. Wilson on fossil-gnawing mammals, an excellent resume was offered on the early Tertiary rodents of North America. K. Hescheler and E. Kuhn traced the succession of animal assemblages of Switzerland and their climatic environments from the Miocene through the Pleistocene. The evidences for microevolution during the Quaternary of certain elements of the faunas inhabiting southern and eastern Asia were discussed by D. A. Hooijer. A few of the other noteworthy studies in palaeomammalogy were a detailed taxonomic revision of the promerycochoerine oreodonts by C. B. Schultz and C. H. Falkenbach, the report of a new Pliocene fauna in Nevada by J. R. MacDonald and the quantitative analysis of a population of the peccary, *Platygonus,* rom a cave deposit in St. Louis, Mo., by G. G. Simpson.

Expanded co-operation in field work and research proved of nutual benefit to anthropologists, geologists and palaeontologists on the problems of human evolution. On these same roblems work on the South African ape-men, the Australoithecinae, again received the especial attention of numerous nvestigators (R. Broom, R. A. Dart, etc.). (D. H. D.)

Palaeobotany.—Near Brandon, Vt., an isolated occurrence f Tertiary lignite containing seeds and wood was being studied y Elso Barghoorn and colleagues at Harvard university to deermine the definite age of the deposit and the environmental onditions in the northeastern states at that time.

Fossil plants and animals contributed to the identification by Roland W. Brown and William T. Pecora of the U.S. geological urvey of hitherto unrecognized Eocene strata in the Bearpaw nountains near Havre, Mont. This discovery revealed that orth-central Montana was once covered with 5,000 ft. of rocks hat have since been eroded, leaving only a small remnant in he Bearpaw mountains.

The site of Cache valley, Utah, in Pliocene time was a lake asin in which sandy and limy sediments accumulated. Conained in the deposits are ostracodes, mollusks, insects and land lants. According to a report on the flora by Roland W. Brown, he latter include remains of juniper, willow, poplar, elm, ooseberry, serviceberry, indigo bush, sumac and maple. The onsistently small size of the leaves and fruits indicated adjustnent to semiarid conditions perhaps not greatly different from hose prevailing in or near the region in modern times.

The fossil species of *Metasequoia* were being studied by Ralph W. Chaney of the University of California, Berkeley, for monographic treatise on the history, distribution and nomenlature of the genus.

Henry P. Hansen of Oregon State college, Corvallis, found by ollen studies that lodgepole pine and spruce were dominant ree species in central and western Alberta in pre-late Wisconin time. Subsequently, during the postglacial warm, dry interal, grasses, chenopods and composites made their appearance ear Edmonton.

J. Harlan Johnson and Bernard J. Ferris of Colorado School f Mines, Golden, described Tertiary coralline algae from the Netherlands Indies.

Research in the palaeobotany of coal since 1943, with special eference to spores, was summarized with an extensive bibligraphy by James M. Schopf of the U.S. geological survey. C. Y. Hsieh described the Paikungshan coal field, discovered in 946 in the Huainan basin, northern Anhui, central China. Cores from this field revealed 27 seams of coal totalling a thickess of 127.95 ft. and indicating about 600,000,000 tons.

On April 4, 1949, the cornerstone of an Institute of Palaeootany, the first of its kind in the world, was laid with approriate ceremonies at Lucknow, India.

During the year the annual report on palaeobotanical reearch in the U.S. reappeared under the editorship of C. A. Arnold of the University of Michigan, Ann Arbor, after several ssues had been passed or delayed. From Stockholm, Swed., nder the editorship of Olaf Selling, came a 121-page report on he activities of European palaeobotanists between 1939 and 947.

Palestine.

The former British-administered mandated territory of Palestine, with an area of 10,159 sq.mi., had been partitioned during 1949 between the new state of Israel, which held four-fifths of its area, and the Hashemite Kingdom of Jordan, which occupied the greater part of the remainder. In the southwest a small strip of territory around Gaza (about 100 sq.mi.) was in Egyptian hands, and in the northeast Syrian forces occupied some small frontier areas. No serious fighting took place after the conclusion of the final Israeli campaign in the Negev in Jan. 1949 (*see* ISRAEL).

The population of the area of Palestine which remained in Arab hands could not readily be established because of the influx of refugees from Israeli territory. That of the Gaza district was estimated at more than 200,000, while the much larger mountain area of Samaria and eastern Judaea, which was occupied by Arab legion forces from Jordan, was probably in excess of 600,000. The total number of Palestinian Arab refugees made destitute by the Arab-Israel war had been computed by the United Nations Economic Survey Mission for the Middle East at 652,000. During 1949 most of them received food and medical assistance from U.N. agencies or voluntary relief organizations.

The Old City of Jerusalem, Nablus and Hebron were the main Jordan-held centres of Arab Palestine, administered by local governors appointed by King Abdullah of Jordan, who had also strengthened his Amman government by the inclusion of some Palestinian Arab leaders. But there was no formal act of annexation or incorporation of the area into Jordan.

The United Nations still regarded Palestine as a unitary area for purposes of conciliation and economic development, and maintained a staff with permanent headquarters at the government house in Jerusalem, in an enclave between Jordan and Israel-held territory. By a resolution of the general assembly of Dec. 1949, the U.N. laid claim to the administration of Jerusalem and its environs. (*See* also EGYPT; JORDAN; UNITED

Panamá. A republic of Central America adjoining South America, Panamá is bisected by the Canal Zone, which is leased to the United States. Area: 28,575 sq.mi., pop. (off. est., July 1, 1949): 763,800, both exclusive of the Canal Zone. The national capital is Panamá city (146,117 in 1949); other principal cities are: Bocas del Toro (2,453), Chitré (5,676), Colón (54,334), David (13,656), La Palma (1,442), Las Tablas (2,667), Penonomé (2,031) and Santiago (6,944). Language: Spanish; religion: predominantly Roman Catholic. Presidents in 1949: Domingo Díaz Arosemena, Daniel Chanis, Jr., Roberto F. Chiari and Arnulfo Arias Madrid.

History.—The year 1949 was featured by a rapid succession of presidents and crises. The administration weathered one crisis when an alleged plot against the government was discovered in April and thwarted by a suspension of constitutional guarantees and the arrest of several political figures. Among those detained were the brothers Harmodio and Arnulfo Arias Madrid, both former presidents.

A heart ailment caused President Díaz Arosemena to retire in July, and he died Aug. 23. He was succeeded on July 28 by the first vice-president, Daniel Chanis, Jr.

President Chanis lifted the state of siege, released those arrested in connection with the plot and undertook to break the meat-packing and bus-transportation monopolies, allegedly controlled by national police personnel. The latter policy provoked a clash between Chanis and the chief of police, Col. José Remón, and on Nov, 20 Colonel Remón forced Chanis to resign in favour of the second vice-president, Roberto F. Chiari. Chanis, however, made a dramatic appearance before the national assembly and withdrew his resignation, explaining it had been signed under coercion. His reinstatement was upheld by the supreme court on Nov. 24, but he was ousted the same day by Colonel Remón, now the "strong man" of the country, and replaced by Arnulfo Arias Madrid. Chanis fled; Chiari retired; and Arias Madrid was sworn in as president on Nov. 25.

Arias Madrid referred the legality of his position to the national election jury. This body had denied him a majority in the presidential election of 1948 by invalidating a large number of his votes and proclaiming Díaz Arosemena elected. Now it reversed its decision and declared that Arias Madrid was legally elected and therefore the constitutional president. A general strike in protest of the coup ended Nov. 28, and the national assembly accepted Arias Madrid as president on Nov. 29.

A commercial aviation convention between Panamá and the United States, signed March 31, was ratified by the national assembly in April. The threat of a world-wide boycott of shipping under Panamá registry lingered throughout the year as the International Labour organization investigated working conditions on the country's flagships.

Education.—During the 1948–49 school year there were 922 primary schools with 3,175 teachers and 101,249 students; 15 secondary schools with 316 teachers and 7,155 students; 52 professional schools and colleges with 497 teachers and 9,149 students, and a national university with 76 professors and 1,343 students. Total appropriations allowed for public education in 1949 amounted to 7,710,549.43 balboas.

Finance.—The monetary unit is the balboa, maintained at par with the U.S. dollar. The national budget for 1949, approved Feb. 28, called for expenditures of 33,208,233.04 balboas, but as early as June 4 the collector anticipated a deficit of 2,000,000 balboas by year's end. The public debt as of Dec. 31, 1948, was $25,968,939 ($15,496,898 external and $10,472,041 internal). As of June 30, 1949, there were seven public and four private banks, capitalized at 4,850,000 balboas, with reserves of 2,106,661.35 balboas and deposits of 68,437,200 balboas. At the same date money in circulation amounted to 1,510,000 balboas in specie and 1,253,000 in paper.

Trade and Resources.—Exports during 1948 were estimated at $10,477,272 ($8,300,000 in 1947), and imports at $63,775,726 ($75,600,000 in 1947). During the first six months of 1949 exports were down 2% and imports were down 7%. The chief exports in 1948 were: bananas (5,658,906 stems, valued at $5,200,478), cacao beans (5,872,074 lb., a $2,089,661), coconuts (4,161,450 units, at $248,738), abacá fibr (7,101,486 lb., $1,444,815). In 1948 the chief agricultural crops were: rice (166,065,213 lb.), corn (102,911,570 lb.), beans (12,717,791 lb.), coffee (8,283,467 lb.), sugar (689,984.7 short tons) and potatoes (4,137,120 lb.).

Communications.—As of June 1949, there were 223.4 mi. of railroad. Highways at the end of 1948 measured 1,102 mi. paved, 450.9 mi gravel, and 275.8 mi. dirt. There were 25,173 motor vehicles registered in the republic at that date. Telephone and telegraph lines totalled 1,270 mi., and there were 50,000 radio receiving sets. The merchant marine had 654 ships with a total tonnage of 2,965,428.

Panama Canal Zone. A United States military reservation embracing a ten-mile strip across the Isthmus of Panama, leased for the protection and administration of the Panama canal. Area: 553 sq.mi. including 191 sq.mi. of fresh water. Population, exclusive of military personnel (1948 off. est.): 47,077, of whom 22,402 were U.S. citizens. Administrative centre: Balboa Heights (pop., 1946: 12,623). Governor in 1949: Brig. Gen. Francis K. Newcomber.

History.—Discussions of canal modernization continued during 1949 without decision, and the study of proposed toll increases was postponed until 1950. On Sept. 21, 1949, commercial air operations were transferred from Albrook field to Panamá's new national airport.

A committee representing labour organizations, investigating conditions in Canal Zone employment, reported in February that racial discrimination existed in housing, schools, hospitals and wage rates. In September employment by the canal and Panama Railroad Co. was reportedly the lowest since 1940.

Education.—In 1948 there were 14 schools with 4,219 students and a junior college for whites; 14 schools with 2,973 and a normal school for coloured students.

Finance.—Total canal revenues for the 1947–48 fiscal year were $20,298,260.70; net expenses, $19,235,066.66; and net capital investment, $516,332,328.23. In the same period, 4,678 ships passing through the canal carried cargoes totalling 24,117,788 tons and paid tolls amounting to $19,956,593. The canal traffic was up 3.7% during the first nine months of 1949 from the same period of 1948.

Paper and Pulp Industry. The estimated production of paper and paperboard in the United States for 1949 was approximately 20,100,000 tons, or about 10% less than in 1948. Inventory backlogs and a resultant buying slump early in the year were the principal causes of the decrease. At the end of 1949 the industry was running at more than 99% of capacity, with production and prices firm.

Canada.—Canadian production of pulpwood in the 1948–49 season was estimated at about 9,400,000 cords. Production of wood pulp continued at the record set in 1947. No new mills were built in 1948 or 1949, but modernization of newsprint mills

*Includes all pulp screenings.

United Kingdom.—No late statistics regarding paper manuacture in the U.K. were issued in 1949. A strict rationing polcy was still being maintained, although newspapers were pernitted to expand size and circulation, the latter without retriction. The fuel situation improved considerably during the ear. Imports of pulp and paper were limited by the dollar xchange and devaluation of the pound.

araguay. A landlocked republic in south-central South America, Paraguay is bounded north and east by razil, south by Argentina and west by Bolivia. Area: 157,047 q.mi., of which 95,338 sq.mi. constitute the sparsely populated haco, while the 61,709 sq.mi. lying east of the Paraguay river ontain 95% of the population and activity. Population (mid-948): 1,270,000. The people are a homogeneous mixture of panish and Guaraní stock, with some Portuguese and Italian, hich has developed into a racial type. Official language: Spansh. The Guaraní tongue has survived more than the blood, but s secondary and recessive. Capital and chief centre: Asunción; op. (1948): 130,067. Other cities: Villarica (31,081); Conepción (16,487); Encarnación (16,078). The official religion s Roman Catholic, and the archbishop is at times president of he council of state. At the end of 1949 the president was ederico Chaves; premier, Bernardo Ocampos.

History.—On Jan. 30, 1949, an army faction headed by Gen. aimundo Rolón, with leanings toward Franquismo (liberal ocialism), forced the resignation of Pres. Natalicio González, of the Guión (battle standard) branch of the Colorado party. As provisional president, General Rolón proclaimed that political exiles of all opinions might freely return to Paraguay and participate in the new presidential elections which he set for April. Faced with this situation, Guión and Democratico factions of the Colorados pooled their influence with the various army officers. They thus succeeded in taking over the government from General Rolón on Feb. 26, during the funeral ceremonies of the archbishop; and installed as provisional president Felipe Molas López, of the Guión faction. Molas was made the sole candidate in the April elections, as the Liberal and the Franquista (Febrerista) exiles did not return. He assumed office formally on April 17, with ostensible support from both Colorado factions; but during the summer the ascendancy of the Democratico faction became sufficiently pronounced so that it induced the Colorado governing board to direct Molas to resign. On Sept. 11 Federico Chaves was made president, ruling the country on behalf of the governing board (which also dominated the chamber). On Nov. 10 President Chaves, a veteran Colorado leader who had borne the brunt of his party's labours during its long years in opposition, issued a decree calling for another election in July 1950; but no indication was given as to whether the Liberales and Febreristas would be involved.

Education.—The last official estimates (1946) show 2,000 elementary schools, of which a large share give three years instruction, with 65,000 pupils. Several national normal schools and a national junior college were maintained in 1949; and at least six agricultural secondary schools. The National university at Asunción had 1,200 students.

Finance.—As a member of the International Monetary fund, Paraguay fixed the value of its currency unit, the guarani, at 3.09 to the U.S. dollar. Free exchange transactions, some legal, show that its value if uncontrolled was somewhat lower in 1949. The government revenues in 1948 were $15,000,000; and the expenditures, $24,000,000. The national debt increased to $22,500,000, the bonds being held mainly in the governmental Bank of Paraguay. Money in circulation rose by 70% in 1948 to $15,500,000. Reserves of gold and foreign exchange at the end of 1948 were $8,500,000. The Bank of Paraguay serves as a central and fiscal bank and also operates a commercial department which does 80% of the ordinary bank transactions of the country. Its net earnings in 1948 were $1,350,000. The three foreign banks—the London and South America, the Bank of Brazil and the Bank of the Argentine Nation—had aggregate net earnings of $250,000 in 1947. Total bank loans were $24,000,000 at the end of 1948, and deposits subject to check were $16,500,000.

Trade and Communication.—A normal figure for Paraguayan exports is $25,000,000; and the statistics for the first six months of 1948 indicated that the trade decline of 1947 had passed. In 1948 the U.S. took over from Argentina the position as the leading customer of Paraguay for exports and the leading source for imports, while Britain also improved its sales in Paraguay at the expense of Argentina and Brazil.

Water transport on the Paraná and Paraguay rivers handled 440,000 tons in 1948, while rail transport handled 240,000 tons. The Argentine Dodero services were greatly predominant until 1947 and 1948, when Paraguay's national merchant fleet placed several modern steamers in operation. The Brazilian Bacia do Prata line also maintained regular service. A standard-gauge railway, British-Argentine, runs 278 mi. southeast from Asunción through the best farm and forest areas, and one weekly connects by car ferries at Encarnación-Posadas with a through train to Buenos Aires. Highway construction in 1949 brought the mileage of modern roads almost to 600, although four-fifths of these were gravel-crowned. Earth roads totalled 4,000 mi. Interurban bus services are widespread. At the end of 1948 the number of motor vehicles was 2,900, of which 300 were buses, 1,400 passenger cars and 1,100 trucks. There were air line connections with Argentina and to Rio de Janeiro. Internal aviation services were under army supervision and were considerable. The telephone system, operated by the government, had 35 exchanges in 1948 and served 4,000 subscribers. The network of 137 telegraph stations is state-owned. There were six long-wave and three short-wave radio stations in 1948, and more than 25,000 receiving sets.

Agriculture.—The total agricultural revenue in 1946 was estimated at $28,000,000, not including animal products of $21,000,000. The 1948 production of 22,000 tons of cotton was only one-half that of 1947. The 1948 tobacco output was 13,000 tons, but prices were sluggish. Vegetable oils—cottonseed, coco, peanut, tung and castor—totalled 7,000 tons. The staple food mandioca was in short supply, but a bumper 110,000-ton yam crop eased the situation. Sugar cane fell to 310,000 tons in 1948, more than one-half used for feed, and sugar, to 12,500 tons. The rice yield, which is increasing, was more than 30,000 tons in the 1948–49 season. Citrus sales from farms were 125,000 boxes, with grapefruit predominating over oranges and lemons. Yerba maté shipments in the first half of 1948 were 4,500 tons; petitgrain (perfume), in 1948, 165 tons. Cattle slaughtered in 1948 were 425,000, of which 60,000 came from Argentina.

The herds had declined since 1945 when the census showed 3,260,000 head. In 1945 there were 306,000 horses, 255,000 sheep and 357,000 hogs.

Manufactures.—The 1946 estimate for the value of manufactures was $44,000,000, but this included both quebracho and canned meat, semi-manufactured forest and food products. The true manufacturing enterprises are small. The government in 1948 aided in installing new machinery for producing wood products, vegetable oils and sugar.

Mines and Forests.—No minerals were exploited in Paraguay in 1949. The minerals resources are extremely meagre—limestone and clay. The Union Oil Co. of California, which has conducted extensive exploration since 1944, turned in its concession at the end of 1949 and desisted from efforts to find petroleum. Exports of hardwood lumber during the first half of 1948 amounted to $3,000,000. Quebracho production in 1948 was 48,000 tons, but only three-fourths of this was exported as prices and demand in the United States were low.

Parents and Teachers, National Congress of.

In April 1949 the National Congress of Parents and Teachers (the P.T.A.) had a total membership of 5,774,358 parents, teachers and other interested persons, organized into 32,942 local parent-teacher associations, which functioned in each of the 48 states, the District of Columbia and Hawaii.

During the year, a joint committee of the National Education association and the National Congress of Parents and Teachers issued a factual report, "Our Schools and the Next Decade," which demonstrated the critical need not only for more school buildings throughout the country but for more teachers, higher salaries for the teachers and for teachers with better training. Vigorous support was given to a broad legislation program, with stress on federal aid to publicly controlled, tax-supported schools. The bill to extend local public health services, which was initiated by the congress in 1948, was reintroduced into the senate and the house. Other legislation sponsored by the National congress in 1949 included measures for: (1) appropriations to carry out the school lunch program as provided in public law 396; (2) the support of the United Nations and its component parts as the best basis for international co-operation; (3) the use of federal funds to demonstrate public library service to people who were without it or were inadequately served; (4) juvenile protection (the expenditure of children's bureau child welfare services funds for returning to their home runaway children not over 15 yr. of age who have crossed state boundaries).

In thousands of communities parent-teacher associations conducted the annual Summer Round-Up of the Children, a project begun by the National congress in 1925 to encourage medical checkup of children entering school for the first time. The scope of the action committee on comics, radio and motion pictures was extended to include television.

National congress publications for 1949 included the official monthly magazine, *National Parent-Teacher;* the *National Congress Bulletin; Proceedings* of the annual convention; and a social history of the parent-teacher movement, *Where Children Come First: A Study of the P.T.A. Idea,* by Harry and Bonaro Overstreet.

The office of the National Congress of Parents and Teachers is located at 600 S. Michigan Ave., Chicago 5, Ill. (A. H. Ha.)

Paris.

Capital and largest city of France, Paris had a population in 1946 of 2,725,374. President of the municipal council, 1949: Pierre de Gaulle.

In general, throughout 1949 there was a gradual return to normal peacetime conditions. Food, though usually expensive, was good and plentiful; and rationing (except for coffee) was abolished, although many price controls were retained. A certain amount of dissatisfaction with prevailing conditions manifested itself in a series of strikes, which were, however, of short duration. There was unrest in the civil service, in some transport services and in the nationalized Renault works. On May 7 the government issued requisition orders for staffs of Air France who had struck because of inadequate pensions and were demanding charters for flying staffs. On Nov. 25, the *Métro* and buses ceased running as part of the 24-hr. general strike occasioned by the government's refusal to extend the special wage bonus, granted earlier in the year, to all workers instead of merely to those in the lowest-paid categories.

A welcome event during 1949 was the reopening of three museums in the Palais de Chaillot which had previously been occupied by the United Nations general assembly. These were the Musée de l'Homme, Musée de la Marine and Musée des Monuments Français. The Musée de Cluny was also reopened.

In October, the new territorial brigades of police were introduced in an effort to counter increasing brigandage in Paris and its suburbs.

The city's estimated expenditure for 1949 was 53,760,517,084 fr. and estimated revenue was 53,760,517,422 fr.

Parks and Monuments: *see* NATIONAL PARKS AND MONUMENTS.

Parliament, Houses of.

For the first time since 1939 both houses sat on a Saturday when on July 30, 1949, they assembled to conclude outstanding business before the summer adjournment. The ten-week recess was interrupted on Sept. 28 when both houses reassembled to debate the government's policy of devaluing the pound sterling. The house of commons sat for three days, and the lords for two days. The session, which had been opened by the king on Oct. 26, 1948, continued until Dec. 16, 1949. This long session was held in order to pass the Parliament bill and the Iron and Steel bill before parliament was dissolved.

The latest constitutional date for the dissolution of parliament was Aug. 1950, but in the autumn of 1949 it was widely believed that the government favoured an immediate general election, and on Oct. 13 the following statement was issued from 10 Downing street: "Having regard to the disturbing effects on trade and industry and on the national effort by the continuance of speculations as to an early General Election, the Prime Minister thinks it right to inform the country of his decision not to advise His Majesty to dissolve Parliament this year."

The strength of the Labour party in the house of commons was reduced by three during the year. On May 18, K. Zilliacus (Gateshead) and L. J. Solley (Thurrock, Essex) were expelled from the Labour party, and L. Hutchinson (Manchester, Rusholme) was expelled on July 27. With D. N. Pritt (Hammersmith, north) and J. Platts-Mills (Finsbury) they formed an independent labour group under the chairmanship of D. N. Pritt. Alfred Edwards (Middlesbrough) and Ivor Thomas (Keighley, Yorkshire), both of whom had been elected as Labour members but later sat as independents, received the Conservative whip during the year.

On Jan. 27, for the first time since 1938, a ballot was held for private members' bills; 353 members entered for the ballot; 25 names were drawn; and the bills were formally introduced on Jan. 28. Among those which were rejected at the second or third readings in the house of commons were the Protection of Animals (Hunting and Coursing Prohibition), Spelling Reform, Analgesia in Childbirth, and Hairdressers (Registration). The first private members' bill to receive the royal assent was the Slaughter of Animals (Scotland), which received the assent on July 30.

The clerk of the parliaments from 1934, Sir Henry Badeley, retired on May 30 and was succeeded by Robert Overbury no had been clerk assistant of the parliaments from 1937. In e birthday honours list Sir Henry was created a baron; and he ok the title of Lord Badeley, of Badeley, Suffolk. Admiral Sir eoffrey Blake, Gentleman Usher of the Black Rod from 1945, signed in January because of continuing deafness from gunast; the king appointed Lieut. Gen. Sir Brian Horrocks to cceed him.

Other new peers created in 1949 were: Lord Adams (J. J. lams), Lord Dugan of Victoria (Sir Winston Dugan), Lord oyd-Orr (Sir John Boyd Orr), Lord Macdonald of Gwaenysgor ir Gordon Macdonald) and Lord Archibald (George Archild). (*See* also CABINET MEMBERS; GOVERNMENT DEPARTENTS AND BUREAUS.)

arliament of Europe: *see* EUROPEAN UNION.

atents. The United States patent office, an agency of the department of commerce, created in 1802 and arged with the execution and administration of the patent and ade-mark laws, granted during the calendar year 1949, 39,809 tents, which included 4,451 for designs, 93 for plants and 118 issues. This was an increase of 11,713 over the 28,096 total r 1948.

Applications for patents filed in the patent office for the lendar year 1948 totalled 75,952; for the first 11 months of 49, the number filed was 68,133. In Dec. 1949, approximately 0,000 applications were pending in the patent office, of which out 141,000 were awaiting action by the office and 96,000 der rejection were awaiting response by applicants, the reainder being in interference or on appeal.

Trade-marks registered (15,972) and renewed (3,797) during 49 totalled 19,769. This compared with 16,530 registrations d renewals in 1948. In addition, 12,983 registrations were published. Applications for registration, republication and newal for the first 11 months of 1949 totalled 23,419, compred with 37,159 applications for the entire preceding year. pproximately 41,000 trade-mark applications were pending in e office in Dec. 1949, of which about 13,000 awaited response applicants.

At the end of 1949, the patent office had granted more than 492,000 patents, of which about 600,000 were unexpired. More an 40,000 unexpired patents were listed on the register of tents available for licence or sale—the new listings being pubhed in the weekly issues of the *Official Gazette*. Printed pies of patents may be purchased for 25 cents each; tradearks and designs, for 10 cents each. During the year ended ne 30, 1949, more than 6,300,000 copies of United States tents and trade-marks were distributed, of which more than 0,000 were sent to libraries in the United States, and approxately 1,000,000 to foreign countries under exchange agreeents.

The work of revising the patent rules of practice, initially dertaken in 1946, was concluded, and a comprehensive revin, published as *Rules of Practice of the United States Patent fice in Patent Cases*, became effective March 1, 1949. Publiion in Nov. 1949 of the *Manual of Patent Examining Produre* brought to completion the project initiated in July 1948 develop an official reference work on the practice and produre in the office as it relates to the duties and operations of aminers. The office prepared and issued during 1949 a new blication entitled *Guide for Patent Draftsmen,* and a pamlet listing attorneys and agents registered to practice before e patent office as of Jan. 1, 1949, was printed.

Publication, at the request of the applicant or owner, of abacts of abandoned patent applications was begun in the July 1949, issue of the *Official Gazette,* in accordance with a commissioner's notice dated Jan. 25, 1949. These abstracts, 295 of which were published in 1949, may be used as references against pending applications and were made available in the public search room and the examiners' files.

The project undertaken in 1948 to perfect the patent copy reference collection maintained for public use in the search room continued during the year. Approximately 200 patent classes comprising more than 56,000 bundles of copies were checked for mutilated, misplaced and missing copies, and necessary corrections were made. This work was to continue until the entire collection of nearly 100,000 bundles had been examined.

Net receipts for the fiscal year ending June 30, 1949, were $5,161,803.96. Obligations incurred under all patent office appropriations amounted to $10,101,937.71, compared with $8,603,032.22 for the preceding year. (J. A. ML.)

Pauker, Ana (1893–), Rumanian politician, was born on Dec. 31 at Codaești, Moldavia, the daughter of Zvi Rabinsohn, a *shohet* or Jewish slaughterer. She studied medicine at Bucharest university and later in Zurich where she married Marcel Pauker and converted him to Marxism. By 1922 she was a member of the central committee of the Rumanian Communist party. When, on July 28, 1924, the party was declared illegal by an act of the Rumanian parliament, she left the country. A few years later she was again active in Rumania. In 1933 she was sentenced to imprisonment for organizing a strike in Grivitsa railway workshops, but escaped. When she returned to Moscow with her husband, he was executed for his Trotskyist sympathies. She, however, held to the Stalinist "general line," and by 1935 was again in Rumania. Rearrested, she was sentenced to ten years' imprisonment for conspiracy, but in 1941, after the annexation of Bessarabia, the soviet government secured her liberation. She went to Moscow, joined the executive committee of the Comintern and became the Kremlin adviser on Rumanian affairs. She returned to Rumania in Aug. 1944 with the soviet army. In Sept. 1947 she represented the Rumanian Communist party at the meeting at Wilcza Góra in Polish Silesia, where the Cominform was created. On Nov. 7, 1947, she was appointed foreign minister. In Dec. 1947 she was instrumental in forcing King Michael to abdicate and in proclaiming Rumania a People's Republic. On Feb. 4, 1948, she revisited Moscow, where she attended the signature of a 20-year treaty of friendship, co-operation and mutual assistance with the U.S.S.R.. On April 15, 1949, she was appointed one of the three Communist deputy prime ministers.

Peaches: *see* FRUIT.

Peanuts. The U.S. in 1949 harvested only 1,853,140,000 lb. of picked and threshed peanuts, the smallest crop in eight years, compared with a record 1948 crop of 2,338,470,000 lb., and an average for the previous decade of 1,845,718,000 lb. Largely as a result of a request by the government for a 22% reduction in acreage, acreage harvested in 1949 was only 2,433,000 (the government goal was 2,629,000 ac.) a sharp reduction from the 3,311,000 ac. of 1948 and the 1938–47 average of 2,718,000 ac. Average yields of 762 lb. per acre were high compared with 706 in 1948 and an average for the 1938–47 decade of 692.

The season average price of 1949 crop peanuts to farmers was estimated at 10.4 cents per pound, approximating the government support price and comparable with 10.5 cents per pound in 1948. The crop was valued at $191,801,000 as compared with a 1948 crop valued at $246,495,000. The support program for peanuts by the government covered about 70% of the crop dur-

U.S. Peanut Production by Leading States

(In thousands of bushels)

State	1949	1948	Average 1938–47
Georgia	605,900	818,300	629,877
Texas	343,785	300,800	265,706
Alabama	289,075	354,710	281,976
North Carolina	236,000	346,625	305,596
Virginia	187,650	237,800	176,183
Oklahoma	100,800	153,000	75,851
Florida	54,250	85,250	60,450
South Carolina	14,300	18,200	17,332

ing 1948–49. Under existing legislation, price support would continue at 90% of parity for the 1950 crop if either marketing quotas or acreage allotments were in effect; it was indicated that both would be continued. Per capita consumption of shelled peanuts in the U.S., meanwhile, declined to 4.4 lb. from a peak of 6.4 lb. in 1945, but approximated the prewar average.

World production of peanuts in 1949 was estimated at 11,460,000 short tons, unshelled, by the U.S. department of agriculture, an increase over the 11,000,000 tons of 1948 and 20% more than the prewar (1935–39) average crop of 9,550,000 tons. The largest producer, India, with a crop of 4,200,000 tons, in contrast with a poor 1948 crop of 3,442,000 tons, accounted for much of the increase. China, Indonesia, French West Africa and Gambia also showed increases, whereas the U.S., Nigeria and Brazil had smaller crops. The Overseas Food corporation of the British government, responsible for the partially developed East African peanuts project, reported very slow progress and unexpectedly high costs. (J. K. R.)

Pennsylvania.

A middle Atlantic state and one of the original 13 states of the union, Pennsylvania is popularly known as the "Keystone state." Area, 45,333 sq.mi., including 288 sq.mi. of inland water; population (1940): 9,900,180, of whom 8,453,729 were native-born white, 973,260 foreign-born white and 470,172 Negroes. The urban population in 1940 numbered 6,586,877 and the rural 3,313,303. Capital: Harrisburg (83,893). Cities with a larger population: Philadelphia (1,931,334); Pittsburgh (671,659); Scranton (140,404); Erie (116,955); Reading (110,568); Allentown (96,904); Wilkes-Barre (86,236). The United States census estimate of total population, July 1, 1949, was 10,618,000.

History.—The year 1949 witnessed notable progress in carrying forward a widespread program for the development of the resources and facilities of the commonwealth. The biennial session of the general assembly created various agencies to implement the state's program of public improvement and school and hospital construction. These included a general state authority, a highway and bridge authority and a general school authority. A housing assistance law was enacted under which no discrimination was permitted in state-aided housing on grounds of race or religion.

On Oct. 24 ground was broken for the western extension of the Pennsylvania turnpike to the Ohio border. Construction was well under way on the eastern extension to Philadelphia.

During 1949 state dredges removed 5,900,000 cu.yd. of accumulated silt from the bed of the Schuylkill river. The state's nurseries distributed 18,000,000 trees for reforestation and erosion control.

An outstanding step taken in the development of a public recreation program was the inauguration of a state summer recreational camp for underprivileged children.

A notable climax to the annual Pennsylvania week celebration in October was a ceremony in the village of Aaronsburg commemorating the 150th anniversary of the founding of the Salem Lutheran church, which was erected as a monument to religious and racial tolerance on land donated by Aaron Levy, a Dutch Jew.

In the Nov. 1949 election, William E. Hirt, Republican, received 1,765,041 votes for judge of the superior court against 1,734,909 for Harry E. Montgomery, Democrat. A constitutional amendment was adopted authorizing a bond issue to pay a bonus to veterans of World War II.

The state's principal officers in 1949 included: James H. Duff, governor; Daniel B. Strickler, lieutenant governor; T. McKeen Chidsey, attorney general; William S. Livengood, Jr., secretary of internal affairs; Weldon B. Heyburn, auditor-general; Charles R. Barber, treasurer; Francis B. Haas, superintendent of public instruction; and George W. Maxey, chief justice.

Education.—Statistics for 1947–48, the latest year for which complete figures were available in 1949, showed a net enrolment of 1,523,267 pupils in the public schools, including 55,070 in the kindergarten, 907,100 in the elementary division and 561,097 in the secondary schools. Similarly, there were 797 kindergarten teachers, 29,819 elementary teachers, 23,713 giving instruction in high schools, 1,433 elementary principals, 854 secondary principals, 1,874 supervising officials and 1,254 other professional employees. The total expenditure, including current expenses, capital outlay and debt service, was $282,345,301, of which $239,644,165 was for current expenses. School districts supplied 60.5% of their receipts from local taxation, while the state government contributed 38.4% and the federal government 1.1% for current operating expenses.

Social Insurance and Assistance, Public Welfare and Related Programs.—During 1949, expenditures by the department of public assistance totalled $145,000,000, including $96,000,000 state funds and $49,000,000 federal funds. The assistance rolls contained an average of 89,000 old-age assistance cases, 47,000 cases receiving aid to dependent children, 37,000 general assistance cases and 15,000 blind pensioners.

The state maintains eight penal and correctional institutions for the support of which a biennial appropriation of $14,773,000 was made for 1949–51. In addition, it owns and operates 10 medical and surgical hospitals, which received an appropriation of $8,780,000; 4 institutions for the feeble-minded and epileptic, $11,240,000; and 17 mental hospitals, $57,077,000. The state contributed $14,865,600 for the aid of privately operated hospitals and homes.

Communications.—Of the approximately 100,000 mi. of highways in Pennsylvania in 1948, 40,900 mi. were on the state highway system under the supervision of the department of highways. Included in this state highway total were 675 mi. in the cities of Pennsylvania and 2,179 mi. in the boroughs. As of Dec. 31, 1949, 37,900 mi. were of improved type, leaving 3,000 mi. unimproved. In addition, there were 160 mi. of superhighway operated by the Pennsylvania Turnpike commission.

Banking and Finance.—On June 30, 1949, there were 356 state banks, including 8 savings banks, with assets of $4,942,619,450.12. These state banks had total deposits of $4,432,880,950.19.

In addition, as of Dec. 31, 1948, there were 786 building and loan associations with assets of $490,863,164.

On June 30, 1949, there were 633 national banks located in Pennsylvania, with assets of $7,064,509,000. The deposits of these national banks totalled $6,309,721,000.

Appropriations and allocations from the general fund and motor licence fund for the biennium ending May 31, 1951, were $1,012,665,225. The estimated receipts from these two funds were $935,419,900. The gross

one	25,872,596	19,855,478

ebt Oct. 31, 1949, was $118,188,000, which cash and securities in the inking fund reduced to a net of $78,768,989.

Agriculture.—The total gross farm income for 1948 was $829,329,000, ncluding $824,011,000 in cash receipts from farm marketings and 5,318,000 in federal government payments.

Manufacturing.—In 1948 there were 20,021 manufacturing establishments in the state, employing 1,808,817 persons to whom $5,206,894,800 vas paid in wages and salaries. The capital invested was $5,560,016,900 nd the value of the goods produced was $18,587,676,900. Included as art of the latter amount, value added by manufacture was $7,565,-34,400. The value of the product of the principal industries for 1940 nd 1948 is shown in Table II.

Mineral Production.—The value of the principal mineral products of the tate in 1940 and 1946 is shown in Table III. (J. H. Df.)

Perón, Juan Domingo (1895–), president of Argentina, was born on Oct. 11 ear Lobos, south of Buenos Aires, and was educated in military chools. He became one of the leaders of the G.O.U. (Grupo de Oficiales Unidos), a nationalist clique of young army officers, which in 1943 helped overthrow the regime of Pres. Ramón S. Castillo. Perón became war minister and later vice-president under Pres. Edelmiro Farrell, and in 1946 was himself elected president on the Labour party ticket.

In 1948 Peronistas won sufficient strength in the congressional elections to sponsor a constitutional convention to initiate n amendment to permit the immediate re-election of the president. The new constitution, effective March 16, 1949, also provided for direct instead of electoral-college election of the president, vice-president and senate; continued dissolution of landed estates and automatic citizenship for foreigners five years in esidence, unless they declined it. Though Perón continually nsisted he did not intend to run for re-election, his followers enominated him at their party convention in Buenos Aires in uly 1949.

In Feb. 1949 and again in September, Perón halted imports or a period, presumably to avoid an unfavourable balance of rade. He told the Argentine congress in May that all public ervices still in private hands must be nationalized. In August, e effected a five-year trade agreement with Britain, and other greements with Norway and France. In October, the Argentine ongress passed a law forbidding members of existing political arties from changing political registration before 1952, thus reventing the formation of an anti-Perón coalition. In September a bill was passed making it a prison offense in Argentina to how "disrespect" to government leaders.

Persia: *see* Iran.

Peru. A South American west coast republic, Peru is bounded on the north by Ecuador and Colombia, on the east by Brazil and Bolivia, on the south by Chile and on the west by he Pacific ocean. Area: 482,258 sq.mi.; pop. (1948 estimate): ,061,000. This estimate comprises about 53% "white" and mestizo and about 46% Indian, in addition to some Asiatic and Negro population elements. Lima (pop., 1945 estimate, 657,824) is the capital; other major cities (with 1945 pop. estimates) include Callao (93,313), Arequipa (87,260), Cuzco (49,760), Trujillo (42,875), Iquitos (36,213), Chiclayo (35,986), Huancayo (31,474), Sullana (24,608), Ica (23,614) and Piura (22,133). President in 1949: Gen. Manuel Odría.

History.—During the year 1949 the Odría regime, which had seized power in Oct. 1948, moved to consolidate its position. The military dictatorship was formalized by a decree dated Jan. 8, which announced the suspension of congress and the assumption by the cabinet of all executive and legislative authority. Civil rights were curtailed and press censorship was established in May; a measure promulgated in the middle of that month rendered all women between the ages of 21 and 45 subject to military service in the event of war. Labour groups expressed their opposition to the regime on Jan. 14, when the American Federation of Labor complained in a letter to the United Nations that labour organizations could no longer function normally in Peru; and on May 6, when a regional unit of the International Labour Office, meeting at Montevideo, Uruguay, adopted a resolution censuring the Odría regime for alleged violations of workers' rights. Reportedly opposed to Odría were Luis Flores and Llosa González Pavón, leaders of relatively powerful right-wing political organizations.
